UDI Webinar – Update on Energy Step Code
and Carbon Pollution Standards
September 13, 2021

Upcoming Changes to Provincial Building Regulations:

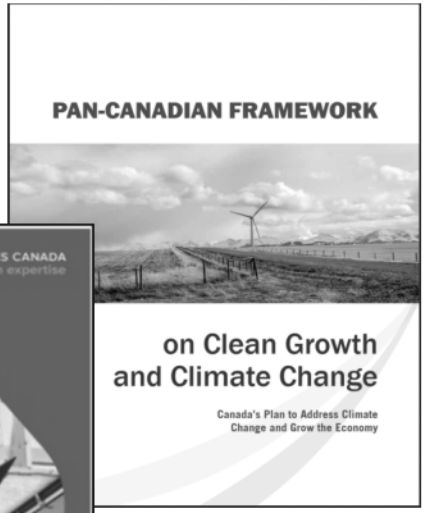
1. 20% improvement to energy efficiency in 2022 (Energy Step Code)

2. Carbon pollution standards for new construction (New)

Provincial & National Policy

CleanBC (2018)

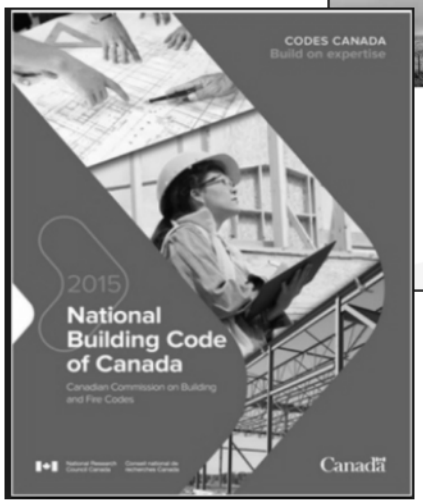
Net Zero Energy Ready by 2032
in BC Building Code



Pan-Canadian Framework (2016)

Net Zero Energy Ready by 2030 in
National Codes

Reconciliation Agreement on Construction Codes (2020)



CleanBC & Energy Step Code

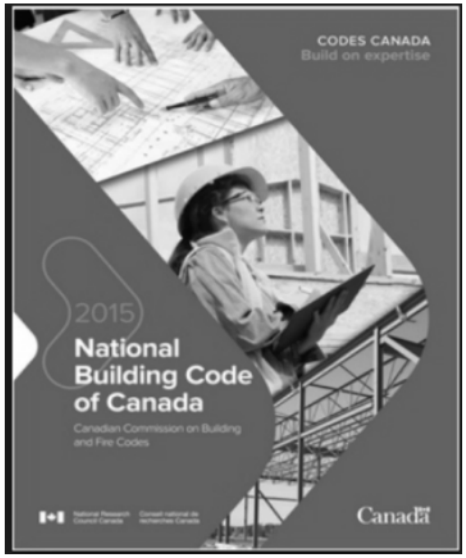
	PART 9 BUILDINGS	PART 3 BUILDINGS	NET-ZERO ENERGY-READY UP TO:
2032	STEP 5	STEP 4	80%
2027*	STEP 4	STEP 3	40%
2022*	STEP 3	STEP 2	20%

*NEW TARGET DEADLINES

Energy-efficiency improvement above 2018 BC Building Code requirements

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

20% Improvement in 2022



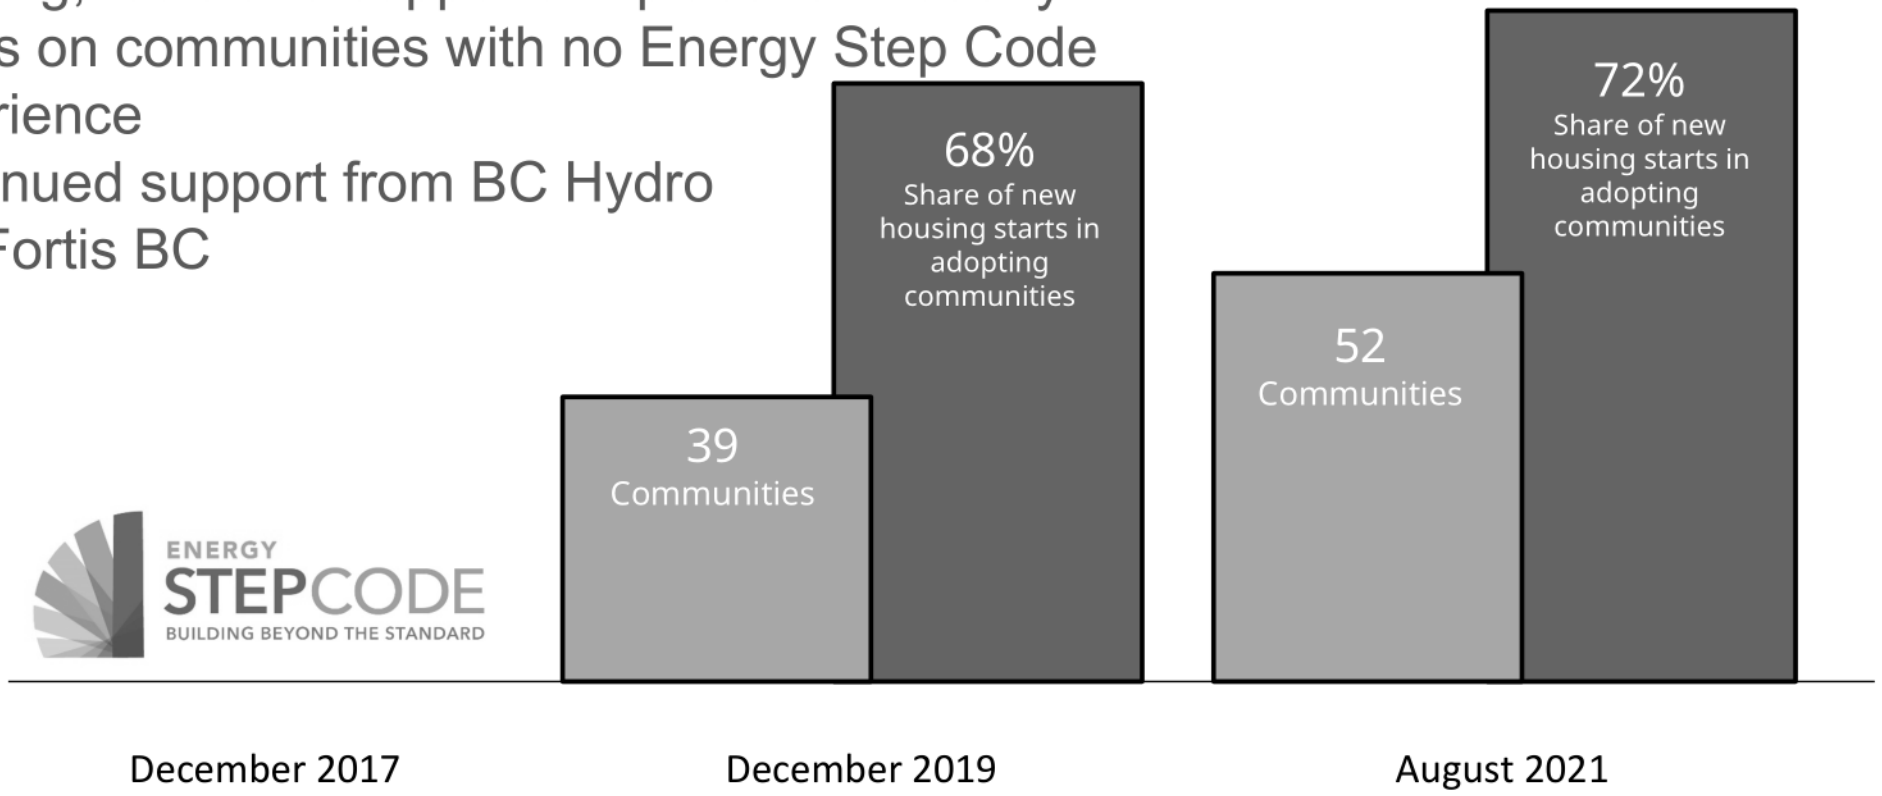
20% Improvement in Energy Efficiency in 2022:

- Build on success of the Energy Step Code
  - Step 3 for Part 9 housing
  - Step 2* for Part 3 buildings
- Support improved harmonization with national codes
- Develop recommendations through the Energy Step Code Council
- Impact analysis currently underway

*pending technical analysis to determine which step achieves 20% improvement

Preparing for Success

- Significant capacity development by local governments who are ready for 2022
- Training, tools and supports in place for industry
- Focus on communities with no Energy Step Code experience
- Continued support from BC Hydro and Fortis BC



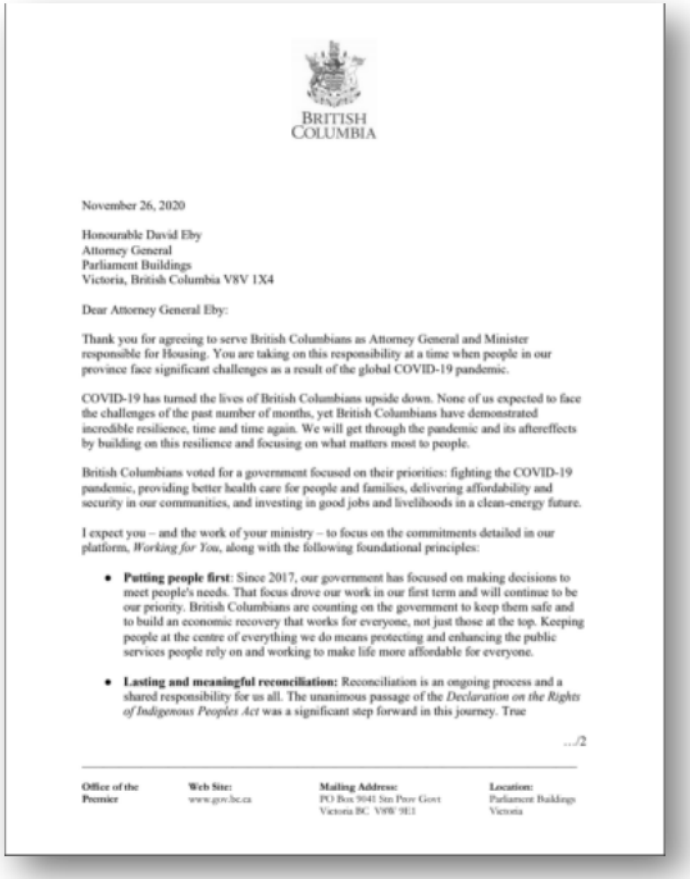
ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Upcoming Changes to Provincial Building Regulations:

1. 20% improvement to energy efficiency in 2022 (Energy Step Code)

2. Carbon pollution standards for new construction (New)

Mandate Letter – Carbon Pollution



BRITISH COLUMBIA

November 26, 2020

Honourable David Eby
Attorney General
Parliament Buildings
Victoria, British Columbia V8V 1X4

Dear Attorney General Eby:

Thank you for agreeing to serve British Columbians as Attorney General and Minister responsible for Housing. You are taking on this responsibility at a time when people in our province face significant challenges as a result of the global COVID-19 pandemic.

COVID-19 has turned the lives of British Columbians upside down. None of us expected to face the challenges of the past number of months, yet British Columbians have demonstrated incredible resilience, time and time again. We will get through the pandemic and its aftereffects by building on this resilience and focusing on what matters most to people.

British Columbians voted for a government focused on their priorities: fighting the COVID-19 pandemic, providing better health care for people and families, delivering affordability and security in our communities, and investing in good jobs and livelihoods in a clean-energy future.

I expect you – and the work of your ministry – to focus on the commitments detailed in our platform, *Working for You*, along with the following foundational principles:

- **Putting people first**: Since 2017, our government has focused on making decisions to meet people's needs. That focus drove our work in our first term and will continue to be our priority. British Columbians are counting on the government to keep them safe and to build an economic recovery that works for everyone, not just those at the top. Keeping people at the centre of everything we do means protecting and enhancing the public services people rely on and working to make life more affordable for everyone.
- **Lasting and meaningful reconciliation:** Reconciliation is an ongoing process and a shared responsibility for us all. The unanimous passage of the *Declaration on the Rights of Indigenous Peoples Act* was a significant step forward in this journey. True

.../2

Office of the Premier | Web Site: www.gov.bc.ca | Mailing Address: PO Box 9041 Stn Prov Govt Victoria BC V8W 9E1 | Location: Parliament Buildings Victoria

Attorney General and Minister Responsible for Housing:

"[…] supporting local governments to set their own carbon pollution performance standards for new buildings."

Other commitments and priorities:

- Homes for BC – 10-year housing plan
- Sectoral targets and engagement on CleanBC related to carbon pollution
- Existing Buildings Code by 2024

Carbon Pollution Standards

Carbon Pollution (GHG) Standards:

- Several local governments already addressing carbon pollution in some form
- Establish a standardized provincial approach similar to Energy Step Code
- Carbon requirements in addition to energy efficiency requirements
- Consulting with Energy Step Code Council to seek input on appropriate performance levels and enforcement

Carbon Pollution Standards

Technical Considerations:

- Considering performance levels from ‘measure only’ to full decarbonization
  - space heat and hot water will be most directly impacted
- Focus on performance codes that provide flexibility and allow for future innovation
  - same energy modelling as Energy Step Code
- Working to provide long term certainty on how codes address carbon pollution

Other Building Code Activities

Projects and Commitments Related to the Code:

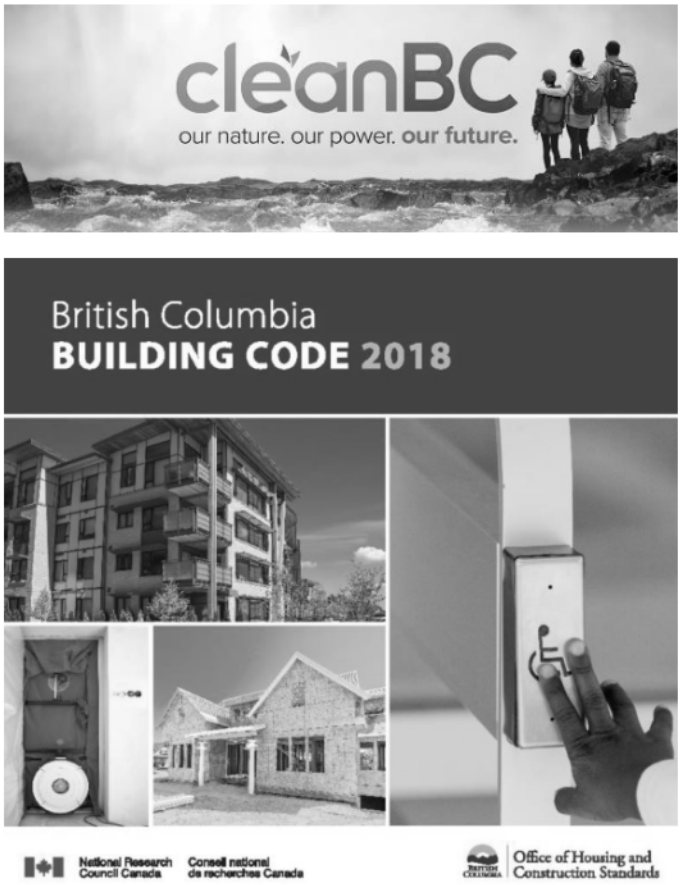
- Reconciliation Agreement on Construction Codes
- Existing Buildings (CleanBC)
- Accessibility
- Next edition of the BC Building Code

ENERGY STEPCODE

BUILDING BEYOND THE STANDARD

Jun'ichi Jensen
A/Executive Director
Building and Safety Standards Branch

UDI Webinar - BC Hydro and Clean BC
Roadmap to 2030
November 30, 2021



Upcoming Changes to Provincial Building Regulations

1. 20% improvement to energy efficiency in 2022 (Energy Step Code)
2. Carbon pollution standards for new construction (New)
3. Existing Buildings Code by 2024

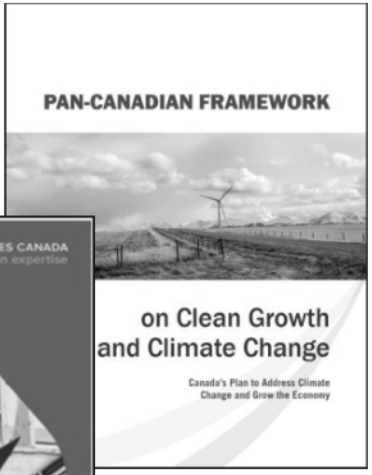
Provincial & National Policy

CleanBC (2018)

Net Zero Energy Ready by 2032 in BC Building Code

CleanBC Roadmap to 2030

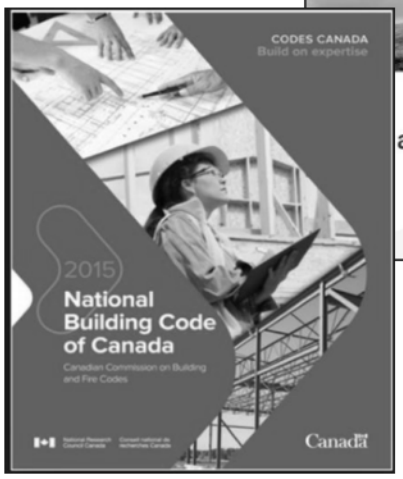
Zero Carbon New Buildings in BC by 2030
Phasing Carbon Pollution Requirements into BCBC Beginning in 2024



Pan-Canadian Framework (2016)

Net Zero Energy Ready by 2030
National Codes

Reconciliation Agreement on Construction Codes (2021)



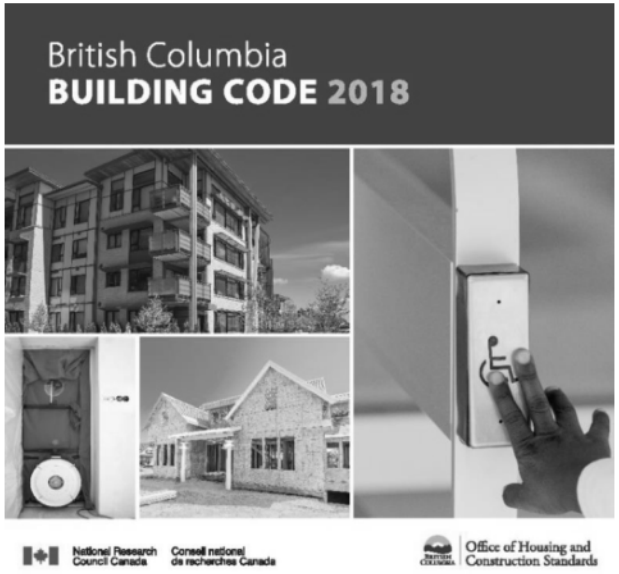
20% Improvement in 2022

20% Improvement in Energy Efficiency in 2022:

- Build on success of Energy Step Code
  - Step 3 for Part 9 housing
  - Step 2* for Part 3 buildings
- Support improved harmonization with national codes
- Develop recommendations through Energy Step Code Council
- Impact analysis currently underway

**pending technical analysis to determine which step achieve 20% improvement.*

20% Improvement in 2022



Carbon Pollution (GHG) Standards:

- Establish a standardized provincial approach, similar to Energy Step Code
- Carbon requirements in addition to energy efficiency requirements
- Consulting with Energy Step Code Council to seek input on appropriate enforcement levels and enforcement

Existing Buildings

Existing Buildings Standard by 2024:

- Engagement on energy efficiency, carbon emissions and climate resilience ongoing
- ‘What We Heard’ Report following the last session on January 11, 2021

CleanBC Roadmap	August 4, 2021
Flood	September 28, 2021
Water Conservation	October 6, 2021
Wildfire	October 19, 2021
Energy Efficiency Regulation	November 30, 2021
Overheating and Air Quality	December 2, 2021
Energy Efficiency Supporting Measures	December 8 , 2021
Integrating Mitigation and Adaptation	January 11, 2022

Hello Energy Step Code Council members,

Thank you to everyone who was able to join our meeting last Friday Oct. 4, 2019 either in person or by phone. It was great to connect with all of you and especially to hear from new Council members Joe, Kelly and Megan.

This is the first follow-up email from our meeting - please watch for more to come.

New BSSB Staff – our CleanBC Team

Code Team
Scott Williams - Senior Energy Codes Administrator – Scott.B.Williams@gov.bc.ca
Tommy Dang – Codes Administrator – Tommy.Dang@gov.bc.ca

Policy Team
Aura McCrae – Senior Policy Advisor – Aura.McCrae@gov.bc.ca
Hugo Wong – Policy Analyst – Hugo.Wong@gov.bc.ca
Nicole Vukosavljevic, Senior Policy Advisor - Nicole.Vukosavljevic@gov.bc.ca

Wendy Acheson/BC Housing – Proposal for Mandatory Step Code Training

- PPT Attached – As requested by Wendy, PLEASE DO NOT SHARE
- Feedback on the proposal can be sent to Wendy at wacheson@bchousing.org

Existing Buildings Project Materials

Unfortunately, due to time, we deferred the Existing Buildings item on the agenda. In lieu, we are sharing the attached 5 'backgrounder' documents for your information. Again, please watch for more to come on this.

Lessons Learned Report
Robyn shared hard copies of the report at the meeting. Reminder it's also available online here: Lessons from the BC Energy Step Code (PDF, 3.5MB)

Thank you and please be in touch if you have questions.

Kind regards,
Dale

DALE ANDERSSON, PhD | Senior Policy Advisor

Building and Safety Standards Branch | Office of Housing and Construction Standards

Email: Dale.Andersson@gov.bc.ca

ENGAGEMENT BACKGROUNDER

Developing an Alterations Code for Energy Efficient, Resilient Buildings

For Discussion: Building Officials and Local Governments

In developing stronger codes for existing buildings, it is important to understand the values, opportunities, and challenges that inform renovation industry activity and building owner investments in existing buildings.

Below are initial topics we would like to discuss with you in more detail:

- Values and Principles of a Future Alterations Code for Existing Buildings
- Interpretation of the BC Building Code for Existing Buildings Alterations
- Enforcement of the BC Building Code on Existing Buildings Alterations
- Current Capacity for Enforcement
- Future Capacity Building Needs
- Preferences for Future Engagement

You will have the chance to provide input through each phase of the project.

Building and Safety Standards Branch
Our Organization and Mandate

The Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing, is responsible for the BC Building Code (BCBC) which regulates health and safety, fire and structural protection, accessibility, and energy and water efficiency in building construction.

Delivering on the CleanBC commitment for Better Buildings, the Branch aims to develop an Existing Building Code for energy efficient and resilient buildings by 2024. The Better Buildings commitment aims to make every building more efficient by improving the BC Building Code and developing stronger codes and standards for existing buildings.

Project Goal: To provide clear requirements for existing buildings that will enable GHG reductions and increase life safety and resilience for British Columbians.

Project Context: Current Opportunities and Challenges

1) *Many existing buildings use more energy than is necessary.* Existing buildings account for 11% of BC's total GHG emissions and as much as 50% in urban areas.
2) *The built environment is increasingly susceptible to seismic and climate risks.* Existing buildings of a certain age may also be the most susceptible to damage and collapse in a seismic event.
3) *The BC Building Code is primarily intended for new construction.* The BC Building Code can be unclear in how it applies to building retrofits, leaving it open to interpretation and leading to inconsistent enforcement.
4) *Retrofits can be expensive, and costs can deter people from taking action.* The renovation industry in BC is a significant contributor to the provincial economy. In 2017, BC's renovation industry accounted for 82,845 jobs, $5.0 billion in wages, and $9.8 billion in investment value.

Your input is needed to help develop policy and regulatory options that address these opportunities and challenges.

Project Timeline

Phase 1 (2019-2021) Prepare Strategy	Phase 2 (2021-2022) Develop Codes & Standards	Phase 3 (2022-2024) Voluntary Implementation
Identify targets for building energy performance, prepare policy options to guide code application to building retrofits, develop a resilience lens through which to evaluate options and identify potential social, environmental and cost-related impacts.	Draft technical codes / standards to implement strategy recommendations. Coordinate development of regulations / programs to support successful implementation.	Provide codes and standards for voluntary early adoption in 2022 in advance of creating a provincial requirement in 2024.

Step Code Training Initiative

Wendy Acheson
October 4, 2019

BC HOUSING

Background

- Residential builders must be licensed in BC under the *Homeowner Protection Act,* administered by BC Housing
- Purpose of the Act is to strengthen consumer protection, increase quality of residential construction, and support related research and education
- General contractors of part 9 buildings must participate in annual Continuing Professional Development (CPD) as a condition of licence renewal
- New licensees must also meet minimum competency requirements in seven areas, including Building Code knowledge and Construction Technology
- Training is currently being provided by a number of organizations for both informal and formal purposes

BC HOUSING

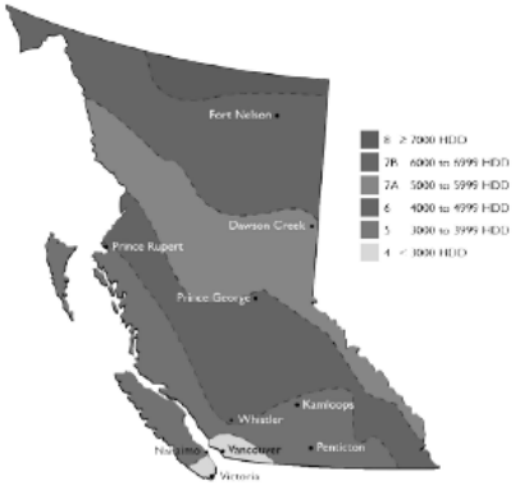
Issues

- There is a risk to homebuyers of defective homes without sufficiently qualified builders
- Understanding how to build energy efficient homes will be a key component of home builder competency, particularly in context of the Step Code
- Various municipalities and industry associations are currently offering relevant training, which can be coordinated and leveraged
- As regulator BC Housing is in an ideal position to ensure that builders are appropriately trained
- Any initiative chosen must be within the authority prescribed in the *Homeowner Protection Act*

BC HOUSING

Objectives of Step Code Training Initiative

1. Strengthen consumer protection for buyers of new homes by reducing risk of defective construction caused by poor building practices
2. Improve the energy efficiency of residential construction by ensuring that licensed builders have received appropriate technical training
3. Support research and education initiatives aimed at Building Code and Step Code compliance
4. Support the overall climate action mandates of government



BC HOUSING

Possible Strategy

1. Develop a core curriculum of education needed now and in the near future
2. Share information to encourage coordination and consistency of training efforts and accredit approved providers
3. Implement a schedule of mandatory training for general contractor licensees, as a condition of licence
4. Identify appropriate exemptions
5. Ensure curriculum is included in existing minimum qualification training for new licensees

BC HOUSING

Step 1: Curriculum development

Coordinated by BC Housing on the following proposed topics:

- Air tightness and continuity of air barrier
- Building envelope details
- Mechanical systems/air quality
- Overall building science and building design

Questions:

- Are these the right topics?
- How much coverage (i.e. hours of instruction) per topic?

BC HOUSING

Step 2: Accreditation

- Share curriculum with possible providers
- Evaluate curriculum coverage and quality of training proposed by providers
- Accredit approved providers
- BC Housing would provide training only where gaps in adequate coverage are identified
- Accredited providers would agree to terms of use of curriculum and costs

BC HOUSING

Step 3: Mandatory training

- Training in accredited courses a condition of licence renewal for general contractors
- Could be part of Continuing Professional Development (CPD), not additional hours
- Licensees would have a variety of accredited training to choose from, including online training

Questions:

- Should topics be provided in one longer course or in modules?
- If modules, should they all be available at once or prioritized over time?
- Should there be any testing of knowledge?

BC HOUSING

Step 4: Exemptions from training

- Licensees who could demonstrate that they were already competent would be exempted from the condition

- Exemptions could be included for:
  - Taking an equivalent course previously
  - Evidence of building energy efficient homes previously
  - Anything else?

- Education providers could be asked to submit material to show that their existing course is equivalent

BC HOUSING

Step 5: Qualifications courses

Ensure curriculum is included in existing minimum qualification training for new licensees

- Identify all existing qualifications courses
- Share approved curriculum with training providers
- Establish timeline for ensuring qualification courses are updated

BC HOUSING

Questions or Comments?

BC HOUSING

ENGAGEMENT BACKGROUNDER

Developing an Alterations Code for Energy Efficient, Resilient Buildings

For Discussion: Non-Government Research Organizations

In developing stronger codes for existing buildings, it is important to understand the values, opportunities, and challenges that inform renovation industry activity and building owner investments in existing buildings.

Below are initial topics we would like to discuss with you in more detail:

- Values and Principles of a Future Code for Existing Buildings
- Existing Buildings Strategies and Programs
- Code Triggers and Targets for Existing Buildings
- Performance vs. Prescriptive Requirements
- Cost Impacts
- Preferences for Future Engagement

You will have the chance to provide input through each phase of the project.

Building and Safety Standards Branch
Our Organization and Mandate

The Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing, is responsible for the BC Building Code (BCBC) which regulates health and safety, fire and structural protection, accessibility, and energy and water efficiency in building construction.

Delivering on the CleanBC commitment for Better Buildings, the Branch aims to develop an Existing Building Code for energy efficient and resilient buildings by 2024. The Better Buildings commitment aims to make every building more efficient by improving the BC Building Code and developing stronger codes and standards for existing buildings.

Project Goal: To provide clear requirements for existing buildings that will enable GHG reductions and increase life safety and resilience for British Columbians.

Project Context: Current Opportunities and Challenges

1) *Many existing buildings use more energy than is necessary.* Existing buildings account for 11% of BC's total GHG emissions and as much as 50% in urban areas.
2) *The built environment is increasingly susceptible to seismic and climate risks.* Existing buildings of a certain age may also be the most susceptible to damage and collapse in a seismic event.
3) *The BC Building Code is primarily intended for new construction.* The BC Building Code can be unclear in how it applies to building retrofits, leaving it open to interpretation and leading to inconsistent enforcement.
4) *Retrofits can be expensive, and costs can deter people from taking action.* The renovation industry in BC is a significant contributor to the provincial economy. In 2017, BC's renovation industry accounted for 82,845 jobs, $5.0 billion in wages, and $9.8 billion in investment value.

Your input is needed to help develop policy and regulatory options that address these opportunities and challenges.

Project Timeline

Phase 1 (2019-2021) Prepare Strategy	Phase 2 (2021-2022) Develop Codes & Standards	Phase 3 (2022-2024) Voluntary Implementation

Subject: RE: Question: UDI's Preliminary Budget 2020 Submission

Hi Jeff,

Here's a blurb:

CleanBC commits the Province to improving energy efficiency in the built environment. The Building Resilience and Energy Retrofit Strategy is the first step toward developing and implementing a retrofit code for existing buildings by 2024. The Strategy will:

- identify targets for building energy performance;
- prepare policy options to guide code application to building retrofits;
- develop a resilience lens through which to evaluate options; and,
- identify potential social, environmental and cost-related impacts.

Agree with Gord's addition – we will consider the proposal, making it clear that tax policy is the responsibility of the Ministry of Finance.

Let me know if you need anything else,

Emily

Subject: RE: Question: UDI's Preliminary Budget 2020 Submission

Emily, can you send me a blurb about the Existing Buildings Retrofit Strategy? What is it, what's the status?

Does it matter that UDI asks for the property tax exemption for new and existing buildings?

To: Dean, Jeff OHCS:EX <Jeff.Dean@gov.bc.ca>
Subject: FW: Question: UDI's Preliminary Budget 2020 Submission

Jeff, I think you can say this and just add on what Gord said: e.g., it is something that the Existing Buildings Retrofit Strategy will consider as part of its policy analysis, but decisions on tax policy rest firmly with the Minister of Finance.

Subject: RE: Question: UDI's Preliminary Budget 2020 Submission

Would you want the BN Jeff is doing for Kaye's meeting with UDI to say anything to that effect? Currently, I think the plan is just to say we defer all things tax to Finance.

Doug

Subject: RE: Question: UDI's Preliminary Budget 2020 Submission

Hi Doug,

I haven't seen this one, but it is interesting input for the existing buildings project to consider. We're not quite at the point where we are looking at impacts, but will consider this when we reach that stage.

Is any action needed in terms of a response?

Thanks,

Emily

Subject: FW: FYI: From UDI's Preliminary Budget 2020 Submission

Interesting. Maybe worth connecting with Emily (or contacts at Finance) on this…it seems that this was also included in their 2019 submission: http://udi.bc.ca/wp-content/uploads/2018/10/UDI-2019-Pre-Budget-submission-Ministry-of-Finance.pdf.

Would be good to know if they did any policy work on this and/or would be planning to implement the future (or have already nixed for the time being)

Subject: FYI: From UDI's Preliminary Budget 2020 Submission

Sustainable Property Tax Exemption and Incentives
UDI believes that provincial property tax exemptions could be beneficial for new and existing rental buildings to encourage the adoption of green or energy efficiency measures, which is the Government's stated goal in the *Clean, Efficient Buildings Intentions Paper*. Unfortunately, there are currently property tax disincentives to improve the energy and water efficiency in buildings. When energy efficient building features are incorporated in new and existing projects, the valuations increase, and as a result, so do the property taxes.
It will be important for the Government to offer exemptions and other sustainable building incentives and financial mechanisms for rental projects in particular. Incentive programs like these may become critical if the Government proceeds with mandating energy efficiency (and other requirements) through both the adoption of the *Energy Step Code* in the *B.C. Building Code* for new construction and the adoption of the *Building Code for Existing Buildings* as described in the *CleanBC Plan*. As noted above, new purpose-built rental projects already face financial obstacles, and this has been exacerbated with the further restrictions on the annual Allowable Rent Increases that were made in 2018. Older buildings will face a nearly impossible balancing act with both seismic and energy efficiency upgrades expectations and Government pressure to keep rent increases down.
We acknowledge that this issue is pervasive across housing types and note, for example, that strata corporations of older buildings will find that balancing affordability with mandated upgrades will be just as difficult as it is for landlords. An exemption is needed that would offset tax increases due to energy/water efficiency features incorporated in new and existing buildings. At the same time, we need to encourage local governments to do the same for their portion of the property tax bill. 5

UDI recommends the creation of a Sustainable Property Tax Exemption, for the Provincial portion of the property tax, which would apply to both rental developments and other building types/tenures.

UDI has one caveat to this recommendation. As we noted in our response to the *Intentions Papers*, the Government should be discerning where money is invested, because for some buildings, it could be more advantageous that redevelopment occur – rather than renovations. It would not be cost efficient to heavily invest in building upgrades in areas where municipal plans are in place that encourage the densification of sites, as those upgrades and the embodied carbon would be lost when the buildings are demolished. Decisions will have to be made on a site-by-site basis. For example, it would likely be more cost effective and environmentally friendly to redevelop a sixty-year-old three-storey rental building next to a SkyTrain station than to make substantive seismic and energy efficiency upgrades to it. It would be better if the government funding was used instead, to increase the number of low-end market rental units on the site during the redevelopment process, and to assist tenants in relocation (see below).

Hello everyone,

Thanks to everyone who joined the Oct. 4 meeting, and for your patience. The minutes from the Oct. 4 meeting are attached and ready for to review. Please let me know if there are inaccuracies and I will correct them.

On a related note, the 2019 public review of proposed changes to the 2015 National Building, Fire and Plumbing codes and the 2017 National Energy Code is now accepting comments. It runs until Dec. 23, 2019. More information is here.

Thanks very much.
Hugo

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Notes

Date: Friday October 4, 2019 | Time: 9:00 a.m. to 4:00 p.m. Pacific
Venue: BC Hydro Office, 333 Dunsmuir Street, Vancouver or by teleconference
Chair: Zachary May, Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Participants

1. Bea Bains, FortisBC
2. Maya Chorobik, Chair, Small LG Peer Network
3. Christian Cianfrone, ZEBx
4. Norm Connolly, Richmond/PIBC, and co-chair, Technical Subcommittee
5. Patrick Enright, City of Vancouver
6. Jeff Fisher, UDI
7. Joe Hart, Icon Homes/CHBA BC
8. Toby Lau, BC Hydro and co-chair, Technical Subcommittee
9. Wilma Leung, BC Housing
10. Megan Lohmann, CEA and UBCM rep
11. John Madden, UBC
12. Lisa Mak, BC Hydro
13. Harshan Radhakrishnan, EGBC
14. Kelly Reid, HKR Builders/CHBA BC
15. Mark Sakai, HAVAN
16. Muneesh Sharma, BOMA
17. Maxwell Sykes, City of Surrey/UBCM Rep and Chair, Large LG Peer Network
18. Warren Perks, BCCA
19. Dale Andersson, BSSB and co-chair, CBC Subcommittee
20. Guests: Wendy Acheson, BC Housing; Pauline Rupp, CHBA BC; Gary Hamer, BC Hydro; Bertine Stelzer, BC Hydro
21. By Teleconference: Tom Berkhout, MEMPR; Mark Bernhardt, Bernhardt Contracting and CHBA BC (guest); Catherine Ernst, BOABC; Chris Fyre, NRCan Housing Division; Nicholas Heap, City of Richmond and co-chair, CaEASC; Vanessa Joehl, CHBA BC and co-chair, CaEASC; Jason Jung, ASTTBC; Adrian Mohareb, Climate Action Secretariat, Andrew Pride, SCEE
22. By Teleconference – BSSB Staff: Aura McCrae; Emily Sinclair; Nicole Vukosavljevic; Scott Williams; Hugo Wong

Regrets: Todd Cumiskey, ICBA; Maura Gatensby, AIBC.

NOTES

1. Welcome and Introductions

Zachary May welcomed Council members and guests. New Council members include Kelly Reid, HKR Builders & Joe Hart, Icon Homes, representing CHBA BC; and Megan Lohmann, CEA, representing UBCM with Max Sykes. Wendy Acheson, BC Housing, Pauline Rupp, CHBA BC and Mark Bernhardt, Bernhardt Contracting attended as guests. Zac thanked all Council members for their efforts, noting 2022 represents the next horizon for Council's work. Zac invited new Council members to share their perspectives on Step Code implementation in their regions.

Megan Lohmann brings the perspective of the Kootenay region to Council. Step Code knowledge in the Kootenays is high and builder airtightness is strong. Three communities have adopted the Step Code and all also require labelling. Current challenges: Incorporating more innovative construction methods such as wall assemblies (they have developed a training module demonstrating various assemblies); home design in energy efficiency and the value of early collaboration with an Energy Advisor; addressing the current Step 3 issue; training for Alberta builders in region. Two EAs are based in the region – may need more as two other communities adopt the Step Code in the new year.

Joe Hart: Joe is based in Quesnel. There are two EAs in Prince George but it will be hard to figure out how to work with EAs over such as large area as the north: it is not practical or sustainable to have an EA in every town. The proposed Sliding Scale TEDI (to be discussed further under proposed Part 9 changes) appears to be working better: the first Net

Zero home in the north only reached Step 4, but with the sliding TEDI reached Step 5. There is little Council or builder interest in the Step Code in the north, so making Step 3 the first mandatory step could be a challenge: is there a potential to made Step 1 a requirement before 2022? Small communities typically do not have the means to offer funding for incentives. In the Cariboo, his company is the only one doing blower door testing at present, and he built six Step 3 homes last year. Despite lower interest, most builders are likely already building to Step 3. Northern differences: architects and engineers are rarely used for Part 9 buildings; construction budgets are significantly lower. While there are challenges in the north, northern builders have expertise they can also share with the south (e.g., quality of construction and achieving airtightness).

Kelly Reid: Kelly is based in Kamloops where they have similar challenges. Eighteen months ago there were no EAs, but through a partnership with BC Housing, they were able to test 20 homes – all with very good airtightness results - and now have 1 individual trained/certified as an EA. Kamloops has adopted an inventive program, and there is also training for builders and building officials. Challenges: Issues with archetypes and site location on north/south sides of the river - the same home built on the north side reached Step 3 but on the south side only achieved Step 1; shortage of EAs; modest construction budgets compared to other regions; little interest in all-electric solutions at present. Homes typically have air conditioning.

Council members discussed related issues including: GHGs as a metric; thinking longer term and eventual electrification; the value of reducing plug loads as critical to success; practical options for today that will support changes in future; no current mandate in CleanBC or the Pan-Canadian Framework to reduce GHGs in the Code; exploring other options. BC Hydro has been involved in helping construct a Net Zero home near Kamloops (?) that is all electric; there will be metrics on the home when completed that could be reported back to Council next spring.

ACTION: CBC Subcommittee co-chairs to contact Joe to discuss the possible case study examples from northern B.C.

ACTION: CBC Subcommittee co-chairs/Peer Network Co-chairs to explore options for building capacity in smaller, rural/northern communities such as: the SC Peer Networks; using existing UBCM or LGMA structures such as the UBCM Climate Caucus or the Climate Leadership Institute or regional groups; engaging an EA to introduce to builders and do airtightness testing examples in the north; showcasing different assemblies in the north as Megan/CEA has done in the Kootenay region, etc.

ACTION: CBC Subcommittee co-chairs further explore EA capacity across B.C., particularly in the north.

ACTION: BSSB to contact Gary Hamer re: Net Zero home example for presentation at future ESCC meeting.

2. Provincial Update

Proposal for Mandatory Step Code Training for Licensed Residential Builders

Wendy Acheson or BC Housing presented details of a proposal under consideration for mandatory Step Code training for licensed residential builders. The objective of such a requirement would echo the purposes in the legislation: strengthen consumer protection, improve the energy efficiency of buildings etc. Council discussion focussed on: the value of mixed-methods approaches to training – e.g., experiential vs classroom; appropriate exemptions (e.g., if a licensee can demonstrate existing knowledge); capturing airtightness values somehow; being able to rely on builders who are 'doing a great job;' the importance of process (e.g., engaging an EA as early as possible) and learning about integrated design; different levels of training – e.g., Step Code 1, Step Code 2; training for individuals vs companies; new licensee requirements vs license renewals; timing (aiming to make changes quickly – e.g., 2020); ensuring sufficient training capacity if this becomes mandatory; training for apprentices; training for all trades not just carpenters; setting training requirements over two license periods instead of just one (so licensees will also be able to take other valuable training); demonstrating competency rather than just participation at a training event.

ACTION: Dale to share Wendy's PPT with Council members with the proviso it be kept confidential for now. DONE

ACTION: Council members to send other feedback about the proposal for Mandatory Step Code Training for Licensed Residential Builders to Wendy at wacheson@gov.bc.ca.

ACTION: CBC Subcommittee co-chairs to invite Wendy to speak at a Subcommittee meeting about the proposal for mandatory Step Code training for Licensed Residential Builders.

Provincial Resources

Zac announced new BSSB staff who will be supporting our CleanBC projects for the Step Code and existing buildings:

- Code team: Tommy Dang and Scott Williams – with Adrian Mohareb continuing to work on the Step Code through his new job with the Climate Action Secretariat
- Policy team: Aura McCrae (BERT support), Hugo Wong (ESCC, strategic plan), and Nicole Vukosavljevic (existing buildings) plus Dale who will focus on CBC, EA issues, remote/rural communities

The new staff resources provide an opportune time to reflect on the current Terms of Reference of the Council Subcommittees. If there's a perceived value in revising or adjusting them, that can be done so that the Subcommittees address our code needs. There is no additional funding but BSSB can collaborate with partner—NRCan, BC Housing, BC Hydro etc.—to help source needed funds.

ACTION: Dale to share contact details for new BSSB staff with Council. DONE

ACTION: Dale/BSSB staff to connect with Max/Maya to determine if/how BSSB could provide support to the LG Peer Networks.

3. National Update

Andrew Pride, Chair of the Standing Committee on Energy Efficiency, provide an update on the development of the National Energy Code and what to anticipate in 2020. A public review process will start October 22, 2019 to gather feedback on the current proposals for Part 3 and Part 9 buildings.

- Proposal for Part 3 buildings: four simple energy tiers, no EUIs, tier 4 = 40% better than reference code.
- Proposal for Part 9:
    - 5 tiers – tier 1 = prescriptive; tier 2 10% better; tier 3 – 20%; tier 4 – 40% and tier 5 = 70%+ - levels which mimic current voluntary standards such as R2000. There is no TEDI.
    - No TEDI but will still require an envelope calculation to ensure better than the prescriptive built house
    - Mandatory testing of all tiers
    - Automatic 10% energy credit to any small house – about 1100 sq ft home or smaller – should enable them to qualify for tier 2

There is no requirement for GHG reductions as this is very difficult at a national level. Zac noted that over the long term, B.C. is committed to harmonizing with the national codes (due to the cost of code development), and there will be fewer B.C. variations over time, and for this reason, the Part 9 TEDI proposal uses language being proposed at the national level. Council discussed the value of improving the software HOT 2000 (H2K) to that it is more aligned with the building code.

ACTION – BSSB to provide Council with info about the national public review when it opens Oct. 22, 2019 so that Council members may respond.

4. GHG and Costing Studies

The final reports of the GHGi and costing studies completed earlier this year were provided to Council. The reports were contracted by BSSB with funding received from NRCan. The studies will be posted to the Step Code website to facilitate sharing.

GHG Study led by Integral Group: Zac notes there is no mandate in the BC Building Code to reduce GHGs, and a resolution to that effect was defeated last week at UBCM's annual convention. Council members discussed ways GHGs could be addressed by local governments given these constraints. Discussion included the following points:

- Local governments pursuing 'default' options if a given Step is not reached (e.g., require Step 3 but Step 2 permitted if connect to a low carbon energy system/district energy, or reduce fees if constructing to a low carbon energy system)
- The value to builders of offering such relaxations
- Setting intensity limits such as the City of Vancouver is doing
- Local government sharing of best/promising practices
- BC Utilities Commission regulation requirements
- Changing climate data over time/in future and possibility of new clean energy options (apart from electricity)

ACTION: Robyn/LG Peer Network Co-chairs – to summarize and share information with Council about local government approaches to GHG reductions. BSSB to assist as needed.

ACTION: Dale to post the GHG and costing studies online and let Council know when they are available.

ACTION: Dale to provide Council with the link to the Lessons Learned report completed in June. DONE

Bob Deeks and Robyn Wark will be sharing the Lessons Learned report at the Getting to Zero Forum in Oakland, CA Oct 9 – 12, 2019. See https://gettingtozeroforum.org/speakers/.

5. Local Government Peer Networks

Item deferred due to time.

6. Proposed Changes Part 9 Buildings

Zac reviewed two proposed changes to address issues - particularly in climate zones 5 and 6 - with the current Part 9 TEDI metrics. BSSB worked with Remi Charron/BC Housing this summer and with the assistance of a TEDI Working Group, identified two problems and recommended solutions:

- **Issue 1: Inequality of TEDI targets at the edge of climate zones. Proposed solution:** Use HDD-based TEDI (adjusting the targets to meet 'sloped' rather than stepped increments) to facilitate targets being met in areas on the colder fringes of the climate zones
- **Issue 2: Challenges of meeting TEDI target for single family dwellings with unique design features (e.g., cathedral ceilings). Proposed Solution:** Align the approach closer with that currently being proposed for the National Building Code – allow for an alternative option to TEDI - achieve a % improvement in TEDI over the reference house

Issue 1: Sliding TEDI Solution - Council members discussed:

- How a sliding scale would work (the Code table would remain the same but there would be an option to adjust based on 100 heating degree day increments)
- Change fatigue and the challenges of communicating another change and explaining the sliding scale (in contrast to last year, industry asked for changes this year which demonstrates the Council is listening and responding)
- AHJ authority to determine climate within their jurisdictions
- Issue doesn't seem to appear in CZ 4
- Are 100 HDD increments too fine – finer than the climate itself?
- The 2017 and 2018 metrics reports reflected locations at the mid range of the CZs

- A sliding scale is not a relaxation but merely making it fair
- How to improve available weather/data files?
- In-stream projects would not be affected by this change, but local governments may make different arrangements
- Homebuilders will be very open to this change and indeed will see it as a 'huge improvement'

Toby Lau reported the Technical Subcommittee agrees with this proposal.

Pauline Rupp of CHBA BC reported on findings of a CHBA BC Task Group looking at this issue. They ran 84 homes through the proposed approach. In the mid to higher end of the CZ, they found a relaxation of about 3 points; 30% found favourable changes though they were not actually significant. CHBA BC would still like an alternative option – the proposed approach works well in theory but there are challenges (e.g., the sliding scale is based on HDD but the AHJ gets to choose this and there are limited data points in software such as ERS which is a H2K issue rather than an issue with the sliding scale).

DECISION: ESCC members endorsed the proposed TEDI metric change and recommended it be supported by appropriate communications.

ACTION: BSSB to work with Subcommittees and NRCan to discuss possibility of enhancing weather files within ERS.

ACTION: BSSB to explore the idea of publishing a bulletin about available weather data in ERS and challenges using it when modelling homes.

ACTION: BC Hydro/BSSB to develop appropriate communications language for the November newsletter about Part 9 TEDI Changes (i.e., ESCC responsive to concerns – try to obtain quotes from CHBA and others demonstrating effective govt-industry partnership).

Issue 2: % Better - The Working Group found that TEDI doesn't necessarily work for some building archetypes. A % better option would enable a builder to demonstrate % better improvements in building envelope over a reference home. The proposed language is the same as that being proposed for the national code which assists harmonization efforts. This would be a voluntary option.

Pauline Rupp reported that this is a building envelope method only (mechanicals not included) and CHBA members view having a choice – TEDI or % better - favourably. Working to align with the direction of the national code makes sense and makes one less change down the road. When their Task Group ran calculations, they didn't see consistent/predictable results and would like to explore that further.

Council discussed:

- Changes due to solar heat gains
- Efficient designs and the importance of this, noting that every building that uses a % better approach isn't necessarily due to poor design
- ERS aligning with the Code over time – this would help that alignment
- The value of having technical support available to EAs and builders – Service Organizations receive more inquiries than they can handle
- Sharing answers to Step Code questions/inquiries publicly – e.g., posting to the website
- The value of working collaboratively with NRCan to prioritize ERS needs
- Directing technical questions to code.question@gov.bc.ca

DECISION: ESCC members endorsed the proposed % better change if issues identified by CHBA BC can be resolved very soon, and the change is supported by appropriate communications.

ACTION: BSSB to consult with EAs to see where there is confusion in either modelling and/or Code language, and engage with NRCan if help needed with H2K issues.

ACTION: BSSB and communications team to develop plan for communicating Part 9 changes, especially with Building Officials and builders – potential communications opportunity at BOABC's fall conference (connect with Catherine Ernst).

ACTION: BSSB to undertake appropriate regulatory work to incorporate the proposed Part 9 changes into the BC Building Code as quickly as possible.

7. Compliance and Energy Advisor Subcommittee Report

Subcommittee Co-chairs Vanessa Joehl and Nicholas Heap provided a written report attached with meeting agenda. Highlights of work since the June meeting:

- Updated Part 9 Energy Compliance Report – now with instructions for modelling/testing ground-oriented attached residential buildings
- Part 9 Mid-Construction Verification Form – now available online and much work and review
- Searchable EA/energy modeller database now online

The Co-chairs reminded the Council of their request from the June meeting that the Subcommittee be allotted enough budget so it can prepare and deliver on a workplan of needed items for the coming year (the development of a budget/workplan may be iterative). There is concern with 'volunteer fatigue' that the current ad-hoc resourcing model is not able to address.

ACTION: BSSB to assign new staff to Step Code work, and in collaboration with partners, help identify how to address the resourcing/financing issues raised by the Subcommittee.

8. EA White Paper and Recommendations

C&EA Subcommittee Co-chairs Vanessa and Nicholas reminded Council the C&EA Subcommittee was likely the first time EAs, building officials, service organizations and industry have come together to work to solve shared challenges – just one of which is the role of EAs/energy modellers in the building regulatory system. A Working Group of the C&EA Subcommittee helped guide the preparation of an EA White Paper report and recommendations. The White Paper was prepared by City Green with funding from NRCan and examined the current and potential future role of Energy Advisors/energy modellers. Four overarching recommendations from the report focus on:

- Professional Regulation of the Industry
- Code Compliance Services Training
- Quality Assurance
- Stakeholder Support Mechanisms

The recommendations are inter-related and equally important. Subcommittee Co-chairs urged the Council to take responsibility for ensuring the recommendations are fully implemented. They proposed two Working Groups be formed: the first to review the recommendations in full, and a second to develop a plan for how to implement the recommendations. Each set of recommendations will need a sponsor and multi-tiered supports.

Council discussed the following related points:

- Possibly regulatory homes - Professional Governance Act, BC Housing's licensing group? NRCan?
- This issue may not sit solely or primarily within BSSB in government (e.g., may involve other ministries such as Advance Education)

- EGBC/AIBC have professional practice guidelines - ASTT could potentially fill that gap – the majority of EAs are not architects/engineers
- Interior Designers Institute of BC – similar pressures of role in current regulatory system
- If regulation is pursued, not making it overly complex or cumbersome or an obstacle to building

DECISION: ESCC members generally agreed with the request made by the C&EA Co-chairs that implementation of the EA White Paper be a high priority.

ACTION: BSSB to help determine next steps to address EA Report Recommendations. BSSG to start a working group and speak with other ministries and NRCan (as this will be a national issue with a tiered code) when doing so.

ACTION: Dale to connect with Max and Maya/LG Peer Networks about options/tools to ease local government communications / sharing of solutions etc. (e.g., SharePoint).

9. Capacity Building and Communications Subcommittee Report

Written report from Dale Andersson and Christian Cianfrone.

Christian wanted expanded key performance indicators, to evaluate progress with more rigour and with a clear Scope of Work to create potential funding options. He also wants someone to manage the role and go from there.

There has been some interest in a Part 3 Working Group which will start up.

10. Proposed Changes Part 3 Buildings

Zachary May outlined three proposals for changes to the Step Code metrics for Part 3 buildings:

- Proposal #1 - Adjusted metrics for Part 3 - CZ5+
- Proposal #2 – Metrics for public sector buildings for hospitals/care facilities – due to concern expressed about the proposed metrics, this proposal was removed from the discussion pending further analysis by BSSB and the Technical Subcommittee
- Proposal #3 – Metrics for other public sector buildings

Council discussed issues as follows:

Proposal 1:

- What feedback BSSB received in the public review process – mostly concern with metrics for hospitals being too ambitious, and the need to differentiate other public sector buildings such as schools or colleges
- IBPSA raised no concerns about this proposal
- Technical Subcommittee support of this proposal
- FortisBC's interest in offering incentives for Part 3 buildings and the value of incentives to encourage builders – there is value in understanding any obstacles to the provision of incentives

DECISION: COUNCIL supported the proposed Part 3 changes for Climate Zones 5 and above.

ACTION: BSSB to share public review comments on Part 3 buildings proposed metrics changes.

ACTION: BSSB to incorporate proposed Part 3 changes into BCBC regulation as quickly as possible supported by relevant communications.

Proposal 2:

- What feedback BSSB received in the public review process – mostly concern with metrics for hospitals being too

Proposal #2: Other Public Sector

Council discussed the following:

- The diversity of public buildings are challenging, as hospitals and classrooms should have different requirements from university residences/mixed use. Some labs/hospitals must adhere to different standards from Ministry of Health/WorkSafeBC reqs on air changes, etc. Different requirements are necessary for each.
    - Zac said college/university definition does not apply to all buildings built on campuses, but rather school-type buildings regardless of whether they are on campus or not (e.g. laboratories would be judged on EUI and thermal demand).
    - On hospitals, Zac said there is a proposal to build to Step 1 and determine specifics of next Steps by policy (Min. of Health requires NPV, carbon impacts, etc.). That responds to IBPSA concerns. Guidelines could be made by January. Technical SC is more split on whether to keep targets and provide guidance, or strike them and work further.
- John said efficiency should not come at the expense of occupant comfort/good learning environment. Old policies did not specify mechanical cooling in classrooms, but students/faculty complained about poor air quality and high temperatures.
- Christian said absolute targets are advantageous because they force everyone to discuss and consider things you might not otherwise. Targets also hold people accountable to use best practices. John wants to see targets, but as proposed, not realistic to achieve within constraints of WorkSafeBC.
- Different targets proposed include a % better approach, a tiered approach, and finer distinctions between targets of a similar type (e.g. elementary vs. high schools). There were concerns about another new approach.
- Robyn said without policy/requirements, CEMs say bottom dollar always wins. Industry and public sector should be held to same high standard. If takes a little longer, that is OK.
- Harshan has read all feedback from Technical Sub-Committee – no issue w EUIs just TEDIs. E.g., elementary schools – issues that related. Northern Zone schools had hard time reaching highest Step TEDIs. A step forward would be to have EUI established. If putting TEDI – say TEDI will apply if no local policies apply.
- Wilma said the merit of % better was a possibility. To adhere to objectives of CleanBC, GHGs targets would be welcomed.
- Zac said GHG's will be part of public sector buildings policy. Adrian agreed, and is seeking guidance at this stage. Patrick said school buildings can be very different. Absolute targets can be very challenging, so he supports % better approach which is aligned with the national approach.

ACTION: Zac will take these comments and suggestions back to BSSB to find alternatives and develop more options for public sector buildings. BSSB will add ventilation rates to research project and follow-up with FortisBC on incentives/barriers. Public review comments to be forwarded to Step Code Council; Ministry of Advanced Education, Skills and Training and Ministry of Energy, Mines and Petroleum Resources. Follow up on four recommendations by December and create a Public Sector Buildings Working Group. Will develop communications resources for local governments.

John has data they can share on different typologies, etc.

Topic of existing buildings was deferred to the next meeting due to time constraints.

Meeting adjourned at 4 p.m.

Request: Upcoming Engagement Session with Building and Safety Standards Branch (Municipal Affairs and Housing)

Hi Jonathan,

Jeff Fisher of UDI provided your name to us in response to the email below. I'm looking to book a 1 hour meeting with you to talk with our contractor who will be leading this session. Can you please advise on your availability this week (or next)? For this week, tomorrow or Friday afternoon looks pretty open from our end.

Thanks in advance,

Aura McCrae
Senior Policy Analyst
Building and Safety Standards Branch | Ministry of Municipal Affairs and Housing
T: 778 698-7635 | M: 250 880-4566 | Email: aura.mccrae@gov.bc.ca

Offering acknowledgement in respect of the Lekwungen Speaking People, traditional keepers of this land on which I live, work and play.

Subject: FYI/Request: Upcoming Engagement Session with Building and Safety Standards Branch (Municipal Affairs and Housing)

Greetings,
I am writing to you as you have been identified as a contact for your organization.
As you may or may not know, Building and Safety Standards Branch (BSSB) with the BC government is working on an initiative called Building Energy Requirements Tool (BERT for short).
This tool is intended to gather data to help inform policies and programs throughout the building lifecycle.
Specifically, BERT will:

- Help manage information
- Support industry compliance with BC Building Code requirements
- Support local government enforcement of code requirements
- Improve transparency

With the initial application aimed at supporting industry and local government's transition to new energy performance requirements, there is potential to assess opportunities in tool development and other data needs.
To do this, we would be conducting engagement/consultation sessions in the next few weeks to seek your input. The purpose of these sessions is to document data needs in building/built environment to inform tool development from a user interface (data inputs and outputs) and on how we may manage the data we collect.
In addition to yourself, please provide 2 to 3 additional contacts from your organization as soon as possible.
*Note: we have also reached out to International Building Performance Simulation Association of British Columbia, Association of Professional Engineers and Geoscientists of British Columbia, Architectural Institute of British Columbia to seek representation from their organizations.

Myself and/or other members of the project team will be in contact with you with further details on this planned engagement/consultation session.
Please advise if you are no longer the appropriate contact. I look forward to hearing from you.
Sincerely,

Aura McCrae
Senior Policy Advisor
Building and Safety Standards Branch | Ministry of Municipal Affairs and Housing
T: 778 698-7635 | M: 250 880-4566 | Email: aura.mccrae@gov.bc.ca

Hello everyone,

Meeting agenda attached.

As before, please find dial-in information and a Skype link below. I have added an additional 30 minutes for overflow in case we go long, but we’ll try to keep it to 1.5 hours.

We are still finalizing the agenda, so if you think we should amend or change it, there’s still time to let us know.

Best,
Hugo

Hugo Wong
Policy Analyst, Building and Safety Standards Branch, Office of Housing and Construction Standards
Ministry of Municipal Affairs and Housing

Subject: Save the Date: December ESCC Teleconference for Mon. Dec. 9, 2-3:30 p.m.

Dear Energy Step Code Council members and guests,

My name is Hugo, and I work with Dale at BSSB. I’ll be providing admin support for the Energy Step Code Council and some sub-committees.

With the release of Revision 2 of the 2018 BC Building Code, we’d like to propose a 1.5-hour teleconference on Monday Dec. 9, 2-3:30 p.m. We’re still finalizing an agenda, but our draft contains:

* ESCC Subcommittee Composition: Report Out
* Succession Planning for Subcommittees
* Strat Plan Update?
* Discuss Roadmap to 2022 code – what should we do by 2021?
* BSSB CleanBC Team Update - update on our work/plans etc.?
* EA White Paper Response
* Other?

Please let us know if you can make it, and send any questions or other agenda items to us. We’ll send dial-in information and a more fulsome agenda closer to the date.

Best,
Hugo

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Agenda

Date and Time of Meeting: December 9, 2019 | Time: 2:00 – 4:00 p.m. Pacific Time
Teleconference Meeting – See also meeting invite for call-in details
s.15

Chair: Zachary May, Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

1. Welcome and Introductions – Zachary May
    - New member: Manjit Sohi representing BOABC
2. BCBC 2018 Revision 2: BC Energy Step Code Changes – Zachary May, Toby Lau and Norm Connolly
    - See https://energystepcode.ca/news/ for details of Part 3 and Part 9 Buildings
    - Decision re: Step 1 for Public Sector Buildings
    - Public Sector Buildings Working Group Update – Scott Williams, BSSB
    - Roadmap to BCBC 2022
3. ESCC Subcommittee Composition: Follow-up from October 4, 2019 Meeting – Zachary May and others
    - Survey of Subcommittee Members (Planned)
    - Succession Planning for Subcommittees
4. Local Government Implementation Update (Graphic to follow shortly) – Zachary May and others
5. BC Energy Step Code Year-End Accomplishments (Graphic to follow shortly) – Zachary May and others
6. Other Items – All
7. Next Meeting: Usual in-person meeting proposed for February 2020 – Zachary May
8. Meeting Adjournment

For Information

Energy Efficiency Canada has just released a scorecard comparing efforts in energy efficiency across Canada. B.C. is on top, due in part to our work on the BC Energy Step Code and the supporting work from Utilities and BC Housing! https://www.scorecard.efficiencycanada.org/.

ENERGY STEPCODE

BUILDING BEYOND THE STANDARD

Zachary D. May, MBA
Director, Strategic Policy
Buildings and Safety Standards Branch
Ministry of Municipal Affairs and Housing

December 12, 2019
Energy Step Code Council – Year End Update

Outline

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

- **Recent Changes – effective December 12, 2019**
- Additional work and research underway
- Getting to 2022

Changes – Dec. 12, 2019

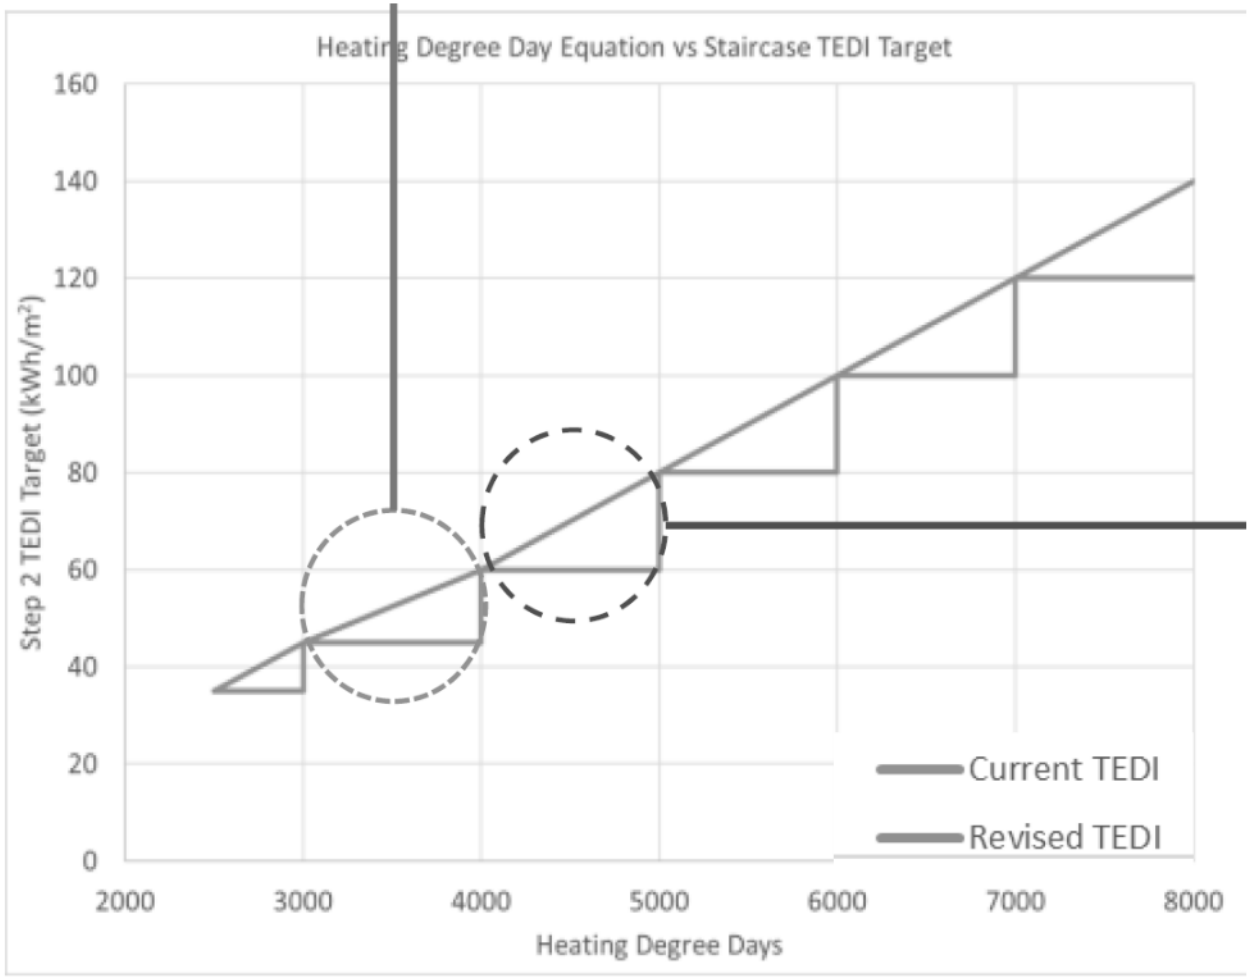
Part 9:

- Part 9 TEDI (Envelope) adjustment scale
- Alternative to TEDI using ERS reference building

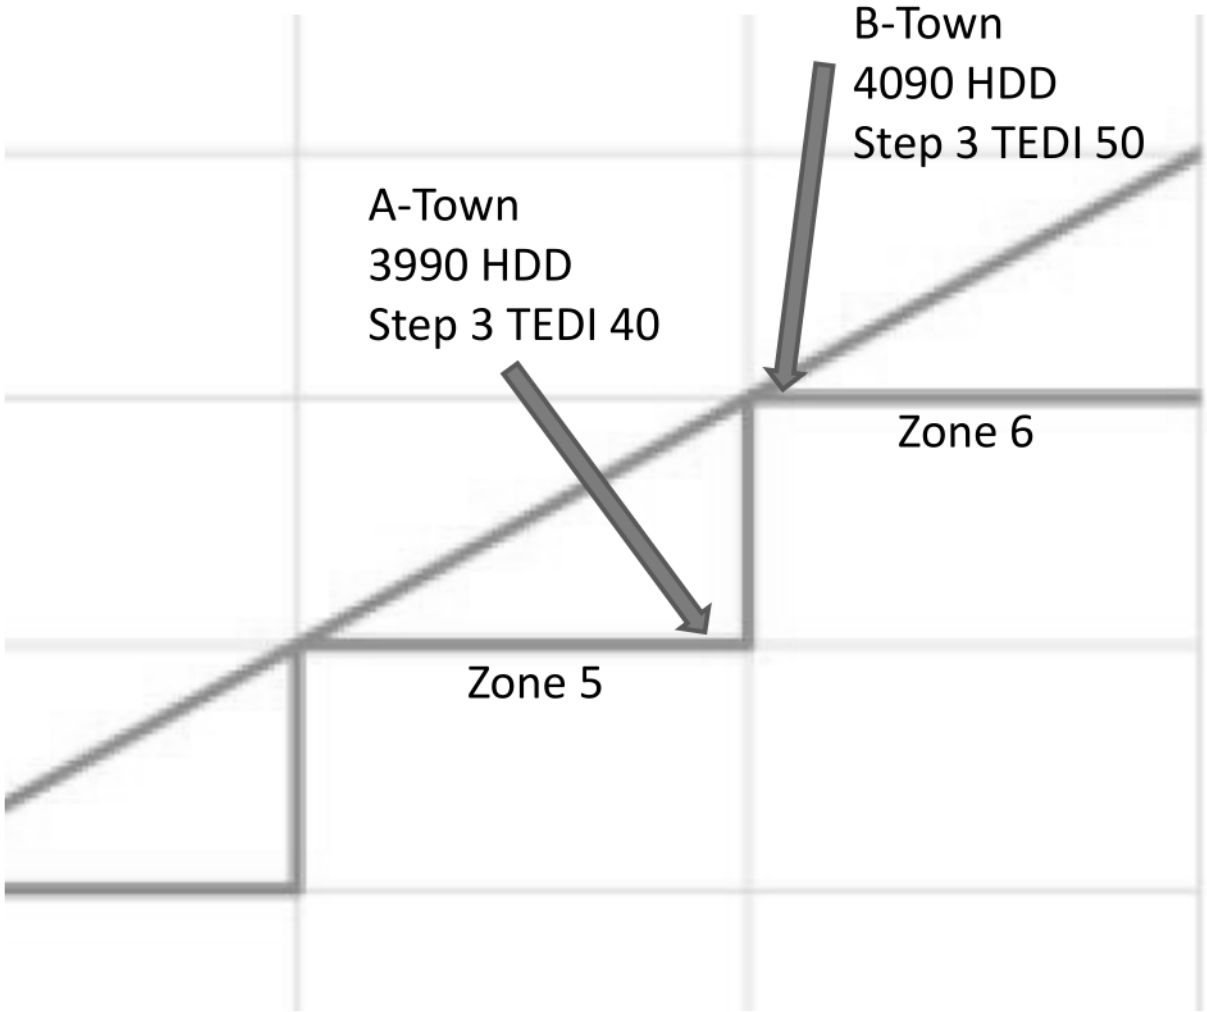
Part 3:

- Adjusted targets outside Climate Zone 4
- Enable Energy Step Code for Public Sector Buildings

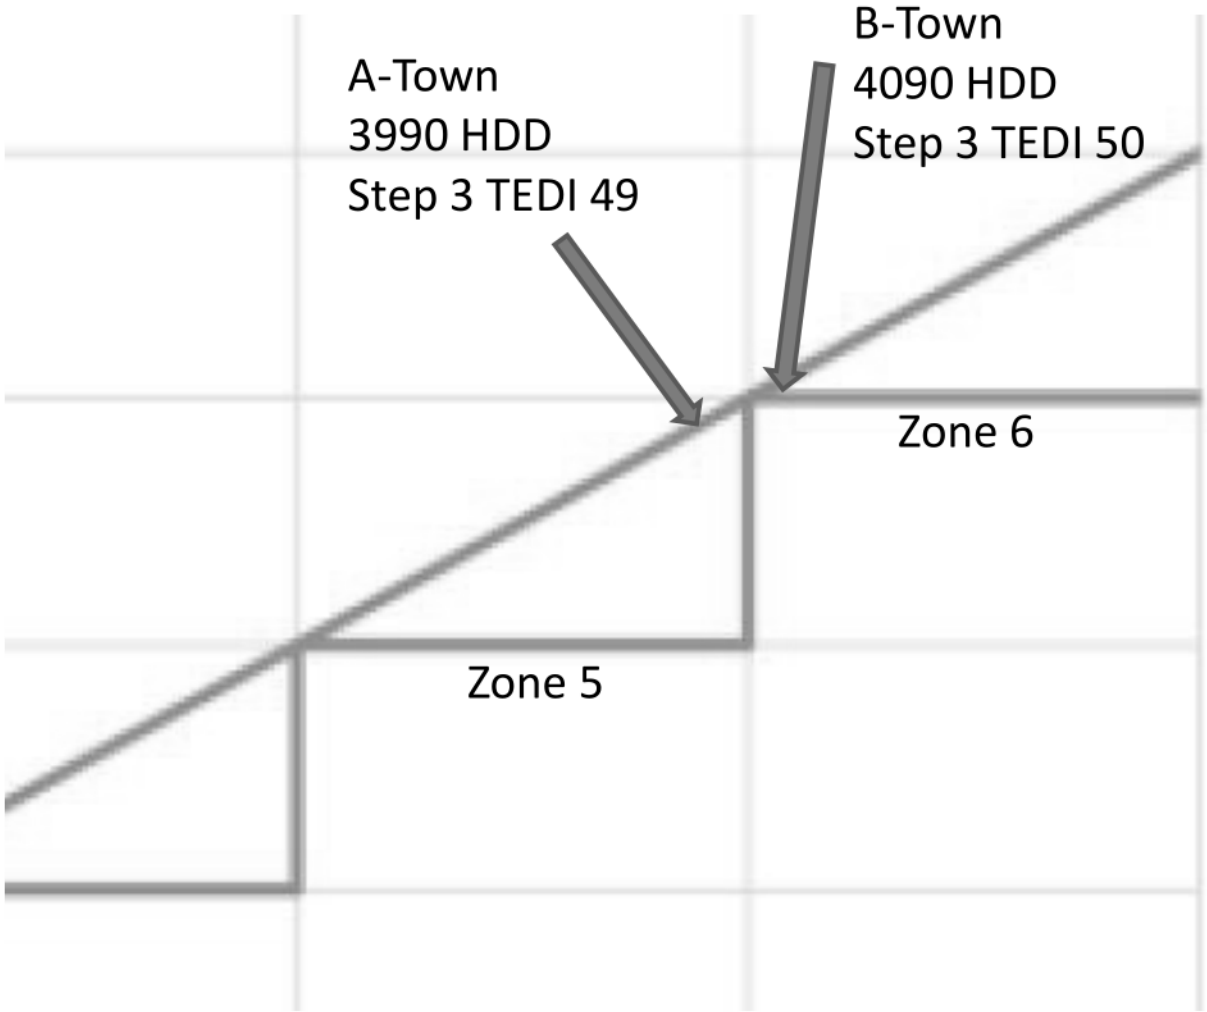
Part 9 Changes



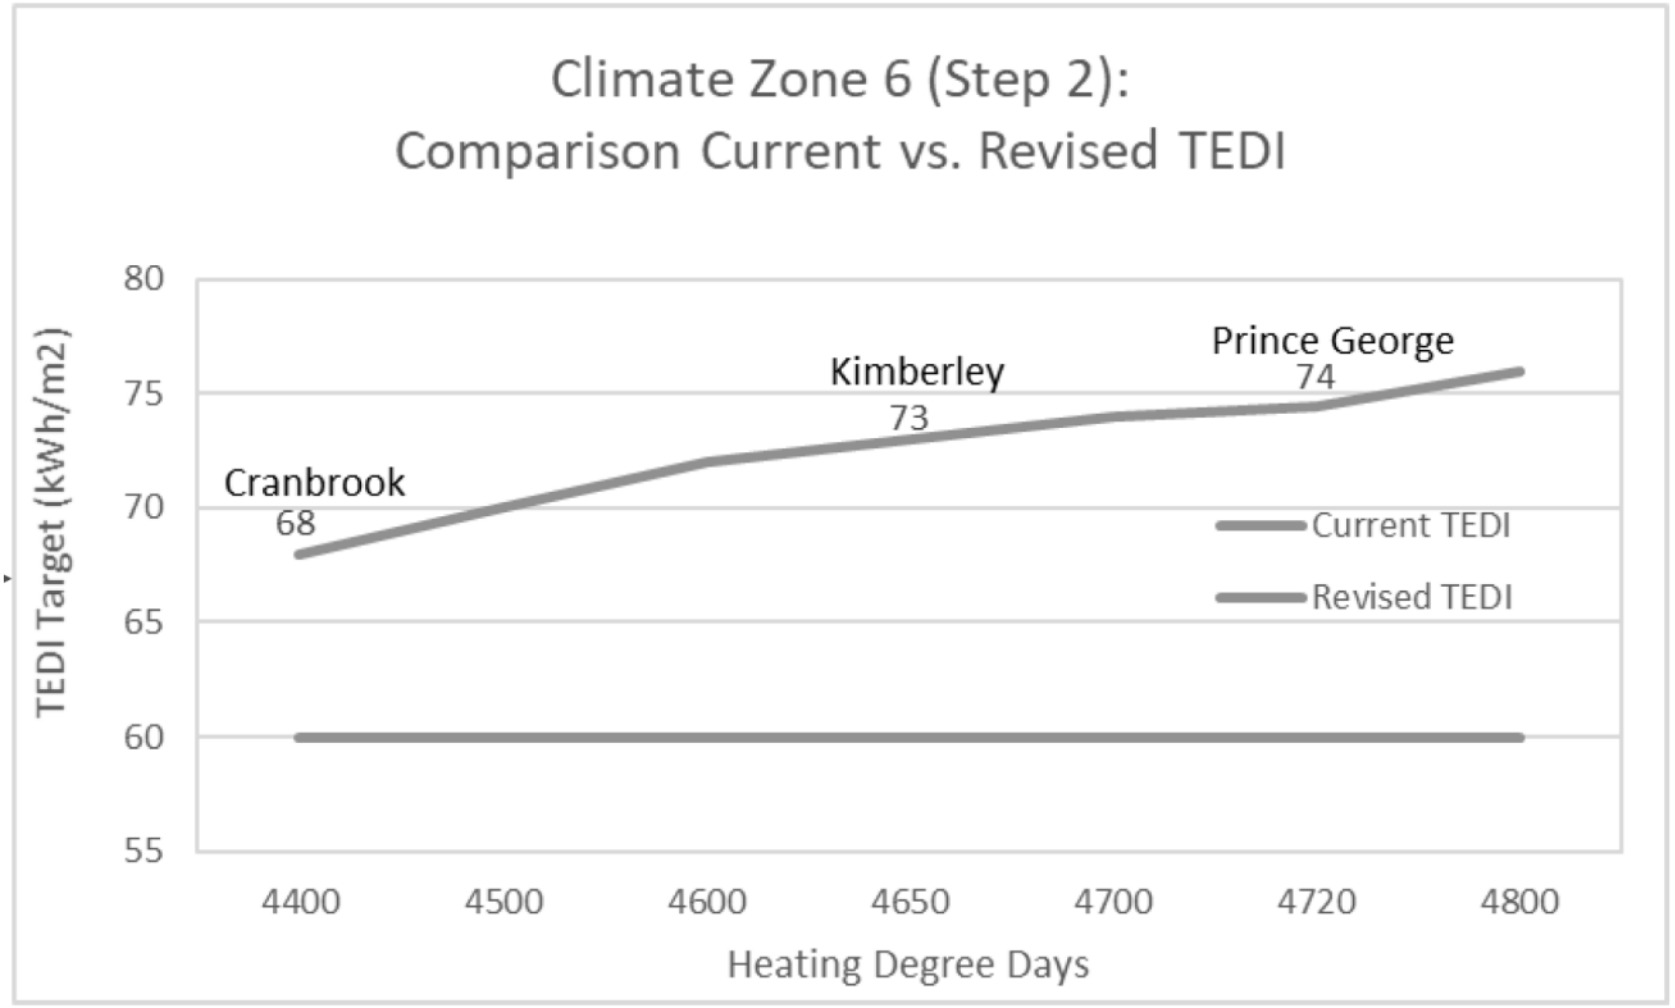
Part 9 Changes



Part 9 Changes



Part 9 Changes



Changes – Dec. 12, 2019

Part 9:

- Alternative to TEDI using ERS reference building - "*envelope performance improvement over the EnerGuide Reference House*"

- New term defined within 9.36.6.
- Based on proposed 2020 National Building Code
- Only available with ERS compliance (not 9.36.5.)
- Neutralizes impact of equipment, focused on passive reduction of heating demand

Changes – Dec. 12, 2019

ERS Compliance Options

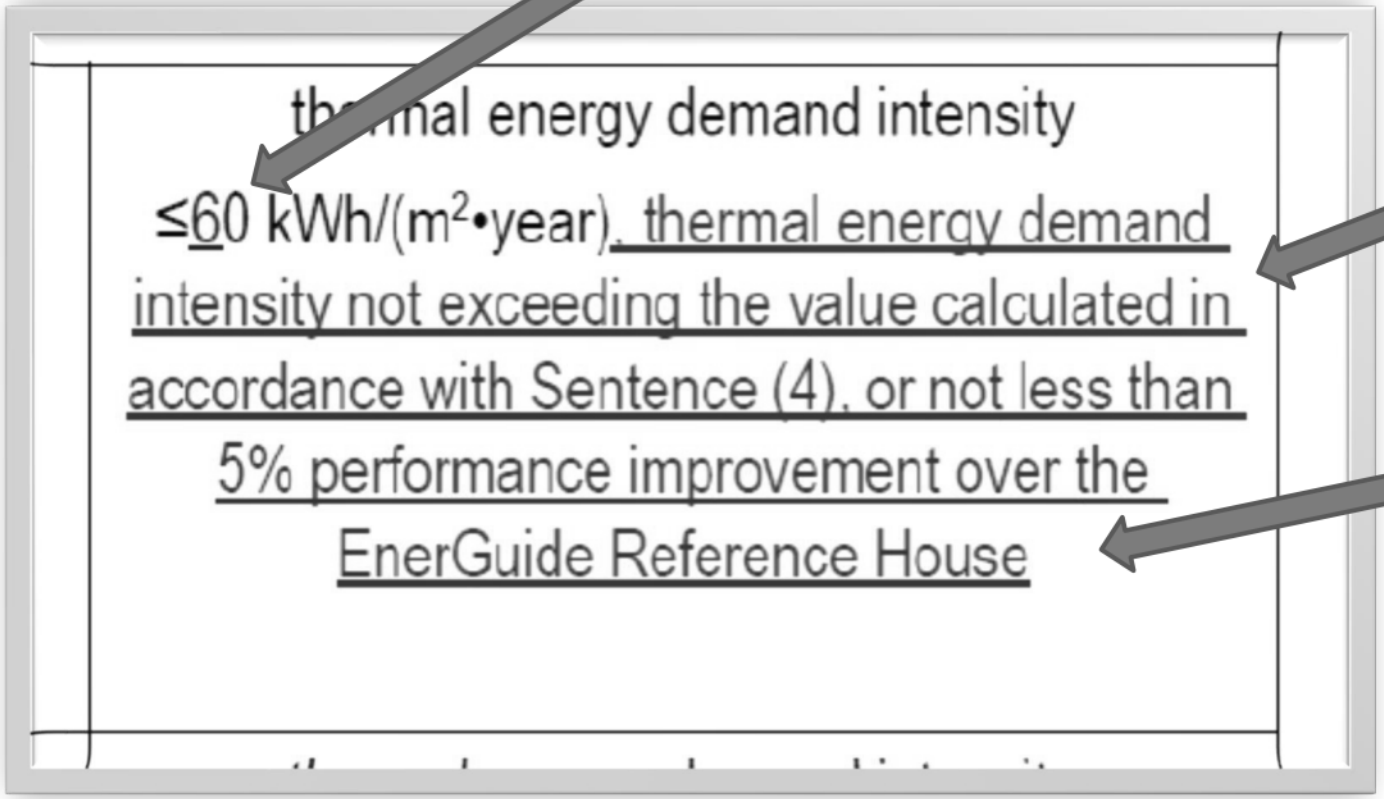
Step	ACH	% over ERS reference	% envelope improvement over ERS reference house
1	N/A	≤0	N/A
2	≤3.0	≤10%	≤5%
3	≤2.5	≤20%	≤10%
4	≤1.5	≤40%	≤20%
5	≤1.0	N/A	≤50%

Changes – Dec. 12, 2019

Step	Airtightness (Air Changes per Hour at 50 Pa Pressure Differential)	Performance Requirement of *Building* Equipment and Systems	Performance Requirement of *Building* Envelope
1	N/A	EnerGuide Rating % lower than EnerGuide Reference House: not less than 0% lower energy consumption or conform to Subsection 9.36.5.	
2	≤ 3.0	EnerGuide Rating % lower than EnerGuide Reference House: not less than 10% lower energy consumption or the applicable mechanical energy use intensity requirements in Table 9.36.6.3.-G	thermal energy demand intensity ≤60 kWh/(m²•year), thermal energy demand intensity not exceeding the value calculated in accordance with Sentence (4), or not less than 5% performance improvement over the EnerGuide Reference House
3	≤ 2.5	EnerGuide Rating % lower than	thermal energy demand intensity

Changes – Dec. 12, 2019

Baseline TEDI for climate zone



Scaled-adjusted TEDI

Envelope performance improvement over the ERS Reference House

Changes – Dec. 12, 2019

Part 3:

- Adjusted targets outside Climate Zone 4
- Enable Energy Step Code for Public Sector Buildings

Changes – Dec. 12, 2019

Table 10.2.3.3.-H
Energy Performance Requirements for Other Residential Occupancies
Forming part of Sentences 10.2.3.3.(1) and (2)

Degree-Days Below 18°C	Step	Equipment and Systems – Maximum Total Energy Use Intensity, kWh/(m²•year)	*Building* Envelope – Maximum Thermal Energy Demand Intensity, kWh/(m²•year)
Less than 3000	1	Conform to Part 8 of the NECB	
	2	130	45
	3	120	30
	4	100	15
3000 to 3999	1	Conform to Part 8 of the NECB	
	2	130	45
	3	120	35
	4	110	22
4000 to 4999	1	Conform to Part 8 of the NECB	
	2	135	50
	3	120	40
	4	110	22
5000 to 5999	1	Conform to Part 8 of the NECB	
	2	135	55
	3	120	40
	4	110	22

Changes – Dec. 12, 2019

Table 10.2.3.3.-H
Energy Performance Requirements for Other Residential Occupancies
Forming part of Sentences 10.2.3.3.(1) and (2)

Degree-Days Below 18°C	Step	Equipment and Systems – Maximum Total Energy Use Intensity, kWh/(m²•year)	*Building* Envelope – Maximum Thermal Energy Demand Intensity, kWh/(m²•year)
Less than 3000	1	Conform to Part 8 of the NECB	
	2	130	45
	3	120	30
	4	100	15
3000 to 3999	1	Conform to Part 8 of the NECB	
	2	130	45
	3	120	35
	4	110	22
4000 to 4999	1	Conform to Part 8 of the NECB	
	2	135	50
	3	120	40
	4	110	22
5000 to 5999	1	Conform to Part 8 of the NECB	
	2	135	55
	3	120	40
	4	110	22

- Adjusted targets outside climate zone 4 based on available data
- Will make targets more achievable in colder climates

Changes – Dec. 12, 2019

10.2.3. Energy Step Code

10.2.3.1. Application

1) This Subsection applies to *buildings* containing any of the following *major occupancies*:

a) *assembly*, as described in Tables 10.2.3.3.-A, 10.2.3.3.-B, 10.2.3.3.-C and 10.2.3.3.-D,

b) *treatment*, as described in Table 10.2.3.3.-E,

c) *care*, as described in Table 10.2.3.3.-F,

d) *residential*,

e) *business and personal service*, or

f) *mercantile*.

(See Sentence 1.1.3.1.(1) and Table C-2 in Appendix C.)

Changes – Dec. 12, 2019

10.2.3. Energy Step Code

10.2.3.1. Application

1) This Subsection applies to *buildings* containing any of the following *major occupancies*:

a) *assembly*, as described in Tables 10.2.3.3.-A, 10.2.3.3.-B, 10.2.3.3.-C and 10.2.3.3.-D,

b) *treatment*, as described in Table 10.2.3.3.-E,

c) *care*, as described in Table 10.2.3.3.-E,

d) *residential*,

e) *business and personal service*, or

f) *mercantile*.

(See Sentence 1.1.3.1.(1) and Table C-2 in Appendix C.)

- Enables Energy Step Code Step 1 for public sector buildings
- No specific targets at this time

Changes – Dec. 12, 2019

Part 9:

- Part 9 TEDI (Envelope) adjustment scale
- Alternative to TEDI using ERS reference building

Part 3:

- Adjusted targets outside Climate Zone 4
- Enable Energy Step Code for Public Sector Buildings

Outline

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

- Recent Changes – effective December 12, 2019
- **Additional work and research underway**
- Getting to 2022

Additional work and research

Complete:

- Summary memo of the changes – Complete!
  www.energystepcode.ca

Underway and in development:

- Online code publishing
- Collaboration with NRCan for ERS compliance
- Part 9 compliance forms and calculator update
- Updates to builder guides – BC Housing
- Research on public sector buildings

Outline

- Recent Changes – effective December 12, 2019
- Additional work and research underway
- **Getting to 2022**

CleanBC – Better Buildings

British Columbia's commitment for future Building Codes

New Buildings
2022 – 20% improvement
2027 – 40% improvement
2032 – Net Zero Energy Ready

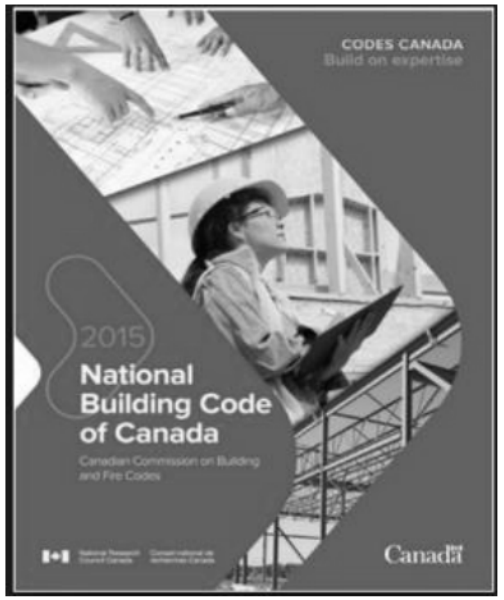
Existing Buildings
Code for existing buildings in 2024

Getting to 2022

20% improvement in 2022:

- Build on the success of the Energy Step Code
- Increase harmonization with National Building Code / National Energy Code for Buildings

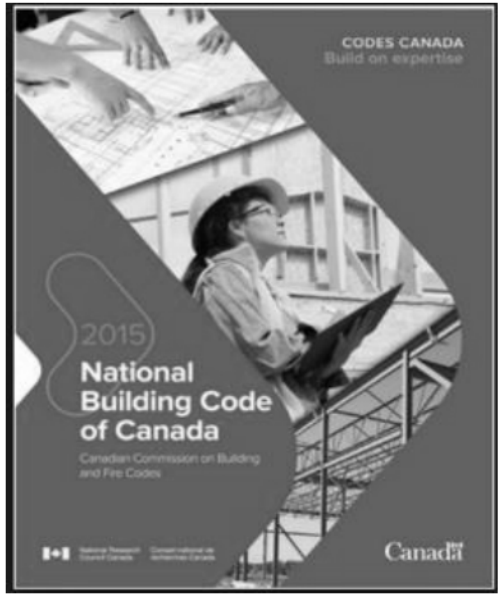
ENERGY STEPCODE
BUILDING BEYOND THE STANDARD



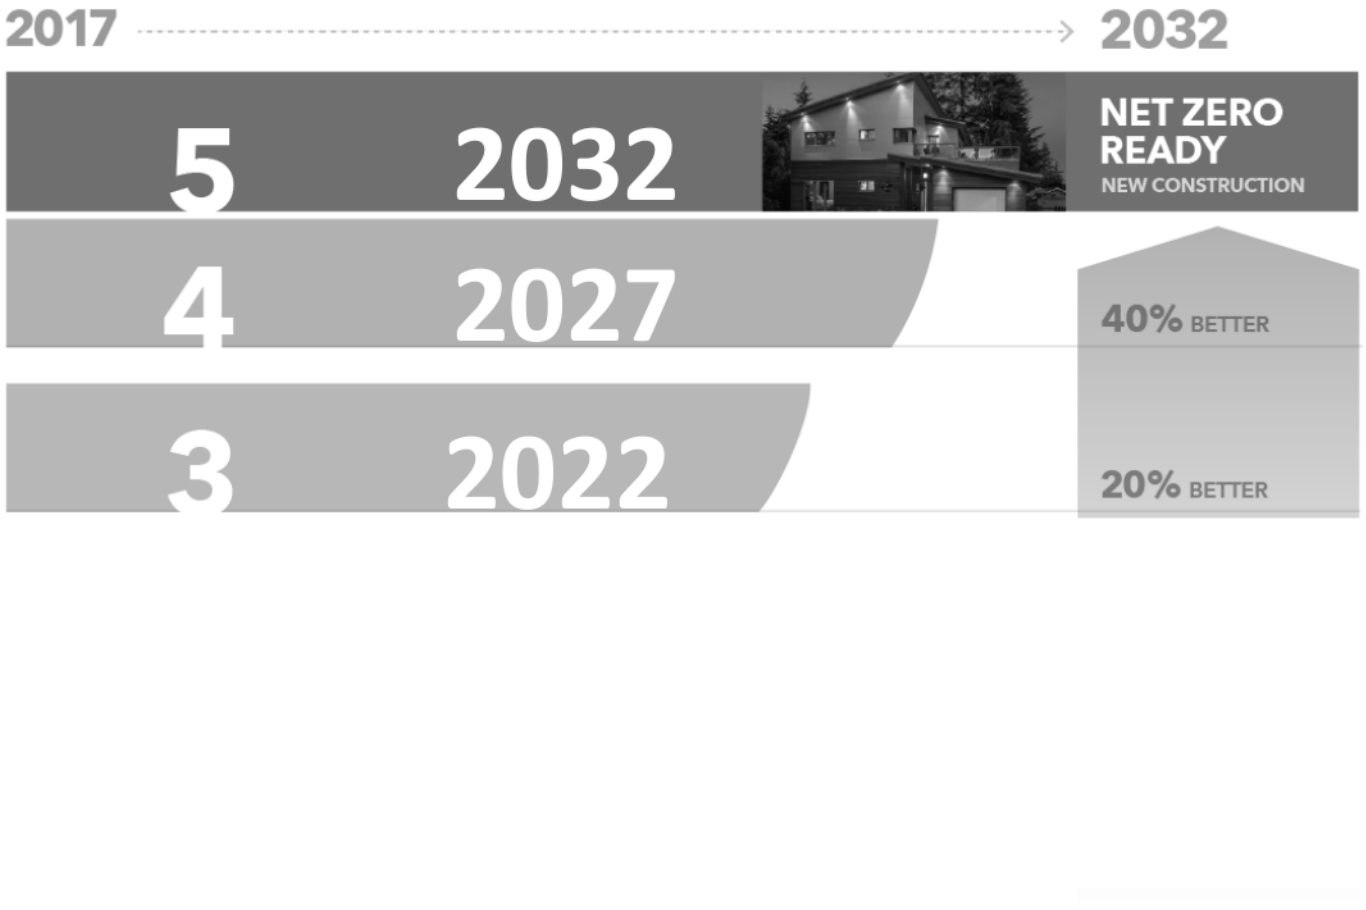
Getting to 2022

2020 NBC/NECB possible outcomes:

- NECB may achieve 20% improvement over 2015 NECB
- No proposed changes to baseline 9.36. prescriptive (static since 2012)
- Tiered code proposals



Getting to 2022



Part 9 (proposed plan):

- Step 3 achieves 20%
- Lower steps will need to be removed or adjusted
- Communities can still reference higher Steps
- Prescriptive backstop for non-residential
- Capacity challenges for rural and remote communities

Getting to 2022

Part 3 (proposed plan):

- Less clear which step is "20% improvement"
- Will require analysis and consultation to establish new minimum Step
- Baseline will be the 2020 National Energy Code for Buildings

CleanBC – Better Buildings

British Columbia's commitment for future Building Codes

New Buildings
2022 – 20% improvement
2027 – 40% improvement
2032 – Net Zero Energy Ready

Existing Buildings
Code for existing buildings in 2024

ESCC Feb. meeting date, Dec. meeting minutes, etc.

Hello Energy Step Code Council members,

I hope you have had a restful holiday. We have some updates to share following our December teleconference.

After looking over the Doodle poll, we have chosen **Feb. 28, 2019** as the date for the next Energy Step Code Council meeting. We expect it to be an all-day meeting in Vancouver again. We tried to choose the date that the most members could attend, although I realize it doesn't work for everyone. Such is the challenge with a large group!

I have attached the minutes from the December teleconference, as well as a summary graphic of our achievements as a group over the last year. Please let me know if there are errors or omissions.

More details on the timing and logistics of the meeting will come in the next few weeks.

Best,
Hugo

Energy Step Code Council Meeting
Meeting Notes

Date: Mon. Dec. 9, 2019 | Time: 2:00 p.m. to 3:15 p.m. Pacific
Venue: By teleconference
Chair: Zachary May, Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Participants

1. Bea Bains, FortisBC
2. Christian Cianfrone, ZEBx
3. Maya Chorobik, LG Peer Network
4. Norm Connolly, Richmond/PIBC, and co-chair, Technical Subcommittee
5. Catherine Ernst and Manjit Sohi, BOABC
6. Chris Frye, NRCan Housing Division
7. Nat Gosman, EMPR
8. Joe Hart, Icon Homes/CHBA BC
9. Nicholas Heap, City of Richmond and co-chair CaEASC
10. Gary Hamer, BC Hydro
11. Vanessa Joehl, CHBA BC and co-chair, CaEASC
12. Jason Jung, ASTTBC;
13. Toby Lau, BC Hydro and co-chair, Technical Subcommittee
14. Wilma Leung, BC Housing
15. Joe Hart, Icon Homes and CHBA-BC
16. John Madden, UBC
17. Warren Perks, BCCA
18. Harshan Radhakrishnan, EGBC
19. Maxwell Skyes, City of Surrey/UBCM Rep and Chair, Large LG Peer Network
20. BSSB Staff: Scott Williams, Hugo Wong, Dale Andersson

Regrets: Bob Deeks, CHBA BC

NOTES

1. Welcome and Introductions

Zachary May welcomed Council members and guests, and walked through changes that have occurred since the last ESCC meeting on Oct. 4. No decisions today on the roadmap to 2022, but 20% better by 2022 is the policy commitment and appears realistic. Wanted to frame the upcoming February 2020 ESCC call around meeting some CleanBC commitments as a group.

BCBC 2018 Revision 2: BC Energy Step Code Changes – Zachary May, Toby Lau and Norm Connolly

1. **Part 9 Residential Buildings:** As discussed at the October meeting, there will now be two (BC Energy Step Code) additional options to address building envelope performance requirements (sometimes referred to as 'targets' or 'metrics'): revised TEDI requirements or a percent-better approach. Thermal Energy Demand Intensity (TEDI) requirements will remain the same, however Revision 2 will allow builders in colder parts of a climate zone to adjust their TEDI based on the Degree Days Below 18°C (HDD) of their project location, rather than use a single value for the entire climate zone. Alternately, builders using the EnerGuide approach will have the option of demonstrating a percentage improvement of the annual space heating demand over the reference building. This is based on a similar approach being considered for the model National Building Code.

2. **Part 3 Buildings Outside Climate Zone 4:** The BC Energy Step Code has adjusted requirements for Total Energy Use Intensity (TEUI) and Thermal Energy Demand Intensity (TEDI) that better reflect colder climate conditions.

3. **Part 3 Buildings, (Some Group A and Group B Occupancies):** Preliminary BC Energy Step Code requirements for hospitals, care centres, schools, recreation centres, libraries and colleges have been introduced, which establish a Step 1 requirement (energy modelling conforming to Part 8 of the National Energy Code for Buildings (NECB) and air leakage testing will be required) for these building types. At this time, specific energy intensity requirements are not included for these buildings.

Change 1 is intended to address concerns from energy modellers in colder climate zones and is similar to the 2020 NBC approach.

Change 2 (Part 3 buildings outside CZ4) were based on the 2018 metrics research report, and are meant to make the targets more reachable for buildings outside CZ4.

Change 3 is to introduce Step 1 for assembly and some care occupancies (sometimes referred to as "public sector buildings"). There are no specific TEDI or TEUI targets for these yet, as there was agreement at the October ESCC meeting that more work is required to develop acceptable requirements. It was clarified that Step 1 is not mandatory for these buildings, and adoption as a mandatory requirement is at the discretion of the municipality.

Discussion that there are no prescriptive minimums now, but prescriptive backstops could be an option in the future. Local governments have shown leadership to the private sector by building high performance public sector buildings, with increasing provincial leadership.

See https://energystepcode.ca/news/ for details of Part 3 and Part 9 Buildings.

ACTION: Slides about the BCBC 2018 Revision 2 Changes to be distributed to ESCC members, additional materials on the way.

BSSB is working with Wilma Leung and BC Housing to update all guides and training info to align with new options for Part 3 and 9 under Step Code. Updated Part 9 Compliance Reports/Calculator are also in the works. Depending on which compliance option you choose for your Part 9 building, the current calculator may work just fine. BSSB acknowledges FortisBC and BC Housing for funding the Part 9 Reports update.

Public Sector Buildings Working Group Update – Scott Williams, BSSB

As discussed at the October meeting, further work is needed to develop appropriate requirements for 'public sector' buildings. BSSB has posted an RFP to engage a consultant to assist with this work, with the RFP closing Jan. 10, 2020. The work will include a facilitated discussion on the Lower Mainland in the new year. Council members will be invited.

Roadmap to BCBC 2022

Zac reminded ESCC that CleanBC commits to a 20% improvement in new buildings by 2022, and to establish a code for existing buildings by 2024. Government seeks to build on the success of the Energy Step Code while keeping in mind the Provincial commitment to harmonization with the national codes. Lower Steps may need adjustment or removal, and Step Code will continue to expand to more building types and occupancies. Council input would be required there. There is also a need to address the capacity challenges in rural and remote communities. The Ministry is aiming to finalize the details of the 2022 code by early 2021.

2. **ESCC Subcommittee Composition: Follow-up from October 4, 2019 Meeting – Zachary May and others**
   - Survey of Subcommittee Members
   - Succession Planning for Subcommittees (not discussed)

In consultation with the Subcommittee Co-chairs, BSSB will send a survey to Subcommittee members to gather feedback on how the Subcommittees can most efficiently and effectively do their collective work. There have been some requests to tweak the scope of the Subcommittees in 2020 – for example, by having a dedicated subcommittee each for Part 3 and Part 9 buildings. BSSB will report back to Council at the next in-person meeting.

3. Local Government Implementation Update – Zachary May and others

BSSB numbers show 57 local governments have submitted an initial notification of consultation form. About 31-33 municipalities actually reference the Step Code in some way. A graphic will be shared by the end of the calendar year showing progress.

4. BC Energy Step Code Year-End Accomplishments – Zachary May and others

The Efficiency Canada report card showing B.C. as a leader in North America was a reminder of how much work we've done in the last five years. We have a clear destination, and clear barriers to overcome. B.C. understands net-zero ready better than most. This is also the second year in a row that CHBA members recommended changes that the ESCC responded to by way of a code change – reflecting responsiveness to the concerns of those in the industry.

Chris Frye: NRCan and Efficiency Canada asked Step Code reps to visit Nova Scotia to discuss with industry, local governments and the province to implement a Step Code-like regulation in the next 10-12 years. Others are also asking for details on the B.C. situation.

Zac also reminded Council of the Lessons Learned report prepared by James Glave and Robyn Wark as an excellent summary and analysis of the accomplishments and innovation of the Energy Step Code Council.

An in-person meeting is being planned for mid- to late February. A Doodle poll will be sent to help identify an appropriate date.

Meeting adjourned at 3:16 p.m.

ACTION: BSSB to distribute PowerPoint presentation and additional bulletins on the Revision 2 BCBC changes.

ACTION: Toby to determine if he can share national reports

29 CONCLUSION

WHERE WE GO FROM HERE 31

FOREWORD BY THE HONOURABLE SELINA ROBINSON MINISTER OF MUNICIPAL AFFAIRS AND HOUSING

Safe, affordable housing is critical to affordability and our overall quality of life, yet it has become the single-biggest challenge affecting British Columbians today.

Prices for renting and buying have surged past local incomes, leaving people paying a greater portion of their wages towards their home. This is hurting people, businesses and communities.

Since becoming housing minister I have met with hundreds of leaders from every level of government, Indigenous Peoples, and the public, non-profit and private sectors. All were excited to be part of the solution to British Columbia's housing affordability crisis.

The lack of affordable homes is hurting people and holding our province back.

Home prices didn't spike overnight, and our housing problems can't be fixed with a single budget.

It will take years of sustained action to bring housing affordability home.

We are acting immediately to stabilize demand by introducing a new speculation tax, increasing and expanding the foreign buyers tax and closing legal loopholes abused by speculators.

And we're working hard to build the right supply. We're making the biggest investment in housing in our province's history. Thousands of affordable homes are in development today, with tens of thousands more to come.

Together, in partnership with all levels of government, Indigenous Peoples, non-profits, co-ops, and the private sector we will streamline the creation of the homes people need across British Columbia.

We will continue to make housing more secure with sensible changes to our housing laws that make life more fair for renters and landlords, and by helping seniors and low-income families in need keep up with skyrocketing rents.

Taken together, these actions represent the first step on the path to reaching our goal of a province where everyone has the secure, safe, and affordable home they need.

Selina Robinson, Minister of Municipal Affairs and Housing

GOVERNMENT'S 30-POINT PLAN FOR A FAIRER HOUSING MARKET

GOVERNMENT'S 30-POINT PLAN FOR A FAIRER HOUSING MARKET

STABILIZING THE MARKET:

1. Taxing speculators who are driving up housing costs
2. Increasing the foreign buyers tax rate to 20%
3. Expanding the foreign buyers tax to areas outside of Metro Vancouver
4. Increasing the property transfer tax on the value of homes over $3 million
5. Increasing the school tax rate on the value of homes over $3 million
6. Allowing online accommodation providers to apply PST and MRDT on short-term rentals
7. Reviewing the Homeowner Grant to provide fairness for renters

CRACKING DOWN ON TAX FRAUD AND CLOSING LOOPHOLES:

8. Moving to stop tax evasion in pre-sale condo reassignments
9. Taking action to end hidden ownership, including a new beneficial ownership registry
10. Strengthening provincial auditing and enforcement powers
11. Moving to close property tax loopholes on the ALR
12. Expanding information collection and information sharing with the federal government to prevent tax evasion
13. Seeking permanent provincial-federal action to combat money laundering, tax evasion, and avoidance

BUILDING THE HOMES PEOPLE NEED:

14. Making a $6 billion-plus investment in affordable housing.

15. Building rental units for the missing middle – more than 14,000 units for individuals, working families and seniors

16. Housing for women and children affected by violence

17. Working with universities, institutes and colleges to build new student housing

18. Fixing existing projects with an eye to ensuring affordability for British Columbians

19. Partnering with Indigenous communities to invest $548 million over 10 years in social housing

20. Building 2,500 new supportive homes for people struggling with homelessness

SECURITY FOR RENTERS:

21. Expanding and increasing benefits to seniors living independently

22. Expanding and increasing the Rental Assistance Program to help working parents.

23. Strengthening protections for renters and manufactured home owners.

24. Extending the life, quality and affordability of existing affordable housing

SUPPORTING PARTNERS TO BUILD AND PRESERVE AFFORDABLE HOUSING

25. HousingHub: Building Partnerships. Building Homes.

26. Empowering local governments

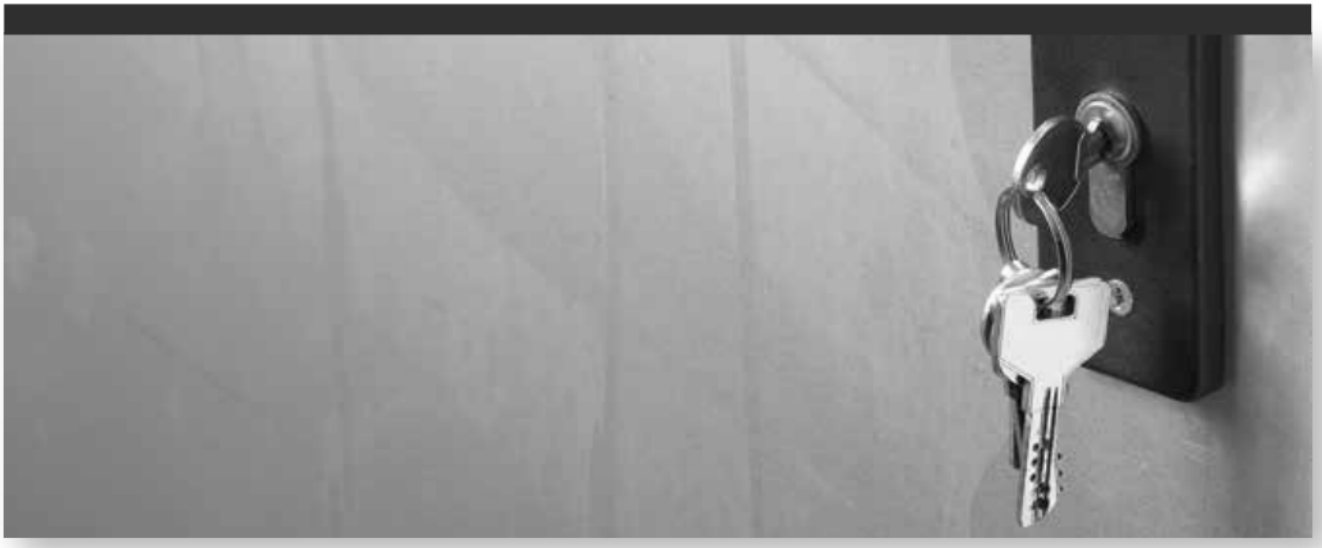
27. Expanding the use of MRDT revenues for affordable housing

28. Encouraging more rentals via property tax exemptions

29. Empowering homeowners in stratas to deal with short-term rentals

30. Expanding transit and building communities

STABILIZING THE MARKET



STABILIZING THE MARKET

Stabilizing B.C.'s out-of-control real estate market is essential to addressing the housing crisis.

That's why our strategy includes a number of measures aimed at curbing demand, reducing tax evasion, closing real estate market loopholes and cracking down on speculators who don't contribute to our province and our communities.

1. TAXING SPECULATORS WHO ARE DRIVING UP HOUSING COSTS

People, including many non-resident investors, are speculating in B.C.'s housing market, using our housing stock as an investment vehicle that drives up prices and removes rental stock.

We are taking immediate action to crack down on speculators who distort our market.

Beginning fall 2018, the Province will introduce a new speculation tax on residential property. This tax will target foreign and domestic speculators who own residential property in B.C., but don't pay taxes here, including those who leave their units sitting vacant. This will include satellite families.

We are applying this new speculation tax broadly to ensure we don't simply push speculators into neighbouring markets. The new tax will apply to Metro Vancouver, Fraser Valley, Capital and Nanaimo Regional Districts, and in the municipalities of Kelowna and West Kelowna.

Up-front exemptions will be available for most principal residences, qualifying long-term rental properties and special cases. The Province will also introduce a non-refundable income tax credit which will allow those who pay income tax in B.C. to offset the property tax.

This bold new tax will help return the real estate market to one that serves local residents, rather than speculators.

2.INCREASING THE FOREIGN BUYERS TAX

Affordability for B.C. residents comes first.
The speculation in our housing market cannot be allowed to overrule the needs of British Columbians. The 15% foreign buyers tax alone has been insufficient to stabilize the housing market; foreign demand is still putting pressure on our housing stock.

That's why we are increasing the foreign buyers tax (additional property transfer tax) rate from 15% to 20%. Increasing the tax will help deter those speculating in B.C.'s housing market, and penalize those who do. Property owners who enjoy our services should pay their fair share of taxes. Foreign buyers should contribute to our society in return for the high quality of life they enjoy when they move to B.C.

3. EXPANDING THE FOREIGN BUYERS TAX TO MORE AREAS

Our government is also extending the reach and impact of the foreign buyers tax to the Capital Regional District, the Fraser Valley, the Central Okanagan and the Nanaimo Regional District. Extending it to other communities ensures that speculation isn't pushed into neighbouring markets.

The increase and expansion of this tax will help stabilize housing prices and raise revenues to help fund housing affordability measures in our province.

4. INCREASING THE PROPERTY TRANSFER TAX ON THE VALUE OF HOMES OVER $3 MILLION

Speculation has led to distortions in our housing market, raising prices and turning homes into commodities. These rising housing prices have benefited many people. Those who have benefited the most from the rising real estate market should contribute their fair share.

That's why our government is raising taxes on the province's most expensive homes. The first step is to increase the property transfer tax to 5% from 3% on the fair market value that is over $3 million on residential properties.

5. INCREASING THE SCHOOL TAX RATE ON HOMES OVER $3 MILLION

Starting in 2019, the Province will be increasing the school tax on homes assessed over $3 million – here, too, the increased tax will apply only to the value in excess of $3 million.

This is what a progressive tax system looks like. These last two measures will not only ask the wealthiest to contribute a little bit more, but they will help to stabilize housing prices. Our tax system should work for all British Columbians, not just those at the top. Our goal is fairness for the people that live, work and pay taxes here. The revenues from these taxes will help address housing affordability in our communities.

6. ALLOWING ONLINE ACCOMMODATION PROVIDERS TO APPLY PST AND MRDT ON SHORT-TERM RENTALS

Home-sharing has grown alongside our traditional accommodation industry. But through global offices and online transactions, these companies have taken root outside of our traditional tax system. It is time to make sure they are properly integrated in our tax system.

Our government is taking bold action to make sure new business models in the sharing economy are operating fairly.

The Province is working to make sure that legitimate home-sharing is appropriately taxed. That's why the Province and Airbnb agreed to move forward with legislative changes to allow Airbnb to collect the 8% provincial sales tax (PST) and the up to 3% municipal and regional district tax (MRDT) on all its accommodation provided in B.C. through its platform on behalf of its hosts. This is the first arrangement of its kind in B.C.

Our goal is to ensure tax fairness. This sets online accommodation providers on an even footing with other short-term rental providers across B.C. The Province will be looking to move forward with similar arrangements with other accommodation platforms in the near future.

This action supports municipalities. Local governments have the authority to regulate short-term rentals. These include setting occupancy limits, requiring business licenses, setting zoning requirements and setting bylaws around noise and nuisances. Applying the PST and MRDT to accommodation purchased on online platforms is one way the province can make sure businesses are operating fairly in our communities.

Applying these taxes to Airbnb supports housing affordability. These additional revenues will help the Province and local governments ease housing affordability. Local governments will also have access to the additional MRDT revenues.

The sharing economy is part of our economy. This is our first step to ensure these businesses are part of our tax system and ensure fairness.

7. REVIEWING THE HOMEOWNER GRANT TO PROVIDE FAIRNESS FOR RENTERS

Currently, through the Homeowner Grant, the Province offers support for most homeowners. But there is no similar support for renters.

The Province will review the Homeowner Grant program to ensure both renters and homeowners benefit in a similar way.

CRACKING DOWN ON TAX FRAUD AND CLOSING LOOPHOLES

CRACKING DOWN ON TAX FRAUD AND CLOSING LOOPHOLES

Fraud and corruption in real estate are distorting housing prices in B.C. For too long people have been skirting the tax system when investing in real estate, such as claiming more than one home as a principal residence or applying for the Homeowner Grant without living in B.C.

The Province is taking immediate action to reduce tax fraud and close loopholes. Strengthening tax administrators' audit and enforcement powers will help to close information gaps and ensure tax compliance.

8. MOVING TO STOP TAX EVASION IN PRE-SALE CONDO REASSIGNMENTS

For too long, people have been using loopholes to obscure the true nature of ownership in B.C.'s housing market. One loophole is in contract assignments in the condo pre-sale market. Through the selling and re-selling of contract assignments a condo unit can be sold multiple times before the unit is even lived in, with each of those buyers usually inflating the price and not necessarily paying the appropriate tax.

This is unfair to British Columbians trying to buy into the condo market. The people flipping these pre-sale condos should pay their fair share of taxes.

That's why we are building a database on pre-sale condominium assignments. We will require developers to collect and report comprehensive information about the assignment of pre-sale condo purchases. The information will be reported to a designated provincial office. This information will be shared with federal and provincial tax authorities so they can make sure taxes are paid.

Collecting this information will also allow government to develop new taxation models in the future.

9. TAKING ACTION TO END HIDDEN OWNERSHIP

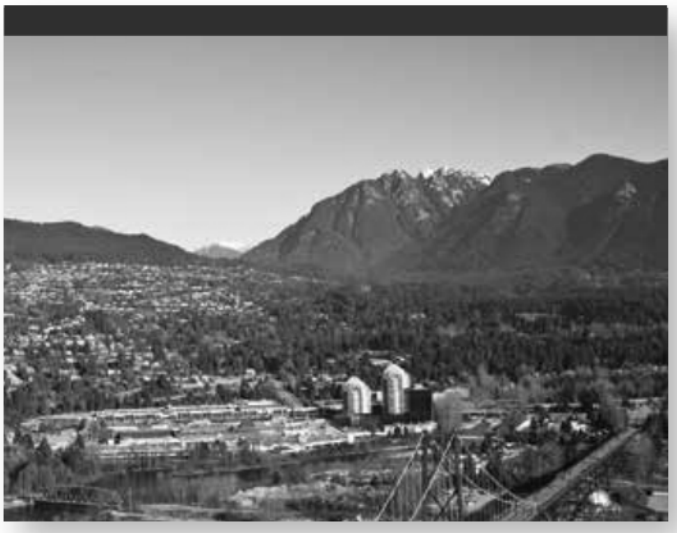
Currently in B.C., true ownership of real estate can be hidden. This means numbered companies, offshore and domestic trusts, and stand-in owners obscure the source of funds in the real estate market. For example, lack of transparency in the land registry means it is not clear who owns nearly half of Vancouver's most expensive properties. This is wrong.

The Province is taking action to close these loopholes and give us a clearer picture of real estate ownership in B.C. It will also help us to crack down on speculators, tax frauds and those engaged in money laundering.

We are taking action in a number of ways to build complete information about beneficial ownership of land and corporations in B.C.

First, the Province will require additional information about beneficial ownership on the Property Transfer Tax form.

Second, we are establishing a registry that will contain information about beneficial ownership of land in B.C., administered by the Land Title Survey Authority. This information will be publicly available and will be shared with federal and provincial tax and law enforcement authorities to assist them in their investigations.



Third, the Province also intends to introduce legislative amendments to require corporations in B.C. hold accurate and up to date information on beneficial owners in their own records offices that will be available to law enforcement, tax and other authorities.

Having a registry means we'll know who owns what. This will help ensure that federal and provincial regulatory, tax and law enforcement agencies have the information they need. By requiring corporations to hold detailed records we'll also be able to track how real estate changes hands.

Together, these actions will help the Province close loopholes in B.C.'s real estate market, and give us a clearer picture of who owns residential property in B.C. The information we collect about beneficial ownership will also allow for the development of new taxation models in the future.

10. STRENGTHENING PROVINCIAL AUDITING AND ENFORCEMENT POWERS

The Province will amend the Property Transfer Tax Act to:

- increase the limitation period for assessments to six years
- enable the collection of additional buyer information
- introduce administrative penalties for non-compliance
- extend the application of the general anti-avoidance rule
- enable tax administrators to compel access to information relevant to transfers such as information held in a Multiple Listing Service (MLS) database

These amendments will help government verify the information people provide on their property transfer tax form.

The government will also amend the Income Tax Act and the Land Tax Deferment Act to allow improved information sharing to help better identify when people are abusing the property tax deferment program or double-claiming principal residences. These amendments will help improve tax compliance and enforcement.

11. MOVING TO CLOSE PROPERTY TAX LOOPHOLES ON THE ALR

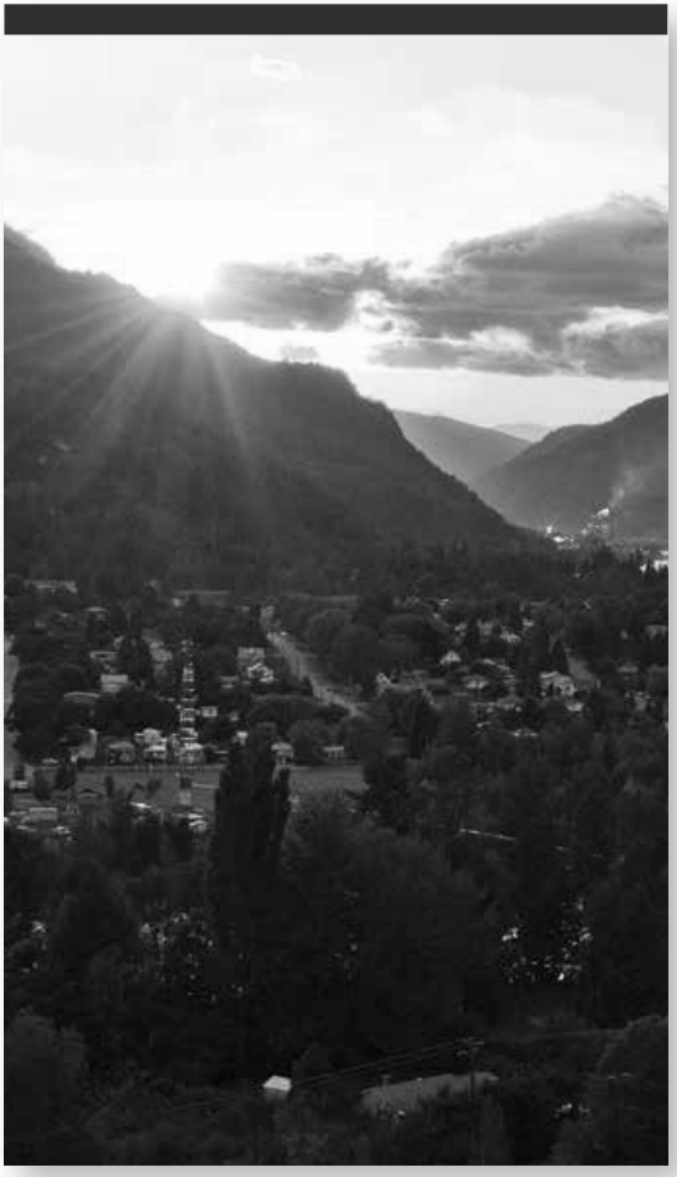
Land in the Agricultural Land Reserve (ALR) should be used for farming, not for investors or mega-mansions. The Province will move to change the property tax treatment of residential property in the ALR as part of a broader review to ensure ALR land is being used for farming.

12. WORKING WITH THE FEDERAL GOVERNMENT TO PREVENT TAX EVASION

Starting in 2019 the Province will collect Social Insurance Numbers as part of the Homeowner Grant application process. This will allow information collected through the Homeowner Grant program to be easily cross referenced with income tax information to catch people inappropriately claiming the grant. This also adds rigour to B.C.'s Homeowner Grant administration to help fight tax evasion, reduce fraud, and ensure people are paying the right amount of tax.

13. PERMANENT PROVINCIAL/ FEDERAL ACTION TO COMBAT MONEY LAUNDERING, TAX EVASION AND AVOIDANCE

The Province has also asked the federal government to formalize a multi-agency working group on tax evasion, money-laundering and housing. Having a dedicated working group would help ensure high priority compliance and enforcement issues in B.C.'s real estate sector are actively addressed. It will also ensure that the B.C. government has the information it needs



to continue to collect and provide data sets required by federal enforcement agencies.

Together these actions will help reduce tax fraud and combat money laundering in B.C.'s real estate market. These are the first steps in making sure the Province and its partners have the information we need to better enforce real estate taxation. British Columbians deserve more effective tax fraud enforcement in our real estate sector.

BUILDING THE HOMES PEOPLE NEED

BUILDING THE HOMES PEOPLE NEED

The right supply of homes is key to addressing housing affordability in British Columbia. After years of prices spiraling out of control and declining availability of the kinds of homes people need, it is clear the market alone is not able to deliver safe, affordable, functional homes for British Columbians.

We are making the biggest investment in housing affordability in B.C. history. This will help build homes for people, create local jobs and open up economic development in communities.

We're investing more than $6.6 billion over 10 years in homes and housing supports that people need, in every corner of the province – urban, suburban and rural.

14. MAKING A $6.6 BILLION OVER 10 YEARS INVESTMENT IN AFFORDABLE HOUSING

Through partnerships, government will deliver 114,000 affordable homes over the next 10 years via an historic investment of $6.6 billion over 10 years in the province's future. This housing will fill current gaps in the market, including homes for growing families, homes for seniors, housing options for women and children fleeing violence, and homes for students.

We are working with all levels of government, Indigenous Peoples, non-profits, and the private sector to streamline the creation of new affordable homes in every region of the province. It can't be done overnight but with sustained action, proactive partnering and smart streamlining; government can provide critical leadership on the supply-side.

15. BUILDING MORE THAN 14,000 RENTAL UNITS FOR THE MISSING MIDDLE

Many middle income people and families in B.C. are struggling to find housing.

Skilled workers – the teachers, service-industry workers, nurses, and carpenters our communities need – are finding it difficult to find and afford quality housing. This hurts people, it hurts businesses and it hurts our economy.

B.C. Chamber of Commerce members overwhelmingly agree that housing costs are a major issue for businesses across the province, with 9 out of 10 business owners agreeing home prices are discouraging workers from living in our communities.

ABOVE: ROSALIE'S VILLAGE PROVIDES AFFORDABLE HOUSING AND DAYCARE FOR SINGLE MOTHERS FLEEING VIOLENCE.

Recognizing historically low vacancy rates and historically high home prices, the Province is investing $378 million over three years and more than $1.8 billion over the next 10 years in rental housing to improve housing choices for middle income British Columbians, including seniors and families.

This builds on the investment of $208 million to help build 1,700 new affordable rental homes that government funded in the Budget 2017 Update.

16. HOUSING FOR WOMEN AND CHILDREN AFFECTED BY VIOLENCE

Women and children fleeing violence and abuse need a safe, secure place to live and support so they can heal.

Budget 2018 makes the first significant investment in housing options for women and children fleeing violence and abuse in the last two decades.

The Province is committing $141 million over three years and $734 million over the next 10 years to build and provide housing supports for women and children at this difficult time in their lives.

17. WORKING WITH UNIVERSITIES, INSTITUTES AND COLLEGES TO BUILD HOUSING FOR POST-SECONDARY STUDENTS

Government is partnering with post-secondary institutions to deliver at least 5,000 new spaces in student housing. These new on-campus homes will help more students find an affordable place to live while they pursue their studies.

And as they move closer to their studies, they will free up rental housing in tight rental markets, making it easier for everyone to find homes.

This is a part of a new $450 million student housing program that will allow public post-secondary institutions to borrow directly from the Province in order to help finance new student housing.

18. FIXING EXISTING PROJECTS WITH AN EYE TO AFFORDABILITY

Improving access to safe, affordable housing isn't just about planning and building new stock; it's also about taking care of what we already have. Our plan talks more about this in the next section on rental security.

But it also applies to development projects that are already underway but experiencing cost pressures that threaten their long-term affordability.

Our government has reviewed these projects and found that insufficient provincial investments into new homes in prior budgets mean that many of the buildings started by the previous government will not be affordable for the British Columbians they were supposed to help. As a result, our government is committing more than $75 million over the next two years to address the cost pressures with an eye to making sure these 4,900 homes remain affordable.

19. PARTNERING TO BUILD SOCIAL HOUSING FOR INDIGENOUS PEOPLE

Indigenous British Columbians, more than 70 percent of whom live off-reserve, are disproportionately represented among the homeless population and are under-housed in B.C. Our investments in Indigenous and social housing will seek to address that gap.

Over the next 10 years, the Province is investing $550 million into the construction of 1,750 units of social housing for Indigenous people in British Columbia. This housing will be developed in partnership with the Aboriginal Housing Management Association, Indigenous housing societies, and First Nations.

In order to ensure the right housing is being created and to advance reconciliation efforts, we will look to engage Indigenous peoples to develop the housing design and delivery system.

20. BUILDING 2,500 NEW SUPPORTIVE HOMES FOR PEOPLE STRUGGLING WITH HOMELESSNESS

We recognize the growing and urgent problem of homelessness in B.C. communities.

In just the last six months, the Province has joined communities across B.C. – including Vancouver, Surrey, Terrace, Prince Rupert, Kelowna, and Kamloops – to begin building more than 1,300 new modular homes for people in need, with hundreds more to come.

These partnerships were made possible by the $291 million in capital funding and operating funding of $216 million over three years to provide ongoing services and supports for those most in need.

Given the urgent need to address homelessness in B.C. communities, Budget 2018 builds on this successful program with funding for an additional 2,500 new homes with 24/7 support for people who are homeless or at risk of homelessness.

TS'I'TS'UWATUL' LELUM (DUNCAN) PROVIDES AFFORDABLE HOUSING SPECIFICALLY DESIGNED FOR INDIGENOUS ELDERS AND PERSONS WITH DISABILITIES.

DRIVER HOUSE (DAWSON CREEK) OFFERS LOW- TO MODERATE-INCOME RENTALS FOR INDIGENOUS FAMILIES AND SENIORS.

IMPROVING SECURITY FOR RENTERS

IMPROVING SECURITY FOR RENTERS

Too many British Columbians are worried about how they will afford housing in the future and even whether they can stay in the housing they already have.

Renters are facing increasingly limited housing options as rents continue to rise and vacancy rates remain persistently low, particularly in urban centres.

Owners of manufactured homes are also feeling uncertainty as the land their homes sit on rises in value and is targeted for redevelopment.

People need to feel secure in their housing. That's why we are taking action to support seniors and low-income British Columbians who are in danger of losing their rental housing by increasing rental supports, strengthening rental laws, upgrading existing affordable housing and enhancing protections for owners of manufactured homes.

21. EXPANDING AND INCREASING BENEFITS TO SENIORS LIVING INDEPENDENTLY and 22. EXPANDING AND INCREASING THE RENTAL ASSISTANCE PROGRAM TO HELP WORKING PARENTS

Rental assistance programs give low-income households the choice of where they want to live and help with housing costs. The Shelter Aid for Elderly Renters (SAFER) program and Rental Assistance Program (RAP) make housing more affordable for low-income seniors and working families who rent their homes in the private market.

Over the last number of years these programs have not kept up with increasing rent costs, leaving many seniors and families struggling to get by.

Budget 2018 invests $116 million over three years to increase the average benefit under RAP and SAFER programs, and will expand the eligibility criteria for RAP – families with gross household annual incomes of up to $40,000 will now be eligible, up from the previous ceiling of $35,000. As a result of these enhancements, more than 35,000 households become eligible for

ABOVE AND BELOW: DAHLI PLACE (VICTORIA) PROVIDES AFFORDABLE RENTAL HOUSING.

increased monthly benefits, including 3,200 newly eligible seniors and families.

Effective September 2018, on average, seniors will receive an extra $930 per year, and the increase for families will be about $800 more per year.

23. STRENGTHENING PROTECTION FOR RENTERS AND MANUFACTURED HOME OWNERS

Property owners provide housing for more than a quarter of B.C. residents.

Unfortunately, some landlords have taken advantage of the tight rental market and their actions have had serious impacts on people. Loopholes in rental laws that allow landlords to wrongfully evict tenants and unfairly jack up rents have left many British Columbians feeling renting is not a secure and predictable housing option.

People who pay their rent and abide by their tenancy agreement should be able to count on their housing. Landlords also deserve certainty. They need to know that if they have a tenant who breaks their rental agreement that it will be dealt with quickly.

That's why we are updating our housing laws to provide more fairness for everyone.

We have already ended the abuse of fixed-term leases and eliminated the geographic rent increase clause, both of which were being used to unfairly jack up rents.

And we increased funding to the Residential Tenancy Branch to reduce wait times, improve service and deal with disputes more quickly, while also strengthening the Residential Tenancy Act and the penalties for those who repeatedly break the law.

Too many people are left struggling to find new housing they can afford when they are evicted to allow for large-scale renovations or when older, affordable buildings are demolished to make way for new development.

While landlords need to be able to make necessary repairs and upgrades to existing rental stock, current protections are not sufficient to ensure those displaced can find new homes, or pay associated moving costs. Government will make changes to the laws that apply in cases of renovations or demolitions to ensure that renters left without housing have adequate support, and to provide a stronger response to cases where landlords misuse these provisions.

Some owners of manufactured homes have been forced to abandon their investments with little compensation for having to move or find a new home.

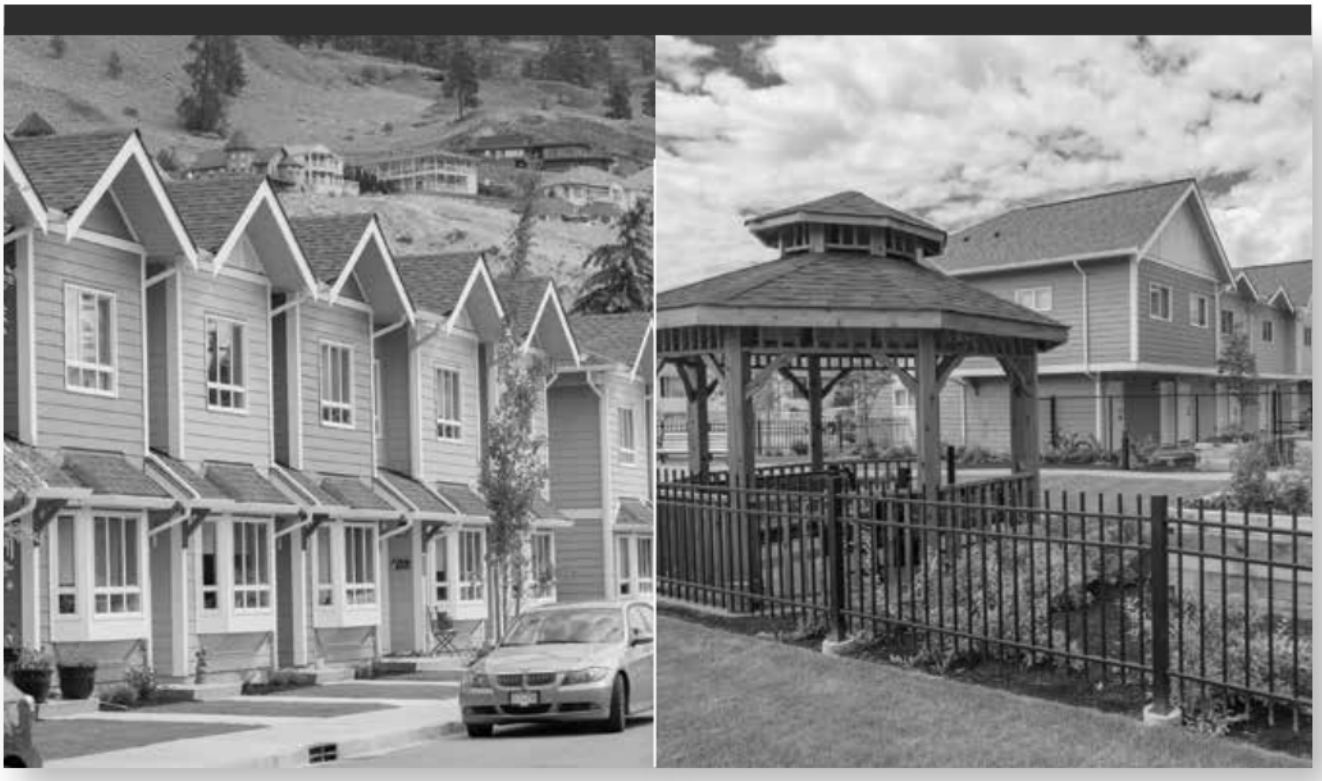
This has left people, many of them in retirement, without a safe, affordable place to live, and without the help they need to find housing elsewhere.

Recognizing the impact on these families, the Province will strengthen the laws protecting owners of manufactured homes when changes to land use displace them.

24. EXTENDING THE LIFE, QUALITY AND AFFORDABILITY OF EXISTING AFFORDABLE HOUSING

To ensure existing social housing continues to be safe and secure, we are investing $1.1 billion over 10 years into seismic and fire-safety upgrades and essential building repairs and maintenance, making homes safer and more comfortable for residents. This is the largest investment in refits and renovations of social housing in B.C. in more than 20 years.

These investments will also lower carbon emissions, and cut energy costs for non-profit providers and residents alike.



LEFT AND RIGHT: PLEASANTVALE (KELOWNA) PROVIDES AFFORDABLE HOUSING UNITS FOR SENIORS AND TOWNHOMES FOR FAMILIES.

BUILDING PARTNERSHIPS FOR AFFORDABILITY

HYAD PLACE (NORTH VANCOUVER) PROVIDES RESIDENTIAL APARTMENTS FOR ADULTS WITH DEVELOPMENTAL DISABILITIES.

BUILDING PARTNERSHIPS FOR AFFORDABILITY

The Province cannot build its way out of the housing crisis on its own. That's why we're bringing together partners from all levels of government, Indigenous organizations, non-profits and the private sector to build the right supply together.

We will build on these emerging housing partnerships by expanding government's work with Indigenous governments and organizations, with non-profits, and with the private sector, with the goal of building capacity and becoming a catalyst for new affordable housing development.

It will take a sustained, coordinated effort to meet the most pressing housing needs facing people and communities. Thankfully, the federal government, the Union of B.C. Municipalities, many individual local governments, and innovators in the private and non-profit sectors have already put forward their own strategies for addressing housing, signalling a desire to work together to make life better for British Columbians. For the first time, all levels of government understand and are prepared to act on the urgent need for housing. BC will work with these and other partners to ease housing affordability and give people more housing options.

25. HOUSINGHUB: BUILDING PARTNERSHIPS. BUILDING HOMES

The province is creating HousingHub – funded by winding down the BC Home Owner Mortgage and Equity Partnership program – to build partnerships and affordable homes where British Columbians need them most.

The Hub will partner with the non-profit sector, faith groups, for-profit builders, all levels of government and others to find and develop or re-develop available land and buildings, creating affordable homes for people who live and work in our communities.

The Hub will act as a project coordinator for owners who are not experienced developers but want to create affordable housing with a reasonable rate of return, to benefit their communities.

HousingHub will also work with new investment sources, such as pension fund and social impact investors to find the best financing solutions for local projects and local people.

26. EMPOWERING LOCAL GOVERNMENTS

The Province recognizes that local governments are on the front lines of the housing crisis, and are well positioned to help advance the development of new homes.

Communities need solutions that work for them. For example, in some communities, the tourism industry is struggling to find workers because workers can't find affordable housing. Housing affordability has become an economic issue. The Province is taking action to put the power and resources to address housing challenges in their hands.

It begins by fully defining the problem. The provincial government is committing $5 million over three years to help fund housing need assessments for local governments, the first step to building housing for people.

We'll work closely with municipal partners to eliminate barriers to affordable housing and develop new tools, such as rental zoning, that will empower local governments to support and accelerate the construction of homes people need.

27. EXPANDING THE USE OF MRDT REVENUES FOR AFFORDABLE HOUSING

The Province is expanding the allowable use of municipal and regional district tax (MRDT) revenues to include housing affordability initiatives. Prior to this policy change, MRDT revenues could only be spent on tourism marketing, programs and projects. This will help those communities struggling with housing tourism workers more options. This will give local governments across B.C. additional flexibility to fund housing initiatives.

28. ENCOURAGING MORE RENTALS VIA PROPERTY TAX EXEMPTIONS

Communities throughout B.C. are faced with tight rental markets. They need support to bring new rental supply online. Our government is taking bold action to give municipalities the support they need to bring new rental supply online.

To help local governments, the Province will mirror the increase to the available property tax exemptions provided under municipal revitalization agreements for qualifying purpose-built rental housing. These agreements encourage the construction and preservation of rental housing by waiving municipal property taxes. The Province is increasing the incentive provided to those operating purpose-built rentals by extending the exemption to include provincial property taxes. This will help encourage developers to build more rental housing.

The Province is also reaching out to the federal government to explore additional ways governments can overcome cost barriers to develop new purpose-built rental construction.

We understand the needs of communities and we're doing our part to support municipalities in their efforts to increase housing supply.

29. EMPOWERING HOMEOWNERS IN STRATAS TO DEAL WITH SHORT-TERM RENTALS

The increasing use of condos for short-term rentals has been difficult for many living in strata developments. Noise, mess and security issues are just a few of the reasons why some strata corporations restrict short-term rentals in their buildings.

If homeowners in a strata building want to limit short-term rentals, the bylaws need to provide enough of a deterrent. People who live full-time in strata buildings deserve the peace, quiet and security they pay for.

Low fines and penalties don't stop some short-term rental operators from breaking strata bylaws. Many absorb fines as part of the price of doing business.

That's why we're empowering strata corporations to charge increased fines and penalties against rule-breakers who disrupt people's sense of peace and housing security.

30. EXPANDING TRANSIT AND BUILDING COMMUNITIES

The Province is a full partner in the Metro Vancouver Mayors' Council vision for improved transit and transportation across the region. As part of this, we will work with TransLink and local governments in Metro Vancouver to increase density and improve the availability of affordable housing around transit stations. Smart investments in transit will allow residents to live, work and play in complete communities, and reduce transportation costs for families.

CONCLUSION

WHERE WE GO FROM HERE

The housing crisis has been building for many years. No single policy or approach is capable of reversing the decline of housing affordability in British Columbia. By addressing demand, supply and security at the same time, we will bring down the curve of housing costs and improve options for people looking for a home.

While the housing problems our province faces are immense, there is tremendous will from all levels of government, First Nations, non-profits and the private sector to make changes and make a difference in housing affordability for people in our province.

We will continue to work with our partners to streamline the creation of affordable homes and build on innovative solutions to tackle the challenges in our housing market.

BRITISH COLUMBIA

Progress on Homes for BC

Every person in B.C. deserves a secure place to call home. But for too long, an out-of-control housing market has left too many British Columbians unable to afford a place to call home and businesses without the workers they need. This is hurting people and the economy.

Our government is taking bold steps to tackle the housing crisis and deliver the affordable homes British Columbians need. In Budget 2018 we launched Homes for BC, government's 30-point housing plan and the largest investment in housing affordability in B.C.'s history – $7 billion over 10 years. Through this plan, we are building the homes people need and improving security for renters. We're moderating housing prices by increasing supply, curbing speculative demand, and tackling fraud and money laundering in the real estate market.

Moderating the market

It's no secret by now that for years our housing market was left to spiral out of control. Money launderers and speculators were given free reign to drive up the price of housing at the expense of the rest of us.

In Greater Vancouver, we saw the benchmark price for single-family homes increase by over 75% in just 5 years. That's not sustainable.

That's why we introduced the **speculation and vacancy tax** to target speculators who own homes in B.C. but do not pay tax here. These speculators are driving up housing costs and using the real estate market like a stock market. This tax is helping to turn empty units into homes for people and families. It's successfully capturing speculators: over 80% paying are foreign owners, satellite families and Canadians living outside of B.C, while more than 99% of British Columbians won't pay this tax.

Our government also increased the foreign buyers tax to 20% and expanded it to urban areas beyond Vancouver to ensure foreign buyers are fairly contributing to provincial services and programs in return for the high quality of life they enjoy when they move to B.C.

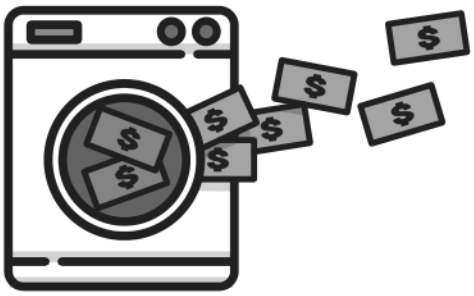
Revenue collected from both the foreign buyers and speculation taxes will be reinvested in building housing in local communities so more people can find an affordable place to live.

We believe in a tax system where everyone pays their fair share. That's why we introduced **progressivity to the existing school tax** so that the top 2% most expensive homes pay a bit more.

The measures implemented by government are beginning to bear results, with strong indications that moderation and stability are returning to B.C.'s housing market.

Cracking down on tax fraud and closing loopholes

It's unacceptable that the proceeds of crime are distorting the housing market while British Columbians are struggling to find secure, affordable housing. That's why we're moving ahead with a public inquiry into money laundering and cracking down on the estimated **$5 billion in "dirty money" laundered through B.C. real estate that's hiked the price of buying a home by at least 5%.**



But we aren't waiting to act. As part of our plan, we passed world leading legislation to end hidden ownership of land in B.C. This public registry - the first of its kind in Canada - will help crack down on tax evasion and make sure people and companies are paying their fair share.

For years, it was widely acknowledged that the practice of pre-sale condo flipping in Greater Vancouver was a factor in driving up real estate prices and avoiding taxes. That's why we acted to close real estate loopholes in the condo market, by establishing Canada's first ever condo pre-sale registry to track pre-sale flipping and assignments.

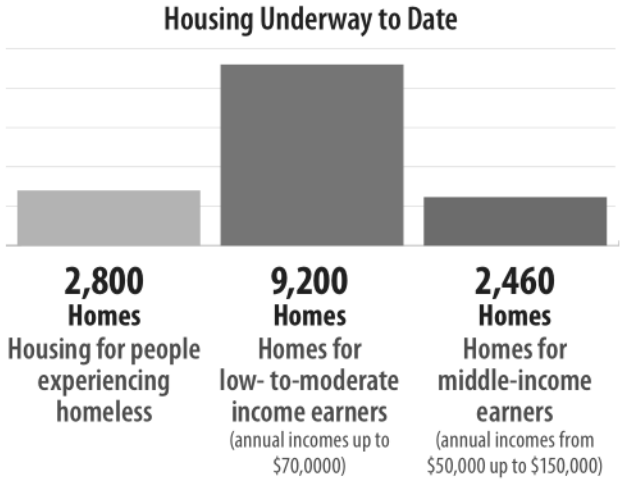
By cracking down on money laundering, stopping tax fraud, and closing loopholes, we are doing our part to make our real estate market fair for everyone.

Building the homes people need

Our government is committed to working in partnership to deliver 114,000 affordable homes over 10 years. This includes directly funding new affordable housing and working with committed partners to deliver the homes people need. In less than two years, we are well on our way, with **more than 20,000 new homes open or underway** in nearly 80 communities.

Funding Program	Total underway (includes completed, under construction & in approvals)
Community Housing Fund	5,204
Indigenous Housing Fund	1,157
Women's Transition Housing Fund	343
Supportive Housing Fund	602
Rapid Response to Homelessness	2,064
Affordable Rental Housing Program	1,598
Deepening Affordability Fund	2,156
HousingHub	960
Regional Housing First Program (CRD)	762
Student Housing	5,630
Total	**20,476**

We are building homes for people with a range of incomes: people experiencing homelessness, people with low to moderate incomes, and middle-income earners.



We are also supporting local governments in their efforts to bring affordable housing to their communities, with new tools like rental zoning, and new funding programs to help municipalities assess their long-term housing needs. New building code changes are also allowing the safe construction of taller wood buildings, supporting our mass timber industry and delivering the homes that British Columbians need, faster.

With new government funding and partnerships with municipalities and housing groups, we are working towards building 114, 000 homes for people living in British Columbia.

Security for renters and landlords

Renters have been struggling with inflated rents and rental laws that failed to protect them for years.

To help ease pressure on renters, our government has cut the annual allowable rent increase by 2%, limiting it to inflation.

To offer families and seniors some relief from rising costs, we have expanded eligibility and increased the benefits available under the Rental Assistance Program and Shelter Aid For Elderly Renters by an average of 17% and 42% respectively.

By closing the fixed-term lease loophole we have put an end to unfair rent hikes when leases end and are being renewed. We have also strengthened protection for renters during renovations and demolitions to prevent unfair renovictions.

New investments also mean that renters and landlords are seeing reduced wait times and getting better service from the Residential Tenancy Branch. A new Compliance and Enforcement Unit will ensure everyone follows the rules or face real consequences when they break them.

People deserve the opportunity to thrive and get ahead. That starts with having an affordable place to call home. After years of out of control rents and skyrocketing housing prices, we've made great progress in our 10-year housing strategy, but this is only the beginning. There is more to do and we're committed to continuing our work to build a better future for everyone in B.C.

Anne McMullin
President and Chief Executive Officer
Government and Public Affairs
Urban Development Institute

Dear Anne McMullin:

I am writing to invite you to join me for a roundtable session with others in the housing sector to discuss the Province's Homes for B.C.: A 30-Point Plan for Housing Affordability in British Columbia.

Working in partnership, we have over 22,000 units of affordable housing complete or underway across the province in just two years. As we move forward in delivering 114,000 homes over 10 years, we would like to hear your views on the successes and opportunities for continuing to deliver affordable housing in our province.

The meeting will take place on March 9, 2020, from 9:30 a.m. to 11:30 a.m., at the Vancouver Cabinet Offices of the Government of British Columbia (Suite 740, 999 Canada Place).

If you are unable to attend personally, we hope you will consider sending another representative to attend. Please send your response by March 2, 2020, by email to: Housing.Policy@gov.bc.ca, to confirm whether you will be attending the meeting.

If you have any questions, do not hesitate to contact my Ministerial Assistant, Molly Henry, by email at: Molly.Henry@gov.bc.ca.

Sincerely,

Selina Robinson
Minister

Victoria, BC V8V 1X4

Dear Minister:

Re: Emergency Program Act Modernization

The Urban Development Institute (UDI) is pleased to respond to your Ministry's important review of the *Emergency Program Act* (*EPA*). UDI is the association of the development industry and its related professions - developers, property managers, financial lenders, lawyers, engineers, planners, architects, appraisers, real estate professionals, local governments and government agencies. Emergency management, especially in an age in which are facing the impacts of climate changes is a critical issue for our members. They need to understand where and how to purchase sites for their projects, and what will be expected of them as early as possible in terms of new requirements to address potential future flooding, forest fires and extreme heat.

Our Building Code Committee has had the opportunity to review the Ministry's Modernizing *BC's Emergency Management Legislation Discussion Paper*. Overall, we are generally supportive of the approach being taken by the Government to adopt the United Nation's *Sendai Framework*, which increases the focus on risk identification and mitigation as well as utilizing an "*All of Society*" approach. We are pleased that the importance of private businesses (and other stakeholders) as partners in emergency management is recognized in the *Discussion Paper*.

It is difficult to provide specific comments at this stage or gauge the impact that the *EPA* Review may have on our members because at this early stage, it is not clear what will be required of builders. As this process moves forward, UDI would be pleased to meet with the Province, local governments and other stakeholders to discuss the expectations for builders and their projects.

UDI has several general recommendations and comments regarding the *Discussion Paper*.

We support the proposal that future legislation "*Require Local Authorities … to give greater consideration of current and future risk for new development approvals in hazardous areas; and Require sustainable long-term mitigation measures when building and development is approved in hazardous areas*." However, we have two critical recommendations:

- It would be best if the Province were to provide direction and best practices to manage development in hazard areas. The Province has access to resources to properly research the most appropriate approaches and policies on issues such as Flood Construction Levels (FCL), flood management approaches, or wall assemblies in wild fire areas. We hope that this research will lead to increased coordination of FCLs, particularly as they relate to sea-level rise and coastal and river flooding across the Metro Vancouver region.

- It is important that our members be consulted by the Province and local governments as well as given early notice of potential changes in land uses, the definition/designation of new hazard areas and additional requirements. It is very difficult to adjust projects where land has been purchased and financial arrangements have been made.

UDI is pleased that the Province is taking on the role "… *to centrally house and provide* transparent data *on hazard, risk and vulnerability assessments, or mitigation planning documents which are conducted or prepared by other bodies (provincial ministries, Crown corporations and agencies; Local Authorities; and critical infrastructure operators)*." This will assist with data collection and this would put the Province in a better position to ensure that there is coordination between ministries, agencies and local authorities. UDI sits on the BC Real Estate Association Floodplain Maps Working Group, and there is a concern that key data, information and flood mapping is not available to most local jurisdictions in the British Columbia. This expanded role for the Province, may help address this concern.

We also support the proposal to "*Enable Local Authorities, in consultation with the Minister responsible for the Community Charter, Vancouver Charter and Local Government Act and the Minister responsible for emergency management, to make emergency amendments to an Official Community Plan, Regional Growth Strategy, zoning, or bylaws*." This will speed the recovery of communities after an emergency. An additional approach that governments may wish to consider is fast tracking approvals when a damaged building is being replaced with the same structure that was there before if:

- It is updated, so it complies with the current *B.C. Building Code* or *Vancouver Building Bylaw*; and
- Is not in a hazard area.

Another way to speed up the recovery efforts of communities is have the Province coordinate with design and construction professionals who may be prepared to volunteer or do *pro-bono* work. We note that a new association of over 100 architecture firms called *Architects Assist* recently formed in Australia. The firms under this association are prepared to offer *pro-bono* design services to the victims of the massive wild fires impacting that country.

The Government may wish to expand the proposed definition of "*emergency*". The proposed language is an "… *imminent event or circumstance that: (a) Is caused by accident, fire, explosion, technical failure or a force of nature …*". This would preclude an act of terrorism or pandemic – unless this is intended to be included in future regulations. We note that on pages 23 and 25, both are identified as emergency management issues that needs to be considered.

UDI appreciates the opportunity to comment on the *Emergency Program Act Modernization*, and we are generally supportive of the direction the Province is taking. However, it will be important for our members to be consulted as this initiative moves forward and more specific measures are contemplated.

Yours sincerely,

Anne McMullin
President and CEO, Urban Development Institute

Subject: ESCC conference
When: February 28, 2020 09:00-15:15 (UTC-08:00) Pacific Time (US & Canada).
Where: BC Hydro Office – 333 Dunsmuir St., Vancouver, B.C. or teleconference

Hello, Energy Step Code Council members:

I have updated this meeting invitation to include the agenda and background materials. Please let me know if you're unable to view these materials and I'll send them in a separate email. The agenda includes the WebEx link and password for those attending via teleconference.

New (2/27/2020): *Teleconference attendees may participate in the breakout groups by dialing the following numbers:*

Conference Line:
Lower Mainland: s.15
Outside Lower Mainland: s.15

Participant Access codes:

1. ***LG Peer Network –*** s.15 *(this is the one people are dialing into for the meeting as a whole)*
2. ***Part 3 Subcommittee*** – s.15
3. ***Part 9 Subcommittee*** –
4. ***CBC*** – s.15

Once the breakout sessions conclude, dial into the original conference line (the same as the LG Peer Network) to re-join.

If you haven't yet indicated your dietary needs or whether you will come in-person or via teleconference, it's not too late to let me know.

As usual, visitors to the BC Hydro building at 333 Dunsmuir St. will be asked to exchange a piece of ID for a visitor's pass. Your ID will be returned to you when you return your visitor's pass.

Your on-site contact will be Dale Andersson and Lisa Mak. I will be attending via teleconference.

Thank you very much.

Hugo

- LEEP Attendee Survey

BC HOUSING

BC Housing's Builder Survey

BC HOUSING

BC Housing's Residential Builder Survey

48% of B.C. builders reported attending a BC Energy Step Code training session

Source: Licensed Residential Builder Survey, 2018

Notes:

1. For the 2018 survey, email invitations were sent to 5,758 builders in good standing without expired, suspended or cancelled licenses. Builders completed a total of 1,206 online surveys which represented a response rate of 20.9%.
2. To ensure the final sample accurately reflected the total population and composition of builders in B.C., mathematical weights were applied based on region (i.e. the area of B.C. where they primarily build) and the number of homes built, or started, in the past year.
3. The Licensed Residential Builder Survey is a province-wide quantitative survey covering the typical builder7 profile (industry experience, type of builder), their construction activities, and their

Market Response Survey
Preliminary Results

BC HOUSING

Market Response Survey

Communities from across B.C. represented, grouped into 4 regions:

- **Lower Mainland/Southern Coast** - Metro Vancouver, Whistler, Squamish, Mission
- **Vancouver Island** - CRD, Duncan, Chemainus, Lake Cowichan, Nanaimo/Lantzville, Parksville, Comox, Campbell River, Port Alberni
- **Southern Interior** - Kelowna, Kamloops, Penticton, Lake Country, Vernon, Peachland, Summerland, Oliver, Cranbrook, Elk Valley
- **Northern BC** - Prince George, Quesnel, Smithers, Kitimat, Burns Lake, Houston

Market Response Survey

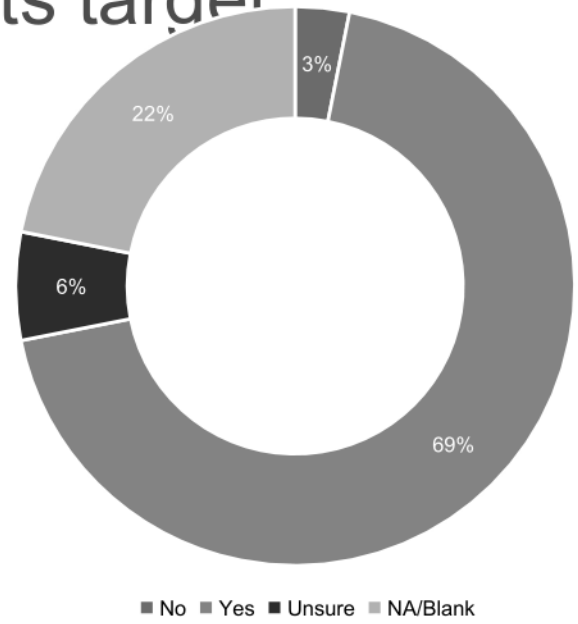
Approximately **70%** of both Lower (68%) and Higher (71%) Step builders reported that their most recent project in the past year met its target



BC HOUSING

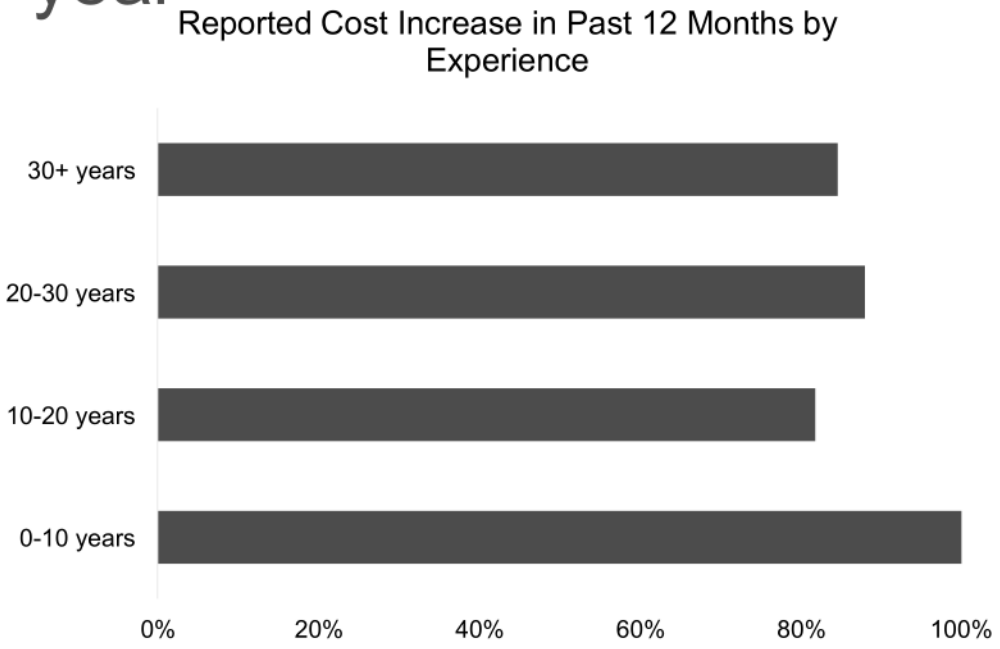
Source: BC Energy Step Code Market Response Study (PRELIMINARY)

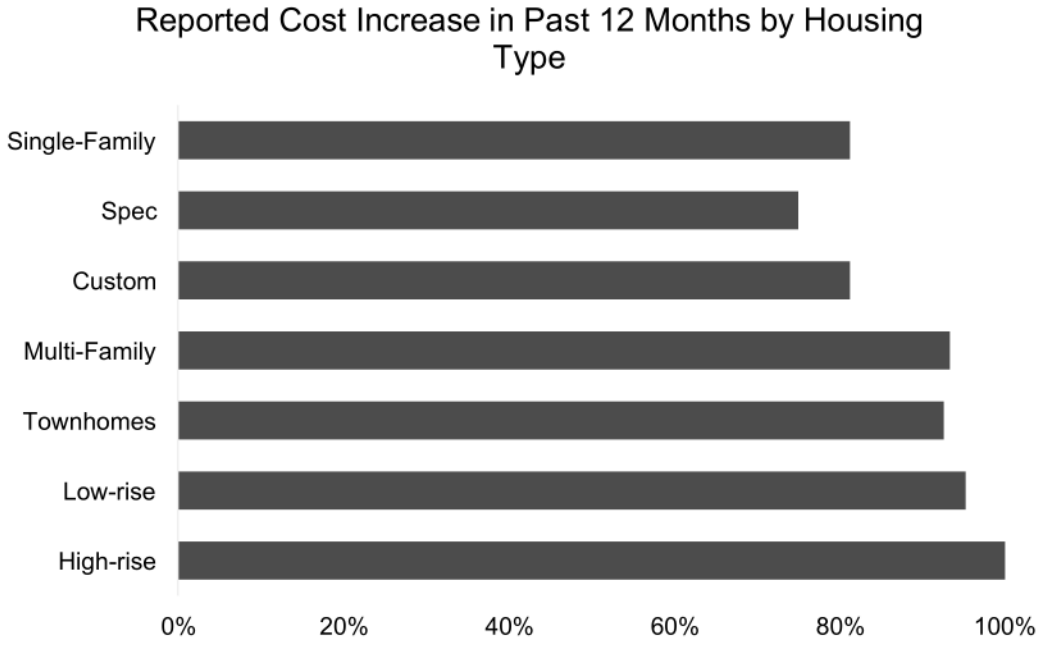
Notes:

1. Results based on 7 phone based interviews and 65 online surveys of builders across BC in 2019. Builder participants were primarily contacted through local Homebuilder Associat

Market Response Survey

88% reported their construction costs increased in the past year





BC HOUSING

Source: BC Energy Step Code Market Response Study (PRELIMINARY)

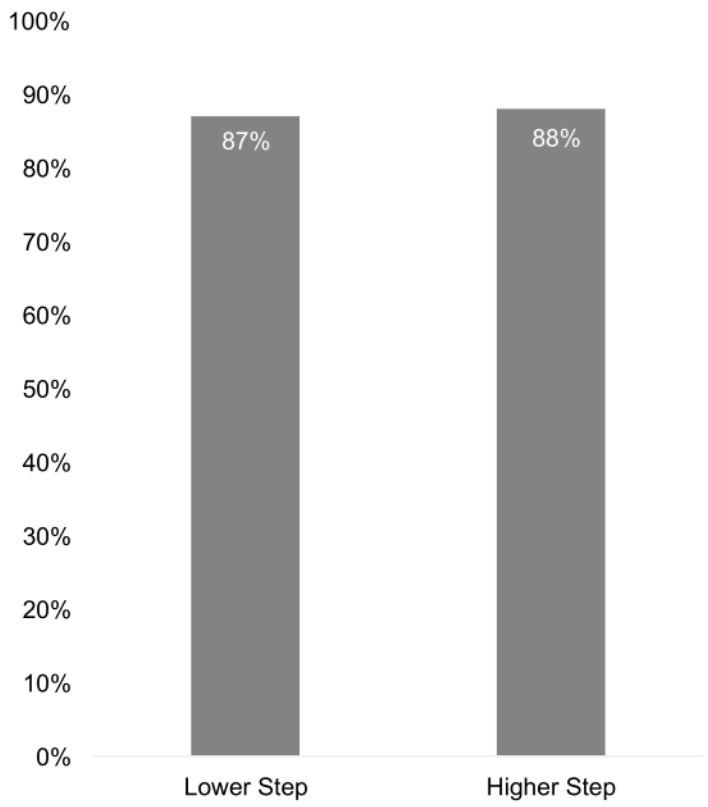
Notes:

1. Results based on 7 phone based interviews and 65 online surveys of builders across BC in 2019. Builder participants were primarily contacted through local Homebuilder Associat

Market Response Survey

The percentage of builders reporting cost increases was very close between **Lower Step builders (87%)** and **Higher Step builders (88%)**

Most builders referred to **material costs, trade/skilled labour, code changes (including seismic), taxes/fees and regulation**.



BC HOUSING

Source: BC Energy Step Code Market Response Study (PRELIMINARY)
Notes:
1. Results based on 7 phone based interviews and 65 online surveys of builders across BC in 2019. Builder participants were primarily contacted through local Homebuilder Associat

Market Response Survey

Three out of 72 responses identified the BC Energy Step Code specifically as a primary cost driver, with one noting that the change in the calculations for colder climates was a particular challenge

Five others mentioned energy efficiency/better energy conservative measures, better envelope details, air tightness, increased HVAC controls, improved mechanical efficiencies, and insulation requirements as one of their top three cost drivers

BC HOUSING

Notes:

1. Results based on 7 phone based interviews and 65 online surveys of builders across BC in 2019. Builder participants were primarily contacted through local Homebuilder Associat

LEEP Attendee Survey

BC HOUSING

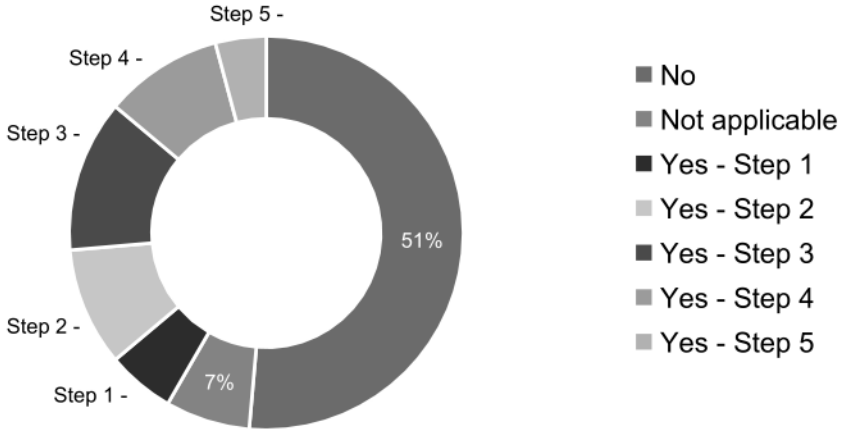
LEEP Attendee Survey

42% reported building to the BC Energy Step Code previously (14% Higher and 28% Lower)

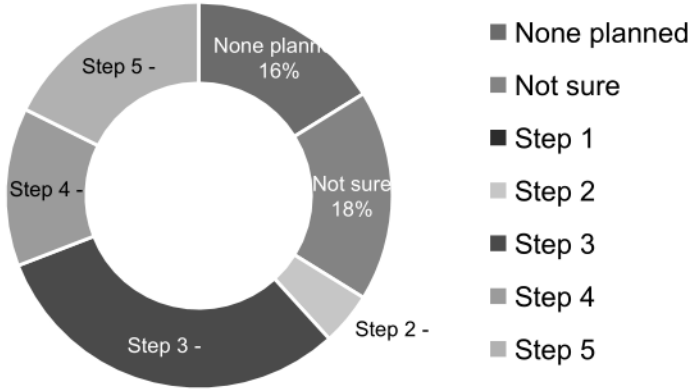
63% planned to build to the BCESC (31% Higher and 35% Lower) in 2020

42% reported feeling more confident in their ability to meet the Step as their reason

Previously built a home to BCESC



What is the highest Step you plan to build to in 2020 under the BCESC



BC HOUSING

Source: LEEP Attendee Survey, 2020

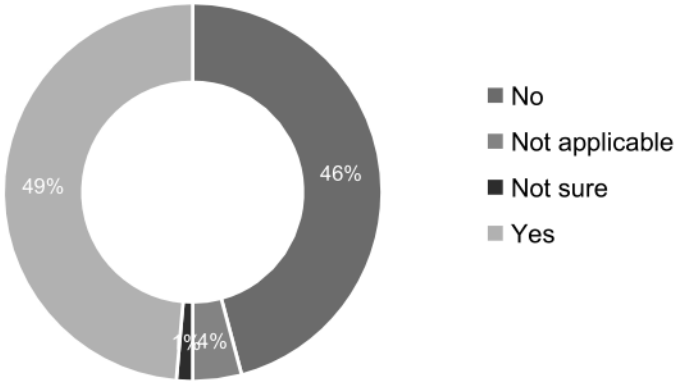
Notes:

1. An online survey was emailed to LEEP attendees using contact information provided by the local Homebuilder's Association. Attendees were asked to respond to the survey within 72 hours of receiving the email.
2. Total of 72 responses received across the sessions in Vancouver, Nanaimo, Victoria, Nanaimo, Abbotsford and Prince George. A response rate of approximately 26%.

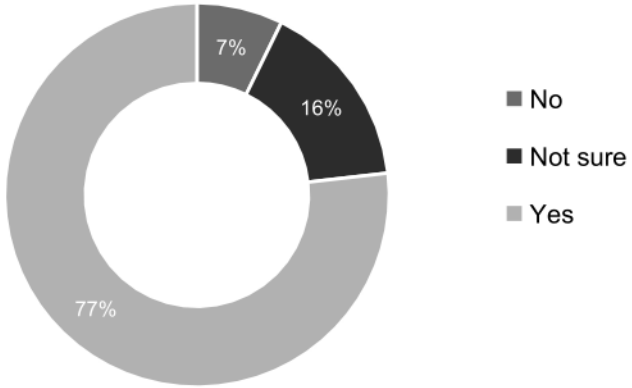
LEEP Attendee Survey

49% reported using a heat pump in 2019
74% planned to use a heat pump in 2020
42% reported feeling more confident in their ability to use heat pumps as their reason

Have you used a heat pump(s) in 2019



Are you planning to use a heat pump(s) in 2020



BC HOUSING

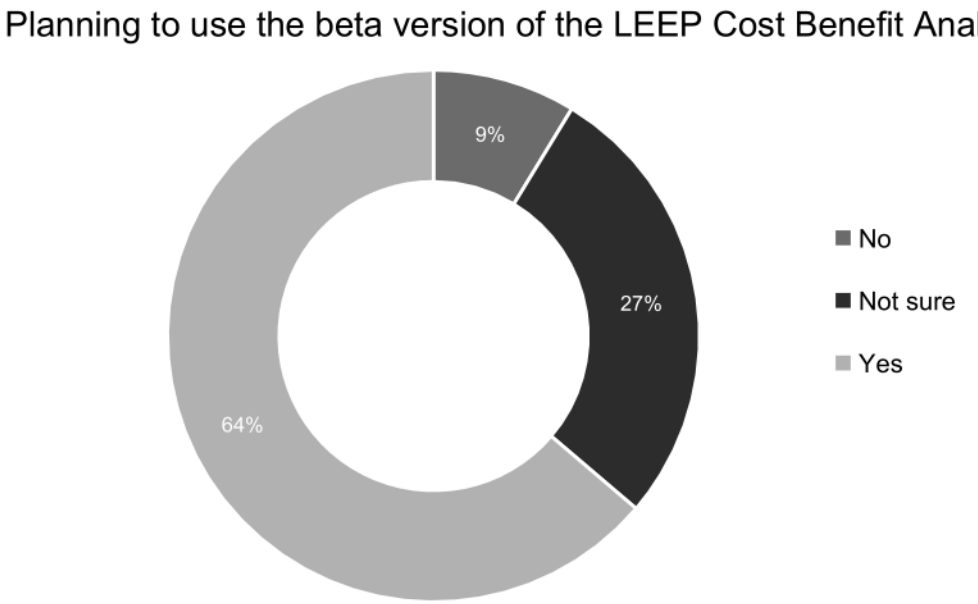
Source: LEEP Attendee Survey, 2020

Notes:

1. An online survey was emailed to LEEP attendees using contact information provided by the local Homebuilder's Association. Attendees were asked to respond to the survey within 72 hours of receiving the email.
2. Total of 72 responses received across the sessions in Vancouver, Nanaimo, Victoria, Nanaimo, Abbotsford and Prince George. A response rate of approximately 26%.

LEEP Attendee Survey

64% reported they planned to use the beta version of the LEEP Cost Benefit Analysis Tool



BC HOUSING

MAH/UDI MEETING

Boardroom 615 | 800 Johnson Street | Victoria

March 05, 2020

10:00 – 10:30 am

#	ITEM	PURPOSE
1	Working with key stakeholders and UBCM to promote and monitor the provincial matching Municipal Revitalization Tax Exemptions for new rental units	Discussion
2	Encourage MAH staff engagement with UDI's Rental Housing Committee	Discussion
3	BC Building Code Changes and Policy Work	Discussion
4	Rental Task Force Recommendations o Renovictions o AGI Implementation	Discussion
5	Rental Zoning o Bulletin/Guidelines o Monitoring	Discussion
6	Development Approval Process Review o Pilot Program for Municipalities	Discussion
7	Round Table	Discussion

Thanks.

I note that the UDI agenda changed from last week to this week and removed explicit mention of the Energy Step Code. It is good that it hasn't been singled out.

I will forward to Greg.

Andrew Pape-Salmon | P.Eng., MRM, FCAE, FCSSE
Executive Director, Building and Safety Standards Branch

Cell: 250-812-1933

From: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>
Sent: March 4, 2020 2:27 PM
To: Pape-Salmon, Andrew OHCS:EX <Andrew.PapeSalmon@gov.bc.ca>
Subject: UDI meeting bullets

Please let me know if you would like more detail on any of this. I know you are aware of many of these details, but wanted to draft in a way that you could forward to Greg/Kaye as required.

None of this would be a surprise to Jeff Fisher, but Anne may not be totally aware of the details. At a high level, the status quo will continue in terms of Step Code as the dominant construction standard, and the baseline code will be improving for communities and projects that aren't already requiring Steps 2/3 of the ESC for Part 3.

Energy Step Code

- UDI is a foundational and active member on the Energy Step Code Council.
- The Ministry is seeking input from the Energy Step Code Council to identify the most effective options for achieving the Province's CleanBC goal of a 20% energy efficiency improvement in the BC Building Code in 2022, as well as increased harmonization with the model national codes.
- For large buildings (Part 3), the 20% goal may be achieved by adopting the anticipated national code changes in the 2020 National Energy Code for Buildings, expected later this year.
- The 20% improvement will also require adjustments to the Energy Step Code to continue to provide a clear roadmap between the minimum efficiency of the BC Building Code and the long term goal of Net Zero Energy Ready performance by 2032.
- Some Energy Step Code targets may be adjusted, based on consultation with stakeholders, to ensure that all building types are treated equitably in the 2022 BC Building Code. It will not be as simple as requiring a different step for large buildings.
- Local governments will continue to be able to incentivize or require performance levels above the minimums in the BC Building Code, using the Energy Step Code.
- In 2022 the BC Building Code may also consider emerging issues such as overheating risks and greenhouse gas emissions, which have both been raised as priority issues at the Energy Step Code Council and in CleanBC.
- The 2022 energy efficiency requirements may be considered for adoption as soon as spring 2021, with an effective date of December 2022. This extended implementation approach would allow for industry to prepare and local governments to consult on and implement any necessary changes to bylaws and policies.
- For houses and small residential buildings (Part 9), a similar approach will be followed, although more substantial changes to the model national code may be necessary to achieve the CleanBC 20% improvement commitment.

Alterations to Existing Buildings

- The Ministry is currently in the early stages of consultation on this initiative, with draft policy options expected in fall 2020.
- Engagement will continue to occur through the Energy Step Code Council as well as direct engagement with impacted stakeholders.

Greg, for the UDI meeting tomorrow.

Note that we will have a Minister Briefing Note for Decision ready for you shortly – which will inform the discussion at the March 23 Minister's Council meeting. One of the bullets below is for decision by the Minister on or after March 23 (2nd last Energy Step Code Bullet: spring 2021 adoption, Dec 2022 effective date).

Tara, #1 on the list is something we have discussed internally. Promoting the revitalization tax program to muni's is a good idea (open to how we might do that) but also monitoring take up is something I have discussed with Jessica and Eric. We have informally talked about an annual survey of muni's to assess how many units are being stimulated by both this policy and rental zoning. You may want speak to this at the meeting.

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Notes

Date and Time of Meeting: Friday February 28, 2019 | Time: 9:00 a.m. to 3:45 p.m. Pacific Time
Venue: BC Hydro Office – 333 Dunsmuir St., Vancouver, B.C. & by teleconference
Chair: Zachary May, Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Participants

1. Dale Andersson, BSSB and co-chair, CBC Subcommittee
2. Bea Bains, FortisBC
3. Maya Chorobik, Chair, Small LG Peer Network
4. Christian Cianfrone, ZEBx
5. Norm Connolly, Richmond/PIBC, and co-chair, Technical Subcommittee
6. Patrick Enright, City of Vancouver
7. Jeff Fisher, UDI
8. Chris Frye, NRCan Housing Division
9. Maura Gatensby, AIBC.
10. Joe Hart, Icon Homes/CHBA BC
11. Toby Lau, BC Hydro and co-chair, Technical Subcommittee
12. Wilma Leung, BC Housing
13. Megan Lohmann, CEA and UBCM rep
14. John Madden, UBC
15. Lisa Mak, BC Hydro
16. Warren Perks, BCCA
17. Harshan Radhakrishnan, EGBC
18. Kelly Reid, HKR Builders/CHBA BC
19. Mark Sakai, HAVAN
20. Muneesh Sharma, BOMA
21. Manjit Sohi, BOABC
22. Maxwell Sykes, City of Surrey/UBCM Rep and Chair, Large LG Peer Network
23. By teleconference – MAH: Holly Wacker (Local Government Division, Planning and Land Use Management); , BSSB Staff: Kylie Sandham; Nicole Vukosavljevic; Scott Williams; Hugo Wong;
24. By Teleconference: Tom Berkhout, MEMPR; Mark Bernhardt, Bernhardt Contracting and CHBA BC (guest); Catherine Ernst, BOABC; Nicholas Heap, City of Richmond and co-chair, CaEASC; Vanessa Joehl, CHBA BC and co-chair, CaEASC; Adrian Mohareb, Climate Action Secretariat, ENV, Andrew Pride, SCEE

Guests: Wendy Acheson, BC Housing; Pauline Rupp, CHBA BC; Gary Hamer, BC Hydro; Bertine Stelzer, BC Hydro

25. Regrets: Jason Jung, ASTTBC; Mary McWilliam, BCIT, co-chair, CBC Subcommittee

1. Welcome and Introductions

Zachary May welcomed Council members and guests. New Council members include Manjit Sohi of BOABC. Zac briefed members on current Step Code adoption plan, still TBC: aiming for spring 2021 adoption with an effective date in December 2022.

2. Regional Roundup

Hugo Wong presented a short summary of an informal consultation he conducted of Building Officials and CHBA regional chapters, particularly on rural implementation in colder climates. His main findings:

For building officials:

- EAs and building officials sometimes interpret requirements differently
- Education opportunities (manuals, BCIT roadshow) are very helpful and welcome
- Functionally, building officials often educate stakeholders on Step Code
- New buildings for natural resource projects (e.g. LNG) stretch building officials capacity to take on other works
- They want:

- Simpler, consistent targets (e.g. a single %-better target instead of 3 separate targets)
- Consideration of microclimate variations in Step Code targets

For home builders:

- Kamloops got their first energy advisor (EA) last year. Previously, one EA covered Kelowna, Vernon and Kamloops
- Recent TEDI metric changes dropped a demonstration house from Step 4 to Step 1.
- Climate data is not always granular enough (Cranbrook climate data used for Kimberley despite twice the snow load in Kimberley)
- High-performance building materials aren't always available in their area (e.g. Kitimat)
- They want:
  - Clarity on 2022 code objective
  - Consistent compliance forms/methods across AHJs
  - Better relationships between EAs and AHJs
  - Clarity on how the ESCC makes decisions

Council members asked for clarification on a few points:

- "buildings for natural resource projects" refers to LNG and mining buildings in Kitimat
- The TEDI metric changes that dropped a demonstration home from Step 4 to Step 1 referred to the "Y Dream Home" built by CHBA-CI (which has since risen again after the Dec. 2019 TEDI metric changes)

Council members raised the following points:

- These issues will take time to address.
- Some EAs report a lack of trust between them and building officials. EAs, like interior designers, seek professionalization and a clear place in the building regulatory system.
- NRCan is hoping to triple their climate files in HOT2000 to better address climate variability in regions.
- Many northern communities still don't require Step 1, which is concerning if blower door tests become mandatory in 2022.
- BC Housing reports some First Nations are interested in improving housing but cannot train or attract an EA.
- Consumer demand for more energy efficient homes is not as highly appreciated as premium interior finishings.

Suggestions from around the table:

- Hold more individual phone calls with local municipalities to increase local government confidence and answer their specific questions.
- The Canadian Association of Consulting Energy Advisors is discussing how to train new EAs, and would be worth consulting on this issue.
- Shorter, plainer language bulletins on the Step Code website could supplement technical bulletins and address implementation issues.
- Pay attention to the Columbia and Elk Valley, where 70% of builders are from AB and are not trained to build Step Code homes. Consider increasing training for out-of-province builders.
- Train Realtors and real estate appraisers to value energy efficiency when selling/pricing homes.
- Architects are apparently interested in becoming EAs (to evaluate their own buildings), but are unsure how to do so. May address other capacity needs. (Richard Kudalski apparently does EA training for architects. CBCSC to examine this issue, too.)

ACTION ITEMS

- BSSB: Reach out to BOABC which offered to help by hosting a seminar on the role of EAs and their authority, accountability, etc. (possibly at spring conference)

- Hugo Wong to provide info to Chris Frye on EA capacity issues/climate files
- Chris Frye to connect with Manjit S on rural EA capacity
- Maura Gatensby to connect with Chris Frye and Robyn Wark on the EA/architect issue

3. Training and Research Update

Wilma updated the group on the market response monitoring report, the builder survey, and feedback from LEEP sessions. See slides for details. Wilma noted the sample is biased towards those who are already interested in Step Code. A cost-benefit tool with different Energy Conservation Measures (ECMs) is being developed by NRCan with estimated May/June release date; a webinar launch is scheduled for June 5. Christian Cianfrone indicated a web version of CBAT tool has similar functionality. UVic is developing a Part 3 net zero navigator. Wilma said the group is collaborating and aware of each other's projects.

4. New Support Role in BSSB (see report attached with meeting agenda)

5. Addressing Greenhouse Gas Performance Requirements in the BC Energy Step Code – Conor Reynolds and Erik Blair, Metro Van

See presentation attached with agenda. Metro Vancouver's member municipalities seek a consistent approach to GHG limits for Part 3/9 buildings, with zero carbon new buildings by 2032. Many members have declared a climate emergency, and Metro Van has a climate action strategic framework, with GHG targets, to be carbon neutral by 2050.

Members discussed several strategies, including funding for low carbon energy systems in Part 9 buildings, which Victoria is also considering. Local governments could also make GHG emissions a condition of rezoning. However, these novel approaches reduce alignment across municipalities, which is not ideal.

In Richmond's analysis, district energy systems with 70% ground source and 30% natural gas will consume all available RNG. FortisBC is considering purchasing additional RNG from outside BC.

Metro Van emphasized that by 2032 Metro Van needs to halve GHG emissions and reduce to zero by 2050, and wants to send early market signals. Council discussion included:

- Support for decarbonization, but reminder that electrically heated homes are present unique challenges in the north
- RNG is an option for lowering carbon emissions
- Province is considering possible approaches to support reduced carbon emissions from building and ESCC can provide guidance
- Clear, flexible, and simple targets could be guiding principles
- Code harmonization with national must also be considered

BC Housing is conducting the MBAR project – see info online: "Mobilizing Building Adaptation and Resilience (MBAR) is a multi-year, multi-stakeholder knowledge and capacity building project led by BC Housing, with participation and contribution from over 30 organizations, including national, provincial, and local agencies; and industry partners."

ACTION ITEMS

- Subcommittees to map out their priorities for the next BCBC edition quickly, as they need to do research (and secure funding for that research). Priorities to be discussed at the June ESCC meeting.
    - Technical subco to examine limits (commission new studies or review old ones)
    - Policy options require development, could engage UBCM Climate Change Committee

6. **Part 9 Homes in Richmond; 2020 National Code Changes and Effect on BC Energy Step Code**

Richmond presented their early findings on Step Code homes built in their jurisdiction. Acknowledging the limited sample size, they nonetheless emphasized that these was the first analysis of actual homes, not reference homes. See slides for more details.

Summary: New metrics are most beneficial for Step 1, with %-better easier to achieve than TEDI. Formerly Step 1 homes could now be Step 3. They are concerned that new %-better and envelope metrics make it easier to reach certain Steps, and create an even wider gulf between the Lower and Upper Steps (in construction methods and cost), thus making it harder for municipalities to reach their emissions reduction targets. The table discussed the benefits of increased airtightness of these homes (regardless of Step), and saw the general improvement of homes as a net benefit.

The %-better approach is the national approach, which B.C. has committed to harmonizing with as much as possible. Some were concerned that a less energy efficient home would be more difficult to convert to a low-carbon energy system.

Nationally, Zac said the process of code harmonization will require input from Step Code members. He introduced the national energy tiers, and remarked on their similarity to Step Code. EUIs are not part of this national code change due to lack of time, but they are to be discussed in the next national code development cycle.

ACTION ITEMS

- Richmond's findings could be used to influence %-better at national.
- Zac to send email out March 5 for working session

7. Proposed New Subcommittee Structure and Priorities: Council Discussion

- Dale Andersson provided an overview of proposed changes to the Subcommittee structure, per the draft Subcommittees' and Council's Terms of Reference provided in the meeting materials. The Subcommittees' Terms of Reference identifies proposed priorities for each Subcommittee in 2020/21.
- The afternoon Subcommittee Breakout Sessions were deferred due to time; teleconferences will be booked instead (one for each Subcommittee) to discuss the proposed priorities of each.

ACTION ITEMS

- BSSB to book 4 teleconferences, one for each Subcommittee – to discuss the priority action items for each. Once all teleconferences are held, BSSB to finalize the updated draft ToRs.

8. CleanBC Annual Report

See report attached with meeting agenda. Report includes update on local government adoption of the BC Energy Step Code.

9. Existing Buildings Project Update, Kylie Sandham, BSSB

Kylie Sandham from BSSB presented a summary of the Fall 2019 stakeholder consultation for BSSB's Alterations to Existing Buildings Project (see attached). Government's commitment is to adopt a code for existing buildings by 2024 as part of CleanBC.

BSSB has just begun developing policy options after first hearing stakeholders, and is considering a broad range of options. Those policy options will be presented for stakeholder feedback in Fall 2020.

Table feedback:

- Feedback from local governments can take more than a month due to council approval. Leave lots of time.

- Limited annual rent increases limit available funds to upgrade buildings. Hopefully it is not targeted to buildings not worth saving.
- Link upgrades with land use planning so upgraded buildings aren't, for example, demolished to increase population density on a future transit line
- The table had questions about what actions will trigger upgrades. This is currently under consideration by BSSB.
- The What We Heard Report from stakeholders will be published externally in the future.
- Maxwell asked BSSB to present on this issue to Metro Vancouver's Local Government Subcommittee

10. Final Comments and Adjournment

- Members thanked the following Subcommittee Co-chairs who have resigned their co-chairing positions: Vanessa Joehl/C&EASC; Christian Cianfrone, CBCSC; Maxwell Sykes, Large Communities Peer Network.
- Scott thanked all those who provided input for the Part 9 Compliance Calculator and Manual.
- Next in-person meetings are planned for June and October 2020.
- Meeting adjourned 3:50 p.m.

RE: 251825: Invitation to Participate in Roundtable to Discuss Housing

Dev & Industry is 9/12 and Indigenous Orgs is 10/13 (incl. Marcel Swain calling in).

Developers & Industry			
YES	**Gary Pooni**	Brook Pooni and Associates	Attended 2017 roundtable and conference
YES	**Tony Pappajohn**	Jameson Development Corp.	Attended 2017 roundtable and conference
YES	**David Sander**	Hollyburn Properties	One of BC's largest owners and operators of purpose-built rental housing. David Sander was at the 2017 roundtable. Sent Joy Hayden (jhayden@hollyburn.ca) to the 2017 conference.
NO	**Anne McMullin**	Urban Development Institute	Was at the 2017 roundtable and at the conference. Kathy Hogan (khogan@udi.org), Jeff Fisher and Anne McMullin (amcmullin@udi.org) were also at the conference. Beau Jarvis (Wesgroup attending for UDI on Anne's behalf)
YES	**Beau Jarvis**	Wesgroup Properties	Was at the 2017 roundtable and conference. Peeter Wesik unable to attend; sending President Beau Jarvis in his place. Beau attending on behalf of UDI.
YES	**Craig Lochhead**	Townline Homes/TL Housing Solutions	Was at the 2017 roundtable and conference.
YES	**David Hutniak**	Landlord BC	Participated in DAPR.
YES	**Luke Mari**	Aryze Developments	Infill developer.
YES	**Neil Moody**	Canadian Home Builder's Association of BC	Participated in DAPR. Molly let Alycia from CHBA know that it won't be possible for them to send an extra person
	Robert Brown	Catalyst Community Developments	Wrote an article, *Below-Market Rental Housing Builds Community*, in the Summer 2019 edition of Input Magazine, the newsletter of the Real Estate Institute of British Columbia.
YES	**Brian McCauley**	Concert Properties	
	David Negrin	MST Development Corporation	MST was formed by the Musqueam, Squamish and Tsleil-Waututh to manage the billion dollars' worth of land that they own.

Indigenous Orgs

YES	**Margaret Pfoh**	Aboriginal Housing Management Association	
YES TELEPHONE	**Marcel Swain**	Lu'ma Native Housing Society	Was at the 2017 roundtable.

YES	**Kevin Albers**	M'akola Housing Society	Was at the 2017 roundtable. Add: Charla Huber chuber@makola.bc.ca and update Kevin's email on the master list
YES	**Fran Hunt-Jinnouchi**	Aboriginal Coalition to End Homelessness	
YES	**Claire Marshall**	Aboriginal Land Trust Society	Best contact I could find was for Indigenous Corporate Training Inc. camarshall@telus.net
YES	**Christos Vardacostas**	Aboriginal Housing Society of Prince George	
YES	**Rupinder Cheema**	Kekinow Native Housing Society	s.22 CEO — Rupinder Cheema is interim
YES	**Janice Silver**	Mamele'awt Qweesome Housing Society	
	David Eddy	Vancouver Native Housing Society	Wrote an article, *Housing and Reconciliation*, in the Summer 2019 edition of Input Magazine, the newsletter of the Real Estate Institute of British Columbia.
YES	**Austin Parisien**	Aganttanam Housing Society	
	Reg Sampson	Lax Kw'alaams WAAP Housing Society	Most of the housing being built will be off-reserve and in Prince George. Could not find contact information for the Housing Society, only for the band.
	Tina Larouche	Ki Low Na Friendship Society	
YES	**Norman Laube**	Metis Nation BC	Norman attending on behalf of Chris Gall.

Good afternoon,

Just a quick note to see if it might be possible to for me (or you) to invite Scott Cressey to the upcoming roundtable housing discussion taking place next monday?

I recently connected with Scott and he was unaware of the meeting. As you may know Cressey has a long history of building rental housing in the province and has likely built more than any other private group.

Scott's email is: scottcressey@cressey.com

Best regards,
David

Hi everyone,

NYSERDA is hosting another meeting/webinar that looks valuable for existing building decarbonization. See below. I have registered, but do not think I will have time to attend. In the past, they have recorded and shared these upon request.

If anyone attends, it would be valuable to share some of the learnings.

Stay isolated,
Max

To: Haramati, Mikhail (NYSERDA) <Mikhail.Haramati@nyserda.ny.gov>
Subject: Enhancing Real Estate Value Stakeholder Roundtable Webinar: 3/26 1-5pm ET

You are invited to attend NYSERDA's**Enhancing Real Estate Value Stakeholder** webinar on**Thursday, March 26th, 1:00 p.m.– 5:00 p.m.** The goal of the webinar is to engage the real estate professionals to better

understand how to influence decision makers at key inflection points in a building's capital cycle, to facilitate upgrades in support of the statewide decarbonization goals.

This webinar is part of an ongoing effort by New York State Energy Research and Development Authority (NYSERDA) to gather information in support of the development of a Carbon Neutral Buildings Roadmap. The Roadmap, expected to be completed in 2021, will lay the framework to scale the economy for the design, construction, renovation, and operation of buildings that achieve superior energy performance, use energy from renewable sources, and are cost effective. This Roadmap will be completed in Q1 2021 and will assist the State in achieving its goal of an 85 percent reduction in greenhouse gas emissions by 2050 and transition to economy-wide carbon neutrality.

The Real Estate Value Stakeholder Roundtable webinar will cover the following discussion topics.

- Topic #1: How do we convince those making upgrade decisions (owners, property managers, industry professionals) to go all-electric, high performance, and/or install distributed generation?
- Topic #2: Messaging: How do we engage the Real Estate Industry Professionals?
- Topic #3: Financing: How do we Fund Deep Retrofits and Upgrades?

Registration

This session will be a webinar. Registration is available at https://nyserda-events.webex.com/nyserda-events/onstage/g.php?MTID=ece4d3b51bcb1884cfe390ca2325bd5e1.

Subject: FW: Enhancing Real Estate Value Stakeholder Roundtable Webinar: 3/26 1-5pm ET

Hi everyone,

NYSERDA is hosting another meeting/webinar that looks valuable for existing building decarbonization. See below. I have registered, but do not think I will have time to attend. In the past, they have recorded and shared these upon request.

If anyone attends, it would be valuable to share some of the learnings.

Stay isolated,
Max

MAXWELL SYKES, MRM, HBA | CLIMATE AND ENERGY MANAGER

To: Haramati, Mikhail (NYSERDA) <Mikhail.Haramati@nyserda.ny.gov>
Subject: Enhancing Real Estate Value Stakeholder Roundtable Webinar: 3/26 1-5pm ET

You are invited to attend NYSERDA's**Enhancing Real Estate Value Stakeholder** webinar on**Thursday, March 26th, 1:00 p.m.– 5:00 p.m.** The goal of the webinar is to engage the real estate professionals to better understand how to influence decision makers at key inflection points in a building's capital cycle, to facilitate upgrades in support of the statewide decarbonization goals.

This webinar is part of an ongoing effort by New York State Energy Research and Development Authority (NYSERDA) to gather information in support of the development of a Carbon Neutral Buildings Roadmap. The Roadmap, expected to be completed in 2021, will lay the framework to scale the economy for the design, construction, renovation, and operation of buildings that achieve superior energy performance, use energy from renewable sources, and are cost effective. This Roadmap will be completed in Q1 2021 and will assist the State in achieving its goal of an 85 percent reduction in greenhouse gas emissions by 2050 and transition to economy-wide carbon neutrality.

The Real Estate Value Stakeholder Roundtable webinar will cover the following discussion topics.

- Topic #1: How do we convince those making upgrade decisions (owners, property managers, industry professionals) to go all-electric, high performance, and/or install distributed generation?
- Topic #2: Messaging: How do we engage the Real Estate Industry Professionals?
- Topic #3: Financing: How do we Fund Deep Retrofits and Upgrades?

Registration

This session will be a webinar. Registration is available at https://nyserda-events.webex.com/nyserda-events/onstage/g.php?MTID=ece4d3b51bcb1884cfe390ca2325bd5e1.

Contact

If you have any questions, please reach out to Mikhail Haramati (mikhail.haramati@nyserda.ny.gov) or Pooja Chawda (pooja.chawda@nyserda.ny.gov).

Thank you for your interest in this topic. We look forward to hearing from you soon.

Sincerely,

NYSERDA Carbon Neutral Buildings Team

COVID-19 UPDATE #2 ON CONSTRUCTION SITES

Dear Wendy

Further to our last bulletin sent Tuesday, March 17 regarding the BC Government's Public Emergency Order prohibiting gatherings of more than 50 people in one place, we would like to provide further clarity as this relates to construction sites.

A senior provincial government official has contacted UDI President & CEO Anne McMullin to assure our industry and membership **the 50-person limit does NOT apply to construction sites**. The provincial government official confirmed that all sites can and should remain operating.

Sites must continue to conform to Worksafe BC practices and current COVID-19 prevention protocols. That means additional handwashing stations should be made available, that workers should maintain their social distance of 1-2 metres from one another and during any on-site meetings.

In addition, the Provincial Health Officer Dr. Bonnie Henry said during the March 17, 2020 news conference, shortly after the 1:02 mark that **"**Construction work outside is not as much of a risk that we are concerned about***...but anyone who's sick should not be going to work*****."**

Additional Resources:

- New B.C. COVID-19 self-assessment tool found online here
- Latest **non-medical** COVID-19 updates, including travel recommendations, please call or text the provincial government through a newly created hotline at 1-888-268-4319 (1-888-COVID19) between 7:30 a.m. and 8 p.m. daily
- Latest orders and directives from the provincial health officer
- If you or a family member have symptoms or need medical advice, **call 811**
- For prevention and treatment, visit BC Centre for Disease Control or follow @CDCofBC
- Latest COVID-19 BC Government Updates

We will continue to keep you posted on all COVID-19 developments. Please let me know if you have any additional questions or concerns by contacting me at AMcMullin@udi.org.

Thank you,

Anne McMullin, President & CEO, UDI

Good afternoon Energy Step Code community,

First and foremost, I hope everyone is finding ways to keep you, your family, and your community safe, healthy, and connected. s.22

s.22 The latest COVID-19 information from the Province is available here: https://www2.gov.bc.ca/gov/content/safety/emergency-preparedness-response-recovery/covid-19-provincial-support?utm_campaign=20200319_GCPE_AM_COVID_6_NOTIFICATION_BCGOVNEWS_BCGOV_EN_BC__NOTIFICATION

Over the past week the Building and Safety Standards Branch has been focused on transitioning our teams to working from home, supporting employees with family care arrangements, and supporting the Ministry with urgent issues related to the State of Emergency declaration. As we have more clarity on our workplan for the next few weeks and months we will work with the Step Code Council and Subcommittees to update priorities and workplans appropriately.

We anticipate that work supporting the Energy Step Code and implementation of CleanBC will continue, but the nature of this work will change according to the evolving public health situation and associated impacts on the construction sector and the economy. I will do my best to provide updates as they are available. Thank you all for your patience and flexibility.

If you have any questions, please feel free to reach out by phone or email.

Wishing you, your families, and your communities a safe and healthy weekend.

Best,
Zachary D. May, MBA
Director, Strategic Policy

Lady and Gentleman,

s.22

I hope you are both well – seems like so far me team s.22 and continuing to work. s.22
s.22

Wanted to let you know that Patrick is gearing up for when life begins to resemble normal to start consulting on updates to our Green Building Policy for Rezonings (4-6 storey and >6 storey residential focus). UDI has flagged that they would like to have a discussion about the real costs of the current requirements first so we are starting to do some background work in this regard, speaking to some designers, builders, and then eventually developers that have more than one or two projects under their belts about their experiences. Aim is to ID some of the (mis)perceptions that need discussion, people with knowledge of specific issues, and then assemble a bit of a workshop (timing likely a couple months out?) to daylight the perceptions and realities.

At such a time as we do have this discussion, is there someone from the Council you would like us to invite to such a workshop?

Stay/keep well!

Subject: Re: DISCUSSION | Early Step Code Adoption

Greg,

I spoke with Zac about this in preparation for the 3pm meeting.

At the Exec meeting this morning I raised the issue of local government bylaw amendment as being a central argument in favour of pre-election adoption to provide lots of time (18-24 months) before the December 2022 effective date.

I failed to mention a more important argument in favour of proceeding now, one being aligned with economic recovery: providing certainty in the marketplace at a time of economic uncertainty, and "uploading" the central responsibility from local governments to the province to deliver CleanBC goals.

UDI would appreciate the consistency of a single provincial standard. We could seek a letter of support from UDI if you want.

With this, we could improve the investment climate through certainty, support investment in a sector that is one of BC's strengths (green buildings), and deliver upon climate action commitments in CleanBC.

For me, this feels like a repeat of 2015 when we standardized the patchwork quilt of variable local government standards in bylaws with the BC Building Code via the Building Act.

Some local governments will want to go beyond what we adopt in 2022. We should discuss this item this afternoon.

Hi Zac

Just wanted to flag that I think Aura has some capacity to assist. As you May recall I was going to get her to help on the compulsory trade file but that has fallen off with COVID.Not sure when it might start up. In talking to Aura, it sounds like BERT is not fully occupying her time.

Just wanted to flag this is if you or another wanted to pull her onto another file.

Subject: RE: New Economic Recovery Task Force

Interesting.
Our usual suspects aren't listed as members. The industry reps are from the larger umbrella groups.
It would be good for to us to understand how our stakeholders are represented by these larger associations:

- Greg D'Avignon, president and CEO, Business Council of BC
- Val Litwin, president and CEO, BC Chamber of Commerce
- Bridgitte Anderson, CEO, Vancouver Board of Trade
- Anita Huberman, CEO, Surrey Board of Trade
- Laird Cronk, president, BC Federation of Labour

For example, does UDI, BOMA or CHBA BC see themselves as stakeholders of one or more of these groups? Are their interests aligned? Is these groups the means by which they would make their needs known?
Zac is our Economic Recovery lead. Do we have an analyst assigned?

Subject: District Energy meeting Thursday May 12, 1.30pm
Importance: High

Good afternoon District Energy Task Group members,

Please find attached two documents in preparation for Thursday afternoon's meeting.

(a) Meeting notes from April 28, 2016
(b) Agenda for May 12, 2016

For anyone who is dialing in to this Thursday's meeting, please use the Dial in #[s.15] **and Participant ID:** [s.15]

Thank you for anyone who has already provided written comments for consideration; we have had some great feedback which will all assist with the formulation of ideas and recommendations.

For those who are unable to be a part of this week's meeting, I will of course keep you updated via email. You are also welcome to send me any additional comments which may assist with the summary report.

Thanks again for all your support,

Andrea Frost | Policy Analyst

Building and Safety Standards Branch, Office of Housing and Construction Standards
Ministry of Natural Gas Development and Minister Responsible for Housing

Attachments: image001.jpg

I wasn't aware of the plan to seek the Minister's decision in December but will add that to our project plan. That's a helpful step to include. I will include the project plan in our next check-in for your review.

Would you like us to postpone the planned consultation in fall 2020 until after we have a decision from the Minister, or is the consultation intended to inform the Minister's decision? I understood the timelines in the BC Hydro agreement to be a "no later than" timeline, as opposed to a specific date we are committed to. The planned fall 2020 consultation is intended to satisfy this requirement in the agreement.

Please let me know how you would like us to proceed.

Best,
Zachary D. May, MBA

Subject: RE: Conversation with Finkelstein, Ben ENV:EX

Yes, I was operating on the assumption that we will submit the draft strategy to the Minister by December. This is contained in the BC Hydro Contribution Agreement. The Minister will decide if we release it publicly in early 2021.

I don't see a down side of delaying that submission to the Minister by say, the end of February 2021. There would still be faint hope that the strategy could be released publicly after that, even in an election year. The Strategy will be good news for most stakeholders, including UDI/CHBA-BC who want us to take action on existing buildings, the climate action community, and consumers. It may not be received positively by the owner associations (BOMA, Landlord BC, CHOA). We need to ensure that the strategy is well received by BC Non-Profit Housing Association. They are critical to get on board and should be a validator of our strategy. I expect BOMA will also be willing to be a validator, given that they are pursuing the 2030 Resiliency District concept.

If we delay the submission to February 2021, then we should amend the BC Hydro contribution agreement to reflect that, or at least include it in a quarterly report to BCH.

It is critical that you prioritize your time on this project – it is the number one priority on your plate, even ahead of BCBC adoption of CleanBC. The reason I say this is that the DM is very engaged. We have 2 bullets in the MAH Strategic Plan that point to this project – CleanBC and assessing risk for existing buildings.

Thanks for forwarding.

Our messaging internally and to stakeholders has been focused on a public engagement for our draft framework for AEB in fall 2020 (see the snip below from the what we heard report) . Were you referring to a decision on the framework after the public engagement this fall?

Next Steps

Development of Policy Options: Spring/Summer 2020

In 2020, BSSB will develop policy options that will support a future alterations code for existing buildings.

Phase 2 Consultation: Discuss Policy Options - Fall 2020

The second phase of consultation will be used to seek input from stakeholders on policy options. The desired outcome of this phase is that stakeholders and BSSB develop a shared understanding of options, policy trade offs, and policy preferences.

Sorry, this note was incorrect and I lost my edits.

I suggest you proceed with a briefing note now. The BN can focus on the short-term stuff. A Cabinet Concept paper can come later this month.

The Briefing Note will:

- Note the importance of the built environment as a component of economic recovery
- Highlight the opportunity for BSSB/MAH to provide leadership for all of government on the built environment, in concert with our partners
- Introduce the concept of linking investment stimulus with a focus on long-term resiliency and sustainability of the built environment
- Note broadly that BC has “strengths” in those sector
- Speak very broadly to the policy levers available to us and our sister Branches
- Allude to the development of a Cabinet Concept Paper (the “proposal”)

The MAH Cabinet Concept will:

- s.12
-
-
-
-
-
-

Hi Andrew,

As discussed, we have considered a concept paper option, based on the feedback from the management team to the BN.

Concept Paper:
s.15

Briefing Note:
s.15

There is still some work to do to on either approach, so interested in your thoughts on which format is best and how we can refine the message into something clear and direct (the general concern from the mgmt. team in the comments and emails).

Best,

FYI - project updates

From: May, Zachary OHCS:EX
To: Vukosavljevic, Nicole OHCS:EX <Nicole.Vukosavljevic@gov.bc.ca>
Sent: April 15, 2020 2:09:07 PM PDT

	April 15 ADM update	**Notes and Next Steps**
Built Environment Economic Recovery Planning	• BN with PLUM for feedback • Developing project tracking document	• What's our strategy? • DAPR support for LG online services? (asked JB) • What's our plan in BSSB?
Building Energy Requirements Tool	• Prototype completed • Releasing online checklist through ESCC and ZEBEx • Coordinating the policy need, technical requirements, and financial requirements into a business case. • Next steps to coordinate with Andreas, brief Greg, brief DM (late May?)	• Develop a business case • Follow up with Andreas • Establish ADM/DM briefing dates • Establish steering committee • Establish funding partners
Alterations to Existing Buildings	• Continuing strategy development and detailed project planning • Waiting for opportunity to brief Greg and Kaye re intended scope and approach. May? • What We Heard report being finalized by GCPE - release in May • BN with Greg as FYI • Still planning for targeted engagement this summer and draft policy framework (policy options) fall 2020 • Planning to provide recommendation to Minister in December	
Clean BC committees	• ED Working Group continues to meet • CAS is moving forward with public engagement on phase 2 - no specific sectoral targets • BSSB has concerns that buildings targets are not validated against real world conditions and impact analysis is not complete • Built Environment Working Group (reports to ED working group) is unpacking policies and will be conducing more modelling this summer • Not clear what delays or changes will result from COVID • Coordinating with B. Finkelstein to support requests from UBCM Climate Action Committee - report expected in June with specific requests re building code, GHG emissions, existing buildings code, and investments in affordable housing.	
Energy Step Code Council	• Council met in February and supported need for adoption of 2022 requirements (20% improvement) prior to provincial election • Significant discussion regarding regulating GHGs and request from industry stakeholders to have ESCC lead this discussion	
Capacity Building and Communications	• Dale is focused on measuring capacity for planned 20% improvement + mandatory energy advisor for homes, including remote communities • Working with EMPR, Fortis, BC Housing, BC Hydro, BCIT to identify capacity gaps, develop solutions (training, information, etc.), and fund programs	

	• Secured 100k funding from BC Hydro to support research and training work towards 2022 Step Code implementation (Section 25 account)	
CleanBC adoption in BCBC by 2022	• Proposal to prepare a Building Code Regulation amendment for Minister's signature by December 2020 - business-as-usual • Communicate that timing of adoption is uncertain • Continue with code development and impact analysis through the summer • Ideally brief the Minister on proposals and impacts no later than September, prior to seeking Energy Step Code Council endorsement • If we move ahead in spring 2021, then all subsequent input would be through Non-Disclosure Agreements	• Scott is leading this work • Detailed project plan underway
2022 Implementation (GHG + LG BP Guide)	• Need to address GHG emissions - pressure from local governments, CAS, EMPR, industry groups (UDI, CHBA) • BSSB commissioned a report in spring 2019 to identify policy options - available on energystepcode.ca • Discussion between BSSB and Fortis BC to find a collaborative approach to (1) understand GHG emissions measurement and (2) establish targets for voluntary adoption by local governments • Pressure likely to increase in June as UBCM committee requests ability to address GHG emissions as part of Energy Step Code • Next steps to establish a committee of energy experts to make sure we have a transparent and defensible approach to measuring and addressing GHG emissions related to fuel source - Likely May 2019 Start • We have a Briefing Note on this topic that can be advanced if desired	
GBA+ Working Group	On Pause	
Public Sector Buildings Energy Step Code	• Virtual workshop completed in March • Consultant has delivered report for review • Will finalize report in May and provide recommended next steps to CAS • BSSB is no longer prioritizing this work and will expect CAS to lead	
Seismic Retrofit Guidelines	• EGBC project team is developing expanded technical guidelines for at-risk building types • NRC and NRCan financially supporting this project • BSSB technical team invited to workshop next week to unpack the methodology used for school program • NRCan is interested in additional project following this one to address additional building types • BSSB is doing internal analysis to determine how this project will inform future code requirements for alterations to existing buildings or pilot projects with communities • Project wrap-up March 2021

SAVE THE DATE!

NYSERDA is hosting a webinar on May 20th from 1pm – 4:30pm on **'Exploring Workforce Development Needs and Resources for a Decarbonized Built Environment'**.

This event will stimulate in-depth discussions on workforce development and will help the Roadmap team understand and prioritize key workforce needs and solutions for decarbonizing and electrifying New York State's building stock. More information to follow in a formal invitation to be sent out in the coming weeks.

If you have any questions, please reach out to Pooja Chawda at pooja.chawda@nyserda.ny.gov or Kaitlin Moody at Kaitlin.moody@nyserda.ny.gov.

We look forward to working with you on this exciting initiative and hope you can join us for this event.

Sincerely,
NYSERDA's Carbon Neutral Buildings Team

Call from UDI

From: May, Zachary OHCS:EX
To: Hutchinson, Jarrett OHCS:EX <Jarrett.Hutchinson@gov.bc.ca>, Pape-Salmon, Andrew OHCS:EX <Andrew.PapeSalmon@gov.bc.ca>
Sent: April 22, 2020 1:59:10 PM PDT

Jarrett and Andrew,

I just got off the phone with Jeff from UDI. He had a few issues to raise that apply to several initiatives at BSSB.

1. **Delays in construction causing permits to lapse** - A UDI member is concerned that they have paid DCCs, been issued a building permit, but may not be able to start work within the 6 months required by the AHJ. This may trigger a new building permit review and unknown impacts on DCCs. I mentioned that it's a LG policy in this case, but also indirectly related to the language in the Minister's order for the code that talks about work starting promptly and continuing without unusual stoppages. Might be something to provide guidance on in these COVID times. Jeff will be providing a written request to BSSB on this.
2. **Wood construction and insurance** - Jeff has participated on several webinars by the insurance bureau of Canada where they link wood construction to high insurance rates. This is confusing for UDI and seems to present a possible barrier to wider adoption of wood construction, which UDI is otherwise very supportive of. This was an FYI at this point. May become more of an issue if/when embodied carbon starts to be measured or regulated.
3. **Energy Step Code and carbon** – UDI is very interested in clarity on GHG emissions and seeing this discussion managed through the Energy Step Code Council. It would be good if GHG could provide options to industry rather than being piled on top of energy efficiency (e.g. low carbon + Step 3 as an alternative to Step 4). No action required here but I mentioned we are reviewing the issue internally right now to determine what next steps are reasonable.
4. **Economic Recovery** – UDI is hoping there is a way to encourage AHJs to focus on improving the efficiency of their internal processes during COVID rather than establishing new policies that may add costs and confusion. The market is impossible to read right now and new policies further complicate the business cases for projects. Jeff will also provide this request in writing. Aligns well with the DAPR items in our recovery framework.

Two things FYI

Our report recommending changes to the Vancouver Building Bylaw requiring Energy Step Code 4 envelopes ("% better than" approach is not allowed though) and zero emissions heating and hot water for new Part 9 residential construction as of Jan1 2022 is on Council's agenda for next Wednesday (though not without the most drama behind the scenes I've ever had to deal with). This is a big win for Climate Emergency Response Big Move 4 (all new and replacement heating and hotwater equipment zero emissions by 2025).

https://council.vancouver.ca/20200429/documents/pspc3.pdf

HAVAN/UDI/CIPH/TECA and even Fortis are not in opposition. We may take some fire from Board of Trade as they have made it clear to our Provincial friends they are opposed to any new policies for CleanBC so suspect they might have something to say for us here.

Also to note, one outspoken builder has flagged for one of our Councilors that Hydro rate structures mean that even with the most efficient equipment that these homes can remain more expensive to operate. The **builder has urged our Councilor to have the City work with Hydro to change their rate structures.** It will likely come up on Wednesday given affordability and COVID recovery sensitivities – **anything more I might be able to say other than simply "Hydro Phase II Review includes exploration of how Hydro can support CleanBC and that rate structure has been identified as one possible area for change"?**

Just FYI at a staff level, we felt the Province's Interim Report on Hydro Phase II review lacked sufficient ambition and emphasis on this issue but we will be preparing a more formal letter that includes this soon.

A couple interesting items below – further City of Vancouver adoption of Step Code (although not the metric we have pulled from the NBC, interestingly) and division between the Board of Trade and the other industry groups we deal with more regularly.

Best,
Zac

Hi all,

Another valuable looking event out of NYC. Early morning for the west coast.

Please let me know if receiving these is more nuisance than benefit and I'll keep you off future emails.

Climate Mobilization Act Series: Staircase to Electrification [ONLINE]

Wednesday April 29, 2020 – 9 to 10:30am

Join NRDC and BE-Ex for the latest installment in our Climate Mobilization Act Series: Staircase to Electrification—a live online event.

Like all sectors of the economy, the building sector must move toward replacing fossil fuels with electricity. There are solutions available to achieve this, but the process and timing of these changes will vary dramatically across different building typologies. What are the primary challenges faced by the major typologies of New York City buildings? Where should each begin this process, and what technologies will help the sector achieve these steps? What is the likely role of on-site generation and energy storage? These questions and more will be addressed by our highly esteemed panel of speakers.

Dear Energy Step Code Council members and alternates,

We hope you are safe during these unprecedented times.

We would like to propose a teleconference with you next week. The agenda is still being prepared, but we would like to gather as a community to start identifying the **issues that are emerging as a result of COVID-19** and **what we should be working to address**.

Would you please indicate your availability for a 1.5 hour teleconference the mornings of May 4, 5 and 6 at the following Doodle Poll:

https://doodle.com/poll/fm97v5t65ck3aeic

We hope to confirm the date later this week. Please reach out to me or Hugo Wong if you have questions.

Thank you,
Dale

Sent:	May 5, 2020 12:58:03 PM PDT
Attachments:	UDI Webinar_GB Regulatory Update_Draft.docx

Dear Sean, Zac and Norm,

UDI has moved their breakfast seminar online. They would like to host a **green building regulatory update webinar** for their members. They have asked ZEBx to moderate the session. BC Hydro's New Construction program is providing educational support for the event.

We wanted to ask whether you would be interested and available to be **panelists for the session**. Please see attached a draft outline with suggested topics which are also summarised below. UDI and ZEBx would, of course, work with you to coordinate and finalise the content.

- **City of Vancouver**: Climate Emergency Response, zero emission space & water heating, green building regulatory update
- **Province**: Energy Step Code & Alterations to Existing Building Code update
- **City of Richmond**: Energy Step Code implementation example (including development & permitting, airtightness testing)

Possible dates:
May 26, 27, or 28
June 8 - 12 and 15 - 19

Time: 9:30 am - 10:30/45 am

Please let me know if you are interested to participate and if so, which date(s) would work for you. I would be happy to receive any feedback regarding the content or answer any questions you might have.

Thank you,
Michaela
--

Michaela Neuberger | Director of Operations
Zero Emissions Building Exchange | 604.330.2017 | @zebxchange

UDI Breakfast Webinar: Green Building Regulatory Update

Possible dates: May 26, 27, or 28 I June 8 - 12 and 15 – 19, 2020

Time: 9:30 – 10:30/45 am

Event duration: 60 – 75 minutes

Moderator: Christian Cianfrone, ZEBx

Educational support: BC Hydro, New Construction Program

Suggested Panel (5 – 7 minutes presentation time):
- City of Vancouver: Sean Pander, Green Building Manager
- Province: Zachary May, Director of Strategic Policy, BSSB
- Lower Mainland municipality: Norm Connolly, City of Richmond

Content:

BC Hydro (2 minutes)
- Why is BC Hydro supporting this session?
- Outline resources, incentives available to support developers achieve high performance new construction (and potentially existing buildings)

ZEBx Introduction (5 minutes)
- What is ZEBx?
- ZEBx & UDI collaboration (GDS)
- ZEBx programming and offers to support developers (Design Charrettes, Pattern Language course, NZER workshops, Decarb Lunch series)
- Introduction to today's session & speakers

CoV Regulatory Update
- Climate Emergency Response: Big Move 4 for zero emissions space and water heating new and existing buildings

- Climate Emergency Requirements for New Housing 3-Storeys and Under (Council approved on April 29, 2020):

    - VBBL has been amended requiring all residential space or water heating systems to be zero-GHG-emitting, effective January 2022.
    - A 2 tonne carbon pollution cap has been introduced for new single family and duplex dwellings 325m2+ to lower emissions form the largest new homes, effective January 2021.

- Other Updates

BC Energy Step Code Regulatory Update

- Number of BC municipalities adopted ESC vs have started consultation on ESC: focus on adoption in the Lower Mainland; (This resource would be good way to summarize information but needs to be updated; two examples to mention are the recent Step 5 adoption by West Vancouver and that Prince George started consultation on implementation in February 2020.)
- Overview for which building types ESC metrics have been developed & adopted and which are still outstanding (e.g. public buildings; hospitals)
- Overview of LGs who have approved a lower step for Part 3 buildings with a Low Carbon District Energy System connection
- Resources available: Summary slide with guides available on ESC website, focus on large building resources such as the Guide to Low Thermal Energy Demand for Large Buildings
- LG Development / Building Permit processes: What are the major changes for developers in their touch points with LGs? Provide example of one municipality and highlight commonalities in processes / documents for Part 3 buildings that need to be provided, such as energy modeling results, airtightness testing etc
- Airtightness Testing: BC Energy Step Code requirements for airtightness testing for Part 3 buildings: outline requirements & procedure on a high-level
- Other Updates?

BC Alterations to Existing Building Code

- Development of an Alterations to Existing Building Code (AEB Code) policy framework has started in 2019.
- Project Goal: To provide clear requirements for existing buildings that will enable GHG reductions and increase life safety and resilience for British Columbians.
- Stakeholder feedback: started in 2019 and will continue through the fall of 2020.
- AEB Code to consider seismic and climate risks.
- It is anticipated that the AEB Code will be implemented in 2024.

Commented [MN1]: Is the CoV ready to talk about existing buildings yet? Even just announcing that they are preparing a retrofit strategy to go to Council in the fall of 2020?

Commented [MN2]: UDI has asked whether an update on the AEB Code is possible to include. Discuss whether the Province and CoV feel comfortable talking about this subject.

Subject: RE: delays in work and the BC Building Code

Zachary, thanks for the information regarding delays in work and the *BC Building Code* (*BCBC*) which informs local governments that there are limits to how long Building Permits can last if delays occur in construction. There is a concern that several local governments have established time limits due to this provincial regulation. As I said in our phone call on April 23, the Province may need to extend these time periods during the COVID-19 pandemic. Would the Province's emergency powers allow you to extend the time limits on municipal Building Permits? The *BCBC* measure was put in place to ensure new buildings comply with the latest version of it. However, it does not appear that there will be another update for a while.

As I said during our call, I also think we need to start looking at how current regulations can be met at lower costs and faster approval times as opposed to creating new requirements. I am attaching a recent letter we wrote to the Hon. Michelle Mungall, Minister of Jobs, Economic Development and Competitiveness, in which we ask the Province (and local governments) to suspend any new requirements and improve processing times while we are facing the COVID-19 pandemic and the economic repercussions from it. In terms of the *BC Energy Step Code*, if we make changes to it related to greenhouse gas emissions, it needs to done in a way that reduces – not increases - costs to new projects.

In terms of your question about our COVID-19 survey, please see attached the results from it. It was done in early April, but we will be conducting another one later this month. Are there any specific questions, you would like us to add? Also, we have built a municipal matrix on our website. It includes details about how local governments are changing development review processes during the emergency period. We contact local governments on an ongoing basis to update it.

Finally, I would also like reiterate my concern regarding UDI'S discussions with the Insurance Bureau of Canada (IBC) about wood-frame and tall timber construction. They clearly indicated to us in several seminars that the insurance industry has substantial concerns with these types of construction. Increasing wood and CLT in new projects is a key issue for the Province, as it reduces embodied carbon in new construction and assists with economic development of forestry dependant communities across the Province. Vancouver is moving forward with embodied carbon regulations and I believe the Province is considering something similar under the *CleanBC Plan*. I think we need to involve the IBC in any future discussions about embodied carbon and tall wood-frame/CLT construction incentives or requirements.

Subject: delays in work and the BC Building Code

British Columbia Building Code established

1 The British Columbia Building Code is established by adopting,

(a) as Book I (General), Divisions A to C of the National Building Code of Canada 2015, a June 1, 2018, with the changes considered necessary and incorporated in it in the attache 1, and

(b) as Book II (Plumbing Systems), Divisions A to C of the National Plumbing Code of Cana it was on June 1, 2018, with the changes considered necessary and incorporated in it in Schedule 2.

Application of British Columbia Building Code

2 The British Columbia Building Code established by section 1 applies except insofar as B.C. Reg applies under section 3.

Application of B.C. Reg. 264/2012

3 (1) In this section, "building permit" means a building permit issued

(a) by a "local authority" as defined in the *Building Act*, or

(b) under the *University Endowment Land Act*.

(2) B.C. Reg. 264/2012, the British Columbia Building Code Regulation, applies only to the con alteration of a building as follows

(a) if a building permit is required,

(i) the building permit is applied for before the effective date of this order, and

(ii) the building permit applied for is issued and work commences and continues to completion without interruption, other than work stoppages considered reasonable building industry, or

(b) if no building permit is required, the construction or alteration of the building has started as of the effective date of this order and work continues to completion without other than work stoppages considered reasonable in the building industry.

(3) All work referred to in subsections 2(a) and (b) must be carried out in conformity with B.C. Reg

Hello, everyone,

Attached is the agenda for tomorrow's special Energy Step Code Council meeting regarding COVID-19. The agenda contains discussion questions that we hope to address.

I will also update the calendar invitation to include the same agenda.

Best,
Hugo

Hugo Wong (he/him)
Policy Analyst, Building and Safety Standards Branch, Office of Housing and Construction Standards

Ministry of Municipal Affairs and Housing
Desk line/Skype (preferred): 236-478-1406; Mobile: 250-880-6418

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Agenda

Time	Topic	Speaker(s)	Purpose(s)
09:45	Welcome and Introductions	Zachary May, ESCC Chair	▪ Welcome participants ▪ Approval of Agenda
09:50	Roundtable: COVID-19 impacts on the construction sector	Zachary May, ESCC Chair	▪ To provide feedback on how the current COVID-19 pandemic has affected your sector ▪ See discussion questions
11:00	Adjournment		

Discussion questions

1. Check in: How has the COVID-19 pandemic affected you and your members?
2. Are your members/employees healthy? Are current measures successful in preventing the spread of COVID-19 in the sector? Do you have best practices to share?
3. Do you notice specific, short and long-term changes to your business or the sector due to COVID-19?
4. Does your organization have information or data that would help the Province understand the impact of COVID-19 on the market in the short and long term?
5. Is there information or data that should be gathered to support a successful recovery?
6. Are there issues that need to be addressed to enable work to proceed safely and efficiently now, and in the long term?
7. Are there positive impacts and changes you have noticed that the ESCC or the Province should support and encourage?
8. How can the ESCC support industry in achieving CleanBC goals as the economy ramps back up?

Hello, everyone:

We look forward to this special, 1.5 hour teleconference on COVID-19. We'll have an agenda to send early next week, but we expect to discuss:

* Current COVID-19-related issues for the sector
* How construction will fit into B.C.'s economic recovery
* What the ESCC should address
* Next steps

This meeting is outside of our normal meeting cycle. We expect to have another meeting, about normal ESCC business, in mid to late June.

Best,
Hugo

Hi Anna,

Can you add this to eapps and assign to me?

I responded to Jeff to let him know that we would review this info and provide a response. Many areas to cover here including building permits, economic recovery, wood, and Energy Step Code.

Best,
Zac

Subject: RE: delays in work and the BC Building Code

Zachary, thanks for the information regarding delays in work and the *BC Building Code* (*BCBC*) which informs local governments that there are limits to how long Building Permits can last if delays occur in construction. There is a concern that several local governments have established time limits due to this provincial regulation. As I said in our phone call on April 23, the Province may need to extend these time periods during the COVID-19 pandemic. Would the Province's emergency powers allow you to extend the time limits on municipal Building Permits? The *BCBC* measure was put in place to ensure new buildings comply with the latest version of it. However, it does not appear that there will be another update for a while.

As I said during our call, I also think we need to start looking at how current regulations can be met at lower costs and faster approval times as opposed to creating new requirements. I am attaching a recent letter we wrote to the Hon. Michelle Mungall, Minister of Jobs, Economic Development and Competitiveness, in which we ask the Province (and local governments) to suspend any new requirements and improve processing times while we are facing the COVID-19

pandemic and the economic repercussions from it. In terms of the *BC Energy Step Code*, if we make changes to it related to greenhouse gas emissions, it needs to done in a way that reduces – not increases - costs to new projects.

In terms of your question about our COVID-19 survey, please see attached the results from it. It was done in early April, but we will be conducting another one later this month. Are there any specific questions, you would like us to add? Also, we have built a municipal matrix on our website. It includes details about how local governments are changing development review processes during the emergency period. We contact local governments on an ongoing basis to update it.

Finally, I would also like reiterate my concern regarding UDI'S discussions with the Insurance Bureau of Canada (IBC) about wood-frame and tall timber construction. They clearly indicated to us in several seminars that the insurance industry has substantial concerns with these types of construction. Increasing wood and CLT in new projects is a key issue for the Province, as it reduces embodied carbon in new construction and assists with economic development of forestry dependant communities across the Province. Vancouver is moving forward with embodied carbon regulations and I believe the Province is considering something similar under the *CleanBC Plan*. I think we need to involve the IBC in any future discussions about embodied carbon and tall wood-frame/CLT construction incentives or requirements.

Subject: delays in work and the BC Building Code

British Columbia Building Code established

1 The British Columbia Building Code is established by adopting,

(a) as Book I (General), Divisions A to C of the National Building Code of Canada 2015, a June 1, 2018, with the changes considered necessary and incorporated in it in the attache 1, and

(b) as Book II (Plumbing Systems), Divisions A to C of the National Plumbing Code of Cana it was on June 1, 2018, with the changes considered necessary and incorporated in it in Schedule 2.

Application of British Columbia Building Code

2 The British Columbia Building Code established by section 1 applies except insofar as B.C. Reg applies under section 3.

Application of B.C. Reg. 264/2012

3 (1) In this section, "building permit" means a building permit issued

(a) by a "local authority" as defined in the *Building Act*, or

(b) under the *University Endowment Land Act*.

(2) B.C. Reg. 264/2012, the British Columbia Building Code Regulation, applies only to the con alteration of a building as follows

(a) if a building permit is required,

(i) the building permit is applied for before the effective date of this order, and

(ii) the building permit applied for is issued and work commences and continues to completion without interruption, other than work stoppages considered reasonable building industry, or

(b) if no building permit is required, the construction or alteration of the building has started as of the effective date of this order and work continues to completion without other than work stoppages considered reasonable in the building industry.

(3) All work referred to in subsections 2(a) and (b) must be carried out in conformity with B.C. Reg

One additional idea – we invite UDI and CHBA-BC to participate in the costing study. They contribute $10k each and be on the project oversight committee. And this time, we don't include the utilities, as they will be focus on their own fuel/programmatic interests.

I could participate in this project given my skillset, along with Jeff Dean.

Subject: RE: delays in work and the BC Building Code

Thanks Zac,

I think we can characterize the Clean BC adoption as cost reducing within those municipalities that currently reference the Step Code. It creates consistency which increases certainty. We can "upload" responsibility for leadership on energy efficiency and decarbonization to the Province, but also allow leading municipalities to continue to reference higher standards (such as North Van).

I want to make sure that we don't advance cost reduction at the expense of consumer affordability. Thus, we need to stick with our message of "efficient electrification" or "efficient RNG" which allows for affordability.

For discussion, I think we need to commission a costing study again to convince groups like UDI. This time, the costing could include administrative costs of compliance – dealing with building permits, etc. I suggest a simple before and after study for pre- and post- BCBC 2022. I suggest 2 tables like the one below, (1) for 12-storey MURB (concrete or wood) (focus on UDI audience) and (2) for 6- or 10-unit townhouses (focus on CHBA-BC audience)

Description	**2018 BCBC Costs**	**2017 ESC Costs (for munis referencing)**	**2022 BCBC Costs**
Capital Costs (excluding professional fees)	NECB/ASHRAE	Step 3 MURB	Cite the least capital cost scenario
Professional fees	Professional reliance costs	Illustrate the variable professional costs, depending on jurisdiction	Lower costs via BERT
NPV for capital and operating costs	Reflect fuel mix that is common (needs professional input)	Reflect fuel mix that is common in (needs professional input)	Cite the highest NPV scenario (more affordable than ESC)
Administrative/permitting costs	TBC	Variable administrative costs of complying with ESC	Consistent approach through BERT/DAPR
Additional internal costs associated with regulatory compliance		Mandatory ESC training	Better alignment of training with code
Energy supply / Carbon related costs	Mandatory district energy	Variable references to ESC for different fuels.	Could we move district energy back into the Building Act restriction,

		Mandatory district energy.	freeing developers of this cost?
Marketing / realtor costs	Limited to none	Consumer confusion and higher costs of marketing	Improved consistency

Some early thinking for us to discuss at our next bilateral.

Cheers,

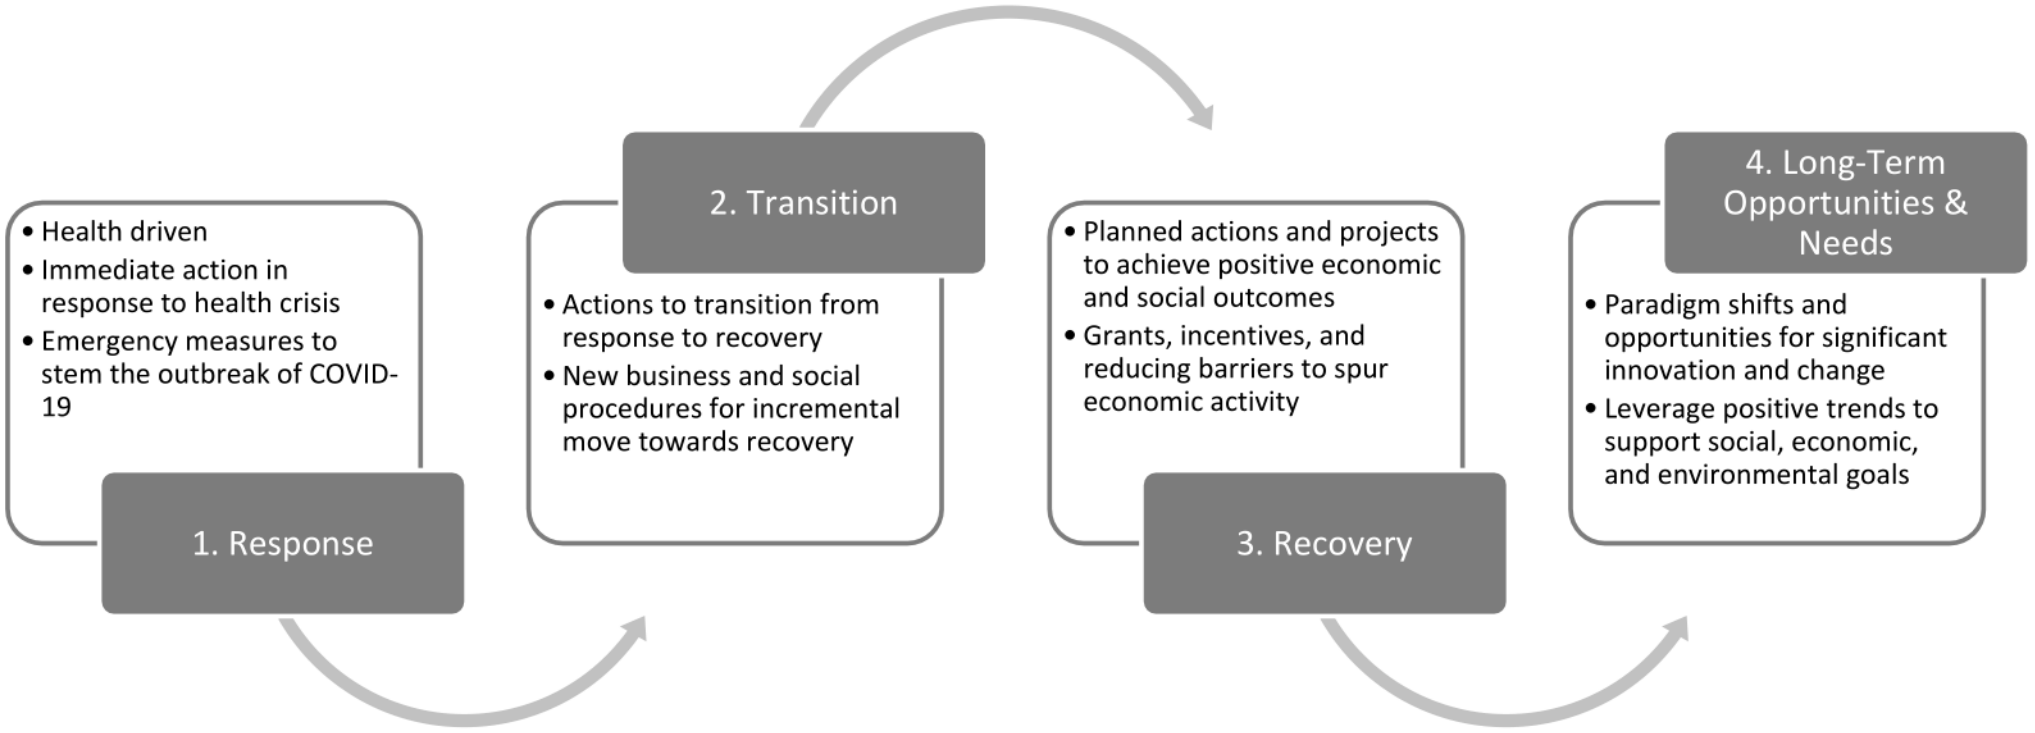
BUILDING BEYOND THE STANDARD

May 6, 2020

COVID-19 Roundtable Discussion

COVID-19



1. Response
• Health driven
• Immediate action in response to health crisis
• Emergency measures to stem the outbreak of COVID-19
2. Transition
• Actions to transition from response to recovery
• New business and social procedures for incremental move towards recovery
3. Recovery
• Planned actions and projects to achieve positive economic and social outcomes
• Grants, incentives, and reducing barriers to spur economic activity
4. Long-Term Opportunities & Needs
• Paradigm shifts and opportunities for significant innovation and change
• Leverage positive trends to support social, economic, and environmental goals

COVID-19

Provincial Transition and Recovery Planning – Premier's Task Force

Ministry – Leverage existing networks and relationships to understand the needs and opportunities for transition, recovery and long term transformation

Energy Step Code Council – build consensus on successful implementation of the Energy Step Code and addressing the related impacts of COVID-19

Discussion

Check-in
How has the COVID-19 pandemic affected you and your members?

Are your members/employees healthy?

Are current measures successful in preventing the spread of COVID-19 in the sector?

Do you have best practices to share?

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Discussion

Sharing information and planning for the short and long term

Are there issues that need to be addressed to enable work to proceed safely and efficiently now, and in the long term?

Are there positive impacts and changes you have noticed that the ESCC or the Province should support and encourage?

How can the ESCC support industry in achieving CleanBC goals as the economy ramps back up?

Discussion

Sharing information and planning for the short and long term

Are there issues that need to be addressed to enable work to proceed safely and efficiently now, and in the long term?

Are there positive impacts and changes you have noticed that the ESCC or the Province should support and encourage?

How can the ESCC support industry in achieving CleanBC goals as the economy ramps back up?

Sent: May 6, 2020 11:28:59 AM PDT
Attachments: image001.png

Thanks for the notes. The last two costing studies included UDI and CHBA (and the rest of the ESCC) in the steering committee to ensure we were asking the right questions and to improve confidence in the findings. I have asked Scott to consider the same approach this time. You and Jeff would be more than welcome to be involved in the costing study work. Based on the workplan that will be happening over the summer.

Let's discuss further at our next check in.

Best,
Zac

To: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>
Subject: RE: delays in work and the BC Building Code

One additional idea – we invite UDI and CHBA-BC to participate in the costing study. They contribute $10k each and be on the project oversight committee. And this time, we don't include the utilities, as they will be focus on their own fuel/programmatic interests.

I could participate in this project given my skillset, along with Jeff Dean.

Subject: RE: delays in work and the BC Building Code

Thanks Zac,

I think we can characterize the Clean BC adoption as cost reducing within those municipalities that currently reference the Step Code. It creates consistency which increases certainty. We can "upload" responsibility for leadership on energy efficiency and decarbonization to the Province, but also allow leading municipalities to continue to reference higher standards (such as North Van).

I want to make sure that we don't advance cost reduction at the expense of consumer affordability. Thus, we need to stick with our message of "efficient electrification" or "efficient RNG" which allows for affordability.

For discussion, I think we need to commission a costing study again to convince groups like UDI. This time, the costing could include administrative costs of compliance – dealing with building permits, etc. I suggest a simple before and after study for pre- and post- BCBC 2022. I suggest 2 tables like the one below, (1) for 12-storey MURB (concrete or wood) (focus on UDI audience) and (2) for 6- or 10-unit townhouses (focus on CHBA-BC audience)

Description	2018 BCBC Costs	2017 ESC Costs (for munis referencing)	2022 BCBC Costs

Capital Costs (excluding professional fees)	NECB/ASHRAE	Step 3 MURB	Cite the least capital cost scenario
Professional fees	Professional reliance costs	Illustrate the variable professional costs, depending on jurisdiction	Lower costs via BERT
NPV for capital and operating costs	Reflect fuel mix that is common (needs professional input)	Reflect fuel mix that is common in (needs professional input)	Cite the highest NPV scenario (more affordable than ESC)
Administrative/permitting costs	TBC	Variable administrative costs of complying with ESC	Consistent approach through BERT/DAPR
Additional internal costs associated with regulatory compliance		Mandatory ESC training	Better alignment of training with code
Energy supply / Carbon related costs	Mandatory district energy	Variable references to ESC for different fuels. Mandatory district energy.	Could we move district energy back into the Building Act restriction, freeing developers of this cost?
Marketing / realtor costs	Limited to none	Consumer confusion and higher costs of marketing	Improved consistency

Some early thinking for us to discuss at our next bilateral.

Subject: RE: delays in work and the BC Building Code

Zachary, thanks for the information regarding delays in work and the *BC Building Code* (*BCBC*) which informs local governments that there are limits to how long Building Permits can last if delays occur in construction. There is a concern that several local governments have established time limits due to this provincial regulation. As I said in our phone call on April 23, the Province may need to extend these time periods during the COVID-19 pandemic. Would the Province's emergency powers allow you to extend the time limits on municipal Building Permits? The *BCBC* measure was put in place to ensure new buildings comply with the latest version of it. However, it does not appear that there will be another update for a while.

As I said during our call, I also think we need to start looking at how current regulations can be met at lower costs and faster approval times as opposed to creating new requirements. I am attaching a recent letter we wrote to the Hon. Michelle Mungall, Minister of Jobs, Economic Development and Competitiveness, in which we ask the Province (and local governments) to suspend any new requirements and improve processing times while we are facing the COVID-19 pandemic and the economic repercussions from it. In terms of the *BC Energy Step Code*, if we make changes to it related to greenhouse gas emissions, it needs to done in a way that reduces – not increases - costs to new projects.

In terms of your question about our COVID-19 survey, please see attached the results from it. It was done in early April, but we will be conducting another one later this month. Are there any specific questions, you would like us to add? Also, we have built a municipal matrix on our website. It includes details about how local governments are changing development review processes during the emergency period. We contact local governments on an ongoing basis to update it.

Finally, I would also like reiterate my concern regarding UDI'S discussions with the Insurance Bureau of Canada (IBC) about wood-frame and tall timber construction. They clearly indicated to us in several seminars that the insurance industry has substantial concerns with these types of construction. Increasing wood and CLT in new projects is a key issue for the Province, as it reduces embodied carbon in new construction and assists with economic development of forestry dependant communities across the Province. Vancouver is moving forward with embodied carbon regulations and I believe the Province is considering something similar under the *CleanBC Plan*. I think we need to involve the IBC in any future discussions about embodied carbon and tall wood-frame/CLT construction incentives or requirements.

ESCC

- 20% commitment remains
- Hear how it's going
  - ↳ steps we need to take?
  - ↳ longer term action

Notes:
- 40ish participants

Builders
Bob - some dip in ma
- good guidelines from the prov.
- nobody sick so far

Manjit - healthy team, limited office time
- role of BOABC is focused on info about
  - ↳ sensitive not to direct members just share info
  - ↳ working w̄ firm in → IT tools
- new construction ok
- occupied inspections halted

what is this?

Mark Sakai - running webinars
- included poll - gathering data over time
- early 75% ok, now down to 66%
  - ↳ no May data
- no May webinar planned

Warren Perks - bulletins every two days
- similar findings to HAVAN
- costs of lost productivity (85%)
  - ↳ who pays?

Jeff Fisher
- loss in retail side to revenue
  - ↳ leases & rental
- VDI doing surveys
- Project launches are not occuring
- Uncertainty re. larger projects
  - ↳ pre-sale time limits
  - ↳ market confidence
- VDI has been sharing info through

Do we have questions to ask?

- heard of lost productivity
- can work hours be extended?

Joe Hart - there was a brief pause, now returning.
- limited health impact in the North
- offering free Step Code course
- access to funding hard due to lag in revenue loss
- [illegible], [illegible] needs in buildings

Can we help?

RE: Economic Recovery

From: Pape-Salmon, Andrew OHCS:EX <Andrew.PapeSalmon@gov.bc.ca>
To: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>, Brooks, Jessica MAH:EX <Jessica.Brooks@gov.bc.ca>
Sent: May 6, 2020 5:09:27 PM PDT

Greetings both,

Adding to Jessica's points, I would add the Greg Steves gave us feedback that we will need to engage stakeholders soon. My comments/edits to the engagement plan document were evidently broader than engagement alone, as it is now time to start mapping out our workplan as well.

From a project management standpoint, I suggest the following framework:

- Initial information gathering (complete)
- Define preliminary objectives and scope (complete, in Concept paper)
- Early engagement with key influencers (complete, with EDs)
- Prepare Charter, prepare preliminary work and communications plans (in the 2nd document that Aura prepared)
- Present preliminary information (Friday)
- Confirm objectives, scope, and pitch preliminary workplan and communications plan with Executive (potentially on Friday)
- Revise work and communications plans
- Execution of work plan

I suggest we have three layers of engagement for each of our project components:

1. Internal, with MAH EDs and Executive
2. Other internal stakeholders (including Crowns) such as BC Housing, FLNRORD, JEDC, Finance, MEMPR, BC Hydro
3. External stakeholders (UDI, CHBA, UBCM, etc.)

I suggest we use similar materials for each of the three layers of engagement for each of the project components. Here is some early thinking on the components (this is evolving, but hopefully we can lock it down soon):

a. Problem definition, data gathering and opportunity identification phase. Key product: Concept Paper (complete)
b. Differentiation of transition versus recovery initiatives. We could prepare a table that illustrates transition versus recovery actions for each of the sectors we identified in the table of the concept paper. The two are evidently linked. We could review the materials from today's announcement by the Premier as a key source of information, and the paper that Cimarron was working on.
c. Confirmation of "recovery" opportunities (to make sure nothing was missed), brainstorm on "long-term paradigm-shifts" for each of them (in other words, we are limiting discussion to those opportunities that could facilitate a pivot to a "new normal"), and method for analyzing impacts and prioritizing opportunities. Evidently DAPR will surface to the top of priorities, along with innovation in building design.
d. Draft "plan", outlining recommended actions, pros and cons and impacts.

So far, we have completed (1)(a). We are already summarizing results from EDs as a basis for pitching this to MAH Executive. However, before we meet with people externally, we will want to confirm some points with key government Branches and Crown Corporations such as BC Housing. We can use the same Concept Paper to meet with them.

For discussion tomorrow afternoon.

Subject: RE: Economic Recovery

Thanks for this, Jessica.

First two bullets are straightforward to act on.

For alignment with the transition planning and Silas' vision I totally agree but am not sure how best to get insights on either. Do either of you have access to the transition plan that went up to the Minister this week? Is Friday our chance to seek Kaye and Silas' direction? If so, we may want to consider how much detail we put on our plan and where we leave room for discussion and direction.

Best,
Zac

Subject: RE: Economic Recovery

Hi Zac, many thanks to you and the team for your work on this. I think this is all heading in a good direction – a couple of preliminary thoughts for your consideration:

- I note that the ideas that were provided by the EDs vary from specific action ideas to outcome objectives. Given that we are looking to clarify outcomes at this stage I wonder if there is value in reframing the proposals that are action oriented into outcomes statements and moving the specific ideas into the 'catalogue tables'. We can then circulate the updated table back for feedback and comment
- Per our discussion earlier in the week, and in line with the engagement plan, we may want to include a section in the framework document that speaks more explicitly to the need to go out and do some preliminary analysis – this will also create a good tie in to the engagement plan.
- Similar to the note above, I think we also need ot build in some language and recognition around the transition plan that is being developed and the need to link that with recovery planning – I think we may also want to build this into the engagement plan as part of those conversations and also to ensure that we are leveraging any work or stakeholder tables that are already underway under the transition framework

I also note more generally that it sounds like this work may be flowing through Silas, in which case it might be helpful to have some conversations with him about his vision and thinking before we get too far down any specific path.

Happy to chat further as may be helpful,
Jessica

Zac and Norm,

I am following up on the UDI GB regulatory update webinar. Sean has confirmed that he or Patrick Enright will participate on behalf of the CoV and are available on May 28, Jun 8-11, 17 or 19.

Are you interested and available to join the session? It would be great to receive your response by tomorrow, Friday, May 8.

Thank you,
Michaela

Subject: UDI webinar: green building regulatory update

Dear Sean, Zac and Norm,

UDI has moved their breakfast seminar online. They would like to host a **green building regulatory update webinar** for their members. They have asked ZEBx to moderate the session. BC Hydro's New Construction program is providing educational support for the event.

We wanted to ask whether you would be interested and available to be **panelists for the session**. Please see attached a draft outline with suggested topics which are also summarised below. UDI and ZEBx would, of course, work with you to coordinate and finalise the content.

- **City of Vancouver**: Climate Emergency Response, zero emission space & water heating, green building regulatory update
- **Province**: Energy Step Code & Alterations to Existing Building Code update
- **City of Richmond**: Energy Step Code implementation example (including development & permitting, airtightness testing)

Possible dates:
May 26, 27, or 28
June 8 - 12 and 15 - 19

Time: 9:30 am - 10:30/45 am

Please let me know if you are interested to participate and if so, which date(s) would work for you. I would be happy to receive any feedback regarding the content or answer any questions you might have.

Thank you,
Michaela

Hi Anna,

Can you add this to eapps and assign to me?

I responded to Jeff to let him know that we would review this info and provide a response. Many areas to cover here including building permits, economic recovery, wood, and Energy Step Code.

Best,
Zac

Subject: RE: delays in work and the BC Building Code

Zachary, thanks for the information regarding delays in work and the *BC Building Code* (*BCBC*) which informs local governments that there are limits to how long Building Permits can last if delays occur in construction. There is a concern that several local governments have established time limits due to this provincial regulation. As I said in our phone call on April 23, the Province may need to extend these time periods during the COVID-19 pandemic. Would the Province's emergency powers allow you to extend the time limits on municipal Building Permits? The *BCBC* measure was put in place to ensure new buildings comply with the latest version of it. However, it does not appear that there will be another update for a while.

As I said during our call, I also think we need to start looking at how current regulations can be met at lower costs and faster approval times as opposed to creating new requirements. I am attaching a recent letter we wrote to the Hon. Michelle Mungall, Minister of Jobs, Economic Development and Competitiveness, in which we ask the Province (and local governments) to suspend any new requirements and improve processing times while we are facing the COVID-19 pandemic and the economic repercussions from it. In terms of the *BC Energy Step Code*, if we make changes to it related to greenhouse gas emissions, it needs to done in a way that reduces – not increases - costs to new projects.

In terms of your question about our COVID-19 survey, please see attached the results from it. It was done in early April, but we will be conducting another one later this month. Are there any specific questions, you would like us to add? Also, we have built a municipal matrix on our website. It includes details about how local governments are changing development review processes during the emergency period. We contact local governments on an ongoing basis to update it.

Finally, I would also like reiterate my concern regarding UDI'S discussions with the Insurance Bureau of Canada (IBC) about wood-frame and tall timber construction. They clearly indicated to us in several seminars that the insurance industry has substantial concerns with these types of construction. Increasing wood and CLT in new projects is a key issue for the Province, as it reduces embodied carbon in new construction and assists with economic development of forestry dependant communities across the Province. Vancouver is moving forward with embodied carbon regulations and I believe the Province is considering something similar under the *CleanBC Plan*. I think we need to involve the IBC in any future discussions about embodied carbon and tall wood-frame/CLT construction incentives or requirements.

Subject: delays in work and the BC Building Code

British Columbia Building Code established

1 The British Columbia Building Code is established by adopting,

(a) as Book I (General), Divisions A to C of the National Building Code of Canada 2015, a June 1, 2018, with the changes considered necessary and incorporated in it in the attache 1, and

(b) as Book II (Plumbing Systems), Divisions A to C of the National Plumbing Code of Cana it was on June 1, 2018, with the changes considered necessary and incorporated in it in Schedule 2.

Application of British Columbia Building Code

2 The British Columbia Building Code established by section 1 applies except insofar as B.C. Reg applies under section 3.

Application of B.C. Reg. 264/2012

3 (1) In this section, "building permit" means a building permit issued

(a) by a "local authority" as defined in the *Building Act*, or

(b) under the *University Endowment Land Act*.

(2) B.C. Reg. 264/2012, the British Columbia Building Code Regulation, applies only to the con alteration of a building as follows

(a) if a building permit is required,

(i) the building permit is applied for before the effective date of this order, and

(ii) the building permit applied for is issued and work commences and continues to completion without interruption, other than work stoppages considered reasonable building industry, or

(b) if no building permit is required, the construction or alteration of the building has started as of the effective date of this order and work continues to completion without other than work stoppages considered reasonable in the building industry.

(3) All work referred to in subsections 2(a) and (b) must be carried out in conformity with B.C. Reg

Honourable Michelle Mungall
Minister of Jobs, Economic Development and Competitiveness
Room 301, Parliament Buildings
Victoria, BC V8V 1X4

Dear Minister:

Re: Building Sector's Role in Economic Recovery Post-COVID-19

I would like to thank you for the discussion we had on May 20 regarding preparing the province for economic recovery when the pandemic subsides. As you know, the Urban Development Institute (UDI) and its members are well positioned to assist your government in this endeavor. However, we need the province and local governments to take substantive and immediate steps to enable our members to continue to employ British Columbians and build homes and office space. These steps include:

- A one-year suspension of any new requirements, fees, charges, taxes and amenity contributions that add costs/delays to projects;
- Applying the same property tax reductions and deadline extensions that were announced for commercial land owners to Class 1 residential building sites that are exempt from the Speculation and Vacancy Tax (SVT) and Purpose Built Rental (PBR) buildings;
- Applying the SVT exemptions for sites under development and PBR to the Additional School Tax for the next year;
- Remove development land and unsold inventory from the Empty Homes Tax for the next year;
- Permanently extending the timelines set out in Policy Statements 5 and 6 issued by the Superintendent of Real Estate (pursuant to the *Real Estate Development Marketing Act (*REDMA)) to allow for an early marketing period of 12 months and a 15-month period to obtain a building permit and satisfactory financing commitment before buyers can unilaterally terminate their pre-sale contracts.
- Ensuring that municipalities continue to implement innovative changes to the development application process that are already permitted, such as holding virtual public hearings, waiving public hearings for Official Community Plan-compliant projects, and establishing clear and reasonable timeframes for development approvals.

Although British Columbia has seemed to flatten the COVID-19 curve better than most jurisdictions, our economy has been as vulnerable to the repercussions of the pandemic as the rest of the world. The Canadian economy had the largest one-month decline in GDP (9%) from February to March 2020 and over 4 million Canadians have applied for the new Canada Economic Recovery Benefit. In B.C. alone, 132,000 jobs were lost in March. It is increasingly clear that the impact of COVID-19 on the economy has not been fully realized.

Our industry is a significant economic generator in British Columbia. Our sector contributes over 230,000 well-paying jobs to B.C., as well as billions of dollars in government revenues and economic activity. The property development industry is a component of the B.C. real estate and construction sector, which accounts for roughly 15 per cent of the provincial GDP.

In communities across British Columbia, our industry builds homes for families at all income levels as well as job spaces - offices, retail buildings and industrial. We also make significant contributions to local neighbourhoods such as parks and recreational facilities, schools, libraries, childcare spaces, affordable housing units and community buildings. We have always been committed to being partners in community building and sustainable development.

Unfortunately, all these contributions are at risk. Over the past few years, we have seen a dramatic escalation of government taxes, fees, charges, and requirements including:

- *Budget 2018* provincial taxes that apply to development lands, including the Additional School Tax and the "Luxury" Property Transfer Tax;
- New TransLink Development Cost Charges (DCCs) which came into effect on January 1, 2020;
- The Greater Vancouver Sewerage and Drainage District DCCs, which increased up to 200%;
- A proposed future Metro Vancouver water DCC;
- Substantial increases to local government DCC rates (as high as 700%) and amenity contributions; and
- The added costs associated with the new building code and site requirements.

At a time when the federal and provincial governments are introducing massive stimulus packages to keep the economy going, and when industries and businesses, small and large, are doing their best to keep people employed, our industry is facing continuously escalating costs and regulatory requirements by municipalities and some provincial agencies.

Our sector is capable of being at the forefront of British Columbia’s economic recovery. However, we need your help to enable our industry to keep the economy going, continue to employ British Columbians and build the housing and job spaces

we need. By working collaboratively, we can quickly recover from the impacts of the COVID-19 pandemic.

If you have any questions regarding our proposed measures, please do not hesitate to contact me. I look forward to working with you to stabilize the economy and keep British Columbians employed.

Sincerely,

Anne McMullin

Hi Norm,

I have heard back from UDI and they would actually prefer you as a speaker since you are more involved in the Energy Step Code as the co-chair of the technical subcommittee. So if that's still ok with you, we will go ahead as initially intended. We have now also confirmed the date of June 11. I will send a separate email to all of you with more details.

Best,

Michaela

Hi Norm,

That's great! Thank you. I will keep your June availability in mind. The webinar will be in the morning from 9:30 - 10:30 am (or 10:45 depending on number of questions).

I was reminded by UDI that ideally they would like to have at least one female speaker. So I have reached out to Emilie Adin at New West to inquire whether she might be available to take the Lower Mainland local government panelist role. I'll wait to hear back until Monday. But if not - you have the spot!

Best,

Michaela

Zac and Norm,

I am following up on the UDI GB regulatory update webinar. Sean has confirmed that he or Patrick Enright will participate on behalf of the CoV and are available on May 28, Jun 8-11, 17 or 19.

Are you interested and available to join the session? It would be great to receive your response by tomorrow, Friday, May 8.

Thank you,

Michaela

Michaela,

Yes there are a number of pending and possible upcoming regulatory changes we would love to raise UDI member awareness of and/or get input on. I or someone from my team would be happy to participate.

May 28, Jun 8-11, 17 or 19 would work.

Attachments:	65A6717AD5194B2989F7D2F30BA687EF.png, UDI Webinar_GB Regulatory Update_Draft.docx

Sean, Zac, and Norm,

Thank you for agreeing to provide a **Green Building Regulatory Update** to **UDI members**. We have now confirmed that the webinar will take place on **Thursday, June 11 at 9:30 am**. Christian from ZEBx will be moderating the session. BC Hydro is providing educational funding support.

Yvonne from UDI (cc:ed) is coordinating the event logistics. She has to set up the event site and has asked that all panelists please send her your **bio and headshot** for the event page.

Event title: Suggestions are welcome for a better title than "Green Building Regulatory Update". It might be easier to decide on the title once the content has been finalized.

Event length: I was wondering whether it might be worth extending the session length by 15 minutes (normal webinar length is 60 minutes), depending on how much content you would like to share and feedback you would like to receive. Yvonne - would this be feasible?

High-level content:

- City of Vancouver, Green Building Regulatory Update
- Building and Safety Standards Branch, Energy Step Code Update (including Alterations to Existing Building Code?)
- City of Richmond, Energy Step Code Implementation for Part 3 buildings

I have attached a draft session outline to serve as a basis for discussion. Your input will be important to finalize the content.

Panelists:

- Sean Pander, Green Building Manager, City of Vancouver (Sean, please let us know whether Patrick or you will be speaking)
- Zachary May, Director of Strategic Policy, Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing
- Norm Connolly, Sustainability Manager, City of Richmond

Yvonne will soon set up a coordination call so that we can discuss the above subjects further.

Thank you,
Michaela

Michaela Neuberger | Director of Operations
Zero Emissions Building Exchange | 604.330.2017 | @zebxchange
zebx
250 - 128 West Hastings Street

Vancouver, BC V6B 1G8

UDI Breakfast Webinar: Green Building Regulatory Update

Possible dates: May 26, 27, or 28 I June 8 - 12 and 15 – 19, 2020

Time: 9:30 – 10:30/45 am

Event duration: 60 – 75 minutes

Moderator: Christian Cianfrone, ZEBx

Educational support: BC Hydro, New Construction Program

Suggested Panel (5 – 7 minutes presentation time):
- City of Vancouver: Sean Pander, Green Building Manager
- Province: Zachary May, Director of Strategic Policy, BSSB
- City of Richmond: Norm Connolly, Sustainability Manager

Content:

BC Hydro (2 minutes)
- Why is BC Hydro supporting this session?
- Outline resources, incentives available to support developers achieve high performance new construction (and potentially existing buildings)

ZEBx Introduction (5 minutes)
- What is ZEBx?
- ZEBx & UDI collaboration (GDS)
- ZEBx programming and offers to support developers (Design Charrettes, Pattern Language course, NZER workshops, Decarb Lunch series)
- Introduction to today's session & speakers

CoV Regulatory Update (10 minutes)
- Climate Emergency Response: Big Move 4 for zero emissions space and water heating new and existing buildings

- Climate Emergency Requirements for New Housing 3-Storeys and Under (Council approved on April 29, 2020):

    - VBBL has been amended requiring all residential space or water heating systems to be zero-GHG-emitting, effective January 2022.
    - A 2 tonne carbon pollution cap has been introduced for new single family and duplex dwellings 325m2+ to lower emissions form the largest new homes, effective January 2021.

- Reminder of upcoming VBBL changes effective Jun 2021 (eg Step 3, GHGI 6 for MURBs 7 storey+).

- Other Updates

Comment: Sean would like to incorporate an easy to use participant live input tool (e.g. Zoom polling) to gather feedback on some pending ideas (embodied carbon in RZ, zero carbon heating and hot water in RZ and appropriate TEDI, logic structure for GHG reg for existing buildings, etc). He could see the presentation including up to 5 short briefs with a couple having one or two audience feedback questions.

BC Energy Step Code Regulatory Update (5 minutes)

- Number of BC municipalities adopted ESC vs have started consultation on ESC: focus on adoption in the Lower Mainland; (This resource would be good way to summarize information but needs to be updated; two examples to mention are the recent Step 5 adoption by West Vancouver and that Prince George started consultation on implementation in February 2020.)

- Overview for which building types ESC metrics have been developed & adopted and which are still outstanding (e.g. public buildings; hospitals)

- Overview of LGs who have approved a lower step for Part 3 buildings with a Low Carbon District Energy System connection

- Resources available: Summary slide with guides available on ESC website, focus on large building resources such as the Guide to Low Thermal Energy Demand for Large Buildings

City of Richmond Energy Step Code Implementation for Part 3 buildings (7 minutes)

- Development / Building Permit processes: What are the major changes for developers in their touch points with LGs? Provide examples for City of Richmon d and highlight commonalities in processes / documents for Part 3 buildings that need to be provided, such as energy modeling results, airtightness testing etc

- Airtightness Testing: BC Energy Step Code requirements for airtightness testing for Part 3 buildings: outline requirements & procedure on a high-level

- Other Updates?

BC Alterations to Existing Building Code (3 – 5 minutes)

- Development of an Alterations to Existing Building Code (AEB Code) policy framework has started in 2019.

- Project Goal: To provide clear requirements for existing buildings that will enable GHG reductions and increase life safety and resilience for British Columbians.
- Stakeholder feedback: started in 2019 and will continue through the fall of 2020.
- AEB Code to consider seismic and climate risks.
- It is anticipated that the AEB Code will be implemented in 2024.

Hi Zachary,

I'm actually the one leading the Construction sector engagement/response on our side.

I'm off today, but let's aim to connect on Monday. My calendar is up to date if you want to send an invite, otherwise will just send a Skype message in the morning.

Have a great weekend.

Best,
Martin

Introduction to MAH Response

Zachary May from BSSB said the meeting is to survey BC Energy Step Code Council members on how COVID-19 has affected their sector, and how the construction sector can contribute to B.C.'s economic recovery. The Province is looking at four phases of recovery, response, transition, recovery, and long-term transformation. These phases represent a transition from health focused measures towards increasing emphasis on economic and social outcomes.

We want to know: What does recovery look like, what challenges do we need to overcome, what are the opportunities? Also, how should we work together as a Council?

Premier has economic recovery task force – MAH wants to leverage current relationships in the construction sector to understand short-term transition issues and also longer-term recovery issues. It's listening mode for BSSB – what's going on, how Province and ESCC can support recovery.

Discussion/shared information summarized by theme below. Please note, the following information is provided for discussion purposes and should not be relied on as official or authoritative.

Safety

- All sectors report staff from their organizations are largely safe with many/most working from home. All are communicating info to their members about COVID.
- Minimal reports of workers being sick from COVID (but a few, traced to Alberta work sites).
- Municipalities doing inspections/permitting still, but at a reduced pace with new safety procedures.
- BOMA releases lots of communication to building owners and managers on COVID (posters, best practices, etc.).
- HAVAN says builders implementing new safety procedures like one-way stairwells to increase physical distancing.

Innovation

- BOABC: A Finnish company is offering six months of free building permit software for municipalities still on paper, announcement to come.
- Richmond trialling virtual video inspections, accepts photos in inspections, but gas inspections are a challenge. Plan reviews generally maintained, online, courier, online signing of documents. Screening protocol for inspections.
- BCIT's offering virtual access to high-performance lab to offer *almost* "hands-on" experiences
- Lots of online work/online delivery of training and inspection which is new for some.

Productivity, employment and the business environment

- Productivity on jobsites is down slightly (BCCA estimates 80% of normal) due to new physical distancing and handwashing. Expenses have increased to buy handwashing stations, etc. BCCA concerned about who will pay for loss in productivity and new cleaning/sanitation costs.
- HAVAN: industry is reporting increasing slowdown in business, based on informal member surveys. In early April, 76% reported normal amount of business, by end of April, 67% reported normal amount of business.
- UDI reports significant loss on retail side (tenants unable to pay rent). Sales centres for condos are closed, pre-sales down (time limits on pre-sales are an issue), some project launches not occurring, reduced market confidence and more uncertainty on accurate real estate pricing. UDI exploring how to extend construction hours to allow shifts. Some local governments are OK with this.
- Home inspectors severely affected: realtors can work but sales are often without inspections ("no conditions" deals).
- Municipalities have temporary layoffs in recreation and other facilities that are now closed.
- UBC: Capital projects mostly progressing, 1 student housing project on hold.
- CEA: New EA work fine, slow on retrofits.
- EGBC: Drop in industrial work, particularly oil and gas, aviation. Some municipal projects on hold, and EGBC thinks property tax deferral and lost revenue could further impact municipalities. Municipal layoffs have affected EGBC members (layoffs, 10% pay cuts, 4-day work weeks). Drop in RFPs, but energy work

continues. Survey sent Fri May 8 to all EGBC members will collect further information. EGBC does not foresee huge impact on their own budget.

How COVID affects normal business

- CHBA BC: BC Hydro is only offering essential services, no new hookups, which is holding things up. Banks also have reduced hours and services which causes delays. EMPR and BC Hydro were on the call and notes Hart's concern re: BC Hydro service.
- ASTTBC: registered fire protection technicians are deemed an essential service but being refused entry to some MURBs. Fire depts. Allowing deferrals of in-suite testing.
- BOMA hears about increased break-ins in garages and storefronts.

Financial assistance and incentives

- CHBA BC reports the $40k loan is helpful for them (Canada Emergency Business Account). For other gov assistance, they find it difficult to prove drop in income when applying for govt help because noticeable drop will only come in the later months (contracts)
- EMPR: no changes to provincial incentive programs for this fiscal. But some work to see how programs can be tuned to support economic benefits/recovery. Watching carefully to see if they need to adjust program design.
- BC Hydro: We have relief fund for residential and small biz. About 70k applications have applied for relief fund. New remote tools for education (Indigenous program energy savings kit.).
- Hydro: has repeated a funding offer to homebuilder associations to apply for $25k each for their membership to fund innovative online/remote training options
- One-size solutions don't fit all

Opportunities

- Collective sense of opportunity to consider new ways of thinking/doing/working.
- Richmond: We are ID-ing shovel-ready projects. Rec centres could take advantage of closure to undergo maintenance. Most LGs have extended tax deadlines to Sept. This is an opportunity to rethink public space (reclaiming road space for parks/pedestrians, bikes, etc.)
- CEA: offering tech training and heat pump training in Columbia Valley, huge opportunity here to move to lower carbon sources for communities. Don't miss this opportunity.
- BC Hydro: Focusing on education. High-performance building fund enabling remote integrated design for LEEP, 1 hour free training with good uptake. CHBA BC is offering Step Code courses for free.
- Increased virtual learning from BC Hydro could help Step Code training/implementation in rural communities
- BC Hydro will ask building energy managers in some municipalities to see if they can check how COVID is affecting consumption.
- EGBC glad to see Hydro still funding a Climate Action position in Abbotsford.

Risks

- CEA: citizens may not understand why during a crisis we should invest money given layoffs, so some sensitivity needed. Robyn from Hydro: mayors are hearing/sympathizing with job losses/economic crisis in their community.
- Fortis: Hesitancy to allow people into homes. New construction is fine, but occupied space is a problem. Developing inspection/repair protocols when going into occupied spaces. Supply chain is a concern (e.g. PPE for builders, normal products required for repairs, installations).
- BOMA wonders: what is landlord duty of care? Who enforces rules? However, they say people are largely self-policing effectively.

Changes in energy use due to COVID

- UBC: building occupancy on campus down 90%, but energy use only dropped 15%. Aquatic centres and ice rink use much less energy now, but core physical plants keep operating. It's a learning opportunity for them to understand energy, carbon, HVAC needs in buildings.

NRCan/EnerGuide perspective (provided following the call)

- All EnerGuide services have continued during the pandemic, including the receipt of EnerGuide files to the Housing Division database, responses (technical and administrative) to inquiries from partners and the delivery network, internal quality assurance, policy work and forward-looking development of tools and services
- Testing centres for new energy advisor candidates, managed nationwide on a contract with Yardstick Assessment Strategies, have been closed since mid-March. The closure has been extended until June 30th, with continual review based on guidance from public health officials
- The implications for EA capacity building are being reviewed by the Housing Division and Office of Energy Efficiency, and alternative options are being explored for exam delivery and proctoring.
- Our input from the EnerGuide delivery network on COVID impacts has been similar to what was shared on the call yesterday. Work in new homes is proceeding with a few adjustments, work in existing homes, which was slow already, has essentially stopped.
- Out of interest, Enbridge in Ontario and Efficiency One in Nova Scotia are exploring remote assessments for existing buildings. At this time, the decision from the building science and programs teams in the Housing Division has been that we don't have the resources to develop protocols for EnerGuide that would allow for remote audits (in new or existing homes, but the issue is in existing homes). This is something that could be pursued for EnerGuide, but there won't be a near-term solution

Hi Zachary,

I'm actually the one leading the Construction sector engagement/response on our side.

I'm off today, but let's aim to connect on Monday. My calendar is up to date if you want to send an invite, otherwise will just send a Skype message in the morning.

Have a great weekend.

Best,
Martin

Hi Martin,

I am working with Jessica Brooks on some economic recovery planning related to the building construction sector, and she suggested I reach out to you to see who at JEDC might also be working on this issue. Do you know if there is anyone already engaged on the issue?

We have held some stakeholder meetings with UDI, homebuilders, and other key stakeholder groups to gather information on how things have been going and ensure we can coordinate a response with these groups. I would be

happy to share the findings from these sessions with the right people at JEDC and make sure we're not duplicating efforts.

Best,

Subject: RE: delays in work and the BC Building Code

Zachary, thanks for the information regarding delays in work and the *BC Building Code* (*BCBC*) which informs local governments that there are limits to how long Building Permits can last if delays occur in construction. There is a concern that several local governments have established time limits due to this provincial regulation. As I said in our phone call on April 23, the Province may need to extend these time periods during the COVID-19 pandemic. Would the Province's emergency powers allow you to extend the time limits on municipal Building Permits? The *BCBC* measure was put in place to ensure new buildings comply with the latest version of it. However, it does not appear that there will be another update for a while.

As I said during our call, I also think we need to start looking at how current regulations can be met at lower costs and faster approval times as opposed to creating new requirements. I am attaching a recent letter we wrote to the Hon. Michelle Mungall, Minister of Jobs, Economic Development and Competitiveness, in which we ask the Province (and local governments) to suspend any new requirements and improve processing times while we are facing the COVID-19 pandemic and the economic repercussions from it. In terms of the *BC Energy Step Code*, if we make changes to it related to greenhouse gas emissions, it needs to done in a way that reduces – not increases - costs to new projects.

In terms of your question about our COVID-19 survey, please see attached the results from it. It was done in early April, but we will be conducting another one later this month. Are there any specific questions, you would like us to add? Also, we have built a municipal matrix on our website. It includes details about how local governments are changing development review processes during the emergency period. We contact local governments on an ongoing basis to update it.

Finally, I would also like reiterate my concern regarding UDI'S discussions with the Insurance Bureau of Canada (IBC) about wood-frame and tall timber construction. They clearly indicated to us in several seminars that the insurance industry has substantial concerns with these types of construction. Increasing wood and CLT in new projects is a key issue for the Province, as it reduces embodied carbon in new construction and assists with economic development of forestry dependant communities across the Province. Vancouver is moving forward with embodied carbon regulations and I believe the Province is considering something similar under the *CleanBC Plan*. I think we need to involve the IBC in any future discussions about embodied carbon and tall wood-frame/CLT construction incentives or requirements.

Labour Force Survey – impacts of COVID-19 crisis

- Virtually all of the lost jobs that the Labour Force Survey observed in March were in the services sectors, not in goods-producing or construction. Data for April come out on Friday, May 8th and will probably radically change the picture.
- Job losses are weighted more towards women (who suffered 60% of the losses), private sector workers (96% of losses), part-time work (representing 57% of the lost jobs), and youth aged 15 to 24 (50,300 jobs lost, representing a 15% fall in employment for youth).
- One month of data can be unreliable, necessitating revisions and longer-term observation. Many analysts will be looking at this, including StatsCan which has created some new products to track the economic effects of the crisis, though most of their data hasn't yet caught up with the onset of the crisis.
- Long term economic impacts of the crisis are likely to be felt in unemployment in service sectors and in reduced discretionary spending. For the construction trades, this likely means lower spending on maintenance and renovation, with uncertainty in the housing market having a delayed effect on the development industry.
- Commentators on the B.C. outlook predict that, following the lockdown there will probably be a quick but partial rebound. Since many people will have taken a hit to their savings, Ken Peacock at the BC Business Council expects that discretionary spending will go down, including on things like luxury goods, household furnishings, travel and entertainment.
- The next Labour Force Survey, showing changes between March and April, will be released on Friday, May 8th. StatsCan will have conducted their phone survey for the next release over the period April 15 to 20th.

Best,
Zac

Subject: data on BC construction sector

Hi Andrew – we really appreciated the call and discussion regarding fees. During that call you mentioned stats on the activity within the construction sector – new construction and existing buildings. Might you have a data source that we could connect with so that we can get this type of data on a regular basis. We believe this type of information would be very helpful for our organization as we develop recovery scenarios and track progress going forward.
Thanks,
Clint

Energy Step Code Council Meeting
Notes

Date and Time of Meeting: Wednesday May 6, 2020 | Time: 9:45 a.m. to 11:15 p.m. Pacific Time
Venue: Skype teleconference

Chair: Zachary May, Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Revised May 11, 2020

Participants

1. Bea Bains, FortisBC
2. Maya Chorobik, Chair, CEA/LG Peer Network
3. Christian Cianfrone, ZEBx
4. Norm Connolly, Richmond/PIBC, and co-chair, Technical Subcommittee
5. Bob Deeks, CHBA and co-Vice Chair
6. Patrick Enright, City of Vancouver
7. Catherine Ernst BOABC
8. Jeff Fisher, UDI
9. Chris Frye, NRCan Housing Division
10. Joe Hart, Icon Homes/CHBA BC
11. Jason Jung, ASTTBC
12. Vanessa Joehl, CHBA BC
13. Toby Lau, BC Hydro and co-chair, Technical Subcommittee
14. Wilma Leung, BC Housing
15. Megan Lohmann, CEA and UBCM rep
16. John Madden, UBC
17. Warren Perks, BCCA
18. Kelly Reid, HKR Builders/CHBA BC
19. Mark Sakai, HAVAN
20. Muneesh Sharma, BOMA
21. Manjit Sohi, BOABC
22. Maxwell Sykes, City of Surrey/UBCM
23. MAH: Holly Wacker (Local Government Division, Planning and Land Use Management)
24. Jeff Dean (Policy Analyst, Housing Policy Branch; OHCS)
25. BSSB Staff: Aura McCrae; Scott Williams; Hugo Wong; Dale Andersson, BSSB and co-chair, CBC Subcommittee
26. Nat Gosman, MEMPR
27. Catherine Ernst, BOABC; Nicholas Heap, City of Richmond and co-chair, P9 subco; Vanessa Joehl, CHBA BC
28. Robyn Wark, BC Hydro and co Vice-chai
29. Guests: Pauline Rupp, CHBA BC; Gary Hamer, BC Hydro; Bertine Stelzer, BC Hydro and potential others
30. Harshan Radikrishnan, EGBC Provided feedback after this meeting:

Regrets: Mara Gatensby, AIBC

Introduction to MAH Response

Zachary May from BSSB said the meeting is to survey BC Energy Step Code Council members on how COVID-19 has affected their sector, and how the construction sector can contribute to B.C.'s economic recovery. The Province is looking at four phases of recovery, response, transition, recovery, and long-term transformation. These phases represent a transition from health focused measures towards increasing emphasis on economic and social outcomes.

We want to know: What does recovery look like, what challenges do we need to overcome, what are the opportunities? Also, how should we work together as a Council?

Premier has economic recovery task force – MAH wants to leverage current relationships in the construction sector to understand short-term transition issues and also longer-term recovery issues. It's listening mode for BSSB – what's going on, how Province and ESCC can support recovery.

Discussion/shared information summarized by theme below. Please note, the following information is provided for discussion purposes and should not be relied on as official or authoritative.

Safety

- All sectors report staff from their organizations are largely safe with many/most working from home. All are communicating info to their members about COVID.
- Minimal reports of workers being sick from COVID (but a few, traced to Alberta work sites).
- Municipalities doing inspections/permitting still, but at a reduced pace with new safety procedures.
- BOMA releases lots of communication to building owners and managers on COVID (posters, best practices, etc.).
- HAVAN says builders implementing new safety procedures like one-way stairwells to increase physical distancing.

Innovation

- BOABC: A Finnish company is offering six months of free building permit software for municipalities still on paper, announcement to come.
- Richmond trialling virtual video inspections, accepts photos in inspections, but gas inspections are a challenge. Plan reviews generally maintained, online, courier, online signing of documents. Screening protocol for inspections.
- BCIT's offering virtual access to high-performance lab to offer *almost* "hands-on" experiences
- Lots of online work/online delivery of training and inspection which is new for some.

Productivity, employment and the business environment

- Productivity on jobsites is down slightly (BCCA estimates 80% of normal) due to new physical distancing and handwashing. Expenses have increased to buy handwashing stations, etc. BCCA concerned about who will pay for loss in productivity and new cleaning/sanitation costs.
- HAVAN: industry is reporting increasing slowdown in business, based on informal member surveys. In early April, 76% reported normal amount of business, by end of April, 67% reported normal amount of business.
- UDI reports significant loss on retail side (tenants unable to pay rent). Sales centres for condos are closed, pre-sales down (time limits on pre-sales are an issue), some project launches not occurring, reduced market confidence and more uncertainty on accurate real estate pricing. UDI exploring how to extend construction hours to allow shifts. Some local governments are OK with this.
- Home inspectors severely affected: realtors can work but sales are often without inspections ("no conditions" deals).
- Municipalities have temporary layoffs in recreation and other facilities that are now closed.
- UBC: Capital projects mostly progressing, 1 student housing project on hold.
- CEA: New EA work fine, slow on retrofits.
- EGBC: Drop in industrial work, particularly oil and gas, aviation. Some municipal projects on hold, and EGBC thinks property tax deferral and lost revenue could further impact municipalities. Municipal layoffs have affected EGBC members (layoffs, 10% pay cuts, 4-day work weeks). Drop in RFPs, but energy work

continues. Survey sent Fri May 8 to all EGBC members will collect further information. EGBC does not foresee huge impact on their own budget.

How COVID affects normal business

- CHBA BC: BC Hydro is only offering essential services, no new hookups, which is holding things up. Banks also have reduced hours and services which causes delays. EMPR and BC Hydro were on the call and notes Hart's concern re: BC Hydro service.
- ASTTBC: registered fire protection technicians are deemed an essential service but being refused entry to some MURBs. Fire depts. Allowing deferrals of in-suite testing.
- BOMA hears about increased break-ins in garages and storefronts.

Financial assistance and incentives

- CHBA BC reports the $40k loan is helpful for them (Canada Emergency Business Account). For other gov assistance, they find it difficult to prove drop in income when applying for govt help because noticeable drop will only come in the later months (contracts)
- EMPR: no changes to provincial incentive programs for this fiscal. But some work to see how programs can be tuned to support economic benefits/recovery. Watching carefully to see if they need to adjust program design.
- BC Hydro: We have relief fund for residential and small biz. About 70k applications have applied for relief fund. New remote tools for education (Indigenous program energy savings kit.).
- Hydro: has repeated a funding offer to homebuilder associations to apply for $25k each for their membership to fund innovative online/remote training options
- One-size solutions don't fit all

Opportunities

- Collective sense of opportunity to consider new ways of thinking/doing/working.
- Richmond: We are ID-ing shovel-ready projects. Rec centres could take advantage of closure to undergo maintenance. Most LGs have extended tax deadlines to Sept. This is an opportunity to rethink public space (reclaiming road space for parks/pedestrians, bikes, etc.)
- CEA: offering tech training and heat pump training in Columbia Valley, huge opportunity here to move to lower carbon sources for communities. Don't miss this opportunity.
- BC Hydro: Focusing on education. High-performance building fund enabling remote integrated design for LEEP, 1 hour free training with good uptake. CHBABC is offering Step Code courses for free.
- Increased virtual learning from BC Hydro could help Step Code training/implementation in rural communities
- BC Hydro will ask building energy managers in some municipalities to see if they can check how COVID is affecting consumption.
- EGBC glad to see Hydro still funding a Climate Action position in Abbotsford.

Risks

- CEA: citizens may not understand why during a crisis we should invest money given layoffs, so some sensitivity needed. Robyn from Hydro: mayors are hearing/sympathizing with job losses/economic crisis in their community.
- Fortis: Hesitancy to allow people into homes. New construction is fine, but occupied space is a problem. Developing inspection/repair protocols when going into occupied spaces. Supply chain is a concern (e.g. PPE for builders, normal products required for repairs, installations).
- BOMA wonders: what is landlord duty of care? Who enforces rules? However, they say people are largely self-policing effectively.

Changes in energy use due to COVID

- UBC: building occupancy on campus down 90%, but energy use only dropped 15%. Aquatic centres and ice rink use much less energy now, but core physical plants keep operating. It's a learning opportunity for them to understand energy, carbon, HVAC needs in buildings.

NRCan/EnerGuide perspective (provided following the call)

- All EnerGuide services have continued during the pandemic, including the receipt of EnerGuide files to the Housing Division database, responses (technical and administrative) to inquiries from partners and the delivery network, internal quality assurance, policy work and forward-looking development of tools and services
- Testing centres for new energy advisor candidates, managed nationwide on a contract with Yardstick Assessment Strateges, have been closed since mid-March. The closure has been extended until June 30th, with continual review based on guidance from public health officials
- The implications for EA capacity building are being reviewed by the Housing Division and Office of Energy Efficiency, and alternative options are being explored for exam delivery and proctoring.
- Our input from the EnerGuide delivery network on COVID impacts has been similar to what was shared on the call yesterday. Work in new homes is proceeding with a few adjustments, work in existing homes, which was slow already, has essentially stopped.
- Out of interest, Enbridge in Ontario and Efficiency One in Nova Scotia are exploring remote assessments for existing buildings. At this time, the decision from the building science and programs teams in the Housing Division has been that we don't have the resources to develop protocols for EnerGuide that would allow for remote audits (in new or existing homes, but the issue is in existing homes). This is something that could be pursued for EnerGuide, but there won't be a near-term solution

Hello Scott,

To your 4 points:

- We support collection of data in so far as it demonstrates compliance with a regulation or bylaw.
- We support post occupancy data collection likewise insofar as it demonstrates compliance with a regulation or bylaw, existing or enacted in the future.
- Drawings and reports as submitted for permit application are copyright and made available for use by the AHJ for one purpose only, code compliance, we do not support any of these documents being made available to anyone else for any other purpose. They are copyright materials that cannot by copied or published without the agreement of the creator. This is intellectual property belonging to the creators, that the AHJ has only the limited right to view and retain for purposes of determining code compliance. We do not support drawings or reports added to this or any database. This material is highly sensitive, highly confidential and contains proprietary information.
- We do not consider anything in these checklists /reports to be sensitive, however would defer to the position of UDI and BOMA, as they are more representative of owner's interests.

All the best,

Subject: RE: Rollout - Part 3 Step Code Energy Design Report/Checklist Discussion

Hi All,

As we near the release of the Part 3 Design Report, I would like to thank all of you for taking time out of your busy schedules to provide your input and support thus far with the development of this tool.
As you all know, we are looking to collect the data outlined in the Part 3 Design Report from local governments to help inform future energy efficiency measures and policy decisions. The voluntary submission of this information will continue until the BeRT tool is fully operational.
In anticipation of tomorrow's meeting, should there be some time at the end of the meeting, we were hoping to have a quick discussion with regards to the BeRT tool and some of the data which we would like to collect in addition to the inputs/outputs as currently outlined in the Part 3 Design Tool, such as post occupancy data.

With the development of the initial tool prototype and user testing in March, the project team is starting to look into data management – collection, usage and storage as well as privacy impact assessment as we plan the next phase of the tool development.

Once again, we are seeking your input and feedback as we develop this tool to standardize the process for demonstrating, gathering and storing data pertaining to energy efficiency for Part 3 buildings. Additionally, the project team is exploring ideas on the BeRT's long-term intention to be a central repository of building information (in addition to energy) from permit submission to post-occupancy.

We would like to discuss the following:

- Any supplemental information that would be useful to collect (e.g., energy modelling documents, architectural, mechanical, electrical drawings etc.)?
- What other types of data would be useful to collect in addition to energy requirements (e.g., post-occupancy performance data, etc.)?
- What type of information constitutes intellectual property or what information would your members be reluctant to disclose privately or publicly?
- Would the information requested in the City of Vancouver's current checklists, or the Part 3 Energy Design Report be considered sensitive?

I look forward to discussing with you further.

Cheers,

Scott Williams P.Eng, CPHD, LEED AP^{BD+C}| Senior Energy Codes Administrator

Hi everyone,

To allow more time to get more info for the call, Norm and I are suggesting to reschedule the meeting to next Wednesday May 20 starting at 2 pm. Hope the new meeting would work for everyone.

Toby

Hi,

Further to our meeting last week, Christian, Norm and I had a discussion this morning and we would like to suggest we reconvene on the 13th. The preliminary agenda is as follow:

- Demo of the latest version of the Checklist and Design Report spreadsheet;
- New web page for the Part 3 Energy Design Report;
- Roll-out of the Part 3 Checklist/Energy Design Report next steps - discussion;
- …

I hope that proposed meeting time would work for you. If you have any other agenda item(s) which you would like to raise, please let us Norm and I know.

The Webex link to the meeting is below:

JOIN WEBEX MEETING
s.15

Thanks,

Toby

P.S. Harshan, please forward the meeting invite to the working group members that you indicated in our last call.

Zachary May is the Acting Director of Policy and Codes Development with the Building and Safety Standards Branch. He is a member of the national standing committee for housing and small buildings (Part 9) with the National Research Council and participates in a number of provincial construction-related committees. In his role with the Building and Safety Standards Branch he leads a technical team responsible for developing and maintaining the BC Building Code, including the recently adopted Energy Step Code.

Dear Zachary,

Thanks, that's great to know.

May I have your headshot and short-form bio for our event promotion page?

Kind regards,
Yvonne

Dear Zachary,

Happy Friday!

For your presentation, how long do you think you would need? Would 15-20 mins be sufficient?

I am working on the schedule now, so it would be great to have your feedback as I can allocate the correct amount of time.

Have a relaxing weekend,
Yvonne

Hi Yvonne,

Is the event on September 25th, or 28th? I'm available on either date, but thought it was the 25th.

Subject: UDI breakfast September 25

Hi Brendan,

Yvonne Lo is scheduling a UDI breakfast where Sean Pander and I will give some updates on CoV and Provincial work (Step Code/Building Code). Dave Ramslie was the third but needs to back out. I suggested to Yvonne that you might be a good alternate to speak to the consultations underway in Richmond. Let Yvonne know if that works for you.

Best,
Zachary D. May, MBA

UDI Breakfast Webinar: Green Building Regulatory Update

Confirmed Date: **Thursday - June 11, 2020**

Time: 9:30 – 10:30/45 am

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run	15	
9:30	UDI Introduction Thank Educational Partner	2	Anne McMullin
9:32	Sponsor Remark Moderator Introduction	2-3	BC Hydro
9:35	ZEBx Introduction Audience polling Panel Introduction	5-7	Christian Cianfrone
9:45	Presentation #1 –	7-10	
9:55	Presentation #2 –	7-10	
10:05	Presentation #3 –	7-10	
10:15	Q&A w/moderator	15-20	All
10:30 ~ 10:45	Webinar concludes		Christian Cianfrone

Event duration: 60 – 75 minutes

Moderator: Christian Cianfrone, ZEBx

Educational support: BC Hydro, New Construction Program

Suggested Panel (5 – 7 minutes presentation time):

- Province: Zachary May, Director of Strategic Policy, BSSB
- City of Vancouver: Sean Pander, Green Building Manager
- City of Richmond: Norm Connolly, Sustainability Manager

Content:

BC Hydro (2-3 minutes)

- Why is BC Hydro supporting this session?
- Outline resources, incentives available to support developers achieve high performance new construction (and potentially existing buildings)

ZEBx Introduction (5 minutes)

- What is ZEBx?

- ZEBx & UDI collaboration (GDS)
- ZEBx programming and offers to support developers (Design Charrettes, Pattern Language course, NZER workshops, Decarb Lunch series)
- Introduction to today's session & speakers

CoV Regulatory Update (10 minutes)

- Climate Emergency Response: Big Move 4 for zero emissions space and water heating new and existing buildings

- Climate Emergency Requirements for New Housing 3-Storeys and Under (Council approved on April 29, 2020):

    - VBBL has been amended requiring all residential space or water heating systems to be zero-GHG-emitting, effective January 2022.
    - A 2 tonne carbon pollution cap has been introduced for new single family and duplex dwellings 325m2+ to lower emissions form the largest new homes, effective January 2021.
- Reminder of upcoming VBBL changes effective Jun 2021 (eg Step 3, GHGI 6 for MURBs 7 storey+).

- Other Updates

Comment: Sean would like to incorporate an easy to use participant live input tool (e.g. Zoom polling) to gather feedback on some pending ideas (embodied carbon in RZ, zero carbon heating and hot water in RZ and appropriate TEDI, logic structure for GHG reg for existing buildings, etc). He could see the presentation including up to 5 short briefs with a couple having one or two audience feedback questions.

BC Energy Step Code Regulatory Update (5 minutes)

- Number of BC municipalities adopted ESC vs have started consultation on ESC: focus on adoption in the Lower Mainland; (This resource would be good way to summarize information but needs to be updated; two examples to mention are the recent Step 5 adoption by West Vancouver and that Prince George started consultation on implementation in February 2020.)

- Overview for which building types ESC metrics have been developed & adopted and which are still outstanding (e.g. public buildings; hospitals)

- Overview of LGs who have approved a lower step for Part 3 buildings with a Low Carbon District Energy System connection

- Resources available: Summary slide with guides available on ESC website, focus on large building resources such as the Guide to Low Thermal Energy Demand for Large Buildings

City of Richmond Energy Step Code Implementation for Part 3 buildings (7 minutes)

- Development / Building Permit processes: What are the major changes for developers in their touch points with LGs? Provide examples for City of Richmon d and highlight commonalities in processes / documents for Part 3 buildings that need to be provided, such as energy modeling results, airtightness testing etc

- Airtightness Testing: BC Energy Step Code requirements for airtightness testing for Part 3 buildings: outline requirements & procedure on a high-level

- Other Updates?

BC Alterations to Existing Building Code (3 – 5 minutes)

- Development of an Alterations to Existing Building Code (AEB Code) policy framework has started in 2019.

- Project Goal: To provide clear requirements for existing buildings that will enable GHG reductions and increase life safety and resilience for British Columbians.

- Stakeholder feedback: started in 2019 and will continue through the fall of 2020.

- AEB Code to consider seismic and climate risks.

- It is anticipated that the AEB Code will be implemented in 2024.

Hello, Energy Step Code Council members:

It is time again for a regular meeting. We're aiming for the third week of June. Unlike our February meeting, this will be held virtually for obvious reasons.

Please indicate your availability via this Doodle poll.

We expect the meeting to be of typical length, with an hour break for lunch. Once we settle on a date, we will have an agenda to circulate.

We look forward to it.

Best,
Hugo

UDI webinar June 11: revised outline

From:	Michaela Neuberger <michaela@zebx.org>
To:	Pander, Sean <sean.pander@vancouver.ca>, May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>, Norm Connolly <nconnolly@richmond.ca>
Cc:	Yvonne Lo <ylo@udi.org>, Stelzer, Bertine <bertine.stelzer@bchydro.com>, Christian Cianfrone <christian@zebx.org>, Patrick Enright <patrick.enright@vancouver.ca>
Sent:	June 1, 2020 2:44:35 PM PDT
Attachments:	UDI Webinar_GB Regulatory Update_Outline V1.docx

Hi Sean, Zac and Norm,

Please find attached a suggested revised outline for the UDI webinar on June 11 based on our conversation last week. Comments:

- Suggested order of content:
  - City of Vancouver: New Construction (Part 9 / Part 3)
  - Province: New Construction (Part 9 & Part 3)
  - City of Richmond: New Construction Implementation (Part 3)
  - Existing Buildings (CoV, Province)
- We could also segment the content further and have all Part 9 new construction first, followed by Part 3 and then existing buildings. The reason I haven't done, is because I wasn't sure that the Provincial update lends itself to being divided this way and because Norm's presentation is going to focus on Part 3. But I'm open to your preferences.
- We suggest to have a brief Q&A section after each presenter/ topic area if questions come up in the chat. This would extend the allotted time for each speaker and reduce the Q & A time at the end.
- The details for each presentation are suggested talking points / examples. Please communicate the priorities that you think are important.
- I would be happy to compile the slide deck centrally, if you prefer. If we go with the suggested order, it might be easier to have the slide deck pre-arranged in advance since we will be going back and forth between the speakers. If this is your preference, please send me your slides by noon on June 10.
- If you would like to include polling questions in your section, please send the questions and answer options to Yvonne and myself by June 9 so that Yvonne has enough time to set up the polling. Christian and I will finalize the polling questions for the introduction and end.

Feel free to make modifications to the attached outline, respond via email, or give me a call to discuss (cell 604.499.3744).

Thank you,

Michaela

UDI Breakfast Webinar: Green Building Regulatory Update

Confirmed Date: **Thursday - June 11, 2020**

Time: 9:30 – 10:30/45 am
Event duration: 60 – 75 minutes

Moderator: Christian Cianfrone, ZEBx
Educational support: BC Hydro, New Construction Program

Panel (~10 minutes presentation time):

- City of Vancouver: Sean Pander, Green Building Manager
- Province: Zachary May, Director of Strategic Policy, BSSB
- City of Richmond: Norm Connolly, Sustainability Manager

Session Overview

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run	15	
9:30	UDI Introduction Thank Educational Partner	2	Anne McMullin
9:32	Sponsor Remark Moderator Introduction	2-3	BC Hydro, Bertine Stelzer
9:35	ZEBx Introduction Audience polling Panel Introduction	5-7	Christian Cianfrone
9:45	**Presentation #1 – New Construction, City of Vancouver**	8	Sean Pander
9:58	**Presentation #2 – New Construction, Province**	8	Zac May
10:06	**Presentation #3 – New Construction, City of Richmond**	7	Norm Connolly

10:20	Q&A w/moderator	10-20	All
10:30 ~ 10:40	Webinar concludes		Christian Cianfrone

Session Agenda

Time	Agenda	Who / Notes
9:15	**Test technology** - Set up and test Zoom meeting, share screen	Speakers to join at this time
9:30	**Intro:** UDI Thank educational partner	Anne McMullin to welcome participants, thank educational partner and introduce Bertine
9:32	**Educational Partner Remarks** ● Why is BC Hydro supporting this session? ● Outline resources, incentives available to support developers achieve high performance new construction (and potentially existing buildings)	Bertine Stelzer Introduce Christian Cianfrone
9:35	**ZEBx Introduction** ● What is ZEBx? ● ZEBx & UDI collaboration (GDS) ● ZEBx programming and offers to support developers (Design Charrettes, Near Zero program) ● Session context: despite COVID, provincial and local governments are going ahead with implementing green building policies and requirements as planned; no redirection happening ● Incentives available to support developers to build high performance buildings e.g. Density bonusing: New Westminster, CoV ● Number of PH projects in Vancouver → show voluntary leadership ● Audience polling (if relevant) ● Panel Introduction Launch first poll: Have you been involved in more than one Passive House or Step 3+ project?	Christian Cianfrone Set session context; Show momentum, build confidence Yvonne to launch poll Introduce Sean, Zac and Norm
9:45	**City of Vancouver Green Building Update (New Construction)** **Part 9** Climate Emergency Requirements for New Housing 3-Storeys and Under (Council approved on April 29, 2020): ● VBBL has been amended requiring all residential space or water heating systems to be zero-GHG-emitting, effective January 2022. ● A 2 tonne carbon pollution cap has been introduced for new single family and duplex dwellings 325m2+ to	Sean Pander *Please note these are just suggested discussion points / examples.* Yvonne to launch poll Christian to monitor chat / Q&A

	lower emissions form the largest new homes, effective January 2021. • Moving closer into alignment with the BC Energy Step Code for residential buildings 4-6 storeys, effective January 1, 2021. **Part 3** Reminder of upcoming VBBL changes effective Jun 2021 (eg Step 3, GHGI 6 for MURBs 7 storey+). Draft Rezoning Policy Update (future looking) • Zero emissions heating & hot water • Embodied Carbon reductions • Climate Resilience 2050 ready • Formal consultation to take place <u>Launch second poll:</u> Does the CoV want to collect feedback on the future policy changes that are being considered (e.g. embodied carbon in rezoning, zero carbon heating & hot water and appropriate TEDI)? **Audience Q & A**	*Please let us know in advance if you would like to ask polling questions.* Christian to ask Sean audience questions
9:58	**Provincial Energy Step Code Update (New Construction)** • Number of BC municipalities adopted ESC vs have started consultation on ESC: focus on adoption in the Lower Mainland; • Overview for which building types ESC metrics have been developed & adopted and which are still outstanding (e.g. public buildings; hospitals) • 2022 BC Building Code: lower steps of the BC Energy Step Code will no longer be optional as the minimum energy-efficiency requirements for all buildings will increase by approximately 20%--or what is currently Step 3 for Part 9 residential buildings (Steps 4 and 5 for Part 9 residential buildings will remain optional) and Step 2/3 for Part 3 buildings. • Additional improvements anticipated in 2027 (approximately 20% to Step 4/Part 9 residential) and again in 2032 to achieve net-zero energy-ready as a minimum standard at that time. **Audience Q & A**	Zachary May Christian to monitor chat / Q&A (This <u>resource</u> might be good way to summarize ESC adoption information but needs to be updated; two examples to mention are the recent Step 5 adoption by West Vancouver and that Prince George started consultation on implementation in February 2020.) *Please note these are just suggested discussion points / examples.* Christian to ask Zac audience questions
10:06	**Local Government Energy Step Code Implementation for Part 3 buildings** • Update how local governments are implementing the Step Cod, not just City of Richmond but Lower Mainland focus.	Norm Connolly Christian to monitor chat / Q&A

	• Development / Building Permit processes: What are the major changes for developers in their touch points with LGs? Provide examples for City of Richmond and highlight commonalities in processes / documents for Part 3 buildings that need to be provided, such as energy modeling results, airtightness testing etc • Overview of LGs who have adopted a two-tiered (Step down) Step Code approach for Part 3 buildings with a Low Carbon District Energy System connection; relaxations for Low Carbon energy systems; **Audience Q & A**	*Please note these are just suggested discussion points / examples.*
10:13	**City of Vancouver Green Building Update (Existing Buildings)** • Climate Emergency Big Move #4: Zero Emissions space heating and hot water for replacements by 2025 (target date) • Announce that research, policy development, and consultation ongoing for existing buildings and that plan is to bring report to Council by end of 2020	Sean Pander Christian to monitor chat / Q&A *Please note these are just suggested discussion points / examples.*
10:16	**BC Alterations to Existing Building Code** • Development of an Alterations to Existing Building Code (AEB Code) policy framework has started in 2019. • Project Goal: To provide clear requirements for existing buildings that will enable GHG reductions and increase life safety and resilience for British Columbians. • Stakeholder feedback: started in 2019 and will continue through the fall of 2020. • AEB Code to consider seismic and climate risks. • It is anticipated that the AEB Code will be implemented in 2024. **Audience Q & A**	Zac May Christian to monitor chat / Q&A *Please note these are just suggested discussion points / examples.* Christian to ask Zac audience questions
10:20	**Panel Q & A** **Final Poll** Did the presentations and discussion today improve your understanding of provincial and local government regulatory changes related to green buildings?	Christian to moderate Yvonne to launch poll
10:40	**Thanks & Close out**	Christian to thank everyone and close out

Jessica and Andrew,

I have been assigned a response for Minister's Signature. I am recommending we provide a response thanking them for their input and commit to staff following up in the future (can we put a timeline on this?). I'm sure the Minister would like to say something of substance, but without any direction on recovery planning we risk getting ahead of things.

Please let me know if you think we should begin work on a more detailed response to the policy requests, but given the focus on transition I don't believe we can draft a meaningful response to the recovery proposals.

Hope you both have a great weekend.

Best,
Zachary D. May, MBA

Honourable Selina Robinson, MLA
Minister of Municipal Affairs and Housing
Room 310, Parliament Buildings
Victoria, BC V8V 1X4
Sent by email: MAH.minister@gov.bc.ca

Dear Minister,

The real estate sector is a critical pillar of the British Columbian economy. During these unprecedented times of social and economic disruption, it is ever-more important that the housing sector work closely with government to mitigate the myriad challenges people and businesses are facing, while laying the groundwork for economic recovery.

As organizations that represent key professions in the BC real estate sector, we have partnered to review existing measures and identify support gaps and urgently needed actions to assist in COVID-19 economic recovery.

As a result, we have developed the following recommendations, designed to further the government's efforts to:

- prevent bankruptcies and insolvencies that result in job loss, lost government revenue and greater demand for taxpayer-backed government assistance,
- allow British Columbians to keep their homes through tough times and remain in their communities,
- help more British Columbians find and afford safe, appropriate housing to either rent or own, and
- support the broader economic recovery of BC.

The following represents our first set of recommendations for immediate implementation while government continues to manage the first stages of the pandemic and the reopening plan. In the next few months, we will provide long-term recovery recommendations for Phases 3 and 4 of BC's Restart Plan.

Support for property owners, tenants and buyers

The BC economy lost nearly 400,000 jobs in March and April and a recent survey by the Canadian Federation of Independent Business reports that 32 per cent of businesses are not sure they will be able to reopen. These harms are being felt by property owners, tenants and builders, many of whom are struggling. While we appreciate the Canada Emergency Commercial Rent Assistance for commercial owners and tenants and the BC Temporary Rental Supplement program for residential landlords and tenants, additional economic relief is necessary to ease the level of financial disruption and economic hardship currently being experienced.

Support for homebuyers helps British Columbians access the most appropriate housing for their needs while supporting jobs in a wide variety of industries across the province. A 2019 report by The Canadian Real Estate Association estimates that, between 2016 and 2018, the sale and purchase of homes on the Multiple Listing Service® generated 50,000 direct and indirect jobs in BC. Further, as first-time buyers enter the housing market, the units they vacate become available to new tenants, adding much-needed supply to the rental market.

Additional measures that support safe practices will benefit professionals and consumers by ensuring consumers are protected, increasing access to information and reducing costs. Our recommendations will help bridge the gap while recovery is underway with only temporary impacts to provincial and municipal revenues.

We recommend the Provincial Government:

- Support the Union of BC Municipalities' recommendation to expand the Property Tax Deferral Program to all residential taxpayers; this should include purpose-built rental housing and residential development lands. Doing so will help property owners manage their expenses, including builders seeking to make more housing options available to British Columbians.
- Reduce or eliminate cost and access barriers for appraisers to Land Title and Survey Authority and BC Assessment data until restrictions are lifted to allow the mechanisms of finance for commercial and residential real estate to serve the needs of public during this time. Physical and social distancing guidelines restrict on-site property accessibility and require appraisers to collect and verify additional data, resulting in potential increased risks, costs and delays for consumers.
- Introduce a program in partnership with the Federal Government to fund residential and commercial landlords that have accrued rent deficits as a result of COVID-19. This program would help mitigate the impacts of rental deficits faced by landlords and tenants by working to prevent insolvencies and foreclosures.

Encourage housing supply and property development

The COVID-19 pandemic has exacerbated the growing mismatch between housing demand and residential construction. Many construction projects have slowed down and new developments have not launched, which will increase the strain on our housing supply. BC Stats predicts the province's population will increase by over 1.3 million people by 2041, and the British Columbia Real Estate Association expects housing sales to increase in 2021. All levels of government have the opportunity to encourage more homes available for rent or purchase – allowing more British Columbians access to affordable, appropriate housing.

We recommend the Provincial Government:

- Strongly encourage local governments to fast-track development applications by adopting ideas from the Development Approvals Process Review.
- Support local governments so development cost charges (DCCs) can be paid when building permits are issued rather than at the subdivision stage. This would ease the crisis for builders working on subdivision projects who want to move forward with projects but are paying their DCCs early in the process.
- Extend the 12-month grandfathering period for DCCs by an additional six months. Currently, when DCC rates increase, developments that are already underway or receive building permits within 12 months are exempt from the increase.

Recommendations to other BC ministries and organizations

In addition to these recommendations for your ministry, we have also sent the following to other ministries and agencies.

Attorney General and Minister of Finance:

- Invest in public education campaigns focused on how to detect and avoid red flags in the mortgage process. Emergency measures related to the pandemic have placed many British Columbians under increased financial pressure, which can in turn increase their risk of being a target for mortgage fraud. Campaigns should be directed at prospective buyers who are most likely to be targeted by fraudsters, including people experiencing increased financial pressure, first-time buyers and newcomers to Canada.

Office of the Superintendent of Real Estate:

- Permanently extend the timelines set out in Policy Statements 5 and 6 (pursuant to the *Real Estate Development Marketing Act*) to allow for an early marketing period for new developments of 12 months and a 15-month period to obtain a building permit

and satisfactory financing commitment before buyers can unilaterally terminate their pre-sale contracts.

Recommendations to the federal and local governments

We ask the BC Government to encourage the federal and local governments to implement the following actions to assist in BC's economic recovery. We have sent the following recommendations to the federal and local governments:

Federal Government:

- Permanently provide renovation tax credits for all property owners, retroactive from May 1, 2020. This is important for renovation projects underway that are at risk of being cancelled as well as to incent new projects – especially to help all property owners voluntarily retrofit existing buildings to improve energy efficiency and reduce greenhouse gas emissions.
- Exempt existing mortgage holders from the mortgage stress test at the time of renewal when switching lenders.
- Consult with the real estate sector if considering any amendment to regulatory mortgage underwriting guidelines, product restrictions or other relevant matters that could impact existing or perspective homeowners and those who serve them.

Local governments:

- Some municipalities are seeking to prioritize the housing market's recovery by fast-tracking development projects, and we encourage all local governments to do so. Some measures that could be considered include:
    - relaxing other defined deadlines in municipal bylaws, such as deferring timelines of development and building permit applications from May until the beginning of Phase 3 of BC's Restart Plan,
    - amending policies that require physical meetings, such as public hearings, with municipal representatives and members of the general public, by allowing virtual access to meetings,
    - waiving public hearings for projects that fit existing design guidelines, Official Community Plan designations and other existing policies, pursuant to *Local Government Act*, and
    - adopting other measures described in the Development Approvals Process Review.

We are committed to working with your government to develop and implement efficient business solutions during this time of crisis. We are happy to discuss any of the above recommendations in more detail and lend sector expertise, data or analysis as needed. Please email Trevor Hargreaves, Vice President of Government Relations at the BC Real Estate Association for follow up (thargreaves@bcrea.bc.ca or 1-236-333-4572).

Sent: June 8, 2020 8:05:58 AM PDT

Morning all,

I guess I was going by the original outline and what I remembered from our call.

I am setting up my short presentation to cover off what local governments (focusing on Metro Vancouver) are doing with respect to supporting the Step Code transition for Part 9 and Part 3 new construction, and some of the regulatory and policy levers that LG's are using to drive low carbon energy systems (Step Code relaxations) as well and incent the top levels of the Step Code / Passive house. I wasn't going to steal any thunder from Sean's presentation, so am focusing on muni's outside CoV. I do make the point within my presentation that the provincial and federal Code timelines to NZER means that we all meet at the same place eventually.

I had planned for 7-9 slides, but can adjust as needed. My deck is only partially completed at this point ☺

Subject: Re: [EXT] Re: UDI webinar June 11: revised outline

Thanks Sean, for your response. I suggested not to divide it up by building type but rather only by new construction vs existing buildings since I thought that the Provincial Update is applicable to both building types and Norm will only speak to P3. I'm open to change it around. Another consideration is that if we go back and forth a lot between speakers, having a centralized slide deck would be much better, which requires a little more time before hand. Anyways, let me know your final decision.

Thanks,
Michaela

> Michaela – I thought we had decided to do by building type if you could figure way to facilitate between speakers. That said, given where we are wrt timeline and that I will just barely have time to put some slides together before Thursday, I think we go with your structure and order. I'll outline my draft speaking points for Zach, Norm and Christian Monday and see if I should add, omit or emphaisize something given what they want to cover.

City of Vancouver security warning: Do not click on links or open attachments unless you were expecting the email and know the content is safe.

Dear All,

I am following up on my email below. I haven't heard back from anyone except for Bertine and wanted to check-in to ask whether I can support with anything to finalise preparations for the June 11 webinar.

In particular, it would be great to know whether you are ok to go with the suggested order of content, individual Q&A after each section, and if you will share your own screen or want me to compile the slide deck centrally.

Thank you,
Michaela

> - Province: New Construction (Part 9 & Part 3)
> - City of Richmond: New Construction Implementation (Part 3)
> - Existing Buildings (CoV, Province)
> - We could also segment the content further and have all Part 9 new construction first, followed by Part 3 and then existing buildings. The reason I haven't done, is because I wasn't sure that the Provincial update lends itself to being divided this way and because Norm's presentation is going to focus on Part 3. But I'm open to your preferences.
> - We suggest to have a brief Q&A section after each presenter/ topic area if questions come up in the chat. This would extend the allotted time for each speaker and reduce the Q & A time at the end.
> - The details for each presentation are suggested talking points / examples. Please communicate the priorities that you think are important.
> - I would be happy to compile the slide deck centrally, if you prefer. If we go with the suggested order, it might be easier to have the slide deck pre-arranged in advance since we will be going back and forth between the speakers. If this is your preference, please send me your slides by noon on June 10.
> - If you would like to include polling questions in your section, please send the questions and answer options to Yvonne and myself by June 9 so that Yvonne has enough time to set up the polling. Christian and I will finalize the polling questions for the introduction and end.

Subject: Invite to Vancouver's Climate Emergency - Building decarbonization advisory committee

Respected Colleagues,

I am Vancouver's Green Building Manager. Our team leads the City's efforts to decarbonize buildings in Vancouver. I am writing this morning to invite you to join Vancouver's Climate Emergency Big Move 4 External Advisory Committee (BM4EAC for short) for Zero Emissions Buildings.

Big Move 4 of Vancouver's Climate Emergency Response (2019) directed staff to begin developing plans to **ensure all** new and **replacement heating and hotwater equipment is zero emissions by 2025** and to reduce greenhouse gas emissions in Vancouver by 50% by 2030. While this work is meant to shape how the City continues to roll-out its Zero Emissions Building Plan (2016), the emphasis of the new planning work is focused on how to get deep emission reductions from existing buildings.

Meeting these objectives will be effectively impossible for the City to achieve on its own; our success will require alignment in thinking and action from a broad range of partners and will need to carefully weigh the tradeoffs that meaningful action will entail. While we have numerous research initiatives and technical experts involved in shaping this work, the BM4EA's role will be to challenge and inform staff thinking on our strategic direction, to maximize this alignment, and to help us balance the tradeoffs.

At a minimum, BM4EAC involvement will include participating in 2-3 meetings over the next 5 months to share your ideas, concerns, and to identify areas for further research and consultation. The outcome will be incorporated as part of our recommendations to Council in November on Vancouver's Climate Emergency Action Plan and a detailed Zero Emission Buildings Retrofit Plan. As part of these meetings, additional opportunities will likely arise to participate in this work further but these will be optional and specific to individual committee members.

I will follow-up this email with an e-poll to check availability for the first Committee meeting on either morning of Jun 22 or afternoon of Jun 18. If you'd like more information on the Committee's role, expectations for participation, or feel there maybe another representative from your organization that would be better suited to participate, please contact me directly to discuss.

At this first meeting, we will present and discuss the main elements of the draft Plan including:

- New buildings actions and importance
- Clear Retrofit Signals and Flexible Requirements
- Supporting Voluntary Leaders
- Building Capacity
- Removing Barriers
- Access to renewable energy
- Equity
- Follow-up actions

I hope you will be able to support us as your voice and the people it represents is critical in this important work.

Hi Andrew,

Any further thoughts on this? JEDC will likely want to coordinate (or lead) if we move ahead with a listening session, since they are leading the construction transition table that includes UDI and CHBA-BC. I believe Landlord BC, BOMA, and UDI are represented at the MURB table that Housing Policy is leading, so many (not all) of these stakeholders are included in active listening tables.

My recommendation:
I will assign this for response with a thank-you and commitment to incorporate this input into our recovery planning, and staff will follow up if they have any questions. If we are able to get a mandate to move forward with recovery planning and engagement with stakeholders, we can follow up with these stakeholders to organize a meeting. I think we risk stakeholder fatigue if we continue to set up meetings with no ability to commit to any action.

Please confirm if you're ok with this course of action, or if you would like more detailed commitments in the response. It will be coming to both of you in eapps in the next couple days.

I wonder if it would be worth sending some holding messaging as you've recommended Zac, and checking in with Cim about the sector tables to see if these perspectives are represented there and if so, how this input fits in with those conversations. Entirely appreciating the value of a listening session, we will want to make sure we're aligned with any transition listening that may be underway, and concurrently, making sure that we're not getting ahead of any thinking that may be coming on recovery.

Subject: Econ Reco correspondence

Jessica and Andrew,

I have been assigned a response for Minister's Signature. I am recommending we provide a response thanking them for their input and commit to staff following up in the future (can we put a timeline on this?). I'm sure the Minister would like to say something of substance, but without any direction on recovery planning we risk getting ahead of things.

Please let me know if you think we should begin work on a more detailed response to the policy requests, but given the focus on transition I don't believe we can draft a meaningful response to the recovery proposals.

Hope you both have a great weekend.

Sent: June 8, 2020 12:39:01 PM PDT

If we are discussing the language in the MO which describes grandfathering of 'in-flight' construction to prior code requirements, I question whether we could achieve the desired outcome by repealing and revising the order because the issue is the local authority exercising power it already has.

The current order's language describes as acceptable "work stoppages considered reasonable in the building industry" which may be sufficiently broad to include a global pandemic of this nature. As well, the limitations periods order already grants statutory decision makers the latitude to "waive, suspend or extend a mandatory time period relating to the exercise of that power," i.e. extend the expiry date of a building permit.

Short of imposing a building bylaw on an inflexible local authority (which has its own considerable implications), our best avenue is diplomacy.

Subject: RE: delays in construction

Hi Zac,

We are talking about the adoption order language that says this code applies to permits on or after a certain date and not to a building under a previous permit unless there was an unreasonable delay in the construction? Note the language is not actually in the code- it is on the adopting order for the code… you may wish to slightly adjust the wording to reflect.

I was not aware that LG's have bylaws on this. I think this is a matter left to LG discretion and your monitor approach is likely sufficient- are there examples of this becoming a problem or is it just speculation at this point? I don't think we could influence their bylaws in any way. The only thing I could think of would be to repeal that language and replace it, but I don't know what we would replace it with, or how or even if it would make a difference. It really needs to be assessed on a project by project basis.

Subject: delays in construction

Hi Juni and Tiffany,

I am responding to a letter from UDI, which includes a request for action to clarify the unusual delays language in Division A of the BCBC. Some LGs have defined a reasonable delay in bylaw, I think Jeff mentioned 6-months as an example. This is causing concern with developers. Do the two of you have any thoughts on whether we need to take action, or is the monitor and coordinate steps I mention below enough?

Zachary, thanks for the information regarding delays in work and the *BC Building Code* (*BCBC*) which informs local governments that there are limits to how long Building Permits can last if delays occur in construction. There is a concern that several local governments have established time limits due to this provincial regulation. As I said in our phone call on April 23, the Province may need to extend these time periods during the COVID-19 pandemic. Would the Province's emergency powers allow you to extend the time limits on municipal Building Permits? The *BCBC* measure was put in place to ensure new buildings comply with the latest version of it. However, it does not appear that there will be another update for a while.

- We do note anticipate any change to the regular adoption of the model National Building Code on a roughly 5-year cycle as a result of COVID-19
- The province is working closely with local governments to ensure that impacts to construction are minimized. The language in the Building Code that relates to delays in construction did not consider a pandemic and are intended to apply to unusual delays on a project, not across the sector.
- We will be reinforcing this message with building officials and may consider further actions if this becomes a widespread issue.

If we are discussing the language in the MO which describes grandfathering of 'in-flight' construction to prior code requirements, I question whether we could achieve the desired outcome by repealing and revising the order because the issue is the local authority exercising power it already has.

The current order's language describes as acceptable "work stoppages considered reasonable in the building industry" which may be sufficiently broad to include a global pandemic of this nature. As well, the limitations periods order already grants statutory decision makers the latitude to "waive, suspend or extend a mandatory time period relating to the exercise of that power," i.e. extend the expiry date of a building permit.

Short of imposing a building bylaw on an inflexible local authority (which has its own considerable implications), our best avenue is diplomacy.

T

Subject: RE: delays in construction

Hi Zac,

We are talking about the adoption order language that says this code applies to permits on or after a certain date and not to a building under a previous permit unless there was an unreasonable delay in the construction? Note the language is not actually in the code- it is on the adopting order for the code… you may wish to slightly adjust the wording to reflect.

I was not aware that LG's have bylaws on this. I think this is a matter left to LG discretion and your monitor approach is likely sufficient- are there examples of this becoming a problem or is it just speculation at this point? I don't think we could influence their bylaws in any way. The only thing I could think of would be to repeal that language and replace it, but I don't know what we would replace it with, or how or even if it would make a difference. It really needs to be assessed on a project by project basis.

Subject: delays in construction

Hi Juni and Tiffany,

I am responding to a letter from UDI, which includes a request for action to clarify the unusual delays language in Division A of the BCBC. Some LGs have defined a reasonable delay in bylaw, I think Jeff mentioned 6-months as an example. This is causing concern with developers. Do the two of you have any thoughts on whether we need to take action, or is the monitor and coordinate steps I mention below enough?

Zachary, thanks for the information regarding delays in work and the *BC Building Code* (*BCBC*) which informs local governments that there are limits to how long Building Permits can last if delays occur in construction. There is a concern that several local governments have established time limits due to this provincial regulation. As I said in our phone call on April 23, the Province may need to extend these time periods during the COVID-19 pandemic. Would the Province's emergency powers allow you to extend the time limits on municipal Building Permits? The *BCBC* measure was put in place to ensure new buildings comply with the latest version of it. However, it does not appear that there will be another update for a while.

- We do note anticipate any change to the regular adoption of the model National Building Code on a roughly 5-year cycle as a result of COVID-19
- The province is working closely with local governments to ensure that impacts to construction are minimized. The language in the Building Code that relates to delays in construction did not consider a pandemic and are intended to apply to unusual delays on a project, not across the sector.
- We will be reinforcing this message with building officials and may consider further actions if this becomes a widespread issue.

Best,
Zachary D. May, MBA

Subject: Invite to Vancouver's Climate Emergency - Building decarbonization advisory committee

Respected Colleagues,

I am Vancouver's Green Building Manager. Our team leads the City's efforts to decarbonize buildings in Vancouver. I am writing this morning to invite you to join Vancouver's Climate Emergency Big Move 4 External Advisory Committee (BM4EAC for short) for Zero Emissions Buildings.

Big Move 4 of Vancouver's Climate Emergency Response (2019) directed staff to begin developing plans to **ensure all** new and **replacement heating and hotwater equipment is zero emissions by 2025** and to reduce greenhouse gas emissions in Vancouver by 50% by 2030. While this work is meant to shape how the City continues to roll-out its Zero Emissions Building Plan (2016), the emphasis of the new planning work is focused on how to get deep emission reductions from existing buildings.

Meeting these objectives will be effectively impossible for the City to achieve on its own; our success will require alignment in thinking and action from a broad range of partners and will need to carefully weigh the tradeoffs that meaningful action will entail. While we have numerous research initiatives and technical experts involved in shaping this work, the BM4EA's role will be to challenge and inform staff thinking on our strategic direction, to maximize this alignment, and to help us balance the tradeoffs.

At a minimum, BM4EAC involvement will include participating in 2-3 meetings over the next 5 months to share your ideas, concerns, and to identify areas for further research and consultation. The outcome will be incorporated as part of our recommendations to Council in November on Vancouver's Climate Emergency Action Plan and a detailed Zero Emission Buildings Retrofit Plan. As part of these meetings, additional opportunities will likely arise to participate in this work further but these will be optional and specific to individual committee members.

I will follow-up this email with an e-poll to check availability for the first Committee meeting on either morning of Jun 22 or afternoon of Jun 18. If you'd like more information on the Committee's role, expectations for participation, or feel there maybe another representative from your organization that would be better suited to participate, please contact me directly to discuss.

At this first meeting, we will present and discuss the main elements of the draft Plan including:

- New buildings actions and importance
- Clear Retrofit Signals and Flexible Requirements
- Supporting Voluntary Leaders
- Building Capacity
- Removing Barriers
- Access to renewable energy
- Equity
- Follow-up actions

I hope you will be able to support us as your voice and the people it represents is critical in this important work.

About BC Housing Research Centre

BC Housing's Research Centre works in collaboration with housing sector partners to foster excellence in residential construction and find innovative solutions for affordable housing in British Columbia. Sharing leading-edge research, advances in building science, and new technologies encourages best practice.

The Research Centre identifies and bridges research gaps to address homelessness, housing affordability, social housing challenges and the needs of distinct populations. Mobilizing knowledge and research expertise helps improve the quality of housing and leads to innovation and adoption of new construction techniques, Building Code changes, and enhanced education and training programs.

Attachments: UDI Presentation - Green Building Regulatory Update (Norm).pptx

Hi Christian and team,

I've attached my PPT deck for tomorrow's UDI session.

I'm approaching this from a local government perspective in terms of the Step Code transition (Code direction), as well as the LCES regulatory tool that a number of local governments are using (or planning to use) to help meet their community GHG emission reduction targets.

It *looks* like a lot of slides, but I will be able to run through them quickly.

Thanks!

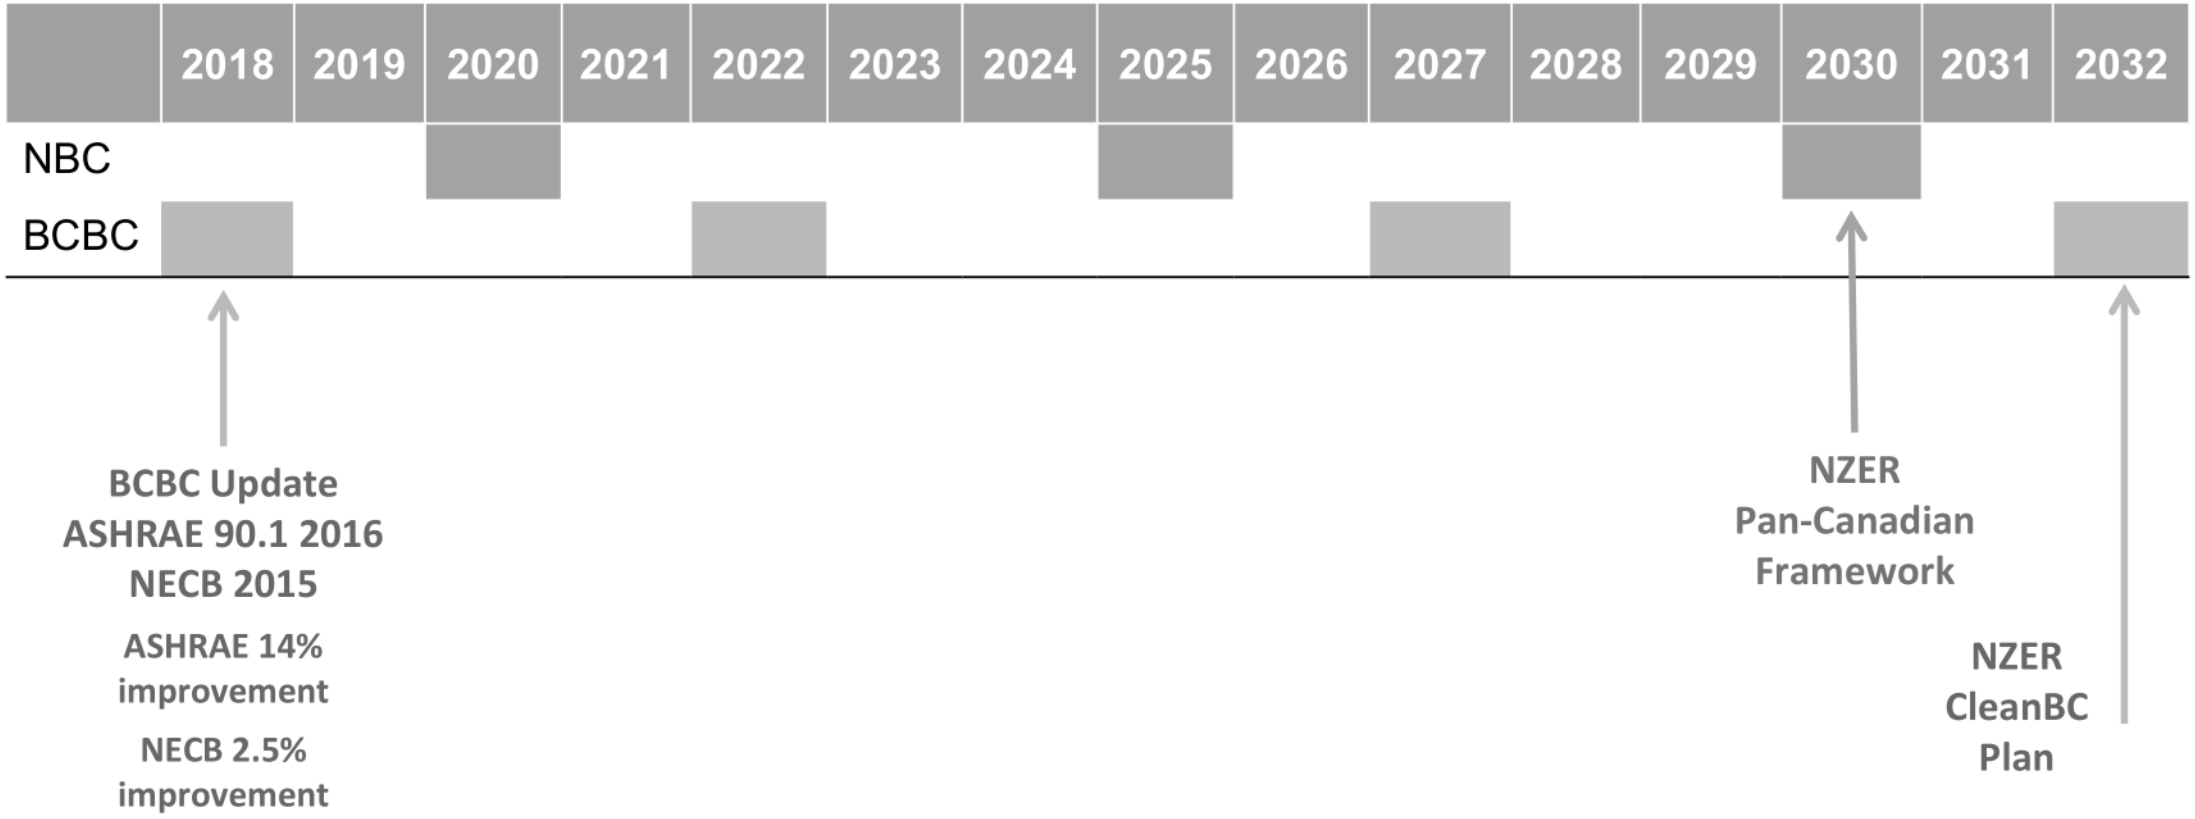
National and Provincial Code Direction



Path to Net Zero Energy Ready (NZER) Construction

Net Zero | BC Energy Step Code

DEFINITION

Net-zero energy buildings produce as much clean energy as they consume. They are up to 80 percent more energy efficient than a typical new building, and use on-site (or near-site) renewable energy systems to produce the remaining energy they need, and

A net-zero energy ready building is one that has been designed and built to a level of performance such that it could, with the addition of solar panels or other renewable energy technologies, achieve net-zero energy performance.

We all meet at the same place (in Code) by 2032!

Timeline for Energy Efficiency Regulatory Requirements in the BC Building Code

Here's what the province's CleanBC plan will mean for new-construction requirements.

	PART 9 BUILDINGS	PART 3 BUILDINGS	NET-ZERO ENERGY-READY UP TO:
2032	STEP 5	STEP 4	80%

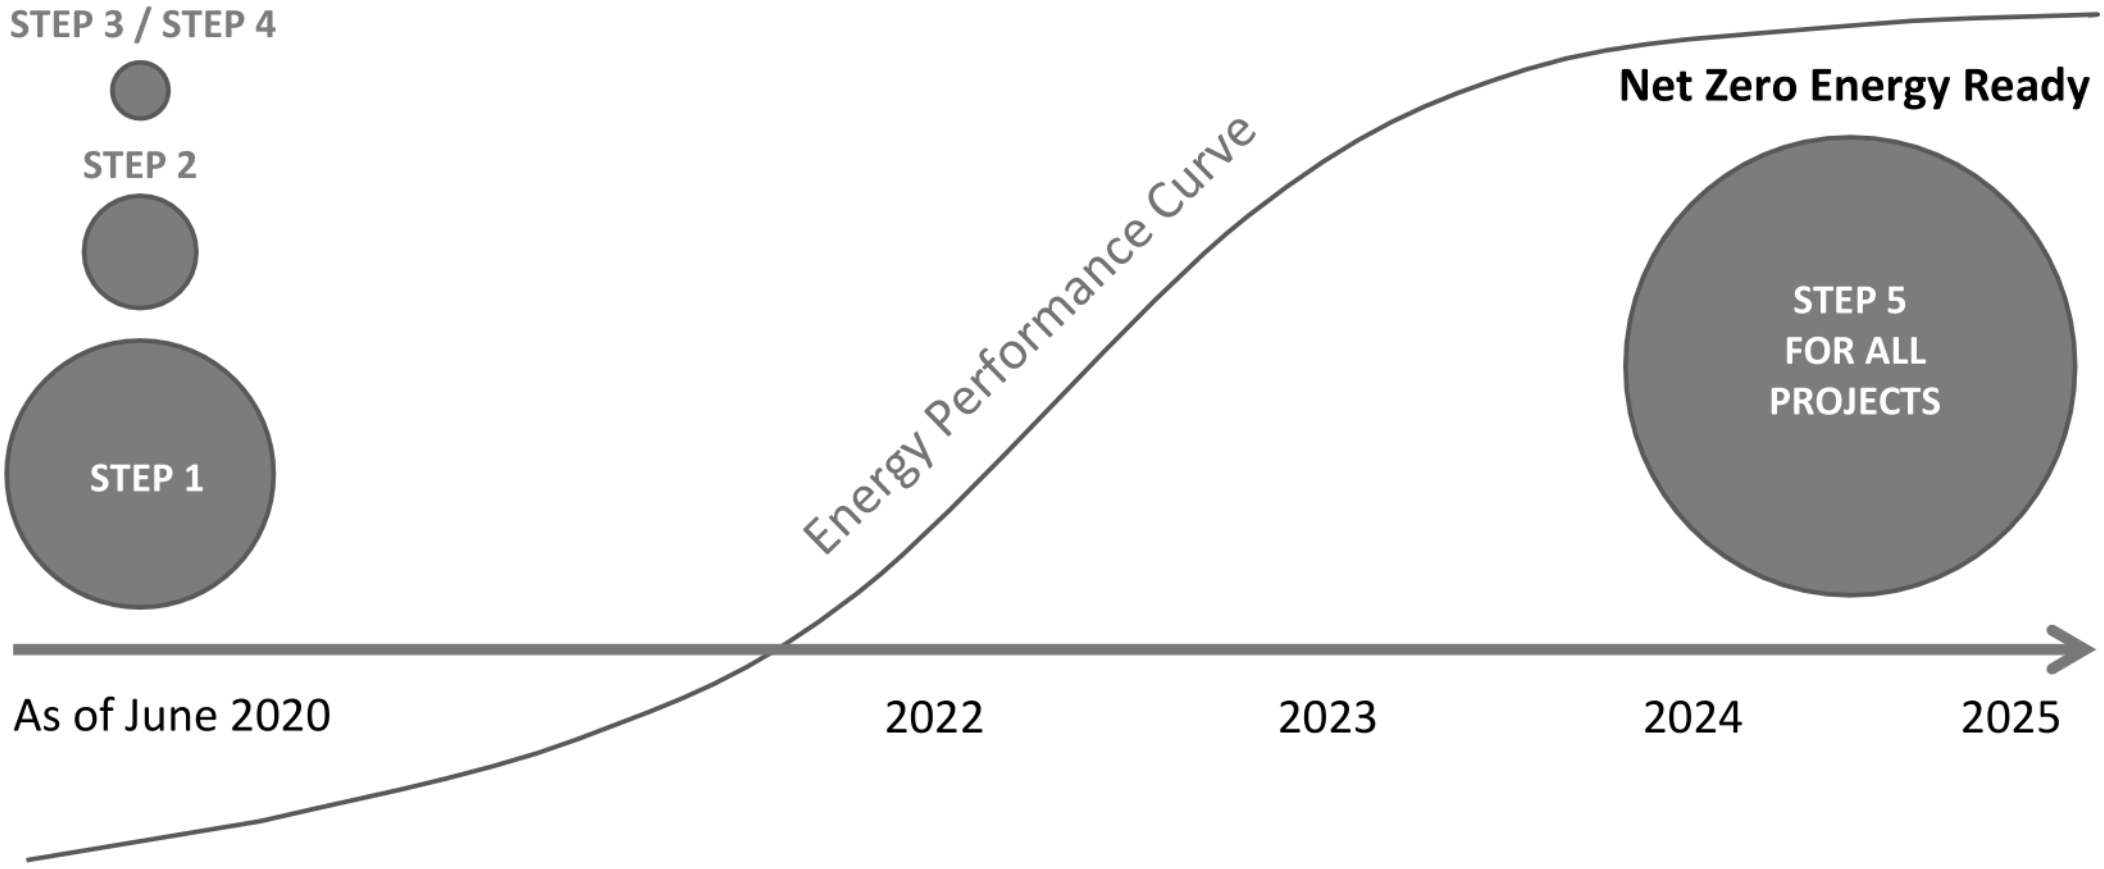
Richmond's Step Code direction | Part 9 Residential

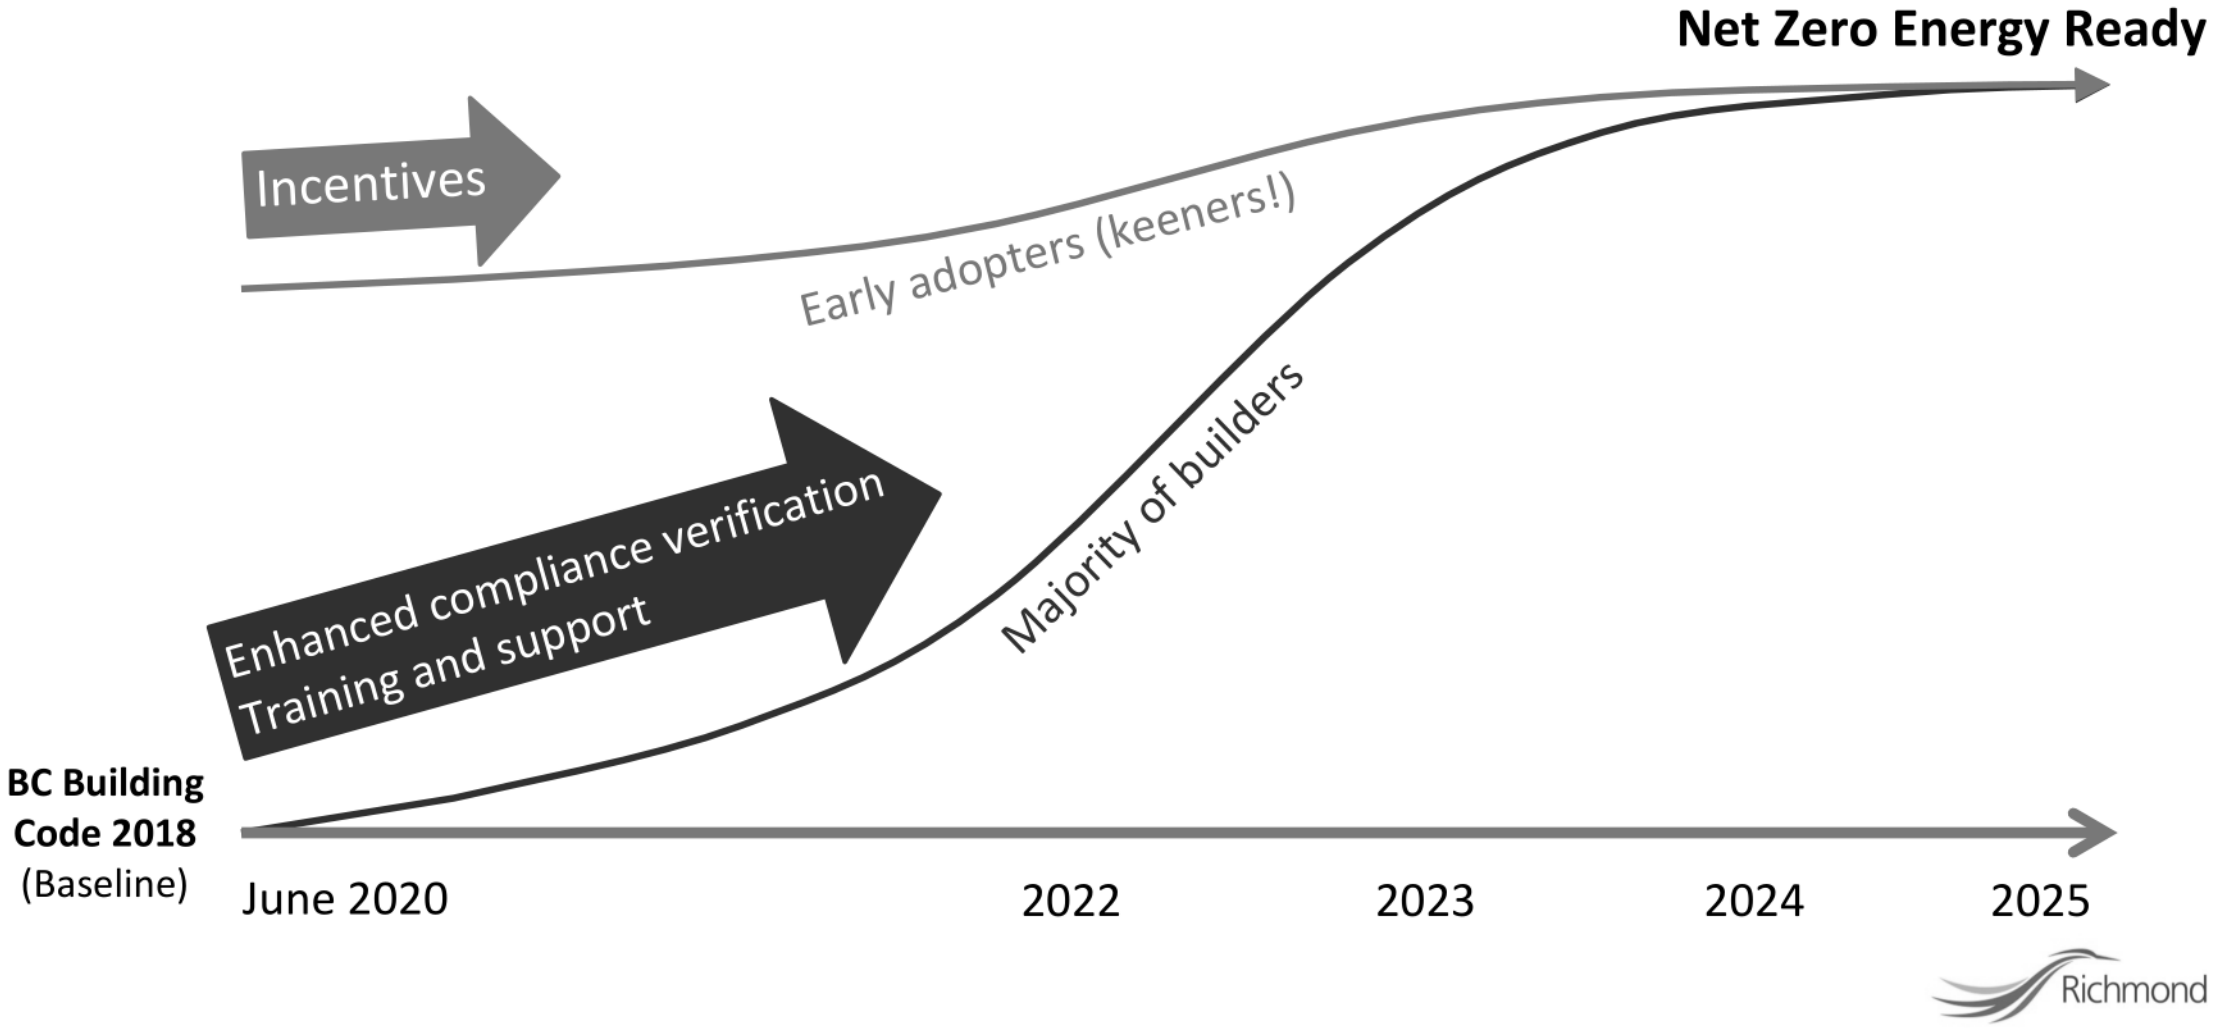


BC Building Code 2018
(Baseline)

Annual Part 9 housing starts: 627 units (2015-2019)

Richmond

Richmond's direction | All Step Code buildings



Responding to the Climate Emergency

As of June 2020, **1,500** jurisdictions in **30** countries have declared a climate emergency.

In BC, **26** local authorities have declared a climate emergency through their Councils.

Responding to the Climate Emergency

Policy and Program Approach:
Integrate energy efficiency and emissions intensity in assessing building performance.

Part 3 Building Metrics

Thermal Energy Demand Intensity (TEDI)

Total Energy Use Intensity (TEUI)

Air leakage rate, in L/(s.m2) @75 Pa
Pressure Differential

GHGI Targets

Greenhouse Gas Intensity (GHGI)

- ✓ Visible progress toward municipal and provincial carbon reduction targets
- ✓ Helps reduce number of buildings requiring costly retrofits to meet future targets

Solution: Incent building-scale or district-scale Low-Carbon Energy Systems (LCES)

Low Carbon Energy Systems | Two Option Approach

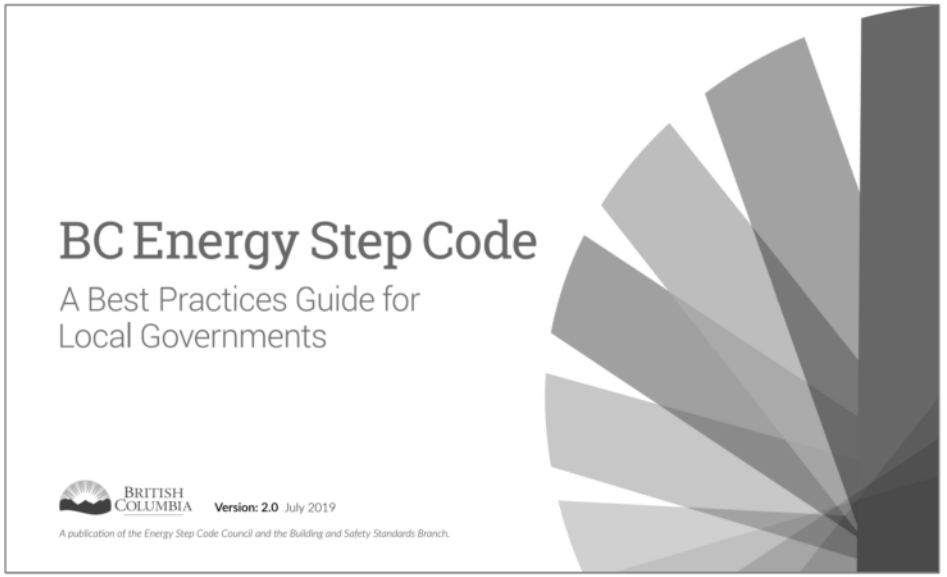
- A two-option Energy Step Code framework offers builders choice, while encouraging lower emission development:

  Option A: **Step X**

  [or]

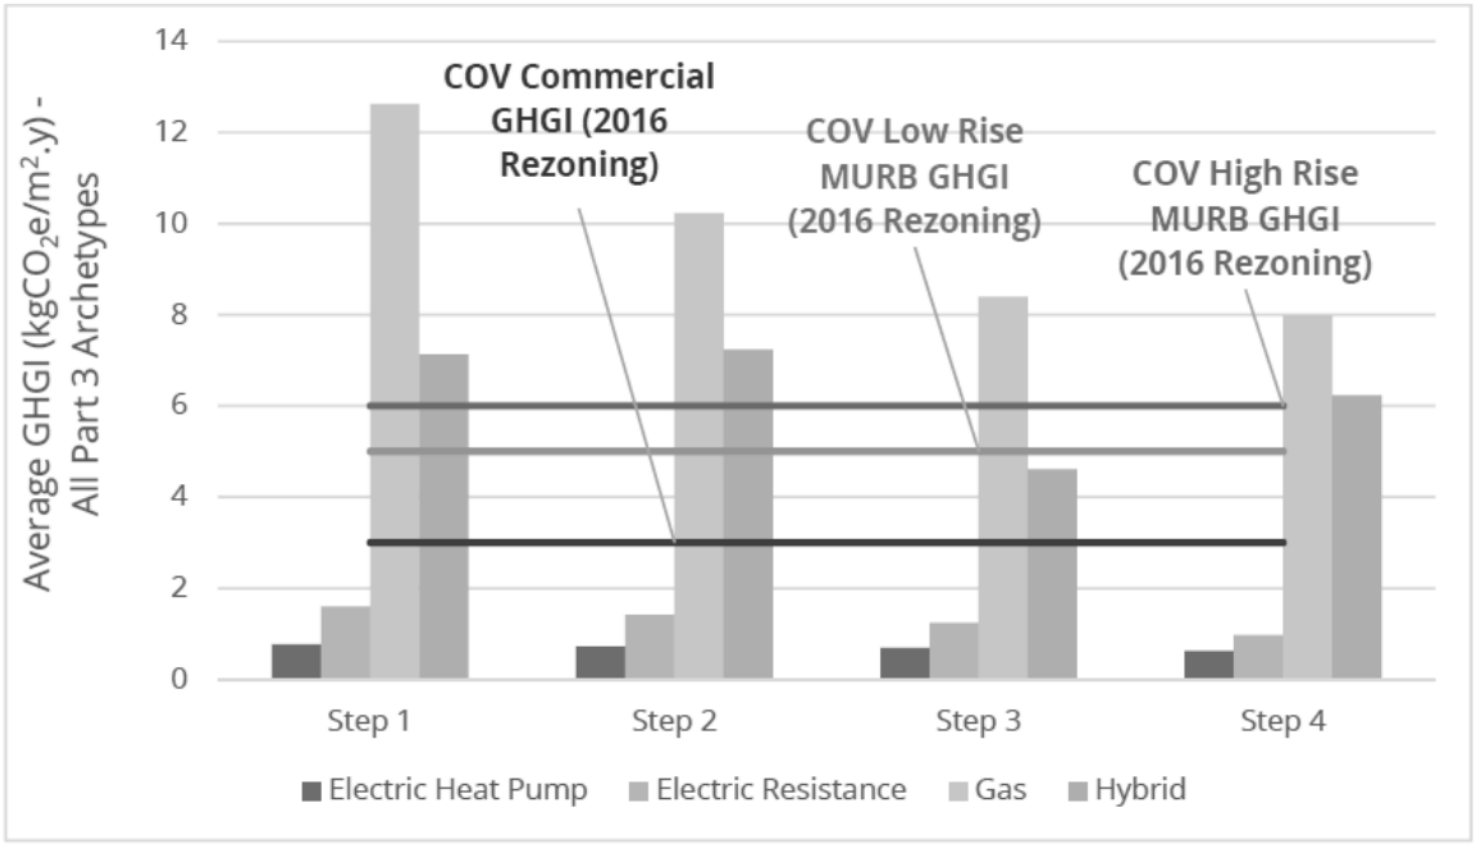
  Option B: **Step (X – n) with a LCES**

- This two-option approach is already used for **Part 3** construction in **Richmond, Burnaby, Surrey, Vancouver, New Westminster, Port Moody and UBC.**
- Included in the *Best Practices Guide for Local Governments v.2*



"Offering industry a relaxation clause that will also reach climate objectives"

LCES Analysis | All Part 3 Archetypes



Low Carbon Energy Systems provide lower GHG intensities, even at high thermal loads.

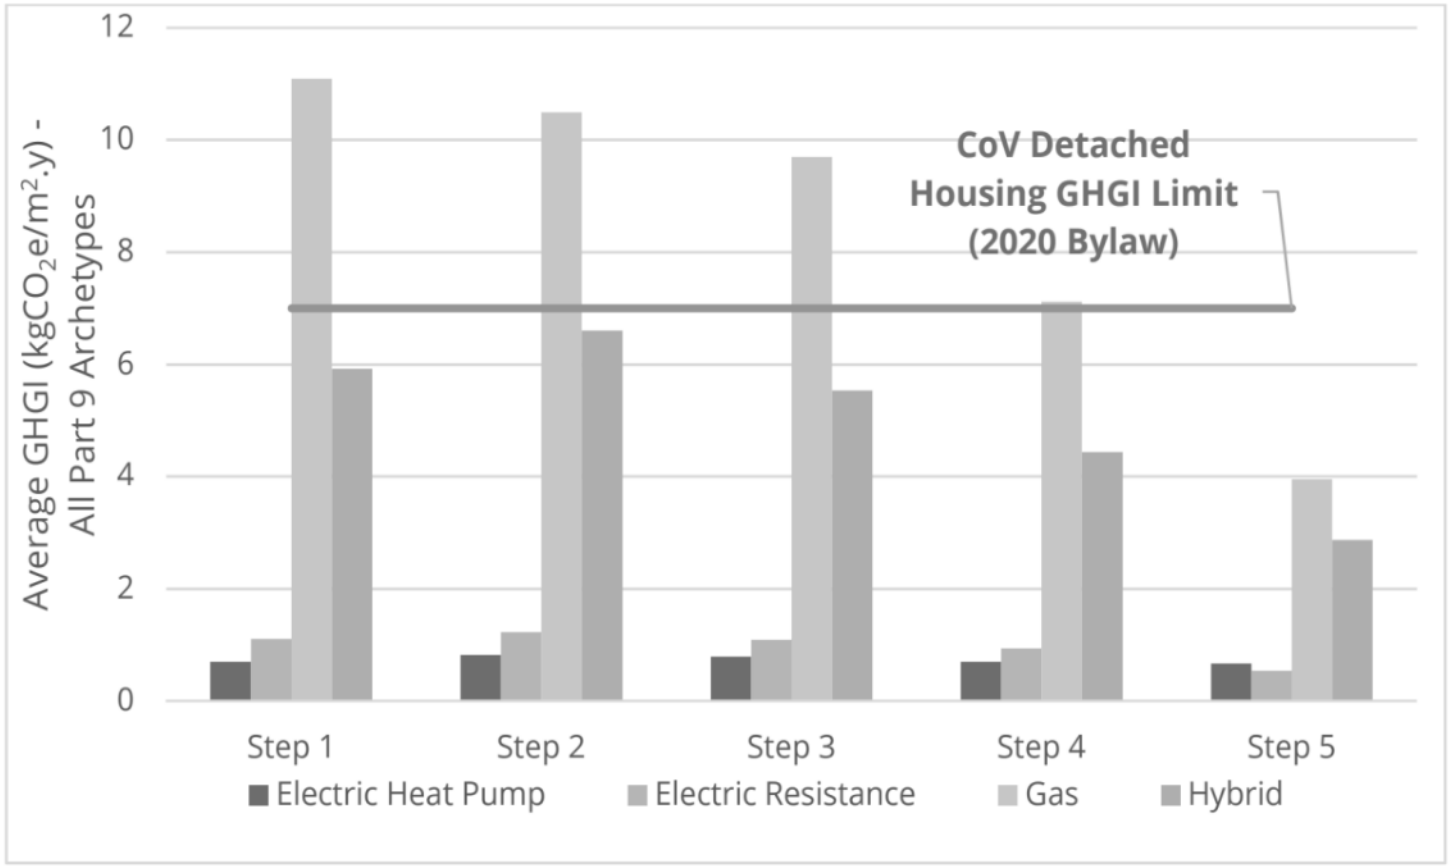
Graph Source: Integral Group. June 2019. *Implications of BC Energy Step Code on GHG Emissions*

Low Carbon Energy Systems | Definition for Part 3

- **LCES**: A professionally operated or maintained on-site energy system supplying a minimum of 70-75% of the building's annual heating, cooling, and domestic hot water demand.

  Examples include, electrical air source heat pump or variable refrigerant flow, geo-exchange, in-building sewer heat recovery, biomass, solar, or other system approved by the City.
- **Step Code relaxation** applies to buildings implementing an on-site Low-Carbon Energy System, or connecting to a district energy system (for buildings within a DE service area).

LCES Analysis | Part 9 Ground-Oriented Residential



Energy Step Code on its own does not necessarily achieve very low GHG emissions.

Graph Source: Integral Group. June 2019. *Implications of BC Energy Step Code on GHG Emissions*

Low GHG
Part 9 Energy Step Code

Considerations for a Consistent Approach

Local Government Workshop
City of Richmond
January 21 2020
Facilitator: McEwen Climate

LCES Definition | Part 9 Buildings

Vancouver uses a **performance metric** for Part 9 residential buildings:

- *Building energy system (heating, cooling, hot water) is limited to GHG emissions of **5.5 kg CO_2e / m2 / year** now.*
- *Will be reduced to **3 kg CO_2e / m2 / year** in 2022.*

Vancouver will also be using a **fixed limit** for larger homes:

- ***2 tonne GHG per year limit** on homes larger than 3,500 ft^2 (2021)*

LCES Definition | Part 9 Buildings

District of West Vancouver uses two **performance metrics**:

- *Building energy system (heating, cooling, hot water) is limited to GHG emissions of **3 kg CO_2e / m2 / year** (November 2020)*
  [i.e.: a 300 m^2 building = 900 kg = 0.9 tonnes GHG per year]

- *The system must have a seasonal average **COP > 2** (November 2020)*

Proposed Two-Option Step Code Framework (requirements and timing)

City of Richmond staff consider framework "C" as closest to our current OCP schedule

	September 2020	January 2022	January 2025	Bylaw Requirements
A	Step 5	Step 5	Step 5	• *Similar to North Shore (West Van) Requirements*
	OR	*OR*	*OR*	
	Step 3 + LCES	Step 3 + LCES	Step 4 + LCES	
B	Step 4	Step 5	Step 5	• *Similar to City of Vancouver requirements*
	OR	*OR*	*OR*	
	Step 3 + LCES	Step 3 + LCES	Step 4 + LCES	
C	Step 3	Step 4	Step 5	• *Similar to existing City of Richmond OCP schedule*
	OR	*OR*	*OR*	
	Step 2 + LCES	Step 3 + LCES	Step 4 + LCES	

Richmond

Hi Christian and team,

I've attached my PPT deck for tomorrow's UDI session.

I'm approaching this from a local government perspective in terms of the Step Code transition (Code direction), as well as the LCES regulatory tool that a number of local governments are using (or planning to use) to help meet their community GHG emission reduction targets.

It *looks* like a lot of slides, but I will be able to run through them quickly.

Thanks!

Hi Gents,

Just doing a final check in here. If you get me slides by end of business day, I'll rearrange them by topic and run them from my computer and aim to moderate the session more as a "chat".

If you’re scrambling to get them done and won’t have them ready until late tonight or early tomorrow morning, then we’ll resort to just running the session as a traditional panel - with each of you presenting your full piece from your own computer, followed up by Q&A.

Remember to sign in at 9:15 as per your invite so we can work out final logistics and test your screen sharing before the event starts at 9:30.

Talk to you all in the morning.

Christian

Final UDI Deck and Format!

From: Christian Cianfrone <christian@zebx.org>
To: Norm Connolly <nconnolly@richmond.ca>, May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>, Sean Pander <sean.pander@vancouver.ca>
Sent: June 10, 2020 9:24:43 PM PDT
Attachments: Consolidated June 11 UDI Webinar.pptx

Gents,

Here is the final consolidated deck for me, Zach and Norm (Sean has no slides). I've rearranged your slides to fit into the format below. I'll treat it like a "fireside chat" and just ask each of you to talk about each topic briefly - I will follow up with any relevant Q&A that might arise on that topic in that moment rather than waiting until the end.

- I ask Zach, Norm, Sean about the **Policy Context** for each of you (in that order) and then relay any follow up questions from me or a good one from the audience chat.
- I ask you each (same order) to give an update on **Part 9 - both recapping what is already here and what is coming** - follow up with any good Q's.
- I ask the same thing for **Part 3** (same order) - follow up with any good Q's.
- I ask Zach and Sean to give the audience a bit of an update of where we're heading for **existing buildings**
- I then moderate additional Q&A from the audience if there's time.

Hopefully this works for you. We can make any last minute adjustments at 9:15am. I trust last minute planning is well within all of your comfort levels so I'm feeling pretty good about tomorrow morning.

Cheers,
Christian

Gents,

Here is the final consolidated deck for me, Zach and Norm (Sean has no slides). I've rearranged your slides to fit into the format below. I'll treat it like a "fireside chat" and just ask each of you to talk about each topic briefly - I will follow up with any relevant Q&A that might arise on that topic in that moment rather than waiting until the end.

* I ask Zach, Norm, Sean about the Policy Context for each of you (in that order) and then relay any follow up questions from me or a good one from the audience chat.
* I ask you each (same order) to give an update on Part 9 - both recapping what is already here and what is coming - follow up with any good Q's.
* I ask the same thing for Part 3 (same order) - follow up with any good Q's.

* I ask Zach and Sean to give the audience a bit of an update of where we're heading for existing buildings
* I then moderate additional Q&A from the audience if there's time.

Hopefully this works for you. We can make any last minute adjustments at 9:15am. I trust last minute planning is well within all of your comfort levels so I'm feeling pretty good about tomorrow morning.

Cheers,
Christian

UDI Webinar: Green Building Regulatory Update	854 6018 6755	2020-06-11 8:55	111	22

Question Details

#	Question	Asker Name	Asker Email	Answer(s)	
1	Can you speak to the ASHRAE 90.1-2010 compliance path and how that fits in with green building standards?	Dana Krechowicz	dana.f.krechowicz@hsbc.ca	The Energy Step Code is based on the National Energy Code for Buildings (NECB), not ASHRAE 90.1. The NECB will continue to increase in importance as we move towards Net Zero Energy Ready construction. Also, it's important to note that ASHRAE 90.1 2016 is the currently referenced minimum, not the 2010 edition.	
2	Question for Zachary May:	Abbas Rangwala	abbas@bcbuildingscience.com		
3	For BCBC 2018 Step Code projects (Part 3), does the whole-building airtightness target for projects using the standard 0.2 L/s/m2 (facade) in the CoV Energy Modelling Guidelines need to use the formula in the CoV Energy Modelling Guidelines, or a fixed target of 2.0 L/s/m2 (similar to VBBL Rezoning and Prescriptive targets)?	Abbas Rangwala	abbas@bcbuildingscience.com	live answered	In Vancouver the formula only applies to projects pursuing airtightness that is better than 0.2L/s/m2 as a strategy for meeting TEDI. An updated Bulletin with more detail on airtightness requirements is in development and we hope to publish this fall.
4	Q: is there a trend for some real estate developers to move away from pursuit of, say, LEED certification, due to cost and process of the certification itself, while still delivering significant green/sustainable features? And more emphasis on following STEP?	Dale Telfer	dale_telfer@hsbc.ca	In the residential market, the focus has shifted to STEP but market demand in the commercial sector keeps LEED alive and relevant.	The Province is working with CaGBC to provide LEED credits for Step Code compliance, which should make it easier for projects interested in LEED and Step Code.
5	Zachary - does the Province have any plans to track/limit embodied carbon?	Michael Guenter	mguenter@concertproperties.con	live answered	This is an increasingly important issue for us, and we're looking at options, but we don't have a specific plan at this point.
6	thanks, great answers	Dale Telfer	dale_telfer@hsbc.ca		
7	Can you give any examples of development firms that are ahead of the curve and good 'champions' of STEP ?	Dale Telfer	dale_telfer@hsbc.ca	live answered	
8	So basically ASHRAE 90.1 is not relevant (because it's much weaker than regulations)?	Dana Krechowicz	dana.f.krechowicz@hsbc.ca	live answered	ASHRAE 90.1 isn't weaker than the NECB, but it's a different approach that doesn't align as well with Canadian policy goals.
9	I missed that, who were the firms mentioned?	Dale Telfer	dale_telfer@hsbc.ca	Hey Dale — I'll ask this on your behalf at the end of the presentation, so we can get the panle to provide examples.	Henson Developments for the 60 storey PH tower and Landa Global/Asia Pacific for the 2 Tower Development on Alberni

10	How has Vancouver considered the construction cost implications of going fully electric and the trickle down effect it will have on housing costs, in terms increasing electrical power supply demand (i.e. pushing smaller sites from PMTs to unit substations), and the on-going costs to maintain electric systems over natural gas systems, and the impact of that on rental and the cost of property management?	Elise Spearing	elise.spearing@mosaichomes.com	
11	perfect, thanks, btw, we have launched a Green Loan initiative and are talking with our clients about how to align their initiatives with our program	Dale Telfer	dale_telfer@hsbc.ca	Dale: On your question of who's designing and buildkng at the top end of the Step Code. There are a number of design teams, builders and developers that have projects already underway or at the design / plan review stage in the region. Reach out to ZEBx and Passive House Canada can provides for examples.
12	Thanks Sean! Got that confirmation from Patrick. Just trying to figure out if this would apply to BCBC Part 3 projects as well? It would seem weird that projects in Kelowna may need to be tested to tighter aritightness targets that CoV.	Abbas Rangwala	abbas@bcbuildingscience.com	
13	Norm, Could you please show you LCES part 3 graph again?	Bill MacKinnon	bmackinnon@bchousing.org	
14	one more Q: when CoV is assessing an application or development for STEP for a project, do they place any emphasis in the actual parent company's track record with Sustainability, on the top level corporate level?	Dale Telfer	dale_telfer@hsbc.ca	
15	...or is everything based on the specific project itself?	Dale Telfer	dale_telfer@hsbc.ca	
16	'@Sean Pander - incentivizing mass timber construction is a fantastic idea. Providing density bump of 10% would really help the industry take advantage of this. Also removing overkill requirements of encapsulation is great idea!	Reid Kaufmann	rkaufmann@bastion.ca	

17	When all buildings switch to electric source energy, do we have enough electricity? Where will the gas go?	Helen Liu	helen@ronwong.ca	
18	What type of incentive tools can the Provinical Gov provide to help the Development industry become early adaptors of Mass Timber and Zero Emissions buildings? Given the incremental cost and risk of committming to Passive House and Mass Timber incentives and support are needed!	Reid Kaufmann	rkaufmann@bastion.ca	
19	also examples in Victoria?	Dale Telfer	dale_telfer@hsbc.ca	
20	Electricity cost is much higer then the gas, will the building owner accturally pay higher energy bill even with more energy efficiency building?	Helen Liu	helen@ronwong.ca	
21	What kind of existing buildings? Just city owned?	John Gilmour	gilmour@magusta.com	
22	Which exisitng building types will the 2024 code apply to? Is taht accross the board or just part 9?	Jeremy Berger	jeremy@porte.ca	Still working on a decision for 2024, but everything is on the table at this point. All buildings are subject to climate and disaster risks.

Hello Sean et al.:

I am afraid that neither Irina nor I can attend on the 22nd (I was awaiting the poll referenced on Monday's email to respond). We are attending BC Hydro's Integrated Resource Planning Technical Advisory Committee meeting at virtually the same time and there are just too many other parties involved for me to ask for a new date and/or time.

However, I would very much like to be involved in this important process as well so if there is a way for me to offer input offline regarding what may be discussed during this first meeting, please let me know and I will do my best to accommodate and contribute.

Best,

Leigha

Subject: Invite to Vancouver's Climate Emergency - Building decarbonization advisory committee

Respected Colleagues,

I am Vancouver's Green Building Manager. Our team leads the City's efforts to decarbonize buildings in Vancouver. I am writing this morning to invite you to join Vancouver's Climate Emergency Big Move 4 External Advisory Committee (BM4EAC for short) for Zero Emissions Buildings.

Big Move 4 of Vancouver's Climate Emergency Response (2019) directed staff to begin developing plans to **ensure all** new and **replacement heating and hotwater equipment is zero emissions by 2025** and to reduce greenhouse gas emissions in Vancouver by 50% by 2030. While this work is meant to shape how the City continues to roll-out its Zero Emissions Building Plan (2016), the emphasis of the new planning work is focused on how to get deep emission reductions from existing buildings.

Meeting these objectives will be effectively impossible for the City to achieve on its own; our success will require alignment in thinking and action from a broad range of partners and will need to carefully weigh the tradeoffs that meaningful action will entail. While we have numerous research initiatives and technical experts involved in shaping this work, the BM4EA's role will be to challenge and inform staff thinking on our strategic direction, to maximize this alignment, and to help us balance the tradeoffs.

At a minimum, BM4EAC involvement will include participating in 2-3 meetings over the next 5 months to share your ideas, concerns, and to identify areas for further research and consultation. The outcome will be incorporated as part of our recommendations to Council in November on Vancouver's Climate Emergency Action Plan and a detailed Zero Emission Buildings Retrofit Plan. As part of these meetings, additional opportunities will likely arise to participate in this work further but these will be optional and specific to individual committee members.

I will follow-up this email with an e-poll to check availability for the first Committee meeting on either morning of Jun 22 or afternoon of Jun 18. If you'd like more information on the Committee's role, expectations for participation, or feel there maybe another representative from your organization that would be better suited to participate, please contact me directly to discuss.

At this first meeting, we will present and discuss the main elements of the draft Plan including:

- New buildings actions and importance
- Clear Retrofit Signals and Flexible Requirements
- Supporting Voluntary Leaders
- Building Capacity
- Removing Barriers
- Access to renewable energy
- Equity
- Follow-up actions

I hope you will be able to support us as your voice and the people it represents is critical in this important work.

Hi Mark,
Thanks for forwarding on. Can they impose GHG targets and comply with the Building Act?
I expect we are going to see this in other municipalities. Squamish has discussed strategies to de-incentivise gas and this is a discussion developing in Whistler. West Van of course has already imposed Step 5 on homes with gas.
Agenda for next meeting?
Cheers,

Bob Deeks

Here are the results of the two in-webinar polls that we did

	Apr 7	Apr 21
Almost Normal w/ adjusted operations	43.6%	38.1%
Some Impacts: Some Reduced revenues, some layoffs	32.7%	28.9%
Significant impacts: Signif reduced rev, signif layoffs	12.7%	17.3%
Near Complete Shutdown	9.3%	11.6%
Complete Shutdown	1.9%	4.1%

Sample size for Apr 7 was about 250; for Apr 21 was 370.

Topic of webinar may have had an impact on the type of attendees.
April 7 was about Construction Site Safety, April 21 was about Economic Impacts & Outlook.

Hi Zachary;

We've been doing some short surveys of attendees of some of our COVID-19 Webinars, to gauge the impact that they have encountered, both from the market and the new site safety requirements.

We haven't specifically asked them to identify challenges, but we've heard of some of them anecdotally.

I can get the results of the two webinar surveys for you, if you think you'd find them interesting.

As of: May 5, 2020

UDI Development Impacts Survey Summary: April 2020

Highlights

- **37 companies** have provided information on the impacts to their businesses due to COVID-19. This survey was open from March 30 to April 7.
    - On March 26, construction was listed as an essential service, and that sites were to follow the protocols of the Provincial Health Officer (PHO). This survey was conducted shortly following the announcement as businesses were adapting to the new protocols.

- Respondents were split across the four property classes surveyed, with the majority of companies indicating that they currently had residential projects underway.
    - Residential: 36
    - Commercial: 21
    - Industrial: 7
    - Institutional: 3

- **9 companies had laid-off employees** due to the impacts of COVID-19.
    - All lay-offs reported were 20 or fewer employees in each case.

- Only 5 of the 37 companies who completed the survey had shut down construction sites.
    - Reasons included: temporary shut-downs for cleaning, temporary shut-downs due to reduced staff capacity, and client initiated closures.

- **60% had paused a launch or stopped pre-construction sales** as a result of COVID-19. This accounts for at least 29 residential or mixed-use projects affecting over 1,300 homes.

- Of those who had not made yet changes to projects as a result of COVID-19, **over 75% were considering it**.

Survey Question:	Yes	No
Has your company laid-off any workers due to the impacts of COVID-19?	9 *(24%)*	28 *(76%)*
Has your company shut-down any worksites due to the impacts of COVID-19?	5 *(14%)*	32 *(86%)*
Has your company paused a launch or stopped pre-construction sales as a result of COVID-19?	22 *(59%)*	15 *(41%)*
If you have NOT made changes to any projects due to the impacts of COVID-19, are you considering it?	21 *(78%)*	6 *(22%)*

Labour Force Survey

B.C.'s job market rebounded by 68,900 jobs in May but B.C. is still down 313,700 jobs since February. Employment has fallen 12.1% and hours worked by 18%.

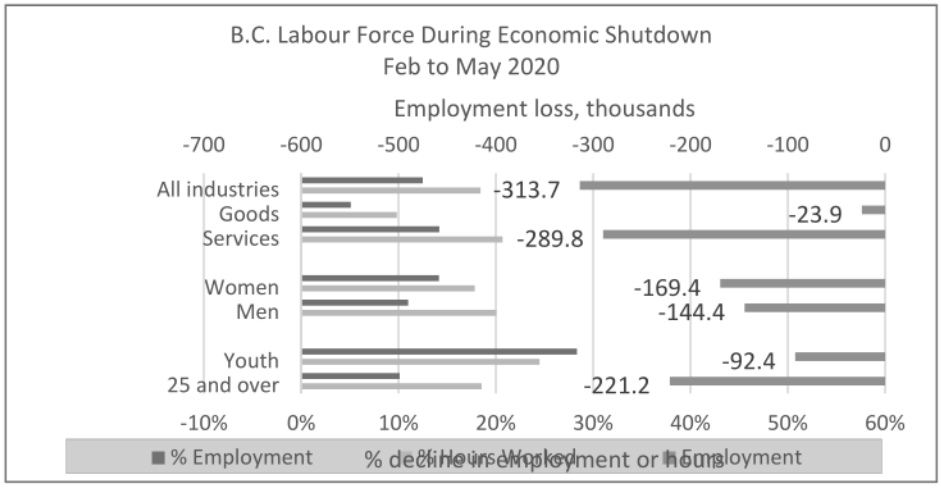
The unemployment rate increased from 5.2 to 13.1 per cent between February and May.

The services sector accounts for 92% of job losses since February. The worst-hit industries have been accommodation and food services, retail trade and other services.

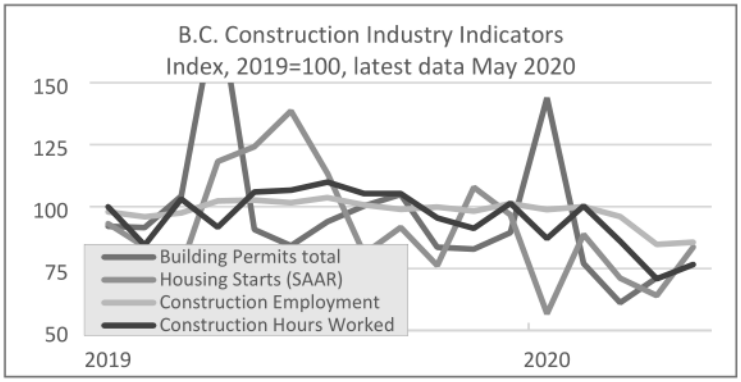
More women lost employment but men lost more full-time jobs and hours worked overall.

Youth were hardest-hit and are three times more likely to have lost jobs than workers aged 25+. Young women are 60% more likely to have lost jobs than young men.

There are 192,100 more unemployed people (+138% since February), including 127,000 who report that they are on temporary layoff (a 20x increase). This indicates some attachment to their jobs after the shutdown is over.



Construction Industry Indicators



The total value of all building permits issued in April increased 16.4% from March. The value of building permits can vary dramatically from month to month and is an indicator of potential future activity.

B.C. housing starts declined 34% between February and April but rebounded 31% in May and now stands at 36,000 when seasonally adjusted at an annualized rate (SAAR).

Construction has been the worst-hit industry in the goods-producing sector. Construction employment rebounded slightly in May but, compared to February, employment is still down by 34,000 or 14%, and hours worked declined 24%.

B.C. Construction Industry Indicators, 2020					
	January	February	March	April	May
Building Permits ($m, s.a.)	$2,282	$1,222	$971	$1,130	n/a
Housing Starts (SAAR)	24,518	38,350	30,721	27,689	36,156
Construction Employment (thousands)	233.7	236.6	227.1	200.5	202.6
Construction Hours Worked (thousands of hours total in reference week)	7,215	8,299	7,124	5,866	6,346

Stakeholder Feedback and Surveys

Executive Summary:

- Minor impact to new construction right now, but longer-term concerns about development approvals, access to financing, market confidence, and market demand that need to be addressed to avoid further decline.
- Significant impact to residential renovation market and lack of specific guidelines on how to restart this sector safely.
- Local governments and regulatory partners that have embraced online permits and inspections and virtual public hearings have been most successful at maintaining service levels.
- Some risks and confusion about inspecting and managing occupied buildings as social activities increase.
- On May 29, stakeholders from the real estate and development sector sent a joint letter outlining general concerns about the sector and recommendations to government for successful economic recovery.
- The May 29 letter also highlighted:
    - The real estate accounts for 50,000 jobs;
    - In a recent survey by the Canadian Federation of Independent Businesses 32% of businesses reported being unsure of they will reopen; and
    - The province's population will increase by 1.3 million, and there is opportunity to encourage more housing starts by supporting the real estate and development sectors.

Energy Step Code Council (May 5, 2020):

Safety

- No significant issues

Innovation

- Online permits and remote inspection practices are being used to varying degrees by local governments, building officials, TSBC, and other regulators
- Private sector is increasing use of technology to facilitate quotes (primarily in residential retrofit)

Productivity, employment and the business environment

- New construction is operating at roughly 80%, although market confidence is creating risks for long-term stability
- Retrofit market is down significantly, especially in residential spaces
- UDI is seeking LG approval to extend work hours to minimize staff numbers on site at one time

How COVID affects normal business

- Some confusion about how essential services (e.g. fire sprinkler inspectors) can safely access occupied spaces
- Vacant spaces seeing increase in crime

Financial assistance and incentives

- CHBA BC reports the $40k loan is helpful for them (Canada Emergency Business Account). For other government assistance, they find it difficult to prove drop in income when applying for government services because noticeable drop will only come in the later months (contracts)
- BC Hydro: Relief fund available for residential and small business (~70k applications). New remote tools for education (e.g. Indigenous program energy savings kit.).
- Concern from builders outside urban areas that one-size solutions don't fit all

Opportunities

- Collective sense of opportunity to consider new ways of thinking/doing/working
- LG buildings could take advantage of closure to undergo maintenance and an opportunity to rethink public space (reclaiming road space for parks/pedestrians, bikes, etc.)
- CEA: offering technical training and heat pump training in Columbia Valley, huge opportunity here to move to lower carbon sources for communities. Don't miss this opportunity
- BC Hydro: Focusing on education. High-performance building fund enabling remote integrated design for LEEP, 1 hour free training with good uptake. CHBABC is offering Step Code courses for free

- Increased virtual learning from BC Hydro could help Step Code training/implementation in rural communities

Risks

- Need a clear public communication about the importance of investments in buildings during a crisis
- New construction is fine, but occupied space is a problem. Developing inspection/repair protocols when going into occupied spaces. Supply chain is a concern (e.g. PPE for builders, normal products required for repairs, installations).
- BOMA wonders: what is landlord duty of care? Who enforces rules? However, they say people are largely self-policing effectively.

Homebuilders' Association of Vancouver (HAVAN):

Association survey results with webinar participants (Sample size for Apr 7 was about 250; for Apr 21 was 370)

	Apr 7	Apr 21
Almost Normal w/ adjusted operations	43.6%	38.1%
Some Impacts: Some Reduced revenues, some layoffs	32.7%	28.9%
Significant impacts: Signif reduced rev, signif layoffs	12.7%	17.3%
Near Complete Shutdown	9.3%	11.6%
Complete Shutdown	1.9%	4.1%

UDI Development Impacts Survey Summary: April 2020

Highlights

- **37 companies** have provided information on the impacts to their businesses due to COVID-19. This survey was open from March 30 to April 7.
    - On March 26, construction was listed as an essential service, and that sites were to follow the protocols of the Provincial Health Officer (PHO). This survey was conducted shortly following the announcement as businesses were adapting to the new protocols.

- Respondents were split across the four property classes surveyed, with the majority of companies indicating that they currently had residential projects underway.
    - Residential: 36
    - Commercial: 21
    - Industrial: 7
    - Institutional: 3

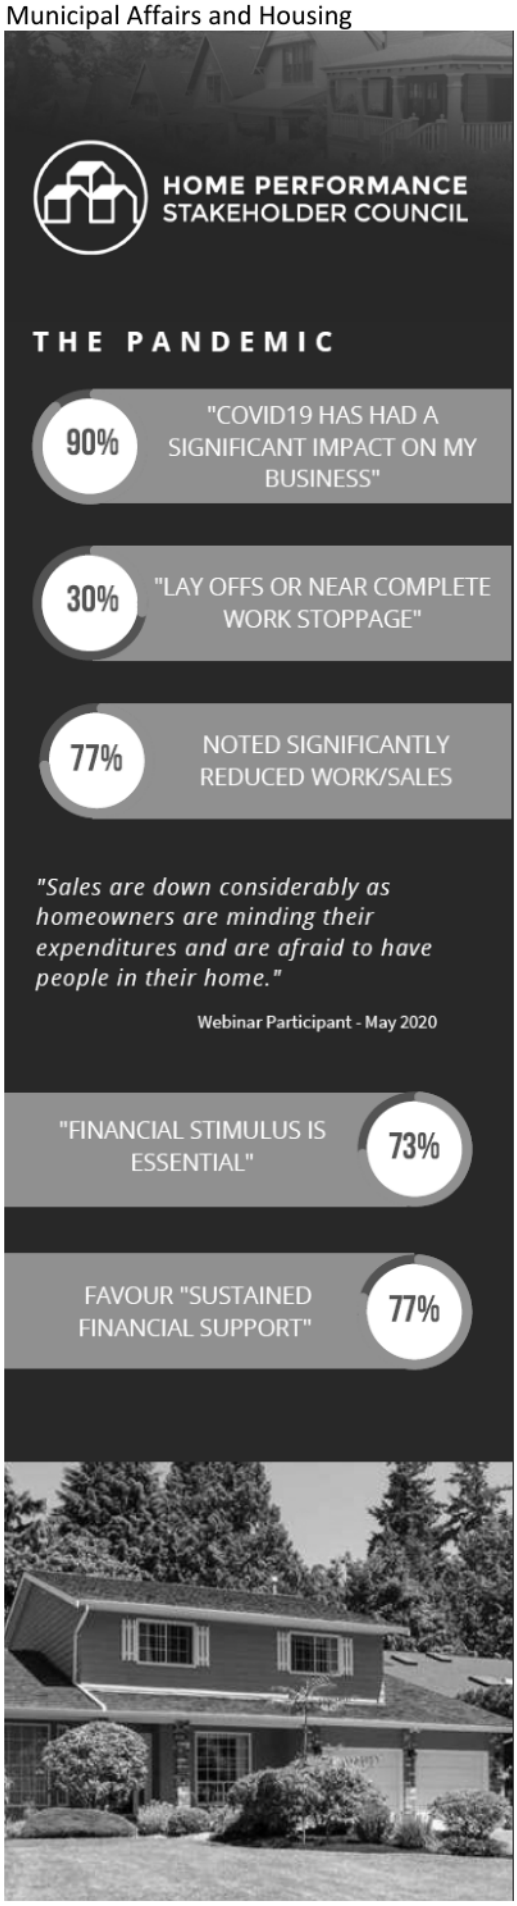
- **9 companies had laid-off employees** due to the impacts of COVID-19.
    - All lay-offs reported were 20 or fewer employees in each case.

- Only 5 of the 37 companies who completed the survey had shut down construction sites.
    - Reasons included: temporary shut-downs for cleaning, temporary shut-downs due to reduced staff capacity, and client initiated closures.

- **60% had paused a launch or stopped pre-construction sales** as a result of COVID-19. This accounts for at least 29 residential or mixed-use projects affecting over 1,300 homes.

- Of those who had not made yet changes to projects as a result of COVID-19, **over 75% were considering it**.

Survey Question:	Yes	No
Has your company laid-off any workers due to the impacts of COVID-19?	9 *(24%)*	28 *(76%)*
Has your company shut-down any worksites due to the impacts of COVID-19?	5 *(14%)*	32 *(86%)*
Has your company paused a launch or stopped pre-construction sales as a result of COVID-19?	22 *(59%)*	15 *(41%)*
If you have NOT made changes to any projects due to the impacts of COVID-19, are you considering it?	21 *(78%)*	6 *(22%)*



RESPONSE RECOMMENDATIONS

JUNE 2, 2020

THE HOME RETROFIT INDUSTRY

BC's home energy retrofit industry is essential to meeting GHG reduction targets.

- 70 per cent of buildings standing today will still be in use as of 2050. [Pembina]
- 7 per cent of BC's GHG emissions come from our homes. [Provincial GHG Inventory]
- Every dollar we invest in energy efficiency generates up to four times its value in economic growth. [CleanBC]

This contracting industry is composed of thousands of small and medium sized businesses distributed across almost every community in the province of BC, so the potential of financial stimulus to benefit homeowner and businesses across the province is strong.

The Home Performance Stakeholder Council is a voice for this industry. Here is what our network is saying:

STIMULUS PRIORITIES

- Home energy renovation tax credits
- New rebates
- Enhanced rebates
- Financing programs
- Consumer engagement

ENABLING PRIORITIES

- COVID19 safety guidelines
- Safe residential retrofits consumer campaign

RECOVERY PRIORITIES

- Expanding rebates for programs to medium-income, low income, social housing, market rental housing
- Mass scale regional retrofit programs
- Better integrate energy evaluations into programs
- Mass scale long term national investments
- Training

info@homeperformance.ca www.homeperformance.ca

HOME PERFORMANCE STAKEHOLDER COUNCIL

TRAINING

"Training without demand or framework to require it for specific industry is difficult for employers to justify/pay for."

Survey Participant - May 2020

"There is a big gap in knowledge with skilled sub trades and I do see this as something that should be an industry focus long term. Training does not help with the enormity of this problem short term."

Survey Participant - May 2020

CONSUMER CONFIDENCE

"The most important thing right now is to create consumer confidence in the industry..."

Survey Participant - May 2020

"If there aren't good, clear guidelines on how to work safely in occupied homes, any retrofit stimulus measures will be running uphill."

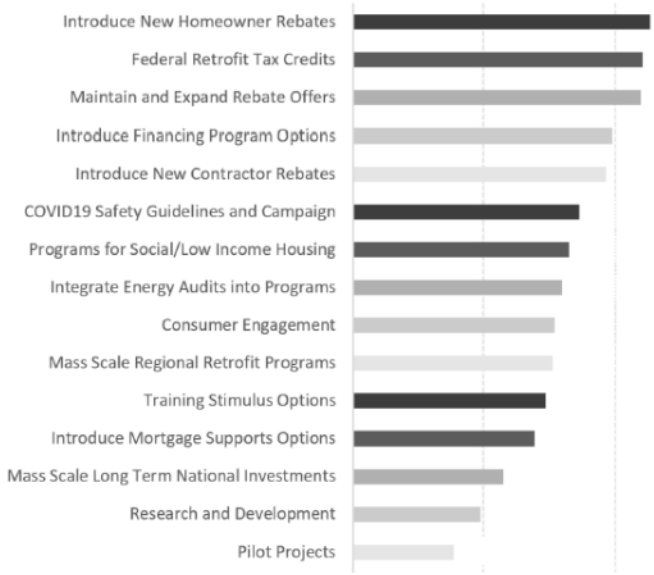
Survey Participant - May 2020

The content presented was developed using feedback gathered by the HPSC through a survey, three webinars and directly by email and phone. Content may not be representative of all contractors in BC.

RESPONSE RECOMMENDATIONS

JUNE 2, 2020

WHAT KIND OF A RESPONSE DO CONTRACTORS WANT TO SEE?



NEW/ENHANCED REBATES

- Incentives for air sealing
- A $200 Rebate for 1.0 U-Factor window
- Higher rebates for all retrofits, low-medium income homes and deep energy retrofits
- New and improved incentives for electrification
- Incentives for heat pump upgrades, replacing older, less efficient models with R22 refrigerant
- Insulation rebates increased for headers and crawlspace walls
- Rebates for quality installations

CONTACT THE HPSC FOR MORE INFORMATION ON HOW BEST TO SUPPORT BC'S HOME ENERGY RETROFIT INDUSTRY

Time: Jun 22, 2020 09:30 AM Vancouver

Join Zoom Meeting
s.15

—-

Respected Colleagues,

I am Vancouver's Green Building Manager. Our team leads the City's efforts to decarbonize buildings in Vancouver. I am writing this morning to invite you to join Vancouver's Climate Emergency Big Move 4 External Advisory Committee (BM4EAC for short) for Zero Emissions Buildings.

Big Move 4 of Vancouver's Climate Emergency Response (2019) directed staff to begin developing plans to ensure all new and replacement heating and hotwater equipment is zero emissions by 2025 and to reduce greenhouse gas emissions in Vancouver by 50% by 2030. While this work is meant to shape how the City continues to roll-out its Zero Emissions Building Plan (2016), the emphasis of the new planning work is focused on how to get deep emission reductions from existing buildings.

Meeting these objectives will be effectively impossible for the City to achieve on its own; our success will require alignment in thinking and action from a broad range of partners and will need to carefully weigh the tradeoffs that meaningful action will entail. While we have numerous research initiatives and technical experts involved in shaping this work, the BM4EA's role will be to challenge and inform staff thinking on our strategic direction, to maximize this alignment, and to help us balance the tradeoffs.

At a minimum, BM4EAC involvement will include participating in 2-3 meetings over the next 5 months to share your

ideas, concerns, and to identify areas for further research and consultation. The outcome will be incorporated as part of our recommendations to Council in November on Vancouver's Climate Emergency Action Plan and a detailed Zero Emission Buildings Retrofit Plan. As part of these meetings, additional opportunities will likely arise to participate in this work further but these will be optional and specific to individual committee members.

I will follow-up this email with an e-poll to check availability for the first Committee meeting on either morning of Jun 22 or afternoon of Jun 18. If you'd like more information on the Committee's role, expectations for participation, or feel there maybe another representative from your organization that would be better suited to participate, please contact me directly to discuss.

At this first meeting, we will present and discuss the main elements of the draft Plan including:
* New buildings actions and importance
* Clear Retrofit Signals and Flexible Requirements
* Supporting Voluntary Leaders
* Building Capacity
* Removing Barriers
* Access to renewable energy
* Equity
* Follow-up actions

I hope you will be able to support us as your voice and the people it represents is critical in this important work.

Hi Julia,

Sorry for the delay in getting back to you.
I have attached a spreadsheet with a number of contacts for both industry organizations and industry professionals (Thanks Dale!).
Hope this helps.

For the upcoming strategy session on July 14th, please keep both myself and Nicole in the loop and we can arrange with our BSSB colleagues.

Cheers,

Subject: Building Industry Contacts for Adaptation Strategy Engagement

Hi Scott,

I hope you are staying well. On July 14th, the Climate Risk Management team will be hosting a targeted engagement session with industry on the Climate Preparedness and Adaptation Strategy. It is important to us to have good representation from the building sector and I am wondering if you have any suggestions for who we should invite. It can include industry associations as well as leading experts.

We also welcome someone from your team attending the session as a government representative.

Ted Back and Haley Williams, cc'd, are compiling the invitee list and can provide more information regarding attending the session if needed.

Best,

Julia Berry, MRM

A. Strategic Planning	Host Capacity Building and Communications Subcommittee - to support the 'convening and catalyzing' role	NA									2 - 3 meetings/year		Meetings: March 11, June 25,
	Matrix Working Group - Modus Report Update - Part 3 & Part 9 Buildings	Matrix Working Group	March Start	Ongoing							Updated 2017 Modus Report for Part 9 & 3 Buildings - with recommendations to guide work of many organizations	Updated Report complete - KPI/Benchmarking Metrics Identified	Scope of Work complete by WG June 2020 - project delayed Timeline TBD
	Integrate, update and/or align existing training and education initiatives and programs	Educators/Training Working Group		WG launch									Educators WG established June 2020
B. Provision of Training Role	Part 9 Energy Compliance Report BCBC 2018 Rev 2 Version: In-person Training Workshop and Development of Online Recorded Version	Part 9 Energy Compliance Report Training	February Start	Ongoing	Completion						Training session & recorded training for onling reference	# of attendees for in-person session # of downloads in 2020 of recorded version	Free webinars starting June or July 2020 Recorded training coming soon Project proceeding but delayed
	Part 3 Energy Design Report (Part 3 Checklist): Development of Guidelines for Use; In-Person or Webinar Training Session; Online Training Recording	Part 3 Energy Design Report Training		May start	Completion						User manual, training session & recorded training for onling reference	# of attendees for training sesssion # of downloads in 2020 of recorded version	Project delayed as Report itself not available until end of May In progress: two webinars for users; 1 webinar for LGs; recorded user training; tip sheet First user webinar: TBD July 2020
	Other training identified as needed	TBD											Step coede training in other languages - request pending
C. EA Capacity (EA Scope of Practice Training Recommendations Implementation)	Develop Core Competency Framework for EA/EM Training (pages 26 & 32 of EA report)	Energy Advisors Working Group	February Start	Ongoing	Ongoing	Completion					Core Competency Framework for Energy Advisors & energy modellers		Project delayed. Competitive process through FortisBC. Completion anticiated for late Sept./Oct 2020
	Grow Capacity: Delivery of training to prepare for NRCan ERS Foundation Exam (page 46 of report)	Energy Advisors Working Group											TBD
	Grow Capacity: Delivery of training to prepare for NRCan ERS EA Exam (page 46 of report)	Energy Advisors Working Group											TBD
	EA Capacity Monitoring	Energy Advisors Working Group	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing			EA WG meetings: April 8, April 21, June 4 Supporting CEA UBC Scholar Project on EA capacity in rural/remote regions
D. Communications	Advise on/support preparation of monthly Step Code newsletter	Communications Working Group	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Monthly newsletter - 9 - 10 editions/year	Increased subscriber #s & increased open rate Note: Reader survey Feb 2020 - to assess plans for future editions	April, May, June editions Future: July to Dec (no August edition)
	Maintain, update and enhance the Step Code website and events calendar	Communications Working Group	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Ongoing	Maintain and enhance website	Website use stats & analysis	Ongoing updates Minor refresh - still in works as time permits
	Develop and promote Step Code Case Studies - Part 9 and Part 3 buildings	Communications Working Group			Start	Ongoing	Ongoing	Ongoing	Start	Complete	Develop several sets of case studies		3 new video case studies added spring 2020 1 case study in development (with CHBA CI)
	Develop 2022 BC Building Code communications plan and lead implementation	Communications Working Group			Start	Complete	Implementation	Implementation	Implementation	Implementation	Communications Plan - Timing TBD	TBD	Not formally started yet

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council
Capacity Building and Communications Subcommittee Report
Report Prepared for the June 25, 2020 ESCC Meeting

GENTLE REMINDER: Step Code Newsletter

- Step Code monthly newsletter sign-up: http://eepurl.com/cE-VnX
- Please share the sign-up with your members and networks

SUBCOMMITTEE WORK PLAN

- See attached

SUBCOMMITTEE MEETINGS SINCE FEBRUARY 28, 2020

- March 11 & June 24, 2020 = meetings of the whole Subcommittee

FOUR WORKING GROUPS

1. **Communications Working Group**
   - Objective: Support the website, newsletter, case studies and other communications channels and opportunities + prepare 2022 communications plan
   - Progress:
     - working on minor website refresh
     - 3 new videos Clayton Passive House
     - new web page and info for Part 3 Energy Design Report (with support of the Part 3/9 Subcommittee co-chairs)
     - minor revisions to the Part 9 Energy Compliance Reports and web page

2. **Energy Advisors Working Group**
   - Objective: Support efforts to secure EA capacity for BCBC 2022 (and related matters)
   - Progress: Three Working Group meetings; extensive information gathering; supporting CEA summer UBC Scholar Research project on EA capacity in rural/remote regions
   - Findings to date – to be confirmed with WG members: Capacity not likely an issue – cost/delivery in rural/remote regions is – see further info in policy discussion document

3. **Matrix Working Group**
   - Objective: Guide and advise on the update to the 2017 Modus Report
   - Progress: Scope of work drafted June 2020 to engage consultant to do study of key construction professionals' industry readiness for BCBC 2022 + develop Key Progress Indicators
   - Key construction professions: 21 different groups including designers, EAs, architects, engineers, Part 9 licensed residential builders, Part 3 developers, various trades, etc.
   - Next Steps: Determine funding, competitive bid process, start research

4. **Educators/Training Working Group**
   - Objective: Support better collaboration, coordination and cooperation amongst key organizations providing education/training
   - Progress: Initial short meeting June 24, 2020 to gauge interest

PART 3 ENERGY DESIGN REPORT AND PART 9 ENERGY COMPLIANCE REPORT TRAINING

- Training coordinated by BSSB with financial support from the High-Performance Builder Training Fund members (BC Hydro, BC Housing, FortisBC, MEMPR)

- **Part 3 Energy Design Report** – Focal Engineering engaged to offer 3 webinars on new report
  - Two webinars for report users – i.e., energy modellers – first session July 30, 2020
  - One webinar for local government staff – date TBD
  - Recorded version of user webinar + tip sheet also coming

- **Part 9 Energy Compliance Report** – City Green & Enerlytics engaged to offer 3 webinars for users
  - Detailed webinars about Step Code metrics & how to complete the Part 9 report
  - First webinar July 9. 2020 (sold out) – other dates to come in August and September
  - Recorded version also coming

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council
POLICY ISSUES
Prepared by BSSB for the June 25, 2020 ESCC Meeting

POLICY ITEMS FOR DISCUSSION

Inconsistent Use/Distinct Versions of Part 9 Energy Compliance Reports

- Some Local Govts are using their own version of the Part 9 Energy Compliance Report – e.g., City of Kelowna, City of North Vancouver/District North Van/West Vancouver
- Issues with distinct LG versions:
  - Reduces consistency among local govts and industry – more work for industry
  - Forms not always current
  - Forms not always fillable, creating the need to transcribe information from the Excel report calculator version and risking transcription errors
  - Also reports of Local Govts requiring EA signatures on the forms
  - Also reports of Local Govts requiring EAs to do on-site verification/inspection
- Mark Bernhardt, Bernhardt Contracting, will provide info at the meeting
- Seeking Council endorsement: CBC and LG Peer Network Subcommittees work together to determine how to address this item as a priority activity, and involve the Part 9 Subcommittee as needed.

Energy Advisor Capacity Estimates

Part of the work of the Energy Advisor Working Group

EA Capacity Estimates: To be Confirmed with EA Working Group Members

- Spring 2020 - B.C. has approximately 85 to 86 EAs active in B.C.

The *broad findings for EA capacity* for 2022 (based on 2019 data which is presumed to be very similar) can be summarized provincially as follows:

- **Total number of EAs** currently working in B.C.: **86**
- Estimated total number of Part 9 units needing modelling and testing: **27,000/year**
- Total number of units needing EA/current # of EAs: 27,000/86 = **314 files/year for each EA**

Scenario A: 314+ Files/EA/Year

- **If average annual file completion rate/EA is 314 or higher**, B.C. will need: 27,000 units/314 files per EA = 86 EAs
- Potential estimated shortage: 86 needed – 86 current EAs = **0 new EAs needed**
- In this scenario, B.C. has sufficient EA capacity (apart from illness, temporary leave, holidays, retirements, natural turnover, and other typical workplace absences)
- CACEA (Canadian Association of Consulting Energy Advisors) reports 314 files/EA/year is 'do-able' & not problematic

Scenario B: 200 Files/EA/Year

- **If average file completion rate/EA is up to 200**, B.C. will need: 27,000 units/200 files per EA = **135 EAs**
- Potential estimated shortage: 135 EAs needed – 86 current EAs = **49 new EAs needed**
- In this scenario, B.C. needs 49 or more new EAs

Scenario C: 150 Files/EA/Year

- **If average file completion rate/EA is up to 150**, B.C. will need: 27,000 units/150 files per EA = **180 EAs**
- Potential estimated shortage: 180 EAs needed – 86 current EAs = **94 new EAs needed**
- In this scenario, B.C. needs 94 or more new EAs

Note: Energy Advisor White Paper recommended training support would be needed for new EAs in B.C. (but no indication of how many new EAs needed).

ENERGY ADVISOR WHITE PAPER

- Also known as the EA/EM Scope of Practice Report
- Prepared March 2019 by City Green and funded by NRCan
- Four sets of inter-related recommendations for:
    1. *Professional Regulation of the Industry* – AEST (Advanced Education and Skills Training) which is working on the CleanBC industry training
    2. *Industry Code Compliance Services Training* = Action started - see below
    3. *Quality Assurance* = For Future Action
    4. *Stakeholder Support Mechanisms* = For Future Action
- Report has been presented to ESCC by the Part 9 Subcommittee co-chairs (formerly the Compliance and EA Subcommittee)

Re: #2 - Industry Code Compliance Services Training

EA/EM BC Energy Step Code Compliance Competency Framework

- From the EA Report: "It was identified that, *as a first step*, it is important to identify what training needs to be provided. Training development must be based on *core competencies frameworks that outline the knowledge and learning needs of the industry for delivery of the BC Energy Step Code and BC Building Code services*." (Page 26, emphasis added.)"
- BC Energy Step Code Compliance Competency Framework for EAs/Energy Modellers is in preparation and should be ready fall 2020
- Progress: Scope of work being tendered via FortisBC – will evaluate proposals and determine successful proponent mid-July 2020 – goal is to be finished within three months of award date

Training Delivery in Step Code Metrics

- From the EA Report: "Development and delivery of accessible and ongoing appropriate training initiatives for both ERS EA training *and BC Energy Step Code training for EAs and EMs*."
    - Training in the Step Code metrics will form the first part of the free Part 9 Energy Compliance Report webinars for EAs and Service Organization staff starting July 9
    - Recorded version will be prepared likely early fall for ongoing reference

Local Governments with no Step Code Involvement

- Issue raised: How will local governments 'step up' in December 2022 if they take no action until then? How can we support them?
- Reminder: CEA/BC Housing issuing local government readiness survey again in 2020
- Seeking Council endorsement: CBC and LG Peer Network Subcommittees work together to determine how to address this item once LG survey results available

Industry Readiness/Capacity Research Project Proposal ('Matrix' Working Group)

- Objective: Guide and advise on the update to the 2017 Modus Report
- Progress: Scope of work drafted June 2020 to engage consultant to do study of key construction professionals' industry readiness for BCBC 2022 + develop Key Progress Indicators
- Key construction professions: 21 different groups including designers, EAs, architects, engineers, trades, and so forth
- Important initiative of Working Group members including ZEBx, BC Hydro, Vancouver Economic Commission – to help shape future funding and capacity building activities
- Ministry of Advanced Education and Skills Training – working on CleanBC Workforce Development Report to support the development of BC's Job Readiness Plan – want to confirm content of that report to avoid any duplication (doesn't appear to be)
- Proposal: Inviting interested partners to help support funding – current estimate $50 – 70K

Proposed Part 9 Residential Subcommittee Work Plan, 2020

Item	Priority	Timeline and Progress	Status	Project Funders	Lead	WG members
BSSB to revise a Technical Bulletin (19-03) on how to address a blower door No Fail path for Step 1 in the Step Code (i.e. using a fixed airtightness value by following Subsection 9.36.5.) Part of work on 3 Tech Bulletins from BSSB about meeting Step 1.	High	Start: March 2018 19-03 complete April 2019. Revision to 19-03, TBD.	In progress		Nick	n/a
Achieving 20% better (Step 3-equiv.) for 2022 BCBC	High	Will discuss at P9 subco meeting to start dividing the work.	In progress	TBD	P9 Subco/BSSB	Unique building types: Ray Smith, Niels Anthonsen, Einar Halbig, Remi Charron, Chris Frye, Torsten Ely, Richard Mathews, Gary Hamer, Pauline Rupp, Nelson Wall, Mark Bernhardt
Overheating risk : Include overheating risk analysis in the code for 2022 using future weather files.	High	Study June-August. Present to SCC in fall 2020	In progress	TBD	BSSB	Ray Smith, Mark Bernhardt, Richard Mathews, Remi Charron, Torsten Ely, Gerry Sawkins, Chris Frye
Airtightness metrics (NLA) - Conduct further review of airtightness testing metrics in proposed changes to NBC for suitability	High	Study June-August. Present to SCC in fall 2020	In progress	TBD	BSSB	Niels Anthonsen, Stan Jang, Sepehr Foroushani (potentially), Gerry Sawkins
%-better TEDI issues and review of this metric for Climate Zone 4.	Medium				Nicholas Heap	Nicholas Heap, Pauline Rupp, Mark Bernhardt, Remi Charron, Sepehr Foroushani, Niels Anthonsen
Crawlspace Issue Working Group Working to address modelling issue identified for crawl spaces	Low	Start: June 2018 Currently on hold.	In progress	NA	Zhi Chen/City Green, Co-chairs	n/a.
Correction for Intentional Openings: developing a protocol for adjusting the airtightness rate to account for leakage through mechanical equipment.	Low	Start: July 2018 Completion: TBD	Not started	NA	Einar	Einar Halbig, Stan Jang, Niels Anthonsen, Gerry Sawkins, Kelly Lane
Verification of Construction by EAs.	Low	On hold	Not started	TBD	TBD	n/a
Articulations and impacts on Upper Steps	Low					Richard Mathews, Roberto Pecora
AHJs who have not implemented Step 1	Low	Will support LGPN and EA WG as needed				n/a

BC Energy Step Code – Part 3 / Part 9 Non-Residential Subcommittee Work Plan

Task #	Work Plan Initiative -	Deliverable(s)	Project Timing and Reporting (Start Date / Completion Date)	Status	Consulting Support?	Project Funders (or project lead)
1a	**Step Code for Part 9 non-residential (all Climate Zones)** Develop additional Step Code table for each Climate Zone for Part 9 non-residential buildings. • Identify prioritized archetypes	Step Code tables for each Climate Zone for Part 9 non-residential buildings	Projected timing to be completed in 2021.	Not started Next steps: Identify priority archetypes	Yes - TBD	Province of BC (BSSB)
1b	**Step Code for Part 3 Other Occupancies Classifications (all Climate Zones)** Develop new Step Code tables for 'other occupancies' as defined in the BC Building Code, such as care homes (B3 occupancies) and similar uses. Tables will be developed for each BC climate zone, ready for adoption into BCBC 2022.	Step Code tables for prioritized 'other occupancies' for each Climate Zone	Subcommittee to identify priority occupancy types for development of Step Code tiers and performance metrics. *Example: Group F, Division 2 and Division 3 (Warehouses)*	Not started Next steps: Identify priority occupancy types	Yes - TBD	Province of BC (BSSB)
2	**Step Code for Provincial Public Sector Buildings** Develop new Step Code tables for typical archetype public sector buildings such as schools, community centers, libraries, colleges lecture halls / labs, hospitals and care facilities.	Step Code tables for public sector buildings	Workshop was held on March 20 – attended by energy modelers. Draft report prepared, final report will be available by June.	In progress	Yes	Province of BC (Climate Action Secretariat and BSSB)

DRAFT

BC Energy Step Code – Part 3 / Part 9 Non-Residential Subcommittee Work Plan

Task #	Work Plan Initiative -	Deliverable(s)	Project Timing and Reporting (Start Date / Completion Date)	Status	Consulting Support?	Project Funders (or project lead)
3	**Revised Energy Modeling Guidelines & Standards** Province of BC has recommended to NRCan to develop a CSA standard for building energy modeling. Developing this CSA standard would constitute the second phase of work for this task.	CSA standard for building energy modelling	Anticipated CSA to publish in 2021/2022	CSA Standard Z5020 in progress	No	Team effort with IBPSA, City of Vancouver, Province of BC (BSSB) and BC Hydro
4	**Part 3 Building Energy Requirements Tool (BERT) (Scott lead)** Develop a Step Code compliant, online checklist for reviewing modeled energy performance characteristics of Part 3 building at both pre-construction and as-built stages. Part 3 Energy Design Report is an Excel-based tool that can be used by energy modelers and reviewed by local government authorities for purposes of Step Code compliance. Part 3 Energy Design Report (spreadsheet tool) will be replaced by an online BERT system in 2021.	Part 3 Energy Design Report (ready for use in Q2 2020) Building Energy Reporting Tool (BERT)	ZEBx engaged through contract in December 2019 to develop Part 3 Energy Design Report. Step Code compliant draft checklist created in Q1 2020 and reviewed by working group February-April. Pilot ready for use on energystepcode.ca website, May 2020.	P3 Energy design report – complete BERT – In progress	Part 3 Energy Design Report (ZEBx and VRCA)	Province of BC (BSSB) P3 Energy Design Report – City of Richmond, BC Hydro Multi-stakeholder working group provides input and review for Part 3 Energy Design Report

DRAFT

Task #	Work Plan Initiative -	Deliverable(s)	Project Timing and Reporting (Start Date / Completion Date)	Status	Consulting Support?	Project Funders (or project lead)
5	**Inform a regulatory strategy for alterations to existing buildings** Defer Step Code work on existing buildings and alterations to be aligned with the work by the Province on an existing buildings code.	Strategy to address alterations to existing buildings	Timeline TBD but anticipated to start sometimes in 2020 and anticipated adoption in 2024 in the BCBC.	In progress	TBD	BSSB/BC Hydro
6	**Actively monitor (and where appropriate provide input on) the National Net Zero Energy Ready Code** Continue coordination/collaboration with the NECB and NBC new code development work	Submission with recommendations to the Province for national public review	Provincial comments submitted Q1 2020. Note: Details on proposed NECB approach shown in table below[1]	In Progress	No	N/A
7	**Industry training/education** Training/education needs, including: • Best practice airtightness scheduling and testing procedures for Part 3 buildings. • Webinar training for energy modelers and building officials on the new Part 3 Energy Design Report (beginning June 2020). • Additional training opportunities as identified / needed	Best practice guides and bulletins, including Webinars.	Ongoing, in coordination with BSSB Training and Capacity Coordinator.	In Progress	TBD	BSSB/ BC Hydro/ Fortis BC (?)

DRAFT

Task #	Work Plan Initiative -	Deliverable(s)	Project Timing and Reporting (Start Date / Completion Date)	Status	Consulting Support?	Project Funders (or project lead)
8	**20% Improvement for BC Building Code 2022** • Adjustment of Steps based on new NECB baseline. Determine if correlation can be made between 20% better and Step level. • Adoption of NECB tiers in the BCBC? • Determine research needs, stakeholder engagement and impact analysis as necessary.	Incorporate 20% baseline improvement within the 2022 code.	Stakeholder engagement, research and impact analysis to be conducted over summer of 2020. Seek endorsement of changes by SCC once completed.		TBD	
9	**Over-heating risks – BCBC 2022** • Determine method of evaluating overheating and incorporation into code • Feasibility of incorporation of PCIC climate files into the BCBC	Incorporate overheating risk evaluation requirements within the BCBC 2022.	Stakeholder engagement, research and impact analysis to be conducted over summer of 2020. Seek endorsement of changes by SCC once completed.		TBD	
10	**Air leakage Testing** • Address airtightness test procedures • Explore feasibility of mandatory air leakage testing as base code minimum.	Issue bulletin for clarity of existing procedures or provide clarity within BCBC 2022.	Stakeholder engagement, research and impact analysis to be conducted over summer of 2020. Seek endorsement of changes by SCC once completed.		TBD	

Note (1):

Tiered Performance Requirements (NECB)

In order to prepare industry for increasingly stringent energy efficiency codes in the future and acclimate industry to the use of performance modeling solutions and airtightness testing as a comprehensive compliance methodology, introducing tiered code metrics to the code will offer increased flexibility to authorities having jurisdiction (AHJ) such as provinces, territories and charter cities such as Vancouver.

DRAFT

As Tier 1 requirements are the same as the balance of the NECB there is no cost impact or energy savings attributed to this Tier [Codes Canada 2020-3]. Progressive Tiers were selected to improve efficiency levels, leading to a top tier which is equivalent to net zero energy ready performance.

While Tier 4 was originally set at 25% of the building energy target (NECB-2020 reference building), or a 75% reduction in energy use, the modelling rules, non-regulated loads, and fixed loads, made this target near impossible to achieve for several building typologies. As a result, the Tier was increased to 40%, for the NECB-2020, to enable progressive designs to achieve Tier 4 irrespective of the noted modelling limitations.

It should also be noted that all the tiers are voluntary until they have been adopted into legislation by an AHJ. In that sense, the tiers represent voluntary standards that have been codified. It is up to the AHJ to decide whether to adopt a tier or not, and at which level. The publication of these voluntary tiers in the code should help industry and the public prepare for potential upcoming code changes, essentially 'priming' the market for upcoming code cycles.

The four tiers proposed for the NECB with each successive tier being increasingly stringent in terms of building energy consumption is show in Table 5.

Energy Performance Tier	Performance of Proposed Building Relative to Performance of Reference Building (% building energy target)
1	≤ 100%
2	≤ 75%
3	≤ 50%
4	≤ 40%

Hugo - thanks for the agenda and materials. Much appreciated.

I was wondering if we have review materials for these two agenda items:

12:00 p	Lunch Break (30 mins)		
12:30 p	Carbon + GHGi issues in Step Code	Zachary May, ESCC Chair	• Low-carbon energy system relaxations • District energy • New GHGi targets in BC Housing projects
1:00 p	Existing Buildings	Zachary May, ESCC Chair and Nicole Vukosavljevic, Senior Policy Analyst	• Initial outcomes • Renovation roadmap for single-family dwellings, strata housing, and purpose-built rentals • Focus on: ○ Assessment: Understanding where buildings and local governments are at ○ Expectations: Defining outcomes ○ Actions: Achieving and measuring outcomes

Thx Bea

Subject: FW: PIBC & COVID response

Hi Jeff, hope you're well. I sent some criticism to PIBC, as a member, of the limited efforts I've seen to date to be a facilitator between municipalities about their efforts to respond to COVID from the perspective of continuing to move applications forward, their rights under the LGA etc. Dave Crossley's response was pretty positive and opened the door to see what we/the industry thought best practices were, so I took at shot at this with our team. Does UDI want to look at this and add anything based on documenting municipal efforts to-date?

Thanks

Application Submission & Fee Payment

- Best Practice
  - Online application submission & payment- City of Vancouver
  - Online fee payment
- Alternative – City of Coquitlam
  - Courier drawings & provide digital submission -City of Coquitlam
  - Pre-confirm application fees & mail cheque following application submission

Pre-Application Open Houses

- Best Practice- Not required- City of Vancouver

Public Hearing & Council Meetings

- Best Practice- Not required for OCP aligned rezoning- Township of Langley & City of Delta
- Alternative- Digital Public Input- City of Surrey

Permit Reviews & Circulation

- Best Practice- digital submission & permit review [Dean, I think Victoria already does this?]
- Alternative- Traditional hard copy & digital submission- City of Coquitlam
  - Digital set can be distributed to speed up circulation process with groups reviewing digital sets

- If the municipality is looking at staff reductions, explore what non-essential items can be eliminated from processes, putting more reliance on Professionals for things like parking review, project statistics, FSR etc.

Inspections & Construction

- Best Practice- limit physical inspections, rely on consultant site reports- City of Richmond
- Best Practice- extend noise by-law hours to allow for split shifts for construction workers

Subject: Re: PIBC & COVID response

Hi Brad:

Thanks for your note and I hope you are well, and taking care in these challenging times. Thanks for sharing your experience with respect to shifting approaches to planning and development approval processes in different municipalities. I know it's been a challenging period all around and on 'both sides of the counter', so to speak, in sorting out how to continue to keep processes moving while meeting statutory obligations and the requirements for meaningful public input for decision makers, while also adhering to the new realities of a pandemic and strict public health and safety guidelines. And there are many different elements and parties involved in all this in every community, beyond just the planners too - from municipal administrators, legal counsel, the elected officials, the Ministry of Municipal Affairs and Housing, various proponents, to even local citizens.

As you indicate, it is part of the reason we added that new topic & webinar to our programming this spring to cover this important issue, and help disseminate the information and some best practice guidance to members. I appreciate that it might not be coming as fast and soon as you or I might ideally wish, but we're endeavouring to pull this stuff together as quickly as we are able given the constraints and resources we have. I will certainly follow up with our team though, to see what other options we might have to be able to augment our work and information sharing in that area - perhaps there is some kind of piece on tips and best practices that we could work to develop and publish or disseminate and share in advance of the upcoming webinar, for example. I will follow up on that.

Additionally, just in terms of peer sharing and best practices, if there are particular municipalities or process adaptation examples that you believe, from your perspective, are working well and leading the way, so to speak. Let me know, and we can perhaps look at ways to potentially share and highlight those as part of our member outreach/education and sharing efforts. Also, you may or may not know, we've recently set up an online discussion group via LinkedIn where were facilitating and encouraging members to share, ask questions, adaptation strategies etc. I'll see if we can tap into that as a source as well. You may also find it a valuable place to engage in dialogue with other members on these kinds of topics.

Thanks again for following up, and if there's anything more you want to share that might help us in these efforts, that would be much appreciated. And I'll keep you posted on what we can do to try to assist and do what we can going forward. Thanks again, and keep well.

Kind regards,

Dave Crossley

On Apr 29, 2020, at 12:23 PM, Brad Jones <bjones@wesgroup.ca> wrote:

Hi Dave,

I wanted to pass on my experience working with Lower Mainland municipalities as COVID has emerged. It appears that each municipality is working on their out to try to sort out how to keep their City Hall operations functioning. I'm writing this email in reaction to a planning department asking me today what other cities are doing in response- they haven't looked or asked their counterparts in other cities. I have found this really shocking, as we're now 2 months into reacting to this crisis. There is significant variance in how each municipality is continuing to work, for example, the Township of Langley is not having a public hearing for a rezoning that conforms to their OCP, as is permitted in the Local Government Act. The City of Richmond is requiring public hearing speakers to attend in person with a cap of 15 speakers- if more speakers register, they're just going to defer the item until the feel comfortable having more than 15 people in Council chambers. Both of these municipalities operate under the same legislation.

We as a company have taken an active role in speaking with our competitors in the industry to understand their efforts to shift their business, along with each municipality we work in to discuss how they are adapting their practices to move development applications forward. We have actively shared what we've experienced in other cities and our own experiences with our business with them. The Urban Development Institute has also been active in trying to document all of the changes to municipal practices on their website as a resource.

I must say as a PIBC member and RPP, I believe that PIBC should be taking a more active role in assisting municipal planning departments facilitate some of this transition and at a minimum, providing an environment to share the actions that they are taking and troubleshoot common issues. I see that there is a webinar scheduled for May 27th on the "legal requirements of holding virtual council meetings, committee meetings, public hearings, consultations etc. and what local governments should consider as they adapt processes and strategies in response to COIVD-19". That's a great subject and I look forward to it, but May 27 is far too late. Municipalities are trying to resolve these items now and make recommendations to Council's to move forward. These efforts need to happen sooner. I believe that PIBC could add a lot of value to it's members by being this information source, facilitating collaborative problem solving, documenting emerging best practices and facilitating recommendations from experts based on what is permitted in law. It is extremely important for municipalities to be open for business, for processes to

continue, for planning and building approvals to be granted so we aren't in a deeper hole on housing and business space delivery coming out of this crisis. PIBC could play an active role in using this as an opportunity to innovate, to create more modern, broader public participation in the future by adopting technology that may seem to be an emergency action today.

I'm happy to discuss this further if you'd like.

Thank you

FYI – Elizabeth Tang of CMHC writes:

Another reason that I wanted to stay involved is that **PM Trudeau promises $40K interest-free loans to make homes energy efficient and safer from severe weather in the election. Some government departments believed CMHC would be delivering the program, but at this point we have received no directives or information other than that NRCan and FCM will also be closely involved.** I am not sure if Chris has touched upon this. It looks like these federal programs including CMHC's existing funding programs can be inter-related.

Don't know any more than this … also not sure which election she means (last fed election or next).

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi Dale and Mary,

Sorry I missed the first 30 minutes of our call, was in another meeting which went longer.

I am interested in both the NRCan capacity-building funding and Educators Working Group. At CMHC we have a sibling team for Housing Sector Capacity, they're newly formed and don't have anyone BC-based, I will be collecting intelligence for them. Another reason that I wanted to stay involved is that PM Trudeau promises $40K interest-free loans to make homes energy efficient and safer from severe weather in the election. Some government departments believed CMHC would be delivering the program, but at this point we have received no directives or information other than that NRCan and FCM will also be closely involved. I am not sure if Chris has touched upon this. It looks like these federal programs including CMHC's existing funding programs can be inter-related.

Thank you again for everything, and my best wishes for the upcoming summer.

Elizabeth

Subject: Step Code CBCSC - June 24, 2020 Meeting Notes and Action Items

Hello Subcommittee members,

It was great to connect with those who could join our meeting today. Please find attached:

- Brief meeting notes with action items
- Updated membership list with email contact information

As always, if anything is incorrect, please let me know and I'll adjust

Two particular follow-up items:

- **NRCan funding** – For anyone interested, we'll hold a Subcommittee meeting in July to discuss potential collaborative projects that might be eligible for NRCan's capacity-building funding (keeping in mind Chris's caveat of 'no promises') – invite to come.
- **Educators Working Group** – Many members were interested in this potential new working group and stayed for the second half of our meeting to discuss it. Brief notes attached. There was sufficient interest that we will schedule a meeting in July to continue this – all will be invited, please participate if you are interested.

Thank you – please be in touch with me or Mary if you have questions or ideas to share.

Kind regards,

Dale and Mary – Step Code Capacity Building and Communications Subcommittee Co-chairs

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Notes

Date and Time of Meeting: Thursday June 25, 2020 | Time: 9:00 a.m. to 2:00 p.m. Pacific Time
Webinar link: Join Microsoft Teams Meeting
Note: There is no conventional dial-in option, but you can request a call back to join the meeting by phone.

Chair: Zachary May, Building and Safety Standards Branch, Ministry of Municipal Affairs and Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Participants

1. Dale Andersson, BSSB and co-chair, CBC Subcommittee
2. Bea Bains, FortisBC
3. Maya Chorobik, LGPN Co-chair
4. Christian Cianfrone, ZEBx
5. Norm Connolly, Richmond/PIBC, and P3 Subco Co-chair
6. Jeff Fisher, UDI
7. Chris Frye, NRCan Housing Division
8. Maura Gatensby, AIBC
9. Joe Hart, Icon Homes/CHBA BC
10. Toby Lau, BC Hydro and P3 subco co-chair
11. Wilma Leung, BC Housing
12. Megan Lohmann, CEA and UBCM rep
13. John Madden, UBC
14. Warren Perks, BCCA
15. Harshan Radhakrishnan, EGBC
16. Kelly Reid, HKR Builders/CHBA BC
17. Mark Sakai, HAVAN & P9 subco co-chair
18. Laura Sampliner, LGPN Co-chair
19. Muneesh Sharma, BOMA
20. Manjit Sohi, BOABC
21. Lise Townsend, City of Surrey/UBCM Rep and Chair, Large LG Peer Network
22. By teleconference – MAH: Holly Wacker (Local Government Division, Planning and Land Use Management); , BSSB Staff: Kylie Sandham; Nicole Vukosavljevic; Scott Williams; Hugo Wong
23. By Teleconference: Nat Gosman, MEMPR; Mark Bernhardt, Bernhardt Contracting and CHBA BC (guest); Catherine Ernst, BOABC; Nicholas Heap, City of Richmond and P9 subco co-chair; Vanessa Joehl, CHBA BC

Guests: Pauline Rupp, CHBA BC; Bertine Stelzer, BC Hydro

24. Regrets: Jason Jung, ASTTBC; Patrick Enright, City of Vancouver; Lisa Mak, BC Hydro; Mary McWilliam, BCIT, co-chair, CBC Subcommittee

1. Welcome and Introductions

Zachary May welcomed Council members and guests. New Council members include Lise Townsend, filling in for Maxwell Sykes during his parental leave.

2. COVID-19 Check-in

Zachary May sought Council input on what data should be tracked as the Province plans an economic recovery strategy.

Discussion:

- Builders report increasing activity in Metro Vancouver and the North. BC Hydro has returned to business as usual re: connections. Banks continue to be slower than normal with more demand.
- BOMA focused on operational recovery and safety, would have preferred to be included in consultation in rental plan. They hope for faster development permits, Vancouver moving to online systems which is speeding it up. Members aren't spending and don't have access to capital. Consider tying future funding

to energy efficiency or resiliency. Increasing incentives for upgrades or lower carbon energy systems, good chance.

- UDI appreciates that construction stayed open. Launching of projects, particularly large ones, has slowed. They have analysis to share as it was part of their pre-budget submission. Would hope for some COVID changes (virtual public hearings, skipping public hearings) to stay.
- HAVAN reminded the Council that the DAPR report makes some of these recommendations. Energy retrofits could achieve economic stimulus and efficiency goals.
- No additional protocols or measures expected from the Province regarding construction, with most internal discussions around economic recovery and the unique value of construction sector. Bea Bains said additional safety equipment was an unanticipated cost, and help may be required there, an issue Zac said has been raised.
- CHBA BC and UDI have heard from members that CERB makes it hard to find labourers as support programs can pay the same or better.
- UDI found recent provincial announcement on strata insurance reforms very interesting, including that insurance for newer buildings is more expensive than older buildings, which is unusual. Insurers are apparently also concerned about six-storey wood frame, which may be concerning given 12-storey mass timber. Zac said there was a new MAH division on mass timber implementation.
- Maya Chorobik of the LGPN said LGs worry about budget uncertainties or property tax deferrals due to COVID. They are just starting to re-hire staff, and they continue to have concerns.
- Toby Lau said BC Hydro surveyed Community Energy Managers and Building Energy Managers on the impact on building permit applications and delays. Effect on LGs vary but they report about a 25-30% reduction in residential and commercial permit applications
- Megan Lohmann reports many building applications, significant interest from Alberta residents to building in the southeast of B.C., quick turnaround on sales of existing homes. Some suppliers report higher demand than before in trim, paint etc. Wonder how to take this opportunity to include energy efficiency as part of home improvement.
- Training for the EnerGuide Rating System, provided by Yardstick, was closed due to COVID but re-opening again. Chris Frye encourages anyone with EA challenges to contact NRCan.
- BC Housing has a monthly new housing registry report, with a COVID addendum published every two weeks.
- Joe Hart of CHBA BC encourages Province to implement findings from DAPR. A new Associate Deputy Minister, Silas Brownsey, will oversee DAPR.
- Harshan from EGBC said Susan McDougall from Focal Engineering is doing training on the Part 3 Energy Design Report. There are also upcoming webinars for Part 9 training. The EGBC AGM will happen virtually.

ACTION: Toby Lau to share survey results from Community Energy Managers and Building Energy Managers.
ACTION: Maya to share LG survey results to LGPN members.
ACTION: Harshan to provide a link to the International Initiative for the Sustainable Built Environment.

3. Step Code Policy/Implementation issues

a. Local Government Peer Network report-out (Maya Chorobik and Laura Sampliner)

- After combining the small and large Peer Networks, there are now 75 local governments and 150 staff participating.
- They hold quarterly meetings following the ESCC meetings, each with a deep dive. One past deep dive was on compliance, yesterday's was on GHG and Step Code with some LGs sharing the two-step approach.
- Two local government surveys, one each for those who have and have not adopted, are being drafted with BC Housing to launch in July. Feedback welcome on questions.

b. Capacity Building and Communications Subcommittee Report-Out (Dale Andersson and Mary McWilliam)

- See work plan.

c. Inconsistent use of Part 9 Energy Compliance Reports (Mark Bernhardt)

- EAs work in multiple AHJs, so there is a time cost if forms are rejected. Multiple form designs also increase risk of errors. Sometimes a signature is required when a checkbox must be ticked to the same effect. The "sign off" is not within an EA's authority. Kelowna has its own form and asks for a Full House Report. Richmond, which does use its own form, are doing audits and finding many problems, and encouraged implementing professionalization recommendations from the EA White Paper. Some LG forms are also outdated. Others want their own form just for branding consistency.
- EAs have insurance, so risk/liability is small compared to a structural engineer
- A call to have stronger language from the ESCC describing the benefits of using the provincial form, which is always up-to-date.
- Discussion: LGPN to ask LGs via survey which LGs are using their own forms and why.
- **Action: Communications and Capacity Building Subcommittee and Peer Network to work on this.**
- **Action: Topic to be addressed again at the next LGPN meeting.**

d. EA Working Group and EA Capacity Issues

- After a study (see attached report), the working group believes B.C. has enough EAs to meet capacity. These findings are preliminary, with more work and reporting back to do. This study did not consider renovation work.

e. Local Governments Who Have Not Adopted Step Code

- General concern expressed that their construction sector will not be able to meet Step 3 in 2022 without Step 1 today. For builders that operate in communities that do have Step Code, this is less of an issue, but builders who work exclusively in large municipalities that have eschewed Step Code may find themselves unprepared for the shift.
- #1 barrier to referencing Step Code in smaller communities was a lack of EAs. Other LGs lack money for incentives so don't do it. Incentive support may be valuable in the context of economic recovery.
- **Action: MAH to bring this issue up at our standing meeting with UBCM**
- **Action: LGPN to identify which LGs haven't yet referenced Step Code, with help from CBCSC.**

f. Industry Readiness/Capacity Research Project Proposal

- See report for details. **No decision recorded.**

g. Part 9 Residential Subcommittee Report Out

- The former "Compliance and Energy Advisor" subcommittee is now the "Part 9 Residential subcommittee". There are 10 work items and 3 working groups. Several high-priority items relate to working on the development of the 2022 BC Building Code. There are 5 low-priority items. See work plan for more information and Scott's report out.

h. Part 3/Part 9 Non-Residential Subcommittee Report Out

- See work plan for major items.
- About 40 members, with lots of technical expertise. Many key items on the work plan, also relating to 2022 BC Building Code development.
- New Part 3 Energy Design Report, an Excel-based tool similar to the City of Vancouver checklist, funded by Richmond and BC Hydro. Christian Cianfrone retained and finalized, and IBPSA involved.

4. Step Code Technical Issues

a. Proposed Code Changes for 2022

- Focus: 20% improvement on energy efficiency, analyzing overheating risks for Parts 3 and 9, and air leakage testing for Parts 3 and 9.
- Implementing "20%-better", see attached PowerPoint. Currently considering Step 3 plus potential prescriptive measures. Still determining role of NBC points-based approach
- Morrison Hershfield engaged to get 20% better on Part 3 aligned with National Building Code
- Work will happen in earnest over the summer, with a report back by the fall.
- The council discussed using the NBC as an alternative path. Step Code is ahead of the national code, so there is a disincentive to "go back". Future climate files will go on to 2050. The BC code development process is more nimble than national, so there is tension between alignment with national and maintaining our progress. The national points based approach is apparently designed to accommodate areas of other provinces without EA capacity, which B.C. mostly has.
- CleanBC and tall wood are key provincial policy pillars.
- The Metrics Report will need updating as 2022 approaches we will need to ensure we're asking the right research questions. We will look at costs for LGs that haven't yet moved on Step Code.
- **Council endorses work plan for Part 3/9 Non-Residential and Part 9 Residential Subcommittees**
- BC Housing has engaged a PhD student to research reference building approach for several years, for both Part 3 and Part 9 buildings. BOMA also has a Victoria-based research project (collaboration with UVic on 50%-better); seeking one more building for a pilot project. Five buildings total.
- Action: Tell ESCC when RFP goes out for Matrix report.
- Action: Similar open process for RFP for archetypes the Council may wish to include.

5. Carbon + GHGi issues in Step Code

- LCES relaxations (by one Step) exist in Richmond, Surrey, New West and Burnaby. UDI said this would drive builders to invest in equipment over envelope. Victoria is also considering this. Typically, it's a "Three-Two" implementation (Step 3 for Residential or Step 2 with LCES). Mark Sakai wonders whether this runs contrary to a stated goal of Step Code: consistency, seeing as Step 3 on the North Shore requires an LCES, but Step 3 in other places does not. Zac understands this concern, and carbon is being brought up by many stakeholders, like how to define an LCES or how to measure GHGi.
- Nicholas Heap thanked BC Hydro for funding air tightness training originally developed by the City of Vancouver. Events were popular and saw improvement in air quality in Step Code homes. Great to get other jurisdictional data to see if airtightness training contributed to measurable improvement.
- BSSB proposed to move forward with the following types of work:
    1. A group to help define how to measure GHG for application in buildings to get a consistent measure
    2. By August, have the ESCC consider appropriate stepped targets and an implementation approach that provides flexibility for LGs and industry. There is a provincial mandate in CleanBC to lower GHGs and emissions from natural gas. Likely another committee on this issue. Parallel discussion on embodied carbon (and NRCan can support on embodied carbon). Goal: recommendations to ESCC by December.
- A minimum GHG standard by the 2022 BCBC is not on the table at this point.
- Discussion: The "Five-Three" approach by some municipalities has a limited shelf life, and it's hard to predict which LG will choose which approach, making it hard to predict whether this will meet provincial GHG reduction goals. BSSB is trying to include GHG changes in a bundle with Code changes for the Minister's approval in early 2021.
- BC Housing has done a carbon calculator with UDI. Report (PDF) and Calculator

ACTION: Bea to share Fortis analysis on two paths: an electrification pathway and diversified pathway that includes gas. BSSB to follow up with Bea here with aim of a presentation at the next ESCC meeting.

6. Existing Buildings

- Presentation by Nicole Vukosavljevic, Senior Policy Analyst at BSSB (see attached)
- Discussion:
    - If an single-family dwelling is on a transit line, it will likely be developed so there should be criteria for when a building should not be invested in. Planners should be involved. Translink should also be involved. OCPs have this future-looking element, but are time-limited. CHBA suggests the first step is an ERS rating at point-of-sale. General public needs education on how older buildings perform. EMPR is looking at energy labelling and pathways to conservation. Online assessment tools are in the works that might help. Some homeowners who can barely afford their homes won't want to do extensive retrofits.
    - Robyn: The timeline to 2050 should also include actions for the next four years. What can we in the short-term to ensure success? Pilots, labelling, incentives, etc.
    - The first step is data: asset and operational data, baselines, labelling, benchmarking, to make the right investments in the right buildings.
    - Lise: Standardized mapping information to see where the least efficient buildings are, racial distribution could help, even if the data is imperfect right now.
    - HAVAN encourages gentle densification for affordable options, but with RS1 zoning all over the province, no additional density can be done. There are options to tie this in with creating more affordable housing and neighbourhood revitalization with infill opportunity. CHBA supports home labelling and renovation incentives, but some regulations may force renovations underground. Low-income homeowners won't be swayed by incentives, they will need government to pay it all if they're to do it.
    - UDI: Currently, retrofits/upgrades increase value of home, and thus property taxes. This is a disincentive to upgrade, and consumers shouldn't be penalized for doing what governments want.
    - **ACTION: BSSB to connect with Lise Townsend on Surrey considering an alterations to existing buildings strategy themselves. There is interest in co-operating.**
    - On strata housing: if the strata insurance crisis and this could be linked somehow, stratas may be inclined to participate. For example: a financing mechanism to spread upgrade costs to future owners (PACE?)
    - The New York model of benchmarking had a decade of data, and is a potential model. The market signal is strong to prepare owners for upgrades.

7. Final comments and adjournment

- Robyn thanks departing council member Mark Sakai for his many contributions over the years as he departs HAVAN for the BC Real Estate Association.
- **Action: BSSB can share FortisBC letter of support of Step Code to District of North Vancouver.**

Meeting adjourned: 2:05 p.m.

FW: Final Budget Submission

Zachary, as discussed, here is our *2021 Budget Submission*. Please see the graph on page 2. Also, here is the data from Urban Analytics for Metro:

"Just ran a custom search on our new home data base and we have an estimation of new condominium & townhome units released by year as follows:

2012 – 12,943
2013 – 11,511
2014 – 13,674
2015 – 13,436
2016 – 19,285
2017 – 17,074
2018 – 20,423
2019 – 7,464

So the 2,207 units x 4 quarters would translate into just below 9,000 units which is apx 40% below the 8 year average. 2019 was a slow year for launches as well."

June 26, 2020

Chair Bob D'Eith and
the Select Standing Committee on Finance and Government Services
Room 224, Parliament Buildings
Victoria, BC V8V 1X4

Dear Chair:

Re: Budget 2021 Submission of the Urban Development Institute

On behalf of the 950 members of the Urban Development Institute (UDI), we thank the Committee for the opportunity to submit our comments and recommendations for *Budget 2021*. We believe that through our recommendations, the Government can restart the economy in the wake of the serious impacts of the COVID-19 pandemic.

Please note that in our submission, we do not address the immediate needs of our members and the businesses and residents they serve related to COVID-19, such as extending the rent supplement program for landlords as long and the *Emergency Program Act* (EPA) and Public Health Officer's (PHO) Orders are in place. These issues are immediate in nature, and need to be addressed well before *Budget 2021* is introduced next February.

Our focus is on recovery measures that are critical to British Columbia's economy as the immediate health and financial impacts of COVID-19 begin to subside. Our proposals will also seek to assist the Government in meeting its laudable objective of building 114,000 new affordable housing units before 2027, as well as its climate change goals. The three key areas we ask that the Government consider in *Budget 2021* are:

1. Housing Tax Policy;
2. Transit and Transportation Funding; and
3. The CleanBC Strategy.

ABOUT THE URBAN DEVELOPMENT INSTITUTE AND THE REAL ESTATE DEVELOPMENT INDUSTRY

UDI Pacific Region is a non-profit and non-partisan association of the development industry and its related professions in British Columbia. UDI represents thousands of individuals involved in all facets of land development and planning, including: builders, property managers, landlords, financial lenders, lawyers, engineers, planners, architects, appraisers, construction companies, real estate professionals, local governments and government agencies.

The real estate and development industry has a significant positive impact on employment, economic growth and government tax revenues. An independent analysis conducted in 2017 found that the B.C. development industry annually:

- Contributes almost $23 billion to the provincial GDP;
- Employs over 230,000 British Columbians; and
- Generates $6.6 billion in revenues to governments at all levels.

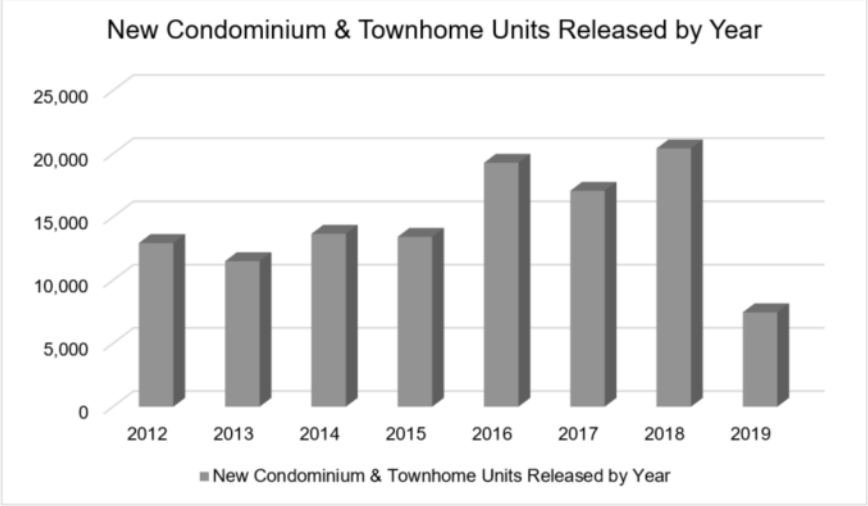
HOUSING TAX POLICY

Since the introduction of a host of housing tax changes beginning in *Budget 2016*, UDI has raised significant concerns pertaining to the direct and indirect impact that a number of recent tax measures introduced by Province would have on the supply and affordability of much-needed housing (including affordable and rental housing) for British Columbians. These taxes included:

- Speculation & Vacancy Tax (SVT)
- Additional Property Transfer Tax (also known as the "foreign buyers' tax" or FBT);
- a "luxury" marginal Property Transfer Tax rate of 5% on residential properties valued in excess of $3,000,000;
- Additional School Tax (AST); and
- Provincial legislation enabling the implementation of City of Vancouver's Empty Homes Tax (EHT).

These tax measures are currently applicable to development lands and unsold inventory, which add to the cost of housing and discourage the supply of new homes.

We are already experiencing a shortfall of new housing. Between 2016 and 2019 there was a 60% drop in multi-family project launches in Metro Vancouver. In fact, in 2019 there were only 7,464 units released for sale, which is far less than a normal year (please see the table below). As of the beginning of 2020 there were 44 multi-family projects with over 17,000 units on hold. All of this occurred before the COVID-19 crisis. We have also seen a precipitous drop since the beginning of the year in new projects. So far, in 2020, only 2,207 units have been released for pre-sale.



Metro Vancouver data as presented by Urban Analytics

The Government has taken some steps to reduce these taxes on development lands/unsold inventory, especially with regard to the exemptions offered under the SVT, but much more work still needs to be done to make a meaningful difference in housing for British Columbians.

Exempting Partnerships with Foreign Capital from the Foreign Buyer's Tax

Last month, the Province amended the *Property Transfer Tax Regulation, B.C. Reg. 74/88* (the PTT Regulation) in an attempt to implment measures announced in *Budget 2020* that were to make the treatment under the FBT regime of corporations and certain limited partnerships (LPs) consistent. This amendment was to recognize that foreign capital often supplements the equity that many Canadian homebuilders require to create housing in British Columbia.

The impact of this amendment on Government revenues should have been negligible because it was intended to simply clarify the existing rules as they pertain to LPs that include a minority of foreign limited partners. However, the current language of the PTT Regulation appears to introduce a new modification to the existing rules which applies prospectively, creating an unfair result for existing partnerships created prior to the effective date of the PTT Regulation since it adds to the uncertainty of the existing rules rather than clarify them.

Under new section 22 of the PTT Regulation, if a general partner of a LP purchases land to which the FBT applies, the LP is exempt from the FBT if all of the following conditions are met:

- "On the date of transfer of the property (or other application for registration of the taxable transaction at the Land Title Office):
  - each general partner of the limited partnership is either a Canadian citizen, permanent resident of Canada or a corporation other than a foreign corporation;
  - the combined interest in the limited partnership of all the foreign limited partners accounts for less than half of the partners' entitlement to share in the profits of the limited partnership; and
- Each general and limited partner of the limited partnership is a resident of Canada for income tax purposes throughout the taxation year in which the taxable transaction occurs."

Given that the amendment only applies in rare circumstances when the general partner of the LP becomes the resistered owner of the land. In the vast majority of development land acquisitions, a nominee company of the LP will purchase sites due to the fact that the partners of the development project are not firmly established at the time of initial site acquisition and, in fact, the LP itself may not exist at the time the sites are put under contract.

UDI recommends that section 22 of the Property Transfer Tax Regulation, B.C. Reg. 74/88 be amended to remove the requirement that a general partner of a limited partnership must be the registered owner of the land purchased for residential construction. We also recommend that the application of section 22 be made retroactive to August 1, 2016, when the FBT was put in place, so that it provides clarity of the rules in a fair and consistent manner.

Exempting Foreign Capitalized Builders from the Foreign Buyers' Tax

In addition to LPs with a minority of foreign limited partners that create new housing supply in British Columbia, there are number of foreign capitalized builders (FCBs) with a proven track record of creating housing supply for British Columbians. These FCBs want to continue this positive work but, since the introduction of the FBT, they have been effectively excluded from acquiring residential sites for redevelopment. As these FCBs are not currently purchasing residential sites, they are not currently paying FBT. Therefore, the introduction of an exemption to enable FCBs to continue creating housing supply in British Columbia, should be revenue-neutral to the Province.

We recommend that the Province considers introducing new measures to exempt FCBs that meet certain conditions, as outlined in the attached appendix, from the application of the FBT.

Exempting Development Sites from AST

It can take up to six years for a project to go through the permitting and rezoning process. During the process, the AST can apply in every year of the project's lifespan, since most housing projects are on sites that are well in excess of the $3,000,000and $4,000,000 thresholds. In fact, the AST can increase during the permitting phase and during construction because the value of land and improvements is added to a site's assessment.

The AST can also apply to purpose-built rental (PBR) buildings when their value exceeds the thresholds noted above. This counterproductive to the Province's objective to create more PBR housing.

UDI recommends that the current SVT exemptions applicable to sites under development be extended to the AST.

TRANSIT/TRANSPORTATION FUNDING

UDI has long supported ongoing senior government funding for transit and transportation projects. This infrastructure services the projects our members build – transit stations serving mixed use, commercial and multi-family residential buildings, or highways serving industrial uses.

These are also great projects for "kick-starting" economic and job growth, which is needed now more than ever to address the impacts of COVID-19 on our Province. In addition, it improves transportation linkages within regions. As noted in TransLink's *Transport 2050 Discussion Paper*, the annual cost of congestion in Metro Vancouver is $500 million to $1.4 billion. Funding transit will also assist the Province in achieving its goals of reducing greenhouse gas (GHG) emissions, improving public health and increasing housing affordability opportunities (see below). As such, ***UDI strongly supports continued provincial funding for transit and transportation projects in British Columbia***.

However, there are two key areas of concern for our membership with regard transit and transportation funding – the growing reliance on the new construction sector to fund TransLink, and the need to link transit funding to land use planning/outcomes.

Increasing Reliance on the Building Sector to fund TransLink

As noted above, UDI has recognized that transit expansion is important for the Metro Vancouver as well as our members. In fact, we conditionally supported the creation of a TransLink Development Cost Charge (DCC), which is now in effect – on top of local government transportation DCCs.

When we supported the TransLink DCC, we were assured by TransLink that "*Should an increase to the DCC rates above inflation be considered by the Mayors' Council for incremental funding for future Investment Plans, substantive consultation would need to be undertaken as a requirement of the expected legislation*." Before the DCC legislation was approved by the Province, and only three months after the original tax and rate was approved by the Mayors' Council, the DCC rate was increased 30% with no consultation with builders and little notice.

Now, TransLink and others are exploring additional potential charges on builders such as Land Value Capture (LVC), an Annual Area Benefiting Tax and a variable rate DCC. UDI's response to the TransLink study on LVC is appended to this submission. In addition, we are concerned that this is occurring at a time when our members are facing a challenging economic environment

because of COVID-19 and a number of policy pressures imposed by all levels of government, including:

- A proposed Federal Vacancy & Speculation Tax on Residential Properties;
- Ongoing Federal restrictions on mortgage lending such as the 2018 "stress test" imposed by the Office of the Superintendent of Financial Institutions, and the recently announced changes to the Canada Mortgage and Housing Corporation underwriting policies for insured mortgages;
- The provincial taxes that apply to development lands noted above;
- A proposed future Metro Vancouver water DCC on top of a 2018 Greater Vancouver Sewerage and Drainage District DCC increase of up to 200% for some projects;
- Substantial increases to DCC and Community Amenity Contribution rates in several municipalities; and
- Increasing requirements for new projects such as the *B.C. Energy Step Code* (see below) and Electric Vehicle Charging Infrastructure.

We ask that the Government and TransLink not add to these issues with new fees/taxes for new construction. Instead, other sources of revenue, such as the road pricing, need to be contemplated.

Linking Transit Funding with Land Use Planning Outcomes

UDI has long advocated for the need to link transit investments with land-use planning. This is critical to fully leveraging the billions of taxpayer dollars being used to fund transit capital programs and operating costs. This is not only important for the economy and increasing transit revenues, it is also needed if the Province is going to meet its GHG emission reduction, public health and affordable housing goals.

Unfortunately, after over 30 years of SkyTrain, there are too many rapid transit stations in the Region that are surrounded by low-density housing and commercial uses. There is little point in investing in billions of dollars in transit infrastructure if only a few people are allowed to live and work nearby.

The Province and local governments that receive substantial transit infrastructure investments need to work together to ensure that increased housing and job spaces are zoned within 800 metres of our mass transit stations. This Transit Oriented Development (TOD) approach will help meet other provincial objectives that all political parties support, including:

- Fully leveraging tax-payer investments in transportation infrastructure with increased ridership;
- Economic development benefits from a more connected region (noted above);
- Carbon emission reductions as multi-family units are smaller and better protected from the elements, and people are more likely to walk, bike or take transit to destinations rather than cars;
- Improved public health (and thus lower health-care costs) as people are utilizing more active transportation options; and
- Improved affordability for households as multi-family units are smaller and vehicle ownership/commuting costs are lower for households in TOD areas (as detailed in the *Metro Vancouver Housing and Transportation Cost Burden Study: A New Way of Looking at Affordability*).

UDI continues to recommend that transit investments in local communities be linked to land-use changes commensurate with those investments. This could be accomplished through the further development and implementation of Transit Supportive Policies Agreements between TransLink and local governments that are signed when commitments for new transit are made. However, we believe these Agreements need to be improved, so they:

- ***Are binding on future Councils;***
- ***Include more specific housing targets that need to be achieved;***
- ***Are co-signed by senior levels of government that are providing much of capital funding; and***
- ***Include penalties if targets are not being met, such as reduced transit services or increasing the TransLink Property Tax.***

CleanBC STRATEGY

The Premier, the Hon. John Horgan, has made it clear that the Province's Climate Strategy, *CleanBC*, will be the centerpiece of British Columbia's economic recovery, stating "*When I announced our restart plan, I made it abundantly clear that the foundation of that plan was CleanBC*."

As noted in the previous section on linking transit investments with land use planning and outcomes, we can achieve a growing economy and meet our climate goals – as well as other objectives. There are other steps under *CleanBC* that the Government can take to reduce carbon emissions while supporting business and job opportunities – mass timber construction and green building technology. However, both will require government investments.

Mass Timber Construction

UDI is pleased that the Province is working with local governments and builders on the Tall Wood Initiative, so our members have the option to construct "*… encapsulated mass timber buildings up to 12 storeys in height*," and that the Ministry of Municipal Affairs and Housing has appointed an Assistant Deputy Minister of Mass Timber Implementation. We have been very supportive of this type of construction and have held several Breakfast Seminars and Webinars on the issue, and would be pleased to involve the Province in future events.

There are some clear advantages that Tall timber has over concrete and steel with regard to GHG emissions during construction (embodied carbon). "*The estimated avoided and sequestered greenhouse gases (GHGs) from the wood used in …*," the Tallwood House at Brock Commons "*… is equivalent to removing 511 cars off the road for a year. The total carbon dioxide equivalent avoided by using wood products over other materials is more than 2,432 tonnes*."

Mass timber construction would also assist B.C.'s forestry dependent communities due to the extensive use of wood. Economic development is and should also be as a result of new investments in production facilities for value-added prefabricated building components. This is already happening in communities such as Penticton and Castlegar.

The initial findings of the cost of tall timber construction range from 4% to 7% higher than concrete, but we anticipate that these costs will decline as more buildings are constructed and more project teams gain experience with tall timber buildings. One issue that we believe needs further exploration is how prefabrication can reduce construction costs and times. The prefabricated components could also be utilized to assist builders in meeting energy efficiency requirements noted in the next section.

Another issue that needs to be addressed is insurance. There is a wariness amongst some in the insurance industry regarding both mass timber buildings – and even six-storey wood-frame construction. This is critical to our members because in the last year strata insurance costs have been rapidly increasing, and this has added unforeseen substantial costs to homeowners.

UDI recommends that the Government invest resources in this emerging approach to construction by:

- ***Supporting local prefabrication/modular production facilities to supply the B.C. market and other jurisdictions;***
- ***Establish an approach to quickly certify mass timber products, so they can be used in projects without facing approval delays;***
- ***Improve the training of designers and construction trades, so they can become for familiar with this new type of construction; and***
- ***Converse with the insurance industry to resolve their concerns with mass timber construction.***

Building Energy Codes

UDI has been involved in the development of the *B.C. Energy Step Code* (*ESC*) since its inception in 2014, and we have sat on the Energy Step Code Council since its creation. We have also held numerous educational events on *ESC* to prepare our members for municipal and provincial energy requirements in new construction. Recently, UDI has also been working with Ministry of Municipal Affairs and Housing staff on the development of the proposed *Alterations Code* (the *Building Code for Existing Buildings*) that is anticipated to be in place by 2024.

While we are confident that our members can meet the lower steps of the *ESC* in Lower Mainland and the Capital Region, we are concerned about their ability to meet the higher steps without incentives being offered by the Province, utilities and municipalities. We are concerned that local governments may mandate the higher steps of the *ESC* without the needed incentives when the Province updates the *B.C. Building Code* (*BCBC*) with new energy requirements in 2022. This could be further complicated if additional requirements are made to reduce GHGs in projects at the same time.

To address these issues, UDI recommends that:

- ***The Province increase awareness of energy efficiency expectations for new and existing buildings through a public education campaign;***
- ***The Province and utilities provide substantial incentives for projects built at the higher steps of the ESC, in addition to a long term reduction in financial barriers through tax and fee reductions or rebates;***
- ***The Province work with local government to strongly encourage them to offer incentives – especially density increases – which would be especially helpful in the TOD areas noted above; and***
- ***If the GHG requirements are mandated for new construction, they be incorporated in a way, so that builders are provided options. For example, in several communities, proponents can build to a lower step of the ESC if they reduce carbon emissions.***

With regard to the *Alterations Code*, it is not clear how many owners will be able to afford to pay for substantial renovations to their buildings to improve energy efficiency, meet seismic standards or remove asbestos – without incentives – especially PBR owners.

As we discussed in our December 2019 letter to the Ministry of Municipal Affairs and Housing, we remain concerned that if the Province proceeds with the implementation of the *Alterations Code*, it could have a negative impact on housing affordability. Where major upgrades are required, we fear that they will be accompanied by substantial costs, which will be borne by

building owners (homeowners, strata owners and landlords) irrespective of their financial capacity or access to financing to fund the improvements. In the case of rental buildings, these costs will be passed on to tenants. If this is not possible, investment in needed new PBR projects would diminish – restricting the housing options for British Columbians.
In addition, newly upgraded buildings will add costs for commercial tenants. This may be less of a problem for established firms, but for start-ups the added costs may become an obstacle for them to find space. This challenge will be exacerbated by the COVID-19 pandemic, which has had a devastating impact on many small businesses.

UDI recommends that the Alternations Code not move forward without substantial incentive programs and financial mechanisms to fund the mandated improvements. This requires further discussions with building owners, tenants and businesses.

There are also steps that the Government can take that will assist builders and building owners with the *ESC* and the *Alterations Code*. ***As a first step, the Government could remove the current property tax disincentives for building upgrades. Currently, if energy efficiency improvements are incorporated into new projects or added to existing buildings, BC Assessment increases the valuations of them, which leads to higher property taxes.***

Another area where the Province could provide assistance is in skills training. We are deeply concerned that as we move to the higher steps of the *ESC*, and the *Alterations Code* is rolled out at the same time, the labour shortages builders have been facing will be exacerbated – adding costs for new construction and the upgrades mandated under the *Alterations Code*. As with mass timber construction, ***UDI recommends that the Province expand funding for designers and construction trades training as well as building officials, so we have a workforce that is ready for the future in green building construction. This will be especially important in the interior and the northern parts of British Columbia.***

CONCLUSION

In conclusion, we would like to thank you and the Select Standing Committee on Finance and Government Services for the opportunity to submit our recommendations for Budget 2021. We believe that the measures outlined above will support government objectives, including the creation of new affordable homes and assist in meeting provincial climate change goals. As British Columbia moves forward with the provincial restart plan, we hope that Budget 2021 will make the investments that are needed to support the building industry as we continue to build homes, offices, retail and industrial spaces across B.C.

We ask that you consider our recommendations, and we would be very interested in discussing them further should additional information be required. If you have any questions regarding our Budget Submission, please do not hesitate to contact me.

Yours sincerely,

Anne McMullin
President and CEO, Urban Development Institute

APPENDIX: PROPOSAL FOR THE ADDITIONAL PROPERTY TRANSFER TAX FOR FOREIGN ENTITIES & TAXABLE TRUSTEES EXEMPTION FOR BC FOREIGN CAPITALIZED BUILDERS (FCBs)

The UDI proposal would only apply to FCBs that are Canadian incorporated companies subject to tax on their building earnings in B.C. ("Canadian FCBs"). UDI estimates that there are approximately 25 established Canadian FCBs in the Province that would qualify for the proposed certificate noted below.
Canadian FCBs have been a key supplier of new housing inventory in the Province. Unfortunately, their continued contribution to the residential construction sector is under threat due to the FBT, which would single out their housing units for additional costs not faced by other builders. Our shared goal is to increase the housing supply in the Province and deliver more affordable housing to British Columbians. There are three components to the proposal:

1. Creating a B.C. Certificate for active foreign entity builder parent companies

UDI believes that it should be relatively easy to determine whether an applicant is a Canadian FCB with an established track record in the Province. UDI proposes two options for Canadian FCBs to confirm, to the satisfaction of the Ministry of Finance, that the company should qualify for a certificate as an active builder. That certificate would then be required to access our proposed exemption.

- Under Section 22 (see the language below), the first option would require that a foreign entity builder has developed two or more residential projects. The test for this is if a corporation has filed a *Real Estate Development Marketing Act* (*REDMA*) disclosure statement on a project that has reached the marketing stage, or completed construction of a residential property with five or more rental units. Note that to be able to market under *REDMA*, significant development milestones such as subdivision and/or strata approvals must have been achieved.
- The second option would require that a foreign entity builder has developed at least one project as described in the first option and the corporation, together with the corporations controlled by it, regularly and continuously employs at least five full time or equivalent employees in its residential marketing or development activities.

2. Mechanism to apply certification to projects

Under *Section 23* (also below) – in order for a company to qualify for an FBT exemption, the project proponent company (or partnership General Partner) will have to file a ministry form that illustrates that it is controlled by a company with the certificate (as obtained from *Section 22)*. They will also need to provide a copy of the certificate and a statement that the land to be purchased is for the purposes of development. UDI believes this process can be easily administered.

3. Mechanism for new foreign entity builder entrants

Section 24 (see below) applies to new entrants to the BC housing construction market that do not yet meet the requirements of *Section 22.* As such, it would apply where the Canadian FCB project company *intends* to construct five or more new residential units and is able to provide evidence of building activity at the time of purchase (as defined in the *Speculation and Vacancy Tax Act).* This new entrant will then request that the Minister accept a security as agreed upon by the administrator and the company. Once the new entrant meets the requirements under Section 22 (the *REDMA* or rental availability threshold) the security would be released. Of note, UDI believes that this process will be used infrequently as it would only be relied on during the initial project(s) undertaken by new entrants to the market.

PROPERTY TRANSFER TAX REGULATION
Part 4 — Additional Tax for Foreign Entities and Taxable Trustees
Division 2 — Exemptions and Refunds

17.1 Definitions [add to 17.1]

"British Columbia developer" means a corporation that meets the requirements of subsection 22(1);

"development property" has the meaning of that term in the *Real Estate Development Marketing Act;*

"qualifying transferee" means the following: **[after existing paragraphs (a) and (b)...]**

(c) in relation to an eligible transaction referred to in subsections 23 (1) and 24 (1) is a corporation incorporated in Canada which, if the Act and Regulations were applied without reference to those subsections, would be liable for the tax imposed under section 2.02 (3) (a) of the Act on the application for the registration of the transfer of the residential property that is the subject matter of the eligible transaction.

22. British Columbia developer [after existing exemptions in sections 18-21]

(1) A corporation incorporated in Canada is a British Columbia developer if

(a) on **[two or more]** occasions, in a specified area, the corporation, or a corporation controlled by it,

(i) has filed a disclosure statement under the *Real Estate Development Marketing Act* in respect of a particular property described in paragraphs (a), (b), (c), or (g) of the definition of "development property" **[NTD: five or more bare land lots, strata lots, leasehold units]** and that has become eligible for marketing in accordance with section 3 of that Act*;* or

(ii) has completed construction of a "residential property" with five or more "rental units" as defined in section 1 of the *Residential Tenancy Act*; or

(b) on at least one occasion, the corporation, or a corporation controlled by it, has undertaken one of the actions described in paragraph (a) and the corporation, together with the corporations controlled by it, regularly and continuously employs at least five full time or equivalent employees in its residential marketing or development activities.

(2) A corporation referred to in subsection (1) may at any time tender an application for a certificate evidencing that the corporation meets the qualifications for British Columbia developer under this section that

(a) is in the form required by the minister; and

(b) includes a consent, in the form required by the minister, by which the corporation consents to the administrator conducting inquiries respecting the corporation, and corporations controlled by it, that the administrator considers necessary to confirm the qualifications of the corporation for the purposes of this section.

(3) The minister shall, on a timely basis upon receipt of the application described in subsection (2), provide a British Columbia developer with a certificate evidencing that the corporation meets the requirements set out in subsection (1).

23. British Columbia development exemption – eligible transactions

(1) Subsection (2) applies to an eligible transaction if, on the registration date

(a) the transferee is a qualifying transferee that is, or is controlled by, a corporation that is a British Columbia developer as evidenced by a certificate described in section 22(3); and

(b) the residential property that is the subject matter of the eligible transaction is acquired by the qualifying transferee for the purpose of developing

(i) a "development property" as defined in paragraphs (a), (b), (c), or (g) in section 1 of the *Real Estate Development Marketing Act,* or

(ii) a "residential property" with five or more "rental units" as defined in section 1 of the *Residential Tenancy Act.*

(2) Subject to subsection (3) and section 24, a qualifying transferee who applies for registration, at a land title office, of an eligible transaction to which this subsection applies is exempt from the obligation to pay tax under section 2.02 (3) (a) of the Act on that transaction.

(3) A qualifying transferee referred to in subsection (2) must tender with the application for registration of the eligible transaction and an application for an exemption under this section that

(a) is in the form required by the minister; and

(b) includes a consent, in the form required by the minister, by which the corporation consents to the administrator conducting inquiries respecting the corporation that the administrator considers necessary to confirm the qualifications of the corporation for the purposes of this section.

24. British Columbia development security and refund – eligible transactions

(1) Subsection (2) applies to an eligible transaction if, on the registration date

(a) the residential property that is the subject matter of the eligible transaction is acquired by a transferee that is a qualifying transferee for the purpose of developing

(i) a property described in paragraphs (a), (b), (c) or (g) of the definition of "development property", or

(ii) a "residential property" with five or more "rental units" as defined in section 1 of the *Residential Tenancy Act;* and

(b) the qualifying transferee has commenced a "building activity" in respect of the residential property within the meaning of section 40 of the *Speculation and Vacancy Tax Act.*

(2) Subject to subsection (4), upon the written request of the qualifying transferee, the minister shall accept security, in such form as it is acceptable to the administrator in lieu of the payment of the tax imposed under section 2.02 (3) (a) of the Act on that transaction.

(3) Subject to subsection (4) upon completion of one of the actions described in paragraph 22 (1) (b), the minister shall release the security described in subsection (2).

(4) A qualifying transferee referred to in subsection (2) and (3) must tender with the application for registration of the eligible transaction, and at the time of the completion described in subsection (3) and an application under this section that

(a) is in the form required by the minister, and

(b) includes a consent, in the form required by the minister, by which the corporation consents to the administrator conducting inquiries respecting the corporation that the administrator considers necessary to confirm the qualifications of the corporation for the purposes of this section.

(5) If an application for a refund under subsection (3) is refused, the administrator must send a letter to the applicant stating the reason for the refusal, and the letter is deemed to be a notice of assessment made under section 18 of the Act for the purposes of allowing the applicant to file a notice of objection under section 19 (1) of the Act.

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Dear Ms. Tseng

Re: UDI Comments on the Evaluation of Land Value Capture and Urban Development as Sources of Revenue for TransLink Draft Report

The Urban Development Institute (UDI) would like to thank TransLink for the opportunity to discuss and comment on the draft Coriolis Report on the *Evaluation of Land Value Capture and Urban Development as Sources of Revenue for TransLink*. We recognize that transit expansion is important for the Region – and our members who are locating commercial and residential projects near transit stations. UDI conditionally supported the creation of a TransLink Development Cost Charge (DCC), and we have always strongly endorsed TransLink developing its surplus lands as well as municipalities sharing their Community Amenity Contributions (CACs) and Density Bonusing (DB) revenues with TransLink. However, we are concerned about one proposal in the Coriolis draft Report - imposing an Annual Benefiting Area Tax (ABAT) on properties near TransLink services.

Strategic Acquisition and Disposition of Land/Participation in Urban Development Projects

For many years, UDI has supported two key revenue options that are recommended in the Coriolis Report as approaches that should be considered:

- TransLink strategically acquiring sites during the building of transit lines and then selling them; and
- TransLink taking these sites and developing them with partners.

Over time, both of these options could provide substantial revenues to TransLink, and they create "*… opportunities to include affordable housing and control the form and character of development so that it is supportive of walking, cycling, and transit ridership*." TransLink would have the advantage of being able to purchase sites early in the process (ideally at a lower price) close to future valuable transit infrastructure.

As noted in the Report, cities like Hong Kong have successfully funded "… *transit infrastructure through involvement in urban development at stations*." While we do not see TransLink being able to achieve the same densities or revenues from development as Hong Kong, there are certainly revenue opportunities from the disposition of sites and development that need to be further reviewed.
UDI supports the approach adopted by transit organizations in Seattle, Los Angeles and Calgary of looking "… *for strategic land acquisition beyond infrastructure needs* …". We are pleased that Coriolis also identified development opportunities from TransLink partnering with BC Hydro and the Province who own some of the stations. We agree that "… *air rights above transit facilities* …" and working with BC Hydro to take advantage of "… *locations along the Expo line right of way* …" should also be considered as a potential revenue sources.

In addition to these opportunities, UDI believes that the approach in Edmonton to build and later redevelop park-and-ride sites should be considered. Future park-and-ride facilities need to be considered for SkyTrain stations in suburban locations that have infrequent bus services – especially if mobility pricing (which UDI also supports) becomes revenue tool. Commuters will need an option to park and take transit to their workplaces. These facilities can then be redeveloped as these suburban communities urbanize and receive better bus services.

We agree with Coriolis that in terms of development, building up a portfolio of commercial and rental assets, would be the best way to grow a stable revenue stream for TransLink. This is the approach taken by pension funds for the same reason.

We also believe there may be an opportunity to gain local government support if the revenues generated from sale of land and/or development in a municipality are used to fund transit services and build affordable housing in that community. At the same time, it is important that TransLink have the opportunity to gain from the sale of sites and/or development. It would be a missed opportunity if TransLink had to provide a significant percentage of the land lift from rezonings of its properties to local governments. We recommend that the Project Partnership Agreements (PPAs) negotiated between TransLink and local governments receiving transit investments address the issues of what revenues from rezonings TransLink should receive and how the overall revenues from disposition and development are spent. Mechanisms could also be created in these Agreements to mitigate the approvals risk factor noted in Section 2.5.2.

If TransLink, through the PPAs, were allowed to build larger projects on their sites, this may assist in other projects obtaining approvals. This has been identified by our members as an advantage to having public sector projects near their sites.

Many of our members have long expressed interest in purchasing sites from TransLink and/or partnering with them in development projects. UDI would welcome the opportunity to work with TransLink regarding how it could best enhance its revenue opportunities in this regard.

Sharing Community Amenity Contribution and Density Bonus Revenues

UDI has advocated for many years that the millions of dollars of Community Amenity Contributions and Density Bonuses that municipalities have extracted from projects near TransLink's services should be shared with that organization. We agree with the assessment that "*Transit, therefore, has a major role in creating the urban economics circumstances that enable*

density bonusing and rezoning to provide public benefits, which means a compelling case can be made for TransLink to have access to some of this revenue potential." Some of the highest CACs in the Region are along the future Millennium Line Broadway extension to Arbutus Street where the Development Contribution Expectations range from $330/ft^2 to $425/ft^2.

These CAC and DB revenues may even be higher than reported in the Coriolis Report, which were estimated to be in the range of $660 to $690 million in 2017 and 2018 in Vancouver, Surrey, Coquitlam, Burnaby, Richmond, West Vancouver, and the District of North Vancouver. However, in 2018 alone, the City of Vancouver obtained over $70 million in cash-in-lieu CACs and over $700 million of public benefits were secured through approvals of additional density – although some of this value is "*… to be collected and/or delivered in future years*."

Depending on the approach taken, municipalities may not lose money through the CAC/DB revenue sharing; especially if TransLink used the funding for capital infrastructure to expand its network and services in the communities where the revenues are collected. If, for example, City of Vancouver CAC/DB revenues were spent on extending the Millennium Line west of Arbutus Street to UBC, this would provide the municipality with more opportunities to plan for higher density projects and receive the corresponding CACs/DBs along that portion of the future Extension.

UDI has one caveat to our support of sharing of Community Amenity Contributions and Density Bonuses. We do not believe that the rates should be increased to pay the additional revenues to TransLink. Most municipalities are already maximising their CAC/DB rates – especially near transit stations. For example, City of Vancouver staff recently noted in Report to Council that "*After taking into consideration development risks, public interests and a reasonable developer profit, CACs generally represent 75% of that increase in land value resulting from the proposed rezoning*." UDI would be concerned if increased CAC and DB rates undermined future building activity. Not deterring development is also a Guiding Principle of the City Vancouver's *Financing Growth Policy*.

Substantially increasing CACs and DBs would be particularly problematic for builders who have already purchased sites and made financial arrangements based on established municipal fees and charges. It would be very difficult to make adjustments. As a result, projects may become unviable and then delayed or cancelled – unless housing prices/rents can be adjusted upwards to accommodate the higher costs. None of these alternatives have a positive impact on affordability.

We would also not support the notion of "*… a TransLink-specific CAC to be applied to rezonings around major transit investments*," unless it came with a value proposition. One way CAC/DB revenues could grow would be to increase the density of sites (and therefore the CACs and DBs). This is an approach UDI would support, as it would be mutually beneficial. Local government revenues would not be lost, TransLink would earn more revenues from the CACs/DBs and increased ridership, and there would be little to no financial impact on builders.

In our letter on Phase 1 of *Transport 2050,* UDI supported an approach in which TransLink would receive a Density Bonus from proponents whose strata sites would benefit from an increase in FAR. There would still be room for local governments to obtain revenues from CACs and Density

Bonuses by increasing the densities further. Such an approach could be addressed through the PPAs.

Annual Benefiting Area Tax

UDI is concerned about the ABAT, in part, because of the history of the TransLink DCC. In a January 16, 2018 letter from TransLink, we were assured that "*Should an increase to the DCC rates above inflation be considered by the Mayors' Council for incremental funding for future Investment Plans, substantive consultation would need to be undertaken as a requirement of the expected legislation*." Before the DCC legislation was approved by the Province, and only three months after the original tax and rate was approved by the Mayors' Council, the DCC rate was increased 30% with no consultation with builders who were given three hours notice. As noted in the Coriolis Report, "*The legislation gives TransLink the ability to vary rates in the future if deemed appropriate*." The DCCs just came into effect a month ago, and TransLink is already seeking additional revenues from the real estate sector. In addition, Translink is receiving significant new revenue due to non-market revenue on assessment roles from rezonings and new construction.

In addition, builders are facing a number of economic pressures imposed by all levels of government at this time, including:

- A proposed Federal Vacancy & Speculation Tax on Residential Properties;
- Ongoing Federal restrictions on mortgage lending such as the 2018 "stress test" imposed by the Office of the Superintendent of Financial Institutions;
- The *Budget 2018* provincial taxes that apply to development lands, including the Additional School Tax and the "Luxury" Property Transfer Tax;
- A proposed future Metro Vancouver water DCC on top of a 2018 Greater Vancouver Sewerage and Drainage District DCC increase of up to 200% for some projects;
- Substantial increases to DCC, CAC and DB rates in several municipalities; and
- Increasing requirements for new projects such as the B.C. Energy Step Code and Electric Vehicle Charging Infrastructure.

Adding additional costs on top of this will undermine our members' ability to provide housing options to Metro Vancouver residents. We have seen a 42% decline in building activity between November 2018 to November 2019; falling from $1,067.8 billion to $618 billion.

In the Report, the argument is made that project proponents gain increased land values if their sites are near transit. While we acknowledge this, it is also true that TransLink benefits from development near its stations. New housing, office and retail drives ridership growth and with that, fare box revenues and tax revenues increase for all levels of government. This symbiotic relationship has not been taken account in the draft Report.

We are also concerned about the impact such the ABAT would have on Landlords. Rental properties near transit are already facing high valuations from BC Assessment and high property taxes because of the prospect of redevelopment. However, in many cases, the ability to landlords to benefit from redevelopment is limited because of municipal restrictions; for example, the City of Vancouver's "Rate of Change" Policy.

At the same time, landlords face provincial restrictions on passing on these higher taxes (as well as other rapidly growing operational costs) to tenants because of provincial rent controls. The rent controls in the *Residential Tenancy Act* were further tightened as the annual rent increases have been restricted to CPI – which is 2% below the previous allowable annual increases. As such, increases in taxes beyond the inflation rate, including the ABAT, cannot be passed onto to renters until units are vacated. It would be problematic if ABAT exacerbated the current problem – especially at a time when many market rental projects, such as Case Study #2 in the Report, are not viable.

Commercial owners/tenants along mass transit lines are also facing rapidly escalating taxes, and many are facing a double hit. Their properties are valued as if the unbuilt density above their actual buildings will be strata residential – the highest real estate value. However, this density is also classed as commercial – which has more than four times the mill rate as residential strata in some municipalities. Already many retail shops are closing as the Province and local governments negotiate a solution. This would not be the time exacerbate the problem with the ABAT. The short term impacts of this are identified in Section 6.1.1. of the Report.

It is noted in that section: "*The impact of property tax in the long run is to reduce the market rent that can be charged by landlords*." This would have the effect of discouraging commercial spaces from being built. While this has not been an issue in the central core of Vancouver, it is a significant concern in the rest of the Region. Suburban communities are having difficulty establishing office districts – even in areas well served by transit – and retail is going through substantial restructuring because of online competitors.

One potential option listed in the Report is "*Including properties in Frequent Transit Corridors served by buses in the definition of benefitting areas*." Given that the premium associated with bus networks is far less than around rapid transit station areas, we would strongly advise against this. In addition, unlike fixed rail transit, bus routes can change quickly, so residents and businesses who pay the ABAT for years may see their transit services diminish.

We are also concerned that TransLink is seeking to collect the tax in areas already served by transit. While the Report supports the notion that properties near transit receive a benefit and increased land values because of the proximity to stations and services, these benefits and increased values have already been priced into those properties. Purchasers of these sites have already paid for the advantage of being near transit and now will be mandated to do so again through the ABAT. In addition, they have paid for increased annual property taxes (and in many cases the Additional School Tax) because of high property values. For the same reason, higher Property Transfer Tax rates are also applied to these sites.

This would discourage commercial and rental development further, as both have investment time horizons that last decades. Builders and lenders of these projects have to trust that the tax and regulatory regime will remain stable over time. A surprise new tax would increase risks for them – especially given the track record of the TransLink DCC noted above.

If TransLink does proceed with this ABAT proposal, we strongly recommend that it be applied only to areas where new transit services are provided. This also has to be clearly communicated to builders and prospective buyers in advance of transit infrastructure funding announcements.

Otherwise, the land market will adjust, and purchasers may face the prospect of paying for the benefit of being near transit twice.

At the same time, TransLink has to consider that the prospect of higher annual taxes may generate a NIMBY reaction to new transit projects. Some residents are already concerned about the changes new transit lines could bring to their communities. Adding a tax would provide them with another reason to oppose transit expansion.

There is also the issue that residents and businesses are being financially punished for living, working and providing services in areas where we as a society want them to locate. They need to be near transit to reduce greenhouse gas emissions; fully leverage multi-billion dollar infrastructure investments; reduce congestion; and make it easier and cheaper for governments to provide services them. We would not want a situation in which people, businesses and developments are incented to move outside of the ABAT taxing areas where the transit services are. TransLink, for example, would likely not want to encourage new office parks away from transit.

For these reasons, TransLink should be wary of implementing the Annual Area Benefiting Tax. Its impact on rental and commercial spaces needs to be seriously considered. If TransLink does move forward with ABAT, it should only do so in areas where new transit infrastructure is being built. We would also advise that landowner associations such as LandlordBC, the Condominium Home Owners Association, NAIOP, Business Improvement Areas and the Building Owners and Managers Association be extensively consulted.

UDI recommends that the other revenue options – the strategic acquisition and disposition of land, partnering in the development of TransLink sites, and the sharing of CAC/DB revenues - be considered first. We look forward to working with TransLink, local governments, and other stakeholders regarding how best to increase TransLink's revenues to expand its critical transit system.

Yours sincerely,

Anne McMullin
President & CEO

Hi Zac,

Urszula and I are preparing a s.12 . I was hoping we could connect with you regarding s.13
s.13 As a start would you be able to share the economic dashboard and the BC Hydro survey results, if you have them (as soon as possible would be much appreciated). We're also aware of the CHBABC survey of members, as well as UDI work on this (although to be truthful I haven't looked at that recently). Is there anything else you would suggest?

Thanks,
Lee

Thanks Lee.

Sounds like BC Hydro has already surveyed local governments on this topic and are pulling the data for us.

This is for the July version of the economic dashboard tracking covid impacts. Trying to find some metrics that we can easily track month to month.

Best,
Zac

Hi Zac – I suspect we'd need to enquire with individual LGs, but UDI and CHBABC may be doing some tracking. A few weeks ago I participated in an RPAC meeting (Regional Planning Advisory Committee – all of the directors of planning from Metro) and there was some mention of volume of applications during COVID. It was all anecdotal with no actual numbers, though.

Can I ask what you're needing the info for?

Hi Jessica,

Are you aware of any efforts to track monthly permit data from LGs to measure COVID impact? We have data from Vancouver and Technical Safety BC, but would be good to get some regional samples to tell the full story.

I have reached out to the Step Code LG peer network to see if they have anything. We might just do some cold calls if required.

Thanks, Andrew. I can't remember if I shared it, but below is the brief DAPR recovery proposal, which lists housing as a development type. There is certainly potential for alignment and I'll be interested to hear Jessica/Jennifer/Silas' thoughts.

Acceleration of Development Approvals Improvement Projects

The development industry is comprised of good paying skilled jobs (residential development accounted for $12B in wages in 2017) and was impacted by COVID-19, including the slowdown of projects, uncertain labor supply, and issues with the supply chain. Leveraging the 2019 engagement findings and working with a range of stakeholders, this proposal would accelerate a suite of projects to improve the efficiency of the development approvals system, stimulate development and jobs ranging from higher cost projects that prioritize expediting certain types of development (e.g. housing, mass timber, local industries) and making systemic impacts (e.g. electronic application tracking and permitting systems, provincial permitting portal), to lower-cost regulatory changes that will streamline and transform development processes (e.g. streamline zoning, development finance tools).

Estimated cost is $12-15M, with the initiative championed by MAH, UBCM and UDI; joint effort and provincial streamlining benefits through partnerships with MOTI, ENV, JEDC, and FLNRORD.

Hello Zachary,

I hope you're keeping well. In 2016, UDI was part of a working group on fire sprinklers that provided recommendations around how this issue would eventually return to Provincial jurisdiction. Given that some time has passed since then, are there any plans underway to make changes to the administration of fire sprinkler regulations in the near future? If not currently underway, do you anticipate that there is still an appetite to make the changes?

As context, this issue was recently brought to us by a (non-UDI member) builder operating in a municipality where a local Bylaw is in place with requirements over and above those contained in the BC Building Code.

If you are able to provide any information on this please don't hesitate to give me call.

Subject: Question: UDI-Capital Region and Okanagan rep for Step Code Metrics Report update

Hi Jeff,

Scott and I are looking for regional representation for a steering committee that's updating Step Code Metrics Research Report. Would you have suggestions for a person from UDI-Capital Region and -Okanagan who could sit on such a committee over the summer and fall?

We're working on a formal invitation, but to give you some context, a draft excerpt is below:

Scope of Work

To meet CleanBC objectives, the Province is proposing changes to the BC Building Code in 2022, which includes a 20% improvement in energy efficiency over the current base code requirements and evaluation of overheating risks for both Part 9 and Part 3 buildings using future climate files. In anticipation of these upcoming changes, we are looking to form a Steering Committee to help guide the process of retaining a contractor to both update the Metrics Research Report and provide technical analysis regarding how the 20% baseline improvement lines up with the existing steps within the Step Code for the various archetypes. We anticipate that the steering committee will incorporate industry professionals, provincial and local government representatives, developers, service organizations, professional associations, utilities, and Crown corporations to provide guidance and expertise.

If you or a delegate can contribute to this work, please fill out this Metrics Report Doodle poll with your availability. *You don't have to attend every meeting, but we want enough input from a broad range of sectors at each meeting to ensure success.*

The kick-off meeting for the Metrics Report Steering Committee will:

- *Consider a proposed scope of the Metrics Report Update and 20% better analysis from BSSB*
- *Determine our meeting frequency and meeting dates over the summer (ideally a standing time)*
- *Discuss contracting and resourcing needs*
- *Introduce and invite participants to Microsoft Teams*

Happy to hear suggestions.

Hi Zachary,

Thanks very much for the insight, and we're glad that this is still something that the Ministry plans to address in the future.

This answers the questions that we had.

Have a great weekend,
Cassandra

Hi Jeff,

There hasn't been much progress on that file for several reasons, mostly because every potential solution will have complex reactions from local governments and industry. I think it's unlikely we will make significant changes in the next year, although it's clear we need to resolve the issue at some point because local governments haven't been able to make new bylaws or update their bylaws since 2017 under the Building Act. Happy to discuss further if you have specific questions.

Best,
Zac

Hello Zachary,

I hope you're keeping well. In 2016, UDI was part of a working group on fire sprinklers that provided recommendations around how this issue would eventually return to Provincial jurisdiction. Given that some time has passed since then, are there any plans underway to make changes to the administration of fire sprinkler regulations in the near future? If not currently underway, do you anticipate that there is still an appetite to make the changes?

As context, this issue was recently brought to us by a (non-UDI member) builder operating in a municipality where a local Bylaw is in place with requirements over and above those contained in the BC Building Code.

If you are able to provide any information on this please don't hesitate to give me call.

Thanks,

Jeff Fisher, M.PL., CAE, MCIP, RPP
Vice-President and Senior Policy Advisor

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Thank you all for sharing your time and insights with us at the Climate Emergency Big Move 4 External Advisory Committee (BM4EAC - focused on zero emissions retrofits) at the end of June. Attached is the deck from that meeting – if you'd like to refer to it or discuss with your members/stakeholders please feel free to do so.

We covered a lot of material and there were many voices at the meeting but nine of the big take-aways included:

1. A **clear signal** for industry of future requirements **will be essential to success**. Owners and industry will need 5-10+ years to prepare for and successfully transition. For such a signal to be effective, stakeholders will have to believe it is real and hear the same or similar signal from multiple different sources consistently over time
2. There are **real barriers to fuel switching for some buildings that need to be addressed** before regulations that mandate these changes can be broadly implemented
3. **No single regulatory approach will work** for all buildings/owner types so a mixed approach should be explored. That said, **maximum flexibility for timing and showing compliance is very important** so a whole building GHG limit (where possible) would have the best chance of succeeding.
4. Regulations, support programs, and communications must seek to **maximize the synergies** between building investments/renewal, health (IAQ), resilience & comfort, safety, and climate action to overcome barriers and inertia to change
5. Most owners (especially home owners) will not be building energy experts and will need support and tools to **simplify information and help them take informed decisions**
6. Designers, contractors, and suppliers can create serious challenges or be the most powerful sales force. Support for the development of **workforce capacity, qualifications and motivation will be essential to success**
7. **Many of the highest emissions buildings may be owned by those with least resources to act but *cannot be ignored***. Understanding and addressing this tension will be important. That said, caution must be exercised about requiring or making large investments towards substantial improvements for buildings that may not realistically be retained over the long term.
8. **New ways of financing long payback improvements** will help reduce friction and may be essential for some owners
9. In some circumstances, **grid connection costs and complications/delays** will make fuel switching very challenging. City must collaborate with BC Hydro to address these issues.

As indicated, we are having follow-up meetings with smaller groups of experts and stakeholder to explore some of these issues and how they pertain to specific building types. We hope to have a DRAFT strategy that begins to address the points above while still setting Vancouver on a path to reduce emissions 50% by 2030 for discussion with you in late August/early September. I will work with Winnie to get a placeholder invitation out for that meeting soon – as there will be even more material to cover then, we will ask you to hold up to four hours in your calendar but aim to develop an agenda that will allow the meeting to be completed in three.

If you have any questions, ideas, or suggestions on who else should be represented on this committee please let Micah or I know and look forward to meeting with you all again at the end of the summer! Stay well until then and do get outside – it's why we do this work after all.

CLIMATE EMERGENCY BIG MOVE 4

By 2025, all new *and replacement* heating and hot water systems will be zero emissions

2016 Zero Emissions Building Plan

Focus initially on new buildings because:

- **50% fewer buildings to retrofit by 2050**
- **City growth does not increase overall emissions**
- **Rapid growth in knowledge, skills and supply of high performance building elements and equipment**

Vancouver's Zero Emissions Building Plan established the ground work for the BC Energy Step Code

Timeline for Energy Efficiency Regulatory Requirements in the BC Building Code

Here's what the province's CleanBC plan will mean for new-construction requirements.

	PART 9 BUILDINGS	PART 3 BUILDINGS	NET-ZERO ENERGY-READY
2032	STEP 5	STEP 4	UP TO: 80%
2027*	STEP 4	STEP 3	40%
2022*	STEP 3	STEP 2	20%

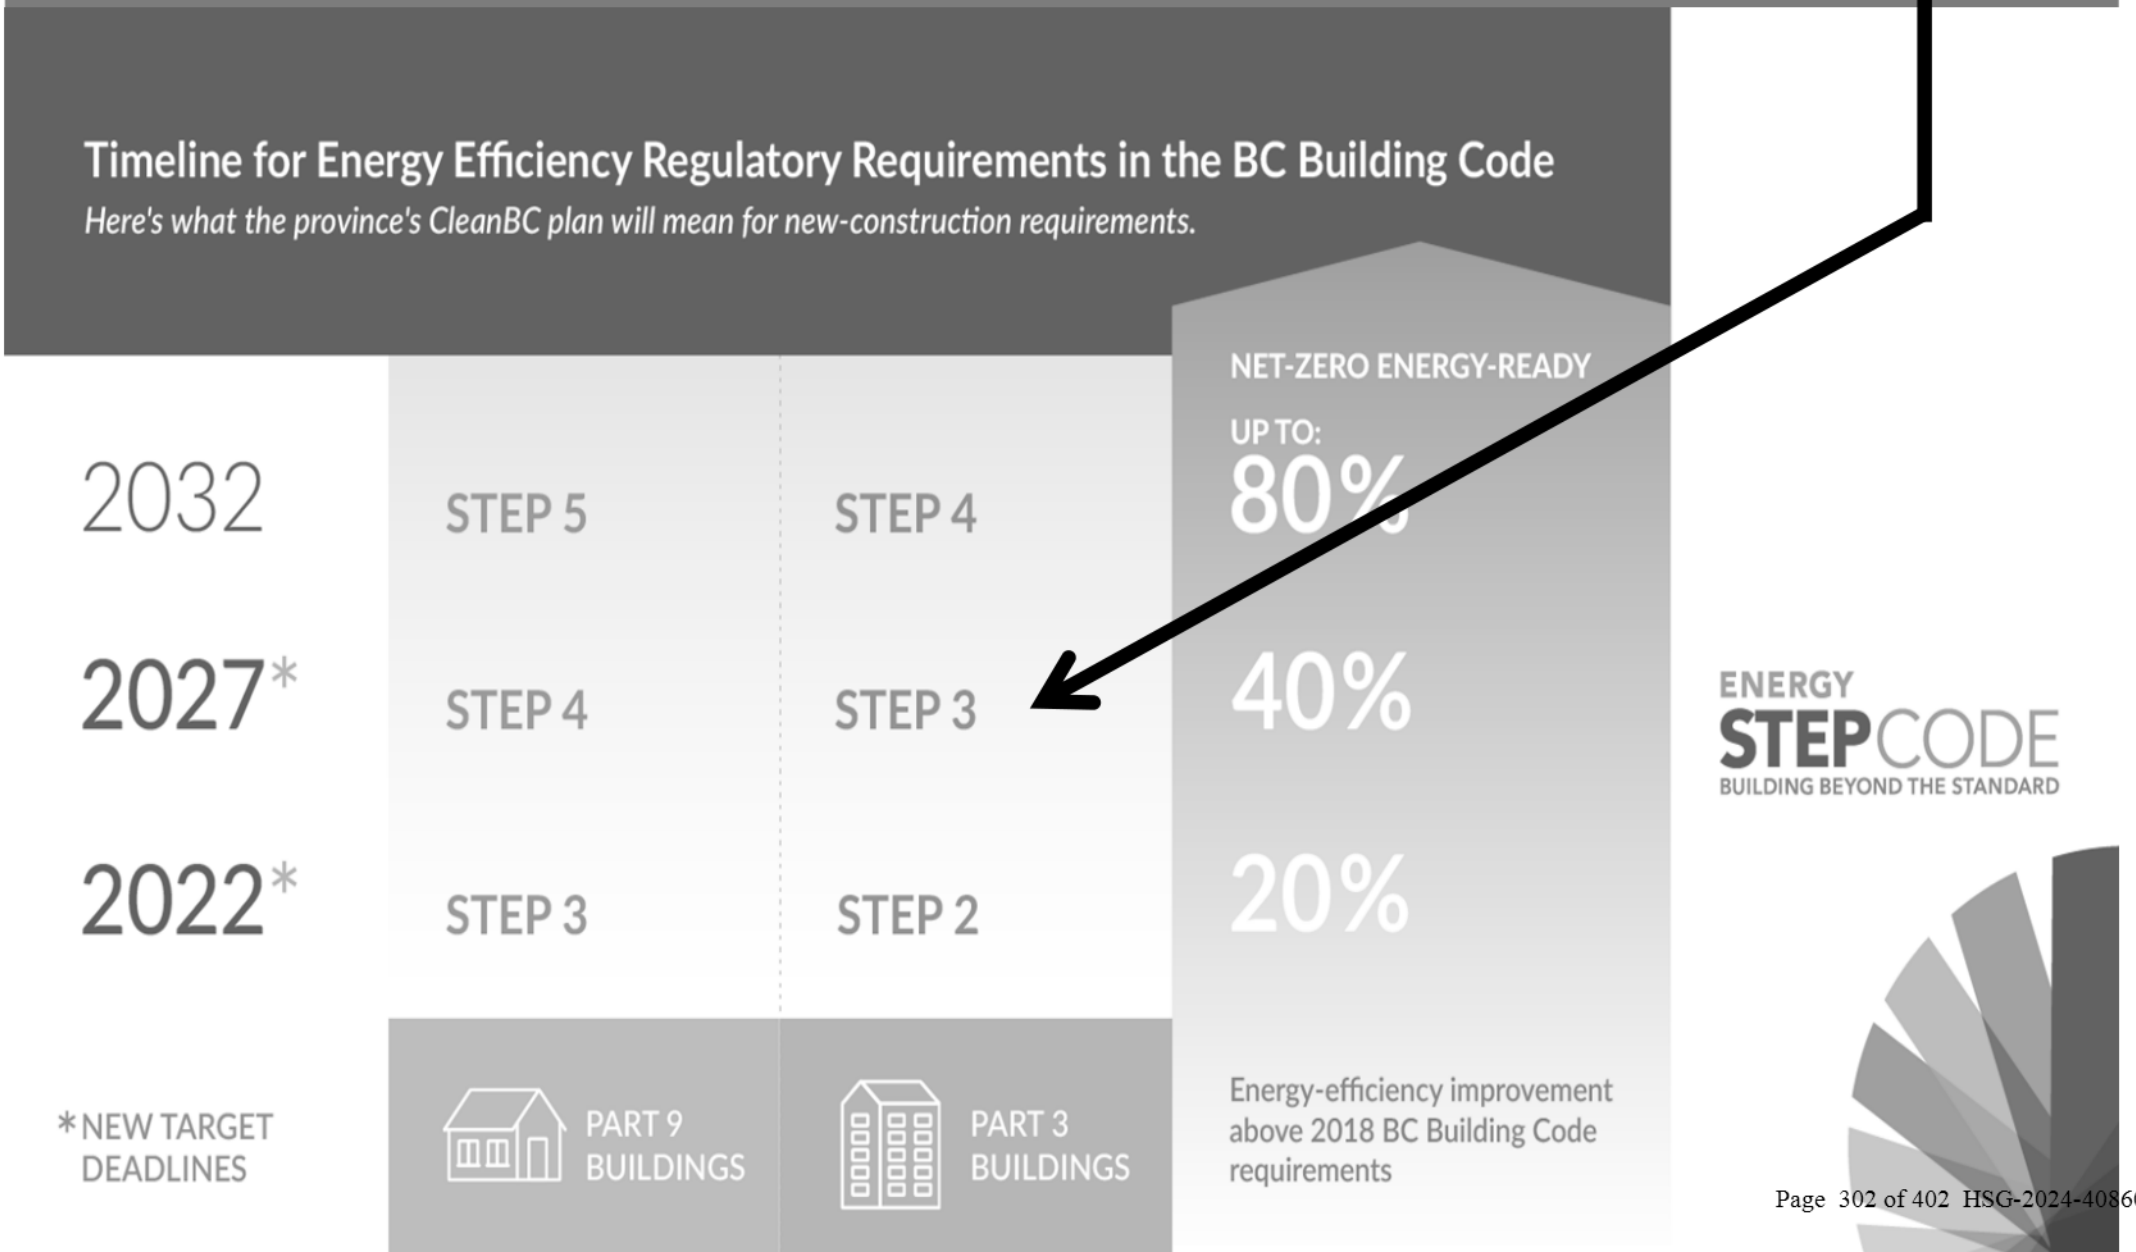
*NEW TARGET DEADLINES

Energy-efficiency improvement above 2018 BC Building Code requirements

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

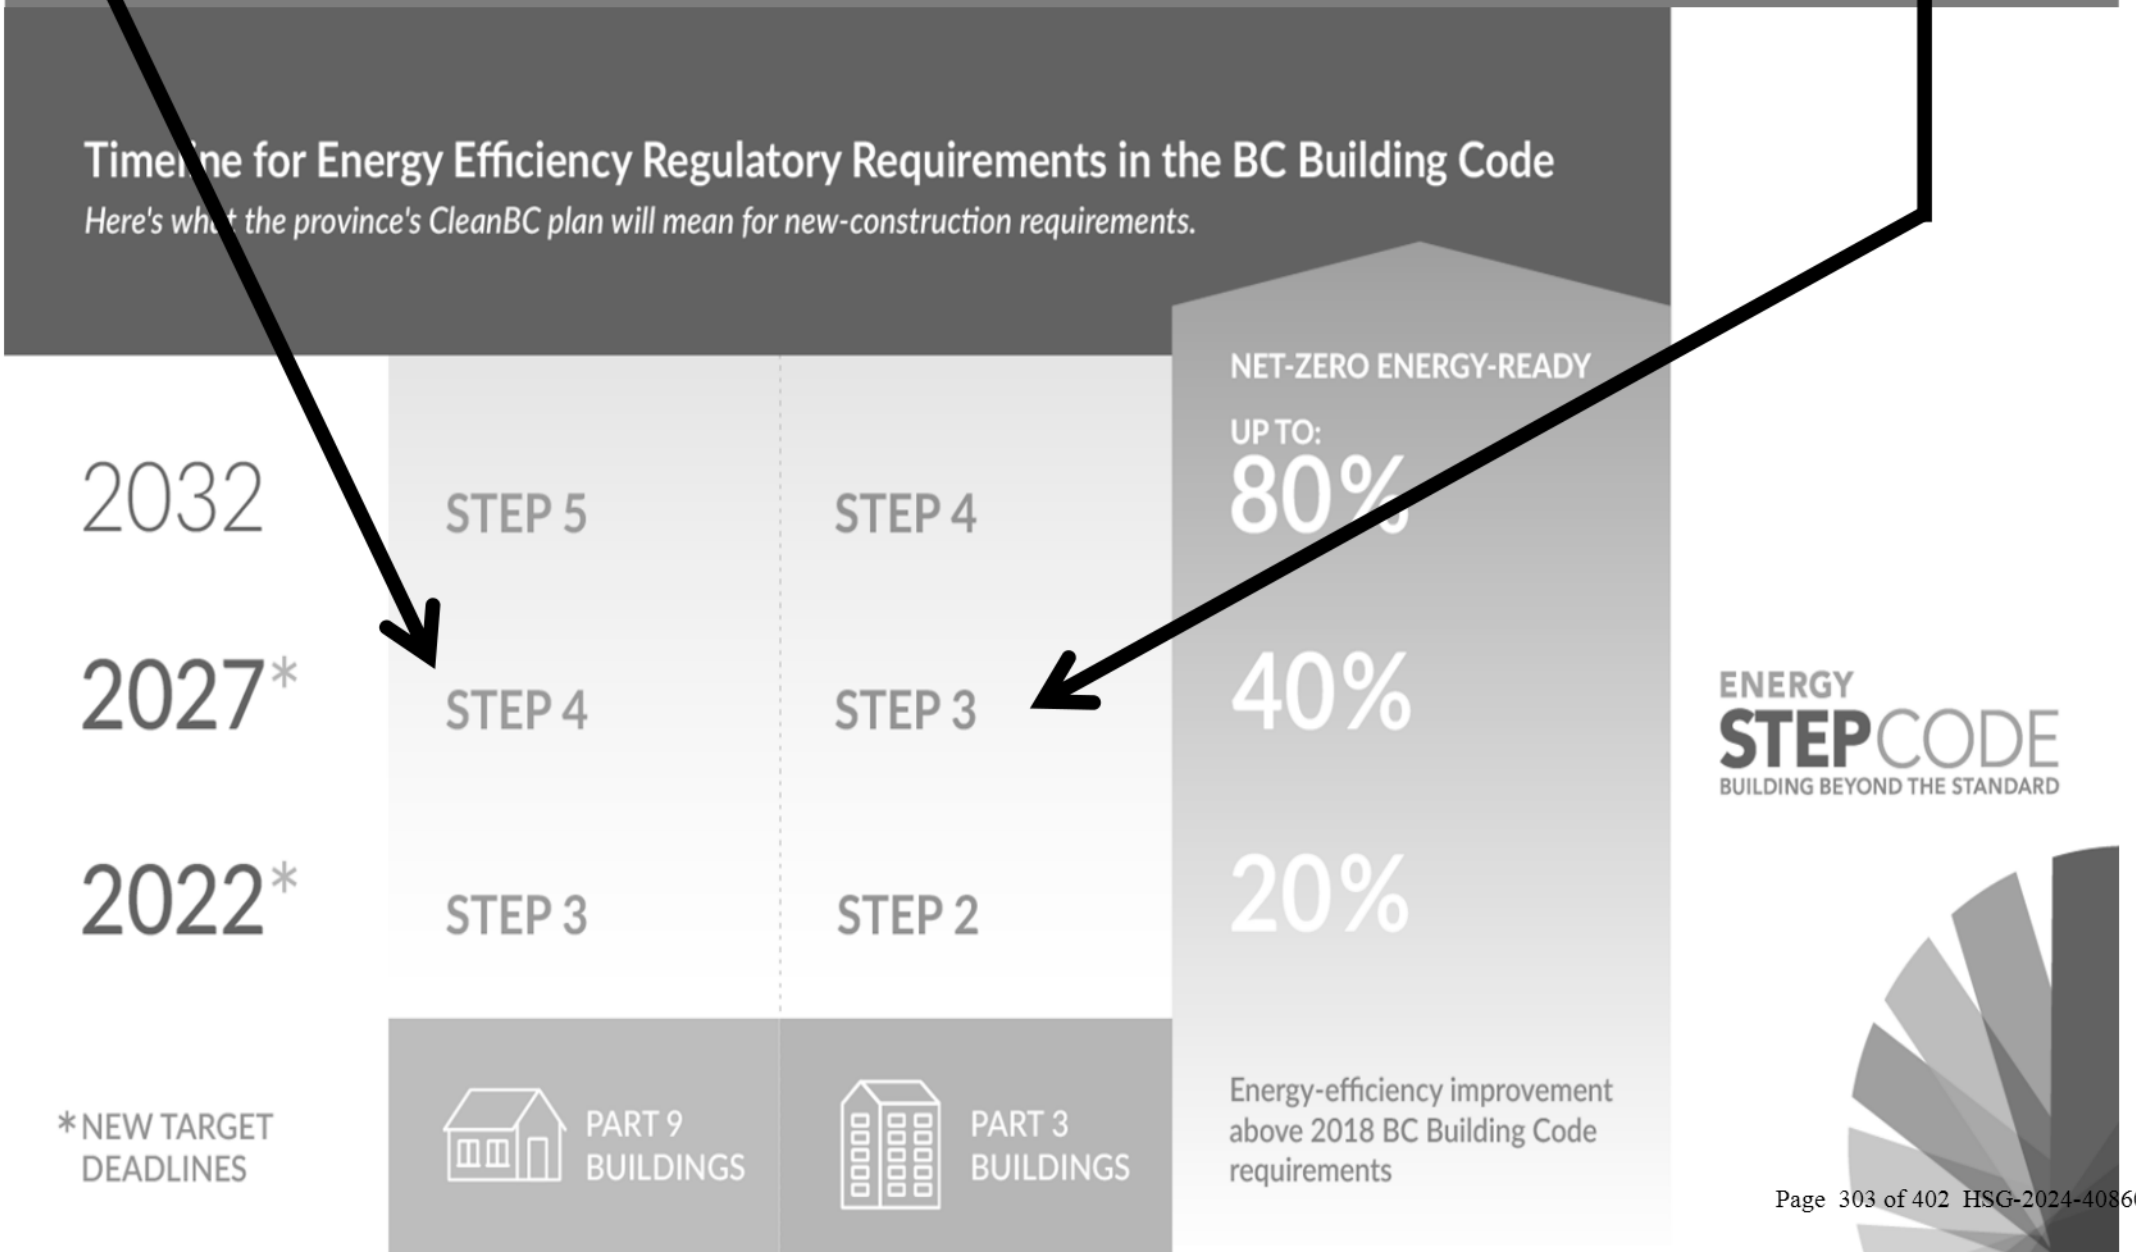
Jun 2021: VBBL for Part 9 at Step 3 with GHGi = 6kg/m2

\+ Consultation on Rezoning Policy updates for zero emissions heating and hot water Fall 2020



Jun 2021: VBBL for Part 9 at Step 3 with GHGi = 6kg/m2

Jan 2022: VBBL for Part 9 at Step 4 with GHGi = 3kg/m2



VANCOUVER IS NOT ALONE

- BC Energy Step Code is world class example of collaborative action
- Wide spread declarations of climate emergency in MetroVancouver; many focus on renewable energy for heating and hot water
- CleanBC and national Build Smart aiming at heat pump equipment standards by 2035
- Metro Climate Neutral 2050 Buildings Roadmap underway
- Collaborative Building Electrification Roadmap nearing completion
- Trades capacity studies and grid capacity research will be completed next month

ROLE OF THIS COMMITTEE (BM4EAC)

By 2025, all *new and* replacement heating and hot water systems will be zero emissions

1. Develop a shared understanding of the technical, economic, and social challenges of deep retrofits in existing occupied buildings
2. Provide input into a plan of action to successfully achieve Big Move 4; **OR** a plan that would result in retrofits of existing buildings to reduce emissions 50% by 2030
3. Provide advice on balancing tradeoffs
4. Facilitate understanding and information flow between the City and your stakeholders
5. Participate in three meetings (Jun, Sep, Oct)
6. If possible; support the Zero Emission Building Retrofit Plan recommendations to Council as part of the Climate Emergency Action Plan in November, 2020

OPPORTUNITIES FOR ADDITIONAL INPUT

BC Building Electrification Roadmap

- *Tomorrow 9 AM – 4:30 PM:* Workshop #2
- To Register: https://www.eventbrite.ca/e/bc-building-electrification-road-map-workshop-2-tickets-106968234870

STRATEGY STARTING POINT:
APPLY THE LESSONS OF THE BC ENERGY STEP CODE

Timeline for Energy Efficiency Regulatory Requirements in the BC Building Code

Here's what the province's CleanBC plan will mean for new-construction requirements.

	PART 9 BUILDINGS	PART 3 BUILDINGS	NET-ZERO ENERGY-READY
2032	STEP 5	STEP 4	UP TO: 80%
2027*	STEP 4	STEP 3	40%
2022*	STEP 3	STEP 2	20%

*NEW TARGET DEADLINES

Energy-efficiency improvement above 2018 BC Building Code requirements

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

STRATEGY FRAMEWORK – LESSONS FROM THE STEP CODE

1. **Clear and consistent requirements that step up over time**
   - Raises awareness; initiates capacity building
   - Enables an orderly transition
   - Catalyzes voluntary action/incentive uptake
   - Ensures outcomes

2. **Support Voluntary Leaders**
   - Use incentives (time, certainty, money)
   - Create demand for high performance goods and services
   - Identify barriers

3. **Remove Barriers**

4. **Develop Capacity**
   - Training and certifications, best practice guides, peer exchange

PRINCIPLES OF A REGULATORY STRUCTURE

1. Clear and consistent signal to catalyze/enable planned transition
2. Align with planned or required building investments
3. Maximize owner flexibility
4. Simplify permitting
5. Equitable: lower requirements/more support for those with higher barriers
6. Achieve real and substantial GHG reductions by 2030

ELEMENTS OF A RETROFIT REGULATION

Structure

- Prescriptive equipment minimum efficiencies
- Prescriptive upgrades (Upgrade menu mechanism)
- GHG Budget/Performance – total GHGs or GHG-intensity
  - Entire lot
  - House/building model
  - Asset-based
  - Actual

Triggers

- Time of replacement
- Time of renovation
- Time of sale
- Milestone years
- Annual

Option	Key advantage	Key disadvantage
1. Prescriptive, time-of-replacement requirements	✓ Aligns with end-of-life replacements ✓ Simple to communicate	X Discourages renovations &/or increases permit avoidance (bad & ineffective) X Inflexible = higher costs, decreased co-benefits, excludes good solutions X Doesn't allow for transition
2. GHG emissions budget that steps down over time	✓ High flexibility = least cost + maximum cobenefits ✓ Start easy but signal future expectation (enable transition) ✓ Simplify building retrofit permitting	X Flexibility = complex decisions X Smaller owners lack resources to measure and plan X May lead to shallow retrofits in early years
3. Time-of-Sale Requirements	✓ Aligns with significant financial investment ✓ Aligns with natural building renovations	X Requires Charter change X Sudden significant upgrade not aligned with "end-of-life" X Long turn-over period and/or sale avoidance X Not aligned with other regs

AGENDA

9:30 – 10:00 Setting the Stage

- Welcome and Logistics
- Who's Here
- Context and ~~The~~ Our Work
- Role of the Committee

10:00 – 10:10 Strategy Approach

10:10 – 10:55 Regulatory Framework

- Break-out discussion

10:55 – 11:25

Daylighting Barriers, Opportunities, and Equity

- Break-out discussion

CHALLENGES

- Low owner awareness and capacity
- Low industry knowledge and capacity
- Currently zero emissions equipment are either higher capital costs (heat pumps) or higher operating costs (resistance, RNG)
- In building heat distribution systems may be incompatible with full heat pump replacement
- Adding HVAC electrical equipment can trigger in building and connection upgrades to address increased peak demand

the world is in a state of:

- *pandemic*
- *racial and economic inequity*
- *climate emergency*

= unprecedented uncertainties and opportunities for change

1,300+ climate emergency declarations as of Jan 2020

CITY OF VANCOUVER | GREENEST CITY

OPPORTUNITIES

- Change is coming; time to get aligned and collaborate is now
- COVID recovery will increase funding for efficiency and GHG reduction measures and capacity
- Economic development
- Demand for cooling is increasing
- Many measures to reduce GHG and prepare for renewable heat are very cost effective and/or improve comfort
- Successful models in Vancouver, Metro and BC do shape national and international actions

Subject: Meeting invite: BC Energy Step Code Metrics Report Update Steering Committee

Hello, everyone:

You are receiving this message either as a member of a Subcommittee of the BC Energy Step Code Council, or because a subcommittee member recommended you as a source of expertise.

One major deliverable of the Part 3 and Part 9 Non-Residential Subcommittee includes an update to the BC Energy Step Code Metrics Research Report (PDF, 4.4 MB), which evaluates the technical, economic, and environmental implications of the BC Energy Step Code on Part 3 and Part 9 buildings. We are seeking your expertise to update this report.

Scope of Work

To meet CleanBC objectives, the Province is proposing changes to the BC Building Code in 2022, which includes a 20% improvement in energy efficiency over the current base code requirements and evaluation of overheating risks for both Part 9 and Part 3 buildings using future climate files. In anticipation of these upcoming changes, we wish to form a Steering Committee to guide the process of retaining a contractor to both update the Metrics Research Report and provide technical analysis regarding how the 20% baseline improvement aligns with the existing Steps within the BC Energy Step Code for various building archetypes. We anticipate that the steering committee will incorporate industry professionals, representatives from several levels of government, developers, service organizations, professional associations, utilities, and Crown corporations to provide guidance and expertise.

If you or a delegate can contribute to this work, please fill out this Metrics Report Doodle poll with your availability. You don't have to attend every meeting, but we want enough input from a broad range of sectors at each meeting to ensure success.

The kick-off meeting for the Metrics Report Steering Committee will:

- Consider the proposed scope of the Metrics Report Update and 20%-better analysis from the Building and Safety Standards Branch (BSSB)

- Clarify roles and expectations and answer questions
- Determine our meeting frequency and meeting dates over the summer (ideally a standing time)
- Discuss contracting and resourcing needs
- Introduce and invite participants to Microsoft Teams

If you believe there are additional qualified people who can help the steering committee, please email me, Scott Williams (Senior Energy Codes Administrator), and Norm Connolly and Toby Lau (Part 3 and Part 9 Non-Residential Subcommittee co-chairs), who can speak with the candidate for their suitability.

For your reference, we are contacting the following people:

Industry
Jeff Fisher, UDI-Pacific
Representative TBD, UDI-Capital Region
Representative TBD, UDI-Okanagan
Dave Ramslie, Concert Properties

Crown Corporation
Wilma Leung and Remi Charron, BC Housing

Local and federal governments
Greg McCall and Patrick Enright, City of Vancouver
Iain MacDonald, National Research Council
Norm Connolly, Sepehr Foroushani and Nicholas Heap, City of Richmond
Maya Chorobik and Laura Sampliner, Local Government Peer Network

Part 9 buildings
Bob Deeks, Joe Hart, Vanessa Joehl and Kelly Reid, Canadian Home Builders' Association (various)
Mark Bernhardt, Bernhardt Contracting

Associations and industry hubs
Harshan Radhakrishnan, Engineers and Geoscientists BC (EGBC)
Maura Gatensby, Architectural Institute of British Columbia (AIBC)
Eoghan Hayes, International Building Performance Simulation Association (IBPSA-Canada)
Christian Cianfrone, Vancouver Zero Emissions Building Exchange (ZEBx)

Utilities
Toby Lau, BC Hydro
Tanya Rumak, FortisBC

Thank you very much. Please contact me if you have additional questions.

COVID and construction

From: May, Zachary OHCS:EX
To: Johnson, Molly MAH:EX <Molly.Johnson@gov.bc.ca>
Sent: July 22, 2020 5:05:44 PM PDT
Attachments: image001.jpg

Minutes from our June 25th Energy Step Code Council meeting:

2. **COVID-19 Check-in**

Zachary May sought Council input on what data should be tracked as the Province plans an economic recovery strategy.

Discussion:

- Builders report increasing activity in Metro Vancouver and the North. BC Hydro has returned to business as usual re: connections. Banks continue to be slower than normal with more demand.

- BOMA focused on operational recovery and safety, would have preferred to be included in consultation in rental plan. They hope for faster development permits, Vancouver moving to online systems which is speeding it up. Members aren't spending and don't have access to capital. Consider tying future funding to energy efficiency or resiliency. Increasing incentives for upgrades or lower carbon energy systems, good chance.

- UDI appreciates that construction stayed open. Launching of projects, particularly large ones, has slowed. They have analysis to share as it was part of their pre-budget submission. Would hope for some COVID changes (virtual public hearings, skipping public hearings) to stay.

- HAVAN reminded the Council that the DAPR report makes some of these recommendations. Energy retrofits could achieve economic stimulus and efficiency goals.

- No additional protocols or measures expected from the Province regarding construction, with most internal discussions around economic recovery and the unique value of construction sector. Bea Bains said additional safety equipment was an unanticipated cost, and help may be required there, and issue Zac said has been raised.

- CHBA BC and UDI have heard from members that CERB makes it hard to find labourers as support programs can pay the same or better.

- UDI found recent provincial announcement on strata insurance reforms very interesting, including that insurance for newer buildings is more expensive than older buildings, which is unusual. Insurers are apparently also concerned about six-storey wood frame, which may be concerning given 12-storey mass timber. Zac said there was a new MAH division on mass timber implementation.

- Maya Chorobik of the LGPN said LGs worry about budget uncertainties or property tax deferrals due to COVID. They are just starting to re-hire staff, and they continue to have concerns.

- Toby Lau said BC Hydro surveyed Community Energy Managers and Building Energy Managers on the impact on building permit applications and delays. Effect on LGs vary but they report about a 25-30% reduction in residential and commercial permit applications

- Megan Lohmann reports many building applications, significant interest from Alberta residents to building in the southeast of B.C., quick turnaround on sales of existing homes. Some suppliers report higher demand than before in trim, paint etc. Wonder how to take this opportunity to include energy efficiency as part of home improvement.

- Training for the EnerGuide Rating System, provided by Yardstick, was closed due to COVID but re-opening again. Chris Frye encourages anyone with EA challenges to contact NRCan.

- BC Housing has a monthly new housing registry report, with a COVID addendum published every two weeks.

- Joe Hart of CHBA BC encourages Province to implement findings from DAPR. A new Associate Deputy Minister, Silas Brownsey, will oversee DAPR.

- Harshan from EGBC said Susan McDougall from Focal Engineering is doing training on the Part 3 Energy Design Report. There are also upcoming webinars for Part 9 training. The EGBC AGM will happen virtually.

- For info: Development Approvals Process Report online link: https://www2.gov.bc.ca/assets/gov/british-columbians-our-governments/local-governments/planning-land-use/dapr_2019_report.pdf

RE: GHGi for buildings

From: May, Zachary OHCS:EX
To: Finkelstein, Ben ENV:EX <Ben.Finkelstein@gov.bc.ca>
Cc: Koski, Chris ENV:EX <Chris.Koski@gov.bc.ca>, Sandham, Kylie OHCS:EX <Kylie.Sandham@gov.bc.ca>, Kaye, Erik ENV:EX <Erik.Kaye@gov.bc.ca>
Sent: July 28, 2020 9:39:22 PM PDT
Attachments: image001.jpg, image002.jpg

1. When will this work be public knowledge as we are seeing the request for GHGi coming up more and more in letters to the Minister?

   We have also received letters, most recently from Metro Vancouver. We have announced that we're moving forward on this issue at the Step Code Council meeting in June, but we have been delaying launching external consultation until we are able to brief up high enough to get the ok to proceed. Briefings have been hard to We could hear back in the next few weeks, or it could take until September if the Minister needs to weigh in.

   Are there any timing sensitivities from a CAS perspective we should know about? I was hoping to have this underway well before UBCM, but not sure if we will be able to pull that off if we're delayed pulling together external stakeholders into September.

2. Will Step Code Council, supported by BC Hydro, be engaging on this with industry and local governments, like in the past?

   Yes. The plan is to develop targets/steps, and a voluntary implementation approach through the Energy Step Code Council. The council has unanimously supported working on this issue. Fortis, UDI, and CHBA BC support working on this issue so long as it's through the council and led by BSSB, so there's hope for a positive outcome that everyone can support.

Happy to discuss further. I'm around the rest of this week and off the first two weeks of August.

Subject: Fw: GHGi for buildings

Hi Zach,

As per our discussion this afternoon, just wanted to confirm that I've canvassed the Clean Government buildings team at CAS and we all agree your GHGi initiative is aligned with our CleanBC objectives and is not getting ahead of our policy timelines.

Ben Finkelstein has a few questions for you, see his email below - could you please respond directly and copy me and Chris Koski? Thanks a buch.

Cheers,

Erik

Subject: RE: GHGi for buildings

Thanks Erik,

As we know local governments are keen to see an intensity metric as part of step code as are many of their stakeholders. Building industry will likely have concerns but that can be remedied by early engagement which the Step Code Council is good at.

Good to see this as it looks to be ahead of schedule. Questions for Zack and Committee;

1. When will this work be public knowledge as we are seeing the request for GHGi coming up more and more in letters to the Minister?
2. Will Step Code Council, supported by BC Hydro, be engaging on this with industry and local governments, like in the past?

Ben

Subject: GHGi for buildings

Hi Erik and Katherine,

We are in the process of briefing up on GHGi requirements for buildings. Our ADM wanted to confirm that we are supporting CleanBC policy developed at CAS, not charting our own course. The key concern is establishing steps or tiers for GHG performance in buildings prior to CAS releasing specific sectoral targets or goals. Right now CleanBC only commits to energy efficiency requirements in the Code, so we're trying to make sure we don't get ahead of government policy at CAS or EMPR here.

Our plan is to accomplish the following by spring 2021 (if all goes well):

Establish a definition of GHGi for application in buildings (the working group we already have kicked off)

Establish tiered or stepped performance outcomes, in consultation with the Energy Step Code

Establish a voluntary adoption process for local governments to use the tiered provincial GHG requirements rather than locally developed policies

We are not planning to establish minimum GHG performance requirements in the baseline BC Building Code for 2022, just voluntary tiers that local governments would be able to use.

Hoping to get a response from each of you in the next week about whether our planned work on GHGi is aligned with CAS and EMPR policies or if we are charging ahead in any way. I think I know the answer but would like to check that assumption.

Best,

Zachary D. May, MBA

Energy Step Code Council
Part 3/Part 9 (Non-residential) Subcommittee
Metrics Research Report Update Steering Committee
Meeting #1: Kick-off Meeting

MEETING NOTES

Date: Thursday July 30, 2020 | **Time:** 9:00 a.m. - 10:30 a.m. | Teleconference Meeting
Steering Committee Chair: Scott Williams, Building and Safety Standards Branch
Steering Committee Members Participating:

Associations and Industry Hubs
Harshan Radhakrishnan, EGBC
Maura Gatensby, AIBC
Eoghan Hayes, IBPSA-Canada
Christian Cianfrone, ZEBx

Crown Corporation
Wilma Leung and Remi Charron, BC Housing

Industry
Jeff Fisher, UDI-Pacific
Nicholas Standeven, UDI-Capital Region (Abstract Developments)

Local and Federal Governments
Greg McCall, City of Vancouver
Norm Connolly, Sepehr Foroushani and Nicholas Heap, City of Richmond (and Part 9 subcommittee representatives)
Laura Sampliner, Local Government Peer Network

Part 9 Buildings
Bob Deeks, Joe Hart, Vanessa Joehl, Pauline Rupp, Canadian Home Builders' Association
Mark Bernhardt, Bernhardt Contracting

Utilities
Toby Lau, BC Hydro
Tanya Rumak and Pete Koepfgen, FortisBC

Building and Safety Standards Branch
Scott Williams, Hugo Wong, Dale Andersson

Regrets: Dave Ramslie, Concert Properties; Zachary May, BSSB; Maya Chorobik, CEA; Iain MacDonald, National Research Council; Patrick Enright, City of Vancouver; Representative TBD, UDI-Okanagan; Kelly Reid, Canadian Home Builders' Association

~~~~~~~~~~

ACTION ITEMS
- BSSB - to book Meeting #2 of Steering Committee for August 26, 2020
- BSSB - to prepare more detailed scope of work for the 2020 Metrics update analysis based on feedback received for discussion August 26
- BSSB - to follow-up on district energy systems and previous Energy Step Code Council work on this issue
- Harshan Radhakrishnan/EGBC - to share a video link about retrofitting DE systems

NOTES
1. **Steering Committee Role and Scope of Work:** Scott Williams provided an overview of the Steering Committee's role and scope of work. See draft Scope of Work provided with the meeting agenda and included below as an Appendix (for reference).

2. **General Discussion and Feedback – the following points were raised:**
   - BC Hydro has retained Morrison Hershfield to undertake analysis of ASHRAE 90.1 – this work may assist with the 20% analysis
   - FortisBC is conducting a Codes compliance study for Part 3/Part 9 they can share – this version will address the Step Code (previous versions didn't as it wasn't in the Code at the time)
~~~~~~~~~~

- Archetypes for Part 9 – 2018 Metrics Report had six
  - What percent of buildings do the 6 archetypes represent? Is there a need for more in the 2020 analysis?
  - Building foot print versus vertical ratio surface area to floor space – important considerations
  - Should/can more archetypes be included? NRCan has analysis of 240 archetypes
  - Previous reports did many studies of single archetypes – to address 20% better, do we need a broader approach?
  - Should the selected archetypes vary by climate zone?
  - Archetypes are 'goal posts' or reasonable representations – not meant to represent everything in between or every possibility – need to consider immense work involved in adding more
  - Need to consider adding very small home archetype – e.g. laneway homes – wasn't included in 2018
  - Keeping to the existing six archetypes is easy as we have the data – adding new archetypes increases the work
  - In current market, smaller homes can be more affordable – need to include a small home that builders can achieve = important to have this included in the study
- Archetypes for Part 3 – 2018 Metrics report had five
  - Consider adding Industrial F3 occupancies – can be many things – currently a loophole to circumvent Step Code requirements – would be good to include this archetype
- Cost analysis
  - Previous reports looked at cheapest option – this may be a bottom outlier – consider including an average cost (such as average of lowest 10 options or something similar)
  - Need to update the costing data used to reflect current costs – e.g., some of the assumptions are out of date – e.g., EA costs, NPV 3% vs 6%-7% (past analysis likely used costing values from 2016-2017 – will need to update)
- Reference House Approach
  - Reference building approach can negate passive approaches
  - Good ways to manage and deliver results – remember we design for many reasons (e.g., comfort of occupants, social reasons) not just energy efficiency and GHG reductions
- Sliding Scale TEDI/Part 9
  - Challenges of measurement with relative targets and variable HDD
- District Energy Systems
  - Challenges of incentives to connect to high-carbon systems – does this defeat goals of Step Code?
  - If buildings are more energy efficient, what is role of DE Systems?
- Data
  - Value of obtaining utility data or other data for assessment, not relying only on modelling
  - Switching approach from simulation to data-based study - many challenges in trying a data-based approach – some local govts have data (for Part 9) as would NRCan – maybe not as much for Part 3
  - Data from Portfolio Manager?
  - Hybrid of modelling and operational data could be considered for part 9
  - In future, data will be available from the BeRT tool (Building Energy Requirements Tool)
  - Commissioning as a code requirement and submission of operational data
- Overheating Analysis – Part 3
  - Recent UBC study on overheating in MURBS – available for high rise but not for low rise
  - Involve Trevor Murdock/UVic in future climate files (BSSB is already in contact with him – he is part of the Part 3 Overheating Working Group)
  - Value in having two independent studies
- Overheating Analysis Part 9

    - HOT2000 – is this closed to new climate files?
- Running Scenarios
    - Will Steering Committee be able to see the options selected in each scenario to see if they 'will fly in the real world'
- Timeline for the project (late July to fall) is very optimistic

3. **Next Meeting of the Steering Committee: August 25, 2020 to review a more detailed scope of work based on the discussion today.**

APPENDIX TO THE MINUTES – DRAFT SCOPE OF WORK FOR THE STEERING COMMITTEE PROVIDED WITH THE MEETING AGENDA

ROLE OF STEERING COMMITTEE: Provide advice to guide an updated analysis of the 2018 Metrics Research Report (Metrics Report), and an analysis of 20%-better energy efficiency, to help prepare for and determine the energy-efficiency requirements to be included in the 2022 BC Building Code.

TIME FRAME: Late July 2020 through to Fall 2020

SCOPING THE PROPOSED CHANGES: Metrics Report Update and 20% Better Analysis

Background
There are number of proposed changes to the BC Building Code in 2022. To analyze potential impacts, the Building and Safety Standards Branch (BSSB) is looking to update the Metrics Report based on the following proposed changes:

1. 20% baseline improvement in energy efficiency for both Part 9 and Part 3 buildings from current BC Building Code requirements
2. Analysis of overheating risks using future-shifted climate data

The updated Metrics Report analysis will also reflect the changes to the BC Energy Step Code metrics per Revision 2 of the 2018 BC Building Code.

This Steering Committee will help guide the process of identifying the required modifications needed to the Metrics Report and define the scope of work for a contractor to execute the modifications; this work will also include additional analysis regarding 20% better and how this is to be best represented within the current Step Code structure.

METRICS REPORT: Updates to include:

1. **BCBC 2018 Revision 2 changes**
    a. Part 9
        - TEDI adjusted
        - %-better envelope
    b. Part 3
        - Climate zone analysis outside of Climate Zone 4

2. **Future Climate Files and Overheating**
    a. Additional analysis to be conducted using future shifted weather files - CWEC 2016 to 2050 for overheating analysis. Limited data set available on Pacific Climate Impacts Consortium's (PCIC) website and does not represent all locations listed in the BC Building Code; however, all climate zones appear to be represented.

b. Associated changes to design temperatures are still to be determined. Work currently being done with the Part 3 – Overheating Risk Working Group will help define this, as well as explore peak internal temperatures.
c. Overheating analysis to be per the City of Vancouver Energy Modelling Guidelines – ASHRAE 55-2010 for Part 3 buildings.
d. Given limited means of calculating overheating for Part 9, consensus is required as to how we are to instruct a contractor to analyze. The Part 9 Overheating Risk Working Group will help to inform this discussion.
e. Based on overheating analysis - costs associated with cooling systems for both Part 3 and Part 9 to be included in the updated report.

3. Potential to Expand Building Archetypes
    a. Focus to be on most impactful archetypes. Additional archetypes could be considered based on Steering Committee recommendations. Potential to expand scope for consultant, which will be affected by cost and timing.

4. Sections to be Potentially Omitted from the Revised Report
    a. Such as section comparing Step Code to City of Vancouver ZEBP– to be discussed further with Steering Committee.

20% BETTER ANALYSIS: Analysis to include:

1. 20% Baseline - Conduct analysis to verify where 20% better baseline improvement lines up with the Steps within the Step Code.

2. Focus on C, D and E Occupancies - (hotel/motel, other residential, office and mercantile) which have Step Code requirements as outlined in Part 10 of the BCBC.

3. NECB 2015 Baseline - For 20% improvement, analysis to assume NECB 2015 as a baseline (i.e. Step 1) for each archetype.

4. Appropriate Modifications - Suggest appropriate modifications to the Steps as needed to roughly line up with 20% better (do not want lowest step to be less than the 20% threshold; steps may need to be modified accordingly).

5. Cost Analysis - Provide cost analysis pertaining to 20% better to be fed into the Metrics Report based on proposed changes to the Step Code metrics. Analysis to include costing impacts of applying proposed changes to the BC Building Code and to understand the cost of implementing these changes in conjunction with the Step Code for different archetypes across multiple climate zones across BC. Costing analysis is to follow what has been outlined in the 2018 Metrics Research Full Report Update.

STEERING COMMITTEE CONTACTS

- Chair: Scott Williams, Senior Energy Codes Administrator, BSSB - Scott.B.Williams@gov.bc.ca
- Support: Dale Andersson, Senior Policy Advisor, BSSB – Dale.Andersson@gov.bc.ca

Hello, everyone:

Attached are notes and a slide deck from this morning's meeting. Thanks for your participation this morning. The next meeting is Wed. Aug 26 from 9-10:30, and you should have already received a calendar invitation.

If you wish to discuss some of the topics in depth before the second meeting, please feel free to post inside our MS Teams channel. It can help us all build a shared understanding of the problems and potential solutions.

Best,
Hugo

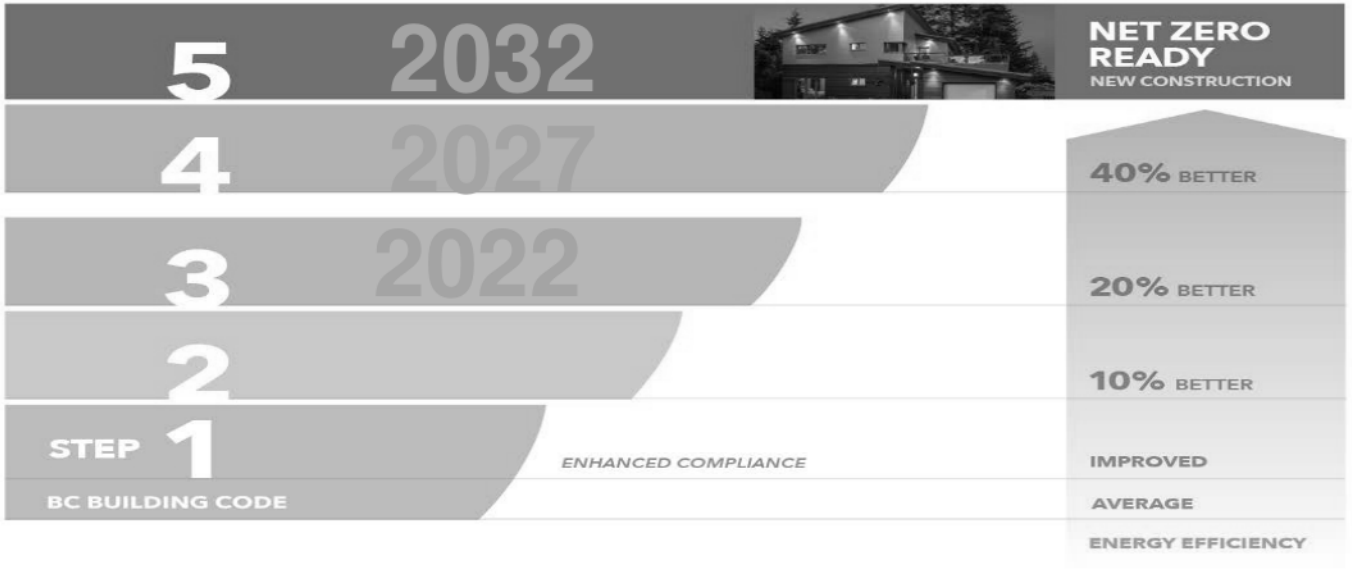
CleanBC – Better Buildings

New Buildings
2022 – 20% improvement
2027 – 40% improvement
2032 – Net Zero Energy Ready



BACKGROUND TO THE NEW ANALYSIS

- A **number of proposed changes** to BC Building Code 2022
- BSSB seeking to **analyze potential impacts** through an updated Metrics Report based on the following proposed changes:
    - **20% baseline improvement in energy efficiency** for both Part 9 and Part 3 buildings from current BC Building Code requirements
    - Analysis of **overheating risks using future-shifted climate data**
- Steering Committee – to **help guide the process of identifying the required modifications** needed to the Metrics Report and **defining the scope of work** for a contractor to execute the modifications

Metrics Research Report Update Steering Committee

METRICS REPORT: Updates to include:

1. BCBC 2018 Revision 2 changes

- **Part 9**
  - TEDI adjusted
  - %-better envelope
- **Part 3**
  - Climate zone analysis outside of Climate Zone 4

Metrics Research Report Update Steering Committee

METRICS REPORT: Updates to include:

2. Future Climate Files and Overheating

- **Future shifted weather files** - CWEC 2016 to 2050 for overheating analysis
  - Data set available from PCIC - does not represent all locations listed in BCBC but all climate zones are represented.

- Associated **changes to design temperatures are still to be determined** - Part 3 – Overheating Risk Working Group will help define this, as well as explore peak internal temperatures.

- Overheating analysis to be **per the City of Vancouver Energy Modelling Guidelines** – ASHRAE 55-2010 for Part 3 buildings.

- Given limited means of calculating overheating for Part 9, **consensus required** to how we instruct contractor to analyze - Part 9 Overheating Risk Working Group will help

- Based on overheating analysis - **costs associated with cooling systems for both Part 3 and Part 9** to be included

Metrics Research Report Update Steering Committee

METRICS REPORT: Updates to include:

3. Potential to Expand Building Archetypes

- Focus to be on most impactful archetypes
- Additional archetypes could be considered based on Steering Committee recommendations
- Potential to expand scope for consultant affected by cost and timing

Metrics Research Report Update Steering Committee

2018 Metrics Report Archetypes – Part 3 Buildings*

ARCHETYPE	DETAILS
Low-Rise MURB	Variable characteristics to represent the range of MURBs in the marketplace (see Section 2.2.3 for more detail), 90% suites, 10% common area
High-Rise MURB	Variable characteristics to represent the range of MURBs in the marketplace (see Section 2.2.3 for more detail), 90% suites, 10% common area
Hotel	Market, 9,520 m2, 10 storeys, 500 people
Commercial Office	Market, 18,200m2, 10 storeys, 790 people, 155 parking spaces
Retail (big box) Market	Market, 4,500m2, 1 storey, 150 people

*Page 4, 2018 Metrics Report

Metrics Research Report Update Steering Committee

2018 Metrics Report Archetypes – Part 9 Buildings*

ARCHETYPE	DETAILS
MURB (10 units)	Market, 1,654m2, 1,780ft2/unit, 3 storeys over underground parkade
Row House (6 units)	Market, 957m2, 1,720ft2/unit, 3 storeys over underground parkade
Quadplex	Market, 513m2, 1,382ft2/unit, 3 storeys over underground parkade
Large SFD	Market, 511m2, 5,500ft2, 2 storeys with basement
Medium SFD	Market, 237m2, 2,551ft2, 2 storeys with basement
Small SFD	Market, 102m2, 1,098ft2, single storey on heated crawlspace

*Page 13, 2018 Metrics Report

Metrics Research Report Update Steering Committee

METRICS REPORT: Updates to include:

4. Sections to be Potentially Omitted from the Revised Report

- Such as section 6.4.3 comparing Step Code to City of Vancouver ZEBP
- For discussion with Steering Committee

Metrics Research Report Update Steering Committee

METRICS REPORT: 20% BETTER ANALYSIS - Updates to include:

1. **20% Baseline** - Conduct analysis to verify where 20% better baseline improvement lines up with the Steps within the Step Code

2. **Focus on C, D and E Occupancies** - (hotel/motel, other residential, office and mercantile) which have Step Code requirements as outlined in Part 10 of the BCBC

3. **NECB 2015 Baseline** - For 20% improvement, analysis to assume NECB 2015 as a baseline (i.e. Step 1) for each archetype

Metrics Research Report Update Steering Committee

METRICS REPORT: 20% BETTER ANALYSIS - Updates to include:

4. **Appropriate Modifications** - Suggest appropriate modifications to the Steps as needed to roughly line up with 20% better (do not want lowest step to be less than the 20% threshold; steps may need to be modified accordingly)

5. **Cost Analysis** - Provide cost analysis pertaining to 20% better to be fed into the Metrics Report based on proposed changes to the Step Code metrics
   - Analysis to include costing impacts of applying proposed changes to the BC Building Code and to understand the cost of implementing these changes in conjunction with the Step Code for different archetypes across multiple climate zones across B.C.
   - Costing analysis is to follow what has been outlined in the 2018 Metrics Research Full Report Update

2018 Metrics Analysis: What did we do? Do we want to do it again?

I swear if my memory was any worse, I could plan my own surprise party.

Quick summary ahead!

2018 Metrics Analysis – SUMMARY

- Study included Part 3 and Part 9 Buildings
- BC Energy Step Code 'targets'/requirements: BCBC 2018 Rev 1 adoption Dec. 10, 2018
- All applicable Climate Zones
- Part 3 buildings - 5 archetypes
- Part 9 buildings - 6 archetypes
- Complex modelling needed – see Section 2 on modelling and costing
- Analysis of metrics, costs and other elements specific to Part 3 and Part 9

2018 Metrics Analysis - Report Section 3.1: Part 3 Buildings Results*

- 3.1.1 Incremental Capital Cost
- 3.1.2 Net Present Value & Carbon Abatement Costs
- 3.1.3 Appropriateness of Metrics and Targets
- 3.1.4 Applying Part 3 Targets to Part 9 Non-Residential Buildings
- 3.1.5 District Energy and Waste Heat

* Starting page 26

2018 Metrics Analysis - Report Section 3.2: Part 9 Buildings Results*

- 3.2.1 Incremental Capital Cost
- 3.2.2 Net Present Value & Carbon Abatement Costs
- 3.2.3 Sensitivity Analysis on NVP Discount Rate
- 3.2.4 Achieving Higher Building Performance in Colder Climates
- 3.2.5 Window to Wall Ratios
- 3.2.6 Equity and Affordability
- 3.2.7 Unintentionally Increasing GHG Emissions
- 3.2.8 Appropriateness of Part 9 Targets for MURBS
- 3.2.9 Typical Energy Conservation Measures

* Starting page 26

2018 Metrics Analysis – Other Analysis

Section 5 – Building Policy Interface

- 5.1 Part 9 R-Values
- 5.2 Ventilation Requirements
  - 5.2.1 The Impact of Different Ventilation Standards on Part 3 Step Code Targets
  - 5.2.2 The Impact of Ventilation Assumptions on Part 9 Modelling Results

Subject: FW: potential P9 co-chairs

Hello Zac, Bob and Robyn,

As you know, Mark Sakai has resigned from the P9 subcommittee co-chair role due to his change of employer. We haven't prioritized finding a new co-chair given other more urgent work items but now would be a good time to start thinking.

Before leaving, Mark suggested s.22 Nick has suggestions below.

Do you have any thoughts on who you'd like to be Nick's co-chair?

Hugo

Hi Nick,

I know you floated a name for a replacement for Mark a while back. Was it [s.22] ? Were there any other candidates you think of?

I'm going to prepare a pitch for Zac, Robyn, and Bob, and so if [s.22] your choice, maybe 1-2 bullets why he's a good choice would be good.

1. Good catch on the 62.2 – I did mean 62.1. The next edition of the code is likely to use the 2016 version.
2. Interesting comments on the gaps that remain in the code regarding air exchanges. Hopefully further work on overheating risks will help us develop national and BC standards that manage this comfort and occupant health issue.

Best,
Zac

Good question,

62.2 is a ventilation standard specific to residential buildings, this is a school so this standard would not apply here. 62.1-2001 w/o addendum N would apply.

62.1 w/o addendum N is a good standard in my opinion as it has higher ventilation rates then more recent versions of the standard. (Greg can fill you in on the history of why they stuck with this version of the standard as opposed to more recent versions). While the 62 standards address ventilation
minimum rates for occupants to breath it does not address air circulating in the space. The designer on the project did meet code minimums for ventilation but there is no code or standard for air circulation in the space, just ventilation.

The school board have now adapted our recommendation of ensuring all classrooms have 6 air changes per hour minimum in all classrooms. About 1.3 air changes of the 6 would be from ventilation air (outside air) the remainder would be from return circulating air in the space.

Cheers
E

Hi Eoghan,

Do you know if the update to ASHRAE 62.2(2016) will address this at all? This sounds like a minimum code issue, not just Energy Step Code. Thanks for sharing.

Best,
Zac

As mentioned on the call today,

The school has excellent solar shading on the exterior south exposure.

Images taken at 10 am on September 10th 2018. Note this is surface temperature

Edge were brought in to do a full thermal analysis and come up with solutions to get reduce the inside temperatures. We explored

- Night cooling,
- Adding cooling to the existing HRV ducting (Limited to 16°C) as the existing ducting was not insulated
- Adding full cooling to the HRV to 12°C with insulating the ducting.
- Full mechanical cooling

The only solution especially with doing to analysis with future weather files was to add full mechanical cooling to the building.

Also the air movement in the space was very low, leading to a very stuffy classroom as the air circulating was for ventilation only, about 1.2 Air changes per hour. Typically you want about 6 air changes per hour in a space.

Figure 1

Figure 2

Conclusion: If we are going to mandate good envelopes and HRV's for schools in certain climate zones in BC we likely need some form of cooling to ensure the above situation does not occur again.

Cheers
E

Hello Steering Committee members,

Please find attached notes from yesterday's meeting.

Teams Access - All members of this Steering Committee should already have received an invitation to join the Metrics Report Teams channel, where members can discuss issues between meetings or post follow-up comments to the meeting notes, instead of sending reply all emails. If you have not received an invitation, please email hugo.wong@gov.bc.ca. For a Teams demo, visit https://teamsdemo.office.com/#/

More to come soon. Thank you.

Kind regards,

DALE ANDERSSON, PhD | Senior Policy Advisor

Meeting #2
MEETING NOTES

Date: Wednesday August 26, 2020 | **Time:** 9:00 a.m. - 10:30 a.m.
Steering Committee Chair: Scott Williams, Building and Safety Standards Branch
Microsoft Teams Meeting

Steering Committee Members Participating

Associations and Industry Hubs
Harshan Radhakrishnan, EGBC
Maura Gatensby, AIBC
Eoghan Hayes, IBPSA-Canada

Crown Corporation
Regrets

Industry
Jeff Fisher, UDI-Pacific
Nicholas Standeven, UDI-Capital Region (Abstract Developments)

Local and Federal Governments
Greg McCall, City of Vancouver
Norm Connolly, Sepehr Foroushani and Nicholas Heap, City of Richmond (and Part 9 subcommittee representatives)
Iain MacDonald, National Research Council
Laura Sampliner, Port Moody and Local Government Peer Network

Part 9 Buildings
Bob Deeks, Joe Hart, Pauline Rupp, Canadian Home Builders' Association
Mark Bernhardt, Bernhardt Contracting

Utilities
Toby Lau, BC Hydro
Tanya Rumak and Pete Koepfgen, FortisBC

Building and Safety Standards Branch
Scott Williams, Hugo Wong, Dale Andersson, Zachary May

Regrets: Wilma Leung and Remi Charron, BC Housing; Vanessa Joehl, CHBA BC; Maya Chorobik, CEA Local Govt. Peer Network; Patrick Enright, City of Vancouver; Representative TBD, UDI-Okanagan; Kelly Reid, Canadian Home Builders' Association; Christian Cianfrone, ZEBx

~~~~~~~~~~~~

ACTION ITEMS

- BSSB - to book Meeting #3 of Steering Committee in about three weeks (Sept. 16 TBC)
- BSSB - to provide detailed scope of work for the 2020 Metrics update analysis for Steering Committee review
- BSSB – to provide info on how to access Teams for the Steering Committee

NOTES

1. **New Member:** Iain MacDonald, Natural Resources Canada.
2. **Concurrent Work:** Scott noted ongoing work supporting and supplementing the metrics update:
    - BC Hydro analysis of ASHRAE 90.1 and changes since 2016 – expected this fall
    - NRCan (Ian MacDonald) work on NECB and changes comparing 2020 to 2015 - ongoing
    - Step Code Working Groups for Part 9: Unique Building Types, and 20% Better Analysis
    - Part 3 and Part 9 Overheating Risk Analysis Working Groups
3. **Metrics Update: Archetypes Part 9 Discussion**
    - Meeting #1 the group expressed interest in smaller homes; current smallest SFH in metrics report about 1000 sq ft – what might work for smaller? Slab or with basement?
~~~~~~~~~~~~

- Suggestion to include homes in range of 500 sq ft/laneway homes
- Suggestion to align sizes with current Code requirements as outlined for MEUI Table 9.36.6.3-G
- Surface area may be more important that sq footage (cubes are rare, and larger custom homes may have surface area 350% higher than sq ft) – could each archetype have 2-3 different surface area factors with surface area of cube as baseline i.e., 150%, 300%. Spec homes have typically 150% more surface area than cubes. Larger homes typically have more surface area and higher form factors - could start with 300% for these types of homes
- NRCan has done analysis showing heated volume is actually the more important characteristic of the building than sq ft when analyzing small homes. Regarding airtightness and ACH, heated volume is most important.
- Consider future temps and that warming will be more pronounced in north and will likely need AC – what archetypes help achieve this affordably?
- Need resources to do credible examples when do updated analysis

4. Metrics Update: Archetypes Part 3 Discussion
   - Group F Occupancies
     - Despite interest in Group F occupancies, Scott proposed leaving this to the Part 3/9 Subcommittee as this is in their workplan and first step is to develop metrics for these occupancies
     - Concern there is a loophole for Group F that is being used either intentionally or not (e.g., when building under construction, tenant may not be known). Building constructed to Group F requirements but then occupancy changes based on tenancy and may no longer meet Part 10 requirements
     - Possibility to amend BCBC in the interim, to provide guidance on how to go from Group F to Group C residential?
     - 2022 Code may be adopted in two phases – would like to focus on more urgent issues now, and leave others for later but still prior to 2022
     - Group F occupancies – should involve NAIOP (Commercial Real Estate Association Development Association - https://www.naiop.org
     - Group F could be similar to how fire safety treated – fire separations built for 'worst case' to support the building over its lifetime – could do for building envelope as well
     - Future temperatures – include archetypes that support better cooling/passive cooling over the life of the building
   - 'Public Sector' Archetypes
     - Step 1 in BCBC – don't intend to add more at this point – use makes determining metrics complex – further study ongoing – provincial public buildings have other requirements (e.g., higher than code)
     - Helps private sector if public sector leads the way – doing only Step 1 doesn't look good
     - For provincial buildings – energy efficiency requirements often established during the procurement process i.e., LEED Gold
     - Cases of overheating in schools now when designed without cooling.
     - Talking of 'public sector' is confusing - code doesn't refer to 'public sector' – schools and care facilities can be private so still need metrics for these occupancies – use code language - assembly, care – the As and Bs etc.
     - Could there be a province wide requirement for all public sector buildings as opposed to being adopted by municipalities?
     - Private sector is willing to move forward but public sector is somewhat lagging.
     - Care facilities without treatment (Group B3 occupancy) so could have same step level as Group C. Further analysis is ongoing to define metrics for 'public sector' archetypes and will be looked at in more detail in 2021.
5. Metrics Update: Overheating Risk Analysis
   - Two Working Groups to address this – it's a complex issue
   - Participants noted this needs to be included for BCBC 2022

- For Part 9, issue is less future climate data availability and more limitations of H2K software; for Part 3, have ASHRAE 55 – but for Part 9/EAs and scope of work and fees would have significant impact. Might need separate plug-in calculator
- BSSB is proposing to remove overheating risk for Part 9 buildings from the scope of work for the Metrics Report update given complexities in analysing
- As opposed to omitting from the update, suggestions of conducting a sensitivity analysis using data from the lower mainland, which could help to inform overheating risk as associated costs. Not all architypes need to be included, nor all climate zones
- CWEEDS could help with analysis. Can use other data sources other than PCIC
- Given lack of flexibilty in HOT2000, could require that solar gain values be reported along with prescriptive solar heat gain coefficients (SHGC) for windows
- Bob noted in his 10+ years of building Step 3 and 4 homes, almost all homes have overheating problems even with correct/triple pane glazing – he strongly recommends cooling to his clients – need to seriously consider this in more airtight homes especially given climate change. Low SHGC windows without proper shading can still be an issue.

6. Metrics Update: Data Analysis
    - Propose sticking with analysis of building design, not operation
    - Building operations analysis will be possible with BeRT – Building Energy Requirements Tool
7. Metrics Update: Costing
    - Due to time, deferred for discussion at next meeting – earlier suggestion to consider other low cost options (e.g., average of lowest 10) rather than just lowest cost option
8. Microsoft Teams – is available for online collaboration. BSSB to send info on accessing.

Hello Everyone,

Thank you for joining our first Vancouver's Climate Emergency Big Move 4 External Advisory Committee (BM4EAC for short) for Zero Emissions Buildings back in June. This is an overview and opportunity to provide feedback on Vancouver's Zero Emissions Building Retrofit Strategy:

A ten year strategy to reduce emissions from existing buildings in Vancouver by 50% by 2030 and establish a clear trajectory for all buildings in Vancouver to be zero emissions before 2050. This strategy reflects the feedback of the Committee from the first meeting in June, subsequent meetings with smaller groups focused on specific building types or topics, and insights gathered as part of the Building Electrification Roadmap process.

It will speak to recommended future regulatory requirements, capacity building programs, and the work needed to begin removing barriers to widespread, deep emissions reductions in Vancouver homes and workplaces.

Please let me know if you are unable to attend this upcoming meeting in September.
——
The City of Vancouver is inviting you to a scheduled Zoom meeting.

Topic: BM4EAC Zero Emission Buildings Retrofit Strategy Steering Committee
Time: **Sep 21, 2020 01:30 – 4:00PM Vancouver**
Join Zoom Meeting

Subject: Part 3 Energy Code Compliance Survey - Survey Questions for Stakeholder Review

All,

Thank you to all of you who attended our stakeholder kick-off yesterday (for those who missed it, I've attached the summary slides for reference).

As discussed, please find attached the following:

- html file that shows the survey flow/organization
- Word document of exact question wording
- I encourage you to review these side by side so you can see how the questions fit into the overall survey

The files are also available via OneDrive, here:
https://irdh-my.sharepoint.com/:f:/r/personal/clove_rdh_com/Documents/22545.000%20Survey?csf=1&web=1&e=kxQHh1

The ask: Please review and provide comments on the content, wording and/or organization of questions. As discussed in our kick-off, the Word document indicates where content as changed since the 2015 survey. We will be limited in how much we can change the previous questions given that we want to compare results since the previous survey.

You are welcome to add comments directly to the OneDrive file; to track changes and send a marked up Word document, or add key comments in an email.

Timeline: we request that all comments from this initial review be sent back to me by **Friday August 28**. We will set up a meeting with the group to discuss any major comments.

I am available if you have questions as you dive in.

Thank you for being part of this process!

Best Regards,
Christy

SEPTEMBER 2, 2020

2020 Part 3 Energy Code Compliance Survey – Stakeholder Feedback Discussion

Pete Koepfgen, FortisBC
Christy Love, Alex Janusz, James Boak, Sarah Bozoian – RDH Building Science

RDH

Agenda

- 2:00: Welcome and intro of new participants
- 2:05: Review of major comments received
- 3:00: Review of any other comments not previously submitted
- 3:20: Next steps and schedule update
- 3:30: Closure

RDH

Background – Stakeholder Role

- Survey design:
  - Are we asking the right questions (note limitations)?
  - Are they asked in the most clear way?
  - Are we missing any questions?
- Survey distribution:
  - Assist with circulation via member organizations
- Respond to survey
- Participate in focus group?
- Develop/implement actions based on results?

RDH

Comments Received

- Clarity comments
  - How long will survey take; can it be completed in multiple sittings – provide in intro/preamble
  - Part 9 – what is in/out?
    - Non-residential buildings > 300 , 600 m2 need to follow NECB
  - Q3A: Align building type options with major BCBC occupancy groups, ie:
    - Group A, assembly occupancies
    - Group B, care, treatment or detention occupancies
    - Group C, residential occupancies
    - Group D, business and personal services occupancies
    - Group E, mercantile occupancies
    - (Group F, N/A)
  - Q3-6 – combine redundant questions
  - Clarify re: major renovations: “major renovations that are required to meet energy code requirements”

RDH

Comments Received

- Scope comments
  - Include VBBL as a line item – enable respondents to rate compliance by compliance path
    - Indicate percentage buildings following each path
  - Is it useful to ask perceptions about building industry in general vs individual's own projects?
  - Q7, Q16/20: Is it useful to provide responses that would imply negligence/lack of adherence to fundamental obligation?.
    - a) Q7 asks building officials whether policy is enforced implicitly or explicitly -

      Would it not be better to ask about how it is enforced (directly, by staff, vs. indirectly, by consultants) or about the resources are allocated.
    - b) Q16/Q20 has a response that indicates that professionals are operating to avoid consequences, rather than in accordance with professional ethics.
  - Q13: Should we be asking whether building "strictly meet all requirements", or whether they "Substantially comply in all material respects".
  - Q4a: Survey asks for projects respondents have worked on over the past 2 years – extend this?
  - Q6a/11: clarify – requirements could be BC Housing which could be > than municipal requirements.
    - Passive House is also a compliance path (e.g. for rezoning in City of Vancouver – include as an option?

RDH

Comments Received

- Scope comments
  - Q21: Suggestions to add to question in blue. **Previous surveys indicated support for several measures that are now in place with the BC Energy Step Code. How effective do you believe the following measures have been in improving energy code compliance?**

Implemented Measure	Effectiveness
City of Vancouver Energy Modeling Guidelines Version 2.0	
Building Envelope Thermal Bridging Guide	
Illustrated Guide – Achieving Air-tightness	
AIBC EGBC Whole Building Energy Modelling Guideline	
Step Code website	
live courses or demos	
Part 3 Energy Design Report (beta)	
Design Guide Supplement on Overheating and Air Quality	
Guide to Low Thermal Energy Demand for Large Buildings	
Step Code Builder Guide	
Design Guide and Supplement – available at https://energystepcode.ca/for-industry/	
https://energystepcode.ca/incentive-programs/	
add seminars/webinars	
municipal info sessions	
municipal support/assistance	
Other design guides and handbooks	
Other (please specify)	

RDH

Comments Received

- Scope comments
  - Q22: Suggestions to add to question in blue: **What more do you believe would make it easier to meet the BC Energy Step Code?**

Implemented Measure	Effectiveness
More/cheaper product options	
In-person education and training opportunities	
Additional learning resources, such as videos, online courses, case studies and guides	
Real-time support / help desk	
Checklists like the step code compliance reporting form	
Live workshops and demos	
General break down to more DESIGN resources vs more REVIEW/CONSTRUCTION resources	
Local government policies	
Cost-benefit analysis tools	
Compliance tools	
Other (please specify): _____	

RDH

Timing, Next Steps

- Survey update based on comments received and today's discussion
  - Complete by Sept 8
- Signoff by project partners
  - Complete by Sept 15
- Coding/formatting/testing of online survey
  - Sept 16-29
  - A couple stakeholders to test/vet final version?
- Targeted survey launch: Sept 30
  - Stakeholders to assist with distribution

Subject: RE: GHGi for buildings

1. When will this work be public knowledge as we are seeing the request for GHGi coming up more and more in letters to the Minister?

   We have also received letters, most recently from Metro Vancouver. We have announced that we're moving forward on this issue at the Step Code Council meeting in June, but we have been delaying launching external consultation until we are able to brief up high enough to get the ok to proceed. Briefings have been hard to We could hear back in the next few weeks, or it could take until September if the Minister needs to weigh in.

   Are there any timing sensitivities from a CAS perspective we should know about? I was hoping to have this underway well before UBCM, but not sure if we will be able to pull that off if we're delayed pulling together external stakeholders into September.

2. Will Step Code Council, supported by BC Hydro, be engaging on this with industry and local governments, like in the past?

Yes. The plan is to develop targets/steps, and a voluntary implementation approach through the Energy Step Code Council. The council has unanimously supported working on this issue. Fortis, UDI, and CHBA BC support working on this issue so long as it's through the council and led by BSSB, so there's hope for a positive outcome that everyone can support.

Happy to discuss further. I'm around the rest of this week and off the first two weeks of August.

Best,

Zachary D. May, MBA

ER Engagem...

Jobs analysis a...

notes from May ESCC...

Framework Concept V3

Agenda:

1. Questions on Transition Plan (with Cimarron)
2. Plans for Executive Briefing tomorrow (with Cimarron)
3. Key points to present from ED input (Zac)
4. Overall Workplan (Andrew) – see attached.
5. Engagement plan (Zac)
6. Content for powerpoint (if any) and speaking points for three of us (all)

Greetings both,

Adding to Jessica's points, I would add the Greg Steves gave us feedback that we will need to engage stakeholders soon. My comments/edits to the engagement plan document were evidently broader than engagement alone, as it is now time to start mapping out our workplan as well.

From a project management standpoint, I suggest the following framework:

- Initial information gathering (complete)
- Define preliminary objectives and scope (complete, in Concept paper)
- Early engagement with key influencers (complete, with EDs)
- Prepare Charter, prepare preliminary work and communications plans (in the 2nd document that Aura prepared)
- Present preliminary information (Friday)
- Confirm objectives, scope, and pitch preliminary workplan and communications plan with Executive (potentially on Friday)
- Revise work and communications plans
- Execution of work plan

I suggest we have three layers of engagement for each of our project components:

1. Internal, with MAH EDs and Executive
2. Other internal stakeholders (including Crowns) such as BC Housing, FLNRORD, JEDC, Finance, MEMPR, BC Hydro

3. External stakeholders (UDI, CHBA, UBCM, etc.)

I suggest we use similar materials for each of the three layers of engagement for each of the project components. Here is some early thinking on the components (this is evolving, but hopefully we can lock it down soon):

a) Problem definition, data gathering and opportunity identification phase. Key product: Concept Paper (complete)
b) Differentiation of transition versus recovery initiatives. We could prepare a table that illustrates transition versus recovery actions for each of the sectors we identified in the table of the concept paper. The two are evidently linked. We could review the materials from today's announcement by the Premier as a key source of information, and the paper that Cimarron was working on.
c) Confirmation of "recovery" opportunities (to make sure nothing was missed), brainstorm on "long-term paradigm-shifts" for each of them (in other words, we are limiting discussion to those opportunities that could facilitate a pivot to a "new normal"), and method for analyzing impacts and prioritizing opportunities. Evidently DAPR will surface to the top of priorities, along with innovation in building design.
d) Draft "plan", outlining recommended actions, pros and cons and impacts.

So far, we have completed (1)(a). We are already summarizing results from EDs as a basis for pitching this to MAH Executive. However, before we meet with people externally, we will want to confirm some points with key government Branches and Crown Corporations such as BC Housing. We can use the same Concept Paper to meet with them.

For discussion tomorrow afternoon.

Cheers,
Andrew Pape-Salmon | P.Eng., MRM, FCAE, FCSSE
Executive Director, Building and Safety Standards Branch
Email: Andrew.PapeSalmon@gov.bc.ca

Concept Paper:

MAH Framework for COVID-19 Community and Economic Recovery

Commented [BJM1]: NOTE:EDs are requested to provide feedback on the proposed approach and to complete Table 1 to the best of their ability

Context

Across BC the impacts of COVID-19 are significant, with variable effects on individual sectors and individuals. Many components of the **economy** have been hit particularly hard and in parallel, the social fabric of BC's **communities** will also require supports to transition and strengthen post COVID-19.

BC's successful recovery from COVID-19 will require action across multiple sectors, with the province needing to take on a significant role with both financial and policy supports for economic recovery. At the same time, some emergent business practices and social activities caused by public health restrictions are having positive impacts on the **environment** and quality of life; efforts to maintain these should be a consideration or lens that is layered onto recovery actions. Furthermore, building the **resilience** of BC communities to withstand and manage for future anticipated chronic stresses (e.g. potential future iterations of the COVID-19 pandemic) and acute shock emergencies (e.g. extreme weather events) will be key to our long-term well being and economy.

The success of MAH's recovery planning will depend on alignment with related Ministry and government priorities, effective use of available data, and meaningful engagement with stakeholders. Recovery planning will be coordinated with MAH transition planning, as well as priorities identified by the Premier's Task Force on Economic Recovery. MAH's draft strategic plan and the Province's Economic Plan 2019-2020 will also serve as foundational documents that inform key strategic outcomes the recovery plan will support.

Further work is required to gather relevant data and stakeholder input related to the impacts and opportunities created by COVID-19, before a recovery strategy or specific actions can be recommended. The Ministry of Municipal Affairs and Housing (MAH) is actively engaging with stakeholders across all levels of government, industry and professional organizations, crown corporations and regulatory agencies, as well as the not-for-profit sector, to identify impacts from COVID-19 and support measures to help the economy and communities thrive both now and through recovery. Through this process, new challenges and opportunities are being identified as the economic and social impacts of COVID-19 continue to evolve.

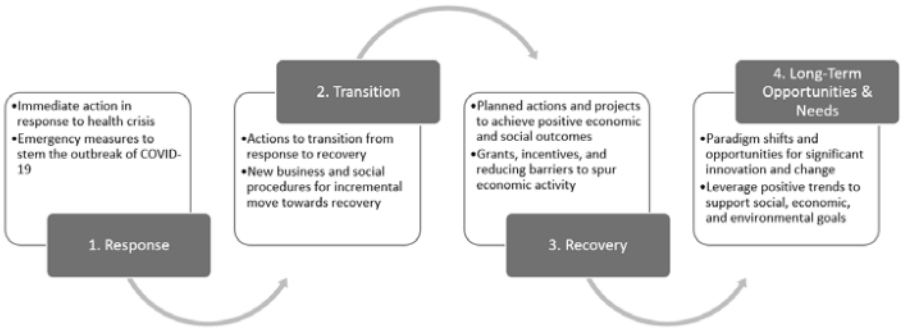
While the impacts present unprecedented challenges, there are also signs of emerging innovation and new opportunities, providing some fodder for a paradigm shift toward a more resilient economy and communities. For example, MAH partners and all sectors of the economy are finding new ways to conduct business online. This has resulted in virtually the elimination of lengthy commuting which has freed up time for workers to spend time on other parts of their lives, as well as significant reductions in environmental impacts. In addition, collaboration between communities and the Province to address chronic issues that have become acute emergencies, such as homelessness and poverty has increased significantly.

Taking Action

Within its scope of authority, MAH has responsibility for, or core engagement with, a number of sectors that have a critical role in BC's economic and social recovery. These include:

- Local governments, who are responsible for infrastructure and service delivery to BC communities and who influence the social fabric. They are expected to be recipients of federal and provincial infrastructure and stimulus funding.
- The housing sector, including security of tenure, affordable market housing, and the provision of social/supportive housing, which are fundamental to the health and wellbeing of BC residents and will be key to the successful transition of vulnerable populations from the current response state.
- Land development, buildings and new housing, which provides significant financial investment into the provincial economy and are important foundations for community resilience and carbon mitigation. The total investment in building construction was $32billion in 2019.
- Public transit (MAH responsibility for TransLink in Metro Vancouver), which has a critical role in leveraging senior government investment in affordable housing and sustainable land use; facilitating economic development; and reducing our carbon footprint.
- Non-profits who further enhance our BC's social fabric, public safety, environmental protection, and other priorities, supported by Community Gaming Grants.
- Indigenous communities who have Aboriginal Title and influence over land and resource development and provide similar or emerging governance and services as LGs across all regions of the province, including housing.

Within these areas, and consistent with its strategic plan[1], MAH has significant levers that it can bring to bear across the four recovery phases: (1) response; (2) transition; (3) recovery; (4) long-term opportunities and needs. The levers include direct investment, policy shifts, legislative and regulatory change, governance, and education/outreach.



[1] Specific actions will be organized at a high level around the MAH strategic objectives for the outward facing goal #1 of helping communities thrive: Communities are well planned for today & tomorrow; Communities are supported to build capacity & be well governed; Housing is affordable, available & secure; The built environment & technical systems are safe & sustainable

Commented [FRAM2]: Something to consider is environment scans of these sectors and drivers at the appropriate time of current and projected

Commented [BJM3]: Per Marijke's comments, we might want to blow out the LG section a little and roll land development into that section (or at least acknowledge)

Commented [FRAM4]: This is an area where PAS may play a role along with tax policy through tax and assessment policy

MAH has been implementing numerous initiatives as part of the COVID *Response* phase, including changes to the local government tax regime led by LGD and Finance that reduced most commercial property taxes by an average of 25%, providing up to $700 million in relief, and CGG branch $3-million emergency grant from the Community Gaming Grants program to Food Banks British Columbia. Actions identified to advance BC's successful recovery will support both near- and mid-term action related to phases 2 and 3: *Transition and Recovery*.

Transition and Recovery Actions (Phases 2 and 3)

Transition and recovery actions will include **profiling or expansion of existing initiatives** to focus on economic and community recovery, along with the **identification of new opportunities**.

Key issues resulting from COVID-19 are identified in table 1 below, along with the critical **outcome objectives** that will support transition and recovery (phases 2 and 3). These included active, planned and proposed initiatives in MAH. They cover the full spectrum of MAH "levers".

For subsequent phases of work, the tables included in Appendix A will identify the specific activities necessary to support the achievement of the identified outcome objectives, including key linkages to the MAH Strategic Plan.

Paradigm Shift (Phase 4)

MAH is also identifying fundamental trends and opportunities for change in industry, governments, and society to support phase 4. While some changes from COVID-19 are temporary, other changes will be much longer lasting and may reshape the way we engage with our communities and the built environment. MAH is working to identify and incorporate these changes into Ministry activities, with the goal of supporting a positive transition and leverage these changes to support goals in the Ministry's strategic plan, where possible. At a very general level these paradigm shifts may include:

- Greater focus on preparation, resilience and adaptation in the built environment and society for a range of acute shocks (earthquake, dangerous climate change) and chronic stresses (housing security), aligned with the *Emergency Program Act* Modernization
- Blending of social, economic and environmental policy to co-optimize efforts and achieve multiple co-benefits, including CleanBC, DRIPA, accessibility and homelessness reduction
- Appetite for innovation in all sectors of the economy
- Changes to business models and financial security
- Increased use of technology and associated "new infrastructure" needs (e.g., broadband)
- Changing nature of work and geographic distribution of employment
- Changes to transportation infrastructure use and patterns

Next Steps:

- Stakeholder engagement strategy to gather information to inform recovery planning and establish key information networks to validate recovery plans and monitor implementation outcomes
    - See engagement plan

Commented [FRAM5]: Minot point, but I believe this is school taxes (i.e. MFIN) , so LGD's role was probably minimal so maybe want to rephrase

Commented [BJM6]: NOTE: EDs are requested to please identify major areas of 'normal' activity / authority, key associated challenges arising from CODIV-19, and critical outcome objectives for transition and recovery, in the table below

Commented [BJM7]: NOTE: EDs are requested to please identify major areas of normal activity, key issues within them arising from CODIV-19, and critical outcome objectives for their recovery in the table below

    - Economic analysis
    - Stakeholder input
- Coordination with MAH transition planning process to ensure that engagement and planning are complimentary
- Establish draft strategic outcomes to guide action planning
    - (based on Ministry and stakeholder input, MAH strat plan, economic plan, transition planning, and PJH Task force)

Hi Zac,

This is just an FYI that Cassandra from UDI asked for a phone call with me to discuss the WWHR – didn't say what about. Sounds like they just have some questions.

Let me know if you have concerns about me taking this call.

Subject: Alterations to Existing Buildings Project – Fall 2019 Stakeholder Consultation Report

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Kylie,

I hope you're getting some relief from the smoke on the Island now. I wanted to reach out to thank you for the call with Jeff and I on Friday. As we discussed, our members remain concerned that any proposed policy options would need to account for situations where buildings are likely to be redeveloped in the near future, and provide flexibility for building owners. This is particularly important in instances where there is a land-use change determined by the municipality or other external factors (ie. transit infrastructure) that would impact an owner's decision on renovation or redevelopment.

Other topics that we are looking to be addressed through the proposed policy options will be the treatment of purpose-built rental buildings under the Alterations Code, including how upgrades would be funded, should they be required. As well as leadership in implementation by the broader public sector.

We also appreciated the opportunity to provide additional feedback on the need for capacity building in the municipal sector, not only to process additional renovation and building permit applications, but also for building officials, particularly in areas of the province outside the Lower Mainland.

We look forward to opportunities to connect with other stakeholders including municipal staff, other departments within MAH, as well as other ministries in the next round of consultation to discuss these and other topics that affect multiple sectors. Once you're able to share additional details regarding the next steps for consultation later this fall, we would be happy to review the proposed policy options and convene a group of our members for consultation.

Many thanks,
Cassandra

Dear Mr. Morrison:

Re: August 20 BCFSA Consultation Session on Strata Property Insurance in British Columbia

We would like to thank the BCFSA for involving the Canadian Home Builders' Association of British Columbia (CHBA BC) and the Urban Development Institute (UDI) in the August 20 consultation on rapidly increasing strata property insurance rates in British Columbia. We have several issues, many of which were discussed on the August 20th call, as well as other recommendations for the BCFSA on this critical issue.

Both CHBA BC and UDI were disappointed that we were not involved in the earlier consultation that led to the June 16 *BC Strata Property Insurance Market – Interim Findings* letter to the Hon. Carole James, Minister of Finance and Deputy Premier. We represent builders who provide new multi-family strata homes to British Columbians, and as noted in the letter, "*Strata insurers are now appearing to be more reluctant to insure new buildings less than five-years old*." The increasing strata insurance premiums are also adding to the strata fees, which undermines affordability for new homebuyers. Our members have to disclose strata fees, so reducing insurance costs is important to them.

Having stated this, we recognize that the BCFSA is still at a preliminary stage, as the data provided at the August 20 session was limited and no recommended policies or regulatory changes were proposed. Staff noted that the data they had been provided by insurers was only 6,000 properties in the early part of 2020. Staff indicated the data was limited to a small group of affected properties and collected at an earlier point in time. Before any proposed actions are provided to the Province, more recent and comprehensive data is needed, so we can confidently assess what the best options are to mitigate rising insurance rates. In addition, there are a variety of strata residential building types and units. The data collected should be expanded beyond a simple unit-by-unit analysis to differentiate clearly between new, existing, wood-frame, concrete, low-rise and high-rise buildings. We ask that if more insurance data is provided to the BCFSA, it be shared with other stakeholders.

The sharing of information and data is critical if we are going to resolve this problem. It was noted in the June interim letter that "*Insurers are incurring losses mostly from minor claims (particularly those resulting from water damage) due to poor building maintenance practices and initial construction quality issues*." Both UDI and CHBA BC

would appreciate knowing what construction quality issues are occurring, so steps can be taken to better assess what measures are appropriate.

In addition, we need to know if there are features that are being incorporated in new buildings that are driving up insurance costs, as well as if there are features that could be incorporated in buildings to reduce insurance costs. Ideally, the approach that can be taken is there is an automatic reduction in strata insurance costs if these features are (or are not) put in new strata buildings. This is similar to the approach taken for auto insurance when anti-theft devices or automatic breaking features are installed in vehicles.

We would be wary of a one-size-fits-all regulatory approach in which actions are mandated for builders or strata corporations (e.g. building code amendments, changes to the home warranty program, additional strata maintenance fees) if they do not end up reducing insurance costs - or end up costing more than what is saved through strata insurance reductions. As mentioned above, the regulatory approach would need to take into account that there may be different solutions for the variety of strata residential building types and units.

In addition, it will be important to have follow-up sessions with stakeholders if the BCFSA is contemplating specific recommendations to Government, as we would like the opportunity to provide input on any proposals to the BCFSA, Ministry of Finance and Ministry of Municipal Affairs and Housing.

It has also been clear from our discussions with the insurance industry that many view wood-frame and tall timber construction as risky, which is, in part, increasing strata insurance rates. As the Province and local governments look at expanding the use of wood in new buildings through incentives and even mandated requirements, we recommend that the Insurance Bureau of Canada be involved in any future consultations on this issue.

In addition, we note that in the Insurance Bureau of Canada's National Commercial Insurance Task Force's Midterm Report that, "*The cost of delays in municipal permitting in BC, particularly in the Lower Mainland, is affecting insurers. Delays and backlogs in the municipal permitting process in greater Vancouver extend the time it takes to repair and rebuild properties after insured losses. Insurers must cover additional costs associated with these delays, such as additional living expenses, which can last months or even years."* They put forward a recommendation that the Province and local governments find ways to speed up municipal permitting processes. UDI and CHBA BC have long identified the delayed municipal permitting process as a key issue that has impacted the affordability of homes – beyond strata insurance rates.

Thank you again for including us in your consultations on strata insurance. Both CHBA BC and UDI want to work with the BCFSA, the Province, the insurance industry and other stakeholders to reduce insurance costs for stratas and their homeowners.

Yours sincerely,

Anne McMullin

Hi Bea,

We are still having internal discussion about next steps on GHG emissions and the Step Code and until those have concluded we will be holding off further external engagement on the topic, including at the Step Code Council. Happy to include the Pathways report in the discussion when it continues, but we're still working on when that might be. I'll let you know as soon as we are ready to move forward.

Thanks again for sharing that information with our team.

Subject: RE: Poll: October Energy Step Code Council meeting date

Hello, everyone:

Due to the upcoming provincial election, we are postponing this meeting as there is a pause in public consultation across the public sector. We hope to provide additional information soon. Please be in touch if you have any questions.

Best,
Hugo

Subject: Poll: October Energy Step Code Council meeting date

Hello, Energy Step Code Council members:

It is time for a quick check in for the fall. We would like to schedule a three-hour meeting.

Please indicate your availability using this Doodle poll: https://doodle.com/poll/739vew8q3zc25cke

Thanks very much.

Hugo

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council
Part 3/Part 9 (Non-residential) Subcommittee
Metrics Research Report Update Steering Committee
Meeting #3
MEETING NOTES

Date: Thursday November 5, 2020 | **Time:** 10:30 a.m. – 12:00 p.m.
Steering Committee Chair: Scott Williams, Building and Safety Standards Branch
Microsoft Teams Meeting

Steering Committee Members Participating

Associations and Industry Hubs
Harshan Radhakrishnan, EGBC
Maura Gatensby, AIBC
Eoghan Hayes, IBPSA-Canada

Crown Corporation
Remi Charron, BC Housing
Wilma Leung, BC Housing

Industry
Jeff Fisher, UDI-Pacific

Local and Federal Governments
Greg McCall, City of Vancouver
Norm Connolly, City of Richmond, and Part 3/9 Subcommittee Co-Chair
Sepehr Foroushani, City of Richmond
Nicholas Heap, City of Richmond (and Part 9 Subcommittee Co-chair)
Iain MacDonald, National Research Council

Part 9 Buildings
Joe Hart, Pauline Rupp, Canadian Home Builders' Association
Mark Bernhardt, Bernhardt Contracting

Utilities
Toby Lau, BC Hydro and Part 3/9 Subcommittee Co-Chair
Pete Koepfgen, FortisBC
Saleh Lavaee, FortisBC (guest)

Building and Safety Standards Branch
Scott Williams, Dale Andersson, Zachary May

Regrets: Vanessa Joehl, CHBA BC; Bob Deeks, CHBA BC; Nicholas Standeven, UDI-Capital Region (Abstract Developments); Tanya RumaK, FortisBC; Maya Chorobik, CEA and Local Govt. Peer Network; Patrick Enright, City of Vancouver; Representative TBD, UDI-Okanagan; Kelly Reid, Canadian Home Builders' Association; Laura Sampliner, Port Moody and Local Govt. Peer Network

~~~~~~~~~~~~

ROLE OF STEERING COMMITTEE: Provide advice to guide an updated analysis of the 2018 Metrics Research Report, and an analysis of 20% better, to prepare for and determine the energy-efficiency requirements to be included in the 2022 BC Building Code.

ACTION ITEMS

- BSSB – revise scope given feedback provided by Steering Committee members
- Scott – connect with Iain MacDonald re: harmonization of work and building archetypes

Discussion of the revised draft included the following points:

- General
  - Clarify analysis to be done on climate zone 4
  - Combi systems - combination of gas/electric was used in the original report and we would be using the same for the update. Issues may arise when using HTAP (Housing Technology Assessment Platform) to model combi systems given the numerous changes to HOT2000
  - What future climate files will be used? 2020 and 2050 will be used for the overheating analysis
~~~~~~~~~~~~

  - Weather files: PCIC does have data for limited locations on their website which represents all climate zones. BSSB will be in discussion with PCIC regarding the data that was provided for the City of Vancouver and how this could be applied across the province
  - Iain MacDonald/National Research Council – doing lots of Part 3 analysis that could support this work – can do more complex work – have 240 archetypes based on ERS to get contemporary geometries for all climate zones. HTAP allows for much faster analysis, so could consider expanding the analysis to consider additional Part 9 archetypes.
  - Laneway homes – can be slab on grade but some are two storeys
  - NECB Schedule G issues
  - For Part 9 analysis, the % better metrics may not be the best method to compare different archetypes and ECMs (energy conservation measures) and absolute values (TEDI/MEUI) should be used instead
- VFAR discussions
  - Cube was not baseline in the original reports (not a typical building type); better to keep to baseline used in previous reports
  - VFAR analysis may demonstrate issues with % better approach because the form of the reference case will match the form of the design case
  - VFAR – volume to floor area may be better for Part 9 or exterior surface area to floor area
  - Less impact for Part 3 than for Part 9
- Costs
  - Previous reports looked at incremental capital costs (ICC) – took lowest 'reasonable' cost not just lowest cost
  - Operating costs were part of original work (NPV) but not a major focus of report – operating costs challenging as they depend on occupant behaviour
  - ICC can be tricky too: e.g., 3% increase on $300K vs $3m home very different for buyers
  - Lowest cost average of 10 approach and Part 9 – challenges if using % better approach; may understate lowest cost average; consider doing five of each – e.g., 5 SC (absolute metrics) and 5 9.36.5 or ERS?
- Modelling Tools
  - Morrison-Hershfield used a specific modelling tool in previous reports – how to address in this iteration? (didn't use archetypes but simulated them). Some inconsistencies may arise should a different consultant undertake the work, which may present challenges with comparing with past results and analysis
  - HOT2000 weak on cooling (cooling load not reliable) but overheating for Part 9 buildings will not be included in this work
  - Possibly use different tool for Part 3 vs Part 9?
- Future studies will be able to use data from the Part 9 Energy Compliance Reports – Pre-construction and As Built (Richmond has 60 As Built reports to date)

Chat Comments Provided

- Not sure if combi-systems can be modelled in latest versions of HTAP. So may not be able to include it for new modelling.
- The scope does not restrict the analysis to H2K. This is likely good given that other tools are better at overheating/cooling.
- The impact of TEDI adjusted to HDD vs the percent better depends on climate zone and archetype.
- VFAR was high-rise, for Part 9 might be more relevant to all exterior building envelope area or building volume.

- Resource for Simulation Weather files, recommend using 2016 files if available. BC Step code to specify weather files for each location as per Table C-2 in BCBC -2018. This is important to maintain modeling simulation consistency across the province and possibly Canada using tools like Ladybug/ One Building.org as a resource for the weather files. This is a free resource for modelers to download weather files from. https://www.ladybug.tools/epwmap/
- Since we started the first Metrics Study in late 2016, the 2016 CWEC files were not available at the time, and the CWEC files available at that time were used.
- Part 3 modeling tools can be used in some Part 9 archetypes (e.g., MURBs)
- Now would be a great time to update these files to 2016 as the old weather files are based on weather data from 40 years old. The old weather files are on average 10 % cooler then the 2016 files. This impacts the overheating analysis and the TEDI and TEUI targets. is it possible to get the analysis updated using the 2016 Weather file data?
- These files were used for Pt 3 in previous Metrics Study
    - CAN_BC_Prince.George.718960_CWEC.epw
    - CAN_BC_Kamloops.718870_CWEC.epw

Attachments:	image003.jpg

Hi Jeff,

Thanks for your phone message. I'm aware of the commitment regarding sectoral targets and have been involved in some of those discussions in the last couple years. I'm still sorting out who at CAS is leading this work after the election reorganization, but I'm confident we'll be involved as the lead on codes. I'll see if we can get an update for the Step Code meeting next week.

Best,

Zachary D. May, MBA

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting

Meeting Package

Date and Time of Meeting: Thursday December 9, 2020 | Time: 1:00 to 4:00 p.m. Pacific Time
Webinar link: Click here to join the meeting
Note: There is no conventional dial-in option, but you can request a call back to join the meeting by phone.

Chair: Zachary May, Building and Safety Standards Branch, Office of Housing and Construction Standards
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Meeting Materials

1. Agenda (revised Dec. 9, 2020)
2. Presentation slides, Capacity Building and Communications Subcommittee

Contacts if You Require Assistance

- Hugo Wong, BSSB –250-880-6418 (call or text); hugo.wong@gov.bc.ca
- Dale Andersson, BSSB – 778-679-9653 (call or text); dale.andersson@gov.bc.ca

AGENDA

Time	Topic	Speaker(s)	Purpose(s)
1:00	Welcome and Introductions	Zachary May, ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs	▪ Welcome participants ▪ Introductions: Tyler Wightman (BOABC), Diana Dilworth (HAVAN), Ruta Fluxgold (NRCan) ▪ Approval of agenda
1:05	COVID-19 check-in	All	▪ Roundtable to discuss effects of COVID-19 during winter months
1:30	Proposed mandatory Step Code education for Licensed Residential Builders	Wendy Acheson, BC Housing	▪ To discuss direction and hear feedback
1:45	EMLI incentives update	Nat Gosman and Katherine Muncaster, EMLI	▪ To discuss: CleanBC Building Innovation Fund, CleanBC double upgrade rebates, Better Homes New Construction Rebate, etc.
2:00 p	Aligning LEED with Step Code	Joyce Wagenaar and Cloelle Vernon, CaGBC	▪ Technical presentation on two new LEED Alternative Compliance Pathways: o BC Energy Step Code ▪ Zero Energy Performance Index and Site Energy Metric (pilot)

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

2:20	New government mandate	Zachary May, BSSB	▪ Renewed energy efficiency mandate ▪ Carbon mandate (GHGs and local governments, CAS sectoral targets, role of electrification) ▪ Existing buildings code likely to address carbon and energy ▪ Longer timeline for BCBC 2022 energy efficiency requirements
3:20 p.m.	Local governments, GHGs, and the new govt. mandate	Lise Townsend, City of Surrey	▪ Approaches under consideration in Surrey ▪ To seed future discussion on GHGis
3:30 p	Subcommittee updates	Scott Williams, BSSB, Subcommittee Co-Chairs and Council members	▪ Local Government Peer Network: Laura Sampliner and Maya Chorobik (7 mins) ▪ Part 9 Residential: Nicholas Heap (10 mins) ▪ Part 3 & Part 9 Non-residential: Norm Connolly, Scott Williams to speak on work plan and new timelines (10 min) ▪ Capacity Building and Communications subcommittee (15 mins) o Seeking council direction on 2022 communications plan
4:00 p	Final Comments and Adjournment	All	

Hi, everyone:

Update #2 (Dec. 9, 2020): Revised agenda and CBCSC presentation attached.
Update (Dec. 8, 2020): Agenda now attached.

Most people chose the Dec. 9 option, so we'll go with that. Looking forward to it.

Report to the ESCC

Capacity Building and Communications Subcommittee

Wednesday December 9, 2020

Mary McWilliam
BCIT
Subcommittee Co-chair

Bertine Stelzer
BC Hydro
Subcommittee Co-chair

Dale Andersson
BSSB
Subcommittee Co-chair

2020 in Brief

Growing Subcommittee Membership

- New co-chair: Bertine Stelzer (replaces Christian Cianfrone)
- Over 90 members (not all active)
- Five Subcommittee meetings
- "Convene and catalyse" role
  - Reaching out to new organizations such as UBC, BCNPHA, REIBC, VEC, etc.
  - Sharing projects and resources at meetings

+ Three active working groups

2020 in Brief: Working Groups

Communications WG

- Maintain Step Code website including events calendar
- Collectively produced 8 newsletters (monthly except Aug, Oct, Nov)
  - BC Hydro Funds, ZEBx produces and provides in-kind support to March 31, 2021
  - Developing 'themed' issues, more intentional in 2021+
  - About 1550 subscribers
- New resources:
  - CEA case study videos
  - Mundell House ATT for Part 3 buildings video
  - Township of Langley case study
  - More being prepared by partners
- 2022 Communications Plan – prepared in 2021

2020 in Brief: Working Groups

Matrix (Capacity Building Study) WG

- Scope of Work developed by WG for capacity building study
- Study of ‘step code readiness’ of key industry professions
- Major funders: BC Hydro and FortisBC
- RFP issued Nov 2020
- Capacity component complete: April 2021
- KPI component: Mid-May 2021

2020 in Brief: Working Groups

EA WG

- **Findings from five meetings**
  - EA numbers increasing since last year: 97 in PQEA List*
  - Firms are 'hiring up' in anticipation of demand
  - Spring: Slow for EAs
  - Concern: 'Mass training' of new EAs
  - Impact of new provincial and federal incentive programs to be seen
- **Supported:** UBC Scholar Study of EA Capacity in Small and Remote Communities – still concerns/challenges
- **Supported:** EA/EM BC Energy Step Code Compliance Competency Framework (recommendation of 2019 EA/EM Scope of Practice Report) – next steps TBD

Other Capacity Building Activities

Part 9 Energy Compliance Report Training

- 3 live webinars over summer (City Green)
- Recorded training coming online shortly

Part 3 Energy Design Report Training

- 3 live webinars over summer (Focal Engineering)
  - 2 for energy modellers
  - 1 for local govt staff – high attendance
- Recorded training and tip sheet online

Annual Local Government Readiness Survey

- CEA/BC Housing doing this year – with LG Peer Network

Local Government Adoption – BSSB Numbers

Consulting Local Governments

- 72 local governments consulting on Step Code – as of Nov. 6, 2020
- Since June 2020 meeting:
  - Town of Oliver – Oct. 20, 2020
  - City of Coquitlam – Oct. 29, 2020
  - Sun Peaks Mountain Resort Municipality – Nov. 5, 2020
  - District of Kitimat – Nov. 6, 2020

Referencing in Policy, Program or Bylaw

- About 39
- Some LGs missing (await forms!) + some adoption might be 'future'

Feedback Invited from ESCC: How best solicit?

1. What do we need to do as a Subcommittee to support industry to understand the BCBC 2022 changes and be ready for them?
2. What could the Subcommittee do more of or better, to support information and education effort over coming year(s)?
3. What are the ESCC's expectations, if any, for the Communications Plan the Subcommittee has been tasked with preparing?
4. Are there key groups or sectors we should focus capacity building work and efforts on in 2021 and in the plan? e.g., local govts that have not yet done any work on Step Code, remote regions, etc.
5. Do you have any other feedback on our activities as we plan for 2021?

Subject: FW: Bullets for Step Code Council

Hi Zac,

Here are the bullets as requested; apologies for the delay in getting these to you. Hurrian, I did the sectoral emissions bullets based on our earlier exchange re the UDI enquiry, but let me know if you have any edits or comments on the bullets below. The Step Code Council meeting is on Wed Dec 9.

Sectoral targets

- Under the *Climate Change Accountability Act*, sectoral GHG reduction targets for British Columbia are required to be established by March 31, 2021.
- Hurrian Peyman is the CAS contact on all questions for sectoral targets.

Emissions factors for Public Sector Organizations

- The Climate Action Secretariat is currently reviewing the electricity emission intensity factors applied to public sector organizations under the Carbon Neutral Government program and participating local governments under the Climate Action Charter, including the option to adopt the Greenhouse Gas industrial Reporting and Control Act EEF methodology for those entities.
- An update on EEF will be communicated to PSOs and local governments in the coming weeks.

Hi, everyone:

Update #2 (Dec. 9, 2020): Revised agenda and CBCSC presentation attached.
~~Update (Dec. 8, 2020): Agenda now attached.~~

Most people chose the Dec. 9 option, so we'll go with that. Looking forward to it.

CleanBC Better Homes
New Construction Program

December 2020

Agenda

- Program overview
- Eligibility criteria
- Available rebates
- How to apply
- Q&A

cleanBC
BETTER HOMES

Program overview

- The **CleanBC Better Homes New Construction Program** provides financial incentives for the construction of new, high-performance residential homes
- Advances CleanBC objectives and helps achieve the building sector's 2030 emission reduction target by supporting ESC adoption and incentivizing builders to use electric space and water heating systems
- Developed and funded by the Province of BC, administered by BC Hydro

cleanBC
BETTER HOMES

Program goals

- Reduce GHG emissions in BC's residential new construction sector:
  - High efficiency electric space and water heating
  - High performance building envelopes
  - Increasing the number of 100% electric homes (no fossil fuel connection to house)
- Prepare market for higher performance requirements and building codes leading up to 2032 when all new buildings will be required to be "net-zero energy ready"

cleanBC
BETTER HOMES

Rebate Pathways

- Applicants may apply for one of two rebate pathways:
  - **Energy Step Code pathway:** build a new home that meets a minimum BC Energy Step code level and uses electric space and water heating systems.

  or

  - **Heat pump pathway:** build a new home that uses an electric heat pump for space heating or water heating, regardless of Energy Step Code level.

- Add-on rebates
  - **All-Electric Bonus:** build a home with no fossil fuel connection whatsoever (e.g. natural gas, propane, oil) and receive an additional $4,000 per home.
  - **Energy Advisor Support Rebate:** work with a Program Qualified Energy Advisor and receive an additional $1,000 per home.

cleanBC
BETTER HOMES

Eligibility

- Homes may be constructed by a licensed residential builder or an owner builder authorized by BC Housing
- Homes must be constructed in compliance with Part 9 of the BC Building Code and, where applicable, the municipally-adopted minimum BC Energy Step Code requirement
- Homes must be built in BC Hydro (including New West Electric) service territory
- Eligible building types:
  - Single family detached
  - Laneway home
  - Duplex
  - Row or townhome

cleanBC
BETTER HOMES

Eligibility (continued)

- An applicant may include a licensed residential builder, owner builder, or Program Qualified Energy Advisor applying on a builder's behalf.
- Builders participating in the Energy Step Code pathway or applying for the Energy Advisor Support Rebate or All-Electric Bonus in the Heat Pump pathway must work with a Program Qualified Energy Advisor
- Building permits must be issued on or after April 1, 2020

cleanBC
BETTER HOMES

Heat pump pathway incentives

- Build a home that uses an electric heat pump for space heating or water heating

Heat pump type	Requirements	Rebate	Energy Advisor Support Rebate (optional)	All-Electric Bonus (optional)
Air source heat pump	**Variable speed mini-split, multi-split, or central ASHP (Tier 2 only)** HSPF ≥9.3, SEER ≥16 Must be on the QPL	$3,000	$1,000 per individually modelled home or unit • $800 to builder • $200 to EA	$4,000 per home or unit
Air-to-water hydronic heat pump	Must be on the QPL	$3,000		
Combined space & water heat pump	Must be on the QPL	$4,000		
Heat pump water heater	Must be on the QPL	$1,000		

cleanBC
BETTER HOMES

Energy Step Code pathway incentives

- Build a home to Step 3 or higher using electric space and water heating systems

ESC Step	Rebate	Energy Advisor Support Rebate	All-Electric Bonus (optional)
Step 3	$4,000	$1,000 per individually modelled home or unit • $800 to builder • $200 to EA	$4,000 per home or unit
Step 4	$6,000		
Step 5 (or Passive House-certified)	$10,000		

cleanBC
BETTER HOMES

How to apply

1. Carefully review the program website, including the Rebate Eligibility Requirements and Terms and Conditions to confirm your eligibility
2. Fill out and submit the pre-registration form
   - Within 30 days of submitting this form, BC Hydro will send you an email with the status of your submission
3. Complete your project within 12 months of the date of your pre-approval confirmation email
4. Submit the post-construction application and required supporting documentation
5. Application reviewed and if approved, rebates issued

Questions? BC Hydro's Project Manager, Residential New Construction Program and the CleanBC Energy Coaches are available to support applicants

Hi Zac

I think we're trying not to circulate too widely but if there are contacts that you think would be very important to receive this DP, then it could be circulated by email. If that is the path, forwarding Neil's email would be the best way to carry it out.

I've cc'd Hurrian Peyman, who is leading this work with Neil.

Hurrian will be able to provide further advice if needed.

Cheers,
Jesse

Hello EDWG

Please note this email is just an FYI - the sectoral targets discussion paper has been sent to key partners.

Uploaded to the SharePoint are the following documents (If you do not have access to the SharePoint, please work with your ED to access the materials):

- An updated email template that allows a little more time for recipients to RSVP to attend the sectoral targets webinar in January
- Updated bullets with links to the recently released Climate Change Accountability Report and an updated date of the sectoral targets webinar
- The final PDF of the discussion paper that was emailed out to key partners today (December 16th)

Best,
Jesse

Hi Jeff,

Thanks for your phone message. I'm aware of the commitment regarding sectoral targets and have been involved in some of those discussions in the last couple years. I'm still sorting out who at CAS is leading this work after the election reorganization, but I'm confident we'll be involved as the lead on codes. I'll see if we can get an update for the Step Code meeting next week.

Honourable David Eby
Attorney General and Minister Responsible for Housing
Parliament Buildings
Victoria, British Columbia V8V 1X4

Dear Attorney General Eby:

On behalf of the Board of Directors of the Urban Development Institute – Pacific Region (UDI) and our over 950 members, I would like to congratulate you on your recent re-election and reappointment as Attorney General. Thank you for the opportunity to connect earlier this month, with Housing now added to your portfolio I look forward to working more closely in the future. We have many common goals, and UDI is eager to work with your Ministry to fulfill the Government's ten-year *Homes for B.C.* housing plan and find ways to incentive the creation of more new homes in municipalities across the province.

The *Homes for B.C.* plan includes providing 114,000 new rental/affordable homes to British Columbians – a laudable but challenging goal to achieve as the Government has only built 2,963 units in the previous term. I have attached a *Housing Policy Priorities* Paper UDI released in October, which outlines strategies and solutions that we ask your government to consider implementing in order to achieve this commendable housing target. The paper not only outlines the incentives needed to get housing built, but it also addresses the understanding that just focusing on housing taxation has not provided relief to tenants and homebuyers. In fact, because many of the housing taxes apply to new housing projects (including new Purpose-Built Rental buildings), they have added to the cost of providing new homes to British Columbians and ultimately impacted affordability across all housing types.

UDI believes that increasing housing options for British Columbians will be critical to the success in meeting the Government's housing objectives. This is why we are supportive of the partnerships being developed through the *Housing Hub*, and welcome the plan to use it to identify "… *pathways to home ownership through rent-to-own or other equity-building programs*." Several of our members have introduced similar rent-to-own concepts in their projects and as such, would be interested in sharing their experiences with your Ministry.

As we discussed, it will also be important for this Government to take a stronger position in encouraging local governments to approve housing projects – especially those that include rental and affordable homes. For example, UDI has long advocated that the Province invest in transit – but also fully leverage those investments by using Transit Supportive Agreements to ensure municipalities provide appropriate land use policies around stations. While this is one example, UDI looks forward to sharing best practices, and tools that municipalities can employ to support the creation of more new homes for British Columbians.

While we strongly support your Government's commitment to provide tenants in need with an annual $400 renters rebate cheque, UDI has concerns with the proposal to extend the rent freeze into next year without providing equitable relief to property owners and landlords that are experiencing mounting operating and maintenance costs and taxation. The rent increases

allowed under the *Residential Tenancy Act* were already reduced by 2% per year in 2018. At the same time, costs that rental providers are facing – property taxes, hydro bills and rapidly escalating insurance costs – are not frozen. We ask that the Government work with the rental housing sector to cap these costs and consider income testing for the rent freeze. For example, the same income threshold for the $400 renter's rebate could be applied to the rent freeze policy. In addition, we understand there has been ongoing work to develop Above Guideline Increases (AGI) for rental building rates to accommodate for maintenance and upgrades. Clarity on when this framework will come into force is even more important now, given the prolonged rent freeze.

The AGI will also be critical if the Ministry proceeds with the development of an Alterations Code for Existing Buildings. UDI has been engaged with the Building and Safety Standards Branch on this initiative and have expressed significant concern regarding the ability to upgrade rental buildings to higher energy efficiency and seismic standards without assistance from governments and/or increasing rent rates. There is also the potential for similar issues with commercial and strata buildings. UDI is eager to continue discussing the development of this Code and how it can be cost-effectively implemented for building owners.

UDI concurs with the Government that climate change is a challenge that British Columbia and the world needs to tackle. We were one of the original organizations that developed the *BC Energy Step Code* (*ESC*), and we continue to actively participate on the Energy Step Code Council. However, consultation is needed before the Government moves forward with empowering "*… local governments to set their own carbon pollution performance standards for new buildings*." UDI supports decarbonizing buildings, but we believe that this can be best implemented through the work of the Energy Step Code Council, which includes representatives from the Province, municipalities, the Federal Government, utilities, academic institutions, BC Housing, the building sector and other stakeholders. The Council helped manage the municipal implementation of the *ESC*, and we recommend that it be involved in this initiative as well.

Consultation with the housing sector is also needed with regard to any changes to accessibility requirements in the *BCBC*. UDI was involved in the development of the current adaptable housing standards in the *Building Code* for new apartment buildings. Apartment buildings are best suited for mandating accessibility features because there is usually one living level that can be accessed through common hallways and elevators. The Ministry needs to carefully consider how similar requirements would be applied to townhouses because it is far more difficult to make them accessible due to the narrowness of the units and a layout that often includes two or more levels.

Thank you again for reaching out after your reappointment and providing the opportunity to start the discussion on these critical issues. We look forward to providing your Ministry with more information on best practices to incentivize new homes as well as working with this Government to implement many of the priorities of its new mandate.

Yours sincerely,

Anne McMullin
President & CEO

C.C. Richard Fyfe, Deputy Attorney General

There's some last minute uncertainty about the true intent of our mandate and whether establishing provincial regulation would be the kind of "support" the Premier intended. We're putting together a decision note to clarify whether we should be establishing regulations or just allowing local governments to develop their own.

Best,
Zac

We could unrestricted that issue and remove the building act as a barrier. It wouldn't be consistent with all the other work we're doing or the requests of local governments themselves, but it's an option. I think there's a lack of familiarity on this topic within the ministry so we're having to revisit and clarify some of our assumed mandates. Hopefully we've got clarity within a few weeks.

Best,
Zac

RE: Part 3 Overheating Working Group - UDI members?

From: Williams, Scott B OHCS:EX
To: Andersson, Dale OHCS:EX <Dale.Andersson@gov.bc.ca>, Jeff Fisher <jfisher@udi.org>
Sent: February 4, 2021 11:09:05 AM PST

Hi Jeff,

With regards to airtightness and smaller buildings, we have a working group for Part 9 that will reconvene as soon as we have more clarity regarding the direction of the NBC for NLA/NLR alternative metrics. A working group will be formed for Part 3 later in 2021 once we get some of the more critical items addressed within the workplan.
Please let us know who from UDI would like to take part and we can add them to the distribution list.

Cheers,

Scott Williams P.Eng, CPHD, LEED AP^{BD+C}| Senior Energy Codes Administrator

Subject: RE: Correspondence from UDI

Hi Susan,

No bother! Looping in Zac and Nicole, who works on existing buildings. I've been separately asked to write an information note on the Energy Step Code Council, so this is quite timely.

What is the AGI? Above Guideline Increases? And could I see the letter for context?

I'm assuming this is related to the Jan. 26 news item UDI posted to their website.

Basically, we have and will continue to consult with UDI on these issues.

- On the first bullet, the Ministry does intend to proceed with developing a strategy for existing buildings. Potential results may include additions to the BC Building Code to guide renovations to existing buildings, best practice guides, and a gradual increase in performance requirements. A second round of consultation, which will include UDI, is expected to begin this summer.
- On the second bullet, I believe this is pending decision (Zac, can you confirm this?). I don't know if I can really answer this one, other than confirm the issue has been raised substantively during Energy Step Code Council meetings in the past.
- Accessibility is outside my wheelhouse, but I can find someone. Probably Andy.

Nicole/Zac, is there anything I missed or anything you'd like to add?

Hugo

Subject: Correspondence from UDI

Hi Hugo,
I'm wondering if you could help me out with some bullets/points in response to a letter from UDI Pacific Region to the Minister. It's a bit of a catch-all letter with various policy issues across the division. I got assigned this reply today when it was already overdue to go back to ADMO, so if you have time to help or could suggest someone who can help soon, that would be really lovely.

Here are the three paragraphs that relate to BSSB stuff:

- The AGI will also be critical if the Ministry proceeds with the development of an Alterations Code for Existing Buildings. UDI has been engaged with the Building and Safety Standards Branch on this initiative and have expressed significant concern regarding the ability to upgrade rental buildings to higher energy efficiency and seismic standards without assistance from governments and/or increasing rent rates. There is also the potential for similar issues with commercial and strata buildings. UDI is eager to continue discussing the development of this Code and how it can be cost-effectively implemented for building owners.
- UDI concurs with the Government that climate change is a challenge that British Columbia and the world needs to tackle. We were one of the original organizations that developed the *BC Energy Step Code* (*ESC*), and we continue to actively participate on the Energy Step Code Council. However, consultation is needed before the Government moves forward with empowering "… *local governments to set their own carbon pollution performance standards for new buildings*." UDI supports decarbonizing buildings, but we believe that this can be best implemented through the work of the Energy Step Code Council, which includes representatives from the Province, municipalities, the Federal Government, utilities, academic institutions, BC Housing, the building sector and other stakeholders. The Council helped manage the municipal implementation of the *ESC*, and we recommend that it be involved in this initiative as well.
- Consultation with the housing sector is also needed with regard to any changes to accessibility requirements in the *BCBC*. UDI was involved in the development of the current adaptable housing standards in the *Building Code* for new apartment buildings. Apartment buildings are best suited for mandating accessibility features because there is usually one living level that can be accessed through common hallways and elevators. The Ministry needs to carefully consider how similar requirements would be applied to townhouses because it is far more difficult to make them accessible due to the narrowness of the units and a layout that often includes two or more levels.

Sorry to bother you!

Subject: UDI response the MAG&H mandate letter

Comments on accessibility, existing buildings, and GHGi.

Not sure if this has been received by the ADMO, but I assume we will be asked to support a response. Dale managed to track this down on the UDI website:
https://udi.bc.ca/wp-content/uploads/2021/01/UDI-Letter-Minister-Eby-Attorney-General-and-Minister-responsible-for-Housing_January-18-2021.pdf

The AGI will also be critical if the Ministry proceeds with the development of an Alterations Code for Existing Buildings. UDI has been engaged with the Building and Safety Standards Branch on this initiative and have expressed significant concern regarding the ability to upgrade rental buildings to higher energy efficiency and seismic standards without assistance from governments and/or increasing rent rates. There is also the potential for similar issues with commercial and strata buildings. UDI is eager to continue discussing the development of this Code and how it can be cost-effectively implemented for building owners.

UDI concurs with the Government that climate change is a challenge that British Columbia and the world needs to tackle. We were one of the original organizations that developed the BC Energy Step Code (ESC), and we continue to actively participate on the Energy Step Code Council. However, consultation is needed before the Government moves forward with empowering "… local governments to set their own carbon pollution performance standards for new buildings." UDI supports decarbonizing buildings, but we believe that this can be best implemented through the work of the Energy Step Code Council, which includes representatives from the Province, municipalities, the Federal Government, utilities, academic institutions, BC Housing, the building sector and other stakeholders. The Council helped manage the municipal implementation of the ESC, and we recommend that it be involved in this initiative as well.

Consultation with the housing sector is also needed with regard to any changes to accessibility requirements in the BCBC. UDI was involved in the development of the current adaptable housing standards in the Building Code for new apartment

buildings. Apartment buildings are best suited for mandating accessibility features because there is usually one living level that can be accessed through common hallways and elevators. The Ministry needs to carefully consider how similar requirements would be applied to townhouses because it is far more difficult to make them accessible due to the narrowness of the units and a layout that often includes two or more levels.

Doug, thanks for getting back to me. I did reach out to our members, and there may be some issues for developers when they are carrying out the responsibilities of the strata corporation prior to the first AGM (see Section 5 of the Act). Joscelyn Baker or Clara Li from Polygon Homes (and the UDI Real Estate Legal Issues Committee) would be interested in participating on the February 26 call. Can you send them the details?

Subject: strata consultations

Hi Jeff,

I heard back from OSRE. They advised that:

Filling out a Form B won't necessitate changes to a disclosure statement. If a developer's insurance coverage changed between when they filed a disclosure statement and then were required to fill out a Form B they would have to amend their disclosure regarding strata insurance, but they would have to make that amendment regardless of whether they had to fill out a Form B. Essentially, there are specific reasons you'd have to amend your disclosure statement (i.e. changes to the development), which may have to be addressed in a Form B, but you wouldn't have to amend your disclosure statement due to filling out a Form B.

I hope that answers your question. As we discussed, there are still occasions where owner developers need to fill out Form B's as the strata corporation, so let me know if you'd like to have someone participate on the call on the 26th. I expect the topics in the following months will be of more interest, however.

Subject: UDI Okanagan rep - Metrics Research Report Update Steering Committee

Hello UDI Okanagan staff,

I'm just reviewing our membership list for our Metrics Research Report Update Steering Committee, and see that we have a spot for a representative from UDI-Okanagan, but it doesn't appear to have been filled (unless my list is out of date?).

Would you like to have a rep on this Steering Committee? The Steering Committee is helping support the development of the BC Energy Step Code as follows:

- **ROLE OF STEERING COMMITTEE:** Provide advice to guide an updated analysis of the 2018 Metrics Research Report, and an analysis of 20% better, to prepare for and determine the energy-efficiency requirements to be included in the 2022 BC Building Code.
- **CURRENT STATUS:** We're waiting for submissions to a BC Bid proposal and anticipate the Steering Committee will next meet late March or early April for a kick-off meeting with the successful proponent, with the research done by late June or so – the anticipated timeline for the work.
- **FYI - OTHER UDI REPS**:
    - *Jeff Fisher, UDI-Pacific*
    - *Nicholas Standeven, UDI-Capital Region (Abstract Developments)*
    - *Dave Ramslie, Concert Properties*

Scott Williams, Senior Energy Codes Administrator (cc'd here) of our branch chairs the group. Please let us know if this is of interest or if you have any questions. Thank you.

Kind regards,
Dale

Hi Zac and everyone!
Thanks for looping us in. Interesting take by this one councillor. How the pendulum has swung from 2009 when wood buildings were the ones being "banned" by local governments!
Agreed that embodied carbon is primed to enter the mainstream conversation around how we build buildings.
Interesting times ahead!

Hello EMTC colleagues,

Sounds like Port Moody is getting (over)excited about mass timber and trying to "phase-out the use of concrete as the main component of buildings over six storeys in height."

Issues with the Building Act aside, this does show the interest at the local government level to encourage mass timber and address embodied emissions. It also shows the need to help everyone understand that a mass timber building is not entirely mass timber, so removing barriers likely works better than creating new barriers for concrete and steel.

No action required but thought you may be interested.

Jeff also called, so I told him it sounded like there might be some Building Act issues but couldn't specify. Sounds like they will flag the Building Act as a possible issue, along with other issues, and hopefully this becomes a more refined proposal and possibly comes our way in a more formal way from Port Moody. Jeff suggested there are many issues so there's little chance of this proceeding as planned and was only worth us being aware of for now. No need to dispatch the Building Act Strike Force yet.

Hi Zac,

Not sure if/how you're planning to respond to Jeff Fisher. You might be inclined to say the same thing that I would say: "Of course they can't ban concrete construction, it's permitted in the Code!" (I infer this from your "issues with the Building Act" comment.)

This email is just a reminder s.14 s.22
s.22

(By the way . . . I fully agree with the rest of your summary in your paragraph two.)

Subject: GHGi Mandate - Monthly Touch Base

At today's meeting I would like to discuss two tweaks to address recent information.
1. Considering all three methods for sectoral targets in the analysis
2. Responding directly to the UDI letter asking for percentage reduction as opposed to intensity targets
3. Commissioning a third party to develop the GHG intensity of natural gas in light of FortisBC's massive effort to decarbonize. This is best done by a third party such as CSA who can maintain the test standard

Also, I am pleased to report that NRC will take in our work as part of the RCT, so we should be able to pass the baton to the national system by 2025

GHGi Mandate - Monthly Touch Base

Subject: RE: New eapp - Energy Step Code Council terms of reference and membership

As promised.

Scope of the ESCC:
- CleanBC and 2020 MAG Mandate item (new construction)
  - 20% better than BCBC
  - Carbon Pollution Standards
  - Not including existing buildings

Membership:
- National Code (1) - NRC staff
- Market developers (4) - UDI 4 chapters
- Social housing developers (2) - one Lower Mainland developer, plus BCNPHA
- Builders (4) - CHBA-BC plus 3 chapters in each region (interior, VI, LM)
- Local governments (4), including one rural / RD representative
- Indigenous (1) - AHMA or FNHIC
- Finance (2) - BC Housing, BCI or some other institutional investor
- Insurance (1) - BC Housing LCS
- BOABC
- Design (2) - EGBC member (not staff), AIBC staff, transitioning to member by 2022
- Research and capacity building (2) - UNBC, Canadian Association of Consulting Energy Advisors
- Energy (2) - utilities

Governance and communications
- Leadership team - need to add a local government vice-Chair
- Decisionmaking methods
- Documentation of decisions (in Teams)
- Public review format (cross-posting on BSSB website, email blast to all BSSB stakeholders)
- Newsletter

I would like to approve this package, not the acting ED during my vacation.

Subject: RE: New eapp - Energy Step Code Council terms of reference and membership

As promised.

Scope of the ESCC:
- CleanBC and 2020 MAG Mandate item (new construction)
  - 20% better than BCBC
  - Carbon Pollution Standards
  - Not including existing buildings

Membership:
- National Code (1) - NRC staff
- Market developers (4) - UDI 4 chapters
- Social housing developers (2) - one Lower Mainland developer, plus BCNPHA
- Builders (4) - CHBA-BC plus 3 chapters in each region (interior, VI, LM)
- Local governments (4), including one rural / RD representative
- Indigenous (1) - AHMA or FNHIC
- Finance (2) - BC Housing, BCI or some other institutional investor
- Insurance (1) - BC Housing LCS
- BOABC
- Design (2) - EGBC member (not staff), AIBC staff, transitioning to member by 2022
- Research and capacity building (2) - UNBC, Canadian Association of Consulting Energy Advisors
- Energy (2) - utilities

Governance and communications
- Leadership team - need to add a local government vice-Chair
- Decisionmaking methods
- Documentation of decisions (in Teams)
- Public review format (cross-posting on BSSB website, email blast to all BSSB stakeholders)
- Newsletter

I would like to approve this package, not the acting ED during my vacation.

Andrew Pape-Salmon | P.Eng., MRM, FCAE, FCSSE Executive Director, Building and Safety Standards Branch

Subject: New eapp - Energy Step Code Council terms of reference and membership

Jessica, please initiate an eapp to Zac to revise and seek approval of the Terms of Reference. I will send instructions separately to Zac by email. This will go to ADM for approval.

Andrew Pape-Salmon
Cell 250-812-1933

Notes to 2021 List Formatting

Organizations = entered in short form if commonly used (e.g., EGBC, AIBC, BOABC), or in short form & spelled out if not (e.g., REIBC (Real Estate Foundation of BC)
Municipal Govts names = entered with full name e.g., District of XX, City of XX, Township of XX etc.
Individuals representing an organization = entered with the org name first and then their own org using & - e.g., UDI & ABC Builder; CHBA BC & XYZ Builder; UBCM and City of Richmond

ESCC Members - have subcategories to identify different folks on the list
- yes = for all regular members
- yes chair = for chair and co-chairs
- yes other - not members but included for info such as BSSB staff
- yes other subco chair = people included as they are ESCC Subcommittee co-chairs
- yes alternate = if they are an alternate member of the ESCC for someone else

Date	Name	Change
25-Feb-21	ESCC List	All names from original sheet added including alternates. Should confirm alternates sometime soon. Updated Helen Goodland email address

3/10/2022	Troy Glasner E3	Part 9 Subco. No longer a principal. No new contact info provided.		
3/14/2022	Gerry Sawkins	Pt 9 Subco New email address		
3/16/2022	Kelly Lane, Maple Ridge	No longer with Maple Ridge		
4/21/2022	Luke Dolan, Capital Homes	Added to Master List & Pt 9 Subco (already on meeting invite list)		
4/21/2022	Daisy Lilley	Removed from ESCC as she's moved on to another position		
4/21/2022	Sara Fralin	s.22 Removed from ESCC as alternate and Cap/Comm subco		
5/3/2022	Lise Townsend	Added her as Max Sykes' alternate for Surrey.		
9/20/2022	Louise Roux	Removed. s.22		
9/23/2022	Peter Sunberg	Left City Green (Peter.Sundberg@citygreen.ca) for FRESCo		
10/11/2022	Tami Rothery	Added to Master List & Pt 9 Subco		
10/11/2022	Chris McCurray	Added to Master List & Pt 9 Subco		
10/14/2022	Richard Mathews	New email address		
10/14/2022	Manda McIntyre	New email address - with the City of Nelson now		
10/14/2022	Dale Andersson	No longer with BSSB - removed from list		
11/3/2022	Elisabeth Baudinaud	Added to Master List, ESCC & Part 3 Subco		
11/4/2022	Gaetane Carignan	Added to ESCC and Part 3 Subco		
11/4/2022	Tami Rothery	Added to ESCC and Part 3 Subco		
11/4/2022	Chris McCurray	Added to ESCC and Part 3 Subco		
3/14/2023	Don Pedde	Deleted s.22		
	Luke Dolan, Capital Homes	Deleted a duplicate (he's still on the list)		
5/2/2023	Anna Joynt	Deleted as she's left Office of Energy Efficiency		
5/12/2023	Alex Hutton	No longer at Providence Health/Fraser Health. Now a sole proprietor. Email changed.		
5/24/2023	Rob Bernhardt	No longer representing Passive House Canada. Removed from P9 subco.		
6/23/2023	Rachel Buskie	Added from CEA		
2023 06-28	Dustin Winstanley	Removed as not representing larger org		

FW: 2021 Provincial Meeting - Ministers Program Briefing Note FINAL (003).pdf

From: May, Zachary OHCS:EX
To: Horner, Shannon E OHCS:EX <Shannon.Horner@gov.bc.ca>
Sent: March 12, 2021 4:36:32 PM PST
Attachments: 2021 Provincial Meeting - Ministers Program Briefing Note FINAL - comments from CHBA.pdf

FYI – given the timelines on this issue I assume there will be ADMO questions about the status of this on Monday.

Best,
Zac

Subject: RE: 2021 Provincial Meeting - Ministers Program Briefing Note FINAL (003).pdf

Greetings all,

As I prepare Minister David Eby's speech, I will use the previous UDI speech as the basis of content. There is a lot of Housing Policy Branch content in there.

I called Carmina at Canadian Home Builders about this event next week and she provided some helpful comments for the speaking points. See attached.

For BSSB, note the comments about:

- BOQs in Central Interior – delays in permits
- Noting differences in interests of builders in rural and remote communities versus urban with respect to standards
- Energy Step Code being a challenge due to differing standards by municipality
- Happy with the outcome from meeting with Superintendent re: Professional Governance Act and Home Designers

For PLUM

- The DAPR is the primary interest of CHBA members on this list
- They were encouraged with the announcement and hope cities like Vancouver will apply, noting City of Vancouver permitting doesn't include online option (still require a paper application)
- Challenges with regulations under Water Act – referrals to the Province with long approvals
- ALR – Fraser Valley and Vancouver Island
- MOTI regulations – no specifics

She also said she would get in touch with us if there are any other issues her members raise before this event. I said I would put her in touch with John Thomson if that is OK.

I will get the speaking points done today or over the weekend, email them to Jessica as an FYI, and to Zac, John before going to ADMO.

I am on vacation next week.

Cheers,
Andrew Pape-Salmon | P.Eng., MRM, FCAE, FCSSE
Executive Director, Building and Safety Standards Branch

Subject: 2021 Provincial Meeting - Ministers Program Briefing Note FINAL (003).pdf

Greetings Jessica and John, I am writing these speaking notes for our Minister now.

I will send you both a draft end of day – Jessica by email and John by eApps.

My colleague Jessica Alexander can collate MMA comments into our points on Monday.

Cheers,
Andrew

CANADIAN HOME BUILDERS' ASSOCIATION BRITISH COLUMBIA

2021 PROVINCIAL MEETING
MINISTERS' ADDRESS BRIEFING NOTES

MARCH 19, 2021 from 1pm – 1:45pm

VIRTUAL MEETING LOG-IN INSTRUCTIONS FOR LIFESIZE:

- You are invited to call into CHBA BC's secured, confidential meeting line on Lifesize at 1pm. Join the meeting here: https://call.lifesizecloud.com/6185905.

EVENT LOGISTICAL NOTES:

1) **Who will the audience consist of and approximately what size?**
   - The audience will consist of the leadership of CHBA BC's organization and CHBA BC staff. This includes the Board of Directors, the Executive Committee, Local Officers and Committee Chairs.
   - The typical turnout for this event in previous years has been 30-40 participants.
   - CHBA BC will be providing the full list of confirmed registrants in advance of the meeting.

2) **Will media be invited?**
   - No media will be present for this event. It is closed to CHBA BC and member-company representatives.

3) **Can you share a contact name/cell number?**
   - Please contact CARMINA TUPE, DIRECTOR OF POLICY & GOVERNMENT RELATIONS at (647) 326-6181.

STRUCTURE OF PROGRAM FOR MINISTERS' SEGMENT:

- 45-minute program running from 1pm to 1:45pm, broken down as follows:

Welcome & Introductions by CHBA BC CEO, Neil Moody	2-3 minutes
Opening remarks by Attorney General and Minister Responsible for Housing, Hon. David Eby and Minister of Municipal Affairs, Hon. Josie Osborne	Approx. 10-15 minutes (5-7 minutes each)
Open Discussion/Q&A Period Moderated by CHBA BC President, Joe Hart	20-25 minutes
Wrap Up/Closing Remarks	2-3 minutes

DISCUSSION TOPICS AND POTENTIAL QUESTIONS:

- In the time you've had to review the housing files, what do you think the government is doing well in terms of supporting delivery of housing options and what areas do you think greater attention is needed to better improve the environment for delivering housing supply?

- Residential construction is one of the most heavily regulated industries. We face regulations at three different tiers of government and often need to work with different departments and ministries (beyond MMA) to receive approvals. How will you be collaborating with other ministries to ensure they maintain a housing lens on the work they do, specifically as it related to reducing red tape and unnecessary barriers to approvals?

- Predictability and certainty are important to plan housing projects. However, members continue to face rising construction costs, especially with lumber shortages, and exponential increases to the development related DCCs and CACs at the local municipal level. What are some ways your Ministries are considering ways to improve the cost certainty for development and ensure that the fees and charges imposed are transparent, reasonable and justified?

- The Development Approval Process Review (DAPR) is a significant piece of work that CHBA BC and its members are highly supportive of and believe it will have a significant impact on streamlining processes. Can you share how you intend to advance that work forward and what opportunities will be made for CHBA BC and its members to be involved?

- Residential construction is a major contributor to the provinces' economy. We create billions of dollars in investment value and contribute thousands of jobs each year. As the pandemic continues to impact the economy, what ways will you seek to have housing play a role in the province's recovery efforts?

- What do you believe our industry and members can do better to work with this government and our mutual housing objectives for more supply and affordability?

Existing Buildings

Hi Jeff,

Heard your message. We're likely starting on existing buildings consultation in May or June. We have internal approvals in place and need to award an RFP for a facilitator, Which will likely take 6-8 weeks to complete.

I may need some advice about your early thoughts on key issues we need to address before we go for consultation. If there's anything in particular you think we should know please feel free to reach out.

Best,
Zachary D. May, MBA

Subject: RE: 2021 Provincial Meeting - Ministers Program Briefing Note FINAL (003).pdf

My last task before taking 2 weeks vacation!

The eApp has been sent to John Thomson for HPB edits. Note that CHBA-BC provides the construction services for buildings up to 6-storeys (as opposed to UDI that dominates larger developments). As such, a large proportion of our social housing is built by CHBA-BC members. John, when HPB is done you can send it to Jessica Alexander and she can submit for the 10am Monday deadline to ADMO. ADM comments should go back to John T for addressing.

Juni and Zac, I invite your input to the attached – please send the word document with tracked changes to Jessica Alexander by 9:30am Monday.

Jessica Brooks, I suspect you are doing your own package.

What is missing from this OHCS package is speaking points for the Q&A topics. I suggest a joint briefing note for both Ministers that can be attached to the eApp later. Who wants to go first? PLUM or HPB?

- In the time you've had to review the housing files, what do you think the government is doing well in terms of supporting delivery of housing options and what areas do you think greater attention is needed to better improve the environment for delivering housing supply?
    - Ministers can speak freely about their experiences.
- Residential construction is one of the most heavily regulated industries. We face regulations at three different tiers of government and often need to work with different departments and ministries (beyond MMA) to receive approvals. How will you be collaborating with other ministries to ensure they maintain a housing lens on the work they do, specifically as it related to reducing red tape and unnecessary barriers to approvals?
    - In my conversation with Carmina, the regulations were focused on development approvals. See my notes in Attachment #4.
    - However, the Ministers should also be prepared to speak to the challenges for climate action noted in attachment #3.
- Predictability and certainty are important to plan housing projects. However, members continue to face rising construction costs, especially with lumber shortages, and exponential increases to the development related DCCs and CACs at the local municipal level. What are some ways your Ministries are considering ways to improve the cost certainty for development and ensure that the fees and charges imposed are transparent, reasonable and justified?
    - Focused on development approvals.
- The Development Approval Process Review (DAPR) is a significant piece of work that CHBA BC and its members are highly supportive of and believe it will have a significant impact on streamlining processes. Can you share how you intend to advance that work forward and what opportunities will be made for CHBA BC and its members to be involved?
    - Ditto.
- Residential construction is a major contributor to the provinces' economy. We create billions of dollars in investment value and contribute thousands of jobs each year. As the pandemic continues to impact the economy, what ways will you seek to have housing play a role in the province's recovery efforts?
    - I have noted some statistics in MDE speech, based on metrics published by CHBA-BC (link in the first attachment).
    - I think they are seeking further information about their policy positions (attachment #2) which are in the domain of Finance.
- What do you believe our industry and members can do better to work with this government and our mutual housing objectives for more supply and affordability?
    - I suggest we propose a quarterly EDs meeting with CHBA on housing supply and affordability. The three of us – John, Jessica and Andrew. I could use my first meeting with CHBA-BC (attachment 5) as the starting point, inviting you two.

Cheers,

Event Information/Speaking Notes
Minister David Eby Opening Remarks

Event:	Canadian Home Builders Spring Provincial Meeting – Jointly attended with Minister Josie Osborne
When:	March 19, 13:00-13:45
Where:	Online: https://call.lifesizecloud.com/6185905
Contact:	**Carmina Tupe. Director of Policy and Government Relations. (647) 326-6181**
Length:	5-7 min for each Minister
Key Participants:	Leadership of CHBA BC's organization and CHBA BC staff
Speaking Backdrop:	Online
Audience Description:	Board of Directors, the Executive Committee, Officers from eight Local Associations and Committee Chairs. • President Joe Hart is a member of CHBA Northern British Columbia and previously served as its local president from 2017-2019. He has co-owned Icon Homes Ltd. since 1995, offering both new homes and renovations to Quesnel and Cariboo region as a licensed residential builder. His experience includes starter homes, developments, and custom homes. In 2018, Joe's company initiated the second net-zero energy home in northern B.C. in order to trial energy-efficient processes in a northern climate. • CEO Neil Moody has led the CHBA BC since August 2013. During this time, membership has grown by 37% to 2,100 member companies and the association has become the leading provider of builder education and energy efficiency programs. Neil brings an action-based, collaborative approach to advocacy and government relations. Neil is a former business owner, home builder and brings more than 15 years of association experience to CHBA BC.

Number of Participants: 30-40 participants

Agenda:

Welcome & Introductions by CHBA BC CEO, Neil Moody	2-3 minutes
Opening remarks by Attorney General and Minister Responsible for Housing, Hon. David Eby and Minister of Municipal Affairs, Hon. Josie Osborne	Approx. 10-15 minutes (5-7 minutes each)
Open Discussion/Q&A Period Moderated by CHBA BC President, Joe Hart	20-25 minutes
Wrap Up/Closing Remarks	2-3 minutes

Media attending: No media will be present

Background Stats:

- 2019 Economic impacts – combined new construction and existing buildings
-

Territory Acknowledgement

- Before I begin, I would like to acknowledge, with respect, that I am joining this event from the traditional territory of the Lekwungen speaking Indigenous peoples, whose relationships with this land continue to this day.

Commented [PAO1]: Depends on location where the Minister is taking this meeting. This is greater-Victoria based territorial acknowledgement.

Key Messages/Bullet Points

- The members of CHBA-BC and your eight regional home builder associations play a vital role in constructing the affordable, safe, functional and resilient housing that British Columbians need.

- Your members also renovate existing homes and construct additional affordable residential units such as secondary suites and laneway houses.

- Your sector is central to the strength of the provincial economy, generating $25.6B in investment, $13.4B in wages and providing over

213,000 jobs in 2019, almost equally split between new construction and renovations.

- As you all know, we face a shortage of the types of housing British Columbians need and an affordability challenge in several parts of the province.

- These challenges call for decisive action. That is why Budget 2018 introduced the 30 Point Plan and an historic $7-billion investment in the homes people need. As a result of that investment, more than 26,000 new homes are complete, under construction or in the approvals process for a range of people who are struggling to find a place to live – people who are experiencing homelessness and seniors on fixed incomes, to middle-income families, students and individuals.

- Under the leadership of my colleague Hon. Josie Osborne, Minister of Municipal Affairs, communities are collecting data, analyzing trends

Commented [PAO2]: HPB: check this figure

and presenting reports that describe their current and anticipated housing needs.

- Your members will build a significant proportion of those needs in virtually all communities across British Columbia, both market housing and BC Housing-funded affordable housing developed by non-profits, housing authorities and Indigenous organizations.

Commented [PAO3]: HPB: Is this a complete list of the types of organizations building affordable housing in BC?

- Along with renovations of existing homes to extend their lifetime, functionality, safety and resilience.

- I'd like to take a few moments to talk about some of the new commitments our government has made to make housing more affordable, efficient and functional.

Housing Hub

- **(Commitment)** We know the development industry and home builders have an important

role to play in creating new supply of affordable housing. That is why we've committed to deliver more affordable housing through HousingHub partnerships by:

  - looking into an increase in the lending capacity for rental construction financing through the HousingHub;

  - identifying new pathways to home ownership through equity-building programs;

  - promoting the Affordable Home Ownership Program gives buyers a leg-up by closing the gap on the equity needed to buy a home.

- But our direct investment and programs like the HousingHub won't deliver all the affordable housing we need. That is why I cannot overstate the importance of collaboration across all governments, with federal and local governments and Indigenous communities, and with the development industry.

Development Approvals

- Much of housing development is impacted through the local government development approvals process. I support my colleague, the Honourable Josie Osborne, Minister of Municipal Affairs, to work with local governments to identify barriers to housing supply, streamline processes, and apply innovative thinking.

- I appreciate the valuable input that CHBA-BC has contributed through multiple channels regarding the importance of land-use changes within the context of urban planning and development practices

- In your January 25 letter to the Climate Action Secretariat you noted the widespread acceptance that residential densification, intensification and brownfield redevelopment support more housing forms and transit-oriented development, and to reduce a community's greenhouse gas emissions.

- My mandate commitments also include important initiatives to make improvements to buildings across the Province.

CleanBC and Climate Action

- **(Commitment)** We will continue government's work to make new and existing buildings more efficient and cleaner and support local governments to set their own carbon pollution performance standards.

- We will seek input from CHBA-BC members and others in the construction and real estate industries and local governments to develop standards that deliver on Government's CleanBC goals.

    - This includes proposed standards to improve energy efficiency in new construction by 20% by 2022.

- We will also engage with building owners and managers in the coming months to develop a strategy for improving the energy efficiency and resiliency of existing buildings.

- In response to my new mandate for local government carbon pollution performance standards, we will develop a consistent set of technical requirements that local governments can voluntarily reference in building bylaws or policies, similar to the Energy Step Code.

- We are aware of the current practice of local governments establishing ~~making~~ their own ~~determinations~~ approaches to~~on~~ ~~achieving~~ achieve ~~GHG emissions~~ reductions in GHG emissions, and we hope that a provincial approach will improve the consistency and accountability of carbon pollution standards. ~~through bylaws that require low carbon energy systems in new homes at the expense of energy efficiency levels and plan to address this, as this compromises energy affordability for homeowners.~~

- Also, in support of affordability of construction costs, our government is committed to transitioning over time to harmonization with national building codes to increase consistency across Canada and to advance BC's policy priorities for climate action through the national code development system.

- This will be implemented over the next four years in response to the Regulatory Reconciliation Agreement on Construction Codes, part of the Canadian Free Trade Agreement.

- My staff are active participants in this transition, working closely with their counterparts with Codes Canada and other Provinces and Territories.

Accessibility for People with Disabilities

- **(Commitment)** My staff are working with the Parliamentary Secretary for Accessibility Dan

Coulter to ensure that the next edition of the Building Code includes changes that will make new buildings more accessible for all people.

- Many of my staff in the Building and Safety Standards Branch are supporting Codes Canada to finalize the National Building Code in 2021 on which the next edition of the BC Building Code will be based.

- My staff are also collaborating with the National Research Council, Accessibility Standards Canada, and the Canadian Standards Association on new accessibility requirements for adoption in future national and BC codes.

- We will be seeking input from CHBA-BC.

Building Official Qualifications

- We heard your desire for more consistent code interpretations from the building officials with whom you regularly interact.

- On February 28, it became mandatory for building officials to meet standardized qualification requirements if they are making code enforcement decisions for local governments.

- With our regulatory partner, the Building Officials Association of BC, core competencies and technical subject matter knowledge have been identified for each level of building official.

- These will support a more unified approach to code interpretation among jurisdictions and more predictability for home builders.

- In response to CHBA-BC's input, we are excited to see BOABC taking approaches to curriculum development and training that seek to bring building officials, builders and recognized professions, like architects and engineers, together to receive the same information and to appreciate the diverse perspectives and roles they each have.

- We heard from CHBA-BC a concern about delayed building permits in areas that have insufficient staffing of qualified building officials.

- Flexibility is provided to local authorities to quickly secure a building official-in-training, along with other options such as registered professionals.

Closing Remarks

- We are taking steps to make sure British Columbians have an affordable place to call home. Increasing housing supply is central to this priority.

- Members of CHBA-BC are critical influencers in facilitating the construction of residential units that British Columbians need throughout the province, from Sooke to Dawson Creek and all parts in between.

- I commend CHBA-BC for your work in supporting housing excellence with government and public relations, education and building innovation.

- I really appreciate CHBA-BC's volunteerism in providing input to provincial staff and elected officials to help inform our policy work, including your January 29 letter to my attention with your policy positions.

- I welcome CHBA-BC's continued input on our policy and regulatory work to ensure that the Province supports a vibrant residential construction sector that provides for an expanded supply of affordable, safe and functional housing that meets the needs of British Columbians.

- I invite your advice today on the challenges your sector faces, and how my Ministry can support reducing or alleviating those challenges.

- I am looking forward to the discussion during the Q&A following our introductory remarks

-END-

time-sensitive: Doodle dates for strata CRF consultation

From: Barlee, Veronica OHCS:EX
To: Jeff Fisher (UDI) <jfisher@udi.org>
Cc: Page, Doug OHCS:EX <Doug.Page@gov.bc.ca>
Sent: March 16, 2021 11:36:12 AM PDT

Hello Jeff,

As part of the Province's actions to address strata insurance issues, Housing Policy branch will be holding consultations on contributions from developers and strata owners to the strata corporation's Contingency Reserve Fund at the end of March.

Please use this Doodle poll to indicate whether you, or a representative of your organization, are available on:

- Fri Mar 26 from 1 to 3 pm
- Mon Mar 29 from 9 to 11 am or 1 to 3 pm
- Wed Mar 31 from 9 am to 11 am or 1 to 3 pm

https://doodle.com/poll/bd4zndyxi9hzwx8p?utm_source=poll&utm_medium=link

This will be an online meeting including representatives from developer and home builder organizations and strata homeowner associations.

Key questions and resource material will be send out later this week.

If you have any questions, suggestions or concerns please don't hesitate to get in touch with me, as the lead policy advisor on this file, or Doug Page, Director of Policy and Legislation.

kind regards,
Veronica Barlee, MBA
Senior Policy Advisor

Sent: March 17, 2021 2:53 PM
To: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>
Subject: SN for stakeholder events

Hi Zachary,
I'm writing speaking notes for three stakeholder events that MDE will be speaking at in May. The audiences are the BC Real Estate Sector's annual Government Relations Days, Real Estate Board of Greater Vancouver, and the UDI Under 40 committee.

For the BC Real Estate Sector presentation, one of the topics that has been requested is "Energy Efficiency in Housing". I'm hoping that you may be able to share some existing SN or bullet points on this topic. The other topic is Housing Affordability & Supply, so there's plenty to fit into a 10 or 20 minute presentation!

I'll probably re-purpose the first SN for the REBGV talk, and then will riff off those and the previous SNs done for UDI-Greater Vancouver for the last event (I have those).

The timelines aren't super pressing on this – the sooner I can get them off my plate the better though I'm hoping to finish up a first draft for the first event's SN by middle of next week.

Feel free to IM me or call to discuss if that's easier.

Thank you!

Susan Low

Overall – supporting improved consistency of building regulations in BC, removing barriers to innovation, and supporting governments key priorities (housing, CleanBC, and economic recovery)

CleanBC – 20% improvement in energy efficiency in the BC Building Code in 2022, developing a strategy to improve the energy efficiency and climate and seismic resilience of existing buildings, and establishing carbon pollution standards for new buildings.

Accessibility – improving accessibility requirements in the BC Building Code

Best,
Zac

Subject: FW: Sectoral targets announcement

Hi Cheryl,

See below regarding a delay in the Sectoral Targets announcement until next week. As Andrew may have mentioned, messaging is being sent from CAS to ADMs and DMs to have sent out to stakeholders. We're happy to support that communication effort with OHCS stakeholders. We have received questions from UDI and CHBABC (Homebuilders) about this process and they may have comments or concerns in the media following the announcement.

There are no immediate implications for OHCS with this announcement, but it does provide outcomes that our codes and standards need to work towards over time. Andrew is working with EDs from other building-related ministries to develop a more detailed roadmap of how the Province will achieve the building and communities emissions targets, to be released in the fall.

Subject: Emailing: Port Moody Sustainable Building Practices

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Zachary, this Report is going to Port Moody Council tonight. The Councillor is requesting that staff look at banning concrete construction in the City. Can local governments ban concrete construction under the Building Act?

Your message is ready to be sent with the following file or link attachments:

Port Moody Sustainable Building Practices

Note: To protect against computer viruses, e-mail programs may prevent sending or receiving certain types of file attachments. Check your e-mail security settings to determine how attachments are handled.

Report to Council
From the Office of Councillor Steve Milani

Date: March 1, 2021

Subject: Sustainable Building Practices

Purpose

For Council to consider phasing out the use of concrete as the main component of buildings over six storeys in height as tall concrete buildings are not sustainable and continuing to build them works against the Climate Action Plan, which was endorsed by Council on July 21, 2020.

Recommendation

THAT staff report back to Council with options and recommendations on how best to:

a) **prioritize and incentivize Mass Timber (Cross-Laminated Timber (CLT)) construction for buildings over six storeys in height; and**
b) **phase-out the use of concrete as the main component of buildings over six storeys in height;**

as recommended in the report dated March 1, 2021 from the Office of Councillor Steve Milani regarding Sustainable Building Practices;

AND THAT this item be classified as High Priority to address the current state of climate emergency.

Background

In June of 2019, the City of Port Moody declared a state of climate emergency. Oxford Dictionaries defines a 'climate emergency' as "a situation in which immediate action is needed to reduce or stop climate change and prevent serious and permanent damage to the environment". In July of 2020, City Council endorsed the Climate Action Plan. One of the six goals included in the plan is to cut the carbon content of construction projects by 40% (compared to 2018) by the year 2030. Committing to it is the first step, the next is action, which is where this report comes into play.[1]

Discussion

Tall concrete buildings such as high-rises are not sustainable and constructing them should no longer be permitted in Port Moody. The recommendations in this report are not meant to affect those development applications that have already passed first-reading.

[1] https://www.portmoody.ca/en/city-hall/climate-action-plan.aspx#Our-Plan-was-developed-with-input-from-the-community

In Canada, a building that is ten storeys or more in height is considered a high-rise while a building with forty or more stories and taller than 150 m (490 ft) is generally considered a skyscraper. The inefficiencies resulting from concrete high-rise construction have been known for years. In the past, profit seemed to take precedence over environmental concerns. In an article dating back to 2012, Patrick Condon of the University of British Columbia states, “Our high-rises, according to BC Hydro (the province of British Columbia’s main electric utility) data, use almost twice as much energy per square metre as mid-rise structures.” He goes on to say, “... high-rise buildings built largely of steel and concrete are less sustainable than low-rise and mid-rise buildings built largely of wood; steel and concrete produce a lot of GHG. Wood traps it. Concrete is 10 times more GHG-intensive than wood.”[2]

A study published in October of 2019 in the International Journal of Environmental Science and Technology examined the carbon footprint of a residential tower during the construction phase and concluded the following: This paper assessed all sources of carbon emissions in the construction phase, including emissions from manufacturing and extraction of building materials, transportation of building materials, construction equipment, vegetation cover around the building, and transportation of construction waste. According to the results, the highest amounts of carbon footprint were estimated at 83% and 14%, which were, respectively, related to the emissions from the transportation of materials and construction wastes. The emissions from the construction phase accounted for 3% of the total footprints. Also in the manufacturing process of building materials, the highest contributions in CO2 emissions were 78%, 10%, and 6%, belonging to concrete, rebar, and cement mortar, respectively.[3]

In a wonderful opinion piece, entitled, “High-rises are energy hogs, not climate solutions” the author states that in addition to the “embodied energy” of high-rise buildings being substantially higher than that of other building types, data collected by the City of Seattle as a result of its Energy Benchmarking and Reporting Program indicates that multi-family buildings higher than nine stories, currently use 60 percent more energy per square foot than comparable four-story or five-story buildings.[4]

Page 32 of the Climate Action Plan states the following under the heading of Buildings:
14.2 Goals
Design/construct/renovate buildings that:

- Are durable and more likely to withstand or recover quickly from the anticipated effects of climate change;
- Use relatively little energy to operate; and
- Provide a healthy indoor environment with good air quality.
- Design/construct/renovate buildings with:
- Materials that are associated with low levels of embodied carbon; and
- Materials that store carbon.

[2] https://ourworld.unu.edu/en/a-city-that-runs-on-itself
[3] https://link.springer.com/article/10.1007/s13762-019-02557-3
[4] https://crosscut.com/2016/11/high-rises-run-counter-to-the-citys-environmental-goals?fbclid=IwAR3ub1UYQgGw0iWf3SEeM1sD6QnwrGZ1DXi_t2VTOnf90U5AcWGBa1Wgjnc

Use sources of energy that produce lower amounts of greenhouse gas emissions and energy systems that are more likely to withstand or recover quickly from disruptive events.
Mass Timber construction, also known as CLT (cross-laminated timber) meets the Climate Action Plan criteria while concrete construction does not. A building material with a long-standing history in construction, Mass Timber is recognized as being a durable and sustainable building option. Lighter and more efficient to use than other structural materials, engineered wood carries much less of an environmental footprint than concrete, which produces up to 8% of the world's emissions. Originally a Swiss invention, CLT has been the norm in Europe for decades while in North America, its uses have been hampered by years of conservative building regulations. The foundations and underground parking garages of Mass Timber buildings are still primarily formed using concrete.

The following excerpt was taken from the Think Wood website.[5]
Here are 4 things the Mass Timber Code Coalition wants you to know about Mass Timber:

1. Mass Timber is Fire Resistant
    - During a fire resistance test of a 5-ply cross-laminated timber (CLT) panel wall, the panel was subjected to temperatures exceeding 1,800 Fahrenheit and lasted 3 hours and 6 minutes, far more than the two-hour rating that building codes require.
    - During fires, exposed mass timber chars on the outside, which forms an insulating layer protecting interior wood from damage. Additionally, when the code requires mass timber to be protected with gypsum wallboard, the mass timber can achieve nearly damage-free performance during a contents-fire burnout event.

2. Mass Timber is Strong
    - Recent mass timber buildings weigh approximately 1/5th that of comparable concrete buildings, which in turn reduces their foundation size, inertial seismic forces, and embodied energy. High strength-to-weight ratios enable mass timber to perform well during seismic activity.

3. Mass Timber is Sustainable
    - Replacing steel with mass timber would reduce carbon dioxide emissions by between 15% and 20%.
    - By some estimates, the near-term use of CLT and other emerging wood technologies in buildings 7-15 stories could have the same emissions control effect as taking more than 2 million cars off the road for one year.
    - The fire tests confirmed that mass timber structures meet and generally exceed the fire resistance requirements in the current code. Studies have shown that building with wood produces fewer greenhouse gas emissions than building with other materials.

4. Mass Timber Makes Construction Cost-efficient

[5] https://www.thinkwood.com/blog/4-things-to-know-about-mass-timber

- Mass timber buildings are roughly 25% faster to construct than concrete buildings and require 90% less construction traffic.
- Since mass timber panels are prefabricated and then assembled on-site, buildings made from mass timber have much shorter project timelines and safer construction sites.

Less construction noise and related traffic are only a couple of the benefits of using mass timber over concrete, here are a few more.

- Wood is a natural insulator and has a lower thermal conductivity compared to concrete, steel-frame, and masonry construction and is ideally suited to energy-efficient design. This efficiency translates to less heating and cooling costs which results in less GHG emissions. A Port Moody resident currently living on the 25th floor of a 26 storey tower said that they spend as much to cool their condo as they do to heat it.
- “As our economy bounces back from the COVID-19 crisis, we want to do everything we can to support forest workers,” said Premier Horgan. “By focusing on mass timber, we have an opportunity to transition the forestry sector to high-value over high-volume production. This will mean opportunities for local workers, strong partnerships with First Nations, and greater economic opportunity while making a significant contribution to advancing CleanBC.”[6]
- A very important fact to consider is that all land surrounding the Burrard Inlet in Moody Centre, Inlet Centre, and Pleasantside neighbourhoods is susceptible to soil liquefaction[7] as referenced in OCP Map 14 - Hazardous Lands.[8] The lighter weight of Mass Timber buildings makes them far less likely to trigger liquefaction in the event of an earthquake.[9]
- There is a growing body of evidence internationally demonstrating that connection to nature, biophilic design, and wood, exposed wood in this case, is associated with improved physical and mental wellbeing. Biophilia (meaning love of nature) focuses on human’s innate attraction to nature and natural processes.

Environmentally Friendly ‘Circular Construction’

Circular construction is achieved by using sustainable materials and construction processes. Mass timber is circular as its components can be dismantled and reused while concrete structures are poured into place requiring them to be demolished when reaching their useful life.

Building materials should be assessed in terms of their life cycle in order to achieve maximum circular potential. Starting to shift into more reconstructable materials and designs will allow engineers, constructors, and designers to depend less on energy-intensive and heavy emitting materials such as concrete and steel.

[9] https://cdn.britannica.com/84/152184-050-0C74FF5D/qualities-soil.jpg

Sustainability [10]
Unlike concrete, building with mass timber has a number of environmental benefits. Life cycle assessments show that wood outperforms both steel and concrete in terms of energy, air pollution, and water pollution.

Carbon storage is an important component of building with CLT. A healthy tree in a forest will release oxygen and store carbon dioxide (CO2). Using mass timber as a building product reduces the carbon footprint by also storing carbon dioxide (CO2) in the same way a healthy tree would. To put it into perspective, it is believed a single five-storey, cross-laminated timber building will cut emissions by levels equivalent to removing up to 600 cars from the road for a year.

In British Columbia, large amounts of CLT are made from Mountain Pine Beetle-kill wood. If those dead trees were to remain in the forest, they would emit CO2 into the atmosphere instead of storing it. However, if trees have already died due to pine beetle contamination, the timber is still sound and usable for construction for up to 10 years. By utilizing that wood before it goes to waste, CLT becomes a building product that not only sequesters tonnes of carbon but also reduces greenhouse gas emissions during construction through the prefabrication process.

CLT also outperforms concrete when it comes to job site waste. Since most or all CLT panels are prefabricated, there is little to no waste on-site. Manufacturers can also re-use any scraps for stairs or other architectural elements.

How will the city meet growth targets if concrete high-rise buildings are no longer permitted?
If Port Moody's current population of approximately 36,000 is added to the projected population numbers for all approved and applications in progress, the City should reach a population of approximately 49,000. If preliminary applications are also factored in, the 2041 population target of 50,000 will have been met. These population projections do NOT include Coronation Park, Moody Centre TOD, and Flavelle Oceanfront which come to 21,867 for those projects alone. Adding them in would bring the collective total to over 70,000 people which is more than double our current population.

These projected numbers do NOT take into account any development applications applied for over the next 20 years. It would not be logical to think there will be zero development applications submitted in two decades, so reaching our population target is not an issue should future concrete high-rise buildings be banned from being built in the city.

[10] https://www.structurlam.com/whats-new/news/concrete-vs-cross-laminated-timber/#:~:text=Despite%20being%20five%2Dtimes%20lighter,panel%20spans%20in%20two%20directions.&text=Buildings%20using%20mass%20timber%20carry,minimizing%20cost%20and%20building%20time

From the City's website: From time to time, the City reviews growth scenarios for the long term by estimating potential buildout overtime. This table[11] is a summary of recently approved applications, proposals currently in the pipeline for Council consideration as well as areas slated for development in the next 10 - 30 years. These numbers provide a tentative indication of what the population growth might be under the assumption that current development applications would all be approved and constructed by 2050.

On May 26, 2020, Council approved the Tall Wood Early Adoption Initiative which allows for the construction of mass timber buildings up to 12 storeys in height which can provide additional density if required[12]. Questions about fire safety were addressed in an attachment included with the report[13].

With both the Climate Action Plan and Tall Wood Early Adoption Initiative now in place, the City of Port Moody has the opportunity to lead by example by banning concrete high-rise buildings within the city, setting the stage for other municipalities to follow. "It's not just words. Action expresses priorities." Mahatma Gandhi

Other Option(s)

THAT staff report back to Council with options and recommendations to prioritize and incentivize mass timber construction.

Financial Implications

The financial implications are the staff time to prepare a report. .

Communications and Civic Engagement Initiatives

There are no communications and civic engagement initiatives related to this report.

Council Strategic Plan Objectives

The recommendation in this report aligns with the Council's Strategic Priorities under the heading of Environmental Leadership.
Maintain and enhance Port Moody's natural and built assets while reducing the impact on our planet.

- Inspire environmental actions and advocacy.
- Reduce the City's impact on the planet.

Expand and enhance policies to guide environmental goals and sustainability programs.

- Review and update existing environmental policies on a regular basis to find leadership opportunities.

Provide leadership in climate change by thinking globally and acting locally.

- Respond and adapt to climate change through planning and policy development.

Address global climate change with local actions.

Your list looks good to me.

I have attached the slides I delivered on December 9th providing a high-level summary of the Ministry's mandate items, as we understood them at the time. Timelines have shifted somewhat but the details are consistent with our current direction, so it gives a good foundation to build on with your presentation. Please note the notes are not related to the content on the slides.

If it's ok with you we will complete the GHG presentations and discussion from 1-3:30, then have your strategic presentation to finish the meeting from 3:30-4:00.

FYI – Dale will be standing in for Hugo (on vacation) and Scott has graciously offered to chair if I happen to be in the delivery room .

Best,
Zachary D. May, MBA

Zac,

Happy Spring!

Looking forward to this Energy Step Code Council meeting on Thursday. I will join at 2:30pm because I have a 1hr conflict at 1:15pm.

As I mentioned previously, I would like to make some ED remarks to help frame the work of the ESCC in 2021; I approximately 20min to highlight:
- current CleanBC mandate with Minister Eby
- housing goals, including central focus on housing supply
- the need to revamp the ESCC membership to spokespeople who can represent constituencies aligned with government mandate priorities (affordable housing developers, tenants and Indigenous Peoples, Professional Governance Act prohibition on advocacy by regulators)
- overview of "affordability" - four types (first cost, life-cycle operations, social cost with future carbon price, and risk mitigation)
- the need for neutrality with respect to multiple building code objectives - life-safety, structural and fire protection, accessibility
- the unique role of BC Housing in supporting market transformation and all of the above
- an overview of the Regulatory Reconciliation Agreement on Construction Codes and transition to strict harmonization by 2025, including institutions being established to support P/T priorities

I also invite comments from those copied on this email.

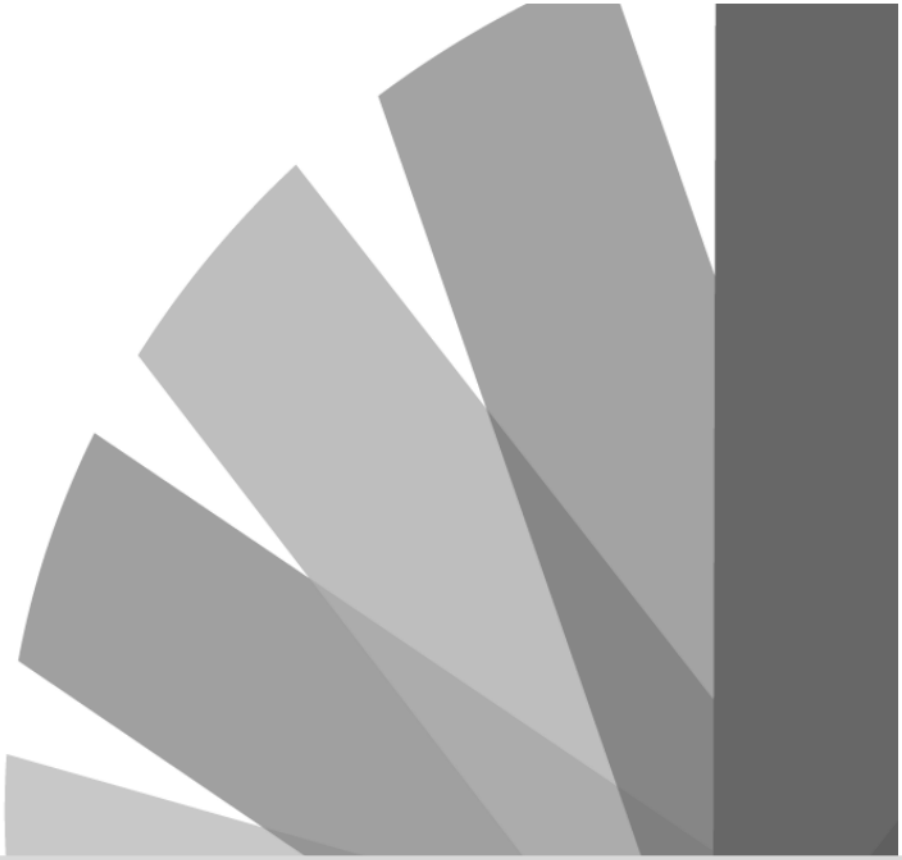
BUILDING BEYOND THE STANDARD



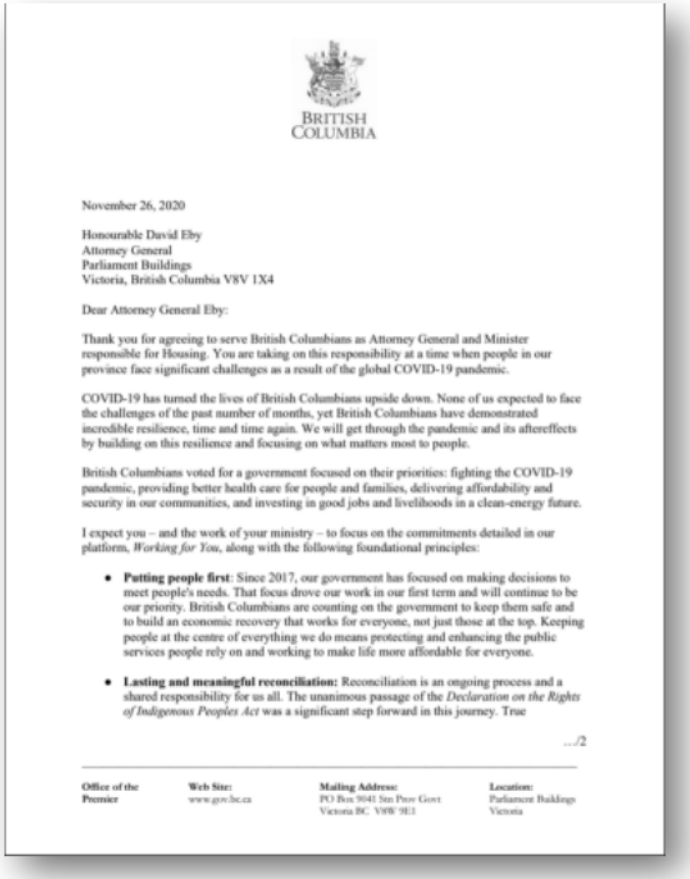
New Ministry Mandate

December 9, 2020

New Ministry – Same Office

Honourable David Eby
Attorney General and Minister responsible for Housing

Mandate Letter



BRITISH COLUMBIA

November 26, 2020

Honourable David Eby
Attorney General
Parliament Buildings
Victoria, British Columbia V8V 1X4

Dear Attorney General Eby:

Thank you for agreeing to serve British Columbians as Attorney General and Minister responsible for Housing. You are taking on this responsibility at a time when people in our province face significant challenges as a result of the global COVID-19 pandemic.

COVID-19 has turned the lives of British Columbians upside down. None of us expected to face the challenges of the past number of months, yet British Columbians have demonstrated incredible resilience, time and time again. We will get through the pandemic and its aftereffects by building on this resilience and focusing on what matters most to people.

British Columbians voted for a government focused on their priorities: fighting the COVID-19 pandemic, providing better health care for people and families, delivering affordability and security in our communities, and investing in good jobs and livelihoods in a clean-energy future.

I expect you – and the work of your ministry – to focus on the commitments detailed in our platform, *Working for You*, along with the following foundational principles:

- **Putting people first**: Since 2017, our government has focused on making decisions to meet people's needs. That focus drove our work in our first term and will continue to be our priority. British Columbians are counting on the government to keep them safe and to build an economic recovery that works for everyone, not just those at the top. Keeping people at the centre of everything we do means protecting and enhancing the public services people rely on and working to make life more affordable for everyone.
- **Lasting and meaningful reconciliation:** Reconciliation is an ongoing process and a shared responsibility for us all. The unanimous passage of the *Declaration on the Rights of Indigenous Peoples Act* was a significant step forward in this journey. True

.../2

Office of the Premier | **Web Site:** www.gov.bc.ca | **Mailing Address:** PO Box 9041 Stn Prov Govt Victoria BC V8W 9E1 | **Location:** Parliament Buildings Victoria

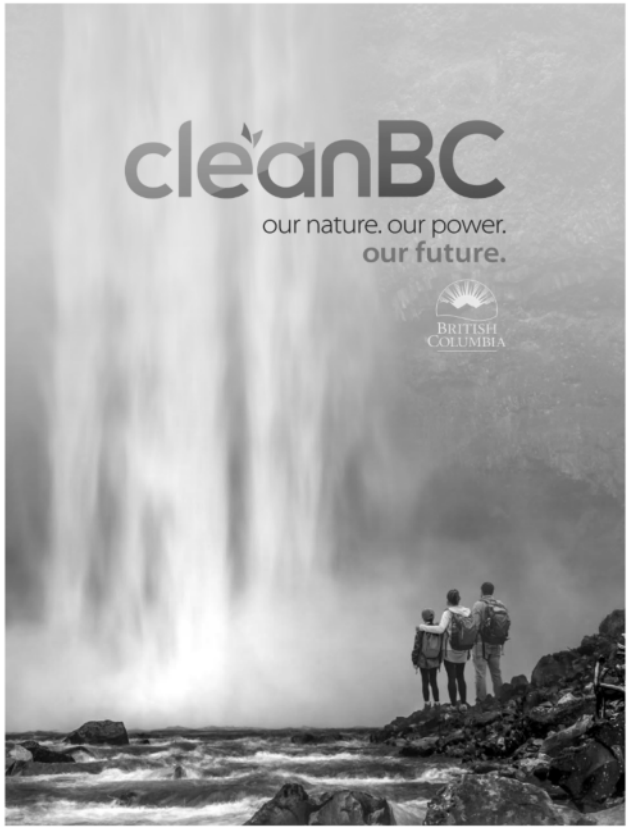
Key Mandate:

- Build on our government's work to require new buildings and retrofits to be more energy efficient and cleaner by supporting local governments to set their own carbon pollution performance standards for new buildings.

“Require new buildings and retrofits to be more energy efficient and cleaner”

“supporting local governments to set their own carbon pollution performance standards for new buildings.”

CleanBC – Better Buildings



New Buildings

2021 – opt-in carbon targets for local governments (NEW)

2022 – 20% energy improvement*

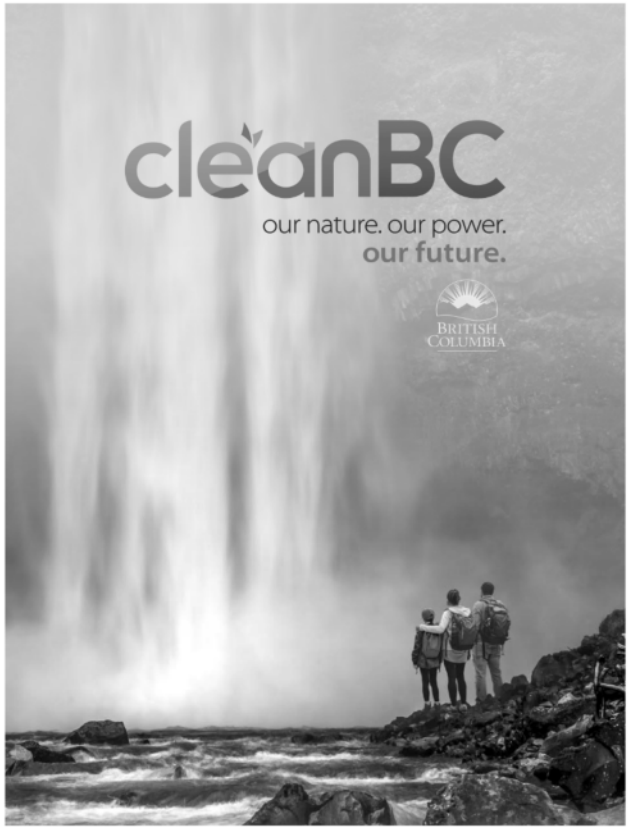
2027 – 40% energy improvement*

2032 – Net Zero Energy Ready

Existing Buildings

Code for existing buildings in 2024

Anticipated Updates on GHGs



Sectoral Targets

- Under the *Climate Change Accountability Act*, sectoral GHG reduction targets for British Columbia are required to be established by March 31, 2021.

- Hurrian Peyman is the CAS contact on all questions for sectoral targets.

Emissions Factors for Public Sector Organizations

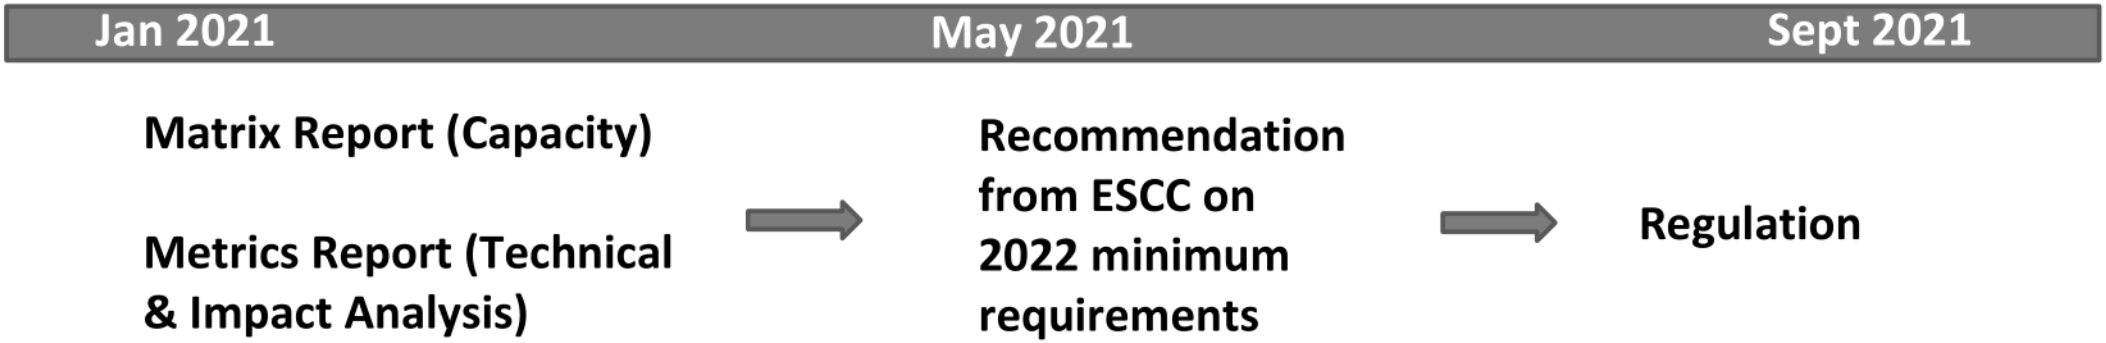
- The Climate Action Secretariat is currently reviewing the electricity emission intensity factors applied to public sector organizations under the Carbon Neutral Government program and participating local governments under the Climate Action Charter, including the option to adopt the Greenhouse Gas industrial Reporting and Control Act EEF methodology for those entities.

- An update on EEF will be communicated to PSOs and local governments in the coming weeks.

New Buildings 20% by 2022

New Buildings

- Continue work on 2022 BC Building Code
  - Step 3 for Part 9, Step 2/3 for Part 3
  - Harmonize with NBC/NECB
  - Goal: Energy Step Code to be the default in BC



LG Carbon Pollution Standards

Voluntary GHG requirements

- Provide a standardized provincial approach to support LG mandate to address carbon emissions in new buildings
- Build on current practice and recent reports
- Integrate into Energy Step Code, but not necessarily to specific steps (measure – improve – long-term goals)

Jan 2021	March 2021	Sept 2021
Consultation through ESCC on targets and implementation	**Recommendations from ESCC**	**Regulation**
CAS emissions factors for LGs and public sector	**CleanBC sectoral emissions targets**	**Implementation guidelines**

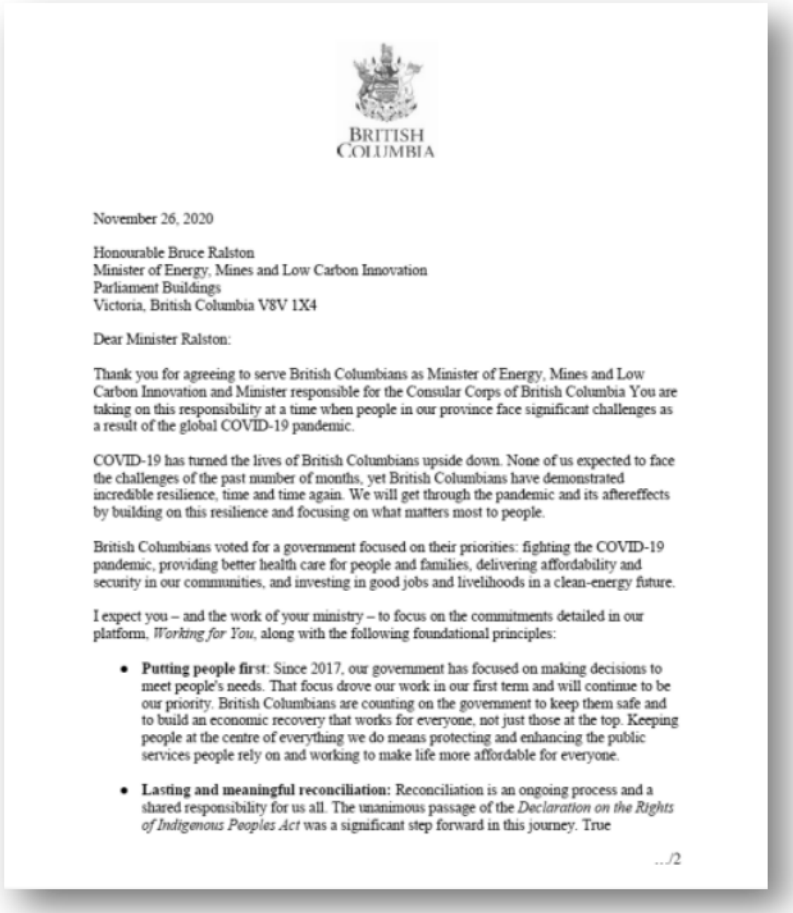
Existing Buildings

Existing Buildings Renewal Strategy

- Energy efficiency, carbon emissions, and resilience
- Likely to require adjustments to the regulatory system and authorities of the Province, local authorities, and others
- Incremental implementation prior to 2024
- ESCC and other venues for ongoing engagement

Spring 2021	Fall 2021	2022-2024
Consultation on draft strategy		
CleanBC sectoral emissions targets →	**Release strategy** →	**Any necessary legislation/regulation**
Pilot programs		

Energy, Mines and Low Carbon Innovation (EMLI) Mandate Letter



BRITISH COLUMBIA

November 26, 2020

Honourable Bruce Ralston
Minister of Energy, Mines and Low Carbon Innovation
Parliament Buildings
Victoria, British Columbia V8V 1X4

Dear Minister Ralston:

Thank you for agreeing to serve British Columbians as Minister of Energy, Mines and Low Carbon Innovation and Minister responsible for the Consular Corps of British Columbia You are taking on this responsibility at a time when people in our province face significant challenges as a result of the global COVID-19 pandemic.

COVID-19 has turned the lives of British Columbians upside down. None of us expected to face the challenges of the past number of months, yet British Columbians have demonstrated incredible resilience, time and time again. We will get through the pandemic and its aftereffects by building on this resilience and focusing on what matters most to people.

British Columbians voted for a government focused on their priorities: fighting the COVID-19 pandemic, providing better health care for people and families, delivering affordability and security in our communities, and investing in good jobs and livelihoods in a clean-energy future.

I expect you – and the work of your ministry – to focus on the commitments detailed in our platform, *Working for You*, along with the following foundational principles:

- **Putting people first**: Since 2017, our government has focused on making decisions to meet people's needs. That focus drove our work in our first term and will continue to be our priority. British Columbians are counting on the government to keep them safe and to build an economic recovery that works for everyone, not just those at the top. Keeping people at the centre of everything we do means protecting and enhancing the public services people rely on and working to make life more affordable for everyone.
- **Lasting and meaningful reconciliation:** Reconciliation is an ongoing process and a shared responsibility for us all. The unanimous passage of the *Declaration on the Rights of Indigenous Peoples Act* was a significant step forward in this journey. True

.../2

Key EMLI Built Environment Mandates:

- "Work with cabinet colleagues to advance clean economic opportunities and CleanBC goals as our government responds to and recovers from the COVID-19 pandemic."

- "Enhance energy efficiency programs and incentives for residential and commercial buildings, including Property Assessed Clean Energy financing to help homeowners make energy-saving retrofits and repay the cost of them over time."

- "..Require realtors to provide energy efficiency information on listed homes to incent energy-saving upgrades and let purchasers know what energy bills they will face."

Subject: Spring Energy Step Code Council meeting
When: Thursday, April 1, 2021 1:00 PM-4:00 PM.
Where: Microsoft Teams Meeting

Update, March 26, 2021: Draft agenda, discussion questions, and three reports attached. Please contact dale.andersson@gov.bc.ca if you have questions or concerns, as I will be away Mar. 29-Apr. 1 inclusive. Thank you.

Hi, everyone:

Agenda to be added. Please let me know if you have conflicts and we can arrange for alternates to attend.

Thank you very much.

Hugo

This must mean that a code for grow-op remediation can't be far behind. We should give out awards for the classic no-chance resolutions that just won't die.

Best,
Zac

Hi Andrew and Tiffany,

I received this from UDI and wanted to give you a heads up. As you may remember, mandating green roofs came up recently at the City of Vancouver and has come up several times over the last couple of decades from various municipalities. Despite the potential environmental benefits of green roofs, we always have to remind municipalities that mandating green roofs might have the unintended consequence of freezing residential construction due to the mandatory home warranty insurance regime. Home warranty insurance companies are not obliged to provide coverage for proposed projects that are considered to be a high insurance risk. When I checked with them a year or so ago about their appetite to cover homes and buildings with green roofs, their position was unchanged. In general, while they may entertain some plans by some builders with an adequate plan and technical expertise, most warranty providers are not willing to provide coverage. In addition, organizations such as CHOA, are concerned that the maintenance requirements of most green roofs are beyond the reasonable ability of strata corporations to manage consistently and competently.

If you need more information on the history of the topic should this issue arise again, or if you need to respond for the purpose of UBCM, Denisa Ionescu, copied here, remembers it all and has the information available. And on the licensing side we can get in touch with the insurers again as necessary for an update.

Regards,

Wendy

AGENDA

Time	Topic	Speaker(s)	Purpose(s)
1:00 p.m.	Welcome and Introductions	Zachary May, ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs	▪ Welcome participants ▪ Approval of agenda
1:05	Framework for developing GHG requirements for new construction	Zachary May, Building and Safety Standards Branch	▪ Presentation regarding goals, timelines and key discussion questions for this process
1:20	Reducing carbon from homes fuelled with natural gas	Bea Bains and Jason Wolfe, FortisBC	▪ Pathways study presentation and RNG ▪ Questions
1:55	Local government perspective on reducing carbon	Brendan McEwan, AES; Maya Chorobik and Laura Sampliner, Local Government Peer Network	▪ AES report on Step Code and GHGi ▪ LGPN perspective on current approach from local governments ▪ Questions
2:30	Discussion questions	Zachary May/ All	▪ Work through discussion questions
3:35	Update on government mandates, additions to the Council table	Andrew Pape-Salmon, Building and Safety Standards Branch	▪ Further clarity on government mandates ▪ Questions ▪ Adding affordable and Indigenous housing providers to the Council table
4:00 p.m.	Adjournment	All	

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting

Discussion questions
Reducing carbon emissions in new construction

1. We have heard that consistency, flexibility, predictability, and affordability are important values for all parties. Are there other values that are important to include? What does success look like to your organization and your members?

2. Following the structure of the BC Energy Step Code, requirements for GHG emissions will require a specific unit of measurement or metric, and specific performance levels using that metric. The following questions will guide our discussion for establishing standards for GHG emissions:

    Metrics:

    a. Which metric(s) should be considered? (GHG intensity; total GHG per house, dwelling unit, or building; others?)

    b. Should the same approach be considered for homes and small buildings as we consider for large complex buildings?

    c. Should we focus on building types addressed in the Metrics Research Report first, or do all building types have equal priority when establishing GHG requirements?

GHG performance levels:

    d. Should we apply a similar approach used for the Energy Step Code and establish a first step that only requires measurement of GHG emissions and increasing steps towards a specific long-term low-carbon outcome? Should we align the number of GHG steps with the number of energy efficiency steps expected in 2022: 3 steps?

    e. What should the highest step should be for GHG emissions?

    f. What should the relationship be between GHG steps and the energy efficiency steps in the Energy Step Code? Should there be flexibility to apply different levels of energy and GHG requirements or should the steps be aligned?

3. In addition to any regulation, there are several implementation and impact analysis issues that should be addressed, either as part of the Metrics Research Report or through separate analysis and discussion. What issues do you and your members see as important to address as we develop GHG emissions requirements? Based on preliminary discussions the following issues have been identified:

    a. Consideration of embodied carbon

    b. Consideration of renewable natural gas

    c. Analysis of the incremental capital cost and operation cost implications of achieving different GHG steps alongside energy efficiency steps (in scope for Metrics Research Report) as well as the equipment and systems required to achieve GHG steps in different regions of the province

    d. Consideration of district energy and other local or site energy systems

STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Notes

Date and Time of Meeting: Thursday April 1, 2021 | Time: 1:00 p.m. to 4:00 p.m. Pacific Time
Chair: Zachary May, Building and Safety Standards Branch, Attorney General and Minister Responsible for Housing
Co-Vice Chairs: Bob Deeks, CHBA BC/RDC Fine Homes and Robyn Wark, BC Hydro
Virtual Microsoft Teams meeting

Participants

1. Dale Andersson, BSSB & CBC Subcommittee Co-chair
2. Bea Bains, FortisBC
3. Maya Chorobik, LGPN Co-chair
4. Norm Connolly, Richmond/PIBC, and P3 Subco Co-chair
5. Diana Dilworth, HAVAN
6. Patrick Enright, City of Vancouver
7. Catherine Ernst, BOABC
8. Jeff Fisher, UDI
9. Maura Gatensby, AIBC
10. Nat Gosman, EMLI
11. Joe Hart, Icon Homes/CHBA BC
12. Nicholas Heap, City of Richmond and P9 Subco co-chair
13. Vanessa Joehl, CHBA BC
14. Jason Jung, ASTTBC
15. Toby Lau, BC Hydro and P3 Subco Co-chair
16. Wilma Leung, BC Housing
17. Megan Lohmann, CEA and UBCM rep;
18. Mary McWilliam, BCIT & CBC Subcommittee Co-chair
19. Roberto Pecora, ZEBx
20. Warren Perks, BCCA
21. Harshan Radhakrishnan, EGBC
22. Kelly Reid, HKR Builders/CHBA BC
23. Laura Sampliner, LGPN Co-chair
24. Muneesh Sharma, BOMA
25. Maxwell Sykes, City of Surrey/UBCM Rep
26. Ralph Wells, UBC
27. Molly Johnson for Holly Wacker, Ministry of Municipal Affairs
28. Guido Wimmers, UNBC (joined later)
29. Scott Williams, BSSB
30. **Guests:** Jason Wolfe, FortisBC; Brendan McEwen, AES Engineering; Pauline Rupp and Carmina Tupe, CHBA BC; Katherine Muncaster and Caitlin Hinton, EMLI, Katherine King and Tom Berkhout, BC Hydro
31. **Regrets:** John Madden, UBC; Lisa Mak, BC Hydro; Tyler Wightman, BOABC

ACTION ITEMS

1. **BSSB:** Revise the discussion questions and send a Word version to ESCC members.
2. **ESCC members:** Please send written responses to questions to Hugo Wong (Hugo.Wong@gov.bc.ca) by Friday April 16, 2021.
3. **BSSB:** Book upcoming Council meetings so ESCC members have time reserved in their schedules.
4. **ESCC members:** Please let BSSB know if anyone else should be part of these discussions. BSSB will be reaching out to some regional groups e.g., CHBA and UDI regional chapters.

NOTES

This meeting was the first of four proposed between now and June/July 2021 to address GHGs and buildings. Four of five agenda items were covered in the meeting. Discussion of the questions included in the agenda has been deferred to a subsequent meeting. To assist that process, ESCC members were asked

to provide a written response to the questions to BSSB by April 16, 2021 so the information can be collated in preparation for meeting #2.

Framework for developing GHG requirements for new construction, Zachary May

- Key government mandate items:
  - Build on our government's work to require new buildings and retrofits to be more energy efficient and cleaner by **supporting local governments to set their own carbon pollution performance standards for new buildings.**
  - **Lead work to continue delivering our government's 10-year housing plan, Homes for B.C., and the affordable housing it's bringing to tens of thousands of British Columbians,** including working in partnership to create 114,000 affordable homes**.**
- Under the *Climate Change Accountability Act*, sectoral GHG reduction targets for British Columbia are required to be established by March 31, 2021.
  - Announcement last week establishing a 59%-64% GHG reduction below 2007 levels by 2030 for buildings and communities; specific goals for communities, new buildings, and existing buildings still being determined
- Provincial goals for carbon pollution standards
  - Align with Ministry and Government mandates and commitments
  - Enable local governments to establish "their own" carbon pollution standards for new construction
  - Align with Provincial standards for measuring and reporting carbon emissions
  - Canada's official greenhouse gas inventory for combustion fuels
  - Greenhouse Gas Industrial Reporting and Control Act (GGIRCA) for electricity
- Proposed Energy Step Code Council goals
  - Align with the basic principles of the Energy Step Code
  - Consistent provincial standard to provide long-term certainty
  - Flexibility for local governments to support their policy and program needs
  - Flexibility for builders to determine the most cost-effective way to achieve desired outcomes
  - Work towards consensus recommendations regarding the technical standard and implementation considerations
  - Coordinate with 2021 Metrics Research Report to conduct impact analysis
- Proposed timelines:
  - Meeting 1 April 1 – Background presentations and agree on key discussion questions
  - Meeting 2 Late May - Renewable natural gas, embodied carbon, district energy systems
  - Meeting 3 Early June - Initial review of impact analysis for proposed metrics and steps
  - Meeting 4 Late June - Seek consensus on recommended option for technical standard and seek consensus on key issues to be addressed in an implementation guide supporting the technical standards
  - Summer 2021 - Technical standard for consideration by the Ministry as possible regulation and implementation guidelines (substantial outline)
- Discussion of the following points:

    - The regulation can be kept simple; implementation may be more complex
    - Intention: Standard for Part 3 and Part 9 buildings; each may have different levels or possibly also different metrics
    - There may be a best practice guide to support implementation – possibly combined in the existing Step Code BP guide or a stand-alone document
    - ESCC members will have advance notice of upcoming meetings so you can invite others who need to be part of the conversation
    - The mandate is for new construction only; this work is separate from other, related existing buildings work
    - This is intended to replace what local governments are currently doing and will ideally be seen as a better standard; it may require the Province to amend authority local governments currently have in the Building Act General Regulation that enables local governments to mandate the Energy Step Code.
- Meeting chat notes
    - Methodology under Greenhouse Gas Reductions Targets Act (GGRTA) referenced by Zac: https://www2.gov.bc.ca/assets/gov/environment/climate-change/cng/methodology/2016-17-pso-methodology.pdf
    - Reference material from IStructE on embodied carbon: https://www.istructe.org/resources/guidance/how-to-calculate-embodied-carbon/
    - City of Richmond can share analysis done by a UBC Scholar in 2020 on embodied carbon in a 2,200 ft^2 home (Part 9), with proportions of embodied versus operational carbon at each Step Code level, and for an all-electric versus mostly natural gas heated home. UBC also did a comprehensive study recently for larger buildings on campus and in their neighbourhood zones

Reducing Carbon from Homes Fuelled with Natural Gas, Jason Wolfe, FortisBC

- Jason provided a detailed overview of the findings of FortisBC's report entitled Pathways for British Columbia to Achieve its GHG Reduction Goals (report sent with the meeting agenda)
- FortisBC engaged a consultant to develop pathways for B.C. to achieve 80% GHG reduction by 2050
- The report explored an electric pathway and diversified pathway; key finding: a diversified pathway is more resilient
- Key challenge: Peak heating and cooling demands
- Key challenge for the electrical path: Meeting clean peak capacity
- Diversified pathway expected to be at least $100B lower than the electrification pathway
- FortisBC is currently undertaking another study by Dunsky Energy, RDH and E3 EcoGroup – New and Retrofit Buildings Study
    - Study seeks to understand current GHGi of buildings with natural gas heat and/or hot water, and how much energy efficiency can reduce GHGi
    - Study will be shared when complete – expected late May
- FortisBC – has a Renewable Natural Gas Program
- RNG Comprehensive Review, BC Utilities Commission filing – must be done by end of year
- Questions and discussion about the report

Low Carbon Building Systems in New Construction Requirements – Brendan McEwen, AES Engineering

- Brendan summarized a report he wrote, which was commissioned by members of the Local Government Peer Network (report sent with the meeting agenda – see also earlier 2019 Step Code GHG study)
- Many local governments (LGs) seeking to reduce carbon in new construction as part of their climate goals; the report explores options to reduce GHGs and principles for performance
- Electric building systems are very low carbon on B.C.'s clean electrical grid
- USA cities driving low carbon, all-electric building requirements – e.g., many communities in California, Seattle, Massachusetts, and other jurisdictions
- Current local government approaches to low carbon given Building Act limitations: Require a higher step or a lower step with a low carbon energy system (LCES)
- Defining LCES – 3 approaches which aren't exclusive:
    1. All electric
    2. GHGi
    3. Seasonal average coefficient of performance or COP
- Recommendations for ESCC:
    - Enable LGs to require GHGi as well as all-electric building systems
    - If using GHGi, allow LG to reference 1, 3, 6 targets
    - Ensure modelling tools (e.g., HOT2000) don't allow loopholes such as modelling an energy source as a 'back-up' source then it's really used as a primary source
    - Consider when/how to use RNG
    - Industry: Wants 'direction of travel'
    - Consider tying GHGi directly into Step Code
    - Mitigate electric utility extension fee uncertainty
- LGPN members support the principles in the report and want a smooth transition and to keep their own local approach until a Provincial standard is ready with no rollback
- Questions and discussion - key issues raised:
    - **Affordability:** E.g., heat pumps in the north can be very expensive to operate
    - **Embodied carbon:** A key part of the discussion as well
    - **Early/dedicated support for rural, northern, interior communities:** Their experience is different, e.g., use of wood heat, reminder not all communities on gas grid
    - **Future climate considerations:** GHG measures should not create issues for resiliency

Update on Government Mandates, Additions to the Council Table – Andrew Pape-Salmon, Executive Director, BSSB

- Andrew reviewed the importance of housing to our Minister and Government's commitment for affordable housing units
    - Types of affordability: initial construction cost; life-cycle costs; social cost
- Expansion of the ESCC: We will be expanding the Council to include Indigenous representatives and more housing providers – e.g., non-profits
- Reconciliation on Codes

    - Pan-Canadian Agreement on Construction Codes – commits the Province to harmonize with the National Code by 2025 and minimize variations (which have substantive impact) and differences (which have non-substantive impacts)
    - Advice to ESCC: Keep an eye on the convergence of the two, so that by 2025 we can get to full convergence
- Questions and discussion

RE: New eapp - Energy Step Code Council terms of reference and membership

From: May, Zachary OHCS:EX
To: Wong, Hugo OHCS:EX <Hugo.Wong@gov.bc.ca>
Sent: April 13, 2021 2:11:14 PM PDT

Hi Hugo,

I appreciate how much you have on your plate. I assumed this was on the back burner while you dealt with higher priorities. Feel free to confirm that with me in the future, but no complaints from me on how you have been prioritizing.

We do still need that eapps completed. Nothing significant from the past meeting. We really just need ot update membership according to Andrew's request in the email attached to the eapps (indigenous and affordable housing).

Maybe a call to walk through this would make sense?

Best,
Zac

Subject: FW: New eapp - Energy Step Code Council terms of reference and membership

Hi Zac,

I still have an eApp (27064) - "Energy Step Code Council terms of reference and membership," that has languished for a while, and has passed its due date by a few weeks. I was sidelined with the GHG meeting prep, so I apologize for not preparing this in time. Do you still want me to complete it, and if so, by what date? I realize the content may also differ given what happened at the Apr 1 meeting, so any feedback on how that meeting will affect the note would also be helpful.

Best,
Hugo

Subject: RE: New eapp - Energy Step Code Council terms of reference and membership

As promised.

Scope of the ESCC:
- CleanBC and 2020 MAG Mandate item (new construction)
- 20% better than BCBC
- Carbon Pollution Standards

- Not including existing buildings

Membership:
- National Code (1) - NRC staff
- Market developers (4) - UDI 4 chapters
- Social housing developers (2) - one Lower Mainland developer, plus BCNPHA
- Builders (4) - CHBA-BC plus 3 chapters in each region (interior, VI, LM)
- Local governments (4), including one rural / RD representative
- Indigenous (1) - AHMA or FNHIC
- Finance (2) - BC Housing, BCI or some other institutional investor
- Insurance (1) - BC Housing LCS
- BOABC
- Design (2) - EGBC member (not staff), AIBC staff, transitioning to member by 2022
- Research and capacity building (2) - UNBC, Canadian Association of Consulting Energy Advisors
- Energy (2) - utilities

Governance and communications
- Leadership team - need to add a local government vice-Chair
- Decisionmaking methods
- Documentation of decisions (in Teams)

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council

Discussion questions Revision 2
Reducing carbon emissions in new construction

Please return questions by April 16, 2021 to Hugo.Wong@gov.bc.ca

Note: Questions differ slightly from the ones included in the April 1, 2021 agenda.

Your name and organization: Jeffrey Fisher, Urban Development Institute

1. We have heard that consistency, flexibility, predictability, and affordability are important values for all parties. Are there other values that are important to include? What does success look like to your organization and your members?

   Answer: These four are important values that need to be followed – especially affordability. There are a couple of others that should be considered:

   - *Capacity – the industry has taken on a lot to adjust to the Energy Step Code (ESC) and manage the impact COVID-19. We need to be careful regarding how much and how soon we are changing construction.*
   - *Simplicity – especially for the Part 9 builders.*

2. Following the structure of the BC Energy Step Code, requirements for GHG emissions will require a specific unit of measurement or metric, and specific performance levels using that metric. The following questions will guide our discussion for establishing standards for GHG emissions:

   Metrics:

   a. Which metric(s) should be considered? (GHG intensity; total GHG per house, dwelling unit, or building; others?)

      Answer: Can the Ministry model what the impact would be, as it may vary by type of building, size and location – maybe the Metrics report noted below?

b. Should the same metric(s) be considered for homes and small buildings as we consider for large complex buildings?

Answer: See above

c. Should we focus on residential, hotel, office and retail building types (i.e., the ones for which we have specific Step Code requirements)? Or do all building types (occupancies) have equal priority when establishing GHG requirements?

Answer: I think it's important to also focus on the buildings constructed by and for the Broader Public Sector (BPS). This would help in terms of getting the industry on side. As I have noted in the past, it was the BPS in Metro Vancouver that led to the adoption of LEED. BC Housing will also be critical in demonstrating how best to build high ESC and low GHG residential buildings through their housing projects.

GHG performance levels:

d. Should we apply a similar approach used for the Energy Step Code and establish a first step that only requires measurement of GHG emissions and increasing steps towards a specific long-term low-carbon outcome? Should we align the number of GHG steps with the number of energy-efficiency steps expected in 2022: 3 steps?

Answer: I would have Step 1 be measuring, so builders have time to become more familiar with what is expected of them.

e. What should the relationship be between GHG steps and the energy-efficiency steps in the Energy Step Code? Should there be flexibility to apply different levels of energy and GHG requirements or should the steps be aligned?

Answer: One of our concerns is our members will lose an incentive that is currently available. Communities who are interested in lowering carbon emissions have offered builders lower ESC step requirements as an incentive to reduce GHGs.

3. In addition to any regulation, there are several implementation and impact analysis issues that should be addressed, either as part of the Metrics Research Report or through separate analysis and discussion. What issues do you and your members see as important to address as we develop GHG emissions requirements? Based on preliminary discussions the following issues have been identified:

a. Consideration of embodied carbon – *We would be concerned if this were added as an additional requirement. Many builders are still navigating the ESC – especially the higher*

steps – and now they will have to manage building electrification. If embodied carbon is being considered, it should be used as an incentive. For example, if you lower your embodied carbon, the ESC or GHG step is reduced.

b. Consideration of renewable natural gas, hydrogen or other renewable combustion fuels – *The more options and information we can provide the industry the better.*

c. Wood burning and other secondary heating sources – *Do you mean heat capture (e.g. transferring the heat from a grocery store on the main floor to the residential units above)?*

d. Analysis of the incremental capital cost and operational cost implications of achieving different GHG steps alongside energy-efficiency steps (in scope for Metrics Research Report) as well as the equipment and systems required to achieve GHG steps in different regions of the province – *This is critical. If local governments are concerned about GHGs, it would help if the Metrics Report had information on how best to reduce GHGs with lower upfront and life cycle costs. This could potentially impact the implementation of the highest ESC step by the Province in the B.C. Building Code (BCBC). Our members also need to know how best to deliver the ESC and GHG reductions cost effectively, and best practices. For example, do you install heat pumps in every unit, every floor, or the whole apartment building?*

e. Consideration of district energy and other local or site energy systems – *We still need to address the viability of municipal district energy systems if the Province will be moving to adopt Step Code 4 for Part 3 buildings.*

f. Transition from local governments' current GHG policies/programs to a provincial standard, including unique regional conditions – *Yes this is needed. As noted above, we are concerned that builders may lose the incentive of a lower ESC step to deliver GHG reductions.*

Other issues to address: The impact of changes BCBC as the ESC steps increase over time.

Also incentives are important - to address the split-incentive issue, and because there may be fewer Fortis incentives if buildings are electrified.

The issue mentioned in the meeting about BC Hydro infrastructure costs for electrified buildings. Right now, our members do not know if they will be asked to pay for additional infrastructure for their projects. If they do, the costs are high and a surprise.

The benefits of air source heat pumps. They offer cooling opportunities. If the Province is also considering expanding the use of them in new and existing buildings en masse, is there an economic development opportunity to have them built in British Columbia?

4. Other comments – Please add any other comments that will help our discussion in the space below.

It is important to note that if we were starting from scratch, it would have been better to build the ESC with two targets – one to reduce GHGs and one to reduce the amount of electricity drawn from the BC Hydro grid – especially at peak times. This would have provided builders with a substantial amount of flexibility – better envelopes, heat pumps, solar PV, geo-thermal/exchange, building batteries, other onsite renewables, RNG, and other technologies that will emerge. This flexibility is important now (because site characteristics vary) and in the future (because technologies and their cost effectiveness change over time).

Sprinklers

From: Jensen, Jun'ichi OHCS:EX <Junichi.Jensen@gov.bc.ca>
To: Chase, Andy OHCS:EX <Andy.Chase@gov.bc.ca>, Olsen, Tracy OHCS:EX <Tracy.Olsen@gov.bc.ca>

Attachments: image001.jpg

Team,

Please note this from my conversation with Pat Ryan from CoV today:

-COV GM undertaking sprinkler review -permits, design through to construction. Includes Part 9. Links to BC sprinkler project. COV has seen success from their mandatory sprinkler program (sprinklers since 1970's in some occupancies). UDI would have interest in water damage issue.
Future conversations with Pat needed.

We can chat next meeting.

Subject: extension, GHG and Step Code feedback

Hello, members of the Energy Step Code Council:
Thank you to those who have submitted answers to the questionnaire I sent on April 7. We have had a few requests for more time, so we can accept submissions until Friday, April 23. If there are other extenuating circumstances, please reply

and I'll see if I can make alternate arrangements.

Although we are eager to digest all your feedback and plan future meetings, we also understand that surveying colleagues can take time.

Have a great weekend!

Hugo

Thank you Veronica - I am available late next week from 1-5 pm Thursday and on Friday from 3-5 pm. Early in the week of May 3 I am available on Monday May 3 from 1-5 pm, on Tuesday from 1-2 pm and from 2:30 to 3:30, and on Wednesday from 1-5 pm.

If those times are not convenient, I can also change my morning schedule to make myself available from 8:30 to 11:30 am on any of those dates.

I would be interested in attending if possible. Thank you very much for this excellent discussion.

Best regards, Joscelyn.

Subject: RE: follow up meeting on contingency reserve fund?

Hi Joscelyn,

Carmina at CHABC and Tony at CHOA can meet late next week or early the week of May 3 to discuss developer's contributions to the contingency reserve fund for strata developments.

Is this something you or UDI would be interested in participating in? We've got some timelines to meet as the strata insurance issue is a sensitive one.

kind regards,
Veronica Barlee, MBA

Hi Joscelyn,

You had mentioned you would like a follow up meeting on the Contingency Reserve Fund.

Are you available next week for an hour? I will also check with CHABC and Tony at CHOA and send out a Doodle poll.

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

- "Thanks Jeff. I think your answers capture how I would respond. The key is that we are still very much learning and COVID has slowed that down in a variety of ways. So thoughtful approaches to achieve our low carbon targets acknowledging the state we are in is key for affordability and the economy. Maybe I would just add to your points that the rise in lumber pricing hits the buildings that are achieving (and learning at) the highest ESC levels. Timing of further changes should acknowledge this."

- "Here are my comments:

1. Agree – we need to consider market transformation in relation to culture – for example gas cooktops – people want these – they don't understand that induction is possibly better with lower emissions – what about fuel supply where electrical power outs are common – gas is more reliable. Same issue exists for hot water – going electric costs more across the board for hot water and cooking.
2. I would recommend GHGI – this is a metric used elsewhere and will simplify adoption – don't create another metric unnecessarily as this creates challenges for understanding and interpretation. I think we need to stop beating up on housing and push industrial requirements, maybe institutional should lead…
   For d and e - GHG Performance levels – I agree with you.
3. Embodied carbon – oh dear – lets go one step at a time. Let's walk before we run – there is so much misinformation and a lack of understanding – plus if they push embodied carbon targets our construction costs will skyrocket – there are some items we use that cannot simply be substituted.
   District Energy – I don't get it – if we are going to net zero homes why do we still need DE? STOP – lets drop DE from the discussion… Municipalities have become hypocritical – they lower step code requirements to make DE work.
4. I agree with your notes. If they are going to GHG lets at least roll out a program that covers all AHJ's, is in one uniform format that goes from 0 to 100 in a structured process over a reasonable period of time.

Exhaustion – the Province needs to map out everything for all building types and then stop changing things and focus on transportation or something else – we are all getting exhausted by moving dials - our costs won't stabilize until the dial stops moving."

Sent: April 23, 2021 5:55:01 PM PDT
Attachments: image001.jpg

Hi Andrew,

In response to your suggestion to expand the Energy Step Code Council to include affordable housing developers/providers, and indigenous housing providers we are extending invitations to:

- AHMA (they are already involved in a subcommittee and we will be inviting them to join the council on Monday when Dale is back)
- FNHIC (Hugo is reaching out the HPB for an appropriate contact)
- BCNPHA (invitation sent)

As with UDI and CHBA, we will invite these groups to include several representatives to ensure we have a diversity of perspectives at the table (e.g. non-profit housing provider, affordable housing developer, etc.).

These new members will be involved in the upcoming Energy Step Code and GHG discussions in June. We will also offer an orientation session to familiarize them with our work to date and allow us to better understand the needs and perspectives they represent.

Please let me/Nicole know if you would like any further action or specific organizations beyond the ones identified above. Once membership is confirmed we will update the Terms of Reference and provide a briefing note regarding these changes for you and Cheryl.

Best,
Zachary D. May, MBA
Director, Strategic Policy

Subject: Sectoral Targets submissions from buildings sector

Tiffany, (Jessica, please prepare an eApp)

You may be aware that CHBA-BC and UDI provided submissions for the Sectoral Targets consultation that directly reference our work at the BSSB:

https://chbabc.org/wp-content/uploads/2021/01/CHBA-BC-Submission-to-B.C.-Sectoral-Targets-25-Jan-2021.pdf

https://udi.bc.ca/wp-content/uploads/2021/02/UDI-Letter-Discussion-Paper-on-Sectoral-Targets-for-GHG-Reductions_Jan.25.pdf

Please prepare a draft response letter to UDI and CHBA-BC for my signature, including our commitment to link our voluntary GHGi standards to specific energy efficiency requirements in order to support consumer affordability (beyond capital costs). Note that this may differ from our base energy efficiency requirements.

In other words, local governments can reference GHGi standards provided they also reference appropriate companion energy efficiency standards that reflect the cost of zero-carbon energy, in order to protect consumer affordability in life-cycle costs. This will align nicely with our “mitigative measures” to address the needs of the affordable housing development, and also support consumers’ interests.

This will put an end to the practice of trading off energy efficiency standards for carbon reduction, as referenced by CHBA-BC in their letter. They correctly state that this compromises the intent of the CleanBC Plan which is focused on energy efficiency.

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council
Part 3/Part 9 (Non-residential) Subcommittee
Metrics Research Report Update Steering Committee
Meeting #4: Kick-off Meeting with Consultants
MEETING NOTES

Date: Wednesday April 21, 2021 | **Time:** 1:00 to 3:00 p.m.
Steering Committee Chair: Scott Williams, Building and Safety Standards Branch
Microsoft Teams Meeting

Steering Committee Members Participating

Associations and Industry Hubs
Harshan Radhakrishnan, EGBC
Eoghan Hayes, IBPSA-Canada
Roberto Pecora, ZEBx

Crown Corporation
Remi Charron, BC Housing
Wilma Leung, BC Housing

Industry
Jeff Fisher, UDI-Pacific
Susan MacDougall, Focal Engineering

Local and Federal Governments
Greg McCall, City of Vancouver
Norm Connolly, City of Richmond, and Part 3/9 Subcommittee Co-Chair
Nicholas Heap, City of Richmond (and Part 9 Subcommittee Co-chair)
Iain MacDonald, National Research Council
Laura Sampliner, Port Moody and Local Govt. Peer Network

Part 9 Buildings
Pauline Rupp, Canadian Home Builders' Association B.C.
Mark Bernhardt, Bernhardt Contracting

Utilities
Toby Lau, BC Hydro and Part 3/9 Subcommittee Co-Chair
Pete Koepfgen and Tanya Rumak, FortisBC

Building and Safety Standards Branch
Scott Williams, Dale Andersson, Zachary May, Nicole Vukosavljevic

Regrets: Vanessa Joehl, Bob Deeks, Joe Hart, Kelly Reid, CHBA B.C.; Maya Chorobik, CEA and Local Govt. Peer Network; Patrick Enright, City of Vancouver; Dave Ramslie, UDI and Concert Properties; David Sargent, UDI-Okanagan and Davara Holdings; Maura Gatensby, AIBC; Sepehr Foroushani, City of Richmond

Guests: Consultants Alex Blue, Evoke Buildings Eng. Inc. and Einar Halbig, E3 Eco Group

~~~~~~~~~~~~

ACTION ITEMS

- **Steering Committee Members**
  - Provide early feedback on appropriate ECMs for the Part 9 analysis. What items should be included or excluded, and for which regions? Prepare for a discussion of ECMs at the next meeting. Please provide all feedback through the Steering Committee Teams channel. Contact Dale if you can't access it.
- **Consulting Team**
  - Consult with BSSB to determine how to present options for ECMs for discussion at next meeting.
  - Consult with BSSB about how to address COVID cost impacts.
  - Consult with BSSB re: feasibility (time/budget) of including LEED for Homes methodology in the Part 3 overheating analysis, per IBPSA BC request.
  - Determine an approach for the costing analysis for presentation at the next meeting.
- **BSSB**
~~~~~~~~~~~~

- BSSB: In consultation with Evoke/E3, identify what if any additional information we can obtain on the geometry of the 60 NRCan archetypes applicable in B.C. Consider which HTAP archetype options should be used for Part 9 analysis.
- Coordinate dates of next meetings with the Consultants: one in 2-3 weeks and another mid-June.
- Determine what files can be shared. IBPSA BC has requested the Model Geometry from the 2018 metrics report so members can replicate the metrics for quality and training purposes.

NOTES

Project Award: Alex Blue of Evoke Buildings Inc. and Einer Halbig of E3 Eco Group were the successful proponents of the RFP.

Scope of Work: Scott Williams reviewed the scope of work from the RFP and the consulting team reviewed their proposed approach to completing the analysis. For full details, please see the PPT deck presented at the meeting and distributed with the agenda. Points of discussion noted below.

INITIAL MODELLING APPROACH AND ECMs –PPT Slides 4 to 10

1. Part 3 Approach, weather files

- NECB 2020 baseline to assess initial results
- CWEC 2016 vs PCIC 2020's files – Historical weather data to be used for all analysis other than for overheating risk analysis which is to use PCIC 2020 and 2050 data.

2. Part 3 archetype starting point from 2018 report

- Five: low-rise MURB, high-rise MURB, hotel commercial, retail
- Program variations: Recommend keeping consistent with 2018 report unless strong reason to change

3. Part 3 ECMs starting point from 2018 report

- For discussion at next meeting

4. Part 9 approach, HTAP archetype selection

- Not necessary to run NRCan's 240 archetypes as only 60 apply in B.C.; need Steering Committee advice on which to include. BSSB/Evoke/E3 to discuss further with NRCan regarding approach to analysis.

5. Part 9 archetype starting point from 2018 report

- May be a need for modifications to the 2018 list: For example, separate out row homes and quadplexes into individual units rather than analyse as a single building? Typically, quadplexes are modelled first as individual units and then combined
- Not necessary to run NRCan's 240 archetypes as only 60 apply in B.C.; also, many challenges with analysis if assessing multiple different building types with varying ECMs (can't assess where differences are coming from)
- Consultants suggest taking existing archetypes and changing one item at a time to determine impact; run 2 to 3 archetypes in HTAP as a check rather than 60 different options
- Is the Small 102m2 SFD still relevant to include? Is it being build currently and in future? YES
- Laneway home size: Adjust size to better reflect current building practices (currently, analysis is required for a home with 50m2 of conditioned floor space which reflects the smallest house size for MEUI as per the BCBC)? In Vancouver typical size is 650 sq ft, 2 level, slab on grade in Vancouver
- Adjust size of archetypes? If the laneway size is adjusted, is there value in having other homes equi-distant in size?

- Remi notes: NRCan has done modelling to see how these Part 9 archetypes are impacted with the upcoming Code. Maybe flagging a few archetypes that were found to have more challenges in achieving targets would be a good place to look.

6. Part 9 ECMs starting point from 2018 report

- Steering Committee will need to help determine which ECMs should be included or excluded, examples:
  - Air-source heat pumps not needed in all regions?
  - 92% gas furnace or 95% AFUE – no longer relevant?
  - Drain water heat recovery – fewer options, not common in Part 9
  - Effective R values – could reduce options (e.g., R60 walls and R100 roof not needed)
  - Dual fuel systems, combination space and water heating or gas back-up systems, Fortis seeing dual fuel space heating
- Other considerations
  - **Best/Worst:** For each archetype, model the best and worse case scenarios to get a sense from those few models what range might be best for each from about 20 models; then, focus on the one with the most variation or pick the ones in the middle; identifying both highest and lowest helps determine where to focus attention
  - **Pair Like with Like:** Pair high ECMs with high, low ECMs with low, i.e., bundle ECMs that make sense rather than randomly select them, so they're meaningful and intuitive, and represent realistic construction practice
  - **Current baseline:** Some ECMs will be useful to represent current baseline
  - **Climate and Embodied Carbon:** Useful but likely for a subsequent study
  - **Ventilation:** Ventilation shifts anticipated in future due to COVID – flag as potential item to consider

Other

- Discussion of what baseline means for the 2022 Code
  - Current BCBC 2018 is based on NECB 2015; BCBC 2022 will be based on NECB 2020 which we need to assess to see if it is indeed 20% better than BCBC 2018 and how it aligns with what is currently Step 3 for Part 3 buildings
  - B.C. needs to determine the 20% better metric but also assess the current EUI metrics as the national code has no intensity metric

Inclusion of Building Pathfinder Tool? (please https://www.buildingpathfinder.com) this was a separate contract for previous metrics research work and won't be included in this contract. Note EUIs, TEDIs, etc are still relevant and can be used; just need to update target values you are looking to hit.

COSTING APPROACH – PPT Slides 11 - 13

Discussion of including or excluding COVID impacts on costs, points raised:

- 2018 metrics update was based on 2017 costs so is quite dated
- **Option 1 Same**: Use the same costing as in the 2018 report to provide a relative scale of improvements versus costs, and then make an adjustment for current costs
- **Option 2 Altus COVID Multiplier**: Start with Altus Guide which has a COVID multiplier, assess values and compare to the 2018 report (need to be clear on what the COVID multiplier includes – e.g., US demand for lumber is increasing prices which may not go down post-COVID)
- **Option 3 Blended Average:** Do a blend of a couple years' costs
- **Option 4 Update:** Do not use old prices as manufacturers increase prices no matter what
- **Option 5 Plug and Play**: Consider including an option whereby individual builders can 'plug in' their own costs as it will be more useful/believable by builders
- **Option 6 Pre-COVID:** Use 2019 Q4 costs as they would represent costs prior to any COVID impacts.
- Whatever pricing is used, be as transparent as possible or builders will question the numbers; all builders have different costs and will want to know how the costs were arrived at (e.g., supplies, labour, etc.)

- Reminder: It's the incremental cost that is most important, not the base cost; the report would stand on more solid ground if based on historical data; use the most recent data available as it's the incremental difference we are most interested in
- Agreement re: flattening impact of COVID on costs; fluctuations will always occur, so a 2 – 3 year rolling average or 2019 Q4 approach or inflation factor could all work; lumber is a standard part of any build and thus an 'embedded' cost, not necessarily an 'incremental' cost
- Note that we are looking at incremental costs of ECMs, which may not be as affected by fluctuations such as COVID

GHG ANALYSIS – PPT Slide 14

- Will include in output tables, both GHG intensity and absolute GHG, all operational GHG
- Won't be able to include every iteration of every heating source so will most likely take a book-end approach
- Embodied carbon is very complicated and will be given a qualitative discussion in the report and point to other resources
- BSSB will provide further updates on approach to GHGs based on engagement with the Step Code Council over the spring/summer which will help to inform desired outputs

OVERHEATING ANALYSIS – PPT Slide 15

- Will use 2020 climate data
- Will focus on building most likely not to have mechanical cooling, e.g., residential
- Potential measures to explore: Shading (various kinds); Operable windows; Night pre-cool; HRV bypass; addition of mechanical cooling, solar heat gain coefficient (SHGC)
- Explore including overheating hours produced along with TEDI, TEUI, GHGi, etc. May not be possible due to simulation time (may need to separate out the two analyses).
- Appliances in MURBS are noticeably underrepresented regarding internal gains and this underestimates current overheating
- Request from IBPSA:
    - Incorporate LEED for Homes for appliances in the analysis
    - ECB-2015 and Step Code underestimate plug load energy and therefore heat emission from appliances in MURB Buildings. IBPSA will share their Excel analysis. IBPSA proposes allowing a separate allowance for appliances as a separate energy and hours per appliances like the LEED for Homes methodology

We'll make that shift. I will also work with Tiffany and OSPG to clarify what role we do still have with EGBC on Step Code and other projects. I agree that we need to be engaging directly with professionals, but I would assume we still need to collaborate with EGBC on basic regulatory matters such as the duties of professionals in our regulations or things that impact letters of assurance.

Best,
Zac

Follow up - Consultation on Contributions to a Strata Corporation's Contingency Reserve Fund

From: Baker, Joscelyn <jbaker@polyhomes.com>
To: Barlee, Veronica OHCS:EX <Veronica.Barlee@gov.bc.ca>
Cc: Jeff Fisher <jfisher@udi.org>

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Thank you Veronica for the excellent meeting this morning. As promised, I outline below a way to use REDMA to address the rare case of a developer that refuses to fund the CRF.
There is an existing enforcement route under REDMA, Policy Statement 1, which already includes the requirement that interim budgets meet s. 13 of the SPA.

Strata Corporations or individual purchasers can submit a complaint that the developer is non-compliant because the developer has either: shown the CRF contribution in the budget in the Disclosure Statement and failed to pay it (misrepresentation); or has failed to show the CRF contribution in the interim budget (non-compliant).

While the OSRE may be inundated with complaints of all sorts, this kind of complaint merits an investigation because it is an objective question of non-compliance with both REDMA and the SPA, and because the investigation time should be quick - the developer can show a bank statement with a payment into the CRF if they paid. In addition to having to cover investigation costs, even small developers' directors probably don't want to have to report in future Disclosure Statements that they have been subject to a penalty or sanction by the OSRE.

I would be happy to discuss further or provide additional background if needed.

Best regards, Joscelyn.

PS - despite this email being from Polygon, it is sent in my capacity as a member of the UDI Legal Issues Committee, not as in-house counsel for Polygon Homes Ltd.

Even though we have not adopted the NBC's 2018 errata and revision package, it did not contain any newer editions of 62 or 62.1. (ANSI/ASHRAE 62 remains as the 2001 edition less addendum 'n' and ANSI/ASHRAE 62.1 remains as the 2007 edition.)

I'm not aware of any planned ASHRAE changes for the 2020 Codes but let's wait on your inquiry with Codes Canada to confirm.

Andy

Subject: RE: School overheating images

OK, thanks. Last code cycle they did all the updates to referenced standards as a package for the first revisions to the NBC. Not ideal but that is what they did. I don't believe any PCF's are typically associated with this process, but I'm not sure how it is initiated and who is involved. I would assume technical committees will be assigned this at some point in the cycle but I don't know.

Juni and Andy,

Wanted to loop back regarding the email chain below and potential changes to ASHRAE 62. I have reached out to Codes Canada to get some more info on the proposed national changes. Nothing is showing up in the most recent PCFs.
Once I get some more info, we can discuss at next tech team meeting.
Long and the short – whatever is decided I need to let the consultant know that is working on the Metrics Research Report as this will affect their analysis.

Cheers,

Zach,
Interesting exchange.
With respect to the province considering 62.1-2016, has the province done an analysis to make sure the CO2 levels do not exceed the BC allowable level?
This was the reason no other versions were adopted subsequent to 62-2001 (except add'm n).

I suggest you speak with Curt Hepting who has performed various analysis of the CO2 levels and may be in the best position to continue.

Cheers,
G

---

1. Good catch on the 62.2 – I did mean 62.1. The next edition of the code is likely to use the 2016 version.
2. Interesting comments on the gaps that remain in the code regarding air exchanges. Hopefully further work on overheating risks will help us develop national and BC standards that manage this comfort and occupant health issue.

Best,
Zac

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Good question,

62.2 is a ventilation standard specific to residential buildings, this is a school so this standard would not apply here. 62.1-2001 w/o addendum N would apply.

62.1 w/o addendum N is a good standard in my opinion as it has higher ventilation rates then more recent versions of the standard. (Greg can fill you in on the history of why they stuck with this version of the standard as opposed to more recent versions). While the 62 standards address ventilation
minimum rates for occupants to breath it does not address air circulating in the space. The designer on the project did meet code minimums for ventilation but there is no code or standard for air circulation in the space, just ventilation.

The school board have now adapted our recommendation of ensuring all classrooms have 6 air changes per hour minimum in all classrooms. About 1.3 air changes of the 6 would be from ventilation air (outside air) the remainder would be from return circulating air in the space.

Cheers
E

As mentioned on the call today,

The school has excellent solar shading on the exterior south exposure.

Images taken at 10 am on September 10th 2018. Note this is surface temperature

Edge were brought in to do a full thermal analysis and come up with solutions to get reduce the inside temperatures. We explored

- Night cooling,
- Adding cooling to the existing HRV ducting (Limited to 16°C) as the existing ducting was not insulated
- Adding full cooling to the HRV to 12°C with insulating the ducting.
- Full mechanical cooling

The only solution especially with doing to analysis with future weather files was to add full mechanical cooling to the building.

Also the air movement in the space was very low, leading to a very stuffy classroom as the air circulating was for ventilation only, about 1.2 Air changes per hour. Typically you want about 6 air changes per hour in a space.

Figure 1

Figure 2

Conclusion: If we are going to mandate good envelopes and HRV's for schools in certain climate zones in BC we likely need some form of cooling to ensure the above situation does not occur again.

ACTION ITEMS

- **Steering Committee Members**
  - All: Send additional comments on the proposed Part 9 ECMs (Excel document in meeting invite) by May 10 to Scott or post on the Teams channel. Comments re: surface area, window to wall ratios, quadplex parking especially appreciated
  - All: Send additional comments on the proposed Part 3 ECMs (PDF document in meeting invite) to Scott or post on the Teams channel as soon as possible.
  - Alex Ferguson: Share draft research report (looking at 240 archetypes and EUI) by colleague Sara Gilani with Einar
  - Toby: Discuss LPD with Alex Blue concerning Part 3/office archetypes and LPD
  - All: Overheating risk analysis – provide comments on proposed approach to Scott or post on the Teams channel by end of next week (May 14) at the latest
- **Consulting Team**
  - Einar: Discussion modelling options for row homes with Alex Ferguson and whether HTAP could assist with the whole building/per unit approaches
~~~~~~~~~~~~

- Einar: Review previous metrics studies to ascertain placement of windows in the Part 9 archetypes, and report back to the Steering Committee
- Einar: Confirm 'baseline' with Scott
- Alex: Look at what portion external lighting is part of total portion of TEUI for Part 3 buildings

- **BSSB**
  - BSSB: Reach out to Mark Bernhardt about form factor for his earlier suggestions on this
  - BSSB: Follow-up regarding ASHRAE 62, DHW and other clarifications

NOTES

Einar Halbig reviewed proposed Part 9 modelling, followed by Alex Blue who reviewed proposed Part 3 modelling (see Excel and PDF documents attached with meeting invite).

Einar Halbig – Part 9 Discussion

- Excel spreadsheet provided highlights questions for the Steering Committee in yellow
- Area and volume questions
  - Floor area: Keep floor area constant and vary envelope surface area
  - Form factor: 25% and 50%? Increases still TBD
    - See Rob Barnhardt's report related to this for guidance: - https://www.passivehousecanada.com/policy-series-5-the-reference-building-approach/
    - We are hoping to find the 10 best solutions that are also the most affordable; different options might not be both effective and affordable – the report could be useful in pointing out what doesn't work
    - For guidance, see also Alex Ferguson's 240 archetypes report which should indicate a reasonable and appropriate range
  - Window to wall ratio: Maintain the same ratios as envelope surface area increases
  - Window to wall ratio: bump up 5% and then 10% increase cognisant of potential issues with solar gain
- Modelling row homes
  - The previous metrics reports (2017, 2018) modelled row homes as one/whole building which follows BCBC but is contrary to EnerGuide Rating System which models individual units. Modelling as whole building using Hot2000 file in 'general mode' won't provide EnerGuide rating or auto generated reference case; therefore, won't be able to calculate % better. It's possible to run both whole building and by unit modelling but this adds to the time and complexity.
  - Option: Use whole building modelling but run a few by unit in relevant climate zones such as 5 or 6 to see the effects
  - Alex Ferguson reports HTAP may be able to help with this issue; Einar to discuss with Alex options to this dilemma
- Hot2000 current version is 11.10 but this analysis will use v 11.8 (was the current version just 8 months ago) for compatibility reasons with HTAP
- Quadplexes
  - Keep to previous report and base analysis? This is not necessarily typical across B.C. but would permit comparison with previous reports
  - Over parkade?
  - Interest in having archetypes that represent typical B.C buildings
  - Proposed solution: Slab on grade quadplex with attached garage
  - Einar to discuss with Alex F. HTAP analysis—240 architypes could address this issue and provide some variation.

- To be determined: placement of windows for analysis (i.e., north, south, east, west facing and in what amounts), as it's not clear what approach the previous 2017 and 2018 analysis took
- ACH: If Step 3 (representing 20% improvement and 2.5 ACH) will be 'base line' with BCBC 2022, is 3.0 ACH needed in current analysis? Suggest removing 3.0 and adding 0.6 ACH
- Baseline: Einar to clarify with Scott what base case represents

Alex Blue – Part 3 Discussion

- See PDF for details (discussion cut short due to time)
- Impact of NECB for analysis – see page 4 of PDF
- Office archetypes
    - Lighting power density (LPD)--changes significant; need to determine appropriate LPD - suggest leave out 50%/highest option; if reduce LPD too much it's like robbing Peter to pay Paul
- SHGC = 0.4, 0.3 = OK? Higher SHGC values may exacerbate overheating.
- Consideration of exterior lighting?
- Challenges with selecting ECMs: If run all low ECMs together, building may not meet Step Code but if run all high together, may be unaffordable. Wide range of ECMs has been selected to allow trade-offs to find the most economical solutions.
- Ventilation rates – ASHRAE 62.1 2001 used in initial analysis. Suggestion of using demand control ventilation
- MERV filtration will affect fan power – Alex will look into this.
- Fans will not be used as an ECM for MURBs
- Schedules – changes to office schedules need to be accounted for.
- Overheating analysis: See PDF, meeting ran out of time for discussion

Other Comments

- **Step Code numbering:** Do not change the Step Code numbers when BCBC 2022 is adopted as this will only cause confusion (e.g., Step 1 in BCBC 2018 would be significantly different to Step 1 in BCBC 2022 if the numbers are revised)

Agenda

1. **Municipal Housing Targets**
   There is a major opportunity to address the B.C.'s housing crisis by establishing clear and enforceable housing targets for municipalities.

   a. Rationale
   b. Implementation and focus on transit areas
   c. Changing local government incentive structures
      - Broadway Plan
      - Other municipalities
   d. Next steps

2. **Identifying Future Issues**
   The need for housing targets is paramount, however we have provided a list of some additional topics for consideration at our next meeting in June.

   a. Addressing the expansion of municipal powers over the management/operations of rental buildings (e.g. RRTZ and Business Licensing powers)
   b. Supporting tenants while allowing the renewal of exiting rental stock
   c. Streamlining the development review process (Municipal/Provincial)
   d. Actions the Province can take without UDI
   e. Other

To: The Hon. David Eby, Q.C., Attorney General and Minister of Housing
From: Anne McMullin, President & CEO, Urban Development Institute (UDI)
Date: May 12, 2021
Re: Supporting Rental and Affordable Housing through Municipal Targets

UDI appreciates the collaborative discussions that we have had thus far, and we want to expand on those initial conversations, by discussing opportunities that will support the Province's goals. We believe that the greatest opportunity to build the rental and affordable housing that B.C. needs is through the establishment of clear and enforceable municipal housing targets.

Rationale
As builders, we regularly see that there are no incentives for municipalities to approve and build more housing. In fact, there are disincentives as growing communities are facing resistance to change. In order to achieve the housing that our province needs, it will require changing this incentive structure to create more support at the municipal level for growth, particularly around the mass transit networks where the Province has invested billions of dollars.

Setting enforceable targets for new homes based on regional population growth and housing demand would incentivize municipalities to support more housing. We would expect that targets would focus on areas well-served by transit where there are the greatest opportunities to improve affordability.

These overall housing targets could include an affordability component to support the government's overall goal of building 114,000 new affordable homes over ten years. To achieve this goal, we would need to add more than 10,000 new affordable homes annually, considerably more than what's currently being built. By comparison, last year CMHC recorded only about 5,600 new rental homes were added across the province. We recommend that the Province review the units needed to achieve its goal and allocate a component of municipal housing targets based on a yearly share of this overarching total. Those municipalities with more transit should have to achieve a higher share of the broader provincial housing goal.

Implementation and focus on areas well-served by transit
There are multiple mechanisms that could be used to develop overall municipal housing targets:

- The Ministry of Municipal Affairs mandated *Housing Needs Reports* – although municipalities would need to demonstrate how their housing needs would be met and the Province would need to sign-off on them the Reports;
- *Transit Supportive Agreements* for new transit lines, which would need be signed-off by the Province as well as be more robust and clearly apply to future Councils;
- The *Integrated Transportation and Development Strategy*; and/or
- The *Metro 2050 Regional Growth Strategy*.

Targets would need to be enforced by the Province, similar to the approach taken in several US states. In our previous memos, we outlined several potential mechanisms that the government could use such as:

- Limiting Government Funding to Local Governments that do not meet their targets;
- Increasing the share of the TransLink Tax that has to be paid; and/or
- Automatically increasing the densities in areas near transit (see below).

Even though there is overall public support for more housing options – especially near transit - the lengthy municipal approvals process and current neighbourhood sentiment in many communities towards growth - even in transit-oriented areas - threatens to delay or derail housing objectives. Applying pre-zoning with density bonuses for rental and affordable housing to defined areas, would improve housing outcomes in those areas.

The Province could require local governments adequately increase densities around stations through pre-zoning with density bonusing within a certain period to accommodate more new housing, including affordable homes. If this is not achieved, the Province could then adjust land-use designations accordingly. Precedent exists for the provincial regulation of municipal powers through current mechanisms, including the *Local Government Act* and Inspector of Municipalities, *Riparian Areas Regulation*, *Water Sustainability Act*, *Environmental Management Act (Contaminated Sites Regulation)*, *Building Act,* and Ministry of Transportation and Infrastructure referrals for developments near provincial highways among others.

The *Local Government Act* in particular establishes requirements around consultation processes, zoning bylaws and the creation of Official Community Plans and setting GHG emissions targets. It also requires municipalities to complete Housing needs Assessments and regulates the use of municipal zoning powers in certain circumstances, such as restricting the use of land for farming. Municipal zoning powers are also restricted through the Agricultural Land Reserve, which is regulated by the Province. The framework already exists for the Provincial government to provide direction to municipalities on zoning, and we suggest this be utilized to secure new rental and affordable housing through targets.

We fully understand that the Province will likely expect Purpose Built Rental (PBR) and/or units with a certain level of affordability in market strata projects. We would need to ensure through an economic analysis by a third-party consultant that enough additional density is provided to allow for the affordability desired by the Province while making projects viable. The municipalities of Coquitlam and Burnaby currently have density bonus programs that meet this threshold and are seeing growth in rental housing.

Municipal disincentives

For builders, it has become increasingly challenging to deliver rental and affordable homes, and we need to remove some of the roadblocks in order to get more homes built, quickly. 75% of new development in Metro Vancouver over the next thirty years will have to be in areas where people currently live and work (infill areas) because we are running out of land. At the same time, only two local governments in Metro Vancouver met their Regional Growth Strategy (RGS) housing targets between 2011 and 2018 – the City of North Vancouver and Richmond.

Councils are constantly requiring proposals to provide more or are inserting roadblocks to new projects in infill areas. Some Local Governments are also establishing standards, and

amenity requirements that are so high that projects do not proceed or are delayed. We've seen this across the region where municipal requirements, such as environmental policies, amenity or affordability targets become difficult to implement or even unachievable – especially since increases in density to fully offset the costs are not provided. If development stops, the impact can be minimal for Councils – or even positive, as the Region's housing crisis can be solved in other municipalities and neighbourhoods.

Builders are often faced with competing municipal policy priorities that delay or deter new housing proposals including shadowing, view corridors and potential building material requirements. We have also seen a troublingly preservationist attitude in some local governments which has appeared in early drafts of Vancouver's Broadway Area Plan or the use of Residential Rental Tenure Zoning (RRTZ) to prevent redevelopment of aging rental stock rather than support the creation of new homes - while fully protecting displaced tenants. It has even gone so far as to become outright objections to growth in some municipalities.

There is a growing sentiment that municipalities are not all willing to accept the growth needed to improve housing affordability or that it will only be accepted if it achieves what are largely unattainable requirements. Unfortunately, the current incentive structure in place doesn't create any impetus for municipalities to change, which is why targets are critical to incentivize the approval of new housing.

Positive outcomes - achieving affordability, transit and climate action goals

Some municipalities are not putting up the same roadblocks to new housing that are noted above. Some municipalities continue to provide opportunities to build the types of rental and affordable homes that we need. The few new market PBR buildings that are being built today are serving a range of incomes, largely within the definition of "workforce housing."

For new rental homes, particularly those in areas well-served by transit, affordability is further improved because households do not have added expense of owning a vehicle. By increasing ridership is supports the long-term growth of the transit network and ensures that Provincial investments are fully leveraged. In addition, it will contribute to achieving the Province's *CleanBC* climate action goals.

Based on the rationale and examples above, we believe that the greatest opportunity to achieve the rental and affordable housing that is needed in B.C. will be by establishing municipal housing targets, enforced by the Province. We look forward to discussing these ideas further with you in our upcoming meetings.

U40 Committee
Thursday, June 3, 2021
7:30 – 9:00 AM
Zoom

AGENDA

1. Roundtable Introductions
    - U40 Overview & Goals
    - Who We Are
    - Minister Eby
2. Building Communities for Everyone
3. Access to Workforce Housing
4. Regional Vision and Leadership
5. Open Discussion
    - How Can We Help
6. Next Steps

Andrew,

Please feel free to join the next Energy Step Code Council meeting. We can make time on the agenda if there is anything you would like to share with the group. I will follow up on Friday at our bilateral with the draft agenda.

Best,
Zac

Reducing carbon in new construction
Considerations for district energy systems

Date: Friday June 4, 2021
Time: 10:30 a.m. – 12:00 p.m. Pacific Time
Teleconference information: Click here to join the meeting

If technical difficulties persist, email Hugo Wong at hugo.wong@gov.bc.ca or call 236-478-1406

Agenda

1. Welcome, introductions (Zachary May, 10 mins)
2. Discussion questions (All, 60 mins.)

Attendees

Zachary May, Director, Strategic Policy, Building and Safety Standards Branch (BSSB), Ministry of Attorney General and Minister Responsible for Housing
Hugo Wong, Policy Analyst, Building and Safety Standards Branch
Alisa Holtz; Senior Policy Analyst; Electricity and Alternative Energy Division; Ministry of Energy, Mines and Low Carbon Innovation

Mauricio Acosta, Vancouver Coastal Health
Bea Bains, FortisBC
Patricia Bell, Community Energy Association
Will Cleveland and Gerard MacDonald, Reshape Strategies
Steve Faltas and Leya Behra, City of New Westminster
Jeff Fisher, Urban Development Institute
Bradford Griffin, Simon Fraser University
Jason Owen, Surrey City Energy (City of Surrey)
Alen Postolka, Lulu Island Energy Company (City of Richmond)
Charlene Rowan, Corix
Peter Russell, City of Richmond
Kerry Shaw, University of British Columbia
David Trigg, FVB Energy
Karsten Veng and Ivan Tang, Lonsdale Energy (City of North Vancouver)

Purpose

- This group was convened to discuss the implications of a carbon pollution standard for new buildings on district energy systems.
- At this initial meeting, the Building and Safety Standards Branch (BSSB) is seeking initial feedback and questions which we will consider and discuss with stakeholders on the Energy Step Code Council. We also want to identify any issues that would require, or would benefit from, further discussion and exploration with district energy providers.

Background

- In November 2020, the Mandate Letter for the Minister Responsible for Housing included direction to build on the government's work to require cleaner buildings by supporting local governments to set their own carbon pollution performance standards for new buildings.
- The *Building Act* limits Local Authorities to establish their own technical building requirements for carbon pollution and energy efficiency, requiring them to use the voluntary Energy Step Code in the BC Building Code (BCBC), which addresses energy efficiency but not carbon pollution.

- Following the structure of the BC Energy Step Code, requirements for GHG emissions will require a specific unit of measurement or metric, and specific performance levels using that metric.
- We have transparent, B.C.-specific emissions factors via the Greenhouse Gas Industrial Reporting and Control Act (GGIRCA) model for grid electricity and Canada's official greenhouse gas inventory for natural gas. However, quantifying emissions in district energy systems are less straightforward given the range of energy sources.
- This summer, BSSB is consulting with stakeholders like the Energy Step Code Council to understand policy and implementation preferences on a carbon pollution standard, with the goal to achieve consensus by the fall of 2021.
    - The goal is to focus on operational carbon emissions, although there will be some discussion of embodied carbon.
    - In April 2021, initial survey responses from the Energy Step Code Council members indicate that the group is most interested in using a GHGi metric for buildings, but most respondents wanted additional costing analysis before expressing a firm preference.

Discussion questions

- What is simplest, most effective way for the Province to determine the emissions factor for district energy systems in B.C. for use in building regulations?
- Is there a standardized approach for determining the emissions factor for district energy systems? Does this value change over time?
- What should the Province be aware of when setting a provincial carbon pollution standard for buildings connected to district energy systems?

Alen, CoR – goal of DE, GHG

Bea, FortisBC
Brad – data centre at SFU (track DE across Canada). Most complete database on available DE facilities. Energy use.

Gerard – Reshape. Infrastructure consultants. DE policies integration with carbon codes. TGS with GHG req. CaGBC and zero carbon. Alisa. CleanBC

Ivan – Lonsdale . Want to know GHG space.

Karsten

Jeff – UDI. I have members who own DE systems. How does DE and ESC integrate?

Emily: Surrey City Energy. Lead planning/design. We're interested in (Jason is my manager) – interested in next phase of renewable energy plant, supply.

Jason Owen – want to bring in more low carbon supply. Working with Reshape. Overseeing sustainability office. How policie will put us on path for zero in net and existing bldgs..

Leya – city of new west. Manager of climate action. And Steven Faltas. New West.

Steven – electricity supply.

Linda – neighbourhood energy utility, CoV. Low-carbon heat and hot water to residents in False Creek up into Mount Pleasant.

Zac – satisfying minister's mandate. Agenda, brief background.

Pat Bell – CEA. Used to do pre-feasability studies.

Kerry Shaw – future neighbourhood developments.

Lloyd Jacobs (FAES)

Question from Gerard on GHGi on timeline: Does the Province have a timeline for introducing a GHGi requirement? Benchmark ourselves between fall 2021 and end of 2022. Given priority of this, likely closelr to fall 2021. We want to finish analysis for this fall. High-prorioty work.

Jeff: As BCBC moves up the Step Code, implications for DE. In what happened in the past, the BCBC will have GHGi targets as well. When we have this convo, has to be in the back of our minds. It might migrate over. As did the ESC. Zac: That's fair. Maybe EE in a parking lot. Implications on this group, EE, could follow up with that with this group.

Will: Will there be multiple Steps?

ZM: Almost certain we will have more than one level. We're trying to harmonize with field in a few ways. A few ways in a measure-only Step, doesn't satisfy policy goals. GHGi dominant but not forgone. Certainly more than one Step. One set of flexible standards.

Alen: Flexibility. A few DE systems started with base load as NG boilers, with longer term of implementation of LCES.

ZM: We're doing something similar…when does it rule out…start different places, different plans. V interested in what that is so any impacts we have on DE as voluntary standards…those LGs decide on right level is for them, what that means for buildings, hopefully local govs understand full implications. Starting with first measure only Step won't cut out anything. But depending on how low the GHGi is required.

Alen: Goal to bring some recommendation in the fall. How do you perceive this group? Another task group? How do you want us to be?

ZM: Primarily, we're running it through ESCC> When it comes to carbon pollution standards, there are other groups are implicated, like DE. We'll either maintain this as aagroup to check in on to ensure we have input. Also opportunity for anynone here to participate in larger ESCC group. Intent here is a group to focus on DE specific issues. As Jeff noted, might be worth tackling the carbon pollution thing, we can revisit EE ahead of 2022 to ensure we capture DE in there to.

Kerry: Any public sector building targets? Part 3 Part 9?

ZM: Defer, follow up with that. We're doing another version of the metrics report. Cost and technology at different levels of Step Code. And emissions outcoms. Off the top of my head, unsure if we have public sector buildings of any archetypes. I don't think there are any public sector buildings in there.

Any recommendations to…brad griffin…claim to have the most advanced understanding of DE systems. Suggestion. Emissions factor for nG and electricity in the grid. How can we gather something similar for DE, those owned and operated by LGs not under the purview of the BCUC? Do we have enough info to calculate emissions of DE?

Brad Griffin: Beyond the fuels that are being used for that energy? I don't. Info we collect is voluntary. Fuels are the most controversial info we get. If it's mandatory reporting, not see why you couldn't calculate it based on fuels going into your system and energy coming out.

ZM: Through this process, we can construct BUILDINGS, we DON"T regulate DE. We CAN"T regulate DE systems. That's our challenge. What's going INTO the building.

Jason Owen: There won't be one simple way to calculate emissions factor. Important to understand: unlike traditional energy networks, electricity/gas, DES primarily developed to facilitate flexible use of different energy inputs. That's the whole point. They'll evolve over time to consist of different fuel makeups. There shouldn't be one calculation for any given utility that's supplied to its whole customer base. It'll change over time. Depend on needs of the customer. As systems grow, new customers that come on will have different requirements that will need to be met. These utilities have the flexibility and utility to deliver different carbon intensity for different customers based on time of construction. Important for utilities to plan for that. But this standard needs to acknowledge evolution over time and diversity of services provided.

Lloyd: What's the definition of DE? Those considered Stream B under BCUC, LG systems, or on-site, too?

ZM: I'll ask the group.

Alen: Back in the DETG day, some definition…as a part of that. Step Code and Minister of the time did consider DE. What did we decide at the time?

Ivan: I want to echo Jason Owen. Our DE (Lonsdale) also envisioned to be flexible in fuel flexibility and fuel input. Cooling or heating service, it's complicated to see how much GHG should be assigned to a heating or cooling system. It's not something we've tackled yet.

ZM: Is it harder for heat recovery…is it easier for some DE systems vs others?

Ivan: Can't speak for others, but for Lonsdale in the node where we have heat recovery from cooling…do we attribute all of the GHG in the fuel that we go into the heat recovery back to heating side and would cooling service is completely zero carbon? If that's the case, can't compare that in apples to apples ways to standalone cooling building.

Brad: Comment/question. Last year, we did work for ECCC, assigning emissions factors for co-generation (electricity and heat). Six methodologies, pros/cons, industry standards, etc. We settled on the most common definition for industry as our recommendation. You could apply something similar for heat only systems. Ome up with std method to split fuels among final energy delivered. Works back to efficieis of different techs, split it up and attribute that way. Would you assign fixed GHG to a system, or would it evolve? Chase a standard as it declines?

ZM: In the Code, we'd love it if it would fixed permanently. But a fluid number that changes dy ot day is impractical. What's the interval of change we see in this system. Would an annual number ascribed, we could do a list like that, but when someone goes to build a building, what number to draw from, provide that for other…like climate info, but we change it every 5 years, we want a regular number, once a year at most, five years is nice, but it might be too long. System in your community?

ZM: We could have a long list. If we can't get info we need, what's a default? We'd ideally incentivize making a real number with update at the next interval, but we aren't looking for one number for all DE. We'll see. We could go through and ID each system if possible Provide a reasonable number.

Jeff: It isn't what the system is, it's for what it'd be for new buildings. In CoV, creative energy has diff GHG number for its current customers vs its new ones. We're only talking about new construction, not EB. Be aware. Next: we're concerned if munis develop different rules for their DE vs the ones for private sector. Some institutional, hospitals may have same view. Also question, will get to the ESCC, if standard is different for DE-buildings vs. other buildings, how fair is that?

ZM: Our desire is a transparent methodology to make that number. We don't want to leave it…needs to be transparent…as we've done for BC Hydro and Fortis on their fuels, distribution, emissions factor, it must be seen as fair. That ideally addresses non-LG-operated DE systems.

Gerard: How we talk about DE in same camp as gas/electricity, it's uncomfortable pairing. DE is a platform, it's not a energy source in itself. Could have wide variety of intensities. In 2019, we did survey of DE systems across Canada, intl, and BC. BC has yet to release that. We looked at 140 systems globally, 42 in Canada, 18 in BC. We asked system operators, got their data, we'll see, it's a wide range of carbon intensities. Vary by time, no one size-fits-all. What do you use as a default? If you assume it's on 100% gas, it's easy. Other regulators, check those who have GHGi in Codes. It'd make sense for all these code makers to get the same page. CaGBC has a zero carbon standard, check that. They're navigating this

very issue. In this convos, not just with CaGBC and Toronto, and Lower Mainland, is exactly Jeff's point, it's about service for new construction. What' we're seeing DE industry come up with is specific offerings for new customers. For what's carbon intensity for existing system. But it's a differen tissue in what the new customer is going to get. Offering for new customers, would be different than heat supply for existing customers. What other code makers thinking,,,they think, principles of allocating carbon for that new customer. Protocols should mirror: what are we doing for buildings. Bldgs need to demonstrate energy code, show spec sheet, show this heat pump, should be similar for DE. If they add some renewable supply, ask the DE provider for that supply. Harmonize. Framework for specific offering, not unlike Fortis' RNG offering…connect to the gas grid, but can buy RNG or green heat and specialized service. Those are being worked through and again, reach out to code making counterparts to see where they are with that.

THING: MAYBE GET GERARD'S THING to CAS for their modelling?

Onus goes to DE provider to demonstrate to their customer…ultimate to the regulator but to customer, robustness of the green heat. How you account for carbon, don't make it more or less stringent than what's required of buildings.

Finally, you invited us to offer any other suggestions. We keep pointing to CoV of an alternate compliance pathway, where some buildings meet a base-level of TEDI performance. They'll go to TEDI 40, but a lower GHGi. I can see how you have different tiers. What'll drive performance of Tiers? TEDI, GHGi? You could have a choice. Surrey and Richmond have similar frameworks in please. An LCES relaxation. Another thought to weave in there. Happy to connect you with…Toronto and CAGBC that are working on this.

ZM: We'll have contacts, we'll chat. How rigid/how flexible, that's what's happening at ESCC.

Constantino: Standardized emissions factor is not an issue. That's fairly easily. Issue: year-to-year and system variation. Maybe because system didn't fully develop. Peaking more natural gas boilers. Don't see how it'd be done without revising number year to year. Or a target GHGi for the system. Ivan's comment on heating/cooling, that's another layer of complication. It'll be significant different between heating only and heating/cooling both. Richmond has started to look into it. Tring to calculate it, but that's our first issue. Which year do we look into?

Jason: We're making our own offerings on this. We've asked Reshape and Gerard to think that through. We have similar concerns/objectives raised here. What we come up is simple, verifiable, scalable, fair. Trying to make principles that could be applied and relevant here. Happy to offer some of those…some thinking there. Framework we start to develop with help of ReShape that will meet those concerns and challenges. Helpful for us to get kind of feedback of a group like this to ensure we're hitting the mark. Not to too much on the spot, Gerard, but could you have that convo broadened, too? No time to get into those details today, but maybe for future.

ZM: That'd be great. Make some time to walk through that that'd be great.

JF: Question on how LCES is regulated by LGs now. What the bldg's modelled at time of occupancy. May be tracking occurring in future on what is energy use when ppl in the bldg. It's not regulated. It's tracked, initiative to push info sharing over time, but usu. It's what it's at at occupancy. How do LGs in

those arrangements, have a high Step Code or a lower Step Code with low-carbon ES, are you actually regulating it so every single year it's achieving this carbon target or it's at the time of modellign?

Jason: Good question Jeff. Challenge and it also exist for TEDI and TUEI.

Gerard: Could you expand that to include on-site systems? Agree shouldn't just be once. On-site, it's 20-30 years. If on building, RNG to comply, not making that commitment for nearly as long. With public sector systems, moving to lower carbon fuels over time. CoV says 100% renewable by 2030. Could transition over time downward. If we do it at modelled snapshop, but if you do it, it's true for DE and on-site systems.

ZM: Some consensus that methodology is achievable. Getting info to run that calculation is not always certain. How certain we need to be that's the case over time? Maybe we just need to pick some level of certainty and run with that. Not into long-term strategy in this. In LG-operated systems outside of BCUC, is it fair to assume it's harder to get info on what fuel is being used to run it through a methodology vs privately operated system or am I wrong?

Jason: Regulated systems have public record documentation of modelled performance of a system. They don't typically report annual operating parameters. Same issue. Matter of transparency and formal reporting structure that all utilities, LG owned, privately, comply the same way. Simple process for any utility. We track energy inputs carefully. We have the data. It's just requesting it in a transparent way.

ZM: Any sensitivy to disclose that? We're leaning towards modelled outcomes. If something happens, that's outside realm of building codes. Can we access that info?

Jason: We'll need these to be verifiable. It makes sense that we report as a necessary requirement.

Gerard: Some providers you won't get actual data as easily. All DE providers know how much fuel they buy. Default emissions factor you plug in based on 100% gas, and that's the number in absence of the building, in absence of other info. Just put it on onus on building to prove it. Building needs to comply, DE needs them as a customer, the incentives should align to demonstrate compliance.

Parkinson: To clarify, CoV's NEU is developing roadmap to 100 per cent renewable by 2030. Will take that to Council in 2023 for approval.

Gerard leaves at 11:28

Pat: We work with v. small communities and v. small systems. Enderby or Revelstoke folks here? They struggle sometimes with complex processes. Flag that for you.

ZM: May be one to follow up on, for sure. Even project-by-project basis on disclosure…sounds viable.

Kerry: a worry, a GHGi per metres squared metric. Makes sense for building. But as a DE provider, is that the best, or would like ton of carbon per megawatt hour. You're not designing the building. What's easier for providers to work with?

ZM: I think we're looking at the latter in intensity per unit of electricity provided. It's analogous on what we're doing for other fuels/energy sources. That's my assumption thought.

Ivan: Trying to calculate emissions per sq. m. or sq. ft. can get complicated. Everybody calculates floor area differently. As energy provider, assign number per unit of energy.

Jason: At building scale, the per metre metric is important as it normalizes different energy outputs and building performance. But not hard to go from per megawatt hour carbon intensity if you forecast energy needed in bldg., to the other, but that should be in building compliance process not the utility providing the info.

ZM: In practice, we need to know the number to plug into the energy model. It should be straightforward and responsibility of developer of the building. We' dlike to see in the Code or some regulated way, to say "here's what you assume for that DE system, : maybe there's a default with some process with AHJ, we'll need to review best practices and carve out something that has a default with exceptions as new info arises. They're innovative, so we need flexibility, but need simple info for buildesr, too.

At least internally, good next steps. Pull definition from 2017, whether on-site is in scope (probably not but take a look)_. CAGBC and Toronto follow up to ensure we align. Pat talk to you about small communities. Maybe we'll tee up a presentation from Gerard in future about work he's doing with Jason and his team. See what timing is for that.

Pat: Wonderful SFU study, Surrey work, if anything else referred to, please share with the group. Document things we look at, sounds like that's useful for many different purposes.

ZM: We'll set up mtg in coming weeks, maybe a month, after meetings with ESCC, if anyone wants to join ESCC discussion, tell us and we'll add you. Otherwise, continue with a DE-focused group to ensure we come up with consensus here as a group. Then take here into integrate the standard with ESCC process. Make sure we capture implications in the fall on EE after the GHG process is done.

JF: How would these regs apply in situation where broader public sector is involved? New hospital with DE system gets built. Existing hospital adds new bldg. with DE. How would what we talk about apply in that situation.

ZM: In an unclear way. Voluntary standards that LGs apply/not apply at their discretion. We've heard from LGs with Step Code that discretion is needed on public sector buildings. Also TB direction energy/efficiency outcomes that need balancing. Large public sector projects will probably still be unique projects that standardized process for other residential/commercial is more of a guidelines than a rule. We're designing this for private sector mostly, schools, courts, maybe not BC Housing buildings, but those weird archetypes.

JF: Probably need a clear statement on that.

ZM: CAS is developing that in the background and we're trying to harmonize as much as possible. But they write the guidelines from TB on that so we stay a far from that and cement it in the code in the future.

Can we go down list of takeaways:

Is on-site in and out of scope, use the 2017 DETG definition.

Hugo to reach out to Brad Griffin to find out who he did study for in the BC gov. We can track it down.

Hugo to reach out to Jason Owen…Jason, let us know when you have BG info on whether Gerard's team can present on the work they're doing.

Kerry Shaw: tell her if public sector is in the . Email Kerry and Scott, connect them. Kerry had questions on bldg. archetypes, Scott. Scott can forward that list to her.

Can we tee up phone call with Pat Bell two weeks from now. To talk about small communities. Week of 14th. To ensure we're not messing things up for them.

Book a meeting a month from now after we have the above done.

Conjecture: Maybe we provide a default. If you connect to DE and don't want to use this number, use a methodology and ensure LG accepts that new info. Punt it to LG. You guys figure this put. If thye want it to be low carbon. Treat it as NG if you don't know what to do. Up to you guys. At this point, it might be simple. It's reasonable to punt it to LGs to see how they manage it. If we do it provincially, maybe we have some guidance on hwo to that.

Alisa works with Guy. Maybe they have the report that Gerard did.

Leave a space for Step Code content throw in bullets on Monday. Give some thought to…template we have for the TCL.

Little tweak.s gEt the latest version. Where we going to add..easiest…HCL is grat. Concerns about ESC implementation, leave space.

ID that we continue to address those concerns on EA capacity, at federal level to increase incentives and in CleanBC and better homes BC. Ensure there's adequate access to energy advisors. They keep saying there aren't EAs, but there are. They presume there are no EAs. Need to nod that we hear you. Work with people,

CEA or LGPN? Reach out to LGPN if they want to collab with other communities working on solutions themselves, including small communities.

Check-in items to be discussed

From: May, Zachary OHCS:EX

Sent: June 7, 2021 11:53:01 AM PDT
Attachments: image003.jpg

Hi Andrew,

There are a few urgent items that we did not have time to address during our check-in, but still require your attention. The bullet points from my OneNote are below. Please let me know if you would prefer a meeting or email on these topics.

GHGi

- Meeting last Friday with district energy providers (+ Fortis, UDI) to determine a way to assign an emissions factor to their systems
- Meeting this week, mostly focused on summary of the survey feedback.
  - APS to review survey findings prior to discussion with the group?
  - APS to review speaking notes prior to meeting?
  - APS to speak at or attend meeting?
    - Discussed just now. I will send slides and notes for approval. Meeting will not proceed without your written approval of materials.

BeRT

- Briefing for decision - when do we want to go to Cheryl for decision?
- Contractor's report - near final draft
  - APS to review?
- Report will be included as an appendix to the business case, now looking like a decision between two preferred options: LTSA, and licensed platform (Dynamics)
- Anything else required for APS before we finalize the report and seek decision?

Jerome Rd

- Most recent report from GHL and Steve Craft report
- Steve Craft says he doesn't agree with the GHL report because it doesn't follow the methodology proposed.
  - Does believe an "alternative solutions type analysis" could allow the building to be considered acceptable.
    - Don does not have confidence in the quality of this report
    - Andy also disagrees with the approach Steve Craft has proposed.
- Sending this back to the proponent to arrive at consensus may be outside the scope of a typical peer review process for EGBC (Don is talking to their practice advisor to confirm), and may further delay the project.
- I have directed the team to send the reports to Keith Calder for his review, with a request to have him identify any risks with the proposed process and design, and produce a report that he can sign and seal (as per APS request).
- Decision required - are we ok to proceed if each engineer deems the design as acceptable/appropriate but uses a different methodology to arrive at that conclusion?
  - I believe our direction is to ensure we provide appropriate oversight while not creating any unecessary barriers or delays to the process. I believe sending the report back with a request for consensus may create such a delay. Accepting the report as is requires a certain level of risk. I'm hoping Keith Calder will provide us with guidance on the nature of the risk in the project before we send up to the Minister. Does this seem acceptable to AD/ADM/…?

Best,
Zachary D. May, MBA
Director, Strategic Policy

When: June 9, 2021 1:00 PM-4:00 PM (UTC-08:00) Pacific Time (US & Canada).
Where: Microsoft Teams Meeting

Hello, everyone:

Thank you for attending last week's initial discussion on district energy systems and reducing carbon in new construction. We are still working on the follow-up items from the last meeting, and I will be working through that list in the days to come.

However, I wanted to use this opportunity to invite you to tomorrow afternoon's Energy Step Code Council meeting. We will be discussing feedback from an April survey circulated among the Council asking them for their early thoughts on how we could deliver the Ministerial mandate to create an opt-in carbon pollution standard.

I realize this is quite short notice, so this is entirely optional (it's only if you're interested in the broader discussion). You may also choose to attend a portion or send a delegate instead.

The two attachments are:

* Discussion questions dated April 1 2021 which outlines what we asked the Council at the time.
* The agenda for the meeting (2021 06 09)

Thanks very much.
Hugo

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting

Discussion questions
Reducing carbon emissions in new construction

1. We have heard that consistency, flexibility, predictability, and affordability are important values for all parties. Are there other values that are important to include? What does success look like to your organization and your members?

2. Following the structure of the BC Energy Step Code, requirements for GHG emissions will require a specific unit of measurement or metric, and specific performance levels using that metric. The following questions will guide our discussion for establishing standards for GHG emissions:

    Metrics:

    a. Which metric(s) should be considered? (GHG intensity; total GHG per house, dwelling unit, or building; others?)

    b. Should the same approach be considered for homes and small buildings as we consider for large complex buildings?

    c. Should we focus on building types addressed in the Metrics Research Report first, or do all building types have equal priority when establishing GHG requirements?

GHG performance levels:

    d. Should we apply a similar approach used for the Energy Step Code and establish a first step that only requires measurement of GHG emissions and increasing steps towards a specific long-term low-carbon outcome? Should we align the number of GHG steps with the number of energy efficiency steps expected in 2022: 3 steps?

    e. What should the highest step should be for GHG emissions?

    f. What should the relationship be between GHG steps and the energy efficiency steps in the Energy Step Code? Should there be flexibility to apply different levels of energy and GHG requirements or should the steps be aligned?

3. In addition to any regulation, there are several implementation and impact analysis issues that should be addressed, either as part of the Metrics Research Report or through separate analysis and discussion. What issues do you and your members see as important to address as we develop GHG emissions requirements? Based on preliminary discussions the following issues have been identified:

    a. Consideration of embodied carbon

    b. Consideration of renewable natural gas

    c. Analysis of the incremental capital cost and operation cost implications of achieving different GHG steps alongside energy efficiency steps (in scope for Metrics Research Report) as well as the equipment and systems required to achieve GHG steps in different regions of the province

    d. Consideration of district energy and other local or site energy systems

Back Pocket on Consequential Losses

From: Warkentin, Tiffany OHCS:EX <Tiffany.Warkentin@gov.bc.ca>

To: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>

Sent: June 14, 2021 11:11:12 AM PDT

A few background bullets speaking to what steps have been taken to investigate and the (national) code work that's ongoing, in case they're useful.

- BSSB is participating in the ongoing strata insurance consultations led by HPB.
- External participants include:
  - Insurance Bureau of Canada, Insurance Brokers and Home Warranty Providers
  - Condo Home Owners' Association (CHOA) and Vancouver Island Strata Owners Association (VISOA) and a Solicitor Whose Primary Practice Areas are Strata Property Matters and Infrastructure
  - Property Managers and Appraisers
  - Developers, UDI and BC Construction Association
  - Canada Mortgage and Housing Corporation (CMHC), Mortgage Brokers and Lenders
  - British Columbia Real Estate Association (BCREA).
- BSSB continues to monitor consultation discussions for comments relating to consequential losses, internal water damage, and construction quality.
- With the help of BC Housing and CHOA inquiries have been made attempting to verify the insurers' claim and ascertain the root cause of the higher number of water damage claims in strata properties age 0-5 years old.
  - Property managers, strata counsels and homeowners' association have been unable to confirm specific incidences of internal water damage related to defects in regulated construction workmanship or standards, nor have they been able to confirm experiencing numerous internal water damage events.
  - A very small number of anecdotes, collected primarily from property managers, describe scenarios leading to internal water damage such as improper (homeowner) installation of plumbed appliances such as dishwashers, or occupants forgetting to shut taps off thereby overflowing sinks and tubs.
- At the national level, more detailed analysis has been carried out in Quebec attempting to ascertain root causes of internal water damage in condos, leading to an ongoing review of CSA standards for flexible connectors (braided metal hoses).
  - There is not currently consensus that an issue with the connectors exists.

Re: City of Vancouver *Broadway Area Plan*

Issue

At the end of this year, Vancouver Council will be asked to approve a *Broadway Area Plan* (*BAP*) to support the new Millennium Line Extension to Arbutus Street. However, the *Emerging Directions* (Phase 2 of the *BAP*) released earlier this year were disappointing because they ignore the Province's objective to provide more workforce housing options – especially near transit.

It is important that growth opportunities for housing under the *BAP* be commensurate with the $2.83 billion investment being made in the subway by senior governments. Otherwise, the potential extension of the Millennium Line to UBC (which UDI has supported) may be called into question by other Metro municipalities such as Burnaby, Coquitlam, and Surrey, which have embraced Transit-Oriented Development.

Many stations along the Expo line still have single-family homes next to them 35 years after it's the line's construction. UDI is concerned about the lack of housing options along the Expo Line and the current Millennium Line stations. The Cambie Corridor Plan also has many missed opportunities. The City has been slow in the implementation of the Plan, and most of Cambie Street has been limited to six-storey buildings with only low-density projects allowed off of the arterial.

Preservation in the *BAP*

One of the objectives of the Plan is "… *retaining and reinvesting in existing older rental housing* …," even though the vast majority of these buildings are old and near the end of their lifecycle. These rental buildings are low-density, 3-4 storey walk-up apartments, lacking modern seismic and energy efficient construction. Instead of upgrading this rental housing while protecting tenants, Vancouver is proposing "… *retention and careful long-term renewal of the older rental housing by considering a modest increase in height and density for secured market and below-market rental* …". We believe it is critical to protect tenants, and ensure there are secure rental homes available for the future.

UDI has recommended the City adopt the approach Burnaby took with Metrotown and other Town Centres to achieve below market housing. This approach focused on protecting tenants (not buildings) by substantially increasing the floor area of projects. An additional 1.1 FAR of strata density has been provided to builders, but they must allow tenants to return (at their old rents) when the new projects are complete.

Builders are also required to assist tenants with temporary accommodations. Burnaby has been able to leverage the strata FAR density bonus to mandate that 20% of units be below-

market housing for redevelopments of non-rental buildings. As a result of this policy, Burnaby is renewing and expanding its affordable rental housing stock.

There are other areas in the *BAP* where there are restrictions on new housing. Only low-density projects would be allowed in the Villages (West 4th, South Granville and Main Street), and no housing would be allowed in Uptown as well as the industrial and mixed-employment areas.

Viability of Projects in the *BAP*

In the limited areas where growth would be allowed, it is not clear how viable it will be. The *BAP* is being asked to resolve too many issues when much of the area is being reserved for rental or below market housing. At the same time, the *BAP* is being asked to deliver on a number of City objectives, including:

- *"Affordable Housing (e.g. social and supportive housing)*
- *Renewal and expansion of community facilities:*
    - *Recreational facilities;*
    - *Libraries;*
    - *Social facilities (e.g. neighbourhood houses, non-profit spaces)*
- *New childcare facilities;*
- *Renewal and expansion of cultural facilities;*
- *New plazas and commercial street sidewalk improvements, including enhancing Broadway as a Great Street;*
- *Renewal and expansion of park space;*
- *New and upgraded bikeways and greenways; and*
- *Green infrastructure, Blue-Green Systems and utilities upgrades*."

As noted above, only modest increases in height and FAR would be allowed in the rental apartment zones, with density reserved for rental, social or below market housing. In the low-density areas, where additional FAR is allowed, it is reserved for rental and below market housing. At the same time, the *BAP* is being asked to deliver on a number of City objectives, including:

- It is difficult to build market rental housing in today's high land/construction cost environment. Adding to the cost of providing affordable units by requiring Community Amenity Contributions (CACs) to deliver on the objectives noted above would quickly render projects unviable.

Staff have indicated they are "… *exploring innovative funding options and tools for Growth needs that do not rely on CACs typically provided with additional strata density*." There is concern that the vast majority of the costs for these amenities will still be funded by new development; projects that will mostly be Purpose Built Rental (PBR) housing where there is less leeway for added costs. As noted in our June 10 meeting, Vancouver has been requesting CACs for some rental projects.

Lack of Market Ownership Opportunities

Although UDI has expressed concerns about the negotiated CAC process in Vancouver, our members expect, and can accommodate, CACs for their strata projects in the City. If the *BAP* includes the amenities noted above, additional areas for strata projects will be needed in the Plan, as the Development Cost Expectations (i.e. CACs) for strata projects in the *BAP* range from $330 to $425 per square foot.

In terms of providing affordable housing units, Coriolis found in a 2019 *Report* for Metro Vancouver that providing builders with additional strata density for their projects "… *has been the most prevalent and successful means to obtain affordable housing in Metro Vancouver*," for municipalities. It is almost impossible for builders to provide any CACs or below-market housing if the projects and the additional FAR offered is for rental.

Creating a diversity of housing types and tenures in the *BAP* is critical to meet current and future housing needs. While UDI has been a strong advocate for rental housing, the *BAP* is unbalanced. With the exception of a few areas, it is largely focused on rental housing, and lacks significant opportunities for homeownership. As part of the full spectrum of housing, strata apartments offer opportunities for new and existing households to enter the market. These will likely include thousands of new Vancouverites joining B.C.'s growing tech sector.

BAP **Centres**

In our meetings with the City, staff have stated that they expect substantial market housing opportunities to occur in the *BAP* Centres (with the exception of Uptown) - "… *the newer mixed-use and commercial areas*," along Broadway. UDI is pleased that these Centres surround the new stations, but their size is very limited relative to the rest of the *BAP*.

In other parts of Metro Vancouver, this could be addressed by substantially increasing the heights of new buildings. However, this option is more difficult along Broadway due to Vancouver's view cones and shadowing policy. Although the City is exploring opportunities for increased heights as part of the *BAP*, the last time the staff conducted a substantial review of the view cones (which was intended to increase opportunities for housing in the Downtown South to offset the removal of residential zoning in other parts of Downtown), Council chose instead to strengthen the policy and add protection for new view corridors. It should be noted the City is also considering "… *potential new protected views, e.g. street-end views of the downtown and North Shore Mountains*," as part of the *BAP*.

We are very concerned that the amount of growth to be allowed in the Centres will not be nearly enough to offset the lost opportunities for growth in the rest of the Broadway Corridor, or address the need for more affordable housing in the City.

Recommendation

UDI recommends that the Province (and Federal Government) become more involved in the *Broadway Area Plan*, and establish mandatory annual housing targets as part of their funding of the Millennium Line extension. This is critical because there are presently no housing targets in the *Plan*. Senior Government targets would also provide a backstop for the City as they move to the final stages of the *BAP*. This approach to create targets around new transit is supported by the public, as demonstrated in the polling we discussed on June 10. Establishing annual targets would also ensure the viability of policy proposals contained within the *BAP*.

Potential Questions for Vancouver

- What are the City's housing targets for the *BAP* and how do they compare to other municipal transit corridors such as Burnaby?
- What is the breakdown between Rental Housing and Strata Housing both market and affordable?
- What are the City's targets for new Job Space in the *BAP*?

- How much housing do they expect to be built along the Broadway Corridor each year?
- CBRE estimates that there are 3.5 million square feet of office space being built in Downtown Vancouver, which will result in additional 15,000 to 20,000 new employees; many of whom will be well paid and want to live in or near Downtown. What are the City's plans to house these new workers? How many will be able to move to the Broadway Corridor.
- If the City is not relying on CACs from strata projects to cover the costs of the amenities and affordable housing in the *BAP*, what is there alternative funding approach to pay for growth and affordable housing?

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Notes

Date and Time of Meeting: Wednesday June 9, 2021 | Time: 1:00 p.m. to 4:00 p.m. Pacific Time
Chair: Zachary May, Building and Safety Standards Branch, Attorney General and Minister Responsible for Housing
Co-Vice Chairs: Bob Deeks, CHBA BC/RDC Fine Homes and Robyn Wark, BC Hydro
Virtual Microsoft Teams meeting

Participants

1. Bea Bains, FortisBC
2. Pat Caraher, AHMA
3. Maya Chorobik and Laura Sampliner, LGPN
4. Norm Connolly, Part 3/Part 9 Non-Residential Subco, PIBC
5. Bob Deeks, RDC Fine Homes, CHBA-BC
6. Diana Dilworth, HAVAN
7. Catherine Ernst, BOABC
8. Jeff Fisher, UDI
9. Nicholas Heap, Part 9 Residential Subco co-chair
10. Wilma Leung and Remi Charron, BC Housing
11. John Madden, UBC
12. Roberto Pecora, ZEBx
13. Warren Perks, BCCA
14. Harshan Radhakrishnan, EGBC
15. Muneesh Sharma, BOMA
16. Maxwell Sykes, City of Surrey, UBCM
17. Robyn Wark, BC Hydro
18. Scott Williams and Hugo Wong, BSSB
19. **Guests:** Brent Graham and Jason Wolfe, FortisBC; Steve Faltas, Energy New West; Constantino Reytas, Lulu Island Energy; Pauline Rupp and Carmina Tupe, CHBA BC; Katherine Muncaster and Alisa Holtz, EMLI; Adrian Mohareb, Climate Action Secretariat; Tom Berkhout, BC Hydro; Ralph Wells, UBC
20. **Regrets:** Lisa Mak, BC Hydro; Tyler Wightman, BOABC

ACTION ITEMS

1. **BSSB:**
2. **ESCC Members:**

NOTES

This meeting was the second of four proposed between now and the summer of 2021 to address GHGs and buildings.

Introduction highlights

- Initial technical and costing analysis from the updated Metrics Research Report will be ready to present to the Energy Step Code Council in July. It is a similar format to the 2018 Metrics Research Report.
- The electricity emissions factor for grid electricity under the Greenhouse Gas Industrial Reporting and Control Act (GGIRCA) model changes each year, which will be challenging in a building code/regulation context. BSSB will continue to consult with provincial government colleagues who set these policies, to ideally create a building regulation that does not fluctuate year to year. This issue will be brought back to the Council at a later date.

Presentation from FortisBC on their CleanBC initiatives

- Brent Graham, Senior Manager, Government Relations and Public Policy, walked the Council through key FortisBC initiatives and how they interrelate with the Energy Step Code Council's work.
- Key takeaways:
    - Understand the progress made in RNG and new construction
    - Significant work done with partners to date
    - Eventual Clean Portfolio Standard
- There is more RNG. Increased supply cap to 30 PJ (15% RNG content in the system), whereas previous cap was one-third that. To increase the cap, the Province expanded their definition of anything in a gaseous state that flows through FortisBC's infrastructure), including hydrogen.
- There is direction to revisit a tariff from new construction, existing buildings, transportation, and other desired uses. FortisBC will create an integrated supply outlook to answer questions about the supply of renewable gases. Outstanding question on how RNG will be allocated among different segments for greatest emissions reductions (new construction, existing buildings, or something else).
- FortisBC is mindful of the desire for permanency and long-term contracts of RNG to buildings to ensure long-term use of RNG. They will work with the BCUC on this.
- Developing the Clean Portfolio Standard is of great importance to FortisBC, with significant dependencies with the work being done at the Energy Step Code Council. They recognize a sense of urgency.
- FortisBC hopes to report back to the Council in mid-summer on how best to allocate RNG between new construction, existing buildings, and other gas users.
- FortisBC has studies coming out with UVic, and a more regional Pathways report for the Metro Vancouver area.
- Questions:
    - Updated feedstock information is being developed.
    - What are other gas utilities in North America doing with RNG/hydrogen? The Quebec utility is interested now in traditional RNG, and some in Alberta, where there is RNG potential from oil and gas.
    - The 15% target was chosen by market potential, supply studies in different feed stocks, but the Province would have more info on that.
    - Has the GGRR or other legislation redefined "natural gas" so it's no longer 95% methane, or has natural gas been replaced with a new term that is defined as 85% methane? No, but the increased allowance lets us displace conventional natural gas with other energy, like hydrogen, lignin, and syngas.
    - How will you convince people to pay the premium for RNG? We should compare RNG to electricity to change the thinking. There will be further conversations with the regulator. Current model is 10,000 customers who pay for most of it. BCUC is asking us to address this, and the RNG business model could change.

- Zac thanked FortisBC for their presentation and congratulated them on their regulatory milestone.

Survey report out, Zachary May

- GHGI seems popular, measure-only with no minimum outcome seems popular. For all construction.
- Consensus that some energy efficiency improvements will be a prerequisite for any carbon reduction. Being overly ambitious in one aspect while ignoring another is undesirable.
- Considerations to be made for the low-carbon energy system relaxation offered by many local governments.
- Focus on operational carbon this time, but notes significant industry interest. Colleagues at OMTI can lead this and tell us where to go, possibly a best practices guide.
- No decision made on whether to lock energy efficiency reduction with corresponding GHGI targets.
- Consider fall timelines to coincide with local government building bylaw updates.
- Climate Action Secretariat is working on regulations for new public sector buildings, including developing public sector archetypes, particularly those owned by public sector organizations. That's Crown corps and core government, residential, office, care facilities, hospitals, and schools.
- **Group discussion**
  - Surrey is interested in a density bonus incentive to consider embodied carbon or cooling, and grandfathering in the existing requirements or a transition plan.
  - Consider presenting to the building officials or other LG staff on this subject.
  - Provincial consistency is hard given wide range of climate zones, so uncertainty on how achievable consistency is. HAVAN letter details this.
  - Zero, or near zero carbon, seems to be the end goal.
  - Most stringent Step still being developed. Low or no carbon.
  - Affordability is important to this government, along with more housing. Consensus will be important.
  - Technical research will focus on Step Code occupancies first, with parallel work happening at CAS regarding the broader public sector.
  - Getting to zero, and an ambitious final step, will provide an important market signal.
  - Want to keep this separate from the province-wide minimums in the 2022 BCBC. These are opt-in carbon pollution standards for local government. There is a window of opportunity we don't want to miss.
  - Transition for local governments current using a low-carbon energy system relaxation. Idea is to make the opt-in carbon pollution standards attractive enough to local governments to entice them towards the more consistent approach.
  - Will possibly cancel the mid-July meeting until we get more information. We will send options soon.
- **Meeting adjourned at 4 p.m.**

Reducing carbon in new construction
Considerations for district energy systems

Date: Friday June 4, 2021
Time: 10:30 a.m. – 12:00 p.m. Pacific Time
Microsoft Teams meeting

If technical difficulties persist, email Hugo Wong at hugo.wong@gov.bc.ca or call 236-478-1406

Agenda

1. Welcome, introductions (Zachary May, 10 mins)
2. Discussion questions (All, 60 mins.)

Attendees

Zachary May, Director, Strategic Policy, Building and Safety Standards Branch (BSSB), Ministry of Attorney General and Minister Responsible for Housing
Hugo Wong, Policy Analyst, Building and Safety Standards Branch
Alisa Holtz; Senior Policy Analyst; Electricity and Alternative Energy Division; Ministry of Energy, Mines and Low Carbon Innovation

Mauricio Acosta, Fraser Health
Bea Bains and Lloyd Jacobs, FortisBC/FortisBC Alternative Energy Services Inc.
Patricia Bell, Community Energy Association
Will Cleveland and Gerard MacDonald, Reshape Strategies
Steven Faltas and Leya Behra, City of New Westminster
Jeff Fisher, Urban Development Institute
Bradford Griffin, Canadian Energy and Emissions Data Centre (CEEDC) at Simon Fraser University
Jason Owen and Emily Kwok, Surrey City Energy (City of Surrey)
Linda Parkinson, City of Vancouver
Alen Postolka and Constantino Retes, Lulu Island Energy Company (City of Richmond)
Peter Russell, City of Richmond
Kerry Shaw, University of British Columbia
David Trigg, FVB Energy
Karsten Veng and Ivan Tang, Lonsdale Energy (City of North Vancouver)

Initial questions and context setting

- Internal staff timeline to introduce it between fall 2021 and end of 2022 (priority of mandate item means we are aiming for closer to fall 2021).
- We can discuss any implications of increasing energy efficiency with this group at a later meeting.
- Most likely more than one Step. A measure-only Step is likely but does not achieve emissions reductions on its own. GHGi is the dominant methodology in discussion but conclusion is not forgone. Goal is one set of flexible standards.
- Alen: Consider flexibility. Some DE systems start with natural gas boilers with long-term plans to implement low-carbon energy systems.
- Goal of this meeting is to determine the impact of voluntary carbon pollution standards on district energy systems so local governments understand the full implications. An initial measure-only Step for carbon pollution won't exclude any types of energy, but any Step above that might.
- Consultations on opt-in carbon pollution standards for new construction are mainly being held through the Energy Step Code Council, but there are other groups that are implicated, like district energy providers. This will group is an opportunity to discuss DE-specific issues related to the

carbon pollution standard, and as time passes, we can revisit energy efficiency ahead of the 2022 code change through this group as well.
- BSSB to follow up on progress for public sector building targets, which are being created by staff at Climate Action Secretariat. We are updating the 2018 Metrics Research Report which considers cost and technology at different Steps of the Step Code.

Discussion questions

Is there a standardized approach for determining the emissions factor for district energy systems? Does this value change over time?

- We have emission factors for natural gas and grid electricity. Is there a way we can do this for district energy, especially those owned and operated by local governments outside the purview of the BC Utilities Commission? Do we have enough information to calculate emissions of district energy?
- Study done by Brad Griffin was based on voluntary disclosure. Fuel mix is somewhat sensitive. If mandatory reporting is required, it is plausible to calculate it based on fuels going in and energy going out.
- Note: the Building Act and Code regulates buildings, not district energy systems.
- No single, simple way to calculate emissions factors. DES facilitate flexible use of different energy inputs, to evolve over time. Shouldn't be a single number. New customers may come onto the system with different requirements, and one DES can provide energy of differing carbon intensity to different customers based on time of construction.
- Lloyd: Does our working definition of DE considered under Stream B of the BCUC, local government systems, and on-site?
- Alen: In 2016, the Energy Efficiency Working Group created a definition. What was that?
- Ivan: Lonsdale envisioned fuel flexibility and inputs. We provide cooling and heating service, so it's complicated to assign emissions to a heating or cooling system. We have not started that work yet. In the Lonsdale note with heat recovery from cooling, we are not yet sure if we attribute all the GHG necessary for heat recovery back to the heating side, leading to a zero-carbon cooling service? If so, we can't compare that in a fair way to a building with standalone cooling.
- Brad Griffin did work for Environment and Climate Change Canada assigning emission factors for co-generation. They looked at six methodologies, pros/cons, and industry standards. They settled on the most common industry definition as their recommendation. Could take a similar approach for heat-only systems. Create a standard method to split fuels among final energy delivered. Works back to efficiencies of different technologies which can be split up and attributed. Question from Brad: Would you assign a fixed GHG to a system, or would it evolve?
- ZM: Code users would love a permanent, fixed number in general, but that is not practical in this context. Yet, a fluid number that changes daily is also not practical. Is it possible to set a number that changes every five years or so? Annually at the most? A long list of emissions factors is possible. But what is an acceptable default emissions factor if a number cannot be determined?
- Jeff: In City of Vancouver, Creative Energy has different emissions factors for current customers vs new ones. Remember that this group is only talking about new construction, not existing buildings. We are concerned if local governments create different rules for their DE systems vs the private sector. Some institutions like hospitals may have the same view. If this is in a Step

Code context, consider the fairness if providing a different emissions factor for DE-buildings vs. other buildings.

- ZM: Our desire is a transparent methodology to create that figure, as is done for BC Hydro and Fortis on their fuels, distribution, and emissions factor. That ideally addresses non-local government-operated DE systems.
- Gerard: Reshape did a survey of DE systems across Canada, internationally, and in B.C, which the Province has yet to release. We examined 140 systems globally, 42 in Canada, 18 in B.C. We asked system operators for their data and there is a wide range of carbon intensities, varying by time. If we assume it's 100% gas, it's easy. CaGBC has a zero-carbon standard which you should check. They're navigating this very issue. Other code makers are consider allocating lower carbon fuels for new customers. If buildings need to demonstrate a spec sheet and ability to meet an energy code, it should be similar if DE is included. If the DES adds renewable supply, they should ask the DE provider for that supply. Onus should be on the DE provider to demonstrate that to their customer and the regulator.
- Gerard: We also point to City of Vancouver's alternate compliance pathway, where some buildings meet a base level of TEDI performance (e.g. a TEDI of 40, but a lower GHGi). Different tiers could be possible. There is a decision to be made on whether TEDI or GHGi drives the performance of the tiers. Surrey and Richmond also have similar frameworks (an LCES relaxation). I'm happy to connect you with City of Toronto and CaGBC who are working on this.
- Constantino: Standardized emissions factor isn't an issue, but year-to-year fluctuations and system variation is an issue. It can be attributed to many things: using natural gas boilers for peaking, system hasn't fully developed, etc. Ivan's comment on heating/cooling adds another layer of complication. Richmond has started to examine this.
- Jason: We've asked Reshape and Gerard to consider these issues, and we have raised similar concerns/objectives as the ones raised at this meeting. We're seeking to come up with a simple, verifiable, scalable, fair solution. The framework we're developing with Reshape will hopefully meet those concerns and challenges, and it would be helpful for us to get feedback on our strategy from this group to ensure we are hitting the mark.
- ZM: Sounds great; we can make time for that.
-

What is simplest, most effective way for the Province to determine the emissions factor for district energy systems in B.C. for use in building regulations?

What should the Province be aware of when setting a provincial carbon pollution standard for buildings connected to district energy systems?

Hello Steering Committee members,

Just to let you know we anticipate being able to **share initial results of the analysis** (prepared by the consultants) on June 24, and will book a meeting **Wed. June 30 from 2 to 4 p.m. to discuss them** (invite to come shortly).

After that, any additional comments can be added to the Matrix Teams Channel during the week of July 5th.

Thank you. We look forward to speaking with you June 30.

Kind regards,
Dale

Hello, members of the Energy Step Code Council:

Thank you for attending the meeting on June 9.

As mentioned, we would like to move the next meeting from June 24 to mid-July so our consultants working on the Metrics Research Report can provide some technical and costing analysis for us to discuss.

We will select dates in mid-July and send a Doodle poll shortly.

Please feel free to reach out directly if you have any questions.

Thanks very much.

[EXTERNAL] **This email came from an external source. Only open attachments or links that you are expecting from a known sender.**

Andrew, thanks for providing me with the opportunity to convey to your staff Engineers and Geoscientists BC's sentiments on the important and excellent work they do. As identified below please feel free to attribute the quote to me.

Andrew, Engineers and Geoscientists BC has had a longstanding relationship with staff at the Building and Safety Standards Branch and as a result we see you as a trusted partner when it comes to the regulation of the design and construction of buildings in BC. I would like to provide a particular shout out to the following individuals at BSSB that my department has dealt with in the last year: Andrew Pape-Salmon P.Eng., Jun'ichi Jensen, Zachary May, Jim Baker AScT, Andy Chase, Don Pedde, Scott Williams P.Eng., Dale Andersson, Katy Dillon, Aman Gill, Nicole Vukosuvljevic and last but not least Kylie Sandham. I apologize if I missed someone as BSSB provides great service and we really appreciate and value the important contribution you make to the protection of public safety.
Thanks,
Peter Mitchell , P.Eng. – Engineers and Geoscientists BC Director, Professional Practice, Standards and Development

Subject: BC Public Service Week

Greetings industry and non-profit colleagues,

On this first day of our annual "Public Service Week" I am informally writing to you to request a short quote with me that I could read out to the Office of Housing and Construction Standards staff to acknowledge the positive impact of their work in the housing, buildings and construction sectors.

If you feel comfortable, could you share with me a sentence or two on the impact of our work in your sector? I won't attribute it to you unless you want me to.

I need some quotes by first thing tomorrow morning (sorry for the short notice).

As you well know, the OHCS has a lot of touchpoints with your organizations through our four Branches:

- Housing Policy Branch
- Residential Tenancy Branch
- Building and Safety Standards Branch
- Homelessness Policy and Partnerships Branch

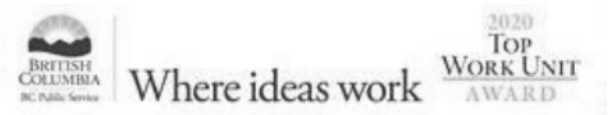
Since I joined the Division in 2017 I have frequently mentioned the positive impact of our work in the buildings, housing and construction industry. In this difficult period with the global pandemic and state of emergency I think some positive reinforcement and recognition is warranted – coming from some of you.

Here is a listing of all our staff
https://dir.gov.bc.ca/gtds.cgi?show=Branch&organizationCode=AG&organizationalUnitCode=AG%2DOHCS
https://dir.gov.bc.ca/gtds.cgi?show=Branch&organizationCode=SDPR&organizationalUnitCode=46610

Thanks in advance,

Andrew Pape-Salmon | P.Eng., MRM, FCAE, FCSSE
Executive Director, Building and Safety Standards Branch
Office of Housing and Construction Standards
Ministry of Attorney General and Minister Responsible for Housing
Cell/Text: 250.812.1933
Office: 250.387.3133
Email: Andrew.PapeSalmon@gov.bc.ca

Please see our website: www.gov.bc.ca/buildingcodes



I acknowledge with respect the Lkwungen-speaking peoples on whose traditional territory the Ministry of Attorney General and Minister Responsible for Housing stands, and the Songhees, Esquimalt and WSÁNEĆ peoples whose historical relationships with the land continue to this day.

Thanks everyone for your responses to this question.

Given the comments provided, I have instructed the consultants to model regular heat pumps for all climate zones with back up heat has necessary.
Should we wish to look at a comparison between cold climate heat pumps and regular heat pumps in colder climates, this could be done under a separate study.

Cheers,

I agree with Mark and would go further. It's the Builders and home owners who will feel this burden in colder climates if we eliminate back up systems. The home owners who could be left in a bad situation in very cold temperatures without any back up system.The Builders who will get the call when a system goes down in the middle of winter.

Nick

We may need to define what cold climate heat pump means for this that
definition gets pretty loose these days. Many of the basic model heat
pumps are now good down to -21. That would easily satisfy anything in
Climate zone 4. CZ 5 in some cases may get that cold but not for very long.
Last I checked the cold climate heat pumps were a premium price so it was still worth it in a lot of cases to heat with electric for a couple weeks a year rather than get the better gear.

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Re: question #2, my understanding is that a cold-climate heat pump in CZ4 (and 5?) would remove the need for back-up heating on peak heating load days, avoiding any need for an ancillary natural gas system (or less efficient baseboard heaters that will run up electricity demand on those days).

If I understand correctly, I think local governments will be motivated to encourage installation of cold-climate ASHPs even in CZ4 for this reason.

Regards,

Nicholas Heap

Subject: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

City of Richmond Security Warning: This email was sent from an external source outside the City. Please do not click or open attachments unless you recognize the source of this email and the content is safe.

Hello Steering Committee members,

Last week Scott put two questions (below) about the Part 9 analysis in the Steering Committee Teams channel for feedback ASAP or by Friday June 11 at the latest. If you have comments, please add them to Teams.

If you can't access the Teams channel, please email comments to Scott and me directly.

QUESTIONS

1. For the Quadplex archetype, we had a targeted discussion regarding potential variations last meeting with some suggesting that they quadplex be modelled over a parkade, over a single car garage or over a slab on grade.
To be representative of a 'typical' scenario across BC, I believe we were leaning towards modelling the slab-on-grade scenario. We will proceed with this unless there are any strong objections.

2. For 9 Part ASHPs and accommodating for colder climates, E3 has suggested that non cold climate ASHPs for climate zones 4 and 5 and cold climate ASHPs for CZs 6 and up. Please provide comment. Thanks!

Thank you,

Dale

Hi Scott:

I don't think anyone was objecting to modelling cold climate Heat Pumps in Climate Zones 6 - 8; there were concerns noted about modelling cold climate HPs for Climate ones 4 and 5.

As such, I think the consensus is that we should go with the consultant's initial suggestion: model standard heat pumps for Climate Zones 4 and 5, and cold climate heat pumps for Climate Zones 6 to 8.

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Re: question #2, my understanding is that a cold-climate heat pump in CZ4 (and 5?) would remove the need for back-up heating on peak heating load days, avoiding any need for an ancillary natural gas system (or less efficient baseboard heaters that will run up electricity demand on those days).

If I understand correctly, I think local governments will be motivated to encourage installation of cold-climate ASHPs even in CZ4 for this reason.

Subject: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

City of Richmond Security Warning: This email was sent from an external source outside the City. Please do not click or open attachments unless you recognize the source of this email and the content is safe.

Hello Steering Committee members,

Last week Scott put two questions (below) about the Part 9 analysis in the Steering Committee Teams channel for feedback ASAP or by Friday June 11 at the latest. If you have comments, please add them to Teams.

If you can't access the Teams channel, please email comments to Scott and me directly.

QUESTIONS

1. For the Quadplex archetype, we had a targeted discussion regarding potential variations last meeting with some suggesting that they quadplex be modelled over a parkade, over a single car garage or over a slab on grade.
To be representative of a 'typical' scenario across BC, I believe we were leaning towards modelling the slab-on-grade scenario. We will proceed with this unless there are any strong objections.

2. For 9 Part ASHPs and accommodating for colder climates, E3 has suggested that non cold climate ASHPs for climate zones 4 and 5 and cold climate ASHPs for CZs 6 and up. Please provide comment. Thanks!

Thank you,

Dale

Thanks Nick.

A number of comments indicated that CCHPs come at a premium with potential risks of not meeting demands during the coldest days of the year. Back up heat reduces those risks and given costs of CCHPs, may be more practical to model regular HPs with back-up.

Hi Scott:

I don't think anyone was objecting to modelling cold climate Heat Pumps in Climate Zones 6 - 8; there were concerns noted about modelling cold climate HPs for Climate ones 4 and 5.

As such, I think the consensus is that we should go with the consultant's initial suggestion: model standard heat pumps for Climate Zones 4 and 5, and cold climate heat pumps for Climate Zones 6 to 8.

Thanks everyone for your responses to this question.

Given the comments provided, I have instructed the consultants to model regular heat pumps for all climate zones with back up heat has necessary.
Should we wish to look at a comparison between cold climate heat pumps and regular heat pumps in colder climates, this could be done under a separate study.

Cheers,

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Re: question #2, my understanding is that a cold-climate heat pump in CZ4 (and 5?) would remove the need for back-up heating on peak heating load days, avoiding any need for an ancillary natural gas system (or less efficient baseboard heaters that will run up electricity demand on those days).

If I understand correctly, I think local governments will be motivated to encourage installation of cold-climate ASHPs even in CZ4 for this reason.

Regards,

Nicholas Heap

Subject: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

City of Richmond Security Warning: This email was sent from an external source outside the City. Please do not click or open attachments unless you recognize the source of this email and the content is safe.

Hello Steering Committee members,

Last week Scott put two questions (below) about the Part 9 analysis in the Steering Committee Teams channel for feedback ASAP or by Friday June 11 at the latest. If you have comments, please add them to Teams.

If you can't access the Teams channel, please email comments to Scott and me directly.

QUESTIONS

1. For the Quadplex archetype, we had a targeted discussion regarding potential variations last meeting with some suggesting that they quadplex be modelled over a parkade, over a single car garage or over a slab on grade.
To be representative of a 'typical' scenario across BC, I believe we were leaning towards modelling the slab-on-grade scenario. We will proceed with this unless there are any strong objections.

2. For 9 Part ASHPs and accommodating for colder climates, E3 has suggested that non cold climate ASHPs for climate zones 4 and 5 and cold climate ASHPs for CZs 6 and up. Please provide comment. Thanks!

Thank you,

Dale

Hi Scott:

Maybe I've misunderstood, but my original comment was that with a CCHP in Climate Zone 4, a back-up heating system might not be required.
Folks said no, that would be risky, there should be a back-up heating system for an HP, even if it is an CCHP in CZ4.
I don't think anyone questioned the appropriateness of installing Cold Climate HPs, with a back-up system, in Climate Zone 6 to 8
I also think folks were OK with having a regular HP and a back-up system in CZ 4 and 5.

What people disagreed with was the specific idea that by having a _CCHP in CZ 4 and 5_, you might safely go without having a back-up heating system.

Thanks Nick.

A number of comments indicated that CCHPs come at a premium with potential risks of not meeting demands during the coldest days of the year. Back up heat reduces those risks and given costs of CCHPs, may be more practical to model regular HPs with back-up.

Hi Scott:

I don't think anyone was objecting to modelling cold climate Heat Pumps in Climate Zones 6 - 8; there were concerns noted about modelling cold climate HPs for Climate ones 4 and 5.

As such, I think the consensus is that we should go with the consultant's initial suggestion: model standard heat pumps for Climate Zones 4 and 5, and cold climate heat pumps for Climate Zones 6 to 8.

Thanks everyone for your responses to this question.

Given the comments provided, I have instructed the consultants to model regular heat pumps for all climate zones with back up heat has necessary.
Should we wish to look at a comparison between cold climate heat pumps and regular heat pumps in colder climates, this could be done under a separate study.

Cheers,

Nick
I agree with Mark and would go further. It's the Builders and home owners who will feel this burden in colder climates if we eliminate back up systems. The home owners who could be left in a bad situation in very cold temperatures without any back up system.The Builders who will get the call when a system goes down in the middle of winter.

Kelly Reid

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Nick

We may need to define what cold climate heat pump means for this that
definition gets pretty loose these days. Many of the basic model heat
pumps are now good down to -21. That would easily satisfy anything in
Climate zone 4. CZ 5 in some cases may get that cold but not for very long.
Last I checked the cold climate heat pumps were a premium price so it was still worth it in a lot of cases to heat with electric for a couple weeks a year rather than get the better gear.

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Re: question #2, my understanding is that a cold-climate heat pump in CZ4 (and 5?) would remove the need for back-up heating on peak heating load days, avoiding any need for an ancillary natural gas system (or less efficient baseboard heaters that will run up electricity demand on those days).

If I understand correctly, I think local governments will be motivated to encourage installation of cold-climate ASHPs even in CZ4 for this reason.

Regards,

Nicholas Heap

Subject: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

City of Richmond Security Warning: This email was sent from an external source outside the City. Please do not click or open attachments unless you recognize the source of this email and the content is safe.

Hello Steering Committee members,

Last week Scott put two questions (below) about the Part 9 analysis in the Steering Committee Teams channel for feedback ASAP or by Friday June 11 at the latest. If you have comments, please add them to Teams.

If you can't access the Teams channel, please email comments to Scott and me directly.

QUESTIONS

1. For the Quadplex archetype, we had a targeted discussion regarding potential variations last meeting with some suggesting that they quadplex be modelled over a parkade, over a single car garage or over a slab on grade.
To be representative of a 'typical' scenario across BC, I believe we were leaning towards modelling the slab-on-grade scenario. We will proceed with this unless there are any strong objections.

2. For 9 Part ASHPs and accommodating for colder climates, E3 has suggested that non cold climate ASHPs for climate zones 4 and 5 and cold climate ASHPs for CZs 6 and up. Please provide comment. Thanks!

Thank you,

Dale

Thanks Remi and Nick,

Sorry for the misunderstanding. It appears that I conflated the comments of CCHPs in CZ4 and 5 with the use of CCHPs in CZ6 to 8.
So, for CZs 4 and 5, regular HPs (with back-up heat) will be analyzed.
For CZs 6-8 CCHPs (with back-up heat) will be analyzed.

Any preference regarding type of back-up heating system?

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Maybe I've misunderstood, but my original comment was that with a CCHP in Climate Zone 4, a back-up heating system might not be required.
Folks said no, that would be risky, there should be a back-up heating system for an HP, even if it is an CCHP in CZ4.
I don't think anyone questioned the appropriateness of installing Cold Climate HPs, with a back-up system, in Climate Zone 6 to 8
I also think folks were OK with having a regular HP and a back-up system in CZ 4 and 5.

What people disagreed with was the specific idea that by having a _CCHP in CZ 4 and 5_, you might safely go without having a back-up heating system.

Thanks Nick.

A number of comments indicated that CCHPs come at a premium with potential risks of not meeting demands during the coldest days of the year. Back up heat reduces those risks and given costs of CCHPs, may be more practical to model regular HPs with back-up.

Hi Scott:

I don't think anyone was objecting to modelling cold climate Heat Pumps in Climate Zones 6 - 8; there were concerns noted about modelling cold climate HPs for Climate ones 4 and 5.

As such, I think the consensus is that we should go with the consultant's initial suggestion: model standard heat pumps for Climate Zones 4 and 5, and cold climate heat pumps for Climate Zones 6 to 8.

Thanks everyone for your responses to this question.

Given the comments provided, I have instructed the consultants to model regular heat pumps for all climate zones with back up heat has necessary.
Should we wish to look at a comparison between cold climate heat pumps and regular heat pumps in colder climates, this could be done under a separate study.

Cheers,

Nick
I agree with Mark and would go further. It's the Builders and home owners who will feel this burden in colder climates if we eliminate back up systems. The home owners who could be left in a bad situation in very cold temperatures without any back up system.The Builders who will get the call when a system goes down in the middle of winter.

Kelly Reid

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Nick

We may need to define what cold climate heat pump means for this that
definition gets pretty loose these days. Many of the basic model heat
pumps are now good down to -21. That would easily satisfy anything in
Climate zone 4. CZ 5 in some cases may get that cold but not for very long.
Last I checked the cold climate heat pumps were a premium price so it was still worth it in a lot of cases to heat with electric for a couple weeks a year rather than get the better gear.

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Re: question #2, my understanding is that a cold-climate heat pump in CZ4 (and 5?) would remove the need for back-up heating on peak heating load days, avoiding any need for an ancillary natural gas system (or less efficient baseboard heaters that will run up electricity demand on those days).

If I understand correctly, I think local governments will be motivated to encourage installation of cold-climate ASHPs even in CZ4 for this reason.

Regards,

Nicholas Heap

Subject: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

City of Richmond Security Warning: This email was sent from an external source outside the City. Please do not click or open attachments unless you recognize the source of this email and the content is safe.

Hello Steering Committee members,

Last week Scott put two questions (below) about the Part 9 analysis in the Steering Committee Teams channel for feedback ASAP or by Friday June 11 at the latest. If you have comments, please add them to Teams.

If you can't access the Teams channel, please email comments to Scott and me directly.

QUESTIONS

1. For the Quadplex archetype, we had a targeted discussion regarding potential variations last meeting with some suggesting that they quadplex be modelled over a parkade, over a single car garage or over a slab on grade.
To be representative of a 'typical' scenario across BC, I believe we were leaning towards modelling the slab-on-grade scenario. We will proceed with this unless there are any strong objections.

2. For 9 Part ASHPs and accommodating for colder climates, E3 has suggested that non cold climate ASHPs for climate zones 4 and 5 and cold climate ASHPs for CZs 6 and up. Please provide comment. Thanks!

Thank you,

Dale

I can see five housing related stakeholders:
UBCM
UDI
BC Housing
BCNPHA
Concert Properties

I did not see LanlordBC or other landlord/tenancy groups, Technical Safety BC or any of the community homeless serving agencies.

Thanks so much for everyone's input on this topic. A lot of great information and insight.

Discussing the HOT2000 process with Alex, it would appear that the easiest approach moving forward regarding back-up heat would be match the back-up heat fuel source to that of the reference case. So, if the reference house has electric baseboard, then the back-up would be electric resistance, conversely, should space heat for the reference house be via natural gas, then the back-up would be natural gas.
We can see how this shakes out in the initial analysis and can discuss further as necessary.

Thanks again for all of your input.

Cheers,

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

That makes sense Eoghan. Increases in runtime of any piece of equipment generally lowers it's lifespan, or increases maintenance costs. Canada probably has a colder climate than Japan where their built, and most of the US, who've been using them. So I'd expect the run times and therefore lifespan should drop vs. those markets.. the more you use it.. just like kms on a vehicle. Although, admittedly, I don't have data on that.

Subject: RE: [External Email] - RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Thanks Pete for confirm, we also heard the same thing. This is to protect the heat pump compressors and air source heat pump technology goes into defrost mode more frequently as the outside air temperature drops as two things are happening. The heat loss of the building is increase and the energy the heat pump can absorb is decreasing.

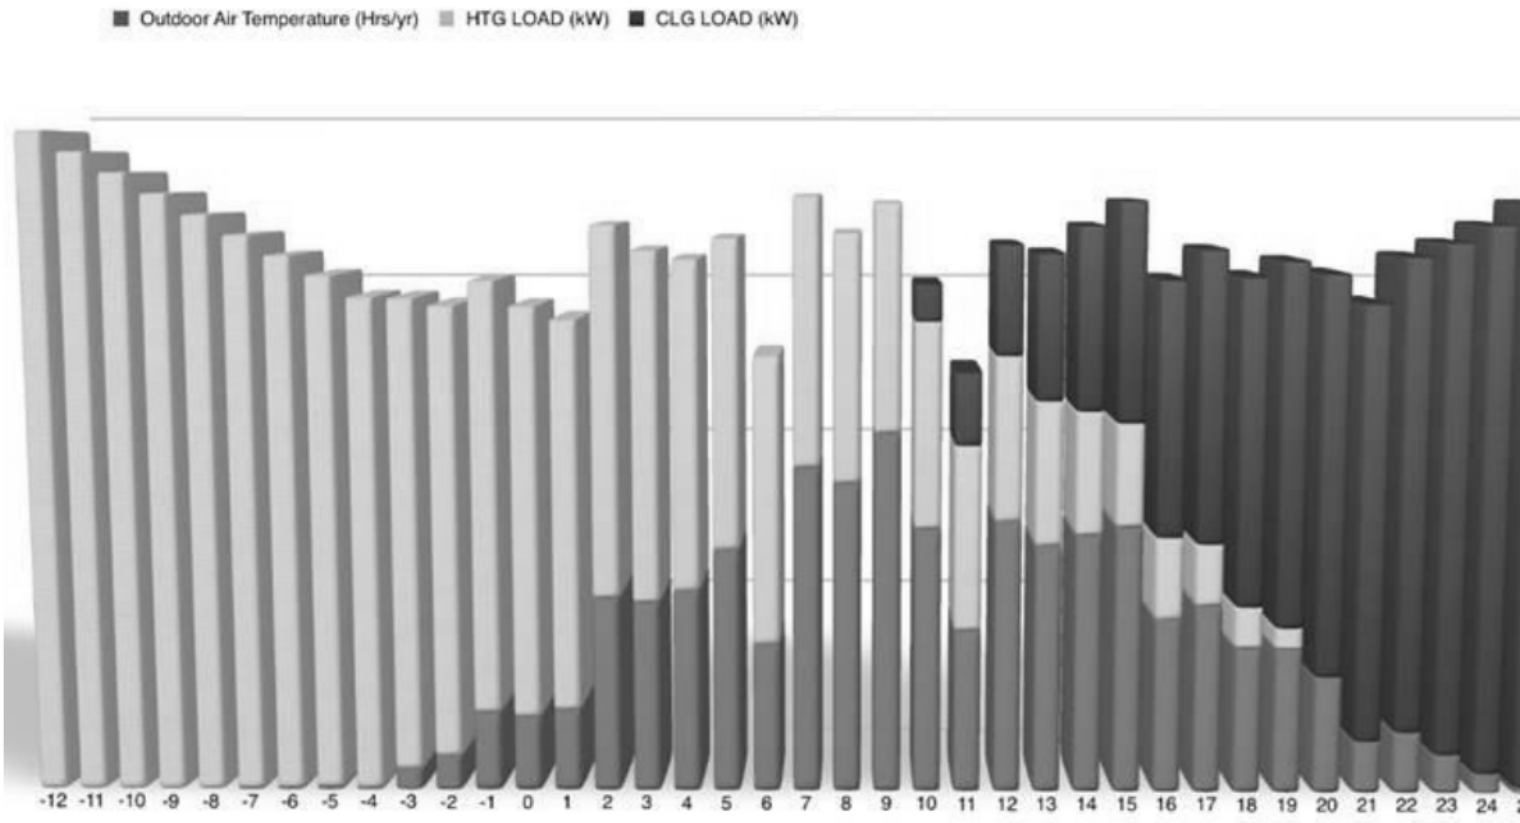
See graphics below of Vancouver's CWEC 2016 weather data and the load profiles for a typical MURB building in this instance. In Vancouver, it's less than 5°C for approximately 25 % of the year, below this 25 % is also the coldest meaning we're not capturing a significant portion of the heating energy utilizing heat pump technology and instead must rely on back up heating which is costly to the home owner and will result in higher BC Hydro bills during these periods.

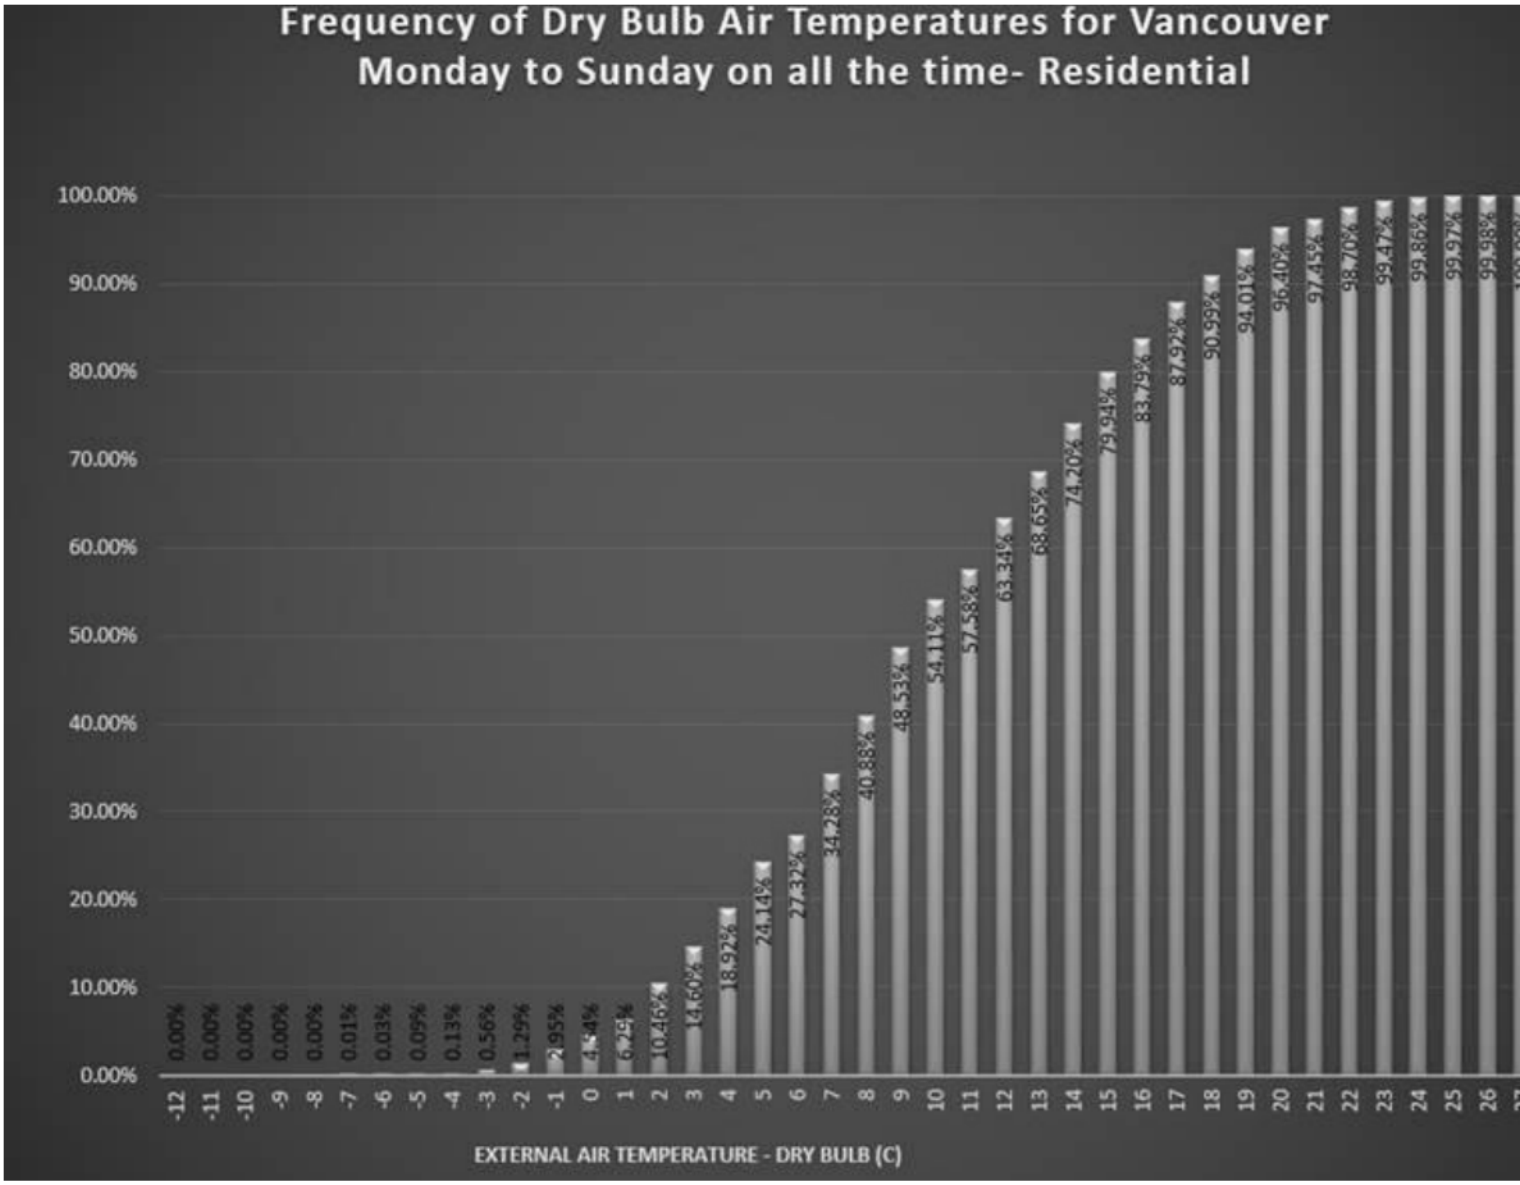
On the last graphic we provided Vancouver and Kelowna, Kelowna is way worse, it's less than 5°C for over 40 % of the year.

To conclude the back up heating is not minimal it's significant, especially in Kelowna. We need back up heat to protect the heat pump technology from being overexerted and reducing the unit life span.

There is no point in putting in heat pump technology that is not designed for the climate in which it is installed. This means looking at extended range heat pump technology or other sources such as Geox (very costly) in cold climates and or cost wise, back up sources like natural gas or electrical that will operate during these colder periods. Natural gas is 1/3rd the cost of electrical so from a cost perspective this makes sense to the consumer but not for green gas emissions. I hope this info helps.

VANCOUVER - HEATING, COOLING AND OUTDOOR AIR TEMPERATURE





It's less than 5°C for 24.14 % of the year. Kelowna is worse, it's less than 5°C for over 40 % of the year.

From asking contractors, typical switchover temps to backup heating are usually 5degC in BC.

Hello all:

My understanding is that the back-up system would be in place for low-frequency cold weather events, and as (literally) the back-up in case the primary system is non-functional.

If so, the average annual heating energy contributed by the back-up system would appear to be minimal.
That said, I'll defer to the experts regarding current design practices on the targeted amount of annual load to be provided by a back-up system.

Regards,

Nicholas Heap

Ok – sounds like I misunderstood the question about backup systems initially; the ASHP will request additional heat from the existing system if required, and we are not readily able to change it within HOT 2000, so we will plan to do that.

Sorry for the confusion.

Thanks for the input on the cold climate vs regular HPs, we are running with cold climate ones for the colder zones, and regular for the warmer zones.

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi all,

The backup heating in this case would be used during cold weather; it is not a true "backup" that would be excluded from the model; it would operate under typical operations when needed (i.e. when it's cold out). We can provide more detail on the temperatures/conditions where the switchover happens in the report, I don't have them offhand.

Bob's note that the two typical options would be electric furnace or natural gas furnace aligns with what we would anticipate.

I think the question for us is: if the base case model has electric baseboard, and we apply an ECM to switch to HP + backup, do we use electric furnace to maintain the same fuel source as the base case? Or do we fuel switch to natural gas? I know in Part 3 world I would generally expect to see a fuel switch there to reduce operating costs, but I'm not sure what the more likely scenario would be for Part 9. I believe the likely outcome of a fuel switch would be to increase GHGs but improve payback of the measure. Based on that, any strong views before we send our draft Thursday? You will have further opportunity for comments once we send.

Best,

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott,

It would be good to get some definition around Backup Heating Requirements or at least understand the assumptions made in modelling. Back-up space heating is excluded from the energy model, if it is equipped with controls and is not

required to meet the space-conditioning load of the house, i.e., it is ok for the back-up to be not factored into the model if controls are there to prevent back up heater operation when the heating load can be met by the heat pump alone.

If that is not the case (e.g. if simultaneous operation of ASHP and backup heating is anticipated), it will be good to note the control strategy assumed for the two cases (CCHP+ backup and regular HP+ backup). Pasted below as an example is one of many control strategies that serves to identify the economic balance point from the NRCan Heat Pump Sizing and Design Guide:

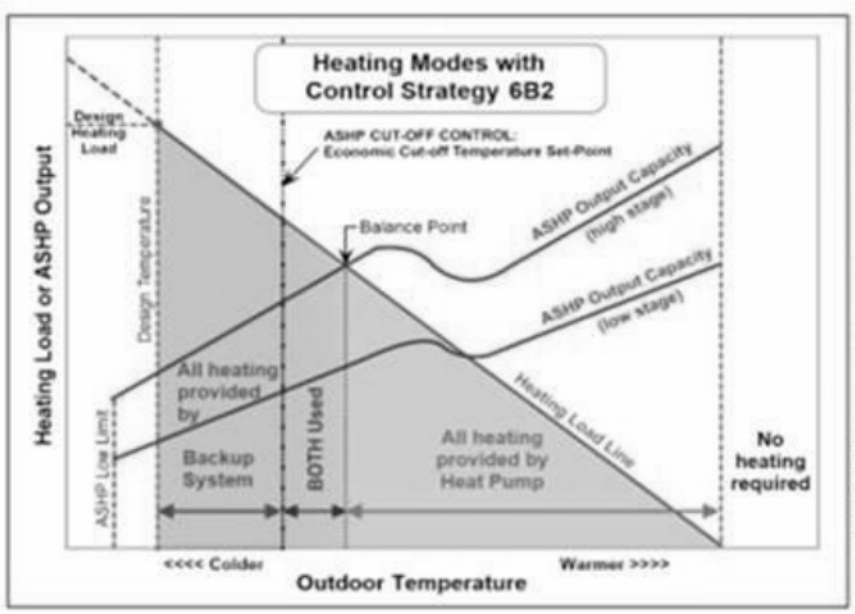

Figure 28: Example of Heating Modes with Control Strategy 6B2

Look forward to the analysis.

Best,
Harshan

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Thanks Remi and Nick,

Sorry for the misunderstanding. It appears that I conflated the comments of CCHPs in CZ4 and 5 with the use of CCHPs in CZ6 to 8.
So, for CZs 4 and 5, regular HPs (with back-up heat) will be analyzed.
For CZs 6-8 CCHPs (with back-up heat) will be analyzed.

Any preference regarding type of back-up heating system?

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Maybe I've misunderstood, but my original comment was that with a CCHP in Climate Zone 4, a back-up heating system might not be required.
Folks said no, that would be risky, there should be a back-up heating system for an HP, even if it is an CCHP in CZ4.
I don't think anyone questioned the appropriateness of installing Cold Climate HPs, with a back-up system, in Climate Zone 6 to 8
I also think folks were OK with having a regular HP and a back-up system in CZ 4 and 5.

What people disagreed with was the specific idea that by having a _CCHP in CZ 4 and 5_, you might safely go without having a back-up heating system.

Thanks Nick.

A number of comments indicated that CCHPs come at a premium with potential risks of not meeting demands during the coldest days of the year. Back up heat reduces those risks and given costs of CCHPs, may be more practical to model regular HPs with back-up.

Hi Scott:

I don't think anyone was objecting to modelling cold climate Heat Pumps in Climate Zones 6 - 8; there were concerns noted about modelling cold climate HPs for Climate ones 4 and 5.

As such, I think the consensus is that we should go with the consultant's initial suggestion: model standard heat pumps for Climate Zones 4 and 5, and cold climate heat pumps for Climate Zones 6 to 8.

Thanks everyone for your responses to this question.

Given the comments provided, I have instructed the consultants to model regular heat pumps for all climate zones with back up heat has necessary.
Should we wish to look at a comparison between cold climate heat pumps and regular heat pumps in colder climates, this could be done under a separate study.

Cheers,

Nick
I agree with Mark and would go further. It's the Builders and home owners who will feel this burden in colder climates if we eliminate back up systems. The home owners who could be left in a bad situation in very cold temperatures without any back up system.The Builders who will get the call when a system goes down in the middle of winter.

Nick

We may need to define what cold climate heat pump means for this that
definition gets pretty loose these days. Many of the basic model heat
pumps are now good down to -21. That would easily satisfy anything in
Climate zone 4. CZ 5 in some cases may get that cold but not for very long.
Last I checked the cold climate heat pumps were a premium price so it was still worth it in a lot of cases to heat with electric for a couple weeks a year rather than get the better gear.

Subject: RE: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

Hi Scott:

Re: question #2, my understanding is that a cold-climate heat pump in CZ4 (and 5?) would remove the need for back-up heating on peak heating load days, avoiding any need for an ancillary natural gas system (or less efficient baseboard heaters that will run up electricity demand on those days).

If I understand correctly, I think local governments will be motivated to encourage installation of cold-climate ASHPs even in CZ4 for this reason.

Regards,

Nicholas Heap

Subject: Metrics Research Steering Committee: Questions re Part 9 quadplex and ASHPs/colder climates

City of Richmond Security Warning: This email was sent from an external source outside the City. Please do not click or open attachments unless you recognize the source of this email and the content is safe.

Hello Steering Committee members,

Last week Scott put two questions (below) about the Part 9 analysis in the Steering Committee Teams channel for feedback ASAP or by Friday June 11 at the latest. If you have comments, please add them to Teams.

If you can't access the Teams channel, please email comments to Scott and me directly.

QUESTIONS

1. For the Quadplex archetype, we had a targeted discussion regarding potential variations last meeting with some suggesting that they quadplex be modelled over a parkade, over a single car garage or over a slab on grade.
To be representative of a 'typical' scenario across BC, I believe we were leaning towards modelling the slab-on-grade scenario. We will proceed with this unless there are any strong objections.

2. For 9 Part ASHPs and accommodating for colder climates, E3 has suggested that non cold climate ASHPs for climate zones 4 and 5 and cold climate ASHPs for CZs 6 and up. Please provide comment. Thanks!

Thank you,

Dale

Hello, everyone:

I'm passing on a message from Alex Blue, copied below.

Please see the link below for draft results for review for the Step Code Metrics Report Update.
s.15

Please contact Alex if you have any issues with the link.

Our focus has been on the data – you'll see a fair number of spreadsheets in there. The report is still more of an outline with some bullet points, but has a few sections populated. One section I will draw your attention to is "Results – Part 3". It has some graphs and discussion on the impact of NECB 2020 vs 2015.

In the meantime, I have given all of you edit access to the files in the folder above; feel free to use the review features in Word to add comments directly within.

I've started with the spreadsheets for one climate zone for each archetype for Part 3; I'll be looking to add most climate zones for most Part 3 archetypes (except hotel due to long model runtimes) by the end of the weekend so feel free to check back. E3 has provided spreadsheet listing all the Part 9 Archetype Parameters, Part 9 cost data spreadsheet, and one sample spreadsheet for the Small SFD Archetype to demonstrate how they have programmed the HTAP run output data into an organizable form. They had some hiccups with a couple of the other output spreadsheets but will add more as they come in.

One section I will draw your attention to is "Results – Part 3". It has some graphs and discussion on the impact of NECB 2020 vs 2015.

In the meantime, I have given all of you edit access to the files in the folder above; feel free to use the review features in Word to add comments directly within.

I've started with the spreadsheets for one climate zone for each archetype for Part 3; I'll be looking to add most climate zones for most Part 3 archetypes (except hotel due to long model runtimes) by the end of the weekend so feel free to check back. E3 has provided spreadsheet listing all the Part 9 Archetype Parameters, Part 9 cost data spreadsheet, and one sample spreadsheet for the Small SFD Archetype to demonstrate how they have programmed the HTAP run output data into an organizable form. They had some hiccups with a couple of the other output spreadsheets but will add more as they come in.

Subject: Draft results, Step Code Metrics Report update

Hello, everyone:

I'm passing on a message from Alex Blue, copied below.

Please see the link below for draft results for review for the Step Code Metrics Report Update.

s.15

Please contact Alex if you have any issues with the link.

Our focus has been on the data – you'll see a fair number of spreadsheets in there. The report is still more of an outline with some bullet points, but has a few sections populated. One section I will draw your attention to is "Results – Part 3". It has some graphs and discussion on the impact of NECB 2020 vs 2015.

In the meantime, I have given all of you edit access to the files in the folder above; feel free to use the review features in Word to add comments directly within.

I've started with the spreadsheets for one climate zone for each archetype for Part 3; I'll be looking to add most climate zones for most Part 3 archetypes (except hotel due to long model runtimes) by the end of the weekend so feel free to check back. E3 has provided spreadsheet listing all the Part 9 Archetype Parameters, Part 9 cost data spreadsheet, and one sample spreadsheet for the Small SFD Archetype to demonstrate how they have programmed the HTAP run output data into an organizable form. They had some hiccups with a couple of the other output spreadsheets but will add more as they come in.

Hello, members and alternates of the Energy Step Code Council:

We are looking to set a date for two July meetings (one on the week of July 12, and the next at the end of the month).

Please pick from a list of times here: https://doodle.com/poll/synvvc6hzt36bkhx?utm_source=poll&utm_medium=link

Agenda TBD, but we will have initial results from the Metrics Research Report to share.

Thanks very much.
Hugo

Email: hugo.wong@gov.bc.ca

Hello Metrics Research Report Steering Committee members,

Update June 28: Info below was emailed to you Friday June 28. Including it here to keep everything in one place.

Please see the link below provided by Alex Blue for draft results for discussion at our meeting.

s.15

Please contact Alex if you have any issues with the link.

Message from Alex: Our focus has been on the data – you'll see a fair number of spreadsheets in there. The report is still more of an outline with some bullet points, but has a few sections populated. One section I will draw your attention to is "Results – Part 3". It has some graphs and discussion on the impact of NECB 2020 vs 2015.

In the meantime, I have given all of you edit access to the files in the folder above; feel free to use the review features in Word to add comments directly within.

I've started with the spreadsheets for one climate zone for each archetype for Part 3; I'll be looking to add most climate zones for most Part 3 archetypes (except hotel due to long model runtimes) by the end of the weekend so feel free to check back. E3 has provided spreadsheet listing all the Part 9 Archetype Parameters, Part 9 cost data spreadsheet, and one sample spreadsheet for the Small SFD Archetype to demonstrate how they have programmed the HTAP run output data into an organizable form. They had some hiccups with a couple of the other output spreadsheets but will add more as they come in."

Thank you,
Dale

RE: [External Email] - Pick a time: July Energy Step Code Council meetings

From: Bains, Bea <Bea.Bains@fortisbc.com>
To: Wong, Hugo OHCS:EX <Hugo.Wong@gov.bc.ca>, May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>
Sent: June 28, 2021 4:55:15 PM PDT

[EXTERNAL] **This email came from an external source. Only open attachments or links that you are expecting from a known sender.**

Hi Zac and Hugo,

We would like to request some time on the agenda at the first scheduled July meeting to provide an overview of the scope and framework of the Dunsky study.

In addition, given the GHG scope of work in buildings largely impacts FortisBC, we would kindly request the second "July" meeting be shifted out to mid- August to enable time for completion of the Dunsky study and thereby an opportunity the bring the results to BSSB and the Step Code Council.

Would you have some insights as to agenda, scope and recommendations being brought forward at these meetings? At the last Step code council meeting there was discussion around carbon emissions regulation, rather than in the context of the building code, could you elaborate on how that mechanism would function?

Kind regards,
Bea

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

FYI, the Province is updating the *Energy Step Code Metrics Report* they did in 2018, but the focus is on what will be mandated for energy efficiency in the upcoming Building Code. Below is a link to the information, and they are asking for comments. If you have time, can you take a look and let me know if you have any questions/comments. Also, because this is draft, please keep it confidential at this point.

Hello, everyone:

I'm passing on a message from Alex Blue, copied below.

Please see the link below for draft results for review for the Step Code Metrics Report Update.

s.15

Please contact Alex if you have any issues with the link.

Our focus has been on the data – you'll see a fair number of spreadsheets in there. The report is still more of an outline with some bullet points, but has a few sections populated. One section I will draw your attention to is "Results – Part 3". It has some graphs and discussion on the impact of NECB 2020 vs 2015.

In the meantime, I have given all of you edit access to the files in the folder above; feel free to use the review features in Word to add comments directly within.

I've started with the spreadsheets for one climate zone for each archetype for Part 3; I'll be looking to add most climate zones for most Part 3 archetypes (except hotel due to long model runtimes) by the end of the weekend so feel free to check back. E3 has provided spreadsheet listing all the Part 9 Archetype Parameters, Part 9 cost data spreadsheet, and one sample spreadsheet for the Small SFD Archetype to demonstrate how they have programmed the HTAP run output data into an organizable form. Hello everyone,

Based on the responses so far, this appears to be the best time for our call to discuss the survey. Happy of course to receive feedback via email as well though, for anyone who prefers.

The agenda will be pretty simple – just walking through the attached as a group to gather your thoughts and input.

Thank you,
Sarah

Importance: High

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Dear Zachary,

Hope you had a wonderful weekend! Can't believe it's been over a year since we last worked together on a webinar.

We are currently working on a potential webinar on the GHL report of the possible mass timber code changes with COV. Andrew Harmsworth will present the report findings and explained the possible code changes identified. Then Patrick Enright can briefly preface his presentation by summarizing how the City might use this report and the survey results.

After discussing with Andrew and Jeff, we would love to invite you to be our panelist . We are also thinking of inviting Rocky Sethi of Adera as a moderator to complete the panel.

The suggested webinar dates (9:15am – 10:30am):
July 20 (Tue)
July 21 (Wed)
July 28 (Wed)
July 29 (Thu)

Would you be interested and available? Thanks so much for your kind consideration.

Best wishes,
Yvonne

Hi Andrew,

Any concerns with us accepting this invitation? Is this something you would like to represent BSSB at?

I have emailed Andrew Harmsworth to confirm the report he's going to present, but in all cases I assume our response is that we're happy to facilitate having this information added to the national code discussion for adoption in future code cycles.

Best,
Zachary D. May, MBA

Re: Ideas that do not need further discussion with UDI

Development Opportunities for Affordable Housing

Partnerships with First Nations: UDI's former Chair, David Negrin, told UDI members a few of years ago that First Nations will soon become the largest developers in the Province. This should be celebrated as a positive step towards reconciliation, but it is also an opportunity for the Government to achieve its 114,000 housing unit goal. First Nations have more flexibility in densifying projects, which means they can establish the benchmark for project sizes in key areas, so it is easier for other non-profit and for-profit builders to follow suit in the future. The Province should partner with First Nations and encourage them to "go big", and make sure that local governments do not slow down or reduce the size of the projects through servicing agreements. There should also be a focus on training for members of First Nations to address the growing skills gap we have in the construction industry. This also lines up with the desire of many First Nations communities to become developers.

Partnerships with Educational Institutions: Several key transit projects have been built or are proposed near universities and colleges – the gondola to SFU, the Millennium Line to UBC, the Canada Line near Langara and a potential rapid transit line that would connect the BCIT Burnaby Campus to both the Expo and Millennium lines. The Province should ensure that these sites are leveraged for additional housing – especially student and faculty housing.

TransLink: TransLink could be allowed to purchase additional lands for its transit stations (ideally before they announce where the stations are going to be). These sites can also establish benchmarks for density next to transit stations and become Transit Oriented Affordable Housing projects, by establishing metrics for affordability as is done in Seattle and Los Angeles. In addition, projects could be built around stations, as was done in New Westminster and with the Vancity building in Vancouver. This should particularly be considered when new SkyTrain lines and stations are being constructed. The UDI Board, over 10 years ago, expressed interest in Joint Venture opportunities along the right-of-ways of the SkyTrain guideways. However, some of these right-of-ways are controlled/owned by other provincial entities such as BC Hydro. If these entities do not proceed with housing projects, they could be given to TransLink, so they can proceed them. To ensure that projects can proceed affordably with appropriate densities, Transit Supportive Agreements may need to include provisions on how the sites will be developed.

Other Government and Non-profit lands: Not enough is being done with government lands at all levels. Some of these sites, like the BC Liquor store at the Cambie and 41st Canada Line Station, are at strategic locations. Again, these could be projects that set the benchmark for density. There are community facilities, libraries and even schools. There are opportunities for upgrading facilities while providing more housing. When new buildings are constructed, there should be an assessment regarding whether housing can be incorporated into the projects – especially rental and affordable housing. Below are before and after pictures of North Toronto Collegiate Institute. The Toronto District School Board could not fund the repairs needed for the school, which was almost a century old. They worked with a builder to construct a new high school with a strata project.

It does not have to be builders that take the lead, there should be a role for BC Housing or the Ministry. This would allow the Government to be more directive about its expectations to local governments. One example of utilizing public sector lands that could result in potentially of thousands of new affordable homes is False Creek South, as several leases are expiring there. This provides an opportunity to substantially increase the housing in the area – while allowing the existing residents to remain in False Creek South. The City owns a large amount of undeveloped land between the Olympic Village and the Cambie Street Bridge. Housing could be built on this site, and some of the units could be offered to tenants and other residents in the older False Creek South buildings at the same rates they pay now. When the sites with older buildings are redeveloped, these units could be offered to the next set of tenants and residents, so other older buildings can be redeveloped. This would allow those buildings to be redeveloped – with no displacement. BC Housing could also look at opportunities for sites that non-profits, religious organizations, and legions own.

Increasing Housing Options in Catchment Areas with Low Enrollment: One issue facing many urban communities is lowering student enrollments, which is leading to divisive debates regarding school closures. There is an opportunity to address housing affordability – while keeping the schools open. Local governments and school boards could work with neighbourhoods to identify how to increase the school age populations in the catchment areas by accepting growth – especially projects with homes for people with school age children. It would be critical that the schools remain open if population metrics are being achieved, so there would be a clear incentive for residents to accept growth. There could be a role for the Ministry of Housing as well as the Ministry of Education in starting these discussions.

Policy Issues

CMHC and BC Housing's HousingHub: We have heard from a number of UDI members that the HousingHub programs are not aligning with some CMHC incentive programs. One member told us that a project with affordable housing units that was approved by the HousingHub was rejected by CMHC's National Office for the Federal Affordable Mortgage Loan Insurance (MLI Flex) program because of a difference of opinion about how to obtain affordability in projects. BC Housing focuses on ensuring that the units are rented to households with incomes below certain thresholds and CMHC focuses on actual rent rates. For affordable rental projects to proceed non-profit and for-profit builders need incentives from multiple sources. We advise the Ministry and BC Housing to work with CMHC and local governments to align incentive programs for affordable housing units.

Metro's *Regional Growth Strategy* (*RGS*): Metro Vancouver is updating its *Metro 2040 Regional Growth Strategy*. It is called *Metro 2050*, and it will be the Regional Plan for the next 30 years. In the past and now, these plans have lead to even more land being frozen or restricted from housing (even affordable housing), but there have been no mandated targets for growth in areas where development should occur (e.g. near transit stations). On the positive front, Metro is considering allowing housing in mixed-employment areas if they are within 200 metres of a SkyTrain station. We are recommending this expand to 400 metres or 800 metres as these are the typical sizes of Transit Oriented Development (TOD) areas. At the same time, Metro is seeking more restrictions for industrial lands and increasing the hazard areas, greenspace and environmentally sensitive lands under *Metro 2050*. For the most part, UDI understands the need for restrictions, but it also means we need to ensure that growth will be directed to infill areas (especially TOD areas), and there is a reluctance to include targets in the new *RGS* at this time. Our understanding is that Provincial officials have been involved in the review, but we are not sure how the Ministry of Housing is involved or how the Ministry's goals of delivering 114,000 affordable and rental housing units is being considered. The *RGS* could be a vehicle for the Province to establish municipal targets in the Region – especially around transit. A draft Metro 2050 RGS is expected to be released in June with final approval occurring the following Summer.

Missing Middle and the Oregon Approach: UDI agrees that the Province should pursue the elimination of single-family home zoning as was done in Oregon. However, our members are generally Part 3 builders, and the types of builders who construct du/tri/quad-plexes are Part 9 builders who are Canadian Home Builders' Association B.C. (CHBA-BC) and the Homebuilders Association of Vancouver (HAVAN) members. We recommend the Ministry work with these organizations on this important initiative.

On-street Parking Regulations/Fees: One of the key strategies for lowering housing costs is reducing off-street parking requirements in projects. The costs per underground stall can be $70,000. Suburban municipalities with SkyTrain stations have been reluctant to substantially lower parking requirements because they fear a community backlash if it is difficult for residents to park on streets. They believe people who own cars will not pay for off-street parking in new projects and choose to park their vehicles in every diminishing on-street parking spaces. This is why it was found in Metro Vancouver's *2018 Regional Parking Study* that parking supply exceeds utilization by 42% in strata projects; in rental buildings, supply exceeds utilization by 35%; and in mixed tenure and mixed rental buildings, the number is 41%. The issue of on-street parking could be resolved if parking regulations and

fees were introduced to streets near transit areas as in the City of Vancouver. However, suburban local Councils are reluctant to introduce these measures because residents are used to free on-street parking, which is typical in the suburbs, but not appropriate in urban areas near SkyTrain. The government could work with TransLink to utilize *Transit Supportive Agreements* with municipalities and other measures to mandate on-street parking regulations and charges within 800 metres of SkyTrain stations. If not adopted by local governments, TransLink could then introduce metered parking in those areas and collect the revenues (which ideally would be spent on transit upgrades in the community). Either way, on-street parking regulations and fees would allow local Councils to be more comfortable in reducing off-street parking requirements near transit.

Education: It would assist non-profit/for-profit builders if the Ministry could educate the public on the critical challenges we face in providing affordable housing. Vancouver is one of the fastest growing regions in North America, and it will be growing even faster as Federal immigration targets expand to over 400,000 people per year. At the same time, we are a land constrained Region with the Ocean, border and mountains as well as the Agricultural Land Reserve, Urban Containment Boundary and protected industrial lands. The work for *Metro 2040* demonstrated that only 9% of the Region's land is greenfield, and 75% of the growth will be in infill areas where people live and work. We have talked to Metro, and by the 2030s there may be little to no greenfield land in the Region, so all new housing (and projects) will be infill. The public for the most part is unaware that we cannot just grow outward as most fast growing North American regions do. If we are going to address affordability, we have to grow through intensification in our existing communities. The added environmental and economic benefits of building complete infill communities should also be communicated to the public.

Hi Bea,

Based on the call we just had with the modelling team we will likely be cancelling the meeting next week and using both days we have placeholders for at the end of July. The team needs more time to polish the analysis and provide impact analysis along with options to the council.

Happy to set up a call prior to the next council meeting. I'll send out some dates on Friday.

Best,
Zachary D. May, MBA
Director, Strategic Policy
(he/him/his)

Hi Zac,
Hoping we can connect in advance of this meeting to get an indication of where we are headed in terms of options and recommendations.
Potential regulation on GHG and energy has the greatest impact to our organization and so would appreciate a dialogue in advance of our next Step code council meeting.

Regards Bea

Thanks Dale.

- I'll leave electric baseboards in; we do have an option for FC that would address the fluid based heating options. (Also this depends on where you are in the province and what you are building; I'm definitely seeing some electric baseboard especially on rental, smaller buildings, or outside of Vancouver)
- Part 9 info will be there in the final! It's in the spreadsheets right now only.
- Conclusions definitely will be built out in the final. Wanted to get initial feedback since some of the conclusions need a fair bit of manual work to pull data.

Alex

Hi Jeff

I have had a fairly quick read through the report (heading on vacation next week so not a lot of time). I have a few comments:

* Page 15 of the report indicates high-rise MURB archetype with electric baseboards – I think the industry has shifted away from that as a whole. In part due to market demand for cooling, combined with a large amount of DE connection mandating fluid based heating options. The second description is probably more accurate (pages 15 to 16).
* I can't really comment on Hotel, Retail and Office as we don't build them.
* I don't see any archetype information or analysis of other common built forms – specifically townhomes and low-rise wood frame condos.
* There seems to be gaps – such as conclusion so it is difficult to provide a full consideration of the report. High level – this seems to be an evolution and falls behind the standards set in the Step Code.

Thanks

Jeff Fisher, M.PL., CAE, MCIP, RPP

Hi Hugo,

Thanks for the update. s.22 I will connect with Megan (cc'd) to make sure UBCM still has a rep, and see whether a colleague can sit in for me.

This will make the outline and confer stage really important and expedited for me. Given the nature of the change this may need to include briefing some folks at UBCM.

So I can prepare people, can you confirm now all items scoped to be in the proposal? I imagine it will include the following, but likely I'm missing things.

- buildings types
- GHGI or other performance limit
- link to steps or not
- targeted adoption date(s)
- DE considerations/approach
- RNG path approach
- electricity connection cost exemption approach
- accounting for cooling and/or current or future weather files
- any regionality

Also, could you please confirm what metrics were used to evaluate/develop the proposed requirements? These? Anything else?

- upfront cost
- operating/energy costs
- equipment and system types needed (to hit targets) vs. local supply

Thanks in advance. This will help ensure we can properly evaluate the proposals to be able to arrive at consensus quickly.

Max

Subject: Energy Step Code Council meeting (GHG mtg. #3)

Hello, members of the Energy Step Code Council:

I hope everyone is staying well this summer. I am writing to discuss a change in scheduling for the upcoming meetings to discuss how to reduce carbon in new construction.

Instead of meeting on July 14th, we will meet on both days held in your calendars (Tues. July 27th from 1-4 p.m. and July 28th from 9 a.m.-noon). This will provide BSSB additional time to create specific proposals for your consideration, and to send an outline to you a week in advance so you have time to confer with your colleagues.

Our goal will be to reach a consensus on a preferred approach after those two meetings.

Thanks very much for your understanding. If you have questions, please feel free to send me an email.

Best,
Hugo

Hi Max,

Will confirm next week, but all the below issues should be addressed in the proposals and analysis that Alex Blue's team is doing for us.

One item I'm not clear on is *electricity connection cost exemption approach*. Can you help me understand what you're referring to?

Hi Zac,

Excellent, thanks very much.

By the electricity piece I meant the discussion around how higher levels of electrification may mean BC Hydro needs to extend/increase distribution lines connected to the site if there isn't enough power available nearby. This can be a high cost depending on how much distribution infra needs to be built. I don't have other details in my notes, but it was raised at our first 2021 meeting on this item.

Thanks
Max

Subject: UDI Webinar - Panelist Invitation
Importance: High

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Dear Zachary,

Hope you had a wonderful weekend! Can't believe it's been over a year since we last worked together on a webinar.

We are currently working on a potential webinar on the GHL report of the possible mass timber code changes with COV. Andrew Harmsworth will present the report findings and explained the possible code changes identified. Then Patrick Enright can briefly preface his presentation by summarizing how the City might use this report and the survey results.

After discussing with Andrew and Jeff, we would love to invite you to be our panelist . We are also thinking of inviting Rocky Sethi of Adera as a moderator to complete the panel.

The suggested webinar dates (9:15am – 10:30am):
July 20 (Tue)
July 21 (Wed)
July 28 (Wed)
July 29 (Thu)

Would you be interested and available? Thanks so much for your kind consideration.

Best wishes,
Yvonne

Hi Zac,

Excellent, thanks very much.

By the electricity piece I meant the discussion around how higher levels of electrification may mean BC Hydro needs to extend/increase distribution lines connected to the site if there isn't enough power available nearby. This can be a high cost depending on how much distribution infra needs to be built. I don't have other details in my notes, but it was raised at our first 2021 meeting on this item.

Thanks
Max

Hi Max,

Will confirm next week, but all the below issues should be addressed in the proposals and analysis that Alex Blue's team is doing for us.

One item I'm not clear on is *electricity connection cost exemption approach*. Can you help me understand what you're referring to?

Best,

Hi Hugo,

Thanks for the update. s.22 I will connect with Megan (cc'd) to make sure UBCM still has a rep, and see whether a colleague can sit in for me.

This will make the outline and confer stage really important and expedited for me. Given the nature of the change this may need to include briefing some folks at UBCM.

So I can prepare people, can you confirm now all items scoped to be in the proposal? I imagine it will include the following, but likely I'm missing things.

- buildings types
- GHGI or other performance limit
- link to steps or not
- targeted adoption date(s)
- DE considerations/approach
- RNG path approach
- electricity connection cost exemption approach
- accounting for cooling and/or current or future weather files
- any regionality

Also, could you please confirm what metrics were used to evaluate/develop the proposed requirements? These? Anything else?

- upfront cost
- operating/energy costs
- equipment and system types needed (to hit targets) vs. local supply

Thanks in advance. This will help ensure we can properly evaluate the proposals to be able to arrive at consensus quickly.

Max

Subject: Energy Step Code Council meeting (GHG mtg. #3)

Hello, members of the Energy Step Code Council:

I hope everyone is staying well this summer. I am writing to discuss a change in scheduling for the upcoming meetings to discuss how to reduce carbon in new construction.

Instead of meeting on July 14th, we will meet on both days held in your calendars (Tues. July 27th from 1-4 p.m. and July 28th from 9 a.m.-noon). This will provide BSSB additional time to create specific proposals for your consideration, and to send an outline to you a week in advance so you have time to confer with your colleagues.

Our goal will be to reach a consensus on a preferred approach after those two meetings.

Thanks very much for your understanding. If you have questions, please feel free to send me an email.

Best,
Hugo

Totally appreciate the challenge with vacations. The goal would be to get a draft proposal out of the meetings in July that everyone could shop around their organizations and likely seek final input on the reg by end of august or early sept. Hoping that works. Happy to set up a call to discuss further next week.

Thanks all and for Max emphasizing the ideal scenario to have the proposals early enough that we can engage lightly with our colleagues.

I am a tentative for the 27th and a hard no for the 28th also due to travel and vacation schedules. I will see if I can get someone else to sit-in as well – tough timing in the summer, but I assume we'd have access to recordings or similar and follow up engagement? What is the timeline post-meetings?

Thanks,
Megan

Subject: Energy Step Code Council meeting (GHG mtg. #3)

Hello, members of the Energy Step Code Council:

I hope everyone is staying well this summer. I am writing to discuss a change in scheduling for the upcoming meetings to discuss how to reduce carbon in new construction.

Instead of meeting on July 14th, we will meet on both days held in your calendars (Tues. July 27th from 1-4 p.m. and July 28th from 9 a.m.-noon). This will provide BSSB additional time to create specific proposals for your consideration, and to send an outline to you a week in advance so you have time to confer with your colleagues.

Our goal will be to reach a consensus on a preferred approach after those two meetings.

Thanks very much for your understanding. If you have questions, please feel free to send me an email.

Best,
Hugo

Ok thanks. That sounds a little more doable than getting consensus at these meetings.

Looking forward to the proposals!

Thanks,
Megan

Totally appreciate the challenge with vacations. The goal would be to get a draft proposal out of the meetings in July that everyone could shop around their organizations and likely seek final input on the reg by end of august or early sept. Hoping that works. Happy to set up a call to discuss further next week.

Best,

Zachary D. May

Thanks all and for Max emphasizing the ideal scenario to have the proposals early enough that we can engage lightly with our colleagues.

I am a tentative for the 27th and a hard no for the 28th also due to travel and vacation schedules. I will see if I can get someone else to sit-in as well – tough timing in the summer, but I assume we'd have access to recordings or similar and follow up engagement? What is the timeline post-meetings?

Thanks,
Megan

Hi Zac,

Excellent, thanks very much.

By the electricity piece I meant the discussion around how higher levels of electrification may mean BC Hydro needs to extend/increase distribution lines connected to the site if there isn't enough power available nearby. This can be a high cost depending on how much distribution infra needs to be built. I don't have other details in my notes, but it was raised at our first 2021 meeting on this item.

Thanks
Max

Importance: High

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Hugo,

Thanks for the update. s.22 I will connect with Megan (cc'd) to make sure UBCM still has a rep, and see whether a colleague can sit in for me.

This will make the outline and confer stage really important and expedited for me. Given the nature of the change this may need to include briefing some folks at UBCM.

So I can prepare people, can you confirm now all items scoped to be in the proposal? I imagine it will include the following, but likely I'm missing things.
- buildings types
- GHGI or other performance limit
- link to steps or not
- targeted adoption date(s)
- DE considerations/approach
- RNG path approach
- electricity connection cost exemption approach
- accounting for cooling and/or current or future weather files
- any regionality

Also, could you please confirm what metrics were used to evaluate/develop the proposed requirements? These? Anything else?
- upfront cost
- operating/energy costs
- equipment and system types needed (to hit targets) vs. local supply

Thanks in advance. This will help ensure we can properly evaluate the proposals to be able to arrive at consensus quickly.

Max

Hi Bea,

Based on the call we just had with the modelling team we will likely be cancelling the meeting next week and using both days we have placeholders for at the end of July. The team needs more time to polish the analysis and provide impact analysis along with options to the council.

Happy to set up a call prior to the next council meeting. I'll send out some dates on Friday.

Best,
Zachary D. May, MBA
Director, Strategic Policy

Hi Zac,
Hoping we can connect in advance of this meeting to get an indication of where we are headed in terms of options and recommendations.
Potential regulation on GHG and energy has the greatest impact to our organization and so would appreciate a dialogue in advance of our next Step code council meeting.

Regards Bea

Subject: RE: Energy Step Code Council meeting (GHG mtg. #3)

Hello everyone,

I received a few emails on Friday asking for additional clarity about the agenda for the meetings on July 27th and 28th, and opportunities to provide feedback after those meetings.

At the meetings on the 27th and 28th our consultant team working the Metrics Report will explore how different options for regulating carbon pollution (e.g. GHGi, total GHG, other options) will impact different building types in terms of design and cost implications. We will also review these findings to address key issues raised during our survey in April. We will be seeking consensus on which options seem best, and where we need more analysis or input.

The goal from these two meetings is to prepare a set of draft recommendation(s) for the technical requirements for carbon pollution standards and a summary of the design and cost implications of the approach(es). We will summarize this in a document that can be shared within your organizations for further input over a few additional weeks. The goal

will be to have recommended options and feedback from your organizations and members by the end of August. This should put us in a good position to summarize the technical requirements that belong in regulation and the supporting guidelines that would appear in an updated Best Practices Guideline for Local Governments by September.

The bottom line is that we will work towards identifying preferred options (or just one if possible) on the 27th and 28th, but we will be proving materials and time to seek additional input in the weeks following the meeting.

Please feel free to reach out if you have any questions. I appreciate everyone's patience as we adapt and adjust to changing timelines and the other rapidly evolving CleanBC discussions. I remain optimistic that we are on track to have final recommendations from the Energy Step Code Council ready in September.

Best,
Zachary D. May, MBA

Hello, members of the Energy Step Code Council:

I hope everyone is staying well this summer. I am writing to discuss a change in scheduling for the upcoming meetings to discuss how to reduce carbon in new construction.

Instead of meeting on July 14th, we will meet on both days held in your calendars (Tues. July 27th from 1-4 p.m. and July 28th from 9 a.m.-noon). This will provide BSSB additional time to create specific proposals for your consideration, and to send an outline to you a week in advance so you have time to confer with your colleagues.

Our goal will be to reach a consensus on a preferred approach after those two meetings.

Thanks very much for your understanding. If you have questions, please feel free to send me an email.

Best,
Hugo

Hi Zac,
Hope you had a good weekend.
Unfortunately I am not able to make it this Friday but can do Wednesday 11 to 12pm or 1 to 3:30pm or Thursday 9am to 10am or 1 to 3pm.
Would any of those times work?

Thx Bea

Hi Bea,

Based on the call we just had with the modelling team we will likely be cancelling the meeting next week and using both days we have placeholders for at the end of July. The team needs more time to polish the analysis and provide impact analysis along with options to the council.

Happy to set up a call prior to the next council meeting. I'll send out some dates on Friday.

Best,

Hi Zac,
Hoping we can connect in advance of this meeting to get an indication of where we are headed in terms of options and recommendations.
Potential regulation on GHG and energy has the greatest impact to our organization and so would appreciate a dialogue in advance of our next Step code council meeting.

Regards Bea

Subject: FW: UPDATED BC Worksafe and CO2 rates

****ATTENTION*** This email originated from outside of the NRC. ***ATTENTION*** Ce courriel provient de l'extérieur du CNRC*

Hi Iain,

Hope you had a great weekend. Your assumptions below are correct.

The 350 ppm for ambient is on the low side. Ambient now is at about 415 to 420 ppm and is predicted to rise. Appendix D of ASHRAE 62.1-2016 references 700 ppm above ambient levels which from the extract below can range from 300 to 500 ppm above outside air levels.

Thus, maintaining a steady-state CO_2 concentration in a space no greater than about 700 ppm above outdoor air levels will indicate that a substantial majority of visitors entering a space will be satisfied with respect to human bioeffluents (body odor). A more detailed discussion of this relationship between CO_2 concentrations and the perception of bioeffluents, as well as the use of indoor CO_2 to estimate building ventilation rates, is contained in ASTM Standard D6245 [D-8].

CO_2 concentrations in acceptable outdoor air typically range from 300 to 500 ppm. High CO_2 concentrations in the outdoor air can be an indicator of combustion and/or other contaminant sources.

Most existing buildings and building standards are programmed to 1,000 PPM. I realize there is differences on opinion on using CO_2 as a metric for good indoor air quality, however regulations are regulations regardless of our opinion. I do agree with the 1,000 ppm limit inside and I would actually prefer to see this limit reduced down further especially when energy conditions are favorable to do so (airside free cooling using economizers is a great example) .

Based on our experience to date, we see a number of key things in the industry that happen on a continuous regular basis.

a. A good number of mechanical designs that come across our desks do not meet code minimum ventilation rates. The reasons for this vary from using more recent versions of ASHRAE 62.1 2007 for LEED for example to not understanding the ASHRAE 62.1 standard at all.
b. Take an office for example: most of the offices we work on are core and shell offices, meaning that at the time of design we have zero idea of who the tenant will be and their occupancy density. You could have a government office in the building with 1 person / 200 ft^2 or a WeWork that has 1 person / 100 ft^{2-} or less. Each of the ASHRAE 62.1 standards assume a general default occupancy density for all types of office spaces, regardless of the real end-use office type, and engineers just use this as the default.
c. ASHRAE 62.1-2001 without add N (current BC Building Code) for an office building is based on 7 people every 1,000 ft^2/100 m^2 at 20 CFM. To keep this simple, this works out to 0.14 CFM/ft^2.

TABLE 2

OUTDOOR AIR REQUIREMENTS FOR VENTILATION*

2.1 COMMERCIAL FACILITIES (offices, stores, shops, hotels, sports facilities)

Application	Estimated Maximum** Occupancy P/1000 ft^2 or 100 m^2	Outdoor Air Requirements				Comments
		cfm/ person	L/s· person	cfm/ft^2	$L/s \cdot m^2$	
Dry Cleaners, Laundries						Dry-cleaning processes may require more ai
Commercial laundry	10	25	13			
Commercial dry cleaner	30	30	15			
Storage, pick up	30	35	18			
Coin-operated laundries	20	15	8			
Coin-operated dry cleaner	20	15	8			
Food and Beverage Service						
Dining rooms	70	20	10			
Cafeteria, fast food	100	20	10			
Bars, cocktail lounges	100	30	15			Supplementary smoke-removal equipment may be required.
Kitchens (cooking)	20	15	8			Makeup air for hood exhaust may require more ventilating air. The sum of the outdoo air and transfer air of acceptable quality fro adjacent spaces shall be sufficient to provid an exhaust rate of not less than 1.5 cfm/ft^2 (7.5 $L/s \cdot m^2$).
Garages, Repair, Service Stations						
Enclosed parking garage				1.50	7.5	Distribution among people must consider worker location and concentration of runnir engines; stands where engines are run must incorporate systems for positive engines exhaust withdrawal. Contaminant sensors may be used to control ventilation.
Auto repair rooms				1.50	7.5	
Hotels, Motels, Resorts, Dormitories				cfm/room	L/s·room	Independent of room size.
Bedrooms				30	15	
Living rooms				30	15	
Baths				35	18	Installed capacity for intermittent use.
Lobbies	30	15	8			
Conference rooms	50	20	10			
Assembly rooms	120	15	8			
Dormitory sleeping areas	20	15	8			See also food and beverage services, mer- chandising, barber and beauty shops, garag
Gambling casinos	120	30	15			Supplementary smoke-removal equipment may be required.
Offices						
Office space	7	20	10			Some office equipment may require local exhaust.
Reception areas	60	15	8			
Telecommunication centers and data entry areas	60	20	10			
Conference rooms	50	20	10			

d. The ASHRAE 62.-1 2016 Standard Table 6.2.2.1 table below states an office space now only has 5 people / 1,000 ft^2 (or 100 m^2) and each person should be given 17 CFM . This works out to 0.085 CFM/ft^2. The mistakes we see with the later versions of the standard are engineers use either the people outdoor air rates or the area outdoor air rate, instead of the sum of both. This means that for an office we see designs with 0.06 CFM/ft^2 or 0.025 CFM/ft^2, rather than the sum which is 0.085CFM/ft^2

TABLE 6.2.2.1 Minimum Ventilation Rates in Breathing Zone *(Continued)*
(Table 6.2.2.1 shall be used in conjunction with the accompanying notes.)

Occupancy Category	People Outdoor Air Rate R_p		Area Outdoor Air Rate R_a		Notes	Default Values

GENERAL NOTES FOR TABLE 6.2.2.1
1 **Related requirements:** The rates in this table are based on all other applicable requirements of this standard being met.
2 **Environmental Tobacco Smoke:** This table applies to ETS-free areas. Refer to Section 5.17 for requirements for buildings containing ETS areas and ETS-free areas.

So a few observations here between 62.1-2001 w/o Add N (current code) and the 62.1-2016 proposed to be used, and other observations as it relates to air quality in general.

1. The numbers in the standards indicated that **occupancy rates in offices have dropped by 29%** between 2001 and 2016 for our buildings moving forward into the future- have they actually? (**5 people / 1,000 ft^2** in 62.1-2016 vs **7 people /1,000 ft^2** in 62.1-2001 w/o Add N).
2. **Ventilation rates per person have dropped by 15%** (20 CFM per person vs 17CFM per person).
3. Overall ventilation rates for an office space have dropped by **39 %** when comparing both standards (**0.14 CFM/ft^2 vs 0.085 CFM/ft^2**).

As well as this:

4. We know CO_2 levels in outside air are increasing.
5. We are talking about design here, not operation. These are code **minimum** ventilation rates. We should not be under sizing ventilation HVAC systems especially given the pandemic. We should be mandating smart controls like demand control ventilation systems and HRVs and ERV which is what we already do a vast majority of these projects.
6. Reducing the design air flow rates of outside air ventilation systems will:
    a. Reduce air side free cooling

b. Reduce climate resiliency of the building because outdoor CO_2 levels are increasing.
c. Increase the risk of virus/bacteria spread in indoor environments when working in an enclosed space for long periods of time with no access to operable windows.

Our experience is primarily with office space ventilation and using this as an example here. We have other examples and these can be provided as well if necessary. We have carried out a lot of analysis on CO_2 levels in indoor spaces based on:

- ASHRAE 62.1 minimum ventilation rates
- Occupant gains in the space as per 2013 ASHRAE Handbook - Fundamentals Table 1 (p18.4)

The graphs below show the CO_2 rates a 1,000 ft^2 (92.90m^2) office space (1,000ft^2 as per ASHRAE 62,1 metrics) and have plotted these over time. The analysis has been carried out using the 62.1-2016 ventilation rates (first graph) and the 62.1-2001 (w/o Add N) ventilation rates (second graph). Both graphs use the office occupant density in the current code (62.1-2001 (w/o Add N)). The red line on the graph shows the WorkSafe BC CO_2 limit for indoor spaces. As you can see, using 62.1-2016 minimum ventilation rate and the occupant density from 62.1-2001 (w/o Add N), the CO_2 produced by the people in the space exceeds the WorkSafe BC limits.

In conclusion, based on our experience:

- HVAC engineers tend to design to absolute code minimum as it relates to ventilation- designing to minimums is not considered good engineering practice.
- Operation is not design- we should be mandating smart controls like demand control ventilation systems and designing larger than code minimum ventilation for our buildings.
- If we have exact same office occupancy as the current code (62.1-2001 w/o Add N: 7 people per 1,000 ft^2) and use the 62.1-2016 ventilation rates we would exceed WorkSafe BC CO_2 limits.
- Reducing outside air rates by 39 % in offices for code minimum ventilation would not be deemed a wise course of action given the current SARS-CoV-2 pandemic and could also be interpreted as a direct violation of the EGBC code of ethics, https://www.egbc.ca/Complaints-Discipline/Code-of-Ethics/Code-of-Ethics specifically, *"hold paramount the safety, health, and welfare of the public, including the protection of the environment and the* ***promotion of health and safety in the workplace****"*

Space Carbon Dioxide Concentration Over Time (based on ASHRAE 62.1-2016 minimum ventilation rates)

Activity in space	Occupancy Cateogory	Room Type	Area of space (m^2)	Height of space (m)	Actual number of people in space

Subject: BC Worksafe and CO2 rates

Hi Eoghan,

Thanks for the link to the BC worksafe document. From what I see they are assuming an ambient of 350 ppm and then setting their limit as 650 ppm above ambient. (this aligns with the 1000ppm that ASHRAE used in the past, before they changed to 700 ppm above ambient). Is that correct? Is the 650 above ambient the target that people are having difficulty with? If are BC worksafe measuring levels?

Iain

GENERAL NOTES FOR TABLE 6.2.2.1

1 **Related requirements:** The rates in this table are based on all other applicable requirements of this standard being met.

2 **Environmental Tobacco Smoke:** This table applies to ETS-free areas. Refer to Section 5.17 for requirements for buildings containing ETS areas and ETS-free areas.

Thus, maintaining a steady-state CO_2 concentration in a space no greater than about 700 ppm above outdoor air levels will indicate that a substantial majority of visitors entering a space will be satisfied with respect to human bioeffluents (body odor). A more detailed discussion of this relationship between CO_2 concentrations and the perception of bioeffluents, as well as the use of indoor CO_2 to estimate building ventilation rates, is contained in ASTM Standard D6245 [D-8].

CO_2 concentrations in acceptable outdoor air typically range from 300 to 500 ppm. High CO_2 concentrations in the outdoor air can be an indicator of combustion and/or other contaminant sources.

Thanks so much Zachary,

Since Andrew is away this whole week, I was thinking it would be nice to meet on the 20th to go over the webinar with the entire panel.

Maybe then we can set on a new date hopefully in August or September?

I have sent you a calendar invite for the pre-meeting.

Most appreciated,
Yvonne

Dear Zachary,

Hope you had a wonderful weekend! Can't believe it's been over a year since we last worked together on a webinar.

We are currently working on a potential webinar on the GHL report of the possible mass timber code changes with COV. Andrew Harmsworth will present the report findings and explained the possible code changes identified. Then Patrick Enright can briefly preface his presentation by summarizing how the City might use this report and the survey results.

After discussing with Andrew and Jeff, we would love to invite you to be our panelist . We are also thinking of inviting Rocky Sethi of Adera as a moderator to complete the panel.

The suggested webinar dates (9:15am – 10:30am):
July 20 (Tue)
July 21 (Wed)
July 28 (Wed)
July 29 (Thu)

Would you be interested and available? Thanks so much for your kind consideration.

Best wishes,
Yvonne

Hello Zachary,

I'm going to be off on holidays for the 27th and 28th and respectfully ask if my colleague Jay Chadha can attend the meetings in my absence. HAVAN wants to keep on top of the issues and I've been keeping both Jay and my CEO Ron Rapp (co-chair of the Step 9 sub-Committee) briefed progress that our Council is making.

Unfortunately I won't have have access to Zoom on my vacation (likely a good thing :)

Thanks for consideration of this Zachary,

Cheers,

~ Diana

Subject: RE: Energy Step Code Council meeting (GHG mtg. #3)
Hello everyone,

I received a few emails on Friday asking for additional clarity about the agenda for the meetings on July 27th and 28th, and opportunities to provide feedback after those meetings.

At the meetings on the 27th and 28th our consultant team working the Metrics Report will explore how different options for regulating carbon pollution (e.g. GHGi, total GHG, other options) will impact different building types in terms of design and cost implications. We will also review these findings to address key issues raised during our survey in April. We will be seeking consensus on which options seem best, and where we need more analysis or input.

The goal from these two meetings is to prepare a set of draft recommendation(s) for the technical requirements for carbon pollution standards and a summary of the design and cost implications of the approach(es). We will summarize this in a document that can be shared within your organizations for further input over a few additional weeks. The goal will be to have recommended options and feedback from your organizations and members by the end of August. This should put us in a good position to summarize the technical requirements that belong in regulation and the supporting guidelines that would appear in an updated Best Practices Guideline for Local Governments by September.

The bottom line is that we will work towards identifying preferred options (or just one if possible) on the 27th and 28th, but we will be proving materials and time to seek additional input in the weeks following the meeting.

Please feel free to reach out if you have any questions. I appreciate everyone's patience as we adapt and adjust to changing timelines and the other rapidly evolving CleanBC discussions. I remain optimistic that we are on track to have final recommendations from the Energy Step Code Council ready in September.

Best,
Zachary D. May, MBA

Subject: Energy Step Code Council meeting (GHG mtg. #3)

Hello, members of the Energy Step Code Council:

I hope everyone is staying well this summer. I am writing to discuss a change in scheduling for the upcoming meetings to discuss how to reduce carbon in new construction.

Instead of meeting on July 14th, we will meet on both days held in your calendars (Tues. July 27th from 1-4 p.m. and July 28th from 9 a.m.-noon). This will provide BSSB additional time to create specific proposals for your consideration, and to send an outline to you a week in advance so you have time to confer with your colleagues.

Our goal will be to reach a consensus on a preferred approach after those two meetings.

Thanks very much for your understanding. If you have questions, please feel free to send me an email.

Best,
Hugo

Hi everyone,

I'm reaching out to make sure you got the invitation to this event next week- we'll be presenting on some research that Integral did to identify ways to reduce refrigerant leakage. I've asked the presenters to tailor their presentation as much as possible to policy makers and industry folks who will be interested to know what options exist out there for reducing the embodied emissions of heat pump and VRF based systems.

Hope you can join us, and please feel free to circulate to your networks/interested colleagues.

Lisa

Subject: Refrigerant Leakage Invite - Did Not Open, Opened, Registered

Hi Lisa,

Attached is a spreadsheet of who the invite was sent to via Mailchimp, who opened the invite (second last column), and who is registered (last column). There's a second worksheet in the file for those who are registered but weren't on our mailing list. I think a lot of people forwarded the invite to others—half of our registrants are not on our mailing list!

It'd be great if you could reach out to the individuals on the spreadsheet who didn't open the invite because sometimes Mailchimp invites go to junk folders, even though the invite says it's from 'Lisa Westerhoff'.

When you email people, please keep in mind that we can't send mass emails that would constitute spam, but more individual emails with the invite is ok, especially if there are particular people you want to make sure they got the invite
s.22 for example didn't open their invites, so could've gone to spam folder).

Some additional notes:

Subject: UDI feedback on metrics report re: ref building and ATT

Hi Jeff,

Just to let you know I got your voice message from Friday July 9 re:

1. **Reference building** – what will that be and the need to compare current code requirements (based on 2015 code) to what will be required in the next/2022 edition of the code
2. **Airtightness testing** – the national doesn't look to be including this so we need to consider the cost of doing ATT in the metrics study

I've cc'd Scott here for his info and will discuss your message with him. I believe these concerns will all be addressed in the report.

Thank you as always for UDI's involvement and feedback in this and so many other projects.

Kind regards,
Dale

I am placing a few calendar holders for organizing the URBCx 2021 session: challenges and opportunities associated with development in hazardous areas, scheduled for sept/october.

This is picking up from the session that was postponed from URBC 2020 due to the provincial election. I have spoken with many of you in advance of sending this out and the current, draft prospectus has also been shaped by many of you already.

These touch-point meetings are not meant to be stressful obligations, but rather opportunities to participate as a steering committee member to shape the agenda and other items as it is further defined going into the fall - as you can and desire to.

Thank you again for your contributions to date, I look forward to your further input and to creating a meaningful opportunity for deliberative dialogue and risk reduction/resilience building action in the fall!

More details and a few calendar invites to follow.

Warmly,
Jessica

Subject: Leaders at OMTI

Hi Jeff and Yvonne,

As discussed, OMTI has two excellent directors who would be a great addition to future gender-diverse panels – Trilby Hoffman-McGaw and Lee Nicol. Trilby and Lee both worked at BSSB in the past, so it's possible you have worked with them already.

Trilby.Hoffman-McGaw@gov.bc.ca
Lee.Nicol@gov.bc.ca

Hi Megan,

We're hoping to have materials available to us today at noon, but I realize that doesn't provide adequate time to review, especially for those who are balancing this work with family vacations and other priorities.

I will touch base with our team internally to see if postponing make sense or if we proceed with just one of the meetings and reduce our expectations on decision-making.

Best,
Zachary D. May, MBA

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Morning all,

I understand the intent was to have a proposal to the Council prior to the meeting for consideration. Would BSSB consider postponing these meetings so that there is more time for proposal review? I haven't seen any materials yet - hopefully haven't missed anything.

I appreciate the time constraint on the other end in terms of your preferred schedule to get the reg drafted, but it's also an important process that I'm sure all LGs would like to have an opportunity to fully participate in.

My two cents :)

Megan

Totally appreciate the challenge with vacations. The goal would be to get a draft proposal out of the meetings in July that everyone could shop around their organizations and likely seek final input on the reg by end of august or early sept. Hoping that works. Happy to set up a call to discuss further next week.

Best,

Thanks all and for Max emphasizing the ideal scenario to have the proposals early enough that we can engage lightly with our colleagues.

I am a tentative for the 27th and a hard no for the 28th also due to travel and vacation schedules. I will see if I can get someone else to sit-in as well – tough timing in the summer, but I assume we'd have access to recordings or similar and follow up engagement? What is the timeline post-meetings?

Thanks,
Megan

Hi Zac,

Excellent, thanks very much.

By the electricity piece I meant the discussion around how higher levels of electrification may mean BC Hydro needs to extend/increase distribution lines connected to the site if there isn’t enough power available nearby. This can be a high cost depending on how much distribution infra needs to be built. I don’t have other details in my notes, but it was raised at our first 2021 meeting on this item.

Thanks
Max

Importance: High

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Hugo,

Thanks for the update.[s.22] I will connect with Megan (cc'd) to make sure UBCM still has a rep, and see whether a colleague can sit in for me.

This will make the outline and confer stage really important and expedited for me. Given the nature of the change this may need to include briefing some folks at UBCM.

So I can prepare people, can you confirm now all items scoped to be in the proposal? I imagine it will include the following, but likely I'm missing things.
- buildings types
- GHGI or other performance limit
- link to steps or not
- targeted adoption date(s)
- DE considerations/approach
- RNG path approach
- electricity connection cost exemption approach
- accounting for cooling and/or current or future weather files
- any regionality

Also, could you please confirm what metrics were used to evaluate/develop the proposed requirements? These? Anything else?
- upfront cost
- operating/energy costs
- equipment and system types needed (to hit targets) vs. local supply

Thanks in advance. This will help ensure we can properly evaluate the proposals to be able to arrive at consensus quickly.

Max

Subject: Energy Step Code Council meeting (GHG mtg. #3)

Hello, members of the Energy Step Code Council:

I hope everyone is staying well this summer. I am writing to discuss a change in scheduling for the upcoming meetings to discuss how to reduce carbon in new construction.

Instead of meeting on July 14th, we will meet on both days held in your calendars (Tues. July 27th from 1-4 p.m. and July 28th from 9 a.m.-noon). This will provide BSSB additional time to create specific proposals for your consideration, and to send an outline to you a week in advance so you have time to confer with your colleagues.

Our goal will be to reach a consensus on a preferred approach after those two meetings.

Thanks very much for your understanding. If you have questions, please feel free to send me an email.

Best,
Hugo

Thanks Katherine – I will compile and get it back to Nat/Andrew for their review tomorrow.

Are you able to review the stakeholder list by 3:00pm today so we can get the invite into everyone's calendars?

Nicole

Subject: Description of policy levers

Hi Nat and Katherine,

To support the August 4th engagement content and discussion we are pulling together a broad overview of the current policy levers. Can I ask that your team pulls together a handful of overview bullets on all your ministry's policy levers (i.e., equipment standards, funding programs etc.). If there are other key themes, questions etc. specific to your work you want raised during the engagement please share those so we can make sure they are reflected in the materials.

We are aiming to get materials ready for sign-off early next week so need input by the end of this week.

Thanks,
NV

Sent: July 26, 2021 1:52:21 PM PDT

Makes sense. I think we could have the session, but maybe just say it is a working session and won't be finalizing based on it. You could book another meeting in September to finalize the policy recommendations.

On another topic, is Evoke's approach aligned with the we previously discussed? For example:
- Step 1 is reporting only
- Step 2 is cost-effective (with future carbon pricing) with planned energy efficiency levels for 2022
- Step 3 is mid-point emissions and planned energy efficiency levels for 2027
- Step 4 is net-zero emissions (to align with federal commitments) and at least 80% GHG reduction, with cost-justified energy efficiency

Or are they doing totally independent analysis based on industry practices, cost-benefit, etc?

Not critical either way, I am just curious.

The delays in getting data from Evoke is putting us in a tight spot with stakeholders.

I'm reluctant to delay, but 6hrs of meetings without advance materials seems unproductive.

Recommendation - we cancel the Tuesday meeting and keep the Wednesday morning meeting. This will give us some sense of how to pull options together for stakeholders to review over August and into September.

Please let me know if either of you have an issue with this proposed approach.

Morning all,

I understand the intent was to have a proposal to the Council prior to the meeting for consideration. Would BSSB consider postponing these meetings so that there is more time for proposal review? I haven't seen any materials yet - hopefully haven't missed anything.

I appreciate the time constraint on the other end in terms of your preferred schedule to get the reg drafted, but it's also an important process that I'm sure all LGs would like to have an opportunity to fully participate in.

My two cents :)

Megan

Totally appreciate the challenge with vacations. The goal would be to get a draft proposal out of the meetings in July that everyone could shop around their organizations and likely seek final input on the reg by end of august or early sept. Hoping that works. Happy to set up a call to discuss further next week.

Best,

Thanks all and for Max emphasizing the ideal scenario to have the proposals early enough that we can engage lightly with our colleagues.

I am a tentative for the 27th and a hard no for the 28th also due to travel and vacation schedules. I will see if I can get someone else to sit-in as well – tough timing in the summer, but I assume we'd have access to recordings or similar and follow up engagement? What is the timeline post-meetings?

Thanks,
Megan

Hi Zac,

Excellent, thanks very much.

By the electricity piece I meant the discussion around how higher levels of electrification may mean BC Hydro needs to extend/increase distribution lines connected to the site if there isn't enough power available nearby. This can be a high cost depending on how much distribution infra needs to be built. I don't have other details in my notes, but it was raised at our first 2021 meeting on this item.

Thanks
Max

Importance: High

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Hugo,

Thanks for the update.[s.22] . I will connect with Megan (cc'd) to make sure UBCM still has a rep, and see whether a colleague can sit in for me.

This will make the outline and confer stage really important and expedited for me. Given the nature of the change this may need to include briefing some folks at UBCM.

So I can prepare people, can you confirm now all items scoped to be in the proposal? I imagine it will include the following, but likely I'm missing things.
- buildings types
- GHGI or other performance limit
- link to steps or not
- targeted adoption date(s)
- DE considerations/approach
- RNG path approach
- electricity connection cost exemption approach
- accounting for cooling and/or current or future weather files
- any regionality

Also, could you please confirm what metrics were used to evaluate/develop the proposed requirements? These? Anything else?
- upfront cost
- operating/energy costs
- equipment and system types needed (to hit targets) vs. local supply

Thanks in advance. This will help ensure we can properly evaluate the proposals to be able to arrive at consensus quickly.

Max

Update (July 26, 2021):

Hello, everyone:

As you may have noticed, we have not been able to send material ahead in advance. As such, we will be cancelling the Tuesday afternoon meeting. I apologize for the late notice.

We will retain the Wednesday morning session as an opportunity to hear the initial technical analysis and ask general questions, but we will not need to come to consensus on an approach at that meeting. Instead, we will book follow-up meetings in August and September so we leave enough time for you to take the analysis back to your colleagues for review and comment.

For Wednesday, I will send a new calendar invitation for the same block of time to include a newly available telephone dial-in option, which I hope will increase the amount of flexibility for everyone.

Thank you very much, and if you have any questions, please send me an email.

Best,
Hugo

Update (July 9, 2021): This meeting now replaces the meeting originally scheduled for July 14.

Hello, members and alternates of the Energy Step Code Council:

This is a calendar hold to discuss GHGs in new construction. Agenda and materials to come.

Microsoft Teams meeting
Join on your computer or mobile app
s.15

Update: 7-26-2021: Please see below for an updated videoconferencing link with dial-in option. If you have technical difficulties, please email hugo.wong@gov.bc.ca<mailto:hugo.wong@gov.bc.ca>, or call 236 478 1406.

Hello, members and alternates of the Energy Step Code Council:

This is a calendar hold to discuss GHGs in new construction. Agenda and materials to come.

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Package

Date and Time of Meeting: Wednesday July 28, 2021 | Time: 9:00 a.m. to 12:00 p.m. Pacific Time
s.15

Chair: Zachary May, Building and Safety Standards Branch, Office of Housing and Construction Standards
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro
Meeting Materials

- Agenda (below)
- Analysis document from Alex Blue, Evoke Buildings

Contacts if You Require Assistance

- Hugo Wong, BSSB – 236 478 1406 (call only); hugo.wong@gov.bc.ca

AGENDA

Time	Topic	Speaker(s)	Purpose(s)
09:00 a.m.	Welcome, Introductions and Opening Remarks	Zachary May, ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs	▪ Welcome participants ▪ Approve of agenda
09:05	Executive Message	Andrew Pape-Salmon, Executive Director, BSSB	▪ Update on Provincial priorities and context
09:20	Overall Approach	Zachary May, ESCC Chair	▪ Review process to date and proposed direction on key aspects of the regulation
09:40	Metrics Analysis: Options for Part 3 Buildings and Part 9 Buildings	Alex Blue, Evoke Buildings Inc.	▪ Present summary of findings from the Metrics Research Update analysis (still draft) ▪ Answer initial questions about the analysis
10:15	Break		
10:30	Discussion	Zachary May, ESCC Chair + All	To discuss issues raised in the analysis, such as: ▪ How much flexibility do we need between energy-efficiency steps and GHG steps? Should there be any limitations on how the two are applied? ▪ How does compliance with any of the three proposed GHG steps affect compliance with the three energy efficiency steps? Any anomalies or very expensive outcomes? ▪ What equipment and/or assemblies become necessary or no longer possible at different steps?
11:55	Final Remarks and Next Steps	Zachary May, ESCC Chair	
12 noon	Adjournment

GHG Steps – Metrics Report Info

July 26, 2021

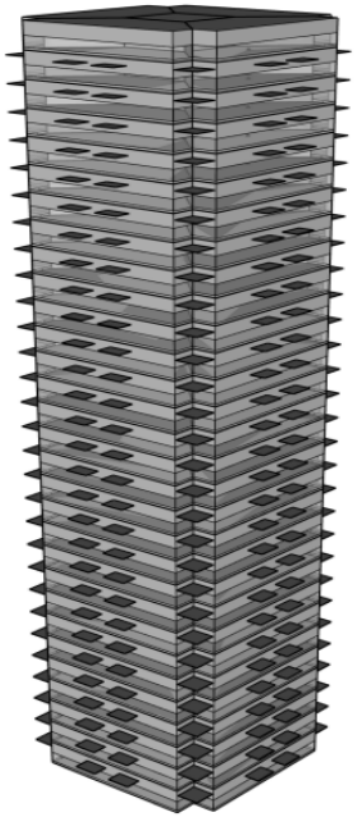
1. Part 3
    1. Analysis/approach
    2. Common observations across building types
    3. Sample archetypes/"steps" highlighting technical implications for buildings
    4. Any building types that seem particularly sensitive?
    5. Range of ICC for different steps, and relation to operational costs?
    6. Conditions that should be placed on modelling to ensure outcomes?
2. Part 9
    1. Analysis/approach
    2. Common observations across building types
    3. Sample archetypes/"steps" highlighting technical implications for buildings
    4. Any housing archetypes that seem particularly sensitive?
    5. Range of ICC for different steps, and relation to operational costs?
    6. Issues with the more limited scope of MEUI? Does GHGi for housing address all loads or just those in MEUI?

Part 3

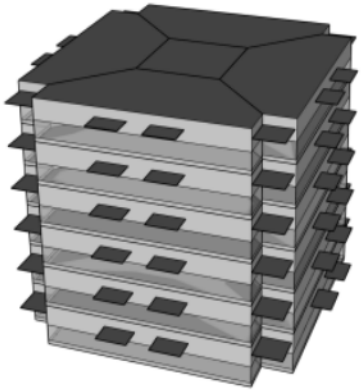
LOW-RISE MURB, HIGH-RISE MURB, OFFICE, RETAIL, HOTEL

Part 3 Analysis Overview

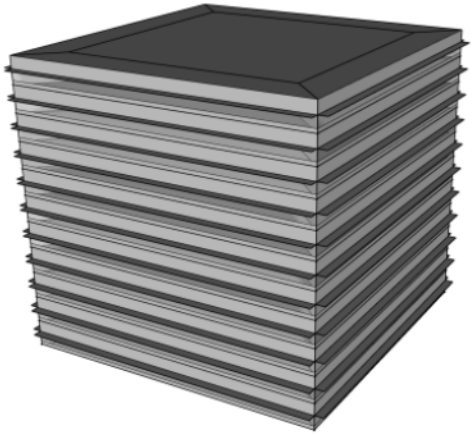
High Rise MURB



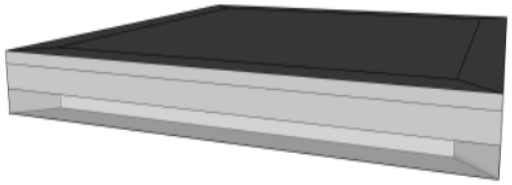
Low Rise MURB



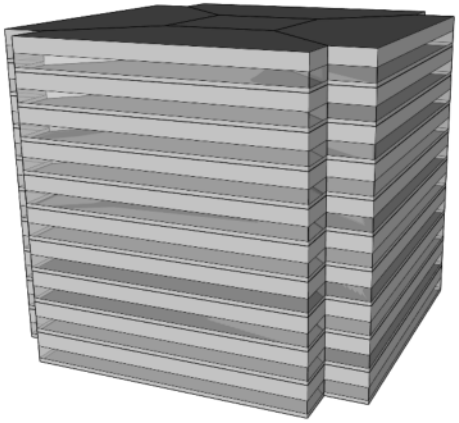
Office



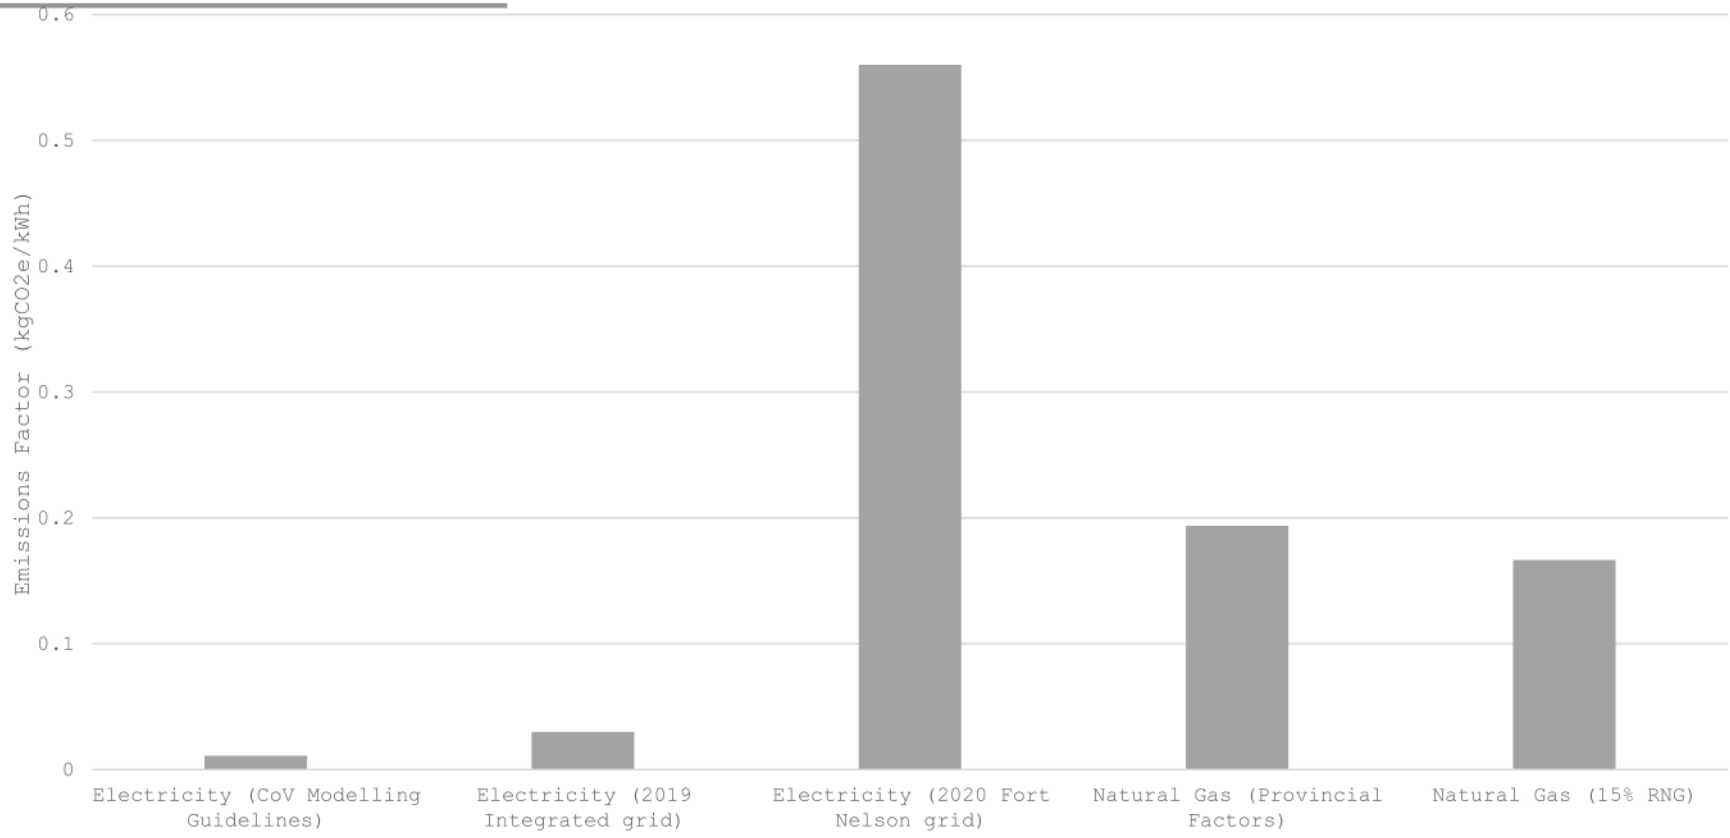
Retail



Hotel



GHG Emissions Factors



Click to edit Master text styles

EUI Implications of GHG Targets

Max TEUI to hit:	6 kg/m²/year	3 kg/m²/year	1 kg/m²/year
100% Elec	201	100	33
25% NG	158	79	26
50% NG	116	58	19

*using Integrated grid 2019 electricity factors

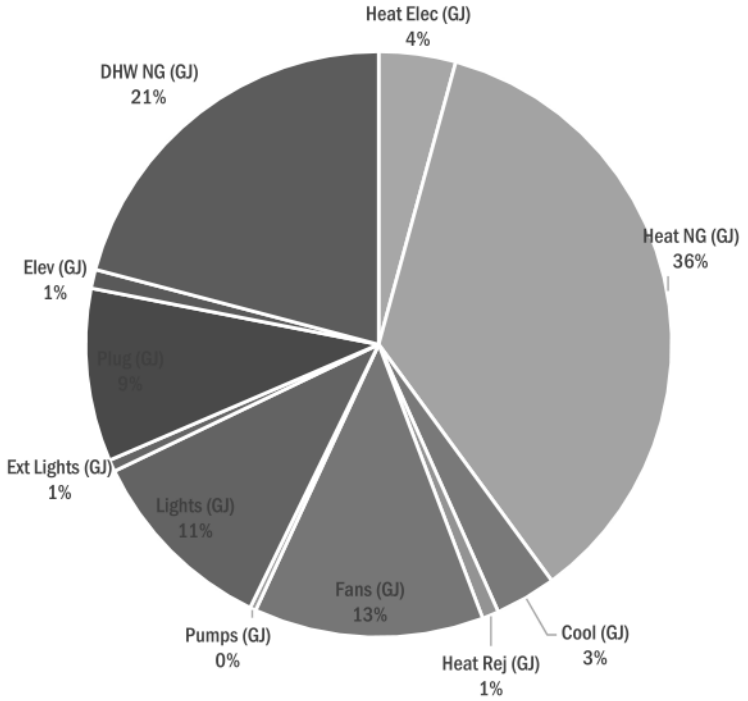
Current TEUI Targets:

Hotel: 120 – 170

MURB: 100 – 180

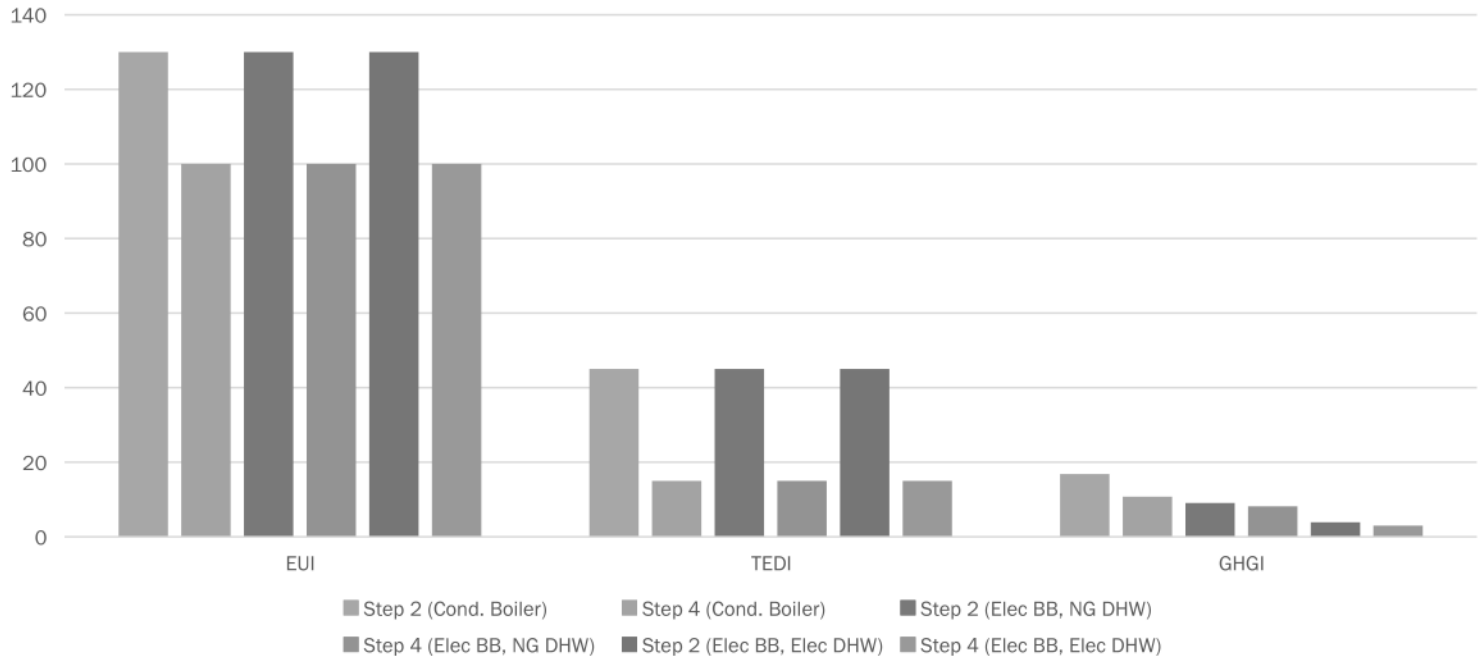
Offices: 100 – 130

Retail: 120 - 190



MURB – NECB 2015 Baseline, FCs w/ Boiler

ECMs and Emissions Factors



Back of envelope using EUI/TEDI targets only

MURB, CZ4

GHGI impact of:

- Step 2 to Step 4
- Condensing boiler to electric baseboard
- NG DHW to electric DHW

Emissions factors >> ECMs

Sample Steps - Principals

1. ECMs

- Typical to slightly improved envelope
  - Walls R-7 to 10
  - Windows USI-1.6 to 2.0
  - Roof R-40
- Typical efficiency HRV 60%
- No infiltration savings
- Mid-range WWR
  - MURBs 40%, retail 20%, office 50%, hotel 50%
- 20% DHW flow savings
- Condensing boiler

2. Partial Heating Fuel Switch

- Same ECMs as 1
- Switch to ASHP for primary heating
  - 70% of annual heating load for most archetypes
  - 90% for retail
- Natural gas condensing boiler backup

3. Fuel Switch Heating + DHW

- Same ECMs as 1
- ASHP w/ electric resistance backup (or fully HP)
- Electric resistance for NG

Click to edit Master text styles

Sample Steps – MURB CZ4

1. ECMs

- GHGIs
  - Range 10.2 – 15.4
  - Average 13.2
- ICC
  - Range 1.1% - 2.3%
  - Average 1.7%
- 24 scenarios
- Some dependence on suite size (density)
  - Low density (large units) ranges from 10.3 – 13.5 GHGI
  - High density (small units) ranges from 12.9 – 15.4 GHGI
- Approx. 40% - 50% NG, remainder electric

2. Partial Heating Fuel Switch

- GHGIs
  - Range 7.8 – 10.8
  - Average 9.4
- ICC
  - Range 2.4% - 3.6%
  - Average 3.0%
- 24 scenarios
- Similar dependence on suite size (density)
  - Low density (large units) ranges from 7.8 – 8.5 GHGI
  - High density (small units) ranges from 10.1 – 10.8 GHGI
- Approx. 25 - 35% NG, remainder electric

3. Fuel Switch Heating + DHW

- GHGIs
  - Range 3.1 – 3.8
  - Average 3.5
- ICC
  - Range 2.4% - 3.6%
  - Average 3.0%
- 24 scenarios
- Similar dependence on suite size (density)
  - Low density (large units) ranges from 3.1 – 3.4 GHGI
  - High density (small units) ranges from 3.6 – 3.8 GHGI
- 100% electric

Click to edit Master text styles

Sample Steps – MURB CZ7a

1. ECMs

- GHGIs
  - Range 20.0 – 27.0
  - Average 23.6
- ICC
  - Range 0.8% – 1.7%
  - Average 1.3%
- 24 scenarios
- Some dependence on suite size (density)
  - Low density (large units) ranges from 20.0 – 25.1 GHGI
  - High density (small units) ranges from 22.0 – 27.0 GHGI
- Approx. 50 - 60% NG, remainder electric

2. Partial Heating Fuel Switch

- GHGIs
  - Range 11.3 – 15.2
  - Average 13.4
- ICC
  - Range 2.3% - 3.3%
  - Average 2.8%
- 24 scenarios
- Similar dependence on suite size (density)
- Approx. 25 - 35% NG, remainder electric

3. Fuel Switch Heating + DHW

- GHGIs
  - Range 4.5 – 5.3
  - Average 4.9
- ICC
  - Range 2.3% - 3.3%
  - Average 2.8%
- 24 scenarios
- Similar dependence on suite size (density)
- 100% electric

Sample Steps – Office CZ4

1. ECMs

- GHGIs
  - Range 6.3 – 8.6
  - Average 7.5
- ICC
  - Range -0.6% – -1.0%
  - Average -0.8%
- 16 scenarios
- Approx. 25% - 35% NG, remainder electric
- Some dependence on occupant density (adds approx. 1.3 to GHGI if double density)

2. Partial Heating Fuel Switch

- GHGIs
  - Range 5.0 – 7.0
  - Average 6.0
- ICC
  - Range 0.4 – 0.7%
  - Average 0.5%
- 16 scenarios
- Approx. 20 - 25% NG, remainder electric
- Similar dependence on occupant density

3. Fuel Switch Heating + DHW

- GHGIs
  - Range 2.5 – 3.2
  - Average 2.8
- ICC
  - Range 0.4 – 0.7%
  - Average 0.5%
- 16 scenarios
- 100% electric

Sample Steps – Office CZ7a

1. ECMs

- GHGIs
  - Range 10.8 – 14.1
  - Average 12.4
- ICC
  - Range -0.2% – 0.3%
  - Average 0.1%
- 16 scenarios
- Approx. 40% - 50% NG, remainder electric
- Some dependence on occupant density (adds approx. 1 to GHGI if double density)

2. Partial Heating Fuel Switch

- GHGIs
  - Range 6.7 – 9.1
  - Average 7.9
- ICC
  - Range 1.4 – 1.8%
  - Average 1.6%
- 16 scenarios
- Approx. 23 - 27% NG, remainder electric
- Similar dependence on occupant density

3. Fuel Switch Heating + DHW

- GHGIs
  - Range 2.9 – 3.8
  - Average 3.3
- ICC
  - Range 1.4 – 1.8%
  - Average 1.6%
- 16 scenarios
- 100% electric

Sample Steps – Retail CZ4

1. ECMs

- GHGIs
  - Range 5.9 – 8.0
  - Average 6.9
- ICC
  - Range -1.4% – -3.1%
  - Average -2.2%
- 8 scenarios
- Approx. 20% - 30% NG, remainder electric
- Some sensitivity to space mix/archetype: mall vs big box
  - Mall 7.3 – 8.0
  - Big box 5.9 – 6.5

2. Partial Heating Fuel Switch

- GHGIs
  - Range 3.4 – 3.8
  - Average 3.6
- ICC
  - Range -0.2 - -1.2%
  - Average -0.6%
- 8 scenarios
- Approx. 5 - 8% NG, remainder electric

3. Fuel Switch Heating + DHW

- GHGIs
  - Range 2.6 – 2.8
  - Average 2.7
- ICC
  - Range -0.2 - -1.2%
  - Average -0.6%
- 8 scenarios
- 100% electric

Sample Steps – Hotel CZ4

1. ECMs

- GHGIs
  - Range 17.5 – 23.0
  - Average 20.2
- ICC
  - Range 1.1% – 1.7%
  - Average 1.4%
- 8 scenarios
- Approx. 40% - 60% NG, remainder electric
- Sensitivity to fuel source for laundry (10%+ of energy use)
  - Electric 17.5 - 18.5 GHGI
  - NG 22.0 – 23.0 GHGI

2. Partial Heating Fuel Switch

- GHGIs
  - Range 14.2 – 18.9
  - Average 16.5
- ICC
  - Range 2.4% - 3.0%
  - Average 2.7%
- 8 scenarios
- Approx. 35% - 50% NG, remainder electric

3. Fuel Switch Heating + DHW

- GHGIs
  - Range 4.8 – 4.9
  - Average 4.9
- ICC
  - Range 2.4% - 3.0%
  - Average 2.7%
- 8 scenarios
- 100% electric

Modelling Conditions

- Emissions Factors
  - Consistency over time
  - District heat
  - Renewables
- Backup heat sources, DHW top-up or backup
- DHW savings calculations
  - Method in CoV Modelling Guidelines
- Home cooking loads, fireplaces
  - Method in CoV Modelling Guidelines
- Other Process Loads
  - E.g. swimming pool heating, commercial laundry for hotel,

Part 9

TBA

Thank you!

Thanks Hugo.

Zac
Wondering what levels (or % RNG) we were able to include in the modelling?
I see 15% in slide 5. Was Alex able to include higher blends up to 100%?

Thanks Bea

The regulation to adopt the 2022 requirements, which are expected to be effective December 2022. Previously I had hoped to have that in regulation about 12-months in advance, but this will compress that timeline between adoption and effective date.

Also, what is being delayed until mid-2022 – the whole new version of the *BCBC* – or just the inclusion of the ESC in the *BCBC*?

To: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>
Sent: July 28, 2021 9:41:59 AM PDT

No it didn't go to anyone else. I accidentally missed UDI when I was removing the climate resilience stakeholders and transferring the energy/carbon stakeholders to the other tab.

I am assuming you have already forwarded him the invite.

Can you see where the invite for UDI went? Maybe it went to someone other than Jeff?

ENERGY

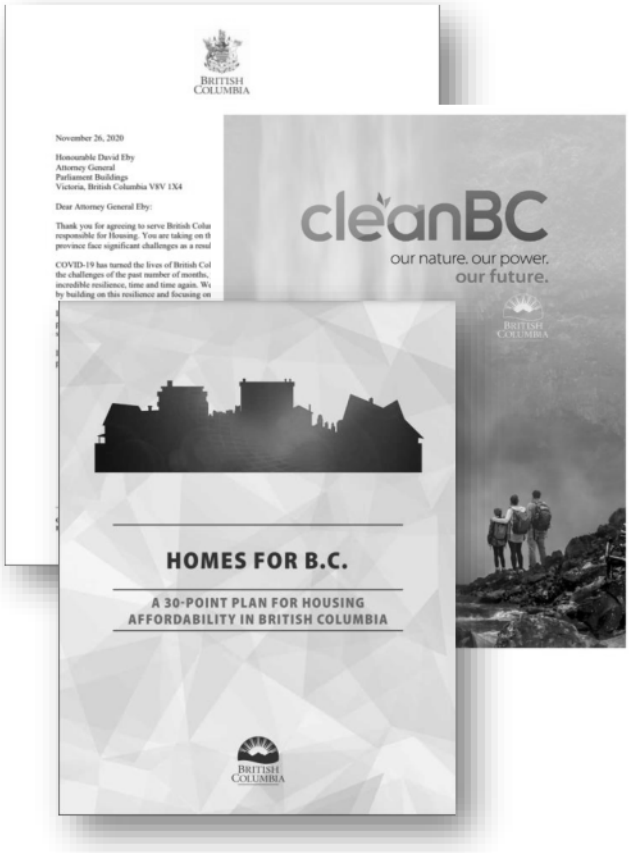
STEPCODE

BUILDING BEYOND THE STANDARD

Carbon Pollution Standards

July 28, 2021

Agenda



Time	Topic	Speaker(s)
09:00	Welcome, Introductions and Opening Remarks	Zachary May, ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs
09:05	Executive Message	Andrew Pape-Salmon, Executive Director, BSSB
09:20	Overall Approach	Zachary May, ESCC Chair
09:40	Metrics Analysis: Options for Part 3 Buildings and Part 9 Buildings	Alex Blue, Evoke Buildings Inc.
10:15	Break	
10:30	Discussion	Zachary May, ESCC Chair + All
11:55	Final Remarks and Next Steps	Zachary May, ESCC Chair
12 noon	Adjournment	

Executive Remarks

Carbon Pollution Standards

Possible technical standard

metric of measurement + steps + any technical conditions

Step	GHGi
1	(measure only)
2	6.0
3	3.0

Table for example purposes only – not a proposed requirement

1) GHGi shall be determined according to the emissions intensities in Division C.

2) GHGi shall be determined using the same operational assumptions used to determine compliance with the energy efficiency requirements of Table 9.36.6.3.

*All non-regulatory requirements can be outlined in a separate guide on a more flexible timeline and with more opportunity to update over time.

Carbon Step Outcomes

Proposed outcomes for GHGi Steps

Step 1 – Measure-only

Step 2 – Reduced Carbon
Decarbonization of either heating or hot water system
Not a prescriptive requirement
GHGi targets are intended to align with this desired outcome, but not explicitly require it to maintain flexibility of a performance-based approach

Step 3 – Near Zero Carbon
Decarbonization of both heating and hot water systems
Not a prescriptive requirement
GHGi targets are intended to align with this desired outcome, but not explicitly require it to maintain flexibility of a performance-based approach
Lack of zero-carbon electricity/fuels makes zero carbon impractical at this time

Emissions Factors

Electricity Emissions Factor Issues

GGIRCA 2019 – 29.9 kg CO_2e/MWh (gross import)

GGIRCA 2020 – 40.1 kg CO_2e/MWh (gross import)

GGIRCA 2021 – net import being examined – not yet calculated

- But will be lower than GGIRCA 2020
- GGIRCA methodology is seeking to account for imports AND exports going forward

City of Vancouver Energy Modelling Guidelines (2018) – 11 kg CO_2e/MWh

2020 BC PSO Methodology – 10.67 kg CO_2e/MWh (BC Hydro)

- 2021 methodology document will reference 2021 GGIRCA number

Emissions Factors

Electricity

2020 GGIRCA EEF is an outlier due to high imports of high carbon electricity.

Proposed approach:

Use 2019 GGIRCA emissions factor of **0.0299 kg CO2e/kWh** for the integrated grid, and **0.560 kg CO2e/kWh** for the Fort Nelson grid.

This is a much higher value than the 0.011 kg CO2e/kWh in the CoV modelling guidelines, but reflects BSSB's commitment to transparent and evidence-based regulation.

Natural Gas

Proposed approach:

Use the emissions factor from the BC 2020 Methodology for reporting emissions of **0.17953 kg CO_2e/kWh**

This is slightly lower than the CoV modelling guidelines value of 0.185 kg CO_2e/kWh

Emissions Factors

Renewable Natural Gas / Hydrogen in the Natural Gas network

No mechanism available that could be referenced in regulation that would demonstrate, pre-occupancy, that a building will use RNG/hydrogen long term.

Proposed approach:

Use **0.17953 kg CO_2e/kWh** for all connections to the natural gas network.

This could be reconsidered in the future if a way to demonstrate use of RNG/hydrogen becomes available and is something able to be demonstrated pre-occupancy.

Other Combustion Fuels

Proposed approach:

BC 2020 Methodology for reporting emissions

Emissions Factors

District Energy

Need to rely on discretion of the AHJ to accept an appropriate emissions factor
Will identify best practices for determining the emissions factor from district energy systems in the updated Best Practices Guide for Local Governments

Affordability

Minimum Energy Efficiency

Part 9 Buildings
"Measure only" requirement available for any energy efficiency step
Minimum **Step 3** energy efficiency as a prerequisite for **any** GHG performance requirement

Part 3 Buildings
"Measure only" requirement available for any energy efficiency step
Minimum **Step 2** energy efficiency as a prerequisite for **any** GHG performance requirement

Need to consider incremental capital impact of requiring highest energy efficiency and GHG steps

Reinforce the value of land use and zoning policies to support the development of new low-energy, low-carbon housing

Public Sector Leadership

What is the Public Sector Doing?

Proposing ambitious GHG emissions performance requirements

Options include electrification and meeting Step Code targets

Proposing they will also need to comply with a Green Building Certification Path

Timelines

Meeting 3 – July 28, 2021
Initial review of emissions, cost, and technical analysis

August 2021
Finalize technical analysis
BSSB to summarize proposed option(s) for review and feedback

September 2021
Finalize proposal and seek consensus endorsement by ESCC

Fall 2021
Proposal to be considered by Ministry of Attorney General and Minister Responsible for Housing

Complete updates to the Local Government Best Practices Guide to support implementation of proposed changes

Subject: Energy Step Code Council meeting (new invite)
When: Wednesday, July 28, 2021 9:00 AM-12:00 PM (UTC-08:00) Pacific Time (US & Canada).
Where: Microsoft Teams Meeting

Update: 7-26-2021: Please see below for an updated videoconferencing link with dial-in option. If you have technical difficulties, please email hugo.wong@gov.bc.ca, or call 236 478 1406.

Hello, members and alternates of the Energy Step Code Council:

This is a calendar hold to discuss GHGs in new construction. Agenda and materials to come.

BC Energy Step Code Metrics Report Update GHG Targets Discussion

1

GHG Steps – Metrics Report Info

July 28, 2021

Part 3

Analysis/approach

Common observations across building types

Sample archetypes/”steps” highlighting technical implications for buildings

Any building types that seem particularly sensitive?

Range of ICC for different steps, and relation to operational costs?

Conditions that should be placed on modelling to ensure outcomes?

Part 9

Analysis/approach

Common observations across building types

Sample archetypes/”steps” highlighting technical implications for buildings

Any housing archetypes that seem particularly sensitive?

Issues with the more limited scope of MEUI? Does GHGi for housing address all loads or just those in MEUI?

Part 3

Low-rise MURB, High-Rise MURB, Office, Retail, Hotel

Click to edit Master text styles

Part 3 Analysis Overview

GHG Emissions Factors

Click to edit Master text styles

Results today are using the Integrated grid 2019 factors (0.03 kg/kWh). Note this is a little under 3x bigger than the CoV factors so for those that may have been working with the CoV factors for a few years, the numbers/targets might look a little different and take different measures to hit these numbers.

5

Electricity (CoV Modelling Guidelines) Electricity (2019 Integrated grid) Electricity (2020 Fort Nelson grid) Natural Gas (Provincial Factors) Natural Gas (15% RNG) 1.0999999999999999E-2 2.9899999999999999E-2 0.56000000000000005 0.19370000000000001 0.16658200000000001

EUI Implications of GHG Targets

*using Integrated grid 2019 electricity factors

MURB – NECB 2015 Baseline, FCs w/ Boiler

Just to throw some numbers and start to see what range could make sense – 1 is not achievable; 3 is right at the low end of TEUI targets so could be reasonable for some archetypes, but would likely require mostly or totally electric. 6 would give some flexibility on fuel mix; achievable for all buildings in all climate zones using fully electric, or can allow for reduced EUI and a mix of nat gas and electric. That might be more appropriate as closer to the upper targets.

Dial in on the next slides.

ECMs and Emissions Factors

Back of envelope using EUI/TEDI targets only

MURB, CZ4

GHGI impact of:

Step 2 to Step 4

Condensing boiler to electric baseboard

NG DHW to electric DHW

Emissions factors >> ECMs

Just using the EUI and TEDI targets for Steps 2 and 4 for CZ4 MURB

Back of the envelope calculation.

What is the GHGI impact of going from Step 2 to 4?

What is the GHGI impact of fuel switching heating (similar efficiency)?

What is the GHGI impact of fuel switching DHW and heating?

Some GHGI reduction from Step 2 to 4, as we would expect!

Particularly significant with higher GHGI fuel source for heating – big heating/TEDI reduction = big GHGI savings.

Bigger impact as we fuel switch with the current emissions factors

So a fully low-GHG fuel building at Step 2 is likely to have lower GHG than a high GHG fuel buidling at Step 4.

Efficiency measures not likely to override emissions factors.

7

Step 2 (Cond. Boiler) EUI TEDI GHGI 130 45 16.818578947368422 Step 4 (Cond. Modelling Conditions

Emissions Factors

Consistency over time

District heat

Renewables

Backup heat sources, DHW top-up or backup

DHW savings calculations

Method in CoV Modelling Guidelines

Home cooking loads, fireplaces

Method in CoV Modelling Guidelines

Other Process Loads

E.g. swimming pool heating, commercial laundry for hotel, cooking for hotel

Click to edit Master text styles

One of the ways consistency of emissions factors over time could be dealt with is the same as LEED does for utility rates, factors can be from anytime during the project's design phase, you just have to keep a record of it.

Or just set numbers and stick to it, and signal changes WAY in advance.

17

Part 9

Click to edit Master text styles

Analysis/Approach

No HTAP results yet…

Using sample end use breakdowns and MEUI Targets

Does not account for potential impacts of % better than EnerGuide target

Click to edit Master text styles

End Use Breakdowns

Step 3, CZ4, MEUI 69, TEDI 36

Step 3, CZ4, MEUI 46, TEDI 37

Step 3, CZ4, MEUI 50, TEDI 27

Small SFD and row house

- larger % of DHW

this means that if we make a fuel switch for around 45-50% of MEUI, we would push DHW over to electric, or space heating to partially electric, for smaller dwellings. For larger, we would be pushing space heating electrification more heavily, since DHW would not be sufficient.

If we were to make a middle step around maybe 75% (threshold to be confirmed based on % backup used in heat pump modeled scenarios)

Idea would be to push small sfd to at least partially electrify both space heating and dhw

Large SFD would potentially get away with just electrifying space heating (almost fully)

20

Small SFD

Space Heating Energy (GJ) DHW Energy (GJ) Ventilation Energy (GJ) 13.67 10.9 0.59

Large SFD

Space Heating Energy (GJ) DHW Energy (GJ) Ventilation Energy (GJ) 72.59 10.9 0.96

Rowhouse

Space Heating Energy (GJ) DHW Energy (GJ) Ventilation Energy (GJ) 103.9 77.599999999999994 5.3

Sample “Steps” and Technology Implications

Size Matters

Different buildings will see different technology pushes based on size

DHW is a larger % of smaller buildings

Option 1 – TEDI and DHW based

Base GHG Steps on TEDI and DHW as a % of MEUI

Set a % of TEDI and DHW that you expect to be low-carbon fuel.

Move heating first = higher targets for small homes, lower targets for large homes

Variation between MEUI/TEDI step levels currently –

Potentially choose GHG targets based on Step 3 ECMs for lower target, Step 4 ECMs for middle target, Step 5 ECMs for upper target

Or increase stringency of lower target so it requires either some ECMs beyond Step 3 or some specifically targeted GHG savings

Sample “Steps” and Technology Implications

Option 2 – MEUI based

Base GHG Steps on MEUI

Set a % of total MEUI that you expect to be low-carbon fuel.

Smaller variation between small and large homes GHGI targets, small homes still higher targets than large homes

If you set % around the space heating % of small homes (~55%), you would be likely to exceed that in large homes if

you switch space heating to electrification, whereas small homes may struggle.

If you set % around the DHW % of small homes (~45%) they would have two options for system electrification (DHW or heating) whereas large homes would have to at least partially electrify space heating, which is a larger system for them (may lead to larger homes overshooting the target as you're not as likely to electrify 60% of your heating, but would give smaller homes more options.)

Modelling Issues

There is a "mismatch" when using a heat pump in the Proposed House. In HOT2000 you have to specify both the heat pump and the "back up" heating system, called "Type 1" and "Type 2" parts of the space heating system when specifying a heat pump. Type 1 is the back up heat; Type 2 is the heat pump. The Reference House will match the "Type 1" part only, which is NOT the heat pump but the backup furnace. This is a HOT2000 discrepancy as far as I understand it; this does not follow the "Reference House" definition at least in the BC version of Section 9.36 which is "supposed" to match the Federal version of 9.36.

Thank you!

Jeff/UDI - GHG work - questions

From: Andersson, Dale OHCS:EX <Dale.Andersson@gov.bc.ca>
To: Wong, Hugo OHCS:EX <Hugo.Wong@gov.bc.ca>, Williams, Scott B OHCS:EX <Scott.B.Williams@gov.bc.ca>
Cc: Jeff Fisher <jfisher@udi.org>
Sent: July 28, 2021 4:31:06 PM PDT

HI Hugo and Scott,

Just had a call from Jeff/UDI (cc'd) who is wondering:

1. **When we anticipate having consultation info about the GHG proposal for Jeff to share with his members**. I believe Zac thought that would be later in August, but I don't think we have a firm date yet, do we? If possible, Jeff would like to share in the UDI newsletter that comes out every second Tuesday – e.g., Aug. 9, 24, etc.
2. **GHG analysis: Do costs include BC Hydro connection costs?** And if so, what kind of connection cost?
    a. Jeff explained that most projects pay a 'standard' connection cost but periodically, such as when a new connection means a substation needs an upgrade to accommodate the new demand, the developer has to pay for that as well, and it's a random/unknown but significantly higher cost they don't know about until they get the bill from Hydro.

Jeff is away next week so I said we'd get back to him after that.

Cheers.

Hi Zac,

Your group is doing a fantastic job evolving this GHG Step Code. It's a tricky endeavour, especially with lively side shows like emissions factors, overheating, capital cost implications, provincial code harmonization, etc.

I wanted to throw in my $0.02 regarding the three proposed steps (Step 1: calculate, Step 2: 6, Step 3: 3). We believe, based on discussions with several local governments, that there should be a fourth step with a GHGI of 1. A GHGI of 1 will allow LGs to better align their GHG reduction goals with the urgency of the climate crisis and the GHG reductions that scientific evidence suggests is required of society. The 2019 GGERCA emissions factor will make this challenging in the short term so GHG Step 4 won't likely be picked up by any LGs right away. As the EF settles down to (hopefully) a lower value, possibly as the result of the Clean Electricity Standard or by allowing exports to be counted against imports of electricity for the EF, the GHGI = 1 target will be more realistic, especially with the increasingly stringent ESC minimums that the CleanBC plan has charted between now and 2032.

Basically, we're suggesting that a GHGI=1 target be available for future use, despite the fact that it won't be used much in the short-term. Including it in the GHG Step Code signals a clear intent and allows the industry to warm up to the concept and prepare for the task.

Proposed CleanBC Plan amendment to include GHGI minimums:

2024: step 2 = 6
2028: step 3 = 3
2032: step 4 = 1

This gives LGs about two years to implement S1.

Happy to discuss further if you have the time.

Roberto

Hi Bea,

That would be helpful.
By way of this email I will ask Hugo to set up a meeting when I'm back the week of the 9th. I would like to work on a list of the specific variables that would be useful for you so we can prioritize the most useful analysis.

Best,

Zachary D. May
Director, Strategic Policy
Building and Safety Standards Branch

Hello members of the Metrics Research Report Steering Committee,

We are making progress! Please find a link below to a final report that is still in progress. The link includes a report and the Part 3 spreadsheets, **with Part 9 data to come.** We thought we'd provide this material now so you could start to review it, but please note it is incomplete.

BC Energy Step Code Metrics Report Update

I will also put a copy of the report (the PDF document) in the Teams channel. You are welcome to provide comments in Teams but feel free to wait until the Part 9 content is also available.

Please keep these materials for your internal review only at this point; further direction will come (after Aug. 9) when the Part 9 data is ready . Please anticipate a meeting sometime in August.

Thank you and hope everyone enjoys a safe time this coming holiday weekend.

Kind regards,

Dale

Hi Michael,

Apologies for the deadly—been away.

Minor update to my text proposed. If it's already gone out, nbd.

Maxwell Sykes will discuss how local governments may apply the GHG performance standards as well as the issues that were considered in contributing to its development and that should be considered in approaches to implementation.

Hi Patrick,

Thanks for the clarification. I believe I have it right now, here's the writeup:

Join our expert panel on September 13th for a breakfast seminar to update you on **important changes to the BC Energy Step Code** and **City of Vancouver Sustainability Policies**.

The Province is moving forward with a Mandate Letter commitment to establish voluntary **greenhouse gas emissions targets** that local governments can apply to new construction, which will be integrated into the *BC Energy Step Code*. The City of Vancouver will also provide an update on their green building policies.

Key topics include:

- Zachary May will outline how these proposed changes to the BC Building Code may impact your projects as well as provide an update on other Building Code issues.

- Maxwell Sykes will discuss about how many local governments plan to utilize these proposed greenhouse gas targets.
- The City Vancouver will share it's experience to date with greenhouse gas targets and the Zero Emissions Building Plan, as well as updates on buildings and the Climate Emergency Action Plan.

I will wait for others to chime in before resending another test eblast.

[Hope calendar invite is properly attached this time.]

Hello MBAR Community,

I hope you are all managing as well as you could with the pandemics, wildfires, heat waves, droughts, evacuations, and their impacts on your communities and the people that you serve.

Please join us on August 25 from 1:30-2:45pm for an online MBAR Stakeholder Engagement Session. Please accept the attached invitation and forward to others who should be involved.

There will be a series of updates and announcements from BC Housing and others within the community. We'd also love to get your thoughts on the topics for upcoming 'Co-Learning' sessions planned for Sept 2021 to May 2022.

As usual, we'll provide space for networking to allow you to speak with—and get to know—others in the group.

Agenda:

- Opening
- Report-back from MBAR Engagement sessions Oct-Dec 2020
- Next steps for the MBAR Community
- Networking and Discussions
- Input on upcoming 'Co-Learning' sessions
- Announcements
    - MBAR Library
    - Provincial Adaptation Strategy
    - IBAMA Framework and Vienna House Pilot
    - Other
- Closing

Note: We'll update this invite with the access link.

Thank you, Huy chexw & Hay ce:p q̓ə,

Wilma

In the spirit of honouring the truth, I acknowledge that I live and work on the shared, ancestral and unceded homelands of the hən̓q̓əmin̓əm̓ and Sḵwxwú7mesh-speaking people. I am also hoping for the opportunity to reconcile with all our relations.

- update on PSC support and UR Global (2022)
- what have I missed?

Look forward to connecting with many of you tomorrow (or the few of you who may not be on vacation:))
♡

URBCx 2021 Regional Resilience Roundtable
October 7th
DRAFT Agenda

9am: Welcome, Reflections, Context

Kamala Todd (Metis-Cree community planner, educator, curator and filmmaker, adjunct professor at SFU and UBC) Including reflections on the 2020 theme of active hope, resilience planning with CoV, and the first National Day for Reconciliation and what UNDRIP and DRIPA implications are for land use and community planning in BC in a time of increasing risks

& Josie Osbourne (Minister, MUNI)
Reflections on the Vancouver Island and Coastal Community's Climate Leadership Plan, Tofino efforts to better understand costal risks and manage them, the interplay between local and provincial efforts to manage climate and disaster risk

9:20am: Jessica Shoubridge (URBC Program Lead 2016-present) UR overview (global to local) and the risk and risk reduction landscape in BC (repeat themes of action items across plans and strategies: CPAS, AG Report, seismic ones, URBC action items, etc.).

- Overview of the agenda / housekeeping (Facilitator support)

Ignite Talks- Understanding, Analyzing and Communicating Risk

9:30am – Intro/context (JS)
What is a 'hazardous area' in Southwest BC? Who defines risk tolerance thresholds?
In Southwest BC, many of the same lands are exposed to numerous hazards, e.g. liquefaction, subsidence, flooding, etc. These presentations and discussions will explore multi-hazard considerations and integrated risk assessment with a focus on major hazards of concern in Southwest BC such as wildfire, seismic and flooding but also other hazards such as intense precipitation, slope stability and extreme heat that are of concern across BC. How we best analyze and communicate the results of risk assessments to inform and drive risk reduction ab d resilience building actions?

Commented [j1]: Can also add a BCREA flood mapping inventory piece here

- 9:35 - Regional microzonation mapping for the Lower Mainland (Robert, Meredith, Sheri?)
- 9:40 - West End seismic hotspot analysis (S. Chang & C. Molina Hutt)
- 9:45 - Lower Mainland Flood Management Strategy (Steve & Frances, Fraser Basin Council)
- 9:50- Showcase examples of collaboration with BC First Nations in risk assessment/analysis (Tamsin Lyle & Fiona Dercole)

Commented [j2]: • (Tamsin is likely flood, cannot recall Fiona's example- debris flows?)

10:00am Break with Song

- 10:15 - Subregional assessment of subsidence/uplift as contributing factor in SLR assessment (COV, Surrey, Port- Angela, CoV?)

- 10:20 - Risk tolerance criteria: examples from practice in BC: DNV landslide and BGC quantitative risk assessment updates for Cheekeye Fan (Kris Holme, BGC & Fiona Dercole, RDK)
- 10:35 - Financial risk assessment/analysis and work with the CCRI (William Philips, Mott MacDonald)

10:45am FACILITATED DISCUSSION

11:15 am Break with Song

Ignite Talks- Reducing Risk and Building Resilience

11:30am – Intro/context (JS)
How do risk reduction and resilience considerations vary by scale & timing of development? What measures are applicable and helpful at the parcel level, neighbourhood, community and regional scales? For existing development or new development? How do we enhance collective efforts to reduce existing risk and prevent new risk creation via more risk-sensitive development?

- 11:35 - Regional governance function via land use planning and asset management, subdivision approving function (MOTI rep)?
- 11:40- COV Large Site Rezoning Resilience Considerations (Case Study- Tamsin Mills)
- 11:45- How post-disaster is often a window of opportunity to apply transfer of density approaches- pre-disaster vs. post disaster transfer of density considerations, Pre-disaster Recovery Planning (PDRP) for the Fraser (case study) (Jessica Shoubridge &Paul Kovacs, ICLR)
- 11:55- Timing of when land is purchased/acquired, proformas developed and hazard and risk policy interventions occur, Assessment of property portfolio risks (Quadreal & Ebbwater)

12:05pm Break

- 12:30- Coastal Flood Guidelines & National Code (Enda Murphy)
- 12:35- Working to integrate hazard and risk information into built environment transformation, from seismic to thermal comfort, education and engaging with trades (Wilma, MBAR, BC Housing)
- 12:40- The role of regional planning in stopping new risk: Regional Growth Strategy (RGS) Update- hazard and risk policies (James and Edward)
- 12:45- Fire following earthquake and related built environment improvements for Vancouver (ICLR, Paul, Glenn?)
- 12:50- Provincial CPAS and EPA modernization elements that relate to theme of shifting development decision making and patterns in hazardous areas (reps from CAS and EMBC/MUNI??)
- 1pm- Challenges with retreat // relocation, Successes with parcel level resilience measures as well as the multi-hazard imperative (Matt Osler, City of Surrey)

Commented [j3]: cover some slope stability/ intense precip here?

Commented [j4]: Need architects!! See JC references

Commented [j5]: Longer break here for lunch opportunities (25 mins)

1:05pm FACILITATED DISCUSSION

1:35 Break

<u>Ignite Talks- Finance, Funding and Incentivization</u>

1:50pm – Intro/context (JS)
How can risk-based insurance and mortgages support risk reduction and resilience building? What is the role for national and provincial guidelines (e.g. seismic and flood) vs. incentivization- what works, how do they best work together? What are the increasing pressures and opportunities re: local and provincial credit ratings, resilience ratings for buildings, TCFD disclosures, etc. There is increasing concern from the global financial community but also increasing opportunity, highlighted via initiatives like Climate Bonds (CBI).

- 1:55- The challenge of local authority reliance on property tax in Canada and sustainable alternatives (Deb Harford?)
- 2pm- Resilience ratings for buildings as a driver for market transformation (Evan Reis, USRC)
- 2:05- Update on National Flood Program for High Flood Risk Properties? (Rob DePruis, IBC)
- 2:10- Liability considerations & legal solutions (Anton Tabun, Manifest Climate)
- 2:15- Finance solutions- PACE and PACE for resilience (George Benson, VEC)
- 2:20- Finance solutions- Bonds for Buildings (Ujala, CBI)

2:25pm FACILITATED DISCUSSION

2:45pm Closing & Gratitude
Synthesis of opportunities and challenges

3pm DONE

Partner events:

- October 8th, VEC/Pembina/UK Consulate, Climate Financial Risk and Resilience Workshop
- October 14th (TBC), UDI Breakfast Seminar
- TBC, Fraser Basin Council, Regional Flood Strategy- Focus on Planning & Development
- TBC, PACE Canada, Webinar re: PACE For Resilience

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Notes

Date and Time of Meeting: Wednesday June 9, 2021 | Time: 1:00 p.m. to 4:00 p.m. Pacific Time
Chair: Zachary May, Building and Safety Standards Branch, Attorney General and Minister Responsible for Housing
Co-Vice Chairs: Bob Deeks, CHBA BC/RDC Fine Homes and Robyn Wark, BC Hydro
Virtual Microsoft Teams meeting

Participants

1. Bea Bains, FortisBC
2. Tom Berkhout, BC Hydro (for Robyn Wark)
3. Patrick Caraher, AHMA
4. Jay Chadha, HAVAN (for Diana Dilworth)
5. Remi Charron, BC Housing
6. Maya Chorobik, LGPN, Community Energy Association
7. Norm Connolly, Part 3/Part 9 Non-Residential Subco, PIBC
8. Patrick Enright, City of Vancouver
9. Catherine Ernst, BOABC
10. Jeff Fisher, UDI
11. Sara Fralin, AHMA
12. Joe Hart, CHBA-BC
13. Nicholas Heap, City of Richmond
14. Brian Jung, BCNPHA (for Ian Cullis)
15. Toby Lau, Part 3 Part 9 Non-Residential Subco, BC Hydro
16. Wilma Leung, BC Housing
17. Richard Mathews, District of Squamish and Part 9 Residential co-chair
18. Katherine Muncaster, EMLI (for Nat Gosman)
19. Roberto Pecora, ZEBx
20. Laura Sampliner, LGPN co-chair, City of Port Moody
21. Muneesh Sharma, BOMA
22. Maxwell Sykes, City of Surrey, UBCM
23. Ralph Wells, UBC (for John Madden)
24. Guido Wimmers, UNBC
25. BSSB: Scott Williams, Hugo Wong, Dale Andersson

26. **Guests:** Tom Berkhout, BC Hydro; Alexandre Bigonesse, NRCan; Alex Blue, Evoke Buildings; Curt Hepting, EnerSys Analytics Inc.; Daisy Lilley, ENV; Lisa Mak, BC Hydro; Brendan McEwan, AES Engineering; Adrian Mohareb, ENV; Andrew Pape-Salmon, BSSB; Victoria Richards, BC Hydro; Tanya Rumak, FortisBC; Pauline Rupp and Carmina Tupe, CHBA BC; Adrian Mohareb, Climate Action Secretariat; Holly Wacker, MUNI

27. **Regrets:** Ian Cullis, BCNPHA; Diana Dilworth, HAVAN; Robyn Wark, BC Hydro; Lisa Mak, BC Hydro; Tyler Wightman, BOABC

1. **Introduction from Zachary May, Chair, Energy Step Code Council Chair and Director, Strategic Policy, Building and Safety Standards Branch**
   - The meeting served as an opportunity to report on progress on the GHGi work, and receive an update from Evoke Buildings Inc. which is leading the metrics research analysis project.

2. **Message from Andrew Pape-Salmon, Executive Director, Building and Safety Standards Branch**

   Andrew provided information on government priorities and plans, including:
   - Affordable housing is a key government priority.
   - The 30-point housing plan may be refreshed; there is a focus on housing for the 'missing middle.'
   - Government is refreshing CleanBC by creating a Roadmap to 2030, including a pathway for new and existing buildings, with a 'buildings' consultation session to be held August 4.
   - The Reconciliation Agreement on Construction Codes will shift code development processes.
   - The importance of reconciliation with Indigenous peoples.
   - Questions from Council members focussed on:
     - Overheating and the code, given the recent heat dome
     - National harmonization affecting B.C.'s leadership on code matters
     - A five-year cycle being too long to address issues
     - B.C.'s sectoral targets for buildings

3. **Presentation from Zachary May**
   - Zac provided an overview of a *possible* technical approach for a voluntary carbon pollution standard for local government adoption for *operational* carbon:
   - Step 1: Measure only
     - Step 2: 6.0 GHGi = reduced carbon
     - Step 3: 3.0 GHGi = near carbon zero
   - Discussion with Council members focussed on:
     - Emissions factors
       - Further work is needed, but GGIRCA 2019 seems most reasonable
       - Calculating RNG emissions is challenging as there is currently no way to guarantee a consumer would use RNG
     - The desired to include embodied carbon, not just operational carbon (this is not in the regulation for this fall, but will continue to be part of the discussion)
     - GHGi as part of, or separate from, the Step Code
     - Energy generation policy (outside the scope of this work)
     - Initial metrics report findings – see presentation from Alex Blue later in the meeting
   - Andrew Pape-Salmon noted that further to the discussion on affordability and land-use planning, it is the Province's goal that local governments that require carbon performance will enable increased density without lengthy and detrimental rezoning negotiations and

public hearings. The increased fuel cost of operating a low-carbon building can be compensated by enabling density. This is not about approving larger houses as is the case in one municipality, but rather increasing the number of residential units. We will be monitoring the extent to which local governments are approving density in the context of carbon pollution standards and will consider policy responses if challenges arise.
- The GHGi discussion was suggested as an appropriate 'deep dive' for the local government peer network when the standards are publicized.

4. **Presentation from Alex Blue, Envoke Buildings**
   - Alex Blue of Envoke Buildings Inc., in collaboration with Einar Halbig of E3 Eco Group, was engaged to update the Metrics Report that will assist in determining Step Code metrics for BCBC 2022.
   - Alex provided an overview of the study findings for Part 3 buildings; data for the Part 9 analysis is still pending (see PPT presented by Alex for details).
   - Discussion with Council members focussed on emissions factors used in the analysis, the energy conservation measures used; overheating; CEDI (cooling energy demand intensity).

5. **Timelines**
   - We are aiming for the metrics/technical analysis to be finalized in August after which we will hold a meeting late August (note: this is now moved to September).
   - In September: BSSB will provide Council with policy options that can be shared with your members for feedback, to finalize a proposal by end of the month.
   - Fall: BSSB to prepare a proposal for the regulation for the Minister's consideration.

6. **Meeting adjourned at 4:00 p.m.**

Scheduling for Sept. plus follow-ups

Hello, Energy Step Code Council members:

I hope you've been having a wonderful summer. I wanted to provide some information on work to date, and schedule two meetings in September.

The first, on the week of Sept. 6, is intended to focus on regular Council business, as we have not discussed that in some time. The second, on the week of Sept. 20, is intended to come to consensus on an approach to opt-in carbon pollution standards for local governments.

Please fill out this Doodle poll to indicate your availability: **https://doodle.com/poll/zyzkkr5rebgu9euy?utm_source=poll&utm_medium=link**

Our goal at BSSB is still to provide some written documentation to you so you can consult with your members on how the options might affect them. We are still developing them, and appreciate that you've been very patient with us!

If you're interested in participating in an ad-hoc group to form research questions and dive deeper into the data that informs these GHG options, please let me know. We will eventually come up with one-page info sheets on common building archetypes for you to disseminate to your members by early September.

Thanks very much.

Hello again,

Further to the below, as we're still waiting for the Part 9 analysis, we would appreciate **comments on the Part 3 analysis in the draft report by Friday August 27, 2021**. Please comment using the **Teams Channel if you can**. If not, please email me and Scott.

This is the link to the draft report in PDF format in Teams. (You can also find it at the link below.)

I will see if Alex can provide a Word version I can upload to Teams as that's easier to comment in – please stay tuned.

We'll get back to you re: Part 9 as soon as we can. Thank you.

Kind regards,
Dale

Subject: Metrics Research Steering Committee - Partial reports available

Hello members of the Metrics Research Report Steering Committee,

We are making progress! Please find a link below to a final report that is still in progress. The link includes a report and the Part 3 spreadsheets, **with Part 9 data to come.** We thought we'd provide this material now so you could start to review it, but please note it is incomplete.

BC Energy Step Code Metrics Report Update

I will also put a copy of the report (the PDF document) in the Teams channel. You are welcome to provide comments in Teams but feel free to wait until the Part 9 content is also available.

Please keep these materials for your internal review only at this point; further direction will come (after Aug. 9) when the Part 9 data is ready . Please anticipate a meeting sometime in August.

Thank you and hope everyone enjoys a safe time this coming holiday weekend.

Kind regards,

Dale

Subject: Metrics report - Jeff's comments from call Aug 19, 2021

Hi Jeff,

Thanks for your call just now. Noting your comments and questions here for Scott (and ultimately Alex). I'll chat w Scott and we will follow up if we have questions. Enjoy your week off next week and we'll chat when you're back.

Scott: My notes from Jeff's call – what you can't decipher I can explain.

1. Plain-language communications needed.
2. Glossary needed – many acronyms
3. Appendices impossible to decipher = not clear what they mean, e.g. NECB 2015 vs 2020 (what does that mean?)
4. Top 10 approaches – what are each of the 10 approaches? What are they for each item for the top 10? e.g., what measures were used in the 10 that were part of the top 10. Including this makes easier for developer/public to see what options are (e.g., 20% glazing might not fly w a LG design panel). Would be helpful to include details of the top 10 to know the options are realistic.
5. Questions: How metrics rpt work w GHG work for LGs? Will there be a separate report for that? Dale's answer: No. Jeff: it could come up at UDI's Sept 13 webinar.
6. Questions: Weather files used for Okanagan was Summerland. For South Coast Vancouver was used. Why Summerland rather than Kelowna? If most development was in Kelowna, should have used Kelowna (but they are close together to may not mean much difference).
7. Questions: Final costing #s in report: Does that include cooling costs? Dale not sure ???? Jeff – if cooling will soon be included in BCBC, costs would be helpful if included in analysis
8. Fort Nelson – Exemption for this region? GHG requirements difficult here – unique circumstances. Doesn't affect UDI members but hard for 'south coast' to tell the north what to do. Might be better to fix grid rather than buildings in this area.
9. Emissions factors – agree w Patrick Enright. Wary of huge GHG changes/modelling guidelines changes as Hydro committed to getting grid to zero. So why make adjustment to modelling guidelines etc. if Hydro making changes when many buildings will come online in the next 3 to 4 years.
10. Cooling related issue: If Prov has a cooling requirement, then need to address DE. Cooling makes ASHPs more viable. Most DE systems can't supply cooling so DE connections everyone will require cooling. Need serious DE discussion.
11. Questions: Do we have to worry about data centres? They will require a lot of energy. What gets counted in terms of who tenants are for industrial and commercial types of buildings? NEED TO CONFIRM.

Kind regards,
Dale

Subject: RE: Metrics report - Jeff's comments from call Aug 19, 2021

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Thanks Dale, I added a few comments.

The only other issue I would add is the question that was raised at the *Roadmap to 2030* meeting held earlier this month. Given the short timeframes that the Province is moving forward with to reduce Greenhouse Gas (GHGs) to net-zero, we should discuss whether or not we need to make regulatory changes for local governments to do so. They can and are now reducing GHG emissions through the *Energy Step Code* (*ESC*) by reducing the step requirement if the operational GHGs are lowered for a project – which UDI supports. Our time may be better spent figuring out the roadmap on how the Province should move forward with its own GHG policy. When the *ESC* was approved, we had 15 to 20 years before the Province promised to mandate net-zero energy buildings, so it made more sense to allow local governments to proceed faster if they wished. We are looking at half the time now for a similar mandate province-wide to move to net-zero GHG emissions for new buildings.

Subject: Metrics report - Jeff's comments from call Aug 19, 2021

Hi Jeff,

Thanks for your call just now. Noting your comments and questions here for Scott (and ultimately Alex). I'll chat w Scott and we will follow up if we have questions. Enjoy your week off next week and we'll chat when you're back.

Scott: My notes from Jeff's call – what you can't decipher I can explain.

1. Plain-language communications needed. Maybe have a communications person take a look at it because builders and local governments from jurisdictions that are unfamiliar with or are not fans of the *ESC* will be reviewing this. We also need to clearly communicate the cost implications for the GHG reductions to everyone.
2. Glossary needed – many acronyms
3. The tables in the appendices impossible to decipher = not clear what they mean, e.g. NECB 2015 vs 2020 (what does that mean?). I had two of my Building Code Committee members review the tables and they could not understand the top line (in black) with "Proposed Design", "NECB 2015 Baseline", and "NECB 2020 Baseline" because it did not seem to link to anything on the page.
4. Top 10 approaches – what are each of the 10 approaches? What are they for each item for the top 10? e.g., what energy conservation measures were used in the 10 that were part of the top 10. Including this makes easier for developer/public to see what options are (e.g., 20% glazing might not fly w a LG design panel or natural gas equipment in a municipality that is restricting GHG emissions). Would be helpful to include details of the top 10 to know the options are realistic.
5. Questions: How metrics rpt work w GHG work for LGs and the 2030 Roadmap? Will there be a separate report for that? Dale's answer: No. Jeff: it could come up at UDI's Sept 13 webinar. Will Zachary address the Provincial and Municipal GHG regulatory approaches being considered at the UDI webinar?
6. Questions: Weather files used for Okanagan was Summerland. For South Coast Vancouver was used. Why Summerland rather than Kelowna? If most development was in Kelowna, should have used Kelowna (but they are close together to may not mean much difference).
7. Questions: Final costing #s in report: Does that include cooling costs? Dale not sure ???? Jeff – if cooling will soon be included in BCBC, costs would be helpful if included in analysis
8. Fort Nelson – Exemption for this region? GHG requirements difficult here – unique circumstances. Doesn't affect UDI members but hard for 'south coast' to tell the north what to do. Might be better to fix grid rather than buildings in this area.
9. Emissions factors – agree w Patrick Enright. Wary of huge GHG changes/modelling guidelines changes (given the other changes to the ESC that are being contemplated) as Hydro committed to getting grid to zero. So why make adjustment to modelling guidelines etc. if Hydro making changes when many buildings will come online in the next 3 to 4 years.
10. Cooling related issue: If Prov has a cooling requirement, then need to address DE. Cooling makes ASHPs more viable. Most DE systems can't supply cooling so DE connections will be mandated plus there will be requirements for everyone to have cooling systems. Need serious DE discussion.
11. Questions: Do we have to worry about data centres? They will require a lot of energy. What gets counted in terms of who tenants are for industrial and commercial types of buildings? NEED TO CONFIRM. This is important because tenancies change during the life of the a building. A regular office tenant may be replaced with game studio. Sometimes, our members don't know who their tenants will be when they are constructing a commercial/industrial building.

Kind regards,
Dale

Good morning everyone,

Thank you all for taking part in the upcoming webinar discussing ESC and COV updates. I would like to take this opportunity to e-introduce myself, I have just joined the UDI team as the Director, Professional Development and will be overseeing the learning and events programming.

Patrick, would you be able to provide the name, title, and a photo of the City of Vancouver panelist by 1pm this afternoon so we may update this information for the event and include it in our second email blast to promote the event?

Thank you all so much for your participation and I look forward to working with you on this event.

Kind regards,

Verna

Hi Patrick,

Thanks for the clarification. I believe I have it right now, here's the writeup:

Join our expert panel on September 13th for a breakfast seminar to update you on **important changes to the BC Energy Step Code** and **City of Vancouver Sustainability Policies**.

The Province is moving forward with a Mandate Letter commitment to establish voluntary **greenhouse gas emissions targets** that local governments can apply to new construction, which will be integrated into the *BC Energy Step Code*. The City of Vancouver will also provide an update on their green building policies.

Key topics include:

- Zachary May will outline how these proposed changes to the BC Building Code may impact your projects as well as provide an update on other Building Code issues.
- Maxwell Sykes will discuss about how many local governments plan to utilize these proposed greenhouse gas targets.
- The City Vancouver will share it's experience to date with greenhouse gas targets and the Zero Emissions Building Plan, as well as updates on buildings and the Climate Emergency Action Plan.

I will wait for others to chime in before resending another test eblast.

Hi Sarah:

I received the following from OMTI this morning:

"For validators, I'd recommend:

Brian Frankel, current UBCM president: bfrenkel13@gmail.com
Anne McMullin, President UDI: AMcMullin@udi.org

I would prioritize Brian Frankel since this is about local governments."

Please let me know if there's anything else I can assist with.

Thanks!
Melanie

Thanks Dale, I added a few comments.

The only other issue I would add is the question that was raised at the *Roadmap to 2030* meeting held earlier this month. Given the short timeframes that the Province is moving forward with to reduce Greenhouse Gas (GHGs) to net-zero, we should discuss whether or not we need to make regulatory changes for local governments to do so. They can and are now reducing GHG emissions through the *Energy Step Code* (*ESC*) by reducing the step requirement if the operational GHGs are lowered for a project – which UDI supports. Our time may be better spent figuring out the roadmap on how the Province should move forward with its own GHG policy. When the *ESC* was approved, we had 15 to 20 years before the Province promised to mandate net-zero energy buildings, so it made more sense to allow local governments to proceed faster if they wished. We are looking at half the time now for a similar mandate province-wide to move to net-zero GHG emissions for new buildings.

Hi Jeff,

Thanks for your call just now. Noting your comments and questions here for Scott (and ultimately Alex). I'll chat w Scott and we will follow up if we have questions. Enjoy your week off next week and we'll chat when you're back.

Scott: My notes from Jeff's call – what you can't decipher I can explain.

1. Plain-language communications needed. Maybe have a communications person take a look at it because builders and local governments from jurisdictions that are unfamiliar with or are not fans of the *ESC* will be reviewing this. We also need to clearly communicate the cost implications for the GHG reductions to everyone.
2. Glossary needed – many acronyms
3. The tables in the appendices impossible to decipher = not clear what they mean, e.g. NECB 2015 vs 2020 (what does that mean?). I had two of my Building Code Committee members review the tables and they could not understand the top line (in black) with "Proposed Design", "NECB 2015 Baseline", and "NECB 2020 Baseline" because it did not seem to link to anything on the page.
4. Top 10 approaches – what are each of the 10 approaches? What are they for each item for the top 10? e.g., what energy conservation measures were used in the 10 that were part of the top 10. Including this makes easier for developer/public to see what options are (e.g., 20% glazing might not fly w a LG design panel or natural gas equipment in a municipality that is restricting GHG emissions). Would be helpful to include details of the top 10 to know the options are realistic.
5. Questions: How metrics rpt work w GHG work for LGs and the 2030 Roadmap? Will there be a separate report for that? Dale's answer: No. Jeff: it could come up at UDI's Sept 13 webinar. Will Zachary address the Provincial and Municipal GHG regulatory approaches being considered at the UDI webinar?
6. Questions: Weather files used for Okanagan was Summerland. For South Coast Vancouver was used. Why Summerland rather than Kelowna? If most development was in Kelowna, should have used Kelowna (but they are close together to may not mean much difference).
7. Questions: Final costing #s in report: Does that include cooling costs? Dale not sure ???? Jeff – if cooling will soon be included in BCBC, costs would be helpful if included in analysis
8. Fort Nelson – Exemption for this region? GHG requirements difficult here – unique circumstances. Doesn't affect UDI members but hard for 'south coast' to tell the north what to do. Might be better to fix grid rather than buildings in this area.
9. Emissions factors – agree w Patrick Enright. Wary of huge GHG changes/modelling guidelines changes (given the other changes to the ESC that are being contemplated) as Hydro committed to getting grid to zero. So why make adjustment to modelling guidelines etc. if Hydro making changes when many buildings will come online in the next 3 to 4 years.
10. Cooling related issue: If Prov has a cooling requirement, then need to address DE. Cooling makes ASHPs more viable. Most DE systems can't supply cooling so DE connections will be mandated plus there will be requirements for everyone to have cooling systems. Need serious DE discussion.
11. Questions: Do we have to worry about data centres? They will require a lot of energy. What gets counted in terms of who tenants are for industrial and commercial types of buildings? NEED TO CONFIRM. This is important because tenancies change during the life of the a building. A regular office tenant may be replaced with game studio. Sometimes, our members don't know who their tenants will be when they are constructing a commercial/industrial building.

Good Afternoon,

Thank you all once again for joining us in discussion on **The Green Building Climate: ESC & CoV Updates**. As September is fast approaching, we would like to set-up a pre-meeting to discuss the event in more detail including event format and rundown as well as review the topics of discussion.

Please let me know if you would be available to join us on any of the following dates/times:

Tuesday, August 31: 3pm
Thursday, September 2: 1 pm
Tuesday, September 7: 11 am

Good Afternoon,

Thank you all once again for joining us in discussion on **The Green Building Climate: ESC & CoV Updates [udi.memberzone.com]**. As September is fast approaching, we would like to set-up a pre-meeting to discuss the event in more detail including event format and rundown as well as review the topics of discussion.

Please let me know if you would be available to join us on any of the following dates/times:

Tuesday, August 31: 3pm
Thursday, September 2: 1 pm
Tuesday, September 7: 11 am
Wednesday, September 8: 9 am or 1 pm

Kind regards,

Hi Verna,

Below is my current availability for those times:

- Tuesday, August 31: 3pm – Yes, if necessary
- Thursday, September 2: 1 pm – Yes
- Tuesday, September 7: 11 am – Yes
- Wednesday, September 8: 9 am – Yes
- Wednesday, September 8: 1 pm – Yes

Do you expect us to be ready to speak to everything we will present?

Thanks
Max

Thanks

We need to get organized in terms of the format, I am still unclear as to how to formulate the presentation.

I thought we had set a meeting time to discuss, but don't see it. Can we find a time.

BTW I don't have a contact for Sheryl Peters – hence she is not copied, but should be in our discussions.

Subject: UDI Introductions + Sept 28 Mass Timber Webinar

Good afternoon Andrew,

Thank you for joining us for the upcoming Advancing Mass Timber in BC breakfast webinar on September 28.

I have recently joined the UDI team as the new Director of Professional Development & Programming. I look forward to virtually meeting you at the pre-event session scheduled for Tuesday, September 14 to further discuss the webinar format and rundown as well as review the topics of discussion. In the meantime, please let me know if there is anything I could be of assistance to.

I hope you have a wonderful rest of the week!

Kind regards,

Verna

Verna Yu | Director of Professional Development & Programming
Urban Development Institute

Proposed agenda (subject to change) to include:

* Brief status update on GHG work and Metrics report
* Presentation from Industry Capacity Readiness Report team (SCIUS and Delphi)
* Update from the subcommittees
* Roundtable on Energy Step Code implementation

We've booked three hours, but may conclude earlier.

Microsoft Teams meeting

Draft Motion
Energy Step Code Council Part 9 Residential Subcommittee

June 3, 2021

Whereas:

A. The BC ESC is to put BC on a path to meet the province's target of all new buildings being 'net zero energy ready' by 2032 and provide assurance that they perform 'as billed'.
B. Clean BC establishes a target of new homes being 80% more efficient that the current base building code by 2032 – the net-zero energy ready standard.
C. BC and Canada have committed to the Paris Accord. International norms and guidelines have been developed by agencies such as the UN and IEA identifying outcomes to be achieve in order to be Paris compliant. Such norms and guidelines are informed by climate science as reflected in IPCC reports.

Be it therefore moved that:

The Energy Step Code Council Part 9 Residential Subcommittee inform the Energy Step Code Council that the BC Energy Step Code, as currently enacted, does not enable Part 9 residential buildings in British Columbia to achieve the goals of the Energy Step Code, Clean BC or achieve performance outcomes aligned with international norms.

Background Information & Discussion

This motion is put forward by Passive House Canada (PHC) to identify the subcommittees understanding of the outcomes the Step Code achieves in relation to its identified purposes and if the subcommittee believes the Step Code Council should be informed of the misalignment of goals and outcomes.

It is brought forward after receiving feedback from subcommittee members, industry leaders, local governments and others expressing concern about the misalignment of goals and outcomes. As the decisions made in building regulation are increasingly observed by society at large, there is growing public scrutiny of the code development process and an expectation those involved will protect the public interest by ensuring codes deliver on their mandate. With the Building Act removing the ability of local government to regulate building performance, a Step Code that fails to achieve its stated purposes limits the ability of local governments to achieve their provincially mandated climate objectives.

This motion deliberately avoids describing the extent of the gap between outcomes and targets, the reasons the gap exists or what should be done to eliminate it. Each of those topics merits a more in depth discussion we seek to avoid during this meeting. The motion, if passed, is intended to be the start of a conversation if the Step Code Council wishes. If a subcommittee member understands the Step Code provisions relating to Part 9 will not achieve one or more of the three outcomes listed in the recitals to this motion, whether by a small or large margin, that subcommittee member is able to support it if he or she believes the Step Code Council should be informed.

Step Code Goals
Recital A refers to buildings performing 'as billed', a term taken from the description of the Step Code on the Step Code website. The performance gap is endemic in the industry, been the subject of many papers, some of which are cited below, and is a reality subcommittee members will be familiar with. With the continued use of HOT2000, the ERS system and the reference building approach, buildings will continue to experience a performance gap, in most cases consuming more energy than anticipated. Until robust methodologies are implemented, the performance gap will continue.

Recital B outlines the energy efficiency target contained in Clean BC which defines what a Net-Zero Ready standard is. Currently, the Step Code does not attempt to regulate "unregulated loads", which form an increasingly significant share of total energy use as efficiency increases. The targeted improvement of even the 'regulated loads' falls below 80% target, creating a clear gap between the outcomes the Step Code will be capable of delivering and the Clean BC target for Net-Zero Ready buildings.

Local governments are becoming aware of the performance gap. For example, in 2020 the City of Vancouver wrote to the Step Code Council confirming their decision to not permit the use of the reference building approach in Vancouver as it's use prevented them from achieving their climate goals. On November 30, 2020 Richmond's Mayor Brodie wrote to Ministers Eby, Heyman & Osborne outlining this city of Richmond's request to modify the Step Code. A copy of that letter, and the staff report dated Sept. 16, 2020 on which it is based, accompany this motion. Figure 1 in the City of Richmond Staff Report includes a calculation of the results of the first 37 houses permitted under the Step Code in Richmond. It compares the TEDI achieved under the Step Code as originally adopted, with reduced targets adopted in Dec. 2019 and by using the reference building approach. To achieve Step 4 using the reference building approach, those 37 homes would require approximately a 20% improvement in TEDI from base building code. Data from the first 125 homes in Richmond has now been evaluated with no material change in the average performance. With such a small improvement in TEDI, there is no prospect of improving total energy demand by 80% at Step 5. Furthermore, the targets and methodology permitted by the Step Code currently enable a home in Courtenay to achieve Step 5 with 2" X 6" bat and poly construction, low performance double paned windows, no heat pump and no HRV even without using the reference building approach or any of the numerous "cheats" available within HOT2000 and the ERS system. That level of construction does not deliver an 80% improvement in building efficiency.

Science-based International Norms
Recital C references the national and international expectations and outcomes arising out of the Paris Accord which BC has committed to. The Step Code seeks to address one of the essential aspects of climate friendly buildings - operating energy efficiency in new buildings. Other aspects such as embodied carbon, existing buildings and fuel switching are to be addressed separately. While various agencies emphasize the critical role of energy efficiency, the proposed revision of the UN Framework Guidelines for Energy Efficiency Standards in Buildings offers the clearest and most detailed description. The findings in the recent IEA Roadmap to Net Zero by 2050 report emphases the need for efficiency regardless of the availability of renewable energy, a reality recognized in the May 21, 2021 communiqué of the G7 Ministers. The Global Alliance for Buildings and Construction Global Status Report and their Global Roadmap

Toward Low-GHG and Resilient Buildings also identify a level of operating efficiency similar to or better than the outcomes delivered by Passive House buildings. Passive House outcomes have been identified because effective mitigation requires efficiency to be maximized regardless of the availability of renewable energy sources. As Passive House is currently the highest level of operating efficiency deployed internationally at scale, the identified goal is to improve upon that outcome. Additional sources of information on this subject are listed in the references below. The Clean BC target of an 80% improvement in building efficiency aligns with international science-based norms, which is presumably why it was adopted.

BC Energy Step Code Capacity Study

July 30, 2021

SCIUS Advisory

DELPHI GROUP

The “BC Energy Step Code Capacity Study” was commissioned by the Province of British Columbia. This work is designed to provide accurate and authoritative information but is not intended to provide professional advice. Users are responsible for exercising professional knowledge and judgement in the application of the information.

ACKNOWLEDGEMENTS

The Province gratefully acknowledges BC Hydro and FortisBC which jointly funded this report.

ADVISORY GROUP

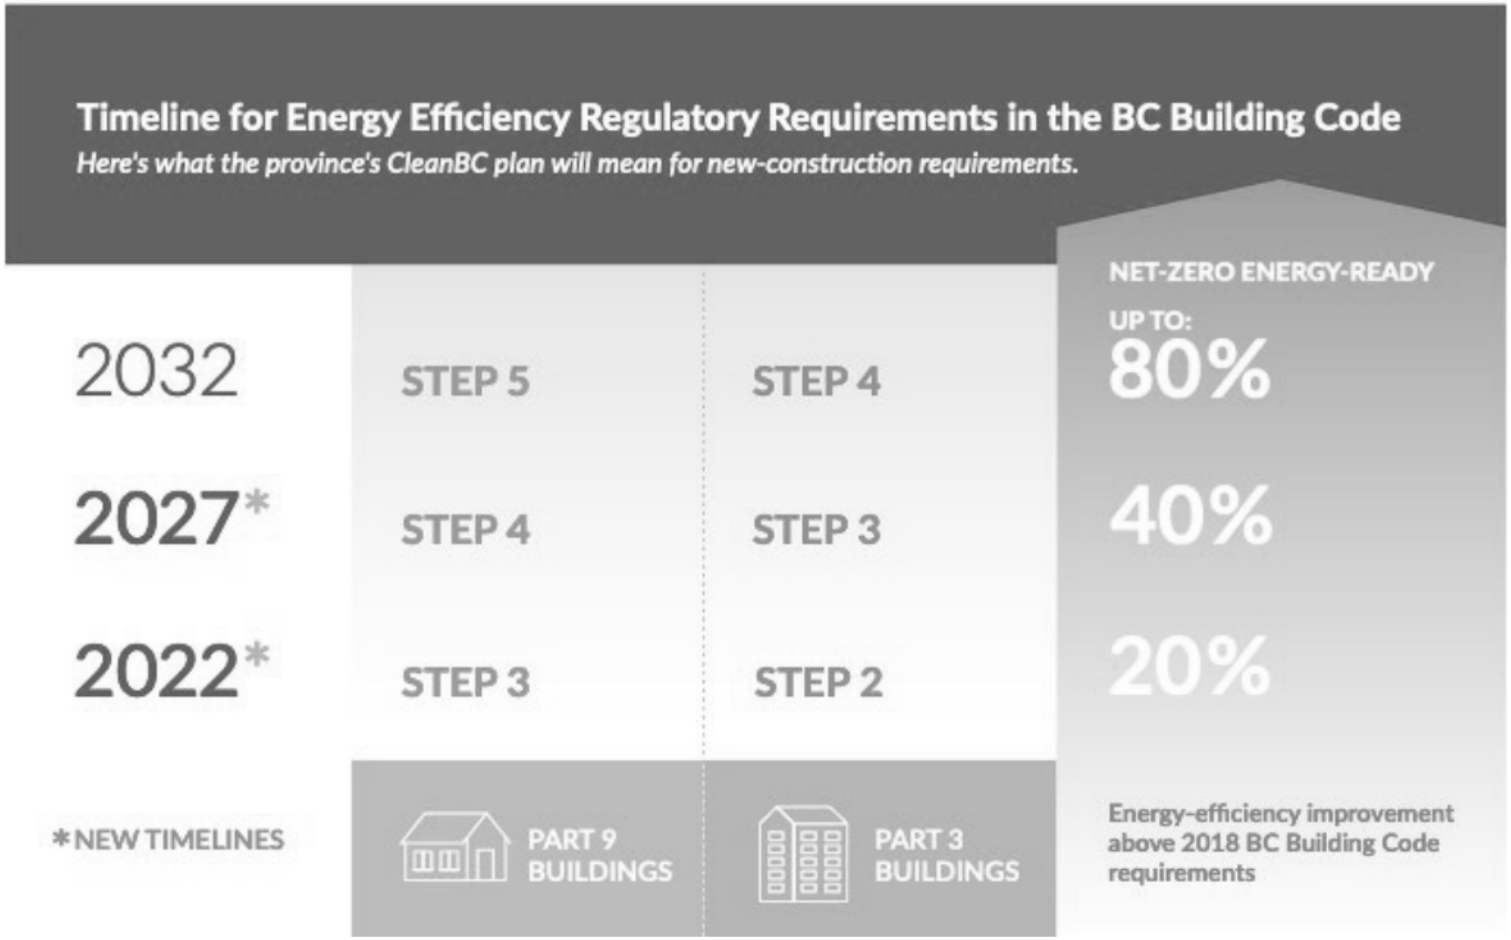
Dale Andersson, BSSB
Zachary May, BSSB
George Benson, Vancouver Economic Commission
Sara Rutherford, BC Housing
Kim McClymont, ZEBx
Tom Berkhout, BC Hydro
Tanya Rumak, Fortis BC
Mary McWilliam, BCIT
Catherine Ernst, BOABC

ADDITIONAL CONTRIBUTIONS

Bertine Stelzer, BC Hydro
Michaela Neuberger, ZEBx

TABLE OF CONTENTS

1. About the Energy Step Code
2. Purpose of Study
3. Research Methodology
4. State of Readiness for Key Professions
5. Key Performance Indicators
6. Findings and Recommendations
7. Appendix



BC ENERGY STEP CODE – SCOPE AND TIMEFRAME

SCIUS Advisory DELPHI GROUP

PURPOSE OF STUDY

REVIEW the educational elements in place to support key construction professionals to acquire knowledge and skills to successfully implement ESC requirements through to 2032

ASSESS the current “state of readiness” of key construction professions to implement the ESC

IDENTIFY barriers hinder key professions from acquiring the knowledge and skills they need

RECOMMEND how capacity building efforts can best be directed in the coming year(s) to support the development of needed knowledge and skills

Research Methodology

SCIUS Advisory | DELPHI GROUP

- Identifying key professions
- Engaging with institutes, associations, warranty providers and certification bodies
- Engaging with organizations that support training and capacity building.
- Identifying existing competency frameworks
- Identifying learning resources
- Identifying degree to which training is encouraged/mandated, as well as obstacles to training.
- Clarifying differences between Part 3 and Part 9 construction.

Interview

- **21 interviews** were conducted
- Included professionals in management and training roles from relevant BC organizations, industry professionals
- Questions on general preparedness, training and availability, hiring qualified workers, incentives, under-served populations, regional differences, barriers and challenges

Survey

- A BC Building Code Capacity Survey was conducted in **March and April 2021**
- The survey was disseminated directly via email through SurveyMonkey platform to over **300 individuals and organizations**
- **56 responses** were received after approximately **5 weeks**.
- Questions on general preparedness, training and availability, hiring qualified workers, incentives, under-served populations, regional differences, barriers and challenges

INTERVIEW AND SURVEY SNAPSHOT

SCIUS Advisory | DELPHI GROUP

Consultants										
Developers and project managers (Part 3)	UDI	AIBC, CHBA-BC, VRCA, ICBA, EGBC	No	Partial	In progress	No	N/A	Minor; experienced developers concentrated in cities	Minor	Prepared in the short term. Will require training on the implications of ESC on building configuration, form and cost.
Architects	AIBC	RAIC, ASTTBC, CAGBC, Passive House Canada	Partial - Modelling Guidelines	Yes	Yes	Accredited (LCU) = Strongly encouraged	Minor	Minor; experienced Architects unavailable outside of cities - retirements eminent	Major	Shortage of experienced architects outside of cities is a major issue - which will critically affect compliance in regions
Engineers involved in construction of buildings, including mechanical, electrical, building envelope	EGBC	ASHRAE, BCBEC, CSME, IEEE Canada	Prof. Practice Guidelines & Modelling Guidelines	Yes	Yes	Self-reporting LCU = Not explicitly encouraged	Minor	Minor; experienced engineers concentrated in cities	Minor	Prepared in the short term. Nhowever, ability to support/advise construction activities is limited in some areas. Shortage of experienced mechancial engineers may become a problem in the future.
(Home) Designers (i.e., Part 9 buildings not requiring an architect)	BC Association of Building Designers	AIBC, ASTTBC, CAGBC, Passive House Canada	Partial (generic)	Yes	Partial	No	N/A	Minor; experienced designers unavailable outside of cities - retirements eminent	Major	Shortage of experienced Home Designers outside of cities is a major issue - which will critically affect compliance in regions
Estimators and Cost Consultants	CIQS	RICS, AIBC, VRCA, ICBA, NRCA, SICA, VICA, CHBA-BC	No	No	No	No	N/A	N/A	Major	CIQS has no education related to energy efficiency or ESC - interviews varies widely on the relevance and impact of cost advice for ESC.
Energy Advisors & Modellers - Part 3	CACEA	IBPSA BC Chapter, Passive House Canada	Yes	Yes	Yes	Not explicitly encouraged	N/A	Major; Canada is suffering a shortage of Energy Advisor with practical construction experience	Major	Shortage of Advisors (esp. in rural locations); Training needed to help EAs better support/advise construction and building officials - which will critically affect compliance
Energy Modellers - Part 3	IBPSA BC Chapter	ASHRAE BC, Passive House Canada, EGBC	Yes	Yes	Yes	Not explicitly encouraged	N/A	Minor; experienced engineers concentrated in cities	Minor	Prepared in the short term. However, ability to support/advise construction activities is limited. Lack of training on whole building airtightness testing a challenge.
Builders and Trades/subcontractors										
General contractors (Part 3)- CMs, PMs and Superintendents	None	BCCA, VRCA, ICBA, NRCA, SICA, VICA	Partial (2017 generic)	Yes	Partial	No	N/A	Minor; experienced Contractors concentrated in cities	Major	Experience in coordination, management and knowledge application required for Energy Code is mixed
Licensed residential builders (Part 9) - CMs, PMs and Superintendents	BC Housing Licensing	CHBA BC, HAVAN	Partial (2017 generic)	Yes	Yes	Yes	N/A	Minor; key gap is lack of local projects offering hands-on experience.	Minor	Taining available. Lack of local projects in rural locations offering hands-on experience will become a bigger problem if not addressed
Carpenters, Framers, AVM Barrier Installers & Envelope Trades (inc. steel stud and drywall)	None	VRCA, NRCA, SICA, VICA, ICBA, CHBA-BC. BCRCC (Union)	Partial (2017 generic)	Partial	No	No	Major	Major; trades with relevant experience or training concentrated in cities, with poor training availability in rural regions	Minor	Building envelope training needed - level of expertise dependent on trade/company experience applying skills to project and envelope types. Lack of local projects in rural locations.
Insulators	NAIMA, BCICA	VRCA, NRCA, SICA, VICA, CHBA-BC	Partial (2017 generic)	Partial	Partial	No	Minor	Minor; experienced installers concentrated in cities, but the skill difference is considered minor	Minor	Mechanical insulators are ready. Envelope insulators may require cross-training, training on air barrier and functional requirements.
Electricians	Technical Safety BC	ECA BC, VRCA, NRCA, SICA, VICA, ICBA, CHBA-BC, BC Hydro, FortisBC	Partial (2017 generic)	No	No	No	Minor	Minor; uncommon equipment familiarization	None	Generally prepared; core practices are not expected to change. However, renewable energy systems (although not technically required for ESC) require training.
HVAC Installers/Mechanical Design and Installers, and Plumbers	Technical Safety BC	TECA, MCABC, HRAI, FortisBC, BCSEA, SMACNA BC, BC Hydro, FortisBC	Partial (2017 generic)	Partial	No	No	Major	Minor; uncommon equipment familiarization	Minor	Lack of familiarity with some new equipment and systems. Training required on "grey areas" relating to testing, commissioning, balancing, etc.
Gas Fitters	Technical Safety BC	FortisBC	Partial (2017 generic)	Partial	No	No	Minor	Minor; uncommon equipment familiarization	Major	Although ESC allows for gas appliances, the introduction of other policies relating to GHG emission reductions (as anticipated in the BC Electrification Roadmap) will result in a limited role in future codes.
Roofers	RCABC	VRCA, NRCA, SICA, VICA, CHBA-BC, ICBA	Partial (2017 generic)	Partial	No	No	Minor	Minor: some roof systems suited to ESC uncommon outside of cities	None	Generally prepared.
Glazers, Window & Glass Door Installers	Fenestration BC	VRCA, NRCA, SICA, VICA, CHBA-BC, ICBA	Partial (2017 generic)	Partial	No	No	Major	Major; experienced installers concentrated in cities, availability in other regions is uncertain	Minor	Required additional "environmental separators" training; uncertain envelope responsibility means some overlap with Envelope trades
Policymakers and regulators										
Building officials	BOABC	PIBC, EGBC, AIBC, ASTTBC	Yes	Yes	Yes	Accredited (CPD) = Strongly encouraged	Major	Major; the experience applicable with Energy Codes is concentrated in cities, with the leaders "few and far between"	Major	Energy Foundations Program available that supports all SC competencies but consistent ability to apply it in practices is considered limited - possibly constraining (esp. outside urban centres).
Local Govt. Planning Department Staff &/or Sustainability Staff support Step Code	PIBC		Partial (2017 generic)	Partial	Yes	Accredited (CPD) = Strongly encouraged	Major	Major the experience applicable with Energy Codes is concentrated in cities, with the leaders "few and far between"	Minor	Ability to articulate the practical implementation of ESC Regulations may be limited - especially within those AHJs that have not formally adopted ESC.

Sample Key Professions Readiness Summary

SCIUS Advisory | DELPHI GROUP

Key Profession Snapshot – Engineers (Mechanical, Electrical, Building Enclosure)

State of readiness	2022	2027	2032
Urban centres – Part 3	Yes	Yes	Yes
Province-wide – Part 3	Yes	Yes	Yes
Urban centres – Part 9	Yes	Yes	Yes
Province-wide – Part 9	Yes	Yes	Yes

Responsible Organization	**Engineers and Geoscientists of British Columbia (EGBC)** – regulatory body that requires continual professional development.
Related or Supporting Organizations	ASHRAE, BCBEC, CSME, IEEE Canada
Step Code Competency Framework	**Yes** - There are Professional Practice Guidelines relating to building enclosure and whole building energy modelling services.
Learning Resources to Support Competencies	**Yes** - There are a total of 32 courses directly addressing all aspects of ESC and a further 24 complementary resources. 90% are offered online and available across the province. The majority of the courses address envelope and enclosure, there are fewer related to mechanical and electrical design.
Learning Resources List for this Profession	**Yes** - EGBC lists numerous institutional and industry resources, although does not specifically call out resources related to ESC

Step Code Status	**Partial** - Engineers are required to track and report their education , but ESC training is not explicitly encouraged.
Differences Between Part 3 and Part 9	**Minor** – engineers are required to maintain their professional credentials and apply EGBC codes of practice irrespective of the type of project.
Regional Differences	**Minor** - experienced engineers may be unavailable outside of urban centres although most firms travel province-wide, especially for larger projects.
Identified Obstacles	**Minor** – possible shortage of engineers due to retirements could affect readiness over the next decade (i.e., by 2032) – especially outside of cities.
Additional notes on readiness:	• The biggest change for engineers will be in how project teams are structured and how risk related to building performance is allocated. • Issues around constructability and trade coordination design could impact readiness since these issues directly affect cost, schedule and construction outcomes. • As builders push for more collaborative and lean project delivery methods to improve productivity, engineers will need to become familiar with digital tools, componentized and prefabricated solutions.

Learning Resources Available to Support Competencies

Building Enclosure Engineers

	Design, construction & regulatory process	Building Science	Energy modelling & metrics	Airtightness	Building envelope assemblies	Insulation (building envelope)	Windows, skylights & doors	Supply chain
ESC COURSES - Pt 3	24	16	8	2	18	6	3	0
ESC COURSES - Pt 9	21	15	5	2	16	6	3	0
ALL APPLICABLE COURSES - Pt 3	30	16	8	2	20	7	4	1
ALL APPLICABLE COURSES - Pt 9	38	19	6	5	22	10	7	2

Mechanical and Electrical Engineers

	Design, construction & regulatory process	Building Science	Energy modelling & metrics	Insulation (mechanical)	Supply chain	Mechanical systems & equipment (heating, cooling and ventilation)	Electrical systems & equipment
ESC COURSES - Pt 3	24	16	8	6	0	1	5
ESC COURSES - Pt 9	21	15	5	6	0	0	5
ALL APPLICABLE COURSES - Pt 3	30	16	8	7	1	7	6
ALL APPLICABLE COURSES - Pt 9	38	19	6	10	2	10	6

Key Profession Snapshot – General Contractors - Part 3 (CMs, PMs and Superintendents)

State of readiness	2022	2027	2032
Urban centres	Yes	Partial	Partial
Province-wide	Yes	Partial	Partial

Responsible Organization	**None** – There are multiple associations to which membership is voluntary. Part 3 builders are not required to be licensed.
Related or Supporting Organizations	BCCA, ICBA, VRCA, NRCA, SICA, VICA
Step Code Competency Framework	**Partial -** There is no ESC competency framework specifically for General Contractors, although the updated 2017 framework is applicable.
Learning Resources to Support Competencies	**Partial -** There are 9 courses directly addressing all aspects of ESC and a further 17 complementary resources. The majority of the courses are offered online and available across the province. Among the competencies, “design, construction and regulatory process” competency is most widely covered. There is at least one course covering each competency. Many of the courses are not clear about applicability to Part 3 / multi-family construction.
Learning Resources List for this Profession	**Partial** – All the construction associations promote education courses generally and sometimes include ESC related events on an ad-hoc basis. There is no centralized list.
Step Code Status	**No** - There are no incentives or means of encouragement for general contractors to take training. Contractors do not require CPD credits.

Differences Between Part 3 and Part 9	**NA**
Regional Differences	**Minor** - Experienced contractors are usually more concentrated in cities, but travel province-wide.
Identified Obstacles	**Major** • There are not enough training resources for contractors, and they are one of the top groups who were identified as struggling with implementation and needing further support. • The courses that do exist are difficult for contractors to find. • There is confusion about whether Part 9 courses are applicable to Part 3 projects. Some may be, but most courses are not sufficiently well described. • The experience in coordination, management and knowledge application that required for Energy Code is mixed.

Learning Resources Available to Support Competencies

	Design, Construction & regulatory process	Building Science	Energy modelling & metrics	Airtightness	Building envelope assemblies Insulation (Building envelope & mechanical)	Windows, skylights & doors	Supply chain	Mechanical systems & equipment (heating, cooling and ventilation)	Electrical systems & equipment
ESC COURSES	9	4	0	2	6	4	1	1	2	1
ALL APPLICABLE COURSES	17	9	1	3	8	4	1	2	3	6

State of Readiness for Key Professionals

SCIUS Advisory | DELPHI GROUP

State of Readiness by Profession for Part 3 Construction

	Urban Centres			Province-wide		
	2022	2027	2032	2022	2027	2032
Developers	Yes	Yes	Partial	Yes	Yes	Partial

SCIUS Advisory DELPHI GROUP

Key Performance Indicators

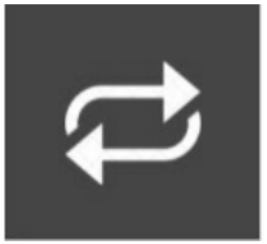
SCIUS Advisory | DELPHI GROUP

To be useful, the measures and reporting mechanisms for performance management systems should be:

Acceptable

Meaningful

Unambiguous & Easily Understood



Repeatable

Show trends over time

Suitable

Feasible

Effective

Aligned

KPIs for responsible organizations can be used to gauge capacity of their member professions

Presence of Competency Framework for Key Profession

- **Survey question** - Do you have a competency framework or profile that describes what skills and expertise are required to meet the energy efficiency requirements of the BC Building Code and the BC Energy Step Code?
- **Rationale** - Competency frameworks describe skills and expertise required to achieve ESC.

Existence of ESC-specific education programs and resources

- **Survey question** - "What proportion of the competencies required to meet the energy efficiency requirements of the BC Energy Step Code are covered by currently available training programs?"
- **Rationale** - Key professions can develop the skills needed.

Quality of ESC-specific learning resources

- **Survey question** - Do you have assessment programs in place to ensure the education programs and/or learning resources are meeting the needs of your members effectively?
- **Rationale** - Training is effective and meets needs of key profession.

SCIUS Advisory DELPHI GROUP

Key profession – Builders

Responsible organization	BC Housing
Question	“How confident are you that you have in your company (or can find people with) the required technical skills to build a Step 3 building? (Step number adjusted as appropriate).”
Question Format	Ranking (1= not confident, 5 = very confident). Option to add a comment
Considerations	• Indicates readiness of trades since many are not represented by an organization • Include regional information if possible • Leading indicator

Key professions – Architects, Engineers, Builders

Responsible organization	BC Housing , AIBC , EGBC
Question	“What proportion of the projects you have worked on over the past 12 months have targeted and/or achieved Step Code 3? (Step number adjusted as appropriate).”
Question Format	Percentage of projects (0%, 10%, 20%, …100%). Option to add a comment
Considerations	• Professionals who have completed or are in progress of completing Step Code projects considered ready or in process of becoming ready. • Include regional information if possible • Lagging indicator

Findings and Recommendations

SCIUS Advisory | DELPHI GROUP

Four goals to improving the state of readiness of key professions in BC

Findings	Recommendations
Incentives to participate in-training needed to increase enrollment	• Offer financial incentives to address real cost of training • Facilitate partnerships between project developers, training providers and industry associations to provide hands-on training • Adopt system of “Best Practice Advisors”
Lack of clarity about technical requirements of the 2022 ESC and BCBC update	• Launch a province-wide campaign on details of Building Code changes through to 2032. • Develop communications materials for local governments
Confusion about courses addressing appropriate topics at right level of experience; lack of profession-specific competency frameworks.	• Sponsor a centralized online hub listing current and relevant training offerings by region and by profession. • Develop a dedicated telephone hotline to provide support and advice • Consider reviews and testimonials system for courses • Work with training providers to develop and deliver training focused on subject matter in demand

Findings	Recommendations
Uncertainty about course quality; lack of credentials/training for trainers	• Develop a standardized evaluation tool for courses • Establish a “Certificate in Training in Low Carbon Buildings” targeted at professionals and instructors who are delivering training.
Hiring practices prioritize those with practical experience - lack of mentoring and ambiguity around value of credentials	• Develop a “Prior Learning Assessment and Recognition credential” to recognize successful prior site experience with low carbon buildings.
Delivering information in bite-sized pieces may make it more accessible.	• Develop a series of short and focused training options

Findings	Recommendations
Retirement of experienced workforce - “experience vacuum”.	• Develop knowledge sharing and mentorship opportunities
Lack of cooperation, collaboration, and communication between trades.	• Combine curricula related to effective communication, teamwork, and collaboration with “building as a system” courses and “soft skills” training.
Cross-training between trades important for higher steps	• Engage multiple disciplines in collaborative, hands-on training projects to solve technical issues
Tailored education needed for underserved populations with language barriers	• Develop training materials in other languages commonly spoken on construction sites.

Findings	Recommendations
Incentives and customized training needed in areas outside urban centers	• Where local experts do not exist in a specific profession, sponsor experienced leaders to visit regions of the province and share their knowledge. • Develop hands-on training opportunities specific to cold climate construction by sponsoring higher step “showcase” projects in Northern BC and other parts of the interior. • Consider incentives for workers in rural regions to overcome barriers in accessing training opportunities and projects.

Findings	Recommendations
Major obstacles exist for some professions in meeting higher levels of ESC.	• Develop marketing materials aimed at **Developers and Owners** that explain benefits, requirements, and costs to achieve compliance with the ESC. • Develop training for **Building Officials** that covers the practical aspects of design and construction • Combine revamped suite of training resources for **General Contractors** with an incentive program or regulatory requirements to take training. • Develop training for **Estimators and Cost Consultants** that clarifies knowledge of ESC enhancements and requirements, to help support more accurate and consistent pricing and estimating services.
Energy Advisors are scarce in rural regions	• Provide incentives for regional colleges to deliver and students to complete Energy Advisor training

Findings	Recommendations
Lack of training for building operations and commissioning to maintain performance	• Develop and provide training and ongoing support for building commissioning that enables participants to learn how to operate HVAC and other building systems to achieve desired energy-performance outcomes.
Future for gasfitters is evolving	• Provide targeted incentives for gas fitters to take training on heat pump installation and electrification of buildings.

Thank you!

SCIUS Advisory | DELPHI GROUP

APPENDIX

Research Methodology

SCIUS Advisory DELPHI GROUP

Category	Description	Data entered
Key Professions	Client	Developers
	Designers and consultants	Architects
		Engineers involved in construction of buildings, including mechanical, electrical, building envelope
		Estimators and cost consultants
		(Home) Designers (i.e., Part 9 buildings not requiring an architect)
		Energy Advisors & Modellers (Pt 9)
		Energy Modellers (Part 3)
		Estimators and cost consultants
	Builders & Trades	General contractors (Part 3)
		Licensed residential builders (Part 9)
		Carpenters, Framers, AVM Barrier Installers & Envelope Trades (inc. steel stud and drywall) - Part 3 & Part 9
		Insulators - Part 3 & Part 9
		Electricians - Part 3 & Part 9
		HVAC Installers/Mechanical Design and Installers - Part 3 & Part 9
		Gas Fitters - Part 3 & Part 9
		Roofers - Part 3 & Part 9
		Plumbers - Part 3 & Part 9
		Glazers, Window & Door Installers

Category	Description	Data entered
	Regulators	Building Officials Local Govt. Planning Department Staff &/or Sustainability Staff support Step Code
Key Organization Responsible or 'Natural or Potential Lead'	Associations, unions, warranty providers and NGOs responsible for and/or certify key construction professionals	Organization name Required to operate Voluntary membership None identified
Related or Supporting Organizations	Associations, unions, warranty providers and NGOs that may be important points of contact with key professions, offer training and or voluntary certification (e.g., Passive House Canada, NAIMA, some equipment manufacturers).	Organization name
Step Code Competency Framework Available?	Does the organization have a competency framework on their website or otherwise easily available for its constituents?	Yes Partial, In Progress (references the 2017 framework) No
Learning Resources available to Support Competencies?	Are there resources available for the key professions based on evaluation of course list per key profession?	Yes Partial, In Progress No
Learning Resources available to Support Competencies?	Is there a resource list for this profession available on the key organization's website?	Yes Partial, In Progress No

Category	Description	Data entered
	Regulators	Building Officials Local Govt. Planning Department Staff &/or Sustainability Staff support Step Code
Key Organization Responsible or 'Natural or Potential Lead'	Associations, unions, warranty providers and NGOs responsible for and/or certify key construction professionals	Organization name Required to operate Voluntary membership None identified
Related or Supporting Organizations	Associations, unions, warranty providers and NGOs that may be important points of contact with key professions, offer training and or voluntary certification (e.g., Passive House Canada, NAIMA, some equipment manufacturers).	Organization name
Step Code Competency Framework Available?	Does the organization have a competency framework on their website or otherwise easily available for its constituents?	Yes Partial, In Progress (references the 2017 framework) No
Learning Resources available to Support Competencies?	Are there resources available for the key professions based on evaluation of course list per key profession?	Yes Partial, In Progress No
Learning Resources available to Support Competencies?	Is there a resource list for this profession available on the key organization's website?	Yes Partial, In Progress No

Key Performance Indicators

SCIUS Advisory | DELPHI GROUP

KPIs for responsible organizations can be used to gauge capacity of their member professions

KPI	Survey question	Rationale / considerations
Presence of Competency Framework for Key Profession	Do you have a competency framework or profile that describes what skills and expertise are required to meet the energy efficiency requirements of the BC Building Code and the BC Energy Step Code?	The key profession knows what they need to be able to do to meet the BC ESC.
Existence of ESC-specific education programs and resources	What proportion of the competencies required to meet the energy efficiency requirements of the BC Energy Step Code are covered by currently available training programs?	Key professions can develop the skills they need.
Quality of ESC-specific learning resources	Do you have assessment programs in place to ensure the education programs and/or learning resources are meeting the needs of your members effectively?	The training is effective and meets the needs of the key profession.

Additional survey questions customized to key professions

Key profession	Responsible organization	Question	Rationale
Builders	BC Housing	How confident are you that you have in your company (or can find people with) the required technical skills to build a Step 3 building? (Step number adjusted as appropriate).	• This will indicate readiness of trades since many are not represented by an organization. Data should be saved with region information if possible. • Leading indicator of confidence in skillset of available labor in near term.
Architects, engineers and builders	BC Housing, AIBC and EGBC	What proportion of the projects you have worked on over the past 12 months have targeted and/or achieved Step Code 3? (Step number adjusted as appropriate).	• Professionals who have completed or are in progress of completing Step Code projects can be considered ready or in process of becoming ready. • Data should be tagged with region information if possible. • Lagging indicator of readiness
Architects, engineers and builders	BC Housing, AIBC and EGBC	The next update to the energy efficiency requirements of the BC Building code will be in 2022 (adjust year as appropriate). What are your challenges in meeting future Steps?	• Qualitative information regarding technical barriers and gaps in preparedness can be gathered. Anticipated popular responses could be provided as check boxes, with other issues able to be added. • Leading indicator of readiness that may help shape future actions.
Architects, engineers, builders, building officials	BC Housing, AIBC, EGBC, BOABC	How many training courses relevant to the Energy Step Code have you taken over the past 12 months?	• When combined with responses to the number of projects and challenges faced, this data would provide insight into the correlation of training, its effect on readiness, and continued challenges in meeting performance requirements.

Key profession	Responsible organization	Question	Rationale
Building Officials	BOABC	When you think about the projects you were involved with over the past twelve months, what proportion of those projects required blower door / air tightness? Of these, what proportion passed the blower door / air tightness test first time?	• Identifies how frequently these tests are passed • A lagging indicator of builders' readiness to build to the intended performance and how much rework is required to achieve goals. • Data should be tagged with region information if possible.
Building Officials	BOABC	What percentage of occupancy permits were NOT issued on the first attempt as a result of energy step code related issues?	• Occupancy permits are a general indicator of construction quality and performance but will not pinpoint issues that are related to energy efficiency • A lagging indicator of skillset readiness to achieve performance goals. • Data should be tagged with region information if possible.
Building Officials	BOABC	The next update to the energy efficiency requirements of the BC Building Code will be in 2022 (adjust year as appropriate). Do you have access to training you need to be able to evaluate buildings as will be required by the next level of the Code?	• Indicates readiness of building officials • A leading indicator of training availability to prepare building officials for future code updates. • Data should be tagged with region information if possible.
Building Officials	BOABC	Are you prepared to evaluate buildings at a higher Step Code level than what is currently required?	• A leading indicator of effectiveness of training resources available. • Data should be tagged with region information if possible.

KPIs for jurisdictions (such as provincial and regional policy makers and stakeholders) can be used to monitor overall progress:

KPI	Data and collection strategy	Rationale / considerations
Predicted TEDI (Thermal Energy Demand Intensity) and EUI (Energy Use Intensity) for new projects	Annual collection of building permit data	TEDI (Thermal Energy Demand Intensity) and EUI (Energy Use Intensity) are key performance criteria for energy efficient new construction projects. This would provide a leading indicator of readiness for project teams by recording intended building performance and comfort level with new Steps. This data is not routinely collected by local governments and resources would need to be made available to assist.
Overall availability of training by region	Survey questionnaire - The survey that accompanied this report can be performed annually to determine if key professions are getting access to the training necessary to deliver ESC compliant projects effectively.	This data would be a leading indicator. Enrollment statistics and student demographics may also be requested from the providers or may be available through statistics on Employer Training Grants. Costs may be incurred to collect this data from course providers, as well as to compile and analyze the data and host the results. Quality would be dependent upon response rate.

KPI	Data and collection strategy	Rationale / considerations
Industry satisfaction with training / training effectiveness	Survey questionnaire to course participants: • What version of the building code (or Step Code) was referenced for this course? (Check box) • To what extent did the course content align with your expectations when you signed up for it? (1 = it was not what I expected at all - 5 = it was exactly what I expected) • Will the information you learned in this course improve your ability to deliver projects at higher levels of the Energy Step Code than you were previously able to? (Yes, No, Not sure) • Did the instructor(s) have a good understanding of the practical requirements and challenges on a standard job site? (1 = not at all – 5 = very knowledgeable) • What other training would you like to see offered that is not currently available or accessible and would help you in your job delivering high-performance buildings? (Comment)	Training providers need to deliver training effectively – i.e., in formats, time frames and pedagogical approaches that suit the trainees. Exit surveys and/or feedback forms can be used to gather participants feedback on course effectiveness. The data provides leading indicators of: • Students are able to find the training they need • Students are satisfied with the training • Potential technical challenges and gaps.

The number of certified projects under a variety of building standards broken out by type of building and region.

- **Pros:** Easily accessible, historic data
- **Cons:** Not representative of mainstream construction, only captures top percentage who seek certification. Residential projects may not be accurately represented (often included into “mixed, use, retail, etc.)

Price per square foot of projects in different areas based on different levels of ESC adoption

- **Pros:** Check of incremental price premiums and if they are normalizing based on readiness
- **Cons:** Data broken out by building type, not by region, so no data on ESC adoption.

The number of housing starts by region

- **Pros**: Indicator of impacts of ESC requirements
- **Cons:** Not an indicator of ESC demand; does not address readiness.

Energy use and GHG emissions related to residential, commercial & institutional buildings in BC

- **Pros:** Meta-level indicator that the impacts of buildings are reducing overall.
- **Cons:** Not possible to break out new construction projects; does not address readiness.

Building permit values, broken out by local government.

- **Pros:** Meta-level indicator or industry health and issues affecting construction economy.
- **Cons:** No indication of ESC level of buildings; does not address readiness.

Number of LCUs/CPD credits awarded for energy efficiency related training programs.

- **Pros:** Indication of key professions' choice of training to fulfill education requirements.
- **Cons:** currently not public data - Information may not be currently recorded by type of course.

Number of projects that receive high performance building incentives.

- **Pros:** Leading indicators of how many builders hit the targets early.
- **Cons**: Currently not public data. May not be representative of the mainstream; data may be proprietary; does not address readiness by profession.

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Package

Date and Time of Meeting: Thursday September 9, 2021 | Time: 1:00 p.m. to 4:00 p.m. Pacific Time
Joining Option 1: Webinar link: Click here to join the meeting
Joining Option 2: New call in option (audio only):
s.15

Chair: Zachary May, Building and Safety Standards Branch, Office of Housing and Construction Standards
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro
Meeting Materials

- Agenda (below)

Contacts if You Require Assistance

- Hugo Wong, BSSB – 236 478 1406 (call only); hugo.wong@gov.bc.ca

AGENDA

Time	Topic	Speaker(s)	Purpose(s)
1:00 p.m.	Welcome, Introductions and Opening Remarks	Zachary May, ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs	▪ Welcome participants ▪ Approve of agenda
1:05 p.m.	Energy Step Code and CleanBC targets	Zachary May, ESCC Chair	▪ Discussing a motion raised during a Part 9 Subcommittee meeting on June 3, 2021
1:15 pm.	Status update on GHG and Metrics Report work	Zachary May, ESCC Chair	▪ Review process to date
1:20 p.m.	Presentation from Industry Capacity Readiness Report team	Helen Goodland (Scius Advisory) and Ben Clark (Delphi)	▪ To review findings from an industry readiness report
1:50 p.m.	Roundtable	Energy Step Code Council	▪ To table issues related to Energy Step Code implementation from your membership
2:20 p.m.	Update from subcommittees	Subcommittee chairs	▪ Communications and Capacity Building Subcommittee ▪ Part 3 and Part 9 Non-Residential Subcommittee ▪ Part 9 Residential Subcommittee ▪ Local Government Peer Network
2:40 p.m.	Break		
2:50 p.m.	20%-better and harmonization – Part 3	Scott Williams, BSSB	To discuss: ▪ Proposed strategy for achieving BC's commitment to improve energy efficiency by 20% in 2022 and harmonization with model national codes

			▪ Role of the working groups and subcommittees
3:20 p.m.	20%-better and harmonization – Part 9	Scott Williams, BSSB	To discuss: ▪ Proposed strategy for achieving BC's commitment to improve energy efficiency by 20% in 2022 and harmonization with model national codes ▪ Role of the working groups and subcommittees
3:55 p.m.	Next steps	Zachary May, Chair	
4 p.m.	Adjournment	All	

RE: UDI Sept. 13 Webinar - Pre-Event Meeting

From: Verna Yu <vyu@udi.org>
To: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>, Sykes, Maxwell <Maxwell.Sykes@surrey.ca>, Enright, Patrick <Patrick.Enright@vancouver.ca>, Kathy Wardle <Kathy.Wardle@perkinswill.com>

Good morning Panel,

I hope everyone had a relaxing long weekend as we head in to the Fall!

With the September 13 breakfast webinar just around the corner, we would like to confirm a date for a pre-meeting this week to go through each presentation topic as well as confirm the format, and order of presentation.

Would you all be available to connect tomorrow morning at 9am or 1pm?

Kind regards,

Verna

Verna Yu | Director of Professional Development & Programming
Urban Development Institute

Subject: UDI Sept. 13 Webinar - Pre-Event Meeting

Good Afternoon,

Thank you all once again for joining us in discussion on **The Green Building Climate: ESC & CoV Updates**. As September is fast approaching, we would like to set-up a pre-meeting to discuss the event in more detail including event format and rundown as well as review the topics of discussion.

Please let me know if you would be available to join us on any of the following dates/times:

Tuesday, August 31: 3pm
Thursday, September 2: 1 pm
Tuesday, September 7: 11 am
Wednesday, September 8: 9 am or 1 pm

Kind regards,

Verna

Verna Yu | Director, Professional Development

"The Green Building Climate: ESC & COV Updates"
Webinar Pre-Meeting

AGENDA

1. Purposed Format
   - 10-12 minutes each – individual overview
   - Moderated Q&A / fireside chat

2. Confirm order of panel presentation

3. Discuss Potential Questions

Proposed Schedule:

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run / Zoom testing	15	
9:30	UDI Introduction Introduce Moderator: Kathy Wardle	3	Jeff Fisher
9:33	Overview	3-5	Kathy Wardle
9:38	Presentation 1	10-12	
9:50	Presentation 2	10-12	
10:02	Presentation 3	10-12	
10:14	Moderated Q&A / fireside chat	15-20	All
10:30	Webinar concludes		Kathy Wardle

RE: Agenda and materials, Sept. 9 Energy Step Code Council meeting

From: Wong, Hugo OHCS:EX <Hugo.Wong@gov.bc.ca>

Good afternoon Panel,

Please see attached for an updated copy of our meeting minutes with information regarding order of speaking as well as some purposed questions. The Q&A and discussion will be adjusted depending how long each presentation is.

You should all have the panel zoom link set in your calendar invitation for 9:15 am on Monday, September 13 to allow us time to do a dry run through and ensure that everyone is comfortable and able to share screens for your presentation. The webinar will go live at 9:30 am.

If you have any questions, please do let me know.

Kind regards,

Verna

Subject: RE: UDI Sept. 13 Webinar - Pre-Event Meeting

Slides to follow later this week, but here's my outline for the Province's update:

Energy Step Code

- BC is committed to improved harmonization with the model national codes and supporting Province's CleanBC commitment to improve energy efficiency in the BC Building Code by 20% in 2022.
    - This will involve incorporating the latest revisions to the national codes, expected at the end of 2021, with the Energy Step Code, to ensure that all buildings are more efficient and on the path towards the Province's 2032 goal of Net Zero Energy Ready
    - For communities already requiring the Energy Step Code, this will not be a significant change
    - For communities not referencing the Energy Step Code the 2022 Code update the Energy Step Code will become the minimum standard
        - Exact technical details are being worked out through the ESC Council, but it's roughly Step 3 for Part 9 buildings and Step 2/3 for Part 3 buildings

- Full impact analysis of the changes is being completed to ensure that the approach in 2022 continues to support affordable energy efficiency through flexible performance-based regulation
- Working with the ESCC to seek recommendations on the details, but 2022 will be built on the success of the Energy Step Code and moving the province up the steps and towards our long-term energy efficiency commitments.

Carbon Pollution Standards

- Mandate letter commitment to enable local governments to set their own carbon pollution standards
- This is a high priority and work is underway, with the hope of finalizing recommendations this fall
- Developing a standardized Provincial carbon pollution (GHG) standard that could be added to the Energy Step Code
- Local governments would be able to reference this standard the same way as the ESC – no formal opt-in
- Building on experience of Vancouver and other jurisdictions, and feedback from industry and utility partners
- Likely looking at GHG targets that would require decarbonization from measure-only, to decarbonizing one or both key energy using systems (heat and hot water), as well as considering full building decarbonization.
- We are collaborating within government to ensure that these standards are prepared for innovations in low-carbon energy (renewable natural gas, district energy, renewable electricity)
- These proposed standards would be in addition to the Province's energy efficiency commitments, to ensure that all buildings are making efficient use of the energy they use.
- We are hoping to have all local governments who currently have low-carbon policies migrate to this provincial standard, which will be more enforceable, transparent, and consistent across the Province.

Hi Verna et al.,

Note that I will not have a PPT nor outline by then. I will have a list of points that I plan to hit by the meeting, but likely will not make the PPT until the wkd.

Given we won't have the full contingent during tomorrow's meeting, if we're able to shorten it to closer to 30 minutes I would appreciate it.

Thanks,

Max

Good Afternoon,

Thank you all once again for joining us in discussion on **The Green Building Climate: ESC & CoV Updates [can01.safelinks.protection.outlook.com]**. As September is fast approaching, we would like to set-up a pre-meeting to discuss the event in more detail including event format and rundown as well as review the topics of discussion.

Please let me know if you would be available to join us on any of the following dates/times:

Tuesday, August 31: 3pm
Thursday, September 2: 1 pm
Tuesday, September 7: 11 am
Wednesday, September 8: 9 am or 1 pm

Kind regards,

"The Green Building Climate: ESC & COV Updates"
Webinar Pre-Meeting

Meeting Minutes

1. Purposed Format
   - 10-12 minutes each – individual overview
   - Moderated Q&A / fireside chat

2. Confirm order of panel presentation

- **Zachary May** will outline how the proposed changes to the BC Building Code may impact your projects as well as provide an update on other Building Code issues. / Energy step code & Carbon Pollution Standards
- **Maxwell Sykes** will discuss how local governments may apply the GHG performance standards; issues that were considered in developing the performance standards; and what should be considered in implementing them.
- **Patrick Enright** will share its experience to date with GHG targets and the *Zero Emissions Building Plan*, as well as updates on building policies and the *Climate Emergency Action Plan*.

3. Discuss Potential Questions

Proposed Schedule:

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run / Zoom testing	15	
9:30	UDI Introduction Introduce Moderator: Kathy Wardle	3	Jeff Fisher
9:33	Overview	3-5	Kathy Wardle
9:38	Presentation 1	10-12	Zachary May
9:50	Presentation 2	10-12	Maxwell Skyes
10:02	Presentation 3	10-12	Patrick Enright
10:14	Moderated Q&A / fireside chat	15-20	All
10:30	Webinar concludes		Kathy Wardle

Purposed Questions:

1. At the time of development, the ESC was driven by managing heating loads. With our changing climate and weather patterns, can anyone on the panel predict when there will be a time when cooling is the main concern?

2. Is the Province looking at introducing a GHGI target for buildings? If so, what is the timeline?

3. What are the most cost effective ways to deliver high ESC step buildings that use low carbon in building operations?

4. As we drive down operational carbon emissions, embodied carbon becomes more important to address. Will the Province introduce an embodied carbon metric? What are the key lessons from the CoV's process of mandating LCA on rezoning projects? How good is the data? What is the COV's plan for rezoning updates? (this may already be addressed in Patrick's presentation. How would you track/administer and not delay approval processes? How big on impact based on the life-cycle of a building?

5. Why spend time on the regulatory framework for LGs to regulate carbon. The time-frames are short to achieve the Provincial low carbon target. Why not just focus on the 8-9 year road-map we need to reduce carbon to near zero in all new construction?

6. What is the long term strategy for DE systems? How can I lower my GHGs if I am mandated to connect to an older DE system that is releasing GHGs? Will there be special rules for these situations? Also, DE systems do not generally provide cooling, so there is no savings as with heat pumps. This will make DE systems even less viable and cost competitive.

7. What incentives, if any, are needed to support a transition to a low carbon economy & building sector? Incentives for new and existing buildings

8. Why doesn't the Province stick to the COV Modeling for the emissions factors because there is already too much change occurring with the ESC, and the BCH emissions factors will be going down anyway fairly soon. The Government needs to do its part, by improving the grid.

9. Is BCH going to required to remove the tier 2 rates and the extra connection fees with EVC and carbon mandates

10. RNG? yes/no, how would you confirm use? Discuss the push for building electrification

11. Do you have concerns over industry capacity issues - First it's the ESC, now electrification/heat pumps and then embodied carbon?

12. How do you ensure that you are not throwing money to buildings that will be knocked down and redeveloped?

13. Industry concern: We have an approach that is working. LGs can lower carbon by using ESC as an incentive - Lower the step if you lower carbon. We have already heard from some LGs that they will mandate highest step of the ESC now and very low carbon reductions of they are allowed to regulate carbon.

14. Should the power be linked to low-carbon land use?

15. What will be the impact of the carbon tax on the metrics?

Hello members of the Step Code Capacity Building and Communications Subcommittee,

On behalf of the Working Group that has guided this project, I'm delighted to announce the BC Energy Step Code Capacity Study is now available online. This study looks at the **readiness of key construction professions to implement the BC Energy Step Code in 2022, 2027 and 2032**. We hope it will be of interest - and assistance - to you and many others.

Thank you to:

- FortisBC and BC Hydro who funded the study
- The consulting team, led by Helen Goodland, Scius Advisory in partnership with Delphi Group, that did the work
- The members of the Matrix Working Group who helped develop the scope of work and provided guidance to the consultants

Helen Goodland/Scius, and Ben Clark/Delphi Group, will give a presentation about the study at our next CBCSC meeting on Sept. 22, 2021. If you don't have the invite already, please let me know.

Til then, if you'd like to read the report, you can find it at https://energystepcode.ca/reports/#capacity. Direct links to the two parts are:

2021 BC Energy Step Code Industry Capacity Study (PDF, 12MB)
Report Appendix with the study matrix and resource lists (Excel)

Thank you and please be in touch if you have questions.

Kind regards,
Dale

Hi Everyone,

Sorry for the delay on this, please find below the outline I will be following for my presentation on Monday:

Outline for Sept 13 UDI Webinar:

Experience to date with GHGI

a. Past steps on GHGI – rezoning, code (show chart of steps)

   i. KEY MESSAGE: we have used carbon performance standards for new buildings to reduce GHG emissions by ~70% in just 5 years

   ii. KEY MESSAGE: we have made great progress in Vancouver, thanks to the hard work of industry

b. GHGI data of actual project designs (show scatter or bar chart)

   i. Average GHGI in rezoning apps in 2020/21 is ~3.2 kgCO2e/m2 (limits are 6 and 5 in residential)

   ii. Zoom in on projects in 5.5 range – what did they do? Electric heat? HP or baseboards? gas DHW? Give insights, breakdown on tenure if possible

      1. You can meet GHGI 6 with electric resistance heat

   iii. Zoom in on projects in ~1-3 range – what did they do?

      1. Lots of people are voluntarily exceeding the limit

   iv. KEY MESSAGE: projects are meeting and exceeding our carbon requirements in policy and code (do not fear a carbon limit!)

c. Success stories – Near-Zero Emissions Buildings (ZEBx Case Studies):

   i. 825 Pacific – GHGI of 0.34!! Airtightness of 0.098 L/sm2 @ 75Pa!!

   ii. Firehall 17 – GHGI of 0.2!! old firehall was 60!

   iii. Gastown Childcares – GHGI of 0.7, typical childcare is 20!

iv. Outside Vancouver – Skeena Residences, Kelowna – GHGI of 0.66, airtightness of 0.08 L/sm2 @ 75Pa!!

v. Outside Vancouver – Carrington View, West Kelowna – GHGI of 0.16!! TEUI of 32.8!! (after -17 for solar PV)

Climate Emergency New Building Updates (Part 3)

a. Content:

i. KEY MESSAGE: this is our plan to address the Climate Emergency in Part 3

1. This will also make it easier/cheaper for existing buildings to decarbonize

ii. Zero Emissions Heating and Hot Water (and make-up air)

1. Such as: GHGI 3 (electric hot water and MUA)

iii. Reducing Embodied Carbon

1. Such as: lower carbon concrete (SCM's), less foam insulation, etc.

a. Mass timber would more than achieve any target we set

iv. Building Resilience – avoiding future overheating

1. Such as: future weather, more stringent overheating limits – still TBD

b. Structure:

i. Rezoning – 7+ storeys (all of above)

ii. Focus on code-only for 4-6 storeys (ZE hot water, more minimal on EC and resilience)

iii. KEY MESSAGE: we need to do our part to make approvals simple, efficient, and streamlined, while addressing Council priorities

c. Timing:

i. Consultation planned for Winter: Nov-Feb

ii. Council: Mar-May 2022

iii. KEY MESSAGE: we look forward to engaging with you on how to make this next step work for everyone

Please let me know if you have any questions or concerns, and I look forward to presenting on Monday!

Also, **Verna**: would it be possible to get a link to the session for my colleague Charling Li and manager Sean Pander?

Thank you!

Good afternoon Panel,

Please see attached for an updated copy of our meeting minutes with information regarding order of speaking as well as some purposed questions. The Q&A and discussion will be adjusted depending how long each presentation is.

You should all have the panel zoom link set in your calendar invitation for 9:15 am on Monday, September 13 to allow us time to do a dry run through and ensure that everyone is comfortable and able to share screens for your presentation. The webinar will go live at 9:30 am.

If you have any questions, please do let me know.

Kind regards,

Verna

Subject: RE: UDI Sept. 13 Webinar - Pre-Event Meeting

Slides to follow later this week, but here's my outline for the Province's update:

Energy Step Code

- BC is committed to improved harmonization with the model national codes and supporting Province's CleanBC commitment to improve energy efficiency in the BC Building Code by 20% in 2022.
    - This will involve incorporating the latest revisions to the national codes, expected at the end of 2021, with the Energy Step Code, to ensure that all buildings are more efficient and on the path towards the Province's 2032 goal of Net Zero Energy Ready
    - For communities already requiring the Energy Step Code, this will not be a significant change
    - For communities not referencing the Energy Step Code the 2022 Code update the Energy Step Code will become the minimum standard
        - Exact technical details are being worked out through the ESC Council, but it's roughly Step 3 for Part 9 buildings and Step 2/3 for Part 3 buildings

- Full impact analysis of the changes is being completed to ensure that the approach in 2022 continues to support affordable energy efficiency through flexible performance-based regulation
- Working with the ESCC to seek recommendations on the details, but 2022 will be built on the success of the Energy Step Code and moving the province up the steps and towards our long-term energy efficiency commitments.

Carbon Pollution Standards

- Mandate letter commitment to enable local governments to set their own carbon pollution standards
- This is a high priority and work is underway, with the hope of finalizing recommendations this fall
- Developing a standardized Provincial carbon pollution (GHG) standard that could be added to the Energy Step Code
- Local governments would be able to reference this standard the same way as the ESC – no formal opt-in
- Building on experience of Vancouver and other jurisdictions, and feedback from industry and utility partners
- Likely looking at GHG targets that would require decarbonization from measure-only, to decarbonizing one or both key energy using systems (heat and hot water), as well as considering full building decarbonization.
- We are collaborating within government to ensure that these standards are prepared for innovations in low-carbon energy (renewable natural gas, district energy, renewable electricity)
- These proposed standards would be in addition to the Province's energy efficiency commitments, to ensure that all buildings are making efficient use of the energy they use.
- We are hoping to have all local governments who currently have low-carbon policies migrate to this provincial standard, which will be more enforceable, transparent, and consistent across the Province.

Hi Verna et al.,

Note that I will not have a PPT nor outline by then. I will have a list of points that I plan to hit by the meeting, but likely will not make the PPT until the wkd.

Given we won't have the full contingent during tomorrow's meeting, if we're able to shorten it to closer to 30 minutes I would appreciate it.

Thanks,

Max

Hi Everyone,

Thank you all for confirming. I have just sent out an invitation for a zoom meeting for 1pm tomorrow afternoon.

Patrick and Zachary – if your schedule changes, please do join us, but we can work out a time to connect over the next couple of days. Please also share with us your presentation/outline so we may review this together.

Kind regards,
Verna

I have a conflict tomorrow at those times as well. I'm free after 2:30pm, but maybe the best approach is to send around an outline, as Patrick proposes, and we can comment via email or with one-on-one calls where required?

Sorry I have a conflict at 1pm. But perhaps I can finish my draft slide deck this afternoon and share it with the group, and then you can send me any take-aways from your discussion and I can adjust it to respond the goals and message of the group.

Cheers,

Importance: High

Good morning Panel,

I hope everyone had a relaxing long weekend as we head in to the Fall!

With the September 13 breakfast webinar just around the corner, we would like to confirm a date for a pre-meeting this week to go through each presentation topic as well as confirm the format, and order of presentation.

Would you all be available to connect tomorrow morning at 9am or 1pm?

Kind regards,

Verna

Good Afternoon,

Thank you all once again for joining us in discussion on **The Green Building Climate: ESC & CoV Updates [can01.safelinks.protection.outlook.com]** [can01.safelinks.protection.outlook.com]. As September is fast approaching, we would like to set-up a pre-meeting to discuss the event in more detail including event format and rundown as well as review the topics of discussion.

Please let me know if you would be available to join us on any of the following dates/times:

Tuesday, August 31: 3pm
Thursday, September 2: 1 pm
Tuesday, September 7: 11 am
Wednesday, September 8: 9 am or 1 pm

Kind regards,

Verna
