Slides to follow later this week, but here's my outline for the Province's update:

Energy Step Code

- BC is committed to improved harmonization with the model national codes and supporting Province's CleanBC commitment to improve energy efficiency in the BC Building Code by 20% in 2022.
    - This will involve incorporating the latest revisions to the national codes, expected at the end of 2021, with the Energy Step Code, to ensure that all buildings are more efficient and on the path towards the Province's 2032 goal of Net Zero Energy Ready
    - For communities already requiring the Energy Step Code, this will not be a significant change
    - For communities not referencing the Energy Step Code the 2022 Code update the Energy Step Code will become the minimum standard
        - Exact technical details are being worked out through the ESC Council, but it's roughly Step 3 for Part 9 buildings and Step 2/3 for Part 3 buildings
    - Full impact analysis of the changes is being completed to ensure that the approach in 2022 continues to support affordable energy efficiency through flexible performance-based regulation
    - Working with the ESCC to seek recommendations on the details, but 2022 will be built on the success of the Energy Step Code and moving the province up the steps and towards our long-term energy efficiency commitments.

Carbon Pollution Standards

- Mandate letter commitment to enable local governments to set their own carbon pollution standards
- This is a high priority and work is underway, with the hope of finalizing recommendations this fall
- Developing a standardized Provincial carbon pollution (GHG) standard that could be added to the Energy Step Code
- Local governments would be able to reference this standard the same way as the ESC – no formal opt-in
- Building on experience of Vancouver and other jurisdictions, and feedback from industry and utility partners
- Likely looking at GHG targets that would require decarbonization from measure-only, to decarbonizing one or both key energy using systems (heat and hot water), as well as considering full building decarbonization.
- We are collaborating within government to ensure that these standards are prepared for innovations in low-carbon energy (renewable natural gas, district energy, renewable electricity)
- These proposed standards would be in addition to the Province's energy efficiency commitments, to ensure that all buildings are making efficient use of the energy they use.
- We are hoping to have all local governments who currently have low-carbon policies migrate to this provincial standard, which will be more enforceable, transparent, and consistent across the Province.

Hi Verna et al.,

Note that I will not have a PPT nor outline by then. I will have a list of points that I plan to hit by the meeting, but likely will not make the PPT until the wkd.

Given we won't have the full contingent during tomorrow's meeting, if we're able to shorten it to closer to 30 minutes I would appreciate it.

Thanks,
Max

Hi Everyone,

Thank you all for confirming. I have just sent out an invitation for a zoom meeting for 1pm tomorrow afternoon.

Patrick and Zachary – if your schedule changes, please do join us, but we can work out a time to connect over the next couple of days. Please also share with us your presentation/outline so we may review this together.

Kind regards,
Verna

Good morning Panel,

I hope everyone had a relaxing long weekend as we head in to the Fall!

With the September 13 breakfast webinar just around the corner, we would like to confirm a date for a pre-meeting this week to go through each presentation topic as well as confirm the format, and order of presentation.

Would you all be available to connect tomorrow morning at 9am or 1pm?

Kind regards,

Verna

Good Afternoon,

Thank you all once again for joining us in discussion on **The Green Building Climate: ESC & CoV Updates [can01.safelinks.protection.outlook.com]**. As September is fast approaching, we would like to set-up a pre-meeting to discuss the event in more detail including event format and rundown as well as review the topics of discussion.

Please let me know if you would be available to join us on any of the following dates/times:

Tuesday, August 31: 3pm
Thursday, September 2: 1 pm
Tuesday, September 7: 11 am
Wednesday, September 8: 9 am or 1 pm

Kind regards,

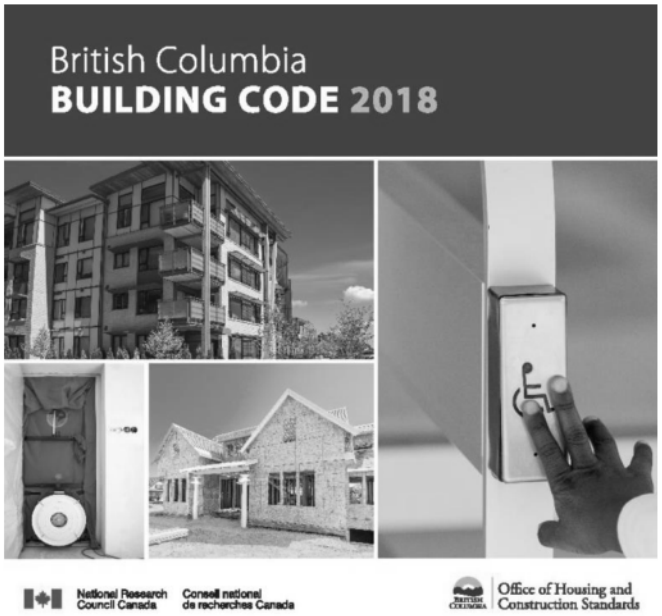
UDI Webinar – Update on Energy Step Code
and Carbon Pollution Standards
September 13, 2021



Upcoming Changes to Provincial Building Regulations:

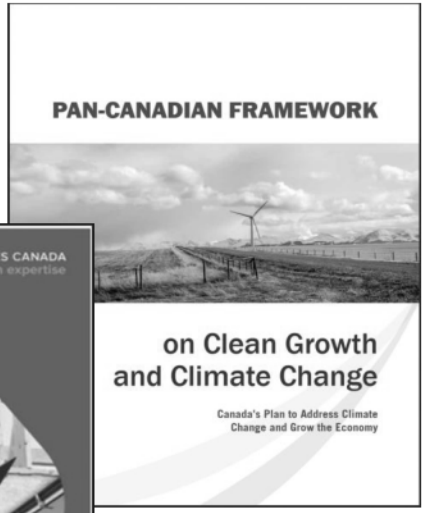
1. 20% improvement to energy efficiency in 2022 (Energy Step Code)

2. Carbon pollution standards for new construction (New)

Provincial & National Policy

CleanBC (2018)

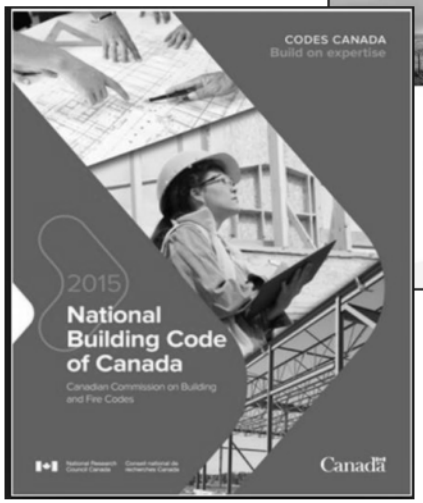
Net Zero Energy Ready by 2032
in BC Building Code



Pan-Canadian Framework (2016)

Net Zero Energy Ready by 2030 in
National Codes

Reconciliation Agreement on Construction Codes (2021)



CleanBC & Energy Step Code

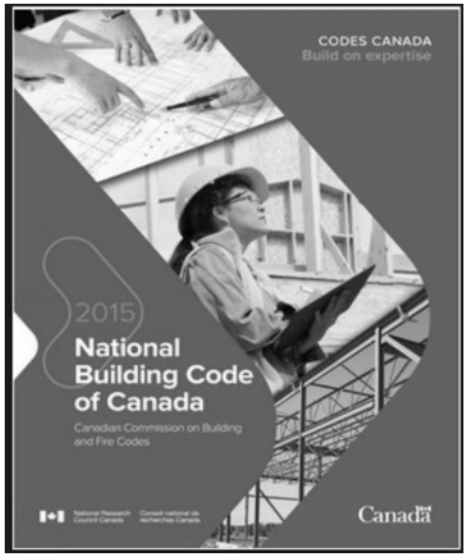
	PART 9 BUILDINGS	PART 3 BUILDINGS	NET-ZERO ENERGY-READY UP TO:
2032	STEP 5	STEP 4	80%
2027*	STEP 4	STEP 3	40%
2022*	STEP 3	STEP 2	20%

*NEW TARGET DEADLINES

Energy-efficiency improvement above 2018 BC Building Code requirements

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

20% Improvement in 2022



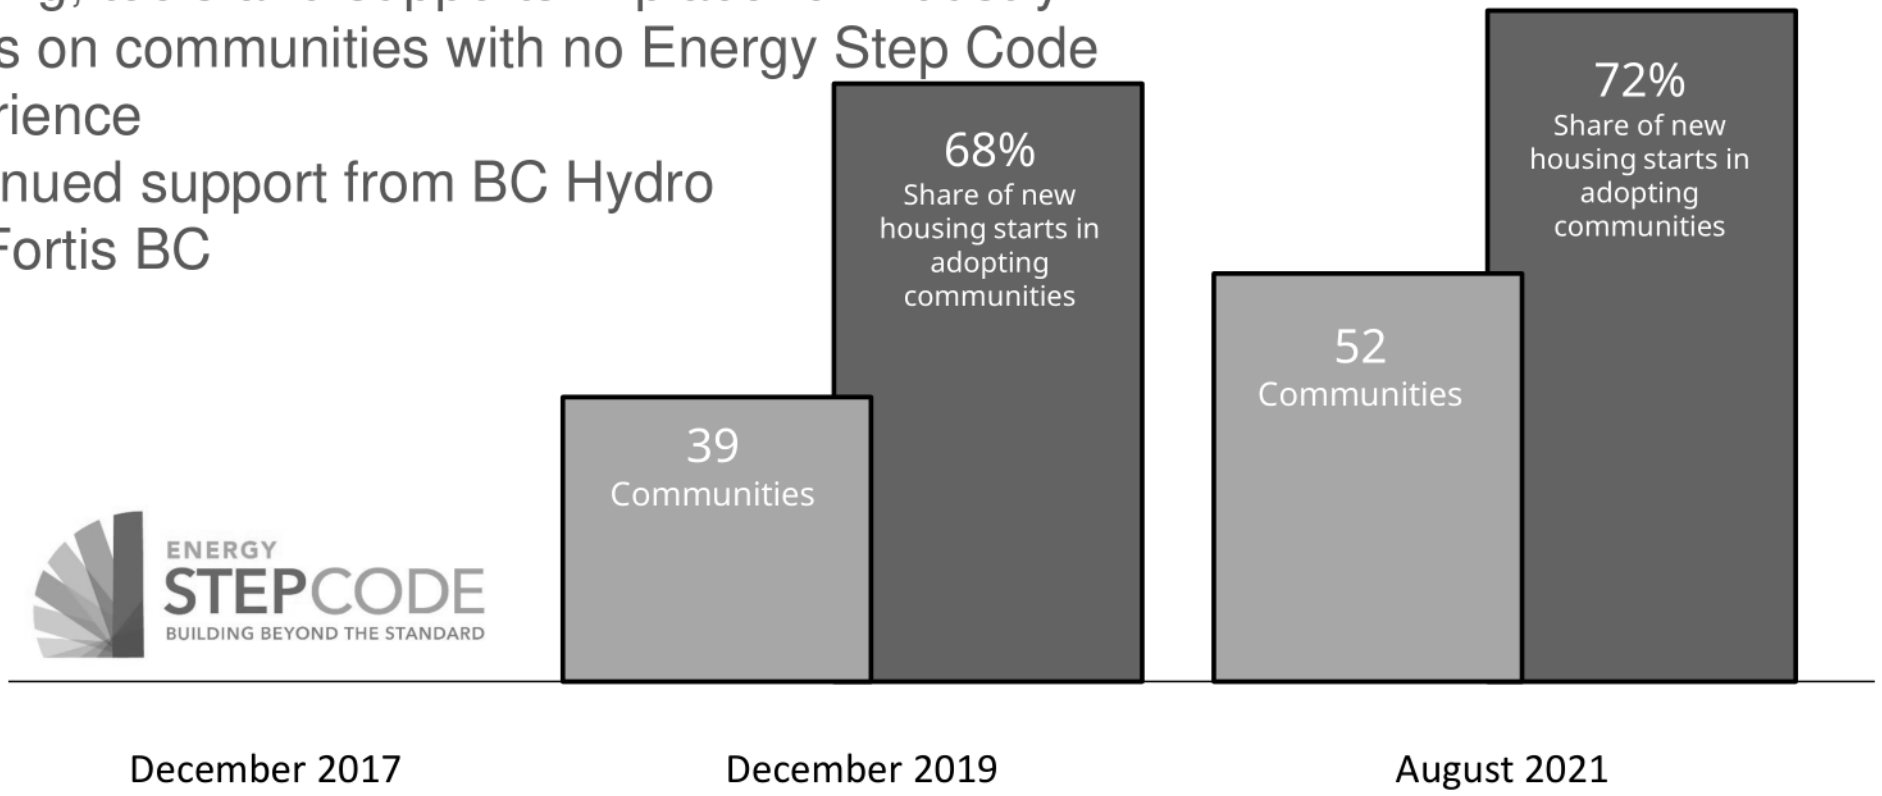
20% Improvement in Energy Efficiency in 2022:

- Build on success of the Energy Step Code
  - Step 3 for Part 9 housing
  - Step 2* for Part 3 buildings
- Support improved harmonization with national codes
- Develop recommendations through the Energy Step Code Council
- Impact analysis currently underway

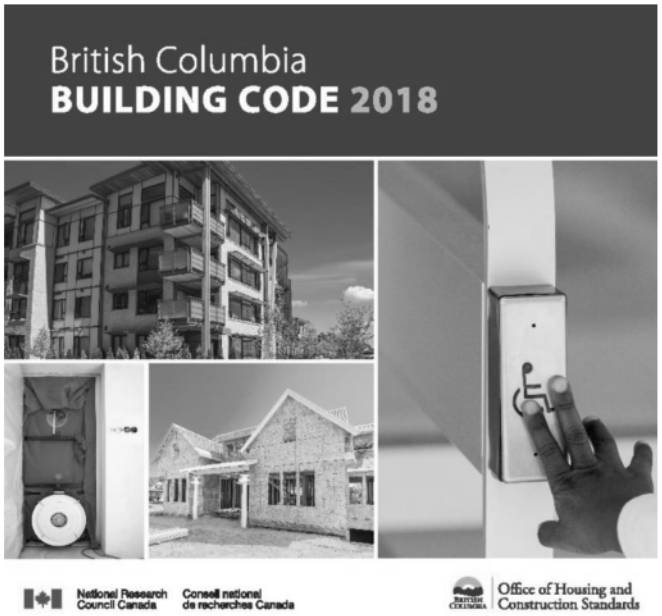
*pending technical analysis to determine which step achieves 20% improvement

Preparing for Success

- Significant capacity development by local governments who are ready for 2022
- Training, tools and supports in place for industry
- Focus on communities with no Energy Step Code experience
- Continued support from BC Hydro and Fortis BC



ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

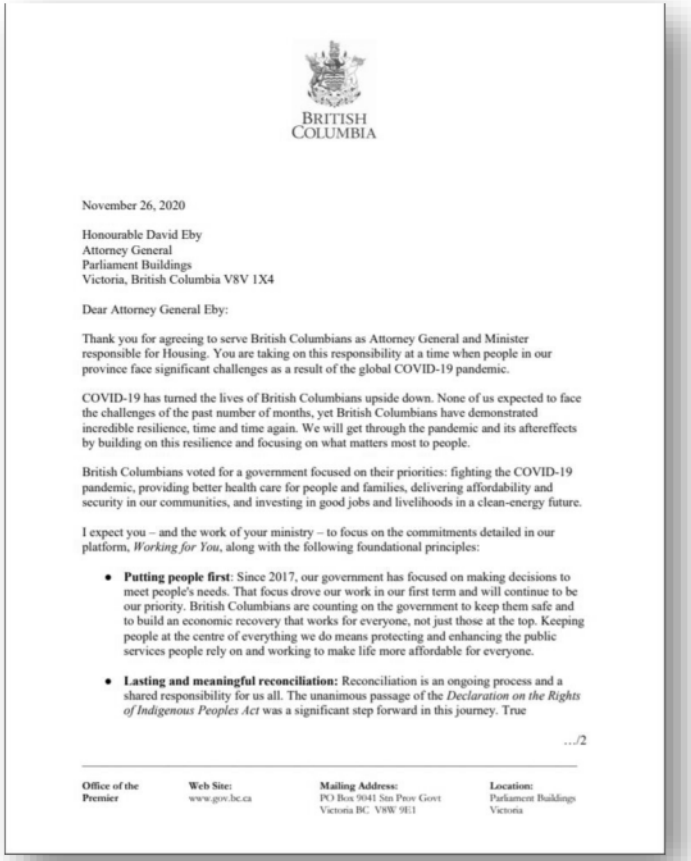


Upcoming Changes to Provincial Building Regulations:

1. 20% improvement to energy efficiency in 2022 (Energy Step Code)

2. Carbon pollution standards for new construction (New)

Mandate Letter – Carbon Pollution



BRITISH COLUMBIA

November 26, 2020

Honourable David Eby
Attorney General
Parliament Buildings
Victoria, British Columbia V8V 1X4

Dear Attorney General Eby:

Thank you for agreeing to serve British Columbians as Attorney General and Minister responsible for Housing. You are taking on this responsibility at a time when people in our province face significant challenges as a result of the global COVID-19 pandemic.

COVID-19 has turned the lives of British Columbians upside down. None of us expected to face the challenges of the past number of months, yet British Columbians have demonstrated incredible resilience, time and time again. We will get through the pandemic and its aftereffects by building on this resilience and focusing on what matters most to people.

British Columbians voted for a government focused on their priorities: fighting the COVID-19 pandemic, providing better health care for people and families, delivering affordability and security in our communities, and investing in good jobs and livelihoods in a clean-energy future.

I expect you – and the work of your ministry – to focus on the commitments detailed in our platform, *Working for You*, along with the following foundational principles:

- **Putting people first**: Since 2017, our government has focused on making decisions to meet people's needs. That focus drove our work in our first term and will continue to be our priority. British Columbians are counting on the government to keep them safe and to build an economic recovery that works for everyone, not just those at the top. Keeping people at the centre of everything we do means protecting and enhancing the public services people rely on and working to make life more affordable for everyone.
- **Lasting and meaningful reconciliation:** Reconciliation is an ongoing process and a shared responsibility for us all. The unanimous passage of the *Declaration on the Rights of Indigenous Peoples Act* was a significant step forward in this journey. True

.../2

Office of the Premier | **Web Site:** www.gov.bc.ca | **Mailing Address:** PO Box 9041 Stn Prov Govt Victoria BC V8W 9E1 | **Location:** Parliament Buildings Victoria

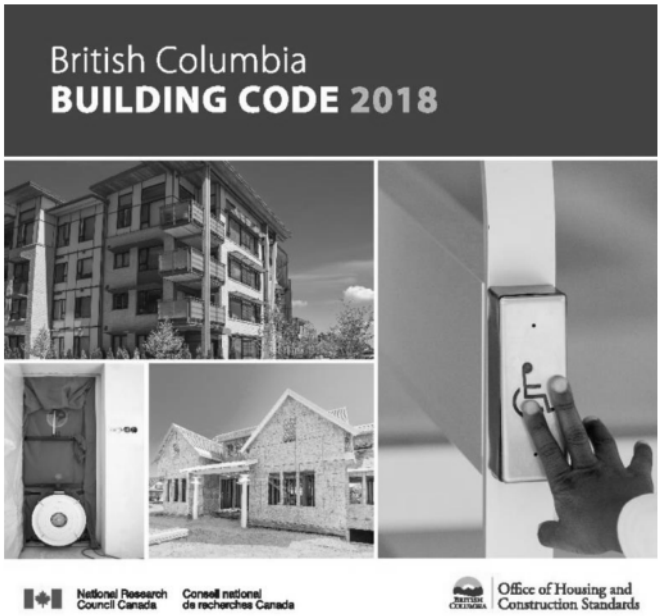
Attorney General and Minister Responsible for Housing:

"[…] supporting local governments to set their own carbon pollution performance standards for new buildings."

Other commitments and priorities:

- Homes for BC – 10-year housing plan
- Sectoral targets and engagement on CleanBC related to carbon pollution
- Existing Buildings Code by 2024

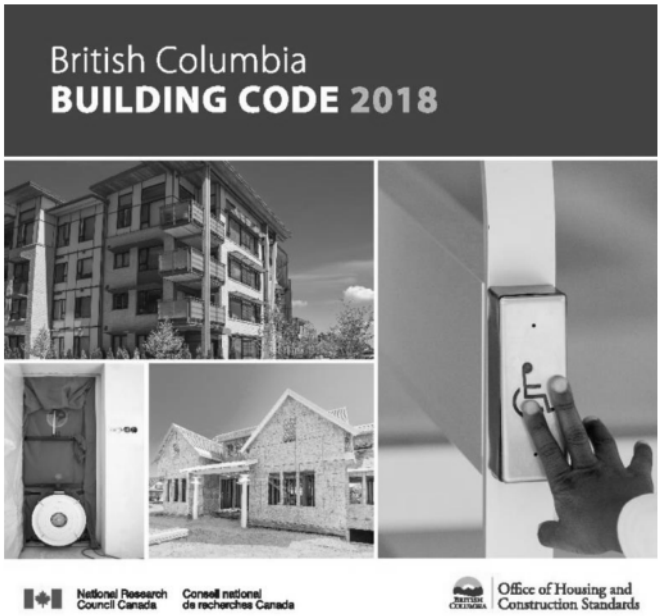
Carbon Pollution Standards



Carbon Pollution (GHG) Standards:

- Several local governments already addressing carbon pollution in some form
- Establish a standardized provincial approach similar to Energy Step Code
- Carbon requirements in addition to energy efficiency requirements
- Consulting with Energy Step Code Council to seek input on appropriate performance levels and enforcement

Carbon Pollution Standards



Technical Considerations:

- Considering performance levels from ‘measure only’ to full decarbonization
  - space heat and hot water will be most directly impacted
- Focus on performance codes that provide flexibility and allow for future innovation
  - same energy modelling as Energy Step Code
- Working to provide long term certainty on how codes address carbon pollution

Other Building Code Activities

Projects and Commitments Related to the Code:

- Reconciliation Agreement on Construction Codes
- Existing Buildings (CleanBC)
- Accessibility
- Next edition of the BC Building Code

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Notes

Date and Time of Meeting: Thursday Sept 9, 2021 | Time: 1:00 p.m. to 4:00 p.m. Pacific Time
Chair: Zachary May, Building and Safety Standards Branch, Attorney General and Minister Responsible for Housing
Co-Vice Chairs: Bob Deeks, CHBA BC/RDC Fine Homes and Robyn Wark, BC Hydro
Virtual Microsoft Teams meeting

Participants

1. Bea Bains, FortisBC
2. Jay Chadha for Diana Dilworth, HAVAN
3. Remi Charron for Wilma Leung, BC Housing
4. Maya Chorobik, CEA and LGPN Co-chair
5. Norm Connolly, Richmond/PIBC, and P3 Subco Co-chair
6. Patrick Enright, City of Vancouver
7. Katy Fairley for Warren Perks, BCCA
8. Sara Fralin, AHMA
9. Jeff Fisher, UDI
10. Maura Gatensby, AIBC
11. Nicholas Heap, City of Richmond and outgoing P9 Subco co-chair
12. Toby Lau, BC Hydro and P3 Subco Co-chair
13. Megan Lohmann, CEA and UBCM rep
14. John Madden, UBC
15. Richard Mathews, Squamish and Part 9 Subco co-chair
16. Mary McWilliam, BCIT & CBC Subcommittee Co-chair
17. Katherine Muncaster for Nat Gosman, EMLI
18. Roberto Pecora, ZEBx
19. Harshan Radhakrishnan, EGBC
20. Ron Rapp, HAVAN and Part 9 Subco co-chair
21. Pauline Rupp for Joe Hart, CHBA
22. Laura Sampliner, Port Moody and LGPN Co-chair
23. Muneesh Sharma, BOMA
24. Maxwell Sykes, City of Surrey/UBCM Rep
25. Holly Wacker, Ministry of Municipal Affairs
26. Guido Wimmers, UNBC
27. BSSB: Tiffany Warkentin, A/Director, Strategic Policy and incoming ESCC chair; Dale Andersson, CBC Subcommittee Co-chair; Scott Williams, Senior Energy Codes Administrator, Hugo Wong, Policy Analyst
28. **Guests**: Tom Berkhout, BC Hydro, Alexandre Bigonesse, NRCan; Charling Li, City of Vancouver; Adrian Mohareb, CAS; Lily Shields-Anderson, UDI
29. **Regrets**: Catherine Ernst, BOABC; Jason Jung, ASTTBC; Lisa Mak, BC Hydro; Kelly Reid, HKR Builders/CHBA BC; Tyler Wightman, BOABC

Welcome, Introductions, and Opening Remarks (Zachary May)

- Objectives for the meeting:
  - 1. Provide an overview of the fall work plan to deliver 20%-better energy efficiency in the next iteration of the BC Building Code.
  - 2. Provide an overview of a new report on industry capacity for 2022, 2027 and 2032.
  - 3. Hear from Council members and Subcommittees.
- New Interim Chair: Zac will start 12 months leave in October. Tiffany Warkentin, Acting Director of Strategic Policy for the Building and Safety Standards Branch, will act as interim chair for this period. Tiffany has been with BSSB for about a year, and has been a solicitor in small communities with experience in real estate and development. She will be taking over most of Zac's duties for that time.

Energy Step Code and CleanBC targets (Zachary May)

- See attachment provided with the agenda.
- This issue concerns a motion raised during Part 9 subcommittee meeting on June 3, 2021.
- The ESCC and subcommittees primarily operate on consensus rather than formal majority votes. The ESCC is not a decision-making body, but provides input on how to implement mandate items.
- In summary, the motion identifies shortcomings with the reference building approach, and says the ESC does not do enough to meet provincial climate targets. The motion will be shared with the Council and Zac will provide a written response.
- ESC is one tool in CleanBC, but is not the only tool. Happy to raise and document any concerns.
- Encourage members who have concerns with the reference building approach or other issues to advance them through the national Standing Committee on Energy Efficiency as the best venue.
- Continued commitment for harmonization means reference building approach stays. Assume that we will harmonize first.
- Current desire to maintain EUI targets in B.C., with revisit in 2025.

Industry Capacity Readiness Report: Presentation from Helen Goodland, Scius Advisory and Ben Clark, Delphi Group

- See slideshow and report examining the readiness of key construction professions to implement the BC Energy Step Code in 2022, 2027 and 2032
- Report available at https://energystepcode.ca/reports/#capacity.
- Direct links:
    - 2021 BC Energy Step Code Industry Capacity Study (PDF, 12MB)
    - Download the study matrix and resource lists (Excel)
- This study was a project of a working group of the Capacity Building and Communications Subcommittee; there was interest in updating an earlier capacity study from 2017 to assess progress since then and determine how best to direct current and future efforts and resources.
- Thank you to FortisBC and BC Hydro for funding the study.
- Questions and discussion on the following points:
    - Members sent congratulations to sectors identified as ready for the future code changes, including EGBC.
    - General contractors for Part 3 buildings identified as partially ready. Not a homogenized sector. Need to be clear which courses are required for which professions. Unlike homebuilders, no similar requirement for CPD, while being very busy and facing labour shortages. More practical, learning-by-doing courses are better than classroom learning.
    - Many courses available, but lack of interest from multiple sectors, such as in Prince George. Smaller buildings would make it easier, but we prefer larger single-family homes or MURBs. Extra insulation in those buildings don't yield significant improvement.
    - Study found many courses available, but not specific enough in what they taught.

- Knowledge management lens should be applied to this issue.
- Good interest from recent builder breakfast in Richmond, where the upcoming 20%-better message has been reinforced.
- Suggestion to include training in tender documents so successful bidders attend education by default.
- EGBC is pleased to post a series of Continuing Education Webinar Series on Deep Energy and Emissions Retrofit of Existing Buildings. The first event in this series on September 29th will provide an introduction to deep retrofits, as explored through the project examples of subject matter experts. Please share this info with your networks. More info: https://www.egbc.ca/Events/Events/2021/21SEPIDR

Council Member Roundtable

- UDI breakfast seminar Sept. 13 featuring Patrick Enright, Maxwell Sykes, and Zachary May on ESC and GHGs.
- HAVAN will have monthly update on ESC implementation in Metro Vancouver, with next one on Sept. 15. Will include more forward-looking information on when municipalities want to step up, versus what they're doing now. HAVAN has online courses, but will reintroduce in-person learning as well.
- HAVAN has started to track local government Step Code adoption on a monthly basis – see https://havan.ca/wp-content/uploads/2021/08/Step-Code-Tracking-Sheet-August-15.pdf
- Max offers to send out promotion material as needed via a City of Surrey e-newsletter, with 500-600 subscribers.
- Question on how H2k works with primary and secondary fuel types, and if CoV energy modelling guidelines will be updated to work with new provincial GHG options. Will defer to CoV but more answers at late September meeting.
- Upcoming ZEBx webinar on labelling, in partnership with CHBA-BC and their NZER label. BERM launch later with a talk from Tom Berkhout and a guest from California. Happy to spread the word on energy efficiency or GHG content.
- ZEBx and BOMA are hosting an event on Sept. 21 for commercial members on deep energy retrofits. https://www.boma.bc.ca/events-sponsorship/event-calendar/event-details/?EventID=398
- Building a Legacy toolkit is expanding with more resources. Lots happening in the North – see https://energystepcode.ca/northern-and-rural-resources/.

Updates from Subcommittees

- **Part 3 and Part 9 Subcommittees:** See meeting notes from Part 3 and Part 9 subcommittees.
  - Building officials should ask Fred Tewfik at City of Richmond for access to tool which scrapes key data from HOT2000 full house reports into Excel.

- **LGPN:** Two quarterly meetings thus far. Compliance form updates, LCES pathways report. Some LGPN participation in CleanBC Roadmap to 2030 consultation, with letter sent to some provincial staff seeking more engagement on this topic. Next meeting is November 3, with no scheduled Deep Dive but possible topics could include Upper Steps, low-carbon building toolkit, electrification impact study results from BC Hydro, and others.
- **Capacity Building and Communications**
    - 'Convene and catalyze role' – Fall meetings Sept. 22, 2021 + Date TBD Nov. 2021
    - Fall/winter workplan being finalized
- Industry Capacity Study: Next Steps
    - Working on implementation plan for recommendations
    - Likely a new/reconfigured WG for this
- Communications Working Group
    - Website (small restructuring June 2021)
    - Newsletter – restarting later fall 2021
    - BCBC 2022 communications plan: Started
- Gentle Reminder
    - Events for the calendar, newsletter or website ideas = always welcome – please send to dale.andersson@gov.bc.ca or hugo.wong@gov.bc.ca

20%-better Workplan and Harmonization, Scott Williams, BSSB

- See PowerPoint
- Seeking to retain Step Code targets for applicable buildings. NECB for buildings without Step Code requirements. May remove ASHRAE 90.1 in new construction, referring instead to NECB 2020 and tiered approach. Long B.C. history of that standard, but with viable national standards, need for 90.1 is diminished. May take time to adjust.
- Overheating needs more work. Lots of headway on ASHRAE 55. Encourage BC participation on national Cooling as a Load committee, with reassessment in 2022. If national committee slows down, BC can use ASHRAE 55 as a backstop and draw from BC-specific work.
- No formal request for cooling in buildings yet, but we are assuming a social need.
- On Part 9, an RFP will soon be issued for technical research into smaller homes, colder climates, and log homes. CSA F280 might be a stopgap. Subcos and working groups will lead on this.
- Plan to introduce 20%-better energy efficiency by Dec. 2022, as an update to the BCBC 2018. The rest of the Code is planned to be updated for 2023.
- A new national code is expected by end of 2021. Will wait until that introduction to further clarify roadmap to 20%-better.
- Questions about communications, and high-level messaging sooner is better.
- Will seek recommendation from technical subcommittees on peak load cooling in proposed NBC.

- Only real option is to keep Steps (i.e., numbering) as they are, putting “reserved” on some Lower Steps to make them an ineligible option for compliance.

Thank You!

Good morning Panel,

Thank you all so much for joining us this morning for the webinar! You can now view the video of this morning's session:

Topic: UDI Webinar: The Green Climate - ESC & COV Updates
Start Time : Sep 13, 2021 09:13 AM

Meeting Recording:
s.15

Hope everyone has a great rest of the day!

Kind regards,
Verna

Hello new and long-time members of the Step Code Capacity Building and Communications Subcommittee, and hello to our guests,

Update Sept. 13, 2021: Adding the agenda.

This is our first fall 2021 meeting. We look forward to presentation from Helen Goodland/Scius Advisory and Ben Clark/Delphi Group about the Step Code industry readiness study they prepared for our Subcommittee's 'Matrix Working Group.'

Thank you. Please be in touch if you have questions. We look forward to speaking with you next week.

Kind regards,
Dale Andersson/BSSB and Mary McWilliam/BCIT
Subcommittee co-chairs

Note: This will be a TEAMS meeting but we now have a dial-in option – see details below.

Microsoft Teams meeting

s.15

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council
Capacity Building and Communications Subcommittee (CBCSC)

MEETING AGENDA

Date: Wednesday September 22, 2021
Time: 10:00 a.m. to 12:00 p.m.
Subcommittee Co-chairs: Mary McWilliam, BCIT; Dale Andersson, BSSB
Microsoft Teams Online Meeting:
Click here to join the meeting or
Call s.15

Role of the Subcommittee: Three Subcommittees (and various working groups) support the Energy Step Code Council and ultimately the successful implementation of the Step Code across British Columbia. The CBCSC has responsibilities to "convene and catalyze" capacity-building efforts; communicate the 2022 plan; track key capacity metrics; support case studies; address key training gaps; and monitor EA capacity.

Time	AGENDA ITEM
10:00	1. **Welcome and Introductions** – Mary McWilliam a. New Members Welcome b. Territorial Acknowledgements
10:10	2. **Step Code Industry Capacity Study 2021** (Matrix Working Group) a. Introduction – Dale Andersson b. Presentation by consultants – Helen Goodland/Scius Advisory and Ben Clarke/Delphi Group (20 min) c. Q&A (25 min) Report is available online at: https://energystepcode.ca/reports/#capacity ▪ 2021 BC Energy Step Code Industry Capacity Study (PDF, 12MB) ▪ Download the study matrix and resource lists (Excel)
11:00	3. **Capacity Study Implementation Plan Discussion** – Tom Berkhout
11:20	**4. New Tools/Resources/Updates** a. Gaëtane Carignan, Community Energy Association i. Local government Step Code survey 2021 ii. Local government Step Code adoption tracker iii. Other b. Others? Please share
11:40	5. **Energy Step Code Council Update** – Dale Andersson a. GHG work per mandate letter[1]

[1] Minister Eby's mandate letter: "Build on our government's work to require new buildings and retrofits to be more energy efficient and cleaner by supporting local governments to set their own carbon pollution performance standards for new buildings." See https://www2.gov.bc.ca/assets/download/FEE0C298D76D435485E143A23907AABB.

	b. 2022 BC Building Code Update i. Spring 2022 legislation for end of 2022 Effective Date
11:45	**6. Working Groups** a. Communications Working Group – Dale Andersson i. Updated Vol 2 of the brand guidelines (see details below) ii. Small restructuring of www.energystepcode.ca June 2021 iii. Communications Plan 2022 b. Energy Advisor Working Group – Dale Andersson c. Educators Working Group – Mary McWilliam
11:55	7. Next Meeting and Adjournment – Mary McWilliam

BC Energy Step Code Brand Handbook

Available online at https://energystepcode.ca/implementation-tools/#brandhandbook:

- The BC Energy Step Code Brand Handbook consists of two files intended to be used together:
  - Volume 1: Design Guidelines (PDF, 1MB)
  - Volume 2: Style and Brand Usage Guidelines (PDF, 1MB)
- The handbook provides design and style guidance for governments, organizations or companies that want to use the brand to communicate accurate information about the standard to constituents, customers or stakeholders

Changes to Volume 2 effective September 2021:

- Brand name remains: BC Energy Step Code (no periods in BC, words capitalized)
- Handbook now permits 'Step Code' or 'ESC' as acceptable shortened forms (formerly there were no short forms permitted apart from 'regulation' or 'standard')
- Handbook now permits use of 'adopt' as well as 'reference' to refer to when a local govt adopts/references the Step Code (formerly the guidelines stipulated the use of 'reference')
- Both changes were made to align with terms people use
- Please take note if you prepare training materials

"Advancing Mass Timber"
Webinar Pre-Meeting

AGENDA
Tuesday, September 14, 2021 | 2:00 pm – 3:00 pm

- Purposed Format
  - 10-12 minutes each – individual overview on topic
  - 15-20 minutes conversation / moderated Q&A

- Confirm order of presentation/topics
  - Patrick Enright, Senior Green Building Engineer - City of Vancouver
  - Andrew Harmsworth, Principal - GHL Consultants Ltd.
  - Zachary May, Acting Executive Director, Building & Safety Standards Branch - Province of British Columbia

- Discuss Potential Questions

Proposed Schedule:

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run	15	
9:30	UDI Introduction Thank Sponsors	2	Jeff Fisher
9:32	Sponsor Remarks – BC Housing	2-3	Sheryl Peters
9:35	Introduction & Overview	5	Rocky Sethi
9:40	Presentation 1	10-12	
9:52	Presentation 2	10-12	
10:04	Presentation 3	10-12	
10:16	Moderated Discussion Q&A w/moderator	15-20	All
10:30	Webinar concludes		Rocky Sethi

Hello everyone,

Please note that for today's Climate 2050 draft Buildings and Transportation Roadmap stakeholder engagement session on adaptation, we will be using the Miro to facilitate discussion and feedback. Miro is an online collaborative platform, which allows participants to add sticky notes with their thoughts and feedback on to a board. We will be providing instructions this afternoon on how to navigate Miro, but you are welcome to view the Miro board in advance to become familiar with the platform.

https://miro.com/app/board/o9J_lxqzoes=/
Please also note that Miro is not compatible with Internet Explorer, and can be accessed using other web browsers such as Chrome.

Meeting Agenda

- Overview of *Climate 2050* resilience actions
- General questions
- Breakout room discussions – Transportation & Buildings
- Summary & next steps

We look forward to the session this afternoon. If you have any questions, please contact Nav Hundle at navjot.hundle@metrovancouver.org.

Thank you.

Navjot Hundle
Policy Analyst , Air Quality & Climate Change
Parks & Environment

Totally get the issue with the materials in development. I'll play the boring gov't man with no exciting ideas

The bullets help. I'm trying to focus on a desire to hear from UDI members what key changes would be helpful as we engage in national code discussions. Trying to avoid encouraging or discouraging provincial regulations until we have clarity from Cabinet.

Best,

Zachary D. May, MBA

Subject: RE: Pre-Meeting: UDI Webinar 09.28

Hi Zac,

s.13

You could talk about:

• We keep hearing about how the sweet spot for taller wood buildings is 7-12 storeys. That's the bread and butter mainstream that requires tapping into. Now that there is are prescriptive regulatory solutions for that, will industry swim with the current and pursue that archetype?

• The early adopter allowed everyone to take EMTC more seriously. Because it was real. Proof is the (1) EGBC/AIBC PPG that BSSB steered, and (2) TSBC issuing a bulletin about how to apply an electrical code that traditionally only had to interface with combust/non-combust. Those resources are in place and we hope the body of knowledge is rounded out further before barn doors are kicked open and EMTC is province wide.

• The early adopter has been good for industry and local governments. Voluntary opt-in by LG's provides industry a map of which areas are keen to see this type of innovation within their back yard.

Sorry I couldn't take this off your hands. But hopefully the bullets above are helpful.

Let me know if you'd like to discuss.

Thanks

Jarrett Hutchinson | Executive Director

Hi Jarrett,

I got roped into this breakfast seminar a couple months ago, but I have very little to offer as a panelist. Is this something you or someone on the team may be willing to step in on to discuss areas of research and possible priority for OMTI? I'm not able to say much without getting ahead of the work in your office.

FYI – there was also some concerns about gender diversity on the panel in the summer and I suggested they reach out to Trilby or Lee, but it sounds like that didn't happen.

Please reach out directly if you or someone on the team is willing to replace me.

Best,

Zachary D. May, MBA

September 7, 2021

Pietro Calendino
Chair, Planning and Development Committee
City of Burnaby
4949 Canada Way
Burnaby, BC, V5G 1M2

Dear Chair Calendino:

Re: Barriers to the Delivery of Market Rental Housing in Burnaby

Introduction

The City of Burnaby has worked over the past few years to increase the amount of affordable housing units being built throughout the City, while also protecting existing tenants. UDI has been supportive of these efforts. Several UDI members and I participated on the *Mayor's Task Force on Community Housing*, and our Burnaby Liaison Committee worked with staff throughout the development of the *Rental Use Zoning Policy and Implementation Framework* and the *Tenant Assistance Policy*. For the most part, UDI has been supportive of both policies and views them as models for other communities.

However, the City's current approach to the approval of 100% Purpose Built Rental (PBR) buildings is making them unviable for many proponents. As a result, projects are being delayed and some could potentially be cancelled. Thousands of PBR units are at stake, which is the very form of housing for families and individuals that Burnaby has committed to provide following your extensive and commendable public engagement process. PBR not only serves a diversity of residents including varying income levels, ages and employment types, but is also a fundamental part of the housing continuum that the City needs. The City's current approach to PBR effectively prioritizes strata and below-market housing types by making market rental challenging to deliver.

There are two key barriers – the City's inclusionary zoning policy being applied to the PBR projects, and a potential significant change to the density bonusing process.

This letter speaks to three issues:

1. Rental Versus Strata Valuations;
2. Inclusionary Zoning; and
3. Density Bonusing.

Rental Versus Strata Valuations

For the most part, new affordable housing in Burnaby has been delivered alongside new strata residential. However, rental is not the same as strata. Strata floor space has a significantly higher value

than rental floor space. The City has previously recognized this issue with regard to the density bonusing program. Up until now, PBR projects were charged substantially lower density bonus rates - approximately 50% of what equivalent strata buildings would be expected to pay. This was intended to support the feasibility of rental projects, which are valued lower than comparable strata residential projects.

It is not possible for purpose built rental to take on the same level of affordable housing and density bonus expectations as strata residential, and City policies, procedures, and decision-making that do not differentiate in this regard will significantly undermine our members' ability to deliver this much-needed housing form.

In addition, Burnaby's approach to market rental housing across multiple policies has been unclear. If changes in the City's approach are occurring, it is critical that they be communicated to builders who are purchasing sites and developing proposals based on published policy.

Inclusionary Zoning

As noted above, UDI is generally supportive of the City's 20% inclusionary zoning policy because the costs of the program are offset by a 1.1 FAR increase in strata residential floor space being offered to proponents. While this is appropriate for strata developments, it is unworkable for PBR projects because by their very nature, they do not include strata ownership units. If the additional RM density is used to build market rental housing units, the increase in value as a result of the additional density will not offset the costs to provide the required affordable housing units. This is due to strata residential floor space being far more valuable than market rental floor space as noted above.

Density Bonus Payment for Rental

Although no Bulletin or Policy has been released, we understand the Density Bonusing approach has substantially changed – in a way that will undermine our members' ability to deliver market rental.

Some of our members have been informed that PBR projects will be assessed as if they were strata projects to determine the appropriate density bonus value. This approach presents a fundamental change to project economics, as those higher costs may not be able to be absorbed, rendering PBR projects (or the rental component of other projects) unviable. We understand that there could be a potential mechanism to offset the increased density bonuses such as a grant from the City; however, there is no clarity about whether such an approach has been adopted, or how it would be operationalized.

Even if offsets were available, subject to Council approval, such an approach will likely add both time and risk to PBR projects, because there would be no certainty regarding the eligibility, amount, or timing of a grant. It would become too risky to purchase a site and invest in designs/plans for a project proposal to find out much later in the process that it is not viable because the density bonus will have to be paid, with no guarantee of an offsetting grant. Builders will more likely develop 100% PBR projects and voluntary rental units in jurisdictions without this length and risky process. The end result would be a very limited supply of new market rental homes being built, if any.

For those development proposals already underway, it is very difficult to adjust financial commitments after sites have been purchased, and equally as difficult to modify in-stream applications when significant new expectations are introduced without warning. The potential changes to the Density Bonusing approach are very consequential and will dramatically impact the economics of projects, with no clear path for mitigation aside from re-assessing and re-designing them. This would set project timelines back significantly, further impacting their viability and possibly resulting in the cancellation of in-stream PBRs

and rental units, which would undermine the affordability of rental housing in Burnaby. The delivery of PBR represents a critical housing form to fulfill the needs of residents.

As a result of these two issues, we are aware of several PBR projects that may not proceed or may need to be altered significantly, so thousands of planned rental housing units may not be developed in Burnaby. This includes the Starlight Developments project near Lougheed Station, where the proponent is seeking to build 1,200 new infill market rental housing units without any displacement of the existing 528 households on the site. Others, such as Grosvenor, with a large masterplan development project in Brentwood are re-evaluating their ability to deliver the voluntary market rental component of their project. Their proposal calls for approximately 2,000 rental housing units. The significance of these issues cannot be understated, as the imposition of the inclusionary zoning policy and potential new density bonusing approach would amount to what is effectively a moratorium on PBR.

Recommendations

UDI has several recommendations for the City:

- We ask Council to consider having a consultant review the economics of 100% PBR projects compared with strata developments and provide recommendations on whether the inclusionary zoning policy should apply to market rental projects – or what adjustments should be made to the policy to accommodate PBR projects.
- If the change, noted above, to the City's density bonusing approach for PBR and voluntary market rental housing is occurring, we ask that the City reconsider it and acknowledge the fundamental differences between market rental and strata properties. Density bonus valuation for PBR should reflect PBR economics.
- Whether or not changes are made to the City's approach, a Bulletin needs to be released detailing the approach for the density bonusing of PBR projects and voluntary market rental housing. Builders are proceeding with their developments and purchasing sites in Burnaby to build 100% PBR or include rental in their developments, and it appears that other than the two developers mentioned above, the rest of the industry is unaware that there may be a significant change in the density bonusing approach. As noted above, they will have difficulty adjusting their financial commitments and may not proceed with their market rental proposals.

UDI has been pleased to work with Burnaby as it developed very positive policies to increase the number of affordable housing units in the City while protecting tenants. However, a key component of Burnaby's Housing System – 100% PBR projects and voluntary rental units - are becoming almost impossible to build. The voluntary rental component of many mixed tenure developments may have to be re-evaluated, removed, or rendered less affordable, because of the approach the City is taking with regard to inclusionary zoning and density bonus payments for rental. We ask Council review these issues and our recommendations to resolve them.

Yours sincerely,

Anne McMullin
President & CEO, Urban Development Institute

Hello Steering Committee members,

Update Sept. 16: This meeting is cancelled as we still await the Part 9 analysis which has been delayed due to technical challenges with the software. Please watch for a new invite coming for later in September or very early October.

Update Sept. 8, 2021: With apologies, we need to reschedule this meeting (again). It will now be Sept. 21 from 10 am to noon Pacific (not Sept. 16). Reason for postponement: We await all the Part 9 results and want to give you sufficient review time prior to our discussion. Documents to come as soon as they are ready.

Thank you for your continued patience.

Good morning everyone,

Happy Friday!

I have attached a copy of the updated notes based on our discussion on Tuesday. You will find the purposed scheduling with order of presentation as well as some key points to address for the webinar on Tuesday, September 28.

Rocky/Zack – is it worth it to double check with OMTI and reconfirm if there is anyone from the office who might want to join the panel or listen in to the webinar?

Kind regards,
Verna

Happy Friday everyone.

The ICAC Council meeting is fast approaching again at the end of October – as noted in the invite, this will be virtual given the current guidelines around meeting in person which are still in place. In the meantime we are putting together the agenda for the meeting so if you have any items that you would like to specifically speak to that would not form part of the round table update, please let me know by September 24th.

Have a good weekend.

Good afternoon Jeff and Jarrett,

Further to Rocky's note, I have registered you both for the event next week. A recording link of the session will also be sent out post-event.

If your schedules allow and you would like to participate in the panel discussion, please do let me know and I can set up a meeting invitation for your calendars.

Thank you so much!

Kind regards,
Verna

Subject: UDI - Advancing Mass Timber

Gents,

On Sept 28th, 9:15-10;30 AM, UDI is hosting a webinar aimed to update the members of UDI on progress in Mass Timber.

Link to reg page: http://udi.memberzone.com/events/details/udi-webinar-advancing-mass-timber-in-bc-1726

We wanted to ask whether either of you would be available to attend. Not to actively participate, but it might she some light on industry concerns and areas of interest.

If you wanted to shed some light on what OMTI is up to, I am sure we can carve some time out for this.

I have cc'd to UDI staff, and Zach from BSSB, who is on the panel (I am moderating).

Let me/us know! I hope one (or both) of you can make it.

Cheers,

Rocky Sethi | Chief Operating Officer

Hello everyone,

Please find an agenda and another document with a series of examples illustrating the impacts of a potential stepped carbon pollution standard on buildings. Please note the document is not quite finished. For example, there is no information yet on the hotel archetype. Our intent is to take your input and questions during the meeting, and send you a finalized document shortly after the meeting so you can send it to your members and colleagues. It will also be a useful springboard for the policy and implementation discussion we hope to have later in the meeting.

Thank you to those who reviewed an earlier version of the document and provided comments.

Looking forward to it.

Preface

The following high-level summaries are designed to isolate and highlight some potential financial and technical implications of a stepped carbon pollution standard for buildings in British Columbia which local governments may opt-in to.

The following pages contain one example each of a multi-unit residential building, office, retail space, hotel, and single-family home in Climate Zones 4 and 7a. In each case, the building design and envelope remains static at Step 2, while different mechanical systems are systematically introduced to meet certain stepped GHG intensity (GHGI) thresholds, which are measured in kilograms of carbon dioxide equivalent per year per square metre of building floor area ($kgCO2e/m^2/year$). The thresholds are not finalized, but intended as samples.

Each archetype also includes a secondary table, which illustrates the amount of renewable gas (RG) required to achieve the same stepped GHGI targets if all-gas equipment were used. The use of RG to meet the GHGI thresholds would only be available if the RG were purchased in such a way that the building would permanently use low-carbon fuels regardless of change in owner or ratepayer.

This analysis is limited by design, and is not representative of all buildings in all situations.

This analysis, along with further consultation with members of the Energy Step Code Council and other policy direction, will inform future decisions or best practice guidelines on the following:

- Whether GHG and Energy Steps should be indexed together
- Whether the highest levels of energy efficiency are required to cost-effectively achieve the lowest GHG outcomes
- Whether targets require adjustment for different archetypes, climate zones, or other situations.

The data that informs these tables is from the 2021 update to the BC Energy Step Code Metrics Research Report, written by Evoke Buildings and E3 Eco Group. More examples may be found in the Metrics Research Report. Thanks to Alex Blue, Einar Halbig, Donald Fast, and M'Beth Schoenfeld.

Assumptions

- *Electricity emissions factor: 0.011kg CO2e/kWh as listed currently in the BC Building Code*
- *Natural Gas emissions factor: 0.185kg CO2e/kWh as listed currently in the BC Building Code*
- *Renewable gas emissions factor: 0.00105551915kg CO2e/kWh (converted from 0.29kg CO2e/GJ as described in the BC Best Practices Methodology for Quantifying Greenhouse Gas Emissions)*
- *Cost of 100% conventional natural gas: $0.042 $/kWh*
- *Cost of 100% RNG blend: $0.066 $/kWh*
- *Cost of BC Hydro residential electricity: $0.094 $/kWh (Step 1) or $0.141 $/kWh (Step 2)*
- *Cost of BC Hydro commercial electricity: $0.068 $/kWh + 12.4 $/kW*

Other assumptions:

- *Other costing data, such as panel size or service upgrade charges, are not included in this analysis given the unique nature of those costs to each project.*

DRAFT

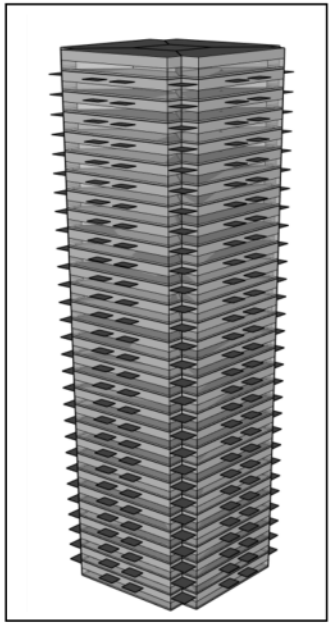
Overall highlights from analysis

- The analysis prioritizes maintaining the envelope/other characteristics constant over achieving draft target levels. Relatively small variations at the upper target levels are likely to be able to be made up by reducing loads or switching some additional portion of the building energy to lower emissions fuels such as electricity or RNG, and some variation would be expected between buildings based on space mix, density, etc.
- A GHGI of 1 would drive EUI reductions beyond current Step Code targets for all archetypes.
- RNG has a lower emissions factor than electricity in this analysis; therefore lower totals are possible.
- RNG costs are effectively breakeven with traditional NG costs over the 20-year analysis period, as RNG leads to a much reduced carbon tax.

High-rise MURB

Base case

- Step 2 envelope
- 100% conventional natural gas (to isolate changes and costs related to carbon requirements)
- Vertical surface area to floor area ratio (VFAR): 0.6
- Medium density (approx. 55m2 average unit size)
- Cooling equipment: Packaged terminal air conditioner (PTAC) units in suites, or fan coils if heating system is FC



Base Case	Climate Zone 4	Climate Zone 7a
Step 2	Walls R-7 Roof R-40 WWR 40% Window USI 2.0 SHGC 0.3 Infiltration: No savings beyond code 60% HRV	Walls R-10 Roof R-40 WWR 20% Window USI 1.2 SHGC 0.3 Infiltration: half of code level 80% HRV

DRAFT

High-Rise MURB - Climate Zone 4

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
2	N/A	11.7	Gas, condensing boiler with fan coils	High eff. gas (95%)	0	0.0%	10.2	N/A	10.2
2	6 (Option a)	7.8	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	10.8	55%	10.2
2	6 (Option b)	6.4	Electric baseboard	Gas	-3	-0.1%	9.9		
2	3	3.2	Air-source heat pump w/ 30% NG backup	Electric resistance	42	1.4%	9.9	80%	10.2
2	1 (Option a)	1.3	Electric baseboard	Electric resistance	-3	-0.1%	10.4	100%	10.2
2	1 (Option b)	1.2	ASHP, no NG backup	Electric resistance	65	2.1%	9.5		

DRAFT

High-Rise MURB - Climate Zone 7a

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
2	N/A	12.6	Gas, condensing boiler with fan coils	High eff. gas (95%)	0	0.0%	11.0	N/A	11.0
2	6 (Option a)	7.5	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	11.6	60%	11.0
2	6	6.5	Electric baseboard	Gas	-4	-0.1%	13.2		
2	3	3.2	Air-source heat pump w/ 30% NG backup	Electric resistance	49	1.5%	10.9	85%	11.0
2	1 (Option a)	1.4	Electric baseboard	Electric resistance	-4	-0.1%	11.4	100%	11.0
2	1 (Option b)	1.4	ASHP, no NG backup	Electric resistance	74	2.3%	10.7		

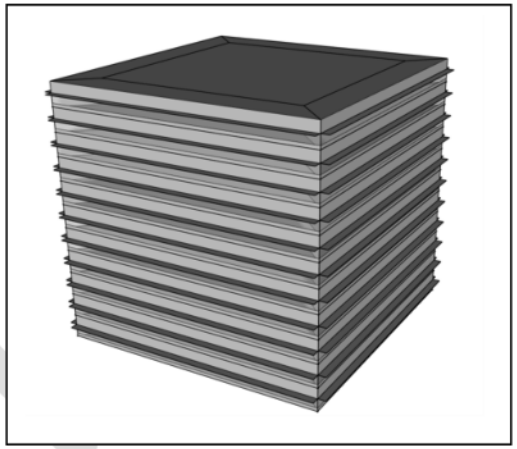
Highlights from analysis

- If the envelope were Step 4, annual operational costs would be reduced by up to 25%
- Larger units/lower density yields lower GHGIs
- A wood framed low/mid-rise would have lower ICC at the same performance level, or higher performance at the same cost.

DRAFT

Office

Base case



- Step 2 envelope
- 100% conventional natural gas (to isolate changes and costs related to carbon requirements)
- 25% lighting savings

Base Case	Climate Zone 4	Climate Zone 7a
Step 2	Walls R-7 Roof R-40 WWR 50% Window USI 2.0 SHGC 0.3 Infiltration: No savings beyond code 60% HRV	Walls R-20 Roof R-20 WWR 30% Window USI 1.2 SHGC 0.3 Infiltration: half of code level 80% HRV

DRAFT

Office - Climate Zone 4

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)

2	6 (option a)	4.2	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	7.8	0%	7.7
2	6 (option b)	4.0	Air-source heat pump w/ 30% NG backup	High eff. gas (95%)	42	1.4%	7.3		
2	3	1.9	Air-source heat pump w/ 30% NG backup	Electric resistance	42	1.4%	7.3	60%	7.7
2	1	0.9	ASHP, no NG backup	Electric resistance	65	2.1%	7.0	95%	7.7

DRAFT

Office - Climate Zone 7a

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
2	N/A	5.9	Gas, condensing boiler with fan coils	High eff. gas (95%)	0	0.0%	8.6	N/A	8.6
2	6 (option a)	4.1	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	8.6	0%	8.6
2	6 (option b)	3.9	Air-source heat pump w/ 30% NG backup	High eff. gas (95%)	49	1.6%	8.2		
2	3	1.8	Air-source heat pump w/ 30% NG backup	Electric resistance	49	1.6%	8.2	60%	8.5
2	1	0.8	ASHP, no NG backup	Electric resistance	75	2.4%	8.0	95%	8.5

Highlights from analysis

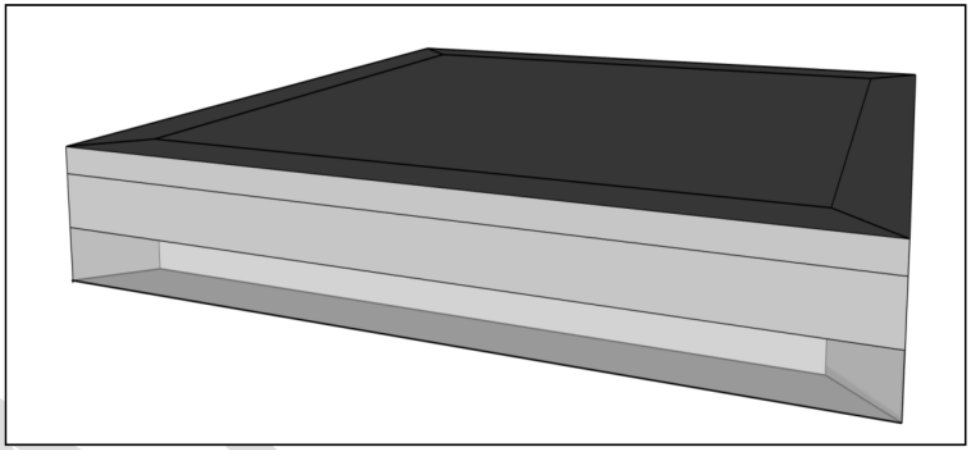
- Current highest target would likely not drive a technology change for most projects.
- DHW is fairly low for this archetype; larger focus on space heating.
- If the envelope were Step 4, annual operational costs would be very similar.
- Occupant density affects GHGI for the first two GHG Steps. Adds approximately 1 to the GHGI if density doubles. Occupant density does not affect the GHGI of the fully decarbonized building.

DRAFT

Retail

Base case

- Step 2 envelope
- 100% conventional natural gas (to isolate changes and costs related to carbon requirements)
- 25% lighting savings vs NECB 2015
- Looking at Mall results rather than big box, as mall has higher GHGI.



Base Case	Climate Zone 4	Climate Zone 7a
Step 2	Walls R-10 Roof R-40 WWR 20% Window USI 2.0 Infiltration: No savings beyond code 60% HRV	Walls R-20 Roof R-40 WWR 20% Window USI 1.6 Infiltration: half of code level 80% HRV

DRAFT

Retail - Climate Zone 4

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
2	N/A	6.6	Gas, condensing boiler with fan coils	High eff. gas (95%)	0	0.0%	1.8	N/A	1.8
2	6	5.8	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	1.9	15%	1.8
2	3	2.1	Air-source heat pump w/ 10% NG backup	High eff. gas (95%)	43	1.2%	1.9	65%	1.8
2	1	1.3	Air-source heat pump w/ 10% NG backup	Electric resistance	43	1.2%	2.0	95%	1.8

DRAFT

Climate Zone 7a

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
2	N/A	7.7	Gas, condensing boiler with fan coils	High eff. gas (95%)	0	0.0%	2.4	N/A	2.4
2	6	6.9	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	2.5	25%	2.4
2	3	2.4	Air-source heat pump w/ 10% NG backup	High eff. gas (95%)	48	1.4%	2.6	70%	2.4
2	1	1.7	Air-source heat pump w/ 10% NG backup	Electric resistance	48	1.4%	2.7	100%	2.5

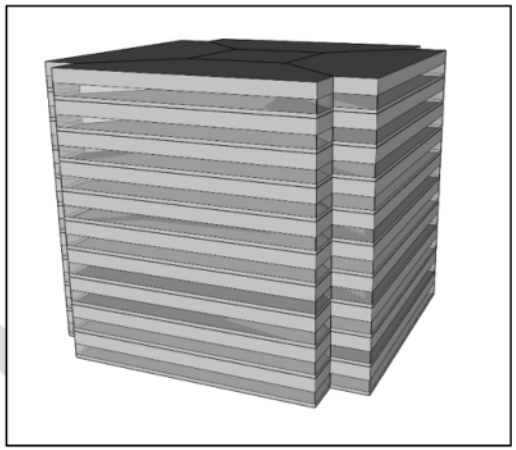
Highlights from analysis

- If the envelope were Step 3 (highest step for this building type), annual operational costs would be very similar
- GHGIs depend on space mix/archetype.
    - GHGIs are higher in malls than in big box stores (used malls in the above, difference on base case fully natural gas is approx. 1.7 GHGI; difference becomes negligible in lowest GHG cases)
- DHW is relatively low for this archetype; larger focus on space heating.

DRAFT

Hotel (to come)

Base case



- Step 2 envelope
- 100% conventional natural gas (to help isolate changes and costs related to carbon requirements)
- *Metrics team to fill out pertinent ECMs in the bullets below*
- Vertical surface area to floor area ratio (VFAR)
- Roof insulation:
- Wall insulation:
- Window-to-wall ratio:
- Solar heat gain co-efficient:
- Cooling:

Climate Zone 4

Step	Sample GHGI threshold	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC ($/m2)	% ICC compared to base case	Annual Utility Savings vs base case ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual $ premium of RNG
2	XXX	Gas, XXX EQUIPMENT	Gas, XXX EQUIPMENT				0	
2	6 (Option a)	Gas, XXX EQUIPMENT	Electric, XXX EQUIPMENT					
2	3 (Option a)	*Electric*	*Gas*					
2	1	Electric	Electric				100?	

DRAFT

Climate Zone 7a

Step	Sample GHGI threshold	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC ($/m2)	% ICC compared to base case	Annual Utility Savings vs base case ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual $ premium of RNG
2	XXX	Gas, XXX EQUIPMENT	Gas, XXX EQUIPMENT				0	
2	6 (Option a)	Gas, XXX EQUIPMENT	Electric, XXX EQUIPMENT					
2	3 (Option a)	*Electric baseboard*	*Gas*					
2	1	Electric	Electric				100?	

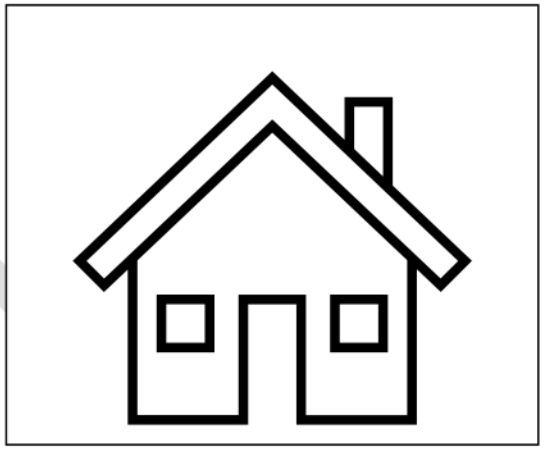
Highlights from analysis

- To come
- There is higher laundry use in these archetypes (10%+ of energy use), so laundry energy source affects GHGI.

DRAFT

Medium single-family home

Base case



- Step 3 envelope
- Medium SFD
- 100% conventional natural gas (to isolate changes and costs related to carbon requirements)
- Size: 2,550 ft^2
- SAR (total envelope to floor area ratio): 1.91

Base Case	Climate Zone 4	Climate Zone 7a
Step 3	Walls R-22 Roof R-50 Window USI 1.4 SHGC 0.35 ACH 1.5 No HRV No drainwater heat recovery	Walls R-22 Roof R-60 Foundation walls R-17 Window USI 1.4 SHGC 0.35 ACH 1.5 No HRV No drainwater heat recovery

DRAFT

Climate Zone 4

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
3	N/A	7.6	Gas furnace	Tankless gas heater 95%	0	0%	4.3	N/A	4.3
3	6 (option a)	5.5	Gas furnace	Heat pump	3	0.1%	4.7	25%	4.3
3	6 (option b)	5.7	Air source heat pump	Gas water heater	10	0.4%	5.0		
3	3	3.4	Air source heat pump	Tankless gas heater 95%	12	0.6%	4.8	65%	4.3
3	1	0.6	Air source heat pump	Heat pump	17	0.8%	4.4	95%	4.3

DRAFT

Climate Zone 7a

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
3	N/A	18.4	Gas furnace	Gas water heater	0	0	5.6	N/A	5.6
3	Does not meet	14.3	Gas furnace	Heat pump	6	0.2%	5.9	N/A	N/A
3	6	6.5	Cold climate heat pump	Gas water heater	13	0.4%	6.5	70%	5.6
3	3	4.1	Cold climate heat pump	Tankless gas heater 95%	16	0.5%	6.3	90%	5.6
3	1	0.9	Cold climate heat pump	Heat pump	19	0.6%	6.4	97%	5.6

Highlights from analysis

- In cold climates, particularly for buildings at lower steps, the DHW forms a smaller part of the total energy use and conventional natural gas use; the focus on reductions is on the heating system.
- If the envelope were Step 5, annual operational costs would be approximately 15% lower (varies depending on actual design).

Chair: Zachary May, Building and Safety Standards Branch, Office of Housing and Construction Standards
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro
Meeting Materials

- Agenda (below)
- Summary draft of impact analysis of carbon pollution requirements for new construction

Contacts if You Require Assistance

- Hugo Wong, BSSB – 236 478 1406 (call only); hugo.wong@gov.bc.ca

AGENDA

Time	Topic	Speaker(s)	Purpose(s)
1:00 p.m.	Welcome, introductions and opening remarks	Zachary May, ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs	▪ Welcome participants ▪ Approval of agenda
1:10 pm.	Feedback on draft targets for building archetypes	Zachary May, ESCC Chair and others	To discuss: ▪ Description of impact analysis on different building archetypes ▪ Develop key questions and information for stakeholder engagement plan
2:30 p.m.	Break		
2:40 p.m.	Next steps	All	To discuss: ▪ Pending policy decisions ▪ Discuss recommendations on content for regulation versus best practices guide
4 p.m.	Adjournment	All	

Hello,

The Building and Safety Standards Branch (Ministry of Attorney General and Minister Responsible for Housing) is responsible for the BC Building Code which regulates health and safety, fire and structural protection, accessibility, and energy and water efficiency in building construction.

The Branch is developing an Existing Buildings Renewal Strategy that provides a path for today's buildings to become more energy and water efficient, cleaner, and safer for British Columbians during events like earthquakes, wildfires, wildfire smoke, heat waves, and floods.

BSSB will be hosting a series of engagement sessions on increasing resilience and, carbon and energy performance in existing buildings, and would like to extend an invitation to you and your organization to attend the October 6 from 10:00am – 12:00pm PDT engagement session on policies to support water conservation in existing buildings.

Future sessions will be held throughout the fall (see schedule below) to continue discussions and partnerships with affected parties and key influencers, such as your organization.

Topic
Date
Existing Buildings – Wildfire risk
Tuesday October 19th, 2021
Existing Buildings – Energy and carbon, regulations
Wednesday November 3rd, 2021*
Existing Buildings – Overheating and air quality
Thursday November 4th, 2021
Existing buildings – Energy and carbon, supporting measures
Tuesday November 16th, 2021*
Existing Buildings – Integrating mitigation and adaptation
Thursday November 25th, 2021
*Dates subject to change. BSSB will provide sufficient notice of any adjustments

If you have any questions in advance of the session, or written feedback on the engagement topics, please contact Nicole Vukosavljevic by email at Nicole.vukosavljevic@gov.bc.ca.

We look forward to your participation and input.

Thank you,
Nicole

INTEGRAL

Existing Buildings Renewal Strategy

Workshop Agenda – Water Conservation

Date: Wednesday, October 6th, 2021
Time: 10:00am – 12:00pm

Objectives:

- Clarify the existing program landscape and the Province's role in water conservation efforts in existing buildings.
- Identify the major barriers that stakeholders face in implementing water conservation measures in existing buildings.
- Identify potential actions that the Building and Safety Standards Branch can take to increase uptake of water conservation measures in existing buildings.

AGENDA	TIME
Welcome and Session Orientation	10 mins
Background • Water shortages and associated climate change trends in B.C. • Potential impacts of water shortage and restrictions on buildings • Opportunities and measures to conserve water in existing buildings • Existing policy landscape, initiatives and tools in B.C.	15 mins
Breakout Group #1 • Discussion topic: Participant experience implementing water conservation measures in existing buildings and lessons learned	35 mins
Breakout Group #2 • Discussion topic: The role of the Building and Safety Standards Branch and potential policy actions/resources to improve water conservation in existing buildings	50 mins
Report Back and Next Steps	10 mins
Close	

RE: UDI - Advancing Mass Timber

Hi Verna,
Thanks so much. Rocky: My apologies for the delay in responding to your earlier email.
We had previously registered two of our senior staff to attend this event. But I also appreciate the initiative you took to register Jeff and I as well! At this point, I'm not sure either Jeff or I will be able to attend.
We'll definitely have our team there to listen to the discussion and collectively we'll be more informed.
These events are so good in building up the body of knowledge. Thanks for your efforts.
Regards,

Jarrett Hutchinson | Executive Director
Office of Mass Timber Implementation

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Good afternoon Jeff and Jarrett,

Further to Rocky's note, I have registered you both for the event next week. A recording link of the session will also be sent out post-event.

If your schedules allow and you would like to participate in the panel discussion, please do let me know and I can set up a meeting invitation for your calendars.

Thank you so much!

Kind regards,
Verna

Subject: UDI - Advancing Mass Timber

Gents,

On Sept 28th, 9:15-10;30 AM, UDI is hosting a webinar aimed to update the members of UDI on progress in Mass Timber.

Link to reg page: http://udi.memberzone.com/events/details/udi-webinar-advancing-mass-timber-in-bc-1726

We wanted to ask whether either of you would be available to attend. Not to actively participate, but it might she some light on industry concerns and areas of interest.

If you wanted to shed some light on what OMTI is up to, I am sure we can carve some time out for this.

I have cc′d to UDI staff, and Zach from BSSB, who is on the panel (I am moderating).

Let me/us know! I hope one (or both) of you can make it.

Cheers,

Rocky Sethi | Chief Operating Officer

Hi,

I think this is a discussion better suited for Zachary May's (cc'd) team over at OHCS. I spoke with[s.22] and he referenced a presentation that Zachary had delivered at UDI.

Specifically, he builds mass timber passive houses and he wanted to know the GHG intensity per meter squared that would align with the step code that is coming in. He is hoping that his buildings would comply but he wanted to make sure it was correct.

Is this something that he can pass to OHCS. If we need to handle it, then I would request that Zachary shares the deck that he had presented.

Hi Jessica,

This outside caller phoned our Deputy Minister's Office a few days ago requesting the following information:

[s.22] would like to speak with someone regarding BC's green house gas intensity targets for the building sector. He said someone recently did a great presentation to their company at UDI and the material may have been up online for a while, but he cannot find it now and believes it was our Ministry."

Our Climate Action Secretariat Division, advised that I forward to you for Zachary May with OHCS to respond directly with caller. (Please see below email from Cheryl Tromp and[s.22] contact information at bottom of email trail.)

I will now close this off from our side indicating response completed and will upload this email train to our records system and I do not require call log below completed by Zachary.

Thank you.

Hi Chris,

As this is in regards to the building sector, would it be for your team?
Or let me know who you think its best to redirect it to.

Thank you,
Cheryl

Hi Cheryl,

Please forward to the appropriate staff for call back. Once the table is completed it can be routed back to the DMO.

I've dropped a line down to you in CLIFF.

DMO REQUEST FOR CALL BACK	
CLIFF Reference #	382294
Date of Phone Call	September 22, 2021
Due Date for Response	**September 29, 2021**
Caller Name/Number	s.22
Caller Email Address	
Call Details: s.22 would like to speak with someone regarding BC's green house gas intensity targets for the building sector. He said someone recently did a great presentation to their company at UDI and the material may have been up online for a while, but he cannot find it now and believes it was our Ministry.	
STAFF RESPONSE	
Division/Branch Responsible	[INSERT ADMO/INSERT BRANCH]
Contact Name/Title	[INSERT NAME/INSERT TITLE]
Contact Number	[INSERT NUMBER]
Date of Response	[INSERT DATE OF CALL BACK]
Call Back Details: [Please include a brief explanation (bullets) of what was discussed, what information was provided to the caller, and their response.]	

Note this table constitutes an official record to be filed in the DMO.

Thank you.

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Happy Monday all!

Just reaching out to everyone to ensure they're comfortable for tomorrow and have provided any presentations to Verna.

As per the attached agenda,

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run	15	
9:30	UDI Introduction Thank Sponsors	2	Anne McMullin
9:32	Sponsor Remarks – BC Housing	5	Sheryl Peters
9:37	Introduction & Overview	5	Rocky Sethi
9:42	Panel introduction	5	All
9:47	Presentation 1	8-10	Patrick Enright
9:57	Presentation 2	10-15	Andrew Harmsworth
10:12	Presentation 3	8-10	Zachary May
10:22	Moderated Discussion Q&A w/moderator	8-10	All
10:30	Webinar concludes		Rocky Sethi

UDI will be pushing for questions for the Q&A so hopefully there's a few good ones for the panel. Verna: I would ask that you 'plant' a few questions to prompt this discussion to happen as this is less of a moderated panel, and more of a presentation/Q&A format at this point

My cell is 778.928.2726 if you want to discuss anything in advance, cheers.

Subject: UDI Webinar - Advancing Mass Timber - Meeting Minutes

Good morning everyone,

Happy Friday!

I have attached a copy of the updated notes based on our discussion on Tuesday. You will find the purposed scheduling with order of presentation as well as some key points to address for the webinar on Tuesday, September 28.

Rocky/Zack – is it worth it to double check with OMTI and reconfirm if there is anyone from the office who might want to join the panel or listen in to the webinar?

Kind regards,
Verna

"Advancing Mass Timber"

Webinar Pre-Meeting Meeting Minutes

Tuesday, September 14, 2021 | 2:00 pm – 3:00 pm

- Purposed Format
  - 8-10 minutes each – individual overview on topic
  - 8-10 minutes conversation / moderated Q&A

- Confirm order of presentation/topics
  - Sheryl and Rocky to share examples of their projects and highlight the benefits during intro
  - Patrick Enright, Senior Green Building Engineer - City of Vancouver
    - introduce project
    - where we are and the intent
  - Andrew Harmsworth, Principal - GHL Consultants Ltd.
    - Review report and presentation
  - Zachary May, Acting Executive Director, Building & Safety Standards Branch - Province of BC
    - Future work - what is happening with the code and process
    - National system and how best to use our voices

Proposed Schedule:

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run	15	
9:30	UDI Introduction Thank Sponsors	2	Anne McMullin
9:32	Sponsor Remarks – BC Housing	5	Sheryl Peters
9:37	Introduction & Overview	5	Rocky Sethi
9:42	Panel introduction	5	All
9:47	Presentation 1	8-10	Patrick Enright
9:57	Presentation 2	10-15	Andrew Harmsworth
10:12	Presentation 3	8-10	Zachary May
10:22	Moderated Discussion Q&A w/moderator	8-10	All
10:30	Webinar concludes		Rocky Sethi

September 21, 2021: Please note new meeting date and start time – as per MO's request. Thank you

July 12, 2021:
Attendees List:

* Richard Fyfe, DAG
* Angela Cooke, Associate DM
* Cheryl May, ADM

Weekly Guests – for BCH discussion only (first 10 minutes of each meeting – beginning on July 15, 2021)

* Douglas S. Scott, DM, CAS
* Holly Cairns, Principal, CAS

Hi Andrew,

Sounds great! You will be able to share your screen and control your own slides during the presentation. We will also be doing a tech-check tomorrow morning at 9:15 just before the webinar to ensure that everyone is set-up.

If you cannot find your Zoom panelist link in your calendar, please let me know so I may resend the information over to you.

Kind regards,
Verna

Thanks everyone,

I will keep it short and sweet to preserve time for Andrew, but will quickly share where this fits in our Climate Emergency Action Plan; profile related City work (including MT zoning variances); highlight the building momentum for mass timber in Vancouver; and emphasize that we will be following-up with a survey to gather feedback on next steps.

Looking forward to it!

Hello

The agenda says Thursday Sept 22. Sept 22 is Wednesday. I assume this is a typo and the meeting is today.

Thanks

Maura

Subject: Agenda and materials, Energy Step Code Council meeting

Hello everyone,

Please find an agenda and another document with a series of examples illustrating the impacts of a potential stepped carbon pollution standard on buildings. Please note the document is not quite finished. For example, there is no information yet on the hotel archetype. Our intent is to take your input and questions during the meeting, and send you a finalized document shortly after the meeting so you can send it to your members and colleagues. It will also be a useful springboard for the policy and implementation discussion we hope to have later in the meeting.

Thank you to those who reviewed an earlier version of the document and provided comments.

Looking forward to it.

Hugo

Preface

The following high-level summaries are designed to isolate and highlight some potential financial and technical implications of a stepped carbon pollution standard for buildings in British Columbia which local governments may opt-in to.

The following pages contain one example each of a multi-unit residential building, office, retail space, hotel, and single-family home in Climate Zones 4 and 7a. In each case, the building design and envelope remains static at Step 2, while different mechanical systems are systematically introduced to meet certain stepped GHG intensity (GHGI) thresholds, which are measured in kilograms of carbon dioxide equivalent per year per square metre of building floor area (kgCO2e/m^2/year). The thresholds are not finalized, but intended as samples.

Each archetype also includes a secondary table, which illustrates the amount of renewable gas (RG) required to achieve the same stepped GHGI targets if all-gas equipment were used. The use of RG to meet the GHGI thresholds would only be available if the RG were purchased in such a way that the building would permanently use low-carbon fuels regardless of change in owner or ratepayer.

This analysis is limited by design, and is not representative of all buildings in all situations.

This analysis, along with further consultation with members of the Energy Step Code Council and other policy direction, will inform future decisions or best practice guidelines on the following:

- Whether GHG and Energy Steps should be indexed together
- Whether the highest levels of energy efficiency are required to cost-effectively achieve the lowest GHG outcomes
- Whether targets require adjustment for different archetypes, climate zones, or other situations.

The data that informs these tables is from the 2021 update to the BC Energy Step Code Metrics Research Report, written by Evoke Buildings and E3 Eco Group. More examples may be found in the Metrics Research Report. Thanks to Alex Blue, Einar Halbig, Donald Fast, and M'Beth Schoenfeld.

Assumptions

- *Electricity emissions factor: 0.011kg CO2e/kWh as listed currently in the BC Building Code*
- *Natural Gas emissions factor: 0.185kg CO2e/kWh as listed currently in the BC Building Code*
- *Renewable gas emissions factor: 0.00105551915kg CO2e/kWh (converted from 0.29kg CO2e/GJ as described in the BC Best Practices Methodology for Quantifying Greenhouse Gas Emissions)*
- *Cost of 100% conventional natural gas: $0.042 $/kWh*
- *Cost of 100% RNG blend: $0.066 $/kWh*
- *Cost of BC Hydro residential electricity: $0.094 $/kWh (Step 1) or $0.141 $/kWh (Step 2)*
- *Cost of BC Hydro commercial electricity: $0.068 $/kWh + 12.4 $/kW*

Other assumptions:

- *Other costing data, such as panel size or service upgrade charges, are not included in this analysis given the unique nature of those costs to each project.*

Commented [KP1]: Please use the latest (2020) B.C. METHODOLOGICAL GUIDANCE FOR QUANTIFYING GREENHOUSE GAS EMISSIONS

Commented [KP2]: Please use the 2020 (latest) B.C. METHODOLOGICAL GUIDANCE FOR QUANTIFYING GREENHOUSE GAS EMISSIONS

Commented [KP3]: Treat the rounding the same as the other emissions factors (i.e to 3 decimal places).

Commented [KP4]: Electrical upgrades are material costs compared to HVAC, and is a gap in the analysis. Consider using a generic upgrade cost for buildings who may need it due to electrification. Consider the midpoint of a range of costs.

DRAFT

Last revised: Sept. 22, 2021

Overall highlights from analysis

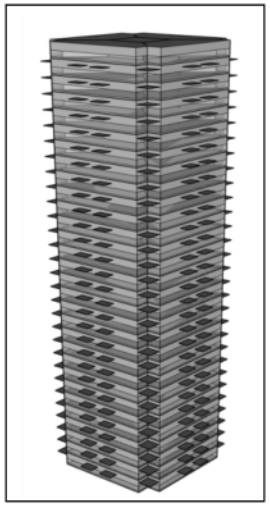
- The analysis prioritizes maintaining the envelope/other characteristics constant over achieving draft target levels. Relatively small variations at the upper target levels are likely to be able to be made up by reducing loads or switching some additional portion of the building energy to lower emissions fuels such as electricity or RNG, and some variation would be expected between buildings based on space mix, density, etc.
- A GHGI of 1 would drive EUI reductions beyond current Step Code targets for all archetypes.
- RNG has a lower emissions factor than electricity in this analysis; therefore lower GHGI totals are possible.
- RNG costs are effectively breakeven with traditional NG costs over the 20-year analysis period, as RNG leads to a much reduced carbon tax.

Commented [KP5]: Added "GHGi" (should be explicit about what "totals" are being discussed in this sentence.

High-rise MURB

Base case

- Step 2 envelope
- 100% conventional natural gas (to isolate changes and costs related to carbon requirements)
- Vertical surface area to floor area ratio (VFAR): 0.6
- Medium density (approx. 55m2 average unit size)
- Cooling equipment: Packaged terminal air conditioner (PTAC) units in suites, or fan coils if heating system is FC



Base Case	Climate Zone 4	Climate Zone 7a
Step 2	Walls R-7 Roof R-40 WWR 40% Window USI 2.0 SHGC 0.3 Infiltration: No savings beyond code 60% HRV	Walls R-10 Roof R-40 WWR 20% Window USI 1.2 SHGC 0.3 Infiltration: half of code level 80% HRV

DRAFT

Last revised: Sept. 22, 2021

High-rise MURB - Climate Zone 4

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
2	N/A	11.7	Gas, condensing boiler with fan coils	High eff. gas (95%)	0	0.0%	10.2	N/A	10.2
2	6 (Option a)	7.8	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	10.8	55%	10.2
2	6 (Option b)	6.4	Electric baseboard	Gas	-3	-0.1%	9.9		
2	3	3.2	Air-source heat pump w/ 30% NG backup	Electric resistance	42	1.4%	9.9	80%	10.2
2	1 (Option a)	1.3	Electric baseboard	Electric resistance	-3	-0.1%	10.4	100%	10.2
2	1 (Option b)	1.2	ASHP, no NG backup	Electric resistance	65	2.1%	9.5		

Commented [KP6]: The basecase is not really a basecase, that is 95% is a very high efficiency value for hot water heating, which is a major load. This is more like a high efficiency HW case. As a result, the GHGi savings from subsequent steps are certainly larger than what this GHGi value would imply.

The basecase should have basecase efficiencies for HW & Space heating.

Commented [KP7]: Looks like these scenarios don't meet the 6. Consider using 8.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the rounding/compliance approach too, when assessing compliance as Zach mentioned on the call (a 1.51 to 2.49 result all

Commented [BB8]: Pete has highlighted the many instances in which the modelled does not meet the suggested GHG threshold which suggests the threshold being recommended of 6, 3, and 1 is to high and needs to re-evalauated.

Commented [KP9]: Looks like these scenarios don't meet the 3. Consider using 4.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the

Commented [KP10]: Looks like these scenarios don't meet the 1. Consider using 2.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the

2	1 (Option b)	1.4	ASHP, no NG backup	Electric resistance	74	2.3%	10.7		

Highlights from analysis

- If the envelope were Step 4, annual operational costs would be reduced by up to 25%
- Larger units/lower density yields lower GHGIs
- A wood framed low/mid-rise would have lower ICC at the same performance level, or higher performance at the same cost.

Commented [KP11]: The basecase is not really a basecase, that is 95% is a very high efficiency value for hot water heating, which is a major load. This is more like a high efficiency HW case. As a result, the GHGi savings from subsequent steps are certainly larger than what this GHGi value would imply.

The basecase should have basecase efficiencies for HW & Space heating.

Commented [KP12]: Looks like these scenarios don't meet the 6. Consider using 8.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the rounding/compliance approach too, when assessing compliance as Zach mention on the call (a 1.51 to 2.49 result all qualify/comply with a 2 target). This was confirmed w/

Commented [KP13]: Looks like these scenarios don't meet the 3. Consider using 4.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the rounding/compliance approach too, when assessing compliance as Zach mention on the call (a 1.51 to 2.49 result

Commented [KP14]: Looks like these scenarios don't meet the 1. Consider using 2.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. As a result, the GHGi savings from subsequent steps are certainly larger than what this GHGi value would imply.

The basecase should have basecase efficiencies for HW & Space heating.

Highlights from analysis

- Current highest target would likely not drive a technology change for most projects.
- DHW is fairly low for this archetype; larger focus on space heating.
- If the envelope were Step 4, annual operational costs would be very similar.
- Occupant density affects GHGI for the first two GHG Steps. Adds approximately 1 to the GHGI if density doubles. Occupant density does not affect the GHGI of the fully decarbonized building.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the rounding/compliance approach too, when assessing compliance as Zach mention on the call (a 1.51 to 2.49 result all qualify/comply with a 2 target). This was confirmed w/ other Municipalities on the call.

Re: GHG savings vs. the basecase - the basecase listed above uses high efficiency gas appliances (not minimums or even close to minimums), which really is not a basecase. It's an upgrade case, so the GHG savings from these steps would be larger than what this appears to the mental math would imply.

DRAFT

Last revised: Sept. 22, 2021

Climate Zone 7a

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
2	N/A	7.7	Gas, condensing boiler with fan coils	High eff. gas (95%)	0	0.0%	2.4	N/A	2.4
2	6	6.9	Gas, condensing boiler with fan coils	Electric resistance	0	0.0%	2.5	25%	2.4
2	3	2.4	Air-source heat pump w/ 10% NG backup	High eff. gas (95%)	48	1.4%	2.6	70%	2.4
2	1	1.7	Air-source heat pump w/ 10% NG backup	Electric resistance	48	1.4%	2.7	100%	2.5

Highlights from analysis

- If the envelope were Step 3 (highest step for this building type), annual operational costs would be very similar
- GHGIs depend on space mix/archetype.
    - GHGIs are higher in malls than in big box stores (used malls in the above, difference on base case fully natural gas is approx. 1.7 GHGI; difference becomes negligible in lowest GHG cases)
- DHW is relatively low for this archetype; larger focus on space heating.

Commented [KP19]: The basecase is not really a basecase, that is 95% is a very high efficiency value for hot water heating, which is a major load. This is more like a high efficiency HW case. As a result, the GHGi savings from subsequent steps are certainly larger than what this GHGi value would imply.

The basecase should have basecase efficiencies for HW & Space heating.

Commented [KP20]: Looks like these scenarios don't meet the 6. Consider using 7.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the rounding/compliance approach too, when assessing compliance as Zach mention on the call (a 1.51 to 2.49 result all qualify/comply with a 2 target). This was confirmed w/ other Municipalities on the call.

Re: GHG savings vs. the basecase - the basecase listed above uses high efficiency gas appliances (not minimums or even close to minimums), which really is not a basecase. It's an upgrade case, so the GHG savings from these steps would be larger than what this appears to the mental math would imply.

Commented [KP21]: Looks like these scenarios don't meet the 1. Consider using 2.

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the rounding/compliance approach too, when assessing compliance as Zach mention on the call (a 1.51 to 2.49 result all qualify/comply with a 2 target). This was confirmed w/ other Municipalities on the call.

2	N/A	20.8	Condensing boiler	High eff. gas (95%)	NG	0	0	11.7		
2	Does not meet	13.2	Condensing boiler	Electric resistance	NG	0	0	11.6		
2	Does not meet	16.0	Condensing boiler	High eff. gas (95%)	Elec	0	0	11.9	0%	11.7
2	Does not meet	11.0	Air-source heat pump w/ 30% NG backup	High eff. gas (95%)	Elec	49	1.5	11.1		
2	6	8.4	Condensing boiler	Electric resistance	Elec	0	0	11.8		
2	6	8.1	Air-source heat pump w/ 30% NG backup	Electric resistance	NG	49	1.5	10.8	75%	11.6
2	3	3.4	Air-source heat pump w/ 30% NG backup	Electric resistance	Elec	49	1.5	11.0	90%	11.5
2	1	1.6	Air-source heat pump	Electric resistance	Elec	75	2.3	10.6	100%	11.5

Highlights from analysis

- If the envelope were Step 4, annual operational costs would be approximately 20% lower (varies depending on actual design).
- There is higher laundry use in these archetypes (10%+ of energy use), so laundry energy source affects GHGI.

Commented [KP26]: The basecase is not really a basecase, that is 95% is a very high efficiency value for hot water heating, which is a major load. This is more like a high efficiency HW case. As a result, the GHGi savings from subsequent steps are certainly larger than what this GHGi value would imply.

The basecase should have basecase efficiencies for HW & Space heating.

Commented [KP27]: Looks like these scenarios don't meet the 6, neither does 3 more scenarios above. Consider using 16, or at least an 11, or a midpoint between the two (13.5, rounded to 14).

This is only one scenario too, in reality there will be many different variations on this building type. DRAFT

Last revised: Sept. 22, 2021

Climate Zone 7a

Step	Sample GHGI threshold	Actual modeled GHGI	Space heating equipment fuel source and equipment type	Hot water fuel source and equipment type	Total ICC vs base case ($/m2)	% ICC compared to base case	Annual modelled utility cost ($/m2)	%-blend of RNG required to meet GHG Step with all-gas equipment	Annual modelled utility cost ($/m2)
3	N/A	18.4	Gas furnace	Gas water heater	0	0	5.6	N/A	5.6
3	Does not meet	14.3	Gas furnace	Heat pump	6	0.2%	5.9	N/A	N/A
3	6	6.5	Cold climate heat pump	Gas water heater	13	0.4%	6.5	70%	5.6
3	3	4.1	Cold climate heat pump	Tankless gas heater 95%	16	0.5%	6.3	90%	5.6
3	1	0.9	Cold climate heat pump	Heat pump	19	0.6%	6.4	97%	5.6

Highlights from analysis

- In cold climates, particularly for buildings at lower steps, the DHW forms a smaller part of the total energy use and conventional natural gas use; the focus on reductions is on the heating system.
- If the envelope were Step 5, annual operational costs would be approximately 15% lower (varies depending on actual design).

Commented [KP32]: Looks like these scenarios don't meet the 6, nor does the scenario above. Consider using 15, or at least the midpoint between the two 11 (rounded from 10.5 from the average of 7 and 15).

This is only one scenario too, in reality there will be many different variations on this building type. To avoid unnecessary back &forth and provide some limited flexibility – we suggest in general, round up to the next whole #. Plus, to be more clear/transparent – describe the rounding/compliance approach too, when assessing compliance as Zach mention on the call (a 1.51 to 2.49 result all qualify/comply with a 2 target). This was confirmed w/ other Municipalities on the call.

Re: GHG savings vs. the basecase - the basecase listed above uses high efficiency gas appliances (not minimums or even close to minimums), which really is not a basecase. Happy Monday all!

Just reaching out to everyone to ensure they're comfortable for tomorrow and have provided any presentations to Verna.

As per the attached agenda,

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run	15	
9:30	UDI Introduction Thank Sponsors	2	Anne McMullin
9:32	Sponsor Remarks – BC Housing	5	Sheryl Peters
9:37	Introduction & Overview	5	Rocky Sethi
9:42	Panel introduction	5	All
9:47	Presentation 1	8-10	Patrick Enright
9:57	Presentation 2	10-15	Andrew Harmsworth
10:12	Presentation 3	8-10	Zachary May
10:22	Moderated Discussion Q&A w/moderator	8-10	All
10:30	Webinar concludes		Rocky Sethi

UDI will be pushing for questions for the Q&A so hopefully there's a few good ones for the panel. Verna: I would ask that you 'plant' a few questions to prompt this discussion to happen as this is less of a moderated panel, and more of a presentation/Q&A format at this point

My cell is 778.928.2726 if you want to discuss anything in advance, cheers.

Good morning everyone,

Happy Friday!

I have attached a copy of the updated notes based on our discussion on Tuesday. You will find the purposed scheduling with order of presentation as well as some key points to address for the webinar on Tuesday, September 28.

Rocky/Zack – is it worth it to double check with OMTI and reconfirm if there is anyone from the office who might want to join the panel or listen in to the webinar?

Kind regards,
Verna

Subject: UDI Webinar - Advancing Mass Timber - Meeting Minutes

Good morning everyone,

Happy Friday!

I have attached a copy of the updated notes based on our discussion on Tuesday. You will find the purposed scheduling with order of presentation as well as some key points to address for the webinar on Tuesday, September 28.

Rocky/Zack – is it worth it to double check with OMTI and reconfirm if there is anyone from the office who might want to join the panel or listen in to the webinar?

Kind regards,
Verna

Exploring Additional Mass Timber Code Changes

UDI Vancouver
Sept. 28, 2021
Patrick Enright,
Sr. Green Building Engineer
City of Vancouver

CITY OF VANCOUVER

AGENDA

1. Direction and Progress
2. Building Momentum
3. Next Steps

1. Direction and Progress

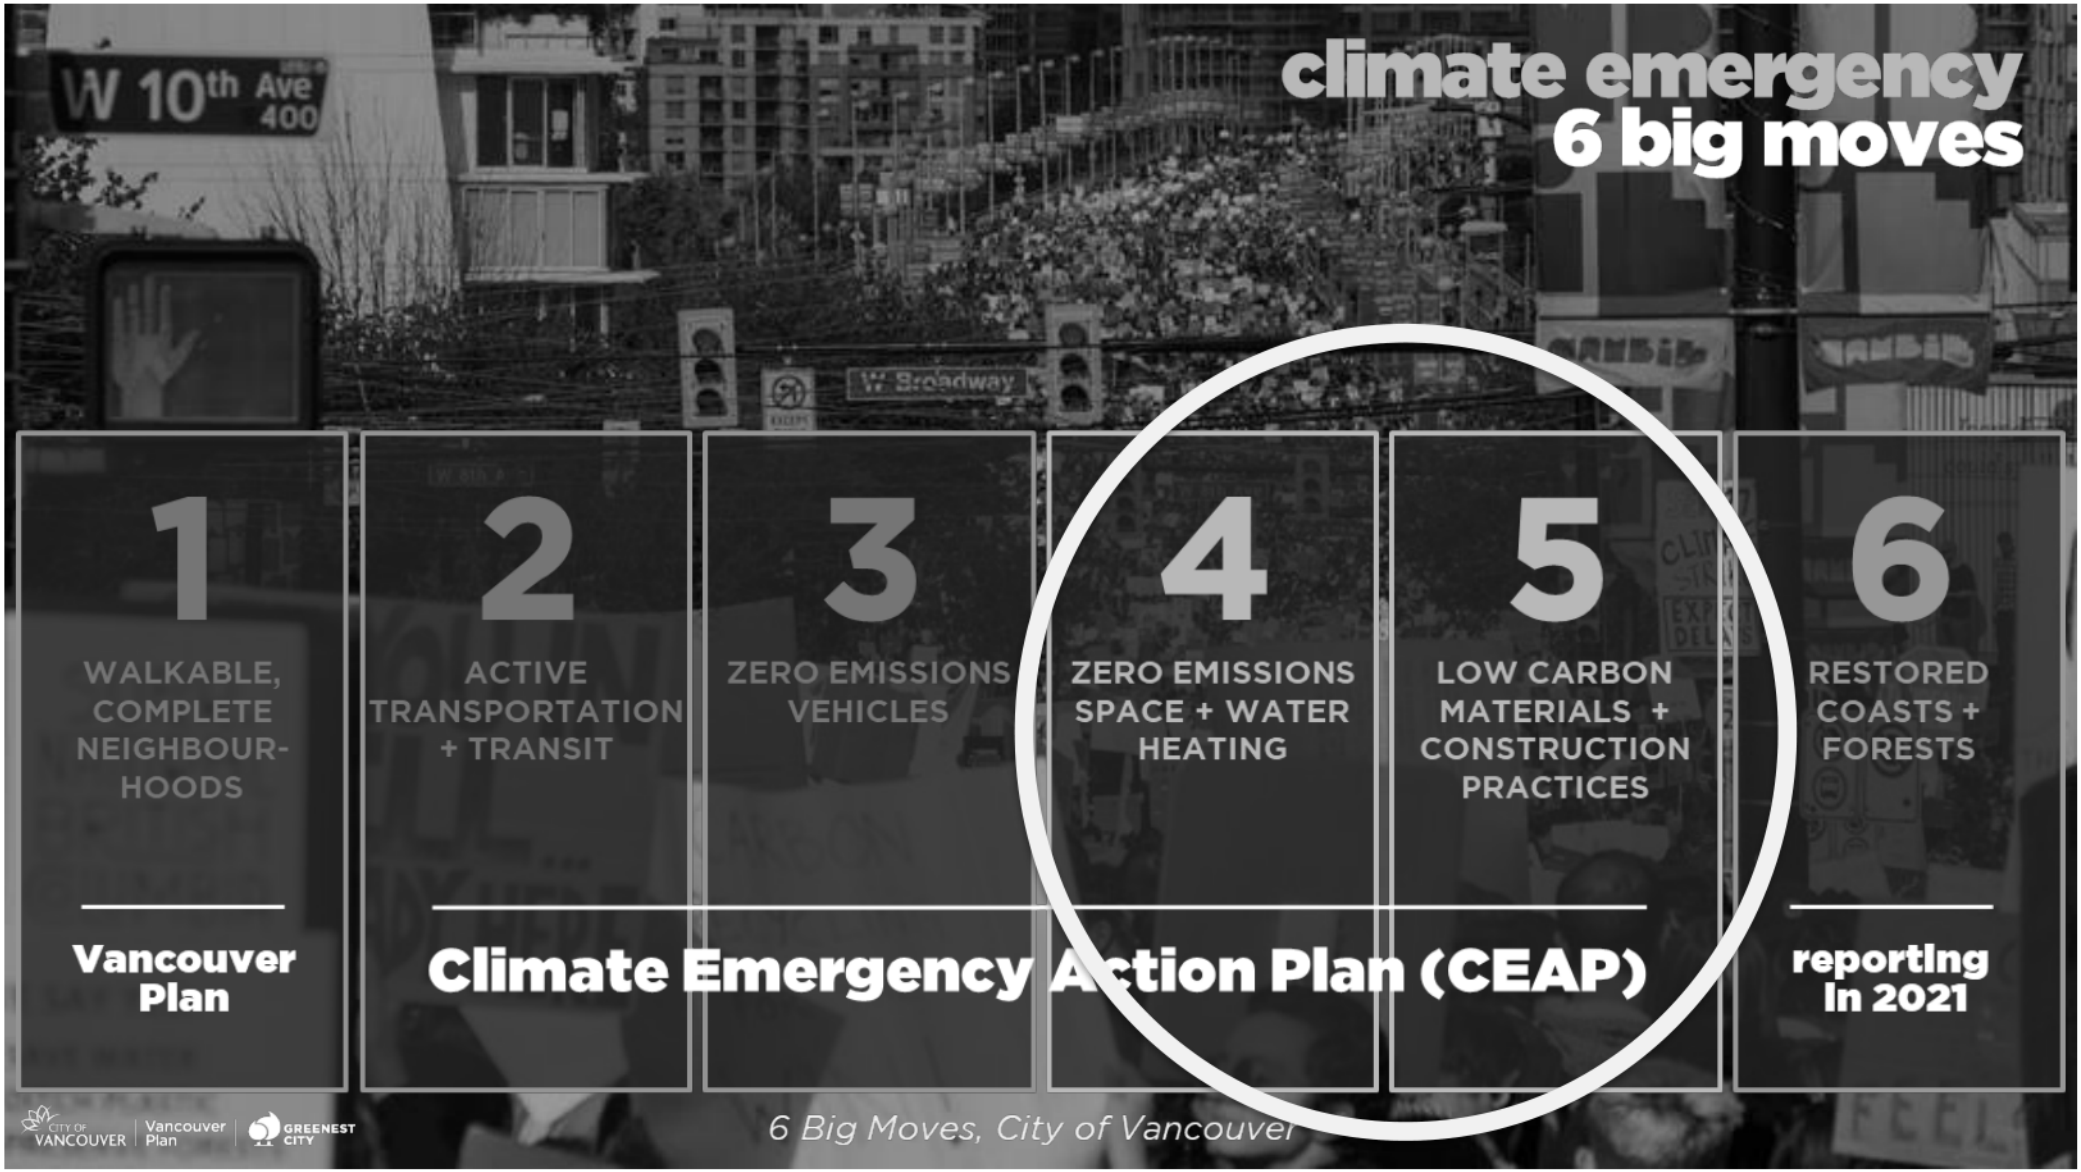
Direction and Progress

CITY OF VANCOUVER

Nov 2019:

- "Council direct Staff to report back with recommendations … including:
  - ✓ amendments to the Building By-law to permit mass timber construction up to 12 storeys, modelled on the proposed 2020 National Building Code, by Q1 2020;
  - ✓ amendments to planning by-laws, policies, and guidelines, such as minor height relaxations or simplifications of building form, to accommodate cost-effective wood building designs, by Q1 2020; and
  - → Further opportunities to amend City by-laws, policies, and guidelines to remove barriers and encourage mass timber development in appropriate locations, by Q4 2020."

Direction and Progress



2. Building Momentum

Building Momentum

CITY OF VANCOUVER

Thanks for this Robyn.

I'm looping in Robyn Webb since I'm away next week, so please send her the summary list of issues and any other correspondence.

We are planning a Peer Network working group meeting on the 13th or 14th where we will go over the proposed metrics and the priority list of issues to be addressed in the BP Bulletin. When do you think the updated metrics summary sheets will be shared?

What do you see as ideal timing for the Part 9 and Part 3 working group meetings? The week of the 25th should give us enough time to work through the issues with local governments and get you something to refine and send to the industry WG members.

Tiffany, I'm looking forward to working with you and the team to get this over the finish line!

Zac, thanks for all your work so far. s.22

Subject: RE: [External] RE: BP Guide Next Steps

Hi all

Thanks for the meeting today. s.22

I thought it would be helpful to update our previous task list for the ESCC. Tiffany – feel free to reach out to me and Bob (as the co-vice chairs) if you need anything else around this.

1. BSSB will send this group the summary list of issues that the BP Bulletin may look to cover, and the BSSB Best Practice Bulletin that was initially released with the Step Code in 2017.
2. Maya will review the summary list and work with LGs on their recommended Best Practices for addressing them. She will share that with BSSB, so that there can be a straw dog for the working group meetings
3. BSSB will set up small working groups in Oct-Nov to work thru P9 and P3 issues.
    a. Part 9 attendees could be BSSB, Maya + 3LGs (regional representation – eg Megan, Max, Rich?), 3-4 builders (ie Ron Rapp, Joe Hart, Bob Deeks, Kelly), plus an EA? Suggest 2 meetings.
    b. Part 3 attendees could be BSSB, Maya + 3LGs (w P3 experience), UDI (Jeff), EGBC (Harshan), AIBC (Moira). 1 meeting may be possible
4. We will hold an ESCC meeting in late-Nov to review / finalize the Carbon Performance Standard and draft BP Bulletin
5. The BP Bulletin will be released in Dec with the regulation. Note: The intent is that the reg would come into effect as soon as it is adopted, thus any LG could reference it in bylaw immediately.
6. The Capacity-Building and Comms Subcttee should oversee additional short-term updates/modules to Guides and training (eg LG, Building Officials, Builder training) to support GHGi
7. We will try and hold an ESCC meeting in early-mid Dec to review the 20% update to the BCBC
8. BSSB will announce the 20% update to BCBC by March 2022 (to come into effect Dec 2022).
9. Spring-Dec 2022, the Capacity-Building and Comms Subcttee will undertake a widescale update on Capacity Building materials for the new 20% BCBC and the GHGi (eg new updated LG BP Guides, Builder training, Building Official Handbook etc)

All the best for Truth and Reconciliation Day tmrrw.

Cheers … Robyn

Subject: BP Guide Next Steps

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Zac

Great meeting today. As discussed following the meeting, here are the proposed next steps for producing the BP Bulletin and follow-up implementation support for the reg. Pls let me know if I have captured these steps right!

10. Zac and team will draft up a Table of Contents for the BSSB BP Bulletin that will be released with the Carbon Pollution Standard to BCBC in Dec.
11. We will set up a meeting for next week with BSSB and Maya to review the draft ToR for the BP Bulletin – below are times that work for Tom and I. **Zac and Maya – pls let us know times that would work for you**.
    a. Weds – any time after 12pm
    b. Fri – any time after 10am
12. (Note: BSSB will forward the findings from today's meeting, and results from the additional modelling discussed today, ASAP to Maya's team for consideration in the Guide.)
13. Maya will work with the LG Peer Network to draft up a straw dog of the BP Bulletin (ideally including some conversations with Jeff Fisher, Ron Rapp and sml community builders to incorporate their concerns ahead of full ESCC review (eg the request for a measure-only step))
14. This draft will be submitted to BSSB, for forwarding to the ESCC in Nov (?) for comments and finalization.

15. The BP Bulletin would be released in Dec with the regulation. Note: The intent is that the reg would come into effect as soon as it is adopted, thus any LG could reference it in bylaw immediately.
16. The Capacity-Building and Comms Subcttee should oversee additional short-term updates/modules to Guides and training (eg LG, Building Officials, Builder training) to support GHGi
17. BSSB will announce the 20% update to BCBC by March 2022 (to come into effect Dec 2022).
18. Spring-Summer 2022, the Capacity-Building and Comms Subcttee will undertake a widescale update on Capacity Building materials for the new 20% BCBC and the GHGi (eg new updated LG BP Guides, Builder training, Building Official Handbook etc)

Cheers … Robyn

Hello Jeff,

As one of the measures to address the strata insurance issue, Housing Policy branch, Office of Housing and Construction Standards, will be consulting on depreciation reports including timing, qualifications and content. I am the lead policy advisor with respect to depreciation reports.

Can you please confirm a representative for UDI? It has certainly been a pleasure to work with Joscelyn Baker on the topic of contributions to the strata corporation's Contingency Reserve Fund.

The depreciation report consultations will be Wed Nov 3 from 1:30 to 3:30 and Wed Dec 1 from 1:30 to 3:30 by Zoom.

If you have any questions, suggestions or concerns please don't hesitate to contact me or Doug Page, Director of Policy and Legislation at doug.page@gov.bc.ca

kind regards,
Veronica Barlee, MBA
Senior Policy Advisor

Sent: Monday, October 4, 2021 10:43 AM
To: Chase, Andy OHCS:EX <Andy.Chase@gov.bc.ca>
Subject: FW: Green Rainwater Infrastructure Pathways Study Workshop - seeking BC Building Code representative

Hi Andy,

I met Chris Radziminski from the City of Vancouver when we co-presented at a UDI workshop. Our contact was brief but he impressed me as being a very sharp dude. Fast forward to today – the City of Vancouver is starting an interesting project and Chris remembered my name. Hence, the email below.

In my opinion, the Branch should make somebody available to participate. Where storm water management systems are located off-site, we (and the Code) don't really have much to say. But, when storm water management systems are located on-site, the lines between the Code and other rules/practices get, for most people, *super* fuzzy. s.13
s.13

Item 4.2 on the LoAs is a case in point. Juni will be aware of a strong push to amend the current wording: "Site and foundation *drainage systems*". s.13
s.13

I'd love to participate, but the project has long timelines and won't wrap for about a year. For that reason, I suggest that someone else be assigned.

Please advise, so that I may respond to Jean Roe, or please respond to her directly.

Thanks,

Don

Hi Don,

On behalf of the City of Vancouver and its project consultant team, I am coordinating an online Green Rainwater Infrastructure (GRI) Pathways Study Workshop #1 on **October 29, 2021**. We are hoping to include BC Building Code representatives. We received your contact through Chris Radziminski. He suggested you may be able to identify an appropriate representative.

Do you have recommendations on who we may invite to this workshop? See more information attached.

Thanks kindly,

Jean Roe (she/her/hers) | MCRP, BA

Good evening,

Thank you to those who were able to participate in the flood resilience engagement session that was held on September 28th. A PDF version of the presentation is attached for your reference.

If you were unable to attend or have additional written feedback, we welcome any comments by October 12th.

Thank you,
Nicole

Subject: Engagement Opportunity - Existing Buildings - Flood Resilience
When: Tuesday, September 28, 2021 2:00 PM-4:00 PM (UTC-08:00) Pacific Time (US & Canada).
Where: Zoom

Hello,

The Building and Safety Standards Branch (Ministry of Attorney General and Minister Responsible for Housing) is responsible for the BC Building Code which regulates health and safety, fire and structural protection, accessibility, and energy and water efficiency in building construction.

The Branch is developing an Existing Buildings Renewal Strategy that provides a path for today's buildings to become more energy and water efficient, cleaner, and safer for British Columbians during events like earthquakes, wildfires, wildfire smoke, heat waves, and floods.

BSSB will be hosting a series of engagement sessions on increasing resilience and, carbon and energy performance in existing buildings, and would like to extend an invitation to you and your organization to attend the first engagement session on **Sept 28 from 2:00 – 4:00pm PDT on policies to support increasing flood risk mitigation in existing buildings**.

Future sessions will be held throughout the fall (see schedule below) to continue discussions and partnerships with affected parties and key influencers, such as your organization.

Topic	Date
Existing buildings - Water conservation	Wednesday October 6th, 2021
Existing Buildings – Wildfire risk	Tuesday October 19th, 2021
Existing Buildings – Energy and carbon, regulations	Wednesday November 3rd, 2021
Existing Buildings – Overheating and air quality	Thursday November 4th, 2021
Existing buildings – Energy and carbon, supporting measures	Tuesday November 16th, 2021
Existing Buildings – Integrating mitigation and adaptation	Thursday November 25th, 2021

If you have any questions in advance of the session, or written feedback on the engagement topics, please contact Nicole Vukosavljevic by email at Nicole.vukosavljevic@gov.bc.ca.

We look forward to your participation and input.

Thank you,
Nicole

Existing Buildings Renewal Strategy
Flood Risk

September 28th, 2021

Image source: https://sunshinecoastcanada.com/explore/south-coast/sechelt/

INTEGRAL BRITISH COLUMBIA

Objectives of Today's Session

- Review flood hazard and impacts to **existing buildings** in B.C.
- Identify opportunities and barriers to increase the resilience of **existing buildings** to flood events
- Discuss Provincial support opportunities to increase **existing building** resilience

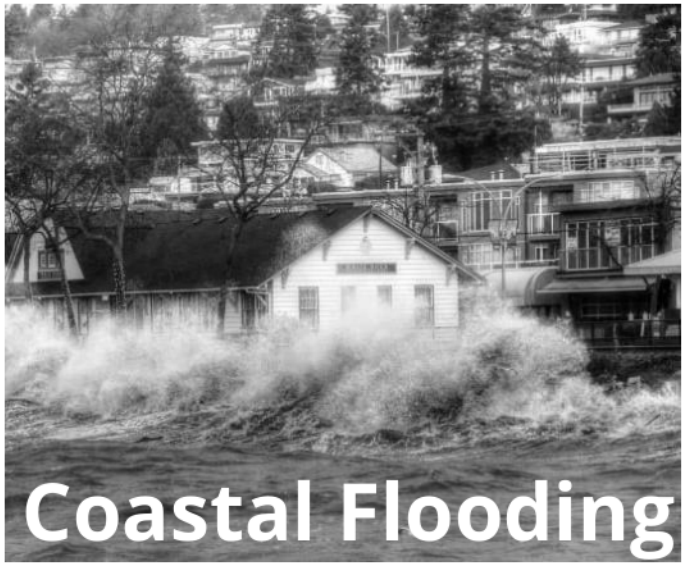
Image source: https://www.scienceworld.ca/light-up-science-world/

Agenda

Time	Agenda
2:00pm	Welcome and orientation
2:10pm	Background
2:25pm	Breakout Session #1
3:00pm	Breakout Session #2
3:50pm	Report Back and Next Step
4:00pm	Close

Background

B.C.'s Flood Risk



Summary of Risk Assessment Rankings

RISK EVENT	PRESENT-DAY LIKELIHOOD	2050 LIKELIHOOD	CONSEQUENCE	RISK SCORE AND RATING
Moderate flooding	2	3	2.9	**8.6** Medium
Severe riverine flooding	1	2	4.3	**8.5** Medium
Severe coastal storm surge	1	2	4.1	**8.3** Medium

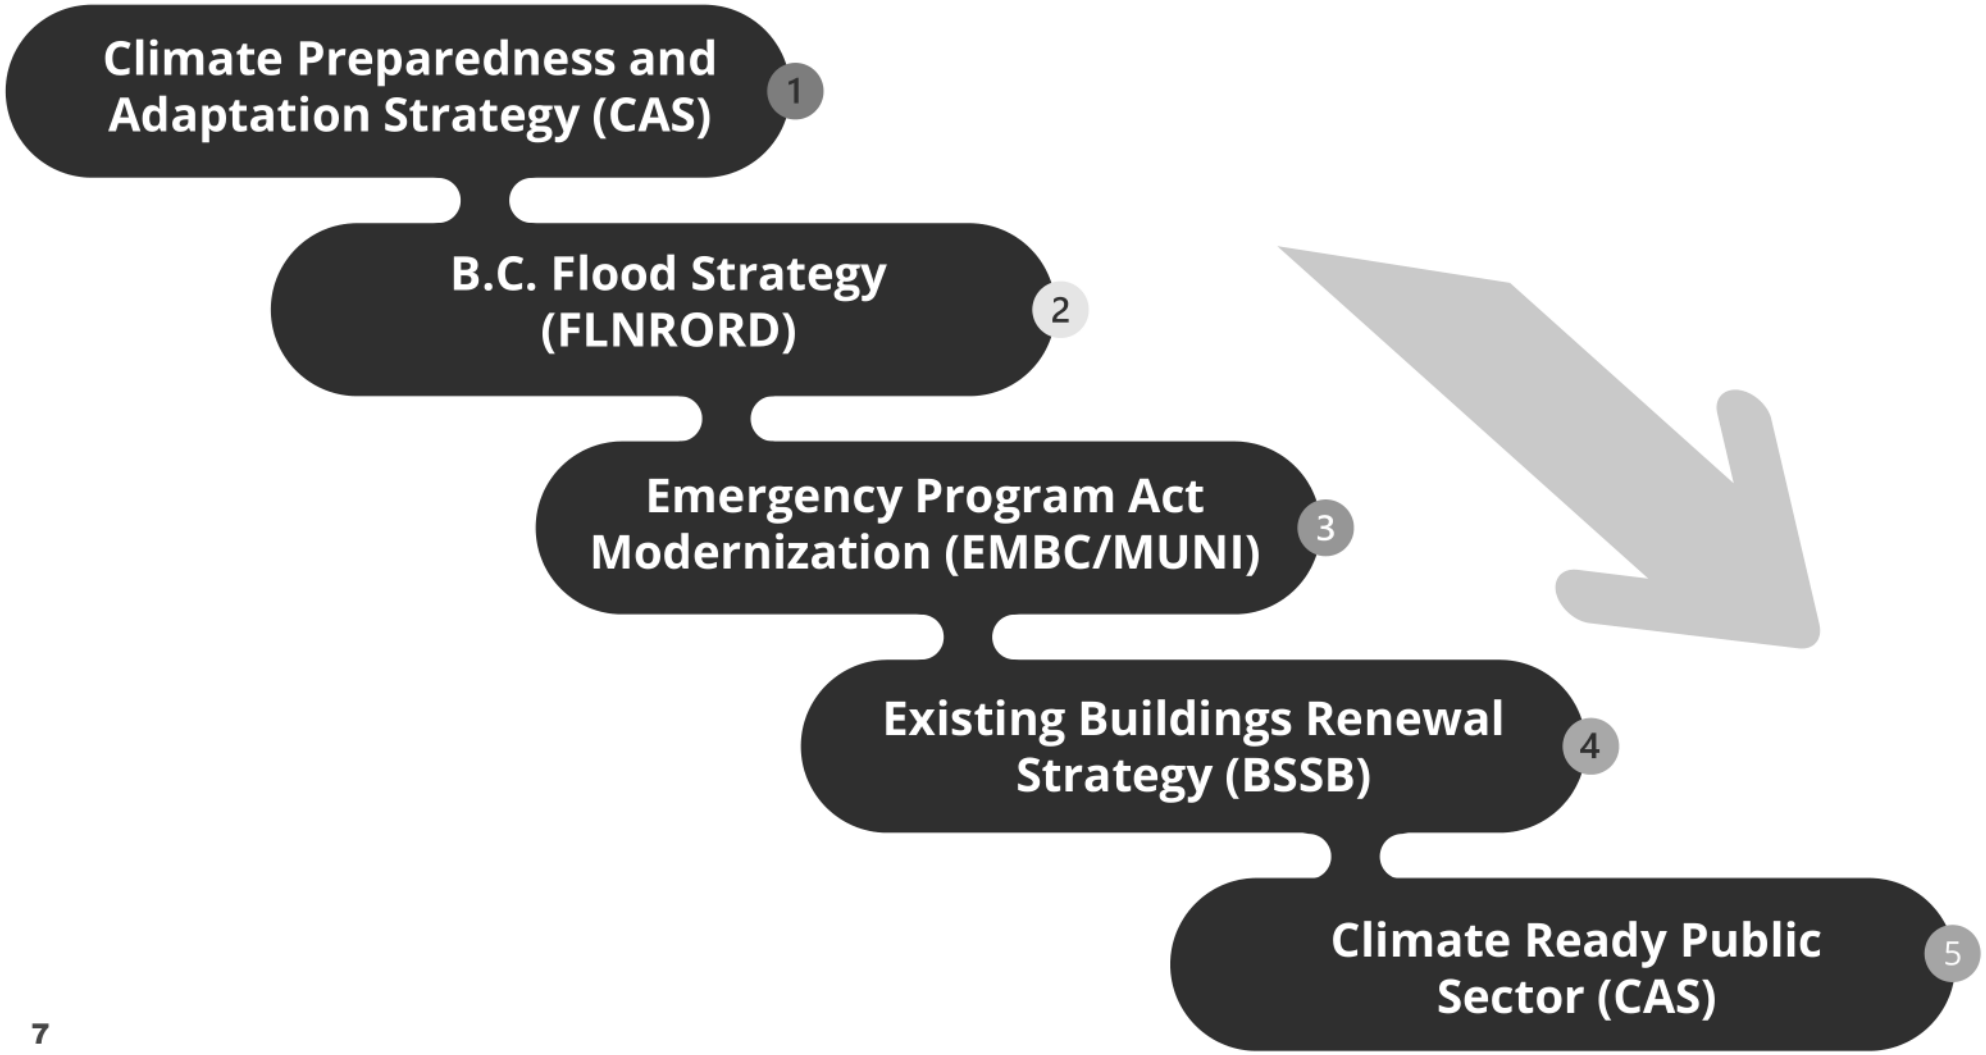
Source: Preliminary Strategic Climate Risk Assessment for British Columbia, July 2019

B.C.'s Flood Risk

Flood Type	Description	General Causes	Climate Change Impacts
	Occurs when extreme rainfall creates local flooding away from water bodies	• Heavy rainfall exceeds the capacity of natural or built landscapes to dissipate stormwater	• **More intense rainfall events** • **Warmer temperatures & drought causing species change** (affecting permeable surfaces)
	Occurs when seawater inundates lands in coastal zones	• Storm surge, wind and wave action • Tsunamis • High tides	• **Rising sea levels** exacerbate impacts from high tides, storm surge, and wind/waves • **Erosion and changing shoreline habitats** (affecting shoreline protection)
	When water levels in a river, lake, or stream overflow beyond its banks	• Intense rainfall, atmospheric rivers • Rapid snowmelt / freshet • Ice jams • Structural failure of dams • Debris floods in steep terrain	• **More intense rainfall events** • **Warmer winter/spring conditions**, causing more rain-on-snow events and rapid freshet • **Sea level rise** compounding higher river flows in coastal areas • **Erosion and chancing riparian habitats** (affecting shoreline protection)

Climate change expected to make flooding more severe and frequent

Policy Landscape in B.C.



Impact of Flooding on Buildings

DEPTH (m)	BUILDING IMPACTS
< 0.1	• Most buildings are expected to be dry • Underground parking, infrastructures and basements may be flooded
0.1 – 0.3	• Water may enter buildings at grade – most buildings will be dry • Walking in moving water or driving is potentially dangerous • Underground infrastructure and basements may be flooded
0.3 – 0.5	• Water may enter ground flood of buildings • Walking in moving or still water is dangerous • Underground infrastructure and basements may be flooded
0.5 – 1.0	• Basements flooded • Electricity failed • Vehicles are commonly carried off roadways
1.0 – 2.0	• Ground floor flooded • Residents and workers evacuate
> 2.0	• First floor and often higher levels covered by water • Residents and workers evacuate

Flood Mitigation in Existing Buildings

Relocation

Wet-Proofing

Elevation

Dry-Proofing

B.C.'s Building Regulatory Landscape

Provincial Responsibility

- *Building* Act: authority to establish building regulations
- *BC Building Code (BCBC)*: designed for new construction but applies to alteration, addition, and reconstruction
- Lack of clarity and direction on the extent to which the BCBC applies to existing building upgrades

Local Government Responsibility

- *Community Charter & Local Government Act*: enables the administration and enforcement of the BCBC
- Local governments determine how the BCBC is administered
- Building permit process
- Local building requirements for the mitigation of flood hazard

Existing Local Government Tools

TOOL	EXISTING BUILDINGS
Building Permit	Safety upgrades as condition of renovation
Flood Plain Bylaw	Additions, renovations, extensions required to be above flood construction level or flood proofed
Development Permit Area for Hazardous Conditions	Engineering report required for additions, renovations and extensions
Zoning	Vertical and horizontal setbacks for additions or extensions to buildings
Covenants	Usually as a condition of subdivision – conditions vary

Challenges

- Assume existing dikes will protect existing buildings
- Need up-to-date risk information and mapping
- High cost of upgrades to existing buildings
- Uncertainty about application to existing buildings

Example Approaches to ExB

INCREASED TECHNICAL GUIDANCE

- Update Provincial Flood Hazard Area Land Use Management Guidelines
  - Revise current sample floodplain bylaw
  - Add model or example guidelines for flood hazard DPA

PUBLIC EDUCATION

- Develop publication modelled after the FireSmart Begins at Home Manual

BUILDING PERMIT UPGRADE REQUIREMENTS

- In floodplains without a dike, require voluntary building permit applications for renovations or extensions to include plans to elevate electrical and heating systems above flood construction levels

BC BUILDING CODE REQUIREMENTS IN FLOODPLAIN

- Develop Provincial building regulation for the floodproofing of existing buildings

Next Steps

Topic	Date
Water Conservation	**Wednesday, October 6th, 2021**
Wildfire Risk	Tuesday, October 19th, 2021
Energy & Carbon 1	Wednesday, November 3rd, 2021*
Overheating and Air Quality	Thursday, November 4th, 2021
Energy & Carbon 2	Tuesday, November 16th, 2021*
Integrating Climate Responses	Thursday, November 25th, 2021

*In collaboration with the Ministry of Energy, Mines and Low-Carbon Innovation.
Date of engagement may be adjusted based on release of CleanBC Roadmap

Further Opportunities for Feedback

Additional opportunities to provide feedback:

- The Province will accept related feedback until **October 12, 2021**
- Written comments can be sent **by email** to **Nicole.Vukosavljevic@gov.bc.ca**

Thank you

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

Agenda

1. Welcome and Chair's Remarks
2. Hon. David Eby, Attorney General, Minister Responsible for Housing

2.1. Update on Provincial Initiatives

- Update on the Minister's UBCM presentation and any further discussion following the UDI presentation to Caucus
- What can UDI expect to see in this fall session?
- Are there other initiatives contemplated for the medium-term where UDI can provide support?

2.2. Attracting Development to growing resource communities

- Discussion and UDI support

2.3. Municipal Updates

- Victoria - Rental regulation
- Vancouver – False Creek Flats, Streamlining Rental Policies and Broadway Area Plan

2.4. Next Steps

- How can we continue to work together?

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi all,

Please hold this time for the next ESC Part 3 & non-residential Part 9 Subcommittee meeting. Agenda and meeting info forthcoming.

Thanks!

RE: UDI feedback on summary sheets

From: Wong, Hugo OHCS:EX <Hugo.Wong@gov.bc.ca>
To: Williams, Scott B OHCS:EX <Scott.B.Williams@gov.bc.ca>
Sent: October 20, 2021 5:59:45 PM PDT

Hi Scott,

I had another call with Jeff Fisher two days ago. He's gotten feedback from two members of his building code committee. A summary is below:

- Some interest in having different baseline information than Step 2. (for example, Step 3 or 4) as some municipalities in the Lower Mainland require higher Steps. An alternative would be to have Excel files out there if people want to do the calculations themselves. *(HW: This says to me we need to make it very clear the intent of the summary sheets is to show the worst case, and that people need to do some of their own analysis)*
- Would prefer centralized heating rather than baseboard or PTAC, because ICC doesn't include space costs. Having centralized HVAC and no personal DHW tank decreases usable floor area, which could be sold to a buyer. A developer would choose centralized systems even if the first cost is higher to sell that space.
- Two UDI members were confused by description of one ECM (infiltration?) as "no savings beyond code." Suggest describing the air change or target directly.
- For high-rise MURBs, the typical building is 50-60 WWR, not 40. 40 makes sense for a mid-rise wood MURB. Most high-rise MURBs are also doing better than R-7 walls.
- Questions about EV charging, and whether those are attributable to the building or the suite. State the assumption. In mid-rise, that makes a big difference.
- Reminder that mid-rise MURBs were the trickiest archetype in Step Code development - sometimes Step 2 was harder to achieve than Step 3, or the performance gap was minimal. Consider including a mid-rise wood-frame MURB archetype.
- Confused by having RNG in the same table (he and his members read it as one continuous row, rather than as a separate table). He also didn't know that the blends described were not actually available for purchase, but rather theoretical blends. He recommended separating out RNG into a separate table. I will probably just make the page larger (to 11x17 instead of 8x11) and use colours/lines/text to make it clear the equipment changes as you go down the rows don't apply to the RNG side of the table).
- If cooling mandate comes, district energy stops being cost effective as it can't offer cooling. ASHP would be the norm.
- Risk that LGs will use this analysis to prove GHG requirements are cost effective, instead of treating this with a grain of salt. They did that with the previous Step Code analysis. Please ensure they don't run with it and treat it as gospel.
- Jonathan Meads at Qualico is willing to chat about these, as he reviewed them. Work number: 604 579 0304; Cell: 604 841 8350.

Hope this helps.

H

Subject: UDI feedback on summary sheets

Hi Scott,

I had a call with Jeff Fisher just now on his feedback for the summary sheets. He'll call his building code committee this weekend or on Monday and get their feedback soon. But Jeff's personal feedback, in essence:

- He's fine if you only include Climate Zone 4 and 5 (but understands why we may need to include more) SW: ok. Lets focus on CZ 4 and 5 for high rise MURBs. CZs 4, 5 with a bookend of 7a for all other architypes.
- Ensure the subsequent tables for Steps 3 and 4 include a cost comparison to our Step 2 base case (which I think it does) SW: the first iteration of the sheets showed a comparison based on Step 2, but this was not something that was discussed with Alex when we last met when referring to additional steps. This is something that we will need to make explicit with the revisions to the sheets.
- Talk to CHBA on Part 9 to get similar feedback because Jeff deals with Part 3 mostly. SW: I suggest that you reach out to a representative of CHBA to bounce our approach off of them. Ie GHGis based on house size similar to approach taken for MEUI as opposed to GHG caps. We could include some data from Alex to kick start the conversation.
- Ask BC Housing if cooling is mandatory in their projects, and during a hypothetical verbal presentation in this report, hint at whether the national codes will eventually require cooling (obviously, only if that's true). SW: we don't know at this point. Really justify in the report why we have cooling included in all types (because some might want a base case with no cooling. Jeff agrees a base case with cooling is the right approach). This way, if UDI members know that low/mid-income housing has cooling, there is less of an argument to not have cooling in a high-end condo. SW: ok Include in the justification that going ASHP makes more sense with an escalating carbon tax (and was the lowest cost option over time given that assumption) SW: this was a question asked a few times during the SCC meeting. Alex will need to provide a quick summary to appropriately address.
- Be clear whether our base case is just a big box, or whether there are lots of articulations (wedding cake), as that affects the cost projections. The graphic we include might just show it (but then caption or explain that that is the actual way the hypothetical building looks). Many municipalities only allow buildings with articulations. That will hint that the cost projects might not be super applicable to them personally. SW: understood. The graphics show the form. Also, the stated VFAR gives and indication of the form used in the calculations. We can include a few sentences on this.
- Jeff likes the questionnaire. He suggests more written guidance (in prose), for example, regarding the red figures explaining that if a building misses a particular GHGI by a bit, suggest changing parts of the ECM package to make it work. SW: I agree. We will need to talk to Alex about this and what it will take to actually meet the proposed metrics. This will also help to inform what we eventually decide with the actual metrics themselves and whether or not we need to deviate from the proposes 6/3/1. Include in prose any explanations if we skip some archetypes and climate zones so stakeholders know they haven't been forgotten (e.g. for laneway homes in CZ8, say it'll be dealt with next year or at the ESC table or similar). SW: sounds good.

From a policy standpoint, Jeff would support phasing in the GHG requirements in CZ 4 and 5 first, with the north later, and a whole separate discussion on the Fort Nelson grid. We'll reflect on that and I can chat with Tiffany about it. SW: keeping our eye on the prize – this is an opt in standard, so if we cannot adequately address the colder climates and the Fort Nelson grid, this is something we can address later (ie in 2022 and beyond).

Hope that's helpful. I can chat on Monday if you need more clarity.

Hello Jeff,

Thank you for your email regarding accessibility and the BC Building Code. Dale Andersson sent me your email for response.

The current BC Building Code accessibility engagement will run until December 9, 2021. After which time, the Building and Safety Standards Branch will publish a What We Heard report to our website. If UDI is interested to meet following publication and review of the report, please do feel free to reach out to me.

As noted, the Branch will conduct a second engagement to solicit feedback on proposed code changes prior to adoption. We anticipate being able to share these mid-2023.

We will be sure to keep you informed as the engagements proceed to ensure you have an opportunity to review and comment on proposed code changes.

Thank you again for your email.

Kind regards,

Shannon Laboucane | Senior Policy Analyst

[EXTERNAL] **This email came from an external source. Only open attachments or links that you are expecting from a known sender.**

Dale, hope all is well!

UDI has been asked to conduct a webinar on accessibility – including potential future requirements from the Province. I understand that the Branch is doing a public engagement process until December 9, but it appears to be at a preliminary stage with few specific measures being put forward.

We have a UDI Building Code Committee. Would the Branch be interested in discussing accessibility in new construction as part of your current engagement process?

We would also be interested in providing feedback to the Ministry when specific measures are being considered in a future consultation stage. In fact, that would likely be the ideal time to do a webinar or breakfast seminar with UDI members. Do you know when this stage will occur, and would the Branch be interested in participating in a webinar or seminar at that time?

Hello Jeff,

Thank you for your email regarding accessibility and the BC Building Code. Dale Andersson sent me your email for response.

The current BC Building Code accessibility engagement will run until December 9, 2021. After which time, the Building and Safety Standards Branch will publish a What We Heard report to our website. If UDI is interested to meet following publication and review of the report, please do feel free to reach out to me.

As noted, the Branch will conduct a second engagement to solicit feedback on proposed code changes prior to adoption. We anticipate being able to share these mid-2023.

We will be sure to keep you informed as the engagements proceed to ensure you have an opportunity to review and comment on proposed code changes.

Thank you again for your email.

Kind regards,

Shannon Laboucane | Senior Policy Analyst
Building and Safety Standards Branch | Ministry of Attorney General and Minister Responsible for Housing

ENERGY
STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code Council Meeting
Meeting Notes

Date and Time of Meeting: Wednesday Sept 22, 2021 | Time: 1:00 p.m. to 4:00 p.m. Pacific Time
Chair: Zachary May, Building and Safety Standards Branch, Attorney General and Minister Responsible for Housing
Co-Vice Chairs: Bob Deeks, CHBA BC/RDC Fine Homes and Robyn Wark, BC Hydro
Virtual Microsoft Teams meeting

Participants

1. Bea Bains, FortisBC
2. Patrick Caraher, AHMA
3. Diana Dilworth, HAVAN
4. Maya Chorobik, CEA and LGPN Co-chair
5. Norm Connolly, Richmond/PIBC, and P3 Subco Co-chair
6. Ian Cullis, BCNPHA
7. Catherine Ernst, BOABC
8. Patrick Enright, City of Vancouver
9. Jeff Fisher, UDI
10. Maura Gatensby, AIBC
11. Nicholas Heap, City of Richmond and outgoing P9 Subco co-chair
12. Toby Lau, BC Hydro and P3 Subco Co-chair
13. Wilma Leung, BC Housing
14. Megan Lohmann, CEA and UBCM rep
15. John Madden, UBC
16. Richard Mathews, Squamish and Part 9 Subco co-chair
17. Mary McWilliam, BCIT & CBC Subcommittee Co-chair
18. Katherine Muncaster for Nat Gosman, EMLI
19. Roberto Pecora, ZEBx
20. Harshan Radhakrishnan, EGBC
21. Pauline Rupp for Joe Hart, CHBA
22. Laura Sampliner, Port Moody and LGPN Co-chair
23. Muneesh Sharma, BOMA
24. Maxwell Sykes, City of Surrey/UBCM Rep
25. Guido Wimmers, UNBC
26. BSSB: Tiffany Warkentin, A/Director, Strategic Policy and incoming ESCC chair; Dale Andersson, CBC Subcommittee Co-chair; Scott Williams, Senior Energy Codes Administrator, Hugo Wong, Policy Analyst
27. **Guests**: Tom Berkhout, BC Hydro; Alex Blue, Evoke Buildings; Alexandre Bigonesse, NRCan; Remi Charron, BC Housing; Patrick Enright and Charling Li, City of Vancouver; Pete Koepfgen, FortisBC; Adrian Mohareb, CAS; Lily Shields-Anderson, UDI; Ralph Wells, UBC
28. **Regrets**: Katy Fairley, BCCA; Jason Jung, ASTTBC; Lisa Mak, BC Hydro; Ron Rapp, HAVAN and Part 9 Subco co-chair; Kelly Reid, HKR Builders/CHBA BC; Holly Wacker, Ministry of Municipal Affairs; Tyler Wightman, BOABC

Welcome, Introductions, and Opening Remarks (Zachary May)

- Analysis of GHG regulations for local government opt-in are taking longer than anticipated due to technical challenges. Therefore, the consultation process will be longer.
- The purpose of today is to ensure the summary sheets have the right details, raise the right policy questions, and are distributed to the right people to get adequate feedback. Policy questions include:
    - Whether GHG and Energy Steps should be linked together
    - Whether the highest energy efficiency targets are required to cost-effectively meet GHG outcomes
    - Whether targets listed require adjustment

Feedback on draft targets for building archetypes (Zachary May and group)

- GHGIs of 6, 3, and 1 were included as points of discussion. With impact analysis, those numbers could be adjusted depending on stakeholder feedback.
- Electricity emissions factor was a topic of great interest and feedback. A clear, stable factor for the next five years is required. Recent volatility in the GGIRCA figures is anomalous, and government announcements indicate electricity will decarbonize quickly in the short term. Zac suggests using the status quo on emissions factor in the CoV Energy Modelling Guidelines, which he believes is our best hope for long-term stability until the future emissions factor for electricity becomes more certain. Although many options were tested, we believe this to be the best proposal.
- Discussion:
    - Can the utility guarantee an emissions factor over time? Outside of BSSB control. Similar to climate data that is always out of date, there will always be a gap between up-to-date data and historical data, but that is a pressure we are trying to manage.
    - UDI and CoV agrees with using the CoV guidelines. CoV indicated openness to changing their gas emissions factor to the PSO best practices figure to align with our approach.
    - Some concern over potential fluctuations in RNG emissions due to different sources, which could vary from the PSO best practices document. CAS oversees RNG, and FortisBC is working on that.
    - RNG program opens again in mid-October with no plans to close the program.
    - Agreement to use the natural gas emissions factor in the BC Best Practices Methodology, similar to RNG, which is slightly lower than the current figure in the Code.
    - CAS would prefer a different approach to the electricity emissions factor.
    - Understanding that if the EEF is changed, the targets would be updated accordingly.

Summary sheets discussion (Zachary May, Scott Williams, Alex Blue)

- Consultants prepared summary sheets from data gleaned from the Metrics Research Report update. The intent was to illustrate different emissions reduction and cost outcomes if the envelope remained constant at Step 2, but equipment changes were made.
- Technology choices were informed by the contractor's professional expertise regarding practicality and cost to limit the potential combinations.
- We are seeking to include the right amount of information without overwhelming.
- Discussion:
    - If ASHP used for heating, and heating loads reduced, likely wouldn't see massive increase in incremental capital cost.
    - Top Step might still make electric resistance possible, with reduced heating loads as Step increases, but DHW energy load stays constant across Steps.

- Please identify and document why heat pump water heaters were not included. HP for DHW is becoming more popular, but we need to draw the line in the sand with options to analyze to keep things simple.
- On why RNG costs seem to remain constant, while RNG is more expensive than conventional natural gas, the difference is offset from an increasing carbon tax. When averaged over 20 years, it's neutral. Some feedback that changes in government direction (e.g. choice to not increase the carbon tax may affect the accuracy of those cost projections.)
- Modelled utility costs for non-profit housing sector tend to be 50% higher due to increased occupant density.
    - Will include disclaimer that these are meant to compare modelled energy costs based on code assumptions, and there will likely be a discrepancy between modelled and actual results.
- More information requested regarding additional climate zones and steps within the Step Code. Many Part 3 buildings are located in CZ 5 and 6. In Metro Van, these buildings will have to hit high Energy and GHG Steps. Suggest including more of those permutations, especially commercial, in CZ 5 and 6. UDI was interested to note that the analysis suggested that increasing the Step doesn't always increase cost.
- Red GHGI numbers indicate that it exceeds the proposed 6, 3, or 1 target, but that a minor change to energy conservation measures or load reduction might make the building hit the target. For the purposes of this analysis, the ECMs were kept as constant as possible.
- The targets aren't necessarily wrong if some buildings exceed it a bit; however, when buildings hit at GHGI of 1.3 or 1.2, it gets harder to reduce further as major emissions reductions decisions have already been made. Even a Step 4 buildings on 100% electricity might reach 1.1 in which case GHG metrics may need to be revisited. Could tweak the DHW savings to get it over the finish line to meet targets. Higher or lower densities affect DHW.
- Understand why connection fees were excluded from analysis due to variations per project. Tier 2 rates are also a challenge. Should be addressed during implementations. Developers could be wary of high GHG Steps without these issues being addressed at BC Hydro.
- We can indicate that time-limited incentives are also not a part of this analysis.
- Cooling has been included in Part 3 models.
- For MURBs, the drop in utility cost in this analysis because of the change in system types. For the natural gas case in MURBs, we're using fan coils in the suites. In our case suite fans represent an additional EUI of about 8. When we move to baseboard, we're removing those. This isn't integral to a fuel switch – you can move from FCs to VRFs, for example, which would have similar fan power. In that case, you would actually still see a drop in utility cost, as you'd be moving to a higher efficiency heating source.
- For Part 9, question on why heat pump water heater was only $700. Answer: the costing database showed $600 for the tankless DHW, then $1374 for HP DHW.

  - ACH was different at Step 3 due to a change in ECM package to reduce ICC.
  - Occupant behaviour is a bigger influence on energy demand at higher Steps due to reduced base loads.
  - Request for electric baseboard heat to be included in the analysis.
  - Question on whether we could include a townhouse or rowhouse as well as additional climate zones and Steps
  - Question from CHBA on smaller and larger homes, and effect of a cap on large houses and a minimum sq. ft for small houses
  - Adjustment for small homes suggested given disproportionate DHW loads.
- Some adjustments to hotel targets may be necessary as they have trouble meeting 6, 3, and 1. **Consensus reached that the 6, 3, and 1 targets are appropriate for Part 3 buildings and medium-sized Part 9 homes. Whole numbers are more acceptable by the group. Consensus on largest and smallest Part 9 buildings not yet reached. Further analysis on caps or other adjustments TBD.**
- Understanding that GHGI should not penalize density
- A best practices guide should explain implications of choosing progressively higher energy and GHG Steps, or projects that may just barely miss a GHGI target.
- Reminder that there will be a measure-only GHG Step, and that buildings must be 20% more energy efficient than 2018 Code before requiring any GHG Steps besides measure-only (Step 3 for Part 9, Step 2 for Part 3).
- For buildings connected to district energy, BSSB is seeking to identify a methodology for choosing an emissions factor, and leave the rest to local governments. So long as it's consistent.
- While the intent is to have the opt-in carbon pollution standard effective on signature as soon as December 2021, it is not actually required until a local government adopts it. Local governments already requiring low-carbon energy systems will likely act immediately; others will look at the best practices guide and go slower.
- More case studies from different local governments on how mixing and matching different Energy and GHG Steps would be helpful for a local government best practices guide, and what design and local government review teams can expect.
- Targets may require adjustment for the Fort Nelson grid (current analysis on Climate Zones 7b and above, which are on that grid, have not been done yet).
- FortisBC is seeking BCUC approval to create a permanent tariff for RNG to guarantee emissions for the life of the buildings, which hopefully will address local government concerns.
- Local government best practices guide to be done in two phases: a simpler form to be released in time with the regulation, and a more refined version done in collaboration with partners.
  - Steering committee associated with the LGPN could offer useful feedback
- It's Zac's last meeting for the year. Zac encourages everyone to pick up the phone or set up meetings to leverage our strong working relationships. Please contact Tiffany Warkentin, the acting ESCC chair (Tiffany.Warkentin@gov.bc.ca or 236 478-2666), as well as Scott, Hugo, or Dale. Appreciative of the collaborative and productive nature of the group.

- Plan for at least one more meeting in late November for further feedback on more refined summary sheets and implementation approaches.

Actions

- BSSB is interested in CHBA input to determine whether sheets reflect issues seen in Part 9 and are relevant to that audience.
- Will investigate including Climate Zones 5 and 6 for Part 9, and electric resistance for space heating in Part 9. Will include disclaimer that annual energy use is modelled, not actual.
- Decision to include NPV in addition to other financial implications, as well as increases in dollar amounts (not just percentage increases) for Part 9. Will change Part 9 analysis to 2.5 ACH instead of 1.5.
- BSSB to investigate rounding principles in the Code on whether a GHG value rounded to the nearest whole number would be sufficient (i.e. a house with GHGI of 1.4 = GHG of 1).

Adjournment at 4 p.m.

DATE: November 8, 2021
FROM: Anne McMullin, President/CEO Urban Development Institute – Pacific Region (UDI)
TO: The Hon. David Eby, Q.C., Attorney General and Minister of Housing
Re: Housing Affordability and the Government's *CleanBC: Roadmap to 2030*

Summary

On October 25, the Government released its plan to achieve the 2030 greenhouse gas emission reduction targets – the *CleanBC: Roadmap to 2030*. There are several actions that may potentially impact the delivery and affordability of housing. However, there are approaches that can mitigate or offset the impacts, specifically related to:

- Linking land-use and infrastructure development;
- Establishing requirements for GHG reduction pilot programs;
- The role of the BCUC and BC Hydro;
- Increasing accessibility and affordability of heat pumps;
- Prioritization of regulatory changes;
- Broader Public Sector Leadership to build capacity;
- Expansion of research, education and training programs;
- Prefabrication; and
- Changes to the District Energy model.

We believe that considering these challenges and opportunities will support the delivery of more high-efficiency homes while balancing the need for affordability.

Background/Discussion

The primary concern amongst builders with the changes being proposed in the new *CleanBC* plan is that the *BC Energy Step Code* (*ESC*) regulatory roadmap that was established several years ago is changing under the new *Roadmap to 2030*. Our members had a clear understanding of what was going to be expected of them from both the provincial and local governments over the next decade until buildings achieved the final *ESC* Step (Step 4 for Part 3 residential structures) to become net-zero in operations. The timeframe province-wide to achieve Step 4 was 2032, but several local governments have shortened them. Extensive training and education programs have been established as well as incentives to help builders adjust to the *ESC*.

Now a new requirement is being established – greenhouse gas (GHG) emissions also have to be reduced to net-zero. The timeframes are also much shorter. When the *ESC* was established, the Provincial timeframe was 15 years before the net-zero energy target had to be achieved. With GHGs, the timeframe is the end of decade, so the timeframes at the municipal level will be even shorter than for the *ESC*.

In addition, under the current regulatory regime, local governments were willing to offer incentives to builders to reduce GHGs by lowering their mandated *ESC* step if Low Carbon Energy Systems (LCES)

were installed in projects. This flexibility lowered implementation costs for some new buildings. Several municipalities have indicated that they will eliminate this incentive and require the highest Step of the *ESC*, in addition to the GHG reduction requirements.

It is the mandating of Step 4 that will likely drive building cost increases the most – especially if local governments maintain urban design requirements that make high performance buildings more difficult to construct – such as mandating smaller floor plates, high articulation and the stepping back of buildings at higher heights (i.e. wedding cake designs).

These changes are also occurring at a time when there are other significant changes being made to building regulations:

- new accessibility requirements;
- rainwater/stormwater measures (e.g. green roofs);
- resiliency policies;
- seismic improvements;
- noise/vibration mitigation;
- embodied carbon; and
- a new *BCBC* in 2022 and others.

UDI is concerned about industry capacity issues – especially given the skilled worker shortage, commodity costs and supply chain issues. In addition, the above requirements will add costs to projects at the same time construction costs and land costs are rapidly rising; as are municipal and regional fees and charges. We recognize that this poses a challenge for housing affordability objectives, and we discuss several potential mitigation measures below.

Link Land-Use & Infrastructure

It is abundantly clear from the *CleanBC Roadmap* that linking land-use planning with infrastructure investments - particularly transit - has substantial environmental benefits. As noted in the *Roadmap to 2030*:

> "*Along with directly controlling emissions from their own facilities, operations and vehicle fleets, municipalities and regional districts have the capacity to influence* ***about 50% of our GHG emissions through decisions on land use****, transportation and infrastructure that affect where people live and work, how they get around, and how their communities grow and change with time"* [by comparison, "*Buildings … account for about 10% of the province's GHG emissions …*"].

UDI was disappointed that there were few actions to ensure that the links between land-use and infrastructure decisions would occur, because allowing density near transit will also assist the Ministry of Housing in its efforts to improve housing affordability. As discussed at previous meetings, UDI recommends that the Province consider instituting targets for the delivery of housing near transit investments – whether this be done through TransLink's *Transit Supportive Agreements*, Metro 2050, or the Provincially-mandated Housing Needs Assessments.

Establish Requirements for Local Government GHG Pilots

Given the short timeframes to establish net-zero GHG emissions in new construction, UDI would have preferred that the Government focus on establishing its regulatory approach to achieve this with stakeholders and utilities rather than also have to establish a regulatory approach for local governments to mandate low carbon construction.

However, in the *CleanBC Roadmap*, the Government notes that for carbon pollution standards, it wants local communities to "… *serve as pilots for future province-wide requirements*." Likely most of these voluntary jurisdictions will be located in Metro Vancouver and the Capital Regional District. The Province could establish requirements for local government regulations such as the use of incentives if they choose to adopt the highest *ESC* Step and low GHG emission targets for new construction.

Municipal incentives do not have to be financial. Time and costs could be saved by reducing/waiving urban design requirements. The Ministry of Housing is funding a metrics report that will identify the most cost effective ways to achieve Step 4/low GHG buildings. We need to ensure that these strategies will not be restricted by municipal urban design policies.

Time could be saved and risks reduced by waiving public hearings as would be allowed under *Bill 26, the Municipal Affairs Statutes Amendment Act (No. 2), 2021* (although some form of enhanced consultation with the public would be needed as is done in the City of North Vancouver through their Development Approvals Pilot Program). However, the incentive with most impact for Part 3 builders would be increased density. In fact, for most Part 3 projects, they would prefer increased density for their projects than the financial incentives that are usually offered. This approach would also assist the Government in its efforts to improve land use planning to lower GHGs noted above and should supplement existing incentives from senior levels of government and utilities as seen in the *ESC*.

The BCUC & BC Hydro

With regard to building electrification, UDI and other stakeholders have been waiting for several years for BC Hydro to address the inconsistent costs and extended timeframes of connecting projects to the grid. For example, projects whose load will exceed the threshold for the electrical infrastructure in the area, there is a requirement to not only fund the upgrades for the project but for future projects in the areas as well. This is usually a surprising and substantial cost for builders.

UDI and other stakeholders have also recognized that the Tier 2 rates, which may have been important for energy conservation, have become obstacles to the goals of *CleanBC* to rapidly expand EV adoption and fully electrify buildings.

Given the shorter timeframes discussed in the *CleanBC Roadmap*, we recommend that clear direction be given to the BC Hydro and the BCUC to take actions as soon as possible that will make it easier and more cost effective for builders to achieve the targets in the new *CleanBC Roadmap*.

There are several options that could resolve the BC Hydro connection issues our members are facing. The costs of upgrading BC Hydro infrastructure could be funded through electricity rates, as BC Hydro revenues will be expanding with fully electric buildings and the utility eventually providing fuel (electricity) to every light-duty vehicle in the British Columbia. Senior Government funding is another option. If builders are going to continue to fund the upgrades, changes are still needed so the costs are predictable and consistent. This can be done by borrowing the approaches local governments use to fund their infrastructure for roads, water and sewers – Development Cost Charges (DCCs) and Latecomer Agreements (LAs).

Both DCCs and LAs are very familiar to builders. With DCCs, the infrastructure improvement costs are calculated across a municipality or for an area. The costs that are related to growth are then shared by builders through DCCs. This approach would require BC Hydro to become far more active in municipal area plans, which we believe is necessary anyway. With Latecomer Agreements, a builder pays for the electricity upgrades, but then Latecomer Charges are applied to projects that use this infrastructure over

a 15 year period, and the revenue from these Charges are passed onto the builder (minus administrative costs) who provided the upgrades.

In addition, there may be opportunities in some parts of the province (eg. the Okanagan) to utilize photovoltaics to achieve net-zero carbon. This would require incentives such as improving the feed-in tariff for BC Hydro, which we understand has recently been reduced. Related to photovoltaics, is the potential deployment of building batteries, such as the Tesla Powerwall. Building Batteries would allow consumers to draw energy from the BC Hydro power grid during off peak times, for use in peak periods of electricity use to reduce the scale of the infrastructure that is required. This would likely require both incentives and smart meters to implement.

Heat Pumps

The *CleanBC Roadmap* includes references for the need to use heat pumps to achieve the Governments climate objectives for both new and existing buildings. In fact, there is a commitment to mandating "… *the highest-efficiency standards for new space and water heating equipment by 2030, and earlier where feasible.*" Given the commitment to heat pumps, which are very expensive, the Government may want to explore approaches to reduce their costs – bulk purchasing and/or encouraging the manufacturing of heat pumps in British Columbia.

Prioritizing Building Regulatory Changes

The new changes to lower GHG emissions for building operations is a significant change and the timeframes are relatively short relative to what was expected of the *ESC*. This should then be the focus of governments and the building sector in the near-term – in addition to implementing the new *BCBC* and the *ESC*. Other initiatives impacting new construction should be minimized or deferred as much as possible as there is a limit to industry capacity.

This should include local governments. The Ministry may need to review its *Building Act* powers, to ensure that municipalities remain focused, and do not intrude on what should be regulated under the *BCBC*. This would ensure that we have a more consistent regulatory environment.

We are especially concerned about any new municipal regulations relating to embodied carbon. The Province wisely is reviewing the issue, but limiting any new requirements to the public sector until at least 2030. Any new regulations need to wait until we fully understand the implications – both in terms of costs and processing times. There are thousands of components in each building and hundreds of workers, which makes tracking and proving the amount of embodied carbon in a project very difficult, while likely slowing down development approval processes and overtaxing industry capacity.

Broader Public Sector (BPS) Leadership

When LEED was introduced to Metro Vancouver, the BPS built the LEED projects first. Design consultants and construction companies became familiar with the standard. Education and training programs could be developed about actual projects. UDI was able to hold seminars on best practices for LEED projects as well as the pitfalls to avoid. We are pleased that under the new *CleanBC Roadmap*, the Government is committed to "*Requiring all new public sector buildings to align with our climate goals beginning with performance standards (2023) and moving to zero-carbon new buildings (2027).*"

We ask these projects also comply with the highest step of the *ESC*, and that BC Housing projects are also built to these high standards. Residential builders would benefit from learning from BC Housing's experience in building high performance buildings. Local government projects should also meet these high standards – especially those engaged in the GHG pilots. Ideally, municipal

requirements imposed on new construction from the pilots should not occur before BPS projects have to achieve them.

Research and Training/Education Programs

As noted above, training and education programs have been essential in the implementation of LEED and the *Energy Step Code*. We strongly recommend that this continue as we implement low carbon construction. In general training and education programs have to increase to address the ongoing skilled worker shortage the sector is facing, and be subsidized to encourage broader participation. We need more trades, design consultants, building officials and others that are familiar with high performance sustainable buildings.

BC Housing has a research program that could be utilized to identify the most cost effective ways to meet the *ESC* and GHG targets that the Province and local governments are seeking. This would assist the BC Housing with their own projects and help builders in general – especially if this research were incorporated into training and education programs.

Prefabrication

One specific area that requires more research, education and pilot projects is prefabrication. This has the potential to speed up the construction process for many projects – especially Purpose Built Rental (PBR) buildings. It would also assist the Province in its efforts to promote mass timber in new construction to reduce embodied carbon and assist B.C.'s forestry communities by expanding the use wood products, and encouraging the manufacturing of prefabricated materials in the Province. BC Housing could be asked to pilot and research prefabrication in new construction. Again, this could lead to more training and education programs.

District Energy

It is not clear how builders are going to achieve net-zero carbon emissions when they are mandated to connect to District Energy (DE) systems that are not zero-carbon. There is also a concern that if these systems are converted to zero-carbon systems, the utility rates and connection fees will increase. The rates and fees may also climb as buildings become more energy efficient. DE systems rely on large energy loads to fund the extensive infrastructure – heating plants and pipes in the ground. These energy loads are dropping as the *Energy Step Code* is implemented. Our members have already seen connection fees climb to $150,000 per building, and many residents are not seeing the energy savings from purchasing or renting high-performance homes.

This may become more problematic if cooling is mandated, as few DE systems provide cooling. Heat pumps would be more cost effective for builders and consumers because they can provide both heating and cooling.

The Government needs to address the future of DE under a regulatory framework that includes the ongoing implementation of the *ESC* (including the higher steps), mandated reductions in GHGs for new construction and potentially cooling requirements. We recommend that the Province have more oversight over DE systems, as there is none now – even by the BCUC. Local Governments that have DE systems who wish to pilot GHG regulations for new construction should be asked how their DE systems will be utilized to achieve the low emission targets and what the costs will be. The growth of the municipal DE systems may have to be limited in the future.

Existing Buildings

As noted above, owners of existing buildings will be asked to install high-efficiency equipment. This will begin in 2024. Under "*right-to-charge*" legislation, they will be mandated to provide EV charging.

This could be costly, and will be problematic for PBR landlords with rent control limiting their revenues. Landlords need be able to fully recover the costs of these initiatives through the new *Above the Guideline Increase Policy* or funding from senior governments. Alternatively, BC Hydro could provide the EVC infrastructure in PBR buildings.

Conclusion

UDI believes you can implement the Government's *CleanBC* goals for the building sector and still be able to increase the housing supply and improve affordability. To do so, steps are going to have to be taken to reduce the costs or offset them through incentives. For Part 3 builders, the best incentive is density, which also is important for reducing emissions – especially if it is located near transit. This would also assist the government with other objectives such as fully leveraging infrastructure investments and increasing the supply of high-performance buildings.

Hi Cheryl –

2.1 DAPR

- Some LGs are messaging that development approvals will slow/stop during election period. (Anne McMullin)
- Need monitoring of whether LGs are making use of the tools.
- Challenges NFP face – Provincial and City Legal drawing lines in the sand. Talked about Poverty Pimps extracting fees (unclear but I assume this is about endless reports) (Email from Rick Ilich, Townline Homes attached)
  - Atira – Stuck due to fights over a Land Lease (City of Van)
  - CLT - Stuck due to fights over a Land Lease (City of Van)
  - Took four months to negotiate access to City of Van SHORT program
- There was some discussion about 'pulling' BCH developments out of the LG development approval process and into a sanctioned provincial process/planning entity.

2.2 New Zealand Model – Policy and Land-Use Changes

- UDI believes it is a more
- Roughly same population, roughly same housing price challenges and NIMBYism
- Part of a larger framework – National Statement on Urban Development (2020)
  - Housing Needs Reports + that require a Competitive Margin of 15-250% that is required in addition to project 'need'
  - Municipalities are required to demonstrate their capacity to support development: resourcing and process
  - Monitoring program and tools for adjustments
  - Minimum requirement, within radius of transit, that requires minimum of 6 story zoning and eliminating parking minimums
- Gap: NZ Policy doesn't speak to Municipal Infrastructure and Hydro Service to support the development.
- Proposed solution (not related to NZ Model): Upzone large areas (not just around transit), set DCC and CAC rates – this will drive development.

***Key point: Equity to build rental is 45%, condo is 15% so for the same capital developers can build a ratio of 3:1 condo to rental for the same capital. Developers who don't hold and operate as rentals won't build rental.**

Rob Blackwell raised the following:

- Provincial: Province could waive PST on construction of rental.
- Federal: You must pre-pay GST to feds when you rent the first unit. You are paying GST on an asset you aren't selling – this is not just new, it is also major regeneration. ($3M GST on a 60 unit apartment they refurbished)

2.3 CleanBC Roadmap and Housing Supply

- **UDI will connect with us.**

2.4 Broadway Area Plan

- Overall pleased in the direction suggested about density but it lacks detail. Hard to decipher how the plan applies to individual sites.
- View cones to and from City Hall are unproductive.
- Station Areas are looking good – East of Main references to limiting heights due to View Cones.
- Wanted Burnaby Model (Burnaby gives 1.3FSR density bonus in exchange for rental.) for condo development to protect rental and generate affordable rental supply. Vancouver policy does not apply to Strata only – just buildings that will contain rental.
- Looks like there are tenant protections (right to return, rent protection), but looks like this is achieved through purposeful reduction of density permitted to make redevelopment economically unfeasible (CoV said that

outright to us) and it appears to UDI some renters may be able to return at lower rates because it is return at current rate but rather capacity at levels of affordability.

- Positives: relaxation of parking requirements, design specs for energy efficiency

Here's what Rick is talking about

From: Rick Ilich <rick.ilich@townline.ca>
Date: Wednesday, November 10, 2021 at 6:41 AM
To: Cassandra McColman <cmccolman@udi.org>
Cc: Anne McMullin <AMcMullin@udi.org>
Subject: Some examples of Non-market housing project delays due to processing disfunctions and Inter governmental brinksmanship.

GENERAL

Any or all of the following general items would reduce barriers and promote development of non-market initiatives. All items not pertaining to use, form and character or density should be enacted on a regional or provincial basis– not by local AHJs. Across the board, please consider:

- DCC, DCL and CAC exemption for all non-profit, charity and municipal status societies;
- Exemptive status for Property Tax, land and improvement;
- Exemption of PTT;
- Working with the Federal Government, exemption of GST Self Supply;
- Waiver of Municipal fees, (RZ, DP, BP etc.);
- Drastically reduced parking; and
- Density bonuses and height relaxations relative to transit

In addition to the above. More cooperation is needed between levels of government. At present 1 project is heavily scrutinized and reviewed by all three levels of government – which is absolutely ridiculous.

Each level mandates their own regulations regarding environment/energy standards with differing baselines of measurement, accessibility/adaptability/universal design standards, and affordability targets. The result of this is a chaotic mess for the applicant and consultant team increasing average unit sizes, spec and costs unnecessarily all the while playing cat and mouse on the pro forma, underwriting and legal agreements. A pecking order is needed, governments need to cooperate and align with each other – or simply trust the other, roll in their contribution and stay out of the way.
As a general statement, the City planning departments get caught up on the latest untried in our region climate saving gimmick which often requires special treatment and inspections because they are not CSA approved, ….but they read about it, or saw it on while at a planning conference.

Some examples of the dysfunction and extreme vetting include:

CITY OF VANCOUVER

- On society owned land, the City has a 'SHORT' program for non-market initiatives. Problem, it takes 18 to 24 months of 'informal' design development and public 'information' before the application can be submitted and the clock actually start.
- On City owned land, lease terms and 'what if' scenarios City Legal and Finance departments come up with are endless. Chasing residual and a definition of low-end-of-market can drag on for months if not years. Land tenure has to be first in, rule No. 1, yet this endless nonsense continues while escalation and the hurry up to wait aspect of this redundancy comes full circle and restarts all new funding analysis.
- **Example:** Sawmill, a 337 unit VAHA/CLT deal funded under BCH CHF1.0. VAHA/Finance chased a lease definition from June 2020 to February 2021 preventing BCH PPA. Project costs soared during that time ultimately costing the Province $8m.
- **Example**: 177 W Pender, a 76 unit VAHA/CLT deal funded under BCH Supportive Housing, CMHC Co-I, and CoV grant. The legal structure (lease v. airspace v. head/subleases etc.) has taken 3 years to get road mapped and terms accepted by council. The latest, City legal is understaffed so the lease terms are back with BCH for 3rd or 4th ? time to draft the lease. Still no lease while CMHC has been on hold pending proof of tenure since late 2018. Another round of costs and modeling ahead, restarting the extreme vetting City finance inflicts jeopardizing the whole project and commitments.
- **Example**: Aaron Webster Co-op at 1885 E Pender with CLT owning the site. Not a mixed use project, a simple 6-storey, 64-unit family heavy co-operative fitting all parameters of the community plan. City required 'informal' Letter of Enquiry application of fully developed architectural and landscape design. LOE Application submitted March 10, 2020, then a pre-RZ submission, then finally late September 2020 the RZ is submitted. Nothing changed during that time. A couple minor landscape conditions. It is still the exact same design today yet 3rd reading took until July 2021. And this project truly was fast tracked because our client insisted and society led open house was unnecessary.
- **Example**: 450 Alexander Street, an Atira owned site. 180 unit building for women and children with a childcare and social CRU at grade. It essentially took 18 months of 'enquiry' and being the City's guinea pig to test different massing models soliciting community and departmental feedback on a tower v. mass wall built form to ultimately vary from the community plan and context. Right or wrong on built form, this is an extreme example of bureaucracy across departments with no authority weighing the options and applying direction. Ultimately this unnecessarily costs the non-profit a few hundred thousand in design fees, 18 months of land carrying costs and delays the whole process adding uncertainty to funders.

CITY OF RICHMOND

- They do next to nothing to support non-profits. They do require units within market projects but unlike utilizing a reserve to deploy sites and waivers, they bring nothing to the table for specific non-market deals.
- **Example**: Brighouse United Church, Townline offered to port 20 affordable housing units worth of cash in-lieu from its Luxe project to Brighouse Church in order for the church to leverage CMHC's Co-Investment program, achieving 47 units at deep levels of affordability and another 93 near market. In total 140 non-market units would have been added to local supply but instead the church is left with selling the site or restarting rezoning and design development towards a different program – RCFI which is all near market.
- **Example:** Steveston Buddhist Temple/Wisteria Place, a 107 unit independent seniors facility funded by BCH. The City provided minor sidewalk upgrades and cut back on some off sites but ultimately did not contribute anything to further deepen the level of affordability or expedite the project.

METRO VANCOUVER

- Same issues as City of Vancouver. Their oversight and due-diligence on simply putting in land that sat vacant for 20 years is astonishing.
- **Example:** The Alex, an Atira Women's Housing project creating a childcare, health clinic and 83 units for women and children funded by BCH's CHF. Construction was delayed 4 months after excavation because the ground lease dragged out for about a year, holding up financing and other registrations needed for BP and funding. Stopping a project, and restarting due to legal brinksmanship between Governing bodies, cost the project and us additional forming costs, and civil costs because the trades walked due to the delay.

BURNABY

- They have a 'fast track' system for processing non-market initiatives but they openly disregard it. In fact Burnaby is the absolute worst at either not following their adopted policies and regulations or requiring

applicants to follow unpublished and enacted regulations. This is hugely problematic in design development and prolongs the entire process requiring a 'learn as you go' approach; and

- Among other process and personalities to navigate, Burnaby requires an ass-backward approach to contributions, zoning and DP commitments. The whole order of things is messed up which creates conflict and uncertainty for applicants and funders.
- **Example:** L'Arche Greater Vancouver at 7401 Sussex Ave. They own a number of group homes in the City and are redevelopment their main outreach facility and community hub. 3 group homes/22 beds for people with disabilities and those who care for them, 10 semi-independent units, 29 rental homes plus office, programming an worship areas:
- First reading of RZ application was July 18, 2018. Fourth reading and adoption was early this week (November 8, 2021);
- On a 6 to 9 month turn-around time for BP, it takes 9 months to receive first round of comments;
- Burnaby required the site and existing facility be hazmat abated, demolished and completely removed before 4th reading and adoption – which is a Preliminary approval milestone for BCH funding. This adds and unreasonable amount of risk to the society and project partners.
- Once rezoned, super late in the grand scheme of things, then they entertain the municipal grant that is being sought. Again, it is all simply too late in the process adding unnecessary risk and uncertainty to the society and funders.

Letter from the Building and Safety Standards Branch RE: Code Inquiry Service

From: OHCS Building & Safety Standards Branch OHCS:EX <Building.Safety@gov.bc.ca>
To: AMcMullin@udi.org, jfisher@udi.org
Cc: mdrummond@udi.org
Sent: November 17, 2021 11:15:16 AM PST

November 17, 2021

Dear Anne and Jeff:

I am reaching out to you as Urban Development Institute is a key partner in the building regulatory system in British Columbia. The Building and Safety Standards Branch (the Branch) is exploring the possibility of revising the code inquiry service to ensure that code users get the best value for this service and consistent guidance regarding the BC Codes.

The question has been raised if there is better value and service if Urban Development Institute members work through their associations when they have feedback or questions about the BC Codes. The Branch remains committed to connecting at an organization level, especially for BC Codes questions that are not resolved for your members.

I would appreciate the opportunity to meet and discuss our ideas for streamlining the code inquiry process further and will be following up shortly. You are also welcome to reach out to me at any time through any of the means below.

Sincerely,

Jun'ichi Jensen
Executive Director (Acting), Building and Safety Standards Branch

Cc: Williams, Melanie OHCS:EX <Melanie.1.Williams@gov.bc.ca>
Sent: November 30, 2021 1:01:02 PM PST

I think Jeff may have mixed up his language- he was clear at the outset in referring to a building policy committee and that he doesn't have a technical building code committee. Thereafter he referred to his code committee, which I took to be the policy committee. Not totally sure, but that was what I came away with.

Jun'ichi Jensen

Cc: Williams, Melanie OHCS:EX <Melanie.1.Williams@gov.bc.ca>
Subject: RE: UDI notes - CQ and RACC discussion

At the risk of repetition, here's my notes:

- UDI members; build range of products (primary focus Part 3 - though some members build Part 9 townhomes)
- JF not aware that members used code inquiry service
- Developers typically work through RPs on Part 3 projects / CHBA on Part 9 (JJ shared that some reach out via code questions)
- Jeff was member of past BC Building Policy Advisory Committee
- RACC - Increased responsibility for province to be connected to provincial industry
- JF supports/favours BPAC-type model for industry voice into system (via province) UDI has building policy committee (meets about 4 times per years)
- BPAC was at 30,000 foot level - advised on policy but was not a technical committee (though some members were also technical experts)
- Likely to find need to interact with UDI at both levels (policy and technical) probably at different times
- E.g. BPAC could strike/form technical working groups
- UDI always felt separated from national system (UDI does not have a national body)
- Support
- UDI has a building code committee(?) [perhaps misheard… maybe would consider striking one?]
- UDI Newsletter every 2 weeks to 3000 recipients
- Corporate- hard to count individual members; 900-950 corporate members
- BSSB; could distribute comms for harmonization via newsletter
- BSSB; send links to Accessibility consultation for newsletter
    - Send to Jeff and Lily at lshieldsanderson@udi.org
- Favours joint (other industry reps) committee such as BPAC (meeting about 2-3 times a year; Feb, May, Oct)
- JF suggests we talk to Applied Scientists, Engineers and Architects and CHBA
- Harmonization; JF asked the question "what do we want done first?" (advice; look at cooling)
    - Decarbonization basically means heat pumps; heat pumps made viable when cooling is required
- BPAC; what does BC want out of this change process?

Andy

From: Jensen, Jun'ichi OHCS:EX <Junichi.Jensen@gov.bc.ca>
Sent: Tuesday, November 30, 2021 11:45 AM
To: Chase, Andy OHCS:EX <Andy.Chase@gov.bc.ca>
Cc: Williams, Melanie OHCS:EX <Melanie.1.Williams@gov.bc.ca>
Subject: UDI notes - CQ and RACC discussion

Jeff Fisher UDI

had building pollicy committee -we can meet with them.

UDI also has a news letter that we can sent items out with - either to building policy committee or more broadly - goes every 2 weeks - 900 corporate members. 3000 people .

favours BPAC model

Does not think his members use CQ much directly - they would ensure their members have first gone to their association.

For BPAC model- what is the breakdown of policy vs technical - we need a cross over comitteee and membership

does not think develpopers will go to UDI with questions- most go to architects/engineers association.

UDI does not have a national association.

Send comms on access to Jeff, jfisher@udi.org and Lily Shields anderson LShieldsanderson@UDI.org

lshieldsanderson@udi.org

joint meetings of all key partners may be helpful as well as one to one meetings with BSSB. UDI priorities could then be balalnced against other segments of the industry. BPAC could be 2-3 times annual.

Harmonization- cooling should be a priority. govt is pushing elecrification and decarbonization, so cooling mandate would make heat pumps more viable option.

Subject: Engagement - ExB - Overheating and Air Quality
When: Thursday, December 2, 2021 1:00 PM-3:00 PM (UTC-08:00) Pacific Time (US & Canada).
Where: Zoom (added)

Hello,

The Building and Safety Standards Branch (Ministry of Attorney General and Minister Responsible for Housing) is responsible for the BC Building Code which regulates health and safety, fire and structural protection, accessibility, and energy and water efficiency in building construction.

The Branch is developing an Existing Buildings Renewal Strategy that provides a path for today's buildings to become more energy and water efficient, cleaner, and safer for British Columbians during events like earthquakes, wildfires, wildfire smoke, heat waves, and floods.

BSSB is hosting a series of engagement sessions on increasing resilience and, carbon and energy performance in existing buildings, and would like to extend an invitation to you and your organization to attend the **Thursday December 2nd from 1:00PM – 3:00PM PDT engagement session on addressing overheating and air quality (wildfire smoke) in existing buildings**.

Future sessions will be held throughout the fall/early winter (see schedule below) to continue discussions and partnerships with affected parties and key influencers, such as your organization.

Topic	Date
Energy efficiency supporting measures	Wednesday December 8th, 2021
Integrating mitigation and adaptation	Tuesday January 11th, 2022

If you have any questions in advance of the session, or written feedback on the engagement topics, please contact Nicole Vukosavljevic by email at Nicole.vukosavljevic@gov.bc.ca.

We look forward to your participation and input.

Thank you,
Nicole

INTEGRAL BRITISH COLUMBIA

Welcome

Facilitation and Provincial Team

Integral

- Lisa Westerhoff
- Robin Hawker
- Madi Kennedy

Building and Safety Standards Branch

- Nicole Vukosavljevic – Senior Policy Analyst & Project Lead
- Scott Williams – Senior Codes Engineer
- Hugo Wong – Policy Analyst
- Tracy Olsen – Senior Policy Analyst
- Tommy Dang – Codes Administrator

Objectives of Today's Session

- Describe the Province's role in supporting efforts to reduce the risk of overheating and air quality (AQ) issues in **existing buildings**
- Identify barriers to implementing overheating/AQ risk mitigating measures in **existing buildings**
- Identify Provincial actions to reduce overheating/AQ risks in **existing buildings**

Agenda

Time	Agenda
1:00pm	Welcome and Orientation
1:10pm	Background – Overheating
1:30pm	Breakout Session – Overheating
2:10pm	Background – Air Quality
2:20pm	Breakout Session – Air Quality
2:50pm	Report Back and Next Steps
3:00pm	Close

Background: Overheating

Climate Change and Increasing Temperatures

PAST Observed Changes (1900 to 2013)

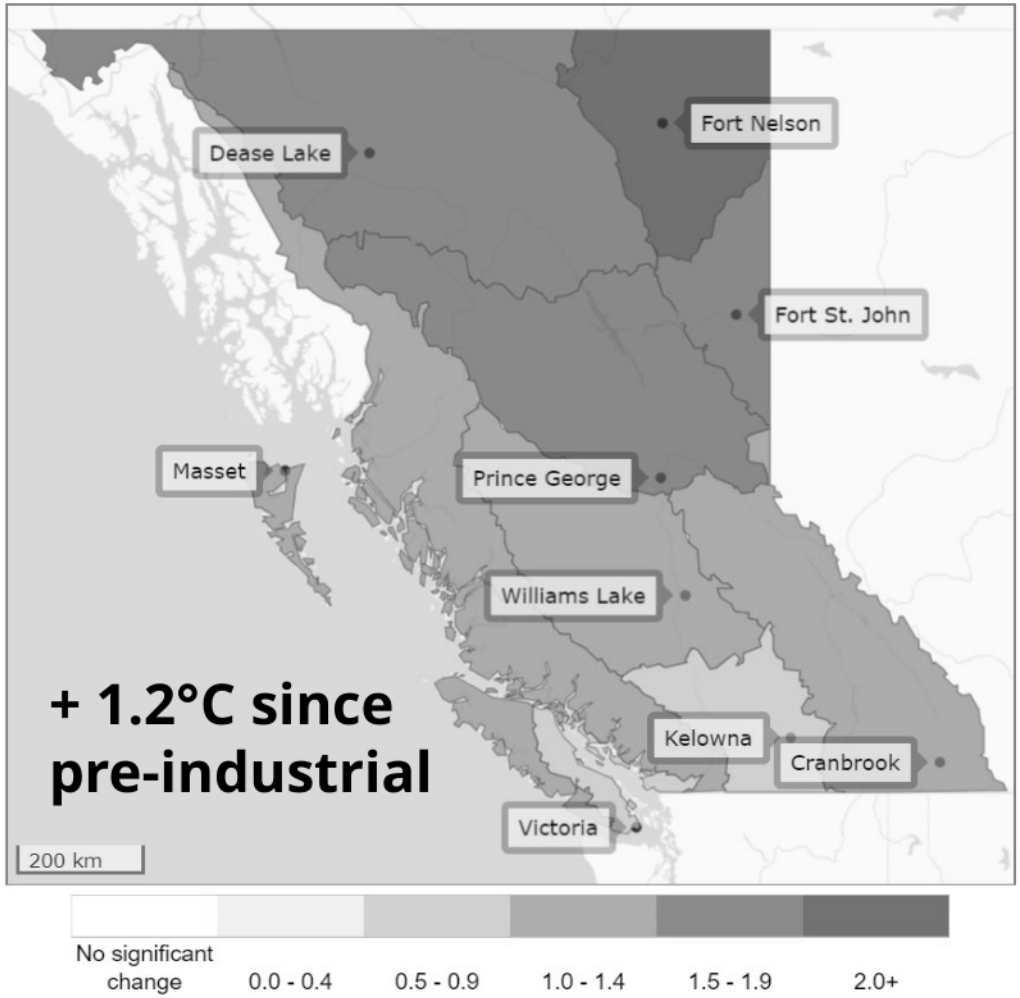

Image source: B.C. Ministry of Environment and Climate Change Strategy – Indicators of Climate Change

FUTURE Temperature Projections

- +3.2 average by 2050s (2040 – 2069)
- +5.4 average by 2080s (2070 – 2099)

- Cascading impacts including:
  - Warmer winters & hotter summers
  - More frequent & severe heat waves
  - Plant & animal species change
  - Changing growing season for crops & gardens

Extreme Heat in Summer 2021

2021 Heat Dome

At least 595 people died due to the extreme heat this summer

526 deaths occurred between June 25 and July 1, 2021

- BC Coroners Service Preliminary Findings
  - Province-wide death rate: 10.1 per 100,000 residents
  - Highest number of deaths in Vancouver, Surrey and Burnaby
  - Individuals 70+ years old accounted for 69% of deaths
  - 96% of heat-related injuries occurred in a residential setting

Table 7. Heat-Related Deaths by Injury Location and Health Authority of Injury, Jun 25 – Jul 1, 2021[1]

	Interior	Fraser	Vancouver Coastal	Island	Northern	Total
Inside Residence	57	265	118	46	20	506
Outside	3	2	1	1	1	8
Public Building[2]	1	1	0	0	0	2
Unknown	3	5	1	1	0	10
Total	64	273	120	48	21	526

[1]Health authority is derived from injury township. Death township is used in where injury township is unknown.
[2]Includes injury location occurring on or near the ground of a public building.

- Investigations into deaths by early 2022
  - Death review panel findings late spring 2022

Extreme Heat Adaptation Measures

Increase Insulation	Cool Roof	Window Glazing	Exterior Shades	Increase Ventilation	Mechanical Cooling
					
Roof insulation – increase from R-20 to R-40 Wall insulation – increase from R-13 to R-20	Cool roof that reflects a greater portion of solar gain	Use of low Solar Heat Gain Coefficient windows to reduce solar gain.	Fixed or operable exterior shades on east, west and south sides	Increasing ventilation rates: make-up air units, HRVs, natural ventilation, bathroom / kitchen exhaust	Heat pumps, air conditioner units, chillers.

Policy Landscape

UBC Study – Future Climate Design for Multi-Family Buildings

Defining Thermal Comfort

Recommendations for defining – heat waves, future climate files, passive survivability

Possible approaches:

- Health and safety risk
- Consecutive hours
- NRC guidelines

01

Modelling Thermal Comfort

Consistent approach to evaluating overheating – ASHRAE 55

Inputs: natural ventilation, exterior or other shading, air speed, mechanical boost

Weather files

Reporting

02

Design Implications

Matrix:

- Strategies – active, passive, mixed
- Overheating mitigation potential
- Climate change mitigation
- Capital and operational impacts
- Architectural design implications
- Impact on resilience

03

Code Recommendations

- Overheating as a health and safety issue
- Frequency and magnitude
- 2020, 2050 and 2080 weather files
- Future shifted RSWY
- Requirements for cooling with passive measures

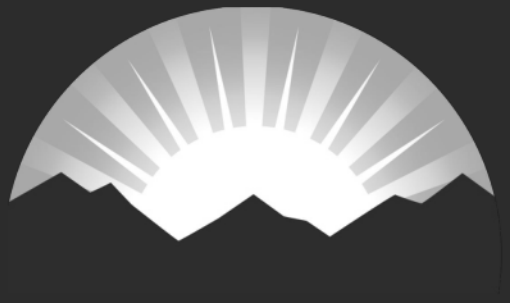
Questions?



Breakout Session #1

Experiences and Lessons Learned

We'll break into groups **by building type** to discuss the following topics:

1. **Challenges or barriers** to addressing overheating in existing buildings?
2. What are **specific actions** you would like the Province (BSSB) to take to address overheating in existing buildings?

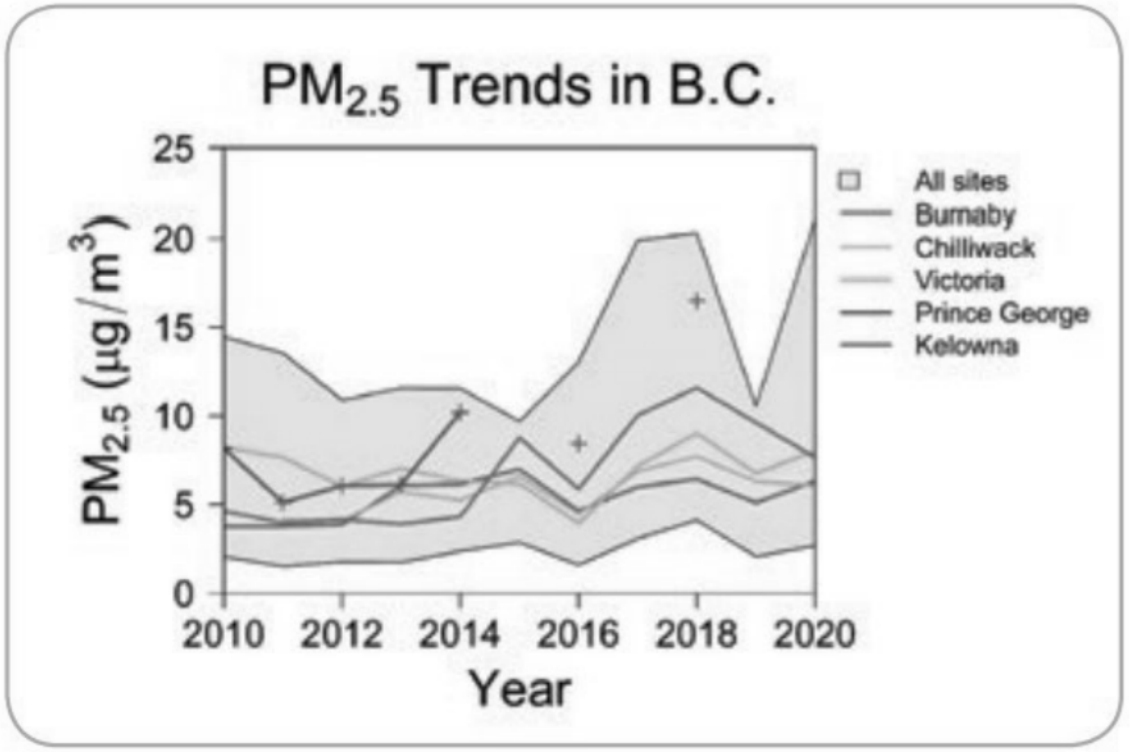
Report Back – Experiences and Lessons Learned

- **Facilitators**
  - What were the **key takeaways** from your breakout session?

- **Participants**
  - Any further reflections? Add them to the chat!

Background: Indoor Air Quality

Wildfire Events and Air Quality Issues



Source: BC Lung Association – State of the Air Report 2021

Wildfire Events and Air Quality Issues (cont'd)

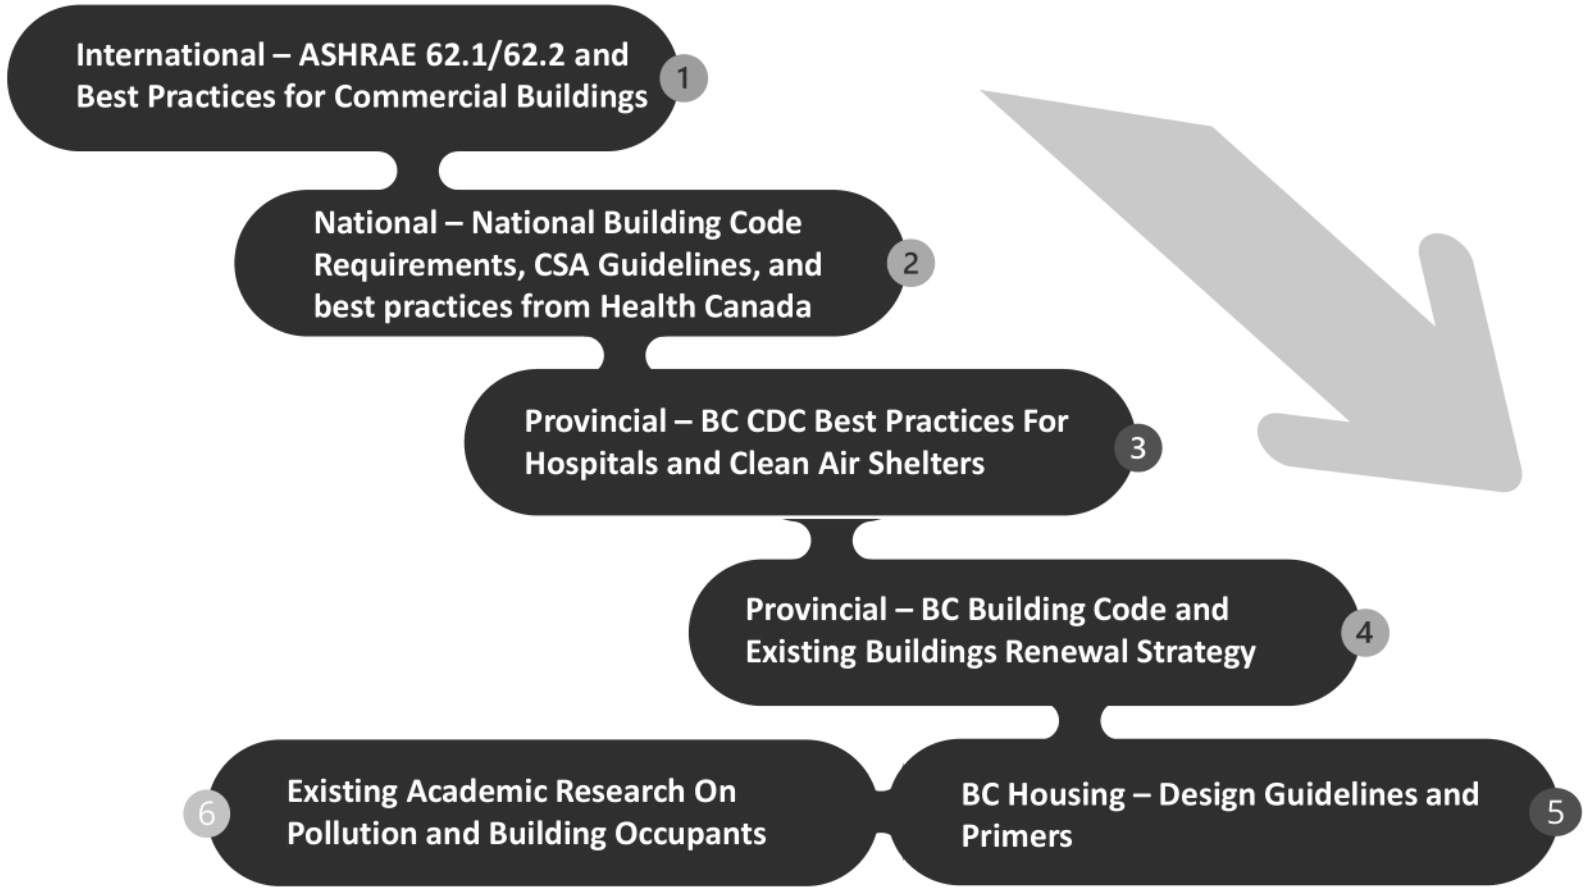
- 2018 wildfires – air quality advisories lasted in some places for more than 40 days
- Exposure can occur inside buildings

Consequences

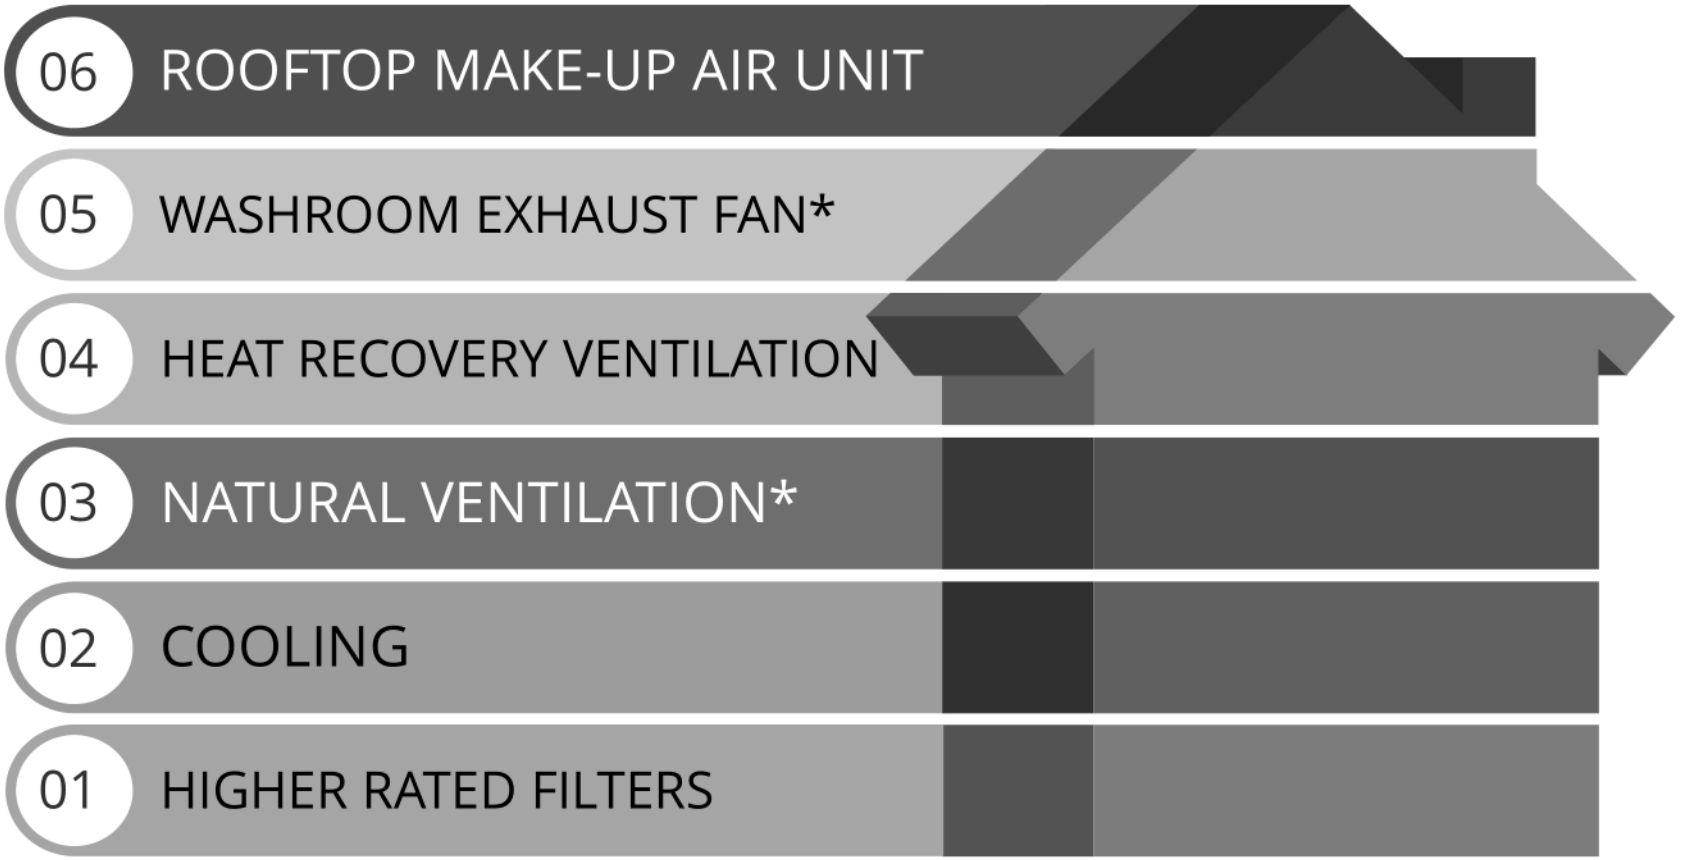
CATEGORY	CONSEQUENCE	RATING: INSIGNIFICANT / MINOR / MODERATE / MAJOR / CATASTROPHIC	DESCRIPTION
Health	Loss of life		Over 100 potential fatalities due to direct and indirect exposure
	Morbidity, injury, disease, or hospitalization		Risk of short-lived smoke irritation, severe respiratory and cardiovascular symptoms, and other illnesses for more than 1,000 people

Confidence level indicated by bar color: Low | Medium | High

Policy Landscape



Air Quality Adaptation Measures



*measures to mitigate overheating, which can be negatively impacted by wildfire smoke

Breakout Session #2

Actions to Address Air Quality

We'll break into groups **by building type** to discuss the following topics:

1. **Challenges or barriers** to addressing indoor air quality in existing buildings?
2. What are **specific actions** you would like the Province (BSSB) to take to address indoor air quality in existing buildings?

Report Back

- **Facilitators:**
  - What were the **key takeaways** from your breakout session?

- **Participants:**
  - Add any further reflections into the chat

Next Steps

Further Opportunities for Feedback

Additional opportunities to provide feedback:

- The Province will accept related feedback until **December 22, 2021**
- Written comments can be sent **by email** to **Nicole.Vukosavljevic@gov.bc.ca**

Next Steps

Topic	Date
CleanBC Roadmap	August 4th, 2021
Flood	September 28th, 2021
Water conservation	October 6th, 2021
Wildfire	October 19th, 2021
Energy efficiency regulation	November 30th, 2021
Overheating and air quality	December 2nd, 2021
Energy efficiency supporting measures	Wednesday December 8th, 2021
Integrating mitigation and adaptation	Tuesday January 11th, 2022

Thank you

Re: Municipal Incentives and Barriers for Rental Housing

Purpose

Rental remains a key area of housing need across British Columbia, and the approaches taken by municipalities can have a significant impact on the delivery of these new homes. Below we review four elements of municipal policy that illustrate both positive and negative examples of their impact. The examples provided are not exhaustive, and represent case studies rather than a comprehensive list of municipal incentives and barriers. This overview is intended to provide context to some of the discussions in the UDI meetings, and describe the variety of approaches within Metro Vancouver that impact rental housing.

Background/Discussion

Incentives

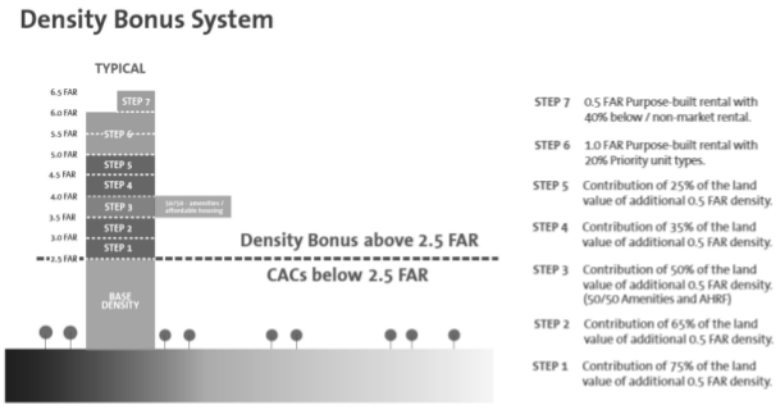
Coquitlam: Housing Affordability Strategy and Streamlined Process

Coquitlam is generally viewed by builders as a good place to build homes due to its favourable polices and collaborative approach. Through a combination of supportive policies and a streamlined application process, the City is adding significant housing stock to the region, including Purpose Built Rental (PBR). As of August 2020, the City had over 6,000 rental units under application or construction - nearly 1,000 of which were below-market or non-market units.

There are a number of incentives under Coquitlam's Housing Affordability Strategy (HAS) that the City provides to support rental development in transit-oriented neighbourhoods:

- Increasing the base densities up to 2.3 FAR in certain TOD neighbourhoods with a 10% density bonus for PBR- applying in medium density apartment zones (RM3); and
- Parking reductions, which lowered the number of spaces required to 0.75 spaces per unit from 0.85 for a 1-bedroom unit and 1.25 for a 2-bedroom unit.

In the higher density zones, for PBR with 20% of the additional space reserved for priority rental housing types (i.e., below market, non-market, accessible and/or three-plus bedroom rental units) the City provides the ability to obtain a 1.5 FAR increase in density. Additional density bonuses are detailed in the graphic below. The density bonus framework is simple, consistent and well-understood by builders and City staff, creating a more streamlined development process. This is a key reason that builders have increasingly chosen to build in Coquitlam.



In addition, the structure of the policy, including the parking reductions and density bonus contributions, is aligned with requirements from senior levels of government for additional supports (i.e. The CMHC Rental Construction Financing Initiative). This has allowed new developments to deliver more below-market housing than they would have otherwise been able to provide.

More broadly, the municipality has been able to consistently provide timely responses to enquires, which are often acknowledged within 24 hours. Development applications for medium-density projects are typically approved in 6 to 8 months, and the City is regularly reviewing their internal processes with builders to make improvements. However, Coquitlam is facing increased development applications due to its newly approved City Centre Area Plan, so adequate staffing levels and continued improvements in efficiency will be required to continue delivering these positive outcomes.

Coquitlam is one of several municipalities which have undertaken internal process reviews over the last few years. Coquitlam's approach encompassed both policy and process, inviting applicants who routinely work within the City's systems to provide specific feedback, and identify problem areas. This feedback is being incorporated into quick "wins" or larger process improvements. For example, the City created a dedicated application stream for builders who are developing smaller residential projects or have not built projects in the City and are unfamiliar with Coquitlam's processes.

This work is critical to builders' being able to deliver more housing in communities across the province. UDI has been outspoken in its support for the Province's role in funding this work.

<u>Key Elements of Success:</u>

- Simple and consistent incentives such as additional density increases, reductions in parking and streamlined processing can deliver more rental and affordable housing at scale.
- Alignment with senior levels of government can result in increased below-market housing delivery.
- Ongoing internal reviews and a focus on customer service creates a culture of collaboration to improve both processes and projects.

City of Burnaby: Rental Use Zoning Policy – Mixed Tenure Developments

In March 2020, Burnaby Council passed an innovative Rental Use Zoning Policy (RUZP). This policy was the result of work by the Mayor's Task Force on Community Housing, industry consultations and community input. The RUZP is comprised of four streams:

Stream 1: Rental Replacement

- New rezoning applications are required to replace all existing rental units on the site at a ratio of 1:1.
- Existing tenants will be offered first right of refusal to return to the new building in these replacement units at the same rent they were paying at the time the redevelopment application was submitted, plus any annual allowable rent increase per the *Residential Tenancy Act* (*RTA*).
- This is in addition to a suite of tenant assistance provisions required by the City when existing rental buildings are redeveloped.
- When initial tenants who exercised their right of first refusal leave the units, they are converted to the same rent structure as Stream 2.

Stream 2: Inclusionary Rental

- All sites within a Community Plan area subject to rezoning are required to provide 20% of the total number of market units (strata and rental) as below-market rental housing, where rents are set at 20% below the CMHC Market Median rates for the applicable rental survey zone.
- Part of this 20% requirement can be satisfied through the replacement rental units delivered through Stream 1. The balance up to 20% of the market units should meet the Stream 2 affordability requirements.
- A density offset in the form of up to 1.125 FAR of market condo density is available for the provision of the Stream 1 and Stream 2 rental replacement/below-market units.

Stream 3: Rental Housing in Commercial Districts

- Market rental units can be provided in commercials districts as part of mixed-use developments that meet specific conditions.
- The gross floor area of the rental components may not exceed the area of the commercial component.
- This is a voluntary component, however the requirements within Streams 1 & 2 must be fully satisfied before a proponent can utilize this policy to build these additional market rental units.

Stream 4: Rental Tenure Zoning

- This Stream will eventually require that all existing purpose-built multi-family rental units throughout the City be rezoned under the rental tenure zoning policy.
- This has not yet been implemented by the City.

Taken together, the streams have created an effective model for the delivery of below-market rental housing alongside market condominiums. Tenants have some of the most robust protections in the region; the rate of return is expected to be high, minimizing the impacts of displacement. Although few applications have advanced to the stage that tenants will be returning to a new building - it is

anticipated that more tenants will choose to use their right of first refusal than in other jurisdictions. Typically, the uncertainty regarding the number of replacement units that will be required in new projects is problematic for builders; however, the structure of Burnaby's policy, in conjunction with the inclusionary requirements and the density offset, has lessened this impact.

The fundamental component of Burnaby's policy is the availability of a density offset for the provision of below-market rental housing. This additional market condo density allows for the provision of the replacement rental units/below-market housing. In addition, the City offers reduced parking requirements for rental units: 0.6 spaces per unit, and 0.1 visitor parking spaces per unit. Further reductions are currently being explored for transit-oriented areas. These incentives were sufficient enough to enable projects to proceed under this new policy.

Burnaby has also provided flexibility for the rental component of new developments to be constructed in a stand-alone rental building, rather than strictly requiring a mixed-tenure building. This is beneficial for non-profit operators who are engaged to operate the below-market rental homes, because it gives them greater control over their costs.

As a result of the RUZP, the City of Burnaby is on-track to see considerable new below-market housing added to the market over the next several years.

Key Elements of Success:

- Robust tenant assistance policy reduces some of the impact on existing tenants during the redevelopment process and creates opportunities for them to return to their neighbourhoods in new rental housing at their same rents. This policy has addressed some of the community's concerns around tenant displacement as a result of redevelopment.
- Below-market rental housing is secured in all new residential developments within Community Plan areas going forward, and is offset through market condo density.
- The City's innovative approach to large mixed-use projects will contribute to complete communities through the blending of commercial and rental components while creating an incentive to deliver rental housing.

Barriers

City of Burnaby: Rental Use Zoning Policy – Market Rental Barriers

The City of Burnaby has developed robust tenant assistance policy, and below market policy with density offsets. Despite these innovative steps, the City has not provided the same level of support for market rental housing. This impacts multi-tenure projects which already are providing below-market rental housing under the RUZP, as well as 100% purpose-built rental housing proposals.

Under the RUZP, projects can provide additional voluntary rental density, however any units provided beyond the required inclusionary requirement must be provided at a 1:1 ratio of market and CMHC market median rents (e.g. for every one market rental unit proposed, an equivalent one unit at CMHC market median rents is required). The provision of this 1:1 ratio of market and CMHC market median rents is not eligible for a density offset.

This restriction has severely limited the number of voluntary rental units being provided as a component of new multi-tenure developments. In March 2021, UDI estimated that there have been more than 750 rental units forgone across 9 projects in the Metrotown area currently under review as a result of the 1:1 ratio policy. To note, the City has plans to review the RUZP in 2022.

As we noted in our September 7th letter to the City of Burnaby, there are also challenges for new purpose-built rental proposals. The underlying assumption from the City is market rental can be treated similarly to condo in terms of its ability to bear City costs (density bonus charges) and inclusionary below market rental housing expectations. In PBR projects, the value is significantly less than a comparable condo project, and rental housing builders are unable to pay the same amount for bonus density. In addition, the density offsets noted above, paired with the City's inclusionary requirements, are not effective due to rental density being worth less than condo density.

This gap in supporting policy will likely result in the development of below-market rental housing and condo, but little market PBR - thereby ignoring a key component of the housing continuum. This is particularly concerning given the City's context. Burnaby's Housing Needs Report is projecting a need for more than 3000 additional rental units over the next five years, 650 of which are identified as being for households earning $85,000 or more annually. Canada has immigration targets of more than 400,000 new immigrants per year for the next several years, with over 10% of new immigrants to Canada historically settling in Metro Vancouver. Burnaby is well situated with 11 rapid transit stations, a Regional City Centre in Metrotown, two major post-secondary institutions, and is in close proximity to Vancouver's metro core. Vancouver's downtown core alone is expected to see considerable job growth over the next decade as new office spaces are constructed. Consideration of these contextual factors makes Burnaby an attractive destination for new residents of the region, many of whom will be seeking rental homes.

Key Barriers:

- Restricting the delivery of additional market rental housing in mixed-tenure projects by requiring 50% of the units to be limited to CMHC market median rents creates is a missed opportunity for rental housing delivery.
- The treatment of market rental housing as market condo housing for the purposes of securing larger density bonus amounts and more inclusionary housing fails to acknowledge the difference in market value between rental and strata housing.
- These policies make developing market rental housing in Burnaby less competitive than other municipalities.

City of Vancouver: Community Amenity Contribution Policy

The City of Vancouver's Community Amenity Contribution Policy was originally designed to ensure that new growth contributes to the development of complete communities for new and existing residents of the City. Voluntary contributions are made through either a target-based or negotiated approach relative to the increase in value created by the redevelopment. These contributions are provided in the form of cash or in-kind contributions. There are also exemptions for "*routine, lower density secured market rental*" housing that meet certain criteria.

The City's process for securing these contributions is usually lengthy if they are negotiated, which most large projects are. In some cases the process can take over seven years to reach a conclusion. There can also be varying assumptions regarding the property's valuation, and any land-lift generated by the rezoning proposal. Unfortunately, there are limited mechanisms to resolve these differences. This creates a lack of certainty and delay for the delivery of new housing in the City, including purpose-built rental. Some PBR proponents have elected not to proceed with their projects based on the City's CAC expectations, resulting in projects being re-designed for alternate uses other than rental housing.

CAC expectations have forced the cancellation of projects in the past, such as the 276-unit market rental building in the Coal Harbour neighbourhood proposed by Hollyburn Properties. The high-level of CACs expected made the project financially unfeasible, as the City was expecting $43.05M in cash contributions, based on the assumed increase in value, without market evidence. The property was eventually sold and it is expected that the site will eventually be redeveloped as market condos in the future.

Another example of a project contributing amenity space and non-market housing that met similar challenges is the partnership between Boffo Properties and the Kettle Society. The proponents were asked to provide both in-kind amenities as well as a large cash contribution. This project was initially designed to deliver 180 market condos alongside 30 supportive homes for individuals with mental illness and a new turn-key drop-in facility owned and operated by the Kettle Society. The project faced challenges regarding the ownership of the non-market housing units and the community centre by the Kettle Society rather than the City, as well as the additional cash contribution based on the City's pro forma assumptions for the project. Due to the lengthy process, numerous revisions and the large CAC request, the project was paused in 2018, despite expressions of support from several provincial cabinet ministers.

The Kettle Society and Boffo subsequently approached the City on a 'Plan B' approach that was also ultimately withdrawn this past year. This plan followed the same ethos as the original plan, but changed some of the project parameters. Plan B was designed to deliver approximately 75 market condos alongside 50 supportive homes for individuals with mental illness (owned by the City, operated by the Kettle Society) and the new turn-key drop-in facility would also be owned and operated by the non-profit. A $5M commitment was also made by BC Housing to support the project. This project did not receive support from the City as they wished to enter into an open-call, request for proposals process for a 12-storey concrete supportive housing project developed through Vancouver's own affordable housing agency.

Today, work remains ongoing for a revised proposal ten years after the original letter of inquiry was submitted. The Kettle Society and Boffo are currently exploring what re-development opportunities exist within the existing four-storey zoning. It is highly likely that the supportive homes and new drop-in facility that was originally envisioned will not come to reality, and that a well-regarded neighbourhood non-profit partner will be looking for a new location.

Key Barriers:

- The protracted negotiation process with limited mechanisms for resolution creates uncertainty and increased risk associated with developing rental housing in Vancouver.
- High contribution expectations based on the City's valuation assumptions creates a situation where some projects cannot proceed, preventing the delivery of market or below-market rental housing.

Conclusion

Although the delivery of rental housing is influenced by many other factors, these case studies provide examples of ways in which municipal policies and processes can affect housing delivery both positively and negatively. Some of the positive approaches may have wider applicability, but underlying all of the preceding discussion is the role for municipal housing targets. Housing targets combined with a robust framework for monitoring and reporting would force municipalities to ensure their policies facilitate development across the breadth of housing types.

Re: Application of GST on Purpose-built Rental Housing

Purpose

UDI was asked to provide background on the impact that the Federal Goods and Services tax (GST) has on the costs of new rental housing. Below we outline the way in which the tax is applied and the inefficacy of the rebates currently provided.

Background/Discussion

The GST was introduced by the Federal Government in 1991 to replace the previous Manufacturers' Sales Tax (MST). The rate was initially set at 7%, but has since been reduced to 5%. This tax applies to newly built housing including the construction of rental housing through the "self-supply" rule.[1] Self-supply is deemed to occur when the building is determined to be substantially complete or the first tenant takes possession of a unit under the terms of their lease. At that time, the builder is required to calculate the "fair market value" (FMV) of the building, applicable land and structures, based on the highest price that could be expected based on comparable values of similar housing in the local market. FMV is determined for each unit separately, and this value will determine whether certain rebates are applicable.

Payment of GST required under the self-supply rule is capitalized to the building value and written off on a 5% declining balance basis over time. Builders are also able to claim tax credits for some of the costs associated with building (or substantially renovating) a rental building through input tax credits (ITCs).

The GST application to purpose-built rental adds significant additional costs to new housing, and can often equal or exceed the cost of all other government taxes and fees combined (excluding community amenity contributions/density bonuses). For example, a 4-6 storey rental building built in Vancouver today could be charged nearly $40,000 in GST per unit on average.

Of note, the application of the GST to rental housing has been the topic of political discussion previously. In the 2015 Federal Election, the removal of the GST from purpose-built rental housing was one of the Liberal Party of Canada's campaign promises. There are rebates for rental housing that were intended to mitigate this impact on purpose-built rental projects that provide more affordable homes to make them more competitive to build, however there are several challenges with the current framework.

[1] "Self-supply" is the term used to describe the situation when a builder is considered to have made a taxable sale of real property and to have immediately repurchased that property.

Rebate Thresholds

In B.C., builders can claim a rebate of up to 36% of the value of the GST paid on new rental housing. The full rebate applies to units with a FMV of $350,000 or less. For units valued between $350,000 and $450,000 the rebate decreases until it reaches zero. Units valued over $450,000 are not eligible for any reductions in the GST payable. Therefore, the maximum that a rental development could claim in rebates would be $6,300 per unit.

These thresholds are set at the national level and do not vary based on local markets, unlike the calculation of FMV. The result is that the majority of rental units built in major urban centres, where rental housing is in high-demand, will exceed the rebate thresholds. This removes any incentive that was intended to support the creation of rental housing in these areas.

In addition, the rebate thresholds have not been tied to inflation, and the thresholds have remained unchanged since the GST was introduced 30 years ago. For comparison, the average rent across all bedroom types in Vancouver was $633 per month in 1991, and today that amount has increased to $1,519. Although this does not directly illustrate the change in FMVs in that time period, it clearly shows that the increase in value has been substantial. When the rebates were introduced 30 years ago most rental units would have qualified for at least some part of the rebate, however this is not the case today. While the rebate thresholds may continue to mitigate the impacts of the GST in lower-priced markets, they have become outdated in many of Canada's urban centres.

Larger Unit Types

The FMV used to determine eligibility for GST rebates is calculated on a per-unit basis. Unfortunately, two and three-bedroom units are valued higher than one-bedroom units in the same building, largely due to the higher square footage of the units and the lack of comparable housing in the market. Given this calculation, smaller units have a greater opportunity to qualify for a portion of the federal rebate, creating a disincentive to build larger two-plus bedroom rental homes. In markets like Metro Vancouver, very few of these units would receive any rebate at all.

Fair Market Value Calculation

The determination of FMV and self-supply at the substantial completion of a building or when initial possession occurs is very late in the process. This is after a builder has had to secure financing, pay other government fees and complete construction. Given how quickly local markets change in response to a variety of factors, it is very difficult to estimate the value of the GST that must be paid. Once the assessment of FMV has been made by the builder, it is increasingly common that an audit will be conducted by the CRA, and in some cases a supplementary appeal, which can take months or years. This lack of predictability creates additional risk when determining the feasibility of a purpose-built rental project and may deter some builders.

Application to Substantial Renovations

The federal GST is also applied to housing that has undergone a substantial renovation, where all or substantially all areas of the building have been renovated to a minimum degree. This is generally considered to be 90% of the building based on the percentage of the rooms renovated or the percentage of the floor/wall area renovated relative to the building total. In these cases, the building is treated in the same way as new housing through the self-supply requirement, with limited exceptions.

While this treatment may affect a building owner's decision to renovate or redevelop rental housing, there are certain circumstances where redevelopment may not be possible. In these cases, the GST may disincentivize large upgrades, for example in:

- Heritage buildings which cannot be demolished; and
- Existing buildings that are larger than what could be built under current municipal planning and development guidelines/zoning.

There are numerous sites in Victoria as an example whereby rental was built to a scale that would not be permitted today and so there would either be less or the same scale of new building allowed which would economically prohibit replacement. While these examples are not the majority of circumstances, they are still impacted by the current framework. Overall, the application of the GST to substantial renovations, with limited access to rebates in certain markets, adds significant cost to renovations and upgrades that may extend the life of the building.

Conclusion and Recommendations

The application of the GST creates a substantial added cost to the delivery of rental housing. To address the challenges discussed above and create more meaningful rebates to support rental growth we have the following recommendations:

- Review the structure of GST payments, and consider revising its treatment to become an expense in the period paid to help reduce of offset income taxes in the initial years after a new or substantially renovated rental building is completed.
- Review and revise the rebate thresholds to more accurately reflect market values in local markets, either by market type/size or jurisdiction.
- Create a mechanism that allows rebate thresholds to adjust with inflation to ensure they remain relevant to current context.
- Scale rebates by unit type or size remove disincentives for the construction of larger rental homes.

We recognize that application of the GST is a federal issue, however it does affect the delivery of rental housing in British Columbia, particularly in the province's urban centres where market values are elevated. We hope that this high-level summary of the issues faced by rental builders and our subsequent recommendations can provide context for our ongoing discussions.

Subject: Follow Up from Tuesday's Meeting

Hello Jeff and Lily,

Jeff, it was a pleasure to meet with you the other day and Jun'ichi and I are extremely grateful for your feedback and willingness to work together.

We have an open engagement (survey) to help inform direction for changes to the BC Building Code to make new buildings mode accessible. If it is possible, we would very much appreciate the word being spread through your networks. Copied here is an invitation from Parliamentary Secretary Dan Coulter that you would be welcome to share via your newsletter.

----------Message Start----------

As you may know, the Attorney General and Minister Responsible for Housing and I are committed to achieve our shared mandate to ensure the next iteration of the BC Building Code includes changes to make new buildings more accessible for all people.

I am writing to invite you to participate in an online survey to provide feedback to help improve accessibility in new buildings.

The online survey will be available on the govTogetherBC website, from October 28, 2021 to January 13, 2022, at https://engage.gov.bc.ca/govtogetherbc/consultation/building-code-accessibility.

Information about the BC Building Code accessibility requirements is available on the Building and Safety Standard's website at https://www2.gov.bc.ca/gov/content/industry/construction-industry/building-codes-standards/accessibility.

Your feedback will help inform proposed changes to the next BC Building Code. In the second phase of our engagement, planned to occur in 2023, we will provide an opportunity for you to comment on the proposed BC Building Code changes.

Please email BSSB.public.review@gov.bc.ca, if you have any questions about the survey or wish to submit supplementary materials related to accessibility in new buildings. Please ensure documents are publicly available and unlocked.

Removing barriers to accessibility and inclusion experienced by British Columbians will help create better buildings and stronger communities for all people.

Please share this information as appropriate with others in your organization.

Yours truly,

Dan Coulter
Parliamentary Secretary for Accessibility
----------Message End----------

If you are looking for something shorter, we have a very simple pointer on our website that you could use:

You are invited to complete an online survey to provide feedback to help increase accessibility in new buildings.

The survey is available on the govTogetherBC website from October 28, 2021 to January 13, 2022.

More information about the public engagement and resources are available on the BC Building Code public review web page.

If you have any questions about the survey or the invitation I'd be happy to respond.

Regards,

Andy Chase | A/Director, Building Policy
Building and Safety Standards Branch | Office of Housing and Construction Standards
Ministry of Attorney General and Minister Responsible for Housing
Phone: 778-677-0944

Subject: Minister's mtg with UDI

Good morning,

The Minister meets regularly with UDI and today's meeting touched on a broad range of topics which will be of interest to all of you. I've attached the material they provided for the meeting, but also here are my notes below – something for everyone – apologies for length, they were on fire!

C.

Dec 9
-mitigating costs of carbon zero buildings

- Heat pumps are going to cost more (Tier 2 rates - were designed to encourage energy efficiency but they penalize people in fully electric buildings and EVs) There is a review going on now, hopefully the review will fix that.
- Options like bulk purchasing of heat pumps may be needed given the demand for heat pumps and ability to bring down costs. Other issue is training - a lot of construction trades not that familiar with heat pumps.
- Connection costs with BC Hydro - if you are the unlucky developer or owner who happens to be the one who pushes over the capacity then you have to pay not only for your connection, but also for everyone in the future. You don't find out about it until late in the project - so unanticipated costs. There is some flow of money coming back for 5 years, but it is inadequate.
- Fortis - not nearly the same issue - simpler infrastructure and Fortis will pay for it sometimes just to get the connection
- Right to charge legislation could create this problem - so one building will end up footing the bill.
- Ideally, these infrastructure costs are in the rates - not disproportionately on one owner or other method for dispersing costs.
- BC Hydro is going to have to be heavily involved in local planning - eg. Broadway infrastructure needs.

- Prioritization of building code policies - Embodied carbon should wait until after GHGs, rain water(?)
- Equipment standards. Link that policy to other jurisdictions and make sure we have access to equipment at cheaper rates and are aligned
- Alterations code - suggest you slow down. Model being put forward - big issue is going to be permitting delays. Need performance path options - (at least for Part 3) otherwise you are going to have building departments bogged down dealing with existing buildings.
- Mandatory upgrades to energy efficiency standards could trigger GST - including on the land.
- We could be mandated to connect to a municipal district energy system that emits carbon post 2030. These all run on gas (except one in Burnaby moving to waste heat)
  - Concern raised about mandatory air conditioning as there was some interpretation of previous comments by MDE that the province is looking at this.

RTB and the ARI - municipal process and RTB processes - concerned about what happens when they don't mesh. Does the RTB determine what energy efficiency processes are appropriate - need to streamline this.

Coquitlam - see memo

- Is this a good model for transit development? Yes - Predictable - consistent.
- Right of first refusal - includes income testing - this means projects can receive BCH funding (grant) - this is better than Burnaby.

Port Moody - case study in how not to do transit.

Vancouver - 6.35% increase in property tax - good example of how quickly the small margin on PBR suddenly becomes economically problematic. Need the policy goals to align.

Getting rental build fast

MDE - we are looking at TOD, predictability around zoning, OCPs, parking

- I'm looking for something that is an crisis response that will bring on a bunch of market housing quickly
- So cities stop knocking down building density by 25%

UDI

- If you're going to add the 25%, then you can't add all the extra policies - otherwise they won't actually get built
- A *state of emergency* in housing would take off political heat on municipalities
- How can CMHC bolt onto this with attractive interest rates - that plus mandated height by the province would bring together pieces now in silos.
- Build fast - go with wood - way faster time. 5-6 story wood frame.

Burnaby - see memo

- Right to return policy - no income testing means that BCH funding is not available.
- New Vista (Non profit) - getting funding to purchase building, but right to return policy did not permit income testing threshold - so no matter what the income they are allowed to move back in. We had to elect not to proceed with New Vista.
- CHF Policy issue: Province could exempt those right to return tenants from income testing until they move out.
- Burnaby is requiring vacancy control on market rentals - developers have walked away and left hundreds of units on the table. Math doesn't work.

Vancouver - Broadway

- Have concerns about plan: ranges in density from 6-18 stories - what does that mean?

- Hearing from CoV staff: Current plan is best it's going to be - if density is cut back in RT areas, for example, it won't go up elsewhere - we sense staff think it is going to get cut back. We don't believe that Council will approve this before election
- We have given strong feedback about wanting more space for strata
- Discretionary shadow policy, view cones - all very unclear how this will work.
- s.16

-

Thanks,
Cheryl

Summary: *CleanBC* Comments – UDI Meeting December 9, 2021

A key concern amongst builders with the changes being proposed in the new *CleanBC* plan is that the *BC Energy Step Code* (*ESC*) regulatory roadmap that was established several years ago is changing under the new *Roadmap to 2030*. Our members had a clear understanding of what was going to be expected of them from both the Province and local governments over the next decade until buildings achieved the final *ESC* Step (Step 4 for Part 3 residential structures) to become net-zero energy in operations. The timeframe province-wide to achieve Step 4 was 2032, but several local governments have shortened them. Extensive training and education programs have been established as well as incentives to help builders adjust to the *ESC*.

Now a new requirement is being established – greenhouse gas (GHG) emissions also have to be reduced to net-zero. The timeframes being proposed for GHG reductions are shorter than those outlined under the *ESC* for energy efficiency changes, as they have to be achieved before the end of the decade across British Columbia. There are several other concerns related to GHG reductions outlined by the *CleanBC* plan as outlined below:

1. Adoption Timeline
   - While some municipalities are already implementing GHG reduction requirements, the *CleanBC* plan creates the framework for all municipalities to move towards this approach through pilot projects before the Provincial requirements are in place.
   - The Building and Safety Standards Branch (BSSB) under the Housing Ministry is currently developing an implementation bulletin for municipalities to adopt GHG reduction requirements.
   - There are also other key issues that need to be addressed, including a how Renewable Natural Gas can be used to meet the requirements as well as the ongoing review of Tier 2 rates and extension fees by BC Hydro (see below) that need to be addressed before local governments mandate substantial GHG reduction standards.

2. Municipal Requirements for GHG Reductions and the Energy Step Code
   - Local Governments are already incenting the reduction of GHGs in new buildings. They have developed an approach in which builders can reduce the required ESC step if their projects use low carbon energy systems. This provided builders with options to balance costs.
   - Some local governments have indicated that this option will not be available if they can mandate GHG reductions. We will likely see the highest step of the ESC mandated as well as substantial GHG reduction requirements.
   - If both become requirements it will add cost to housing development, especially if they continue to have urban design requirements that make it difficult to implement the highest step of the ESC (e.g. small floor plates, high building articulation and having wedding cake designs).

3. Provincial Requirements to reduce GHGs in new construction to zero by 2030
   - This will require heat pumps, which are still expensive upfront or utilizing Renewable Natural Gas which will have higher operating costs.
   - Heat pumps will be a key element of carbon reductions; however, they are currently expensive capital investments.

4. The Alterations Code for existing buildings
   - This change has the potential to add delays in permitting processes due to its complexity as well as adding costs to building capital costs.

- It is not clear how the costs will be passed onto tenants in rental buildings.
- It is also not clear how the Residential Tenancy Branch (RTB) and local government building departments will determine together what landlords should be mandated and compensated to upgrade their buildings. It may be more appropriate to have the RTB determine what the upgrades should be as they are responsible for managing the Above the Guideline increases. This latter point would also apply to the *Right to Charge* regulation for electric vehicles.

5. Mandating 100% efficient heating equipment
   - This will initially add costs for this equipment for both new and existing buildings.
   - However, overtime the costs should decline. However, the Province may look at linking its requirements with other jurisdictions in North America to ensure that builders and building owners have access to inexpensive high efficiency equipment.

6. Building electrification
   - Electrifying buildings will also have cost impacts to new housing through BC Hydro infrastructure upgrades and more expensive Tier 2 rates.
   - When new buildings being proposed necessitate BC Hydro infrastructure upgrades these are added costs to the project that are high and usually a surprise.
   - Although the benefits of these upgrades will extend beyond the projects funding them, there are limited mechanisms to recover these capital expenditures.
   - In a worst-case scenario, a rental building could be required to fund upgrades that would support redevelopment of adjacent buildings regardless or tenure (i.e. They could be luxury owned homes).
   - In addition, the more expensive Tier 2 BC Hydro rates would likely apply to a fully electrified building (especially if there is electric vehicle charging) This would make the building more expensive to operate, and when utilities/electricity is factored into the cost of rent in purpose-built rental buildings, it makes it even more difficult to achieve a sustainable financial model.

However, there are approaches that can mitigate or offset the impacts, specifically related to:

- Linking land-use and infrastructure development - this is the biggest mitigation measure;
- Establishing requirements for the municipal GHG reduction pilot programs;
- Increasing accessibility and affordability of heat pumps;
- Prioritization of future changes to building requirements;
- Broader Public Sector Leadership to build industry capacity;
- Expansion of research, education and training programs;
- Prefabrication; and
- Addressing challenges in the District Energy model.

These measures are outlined in greater detail in the initial memo regarding *CleanBC* and housing affordability.

Agenda – February 10, 2022

1. Welcome and Chair's Remarks
2. Hon. David Eby, Attorney General, Minister Responsible for Housing

2.1. Low-Density Housing Initiatives

- Strong Suburbs Report (Memo only)
- Making HOME Strategy

2.2. Expediting Supply

- Mandated Housing Targets and Aligning Municipal Priorities
- Regular OCP Updates
- Financing Growth through needs-based charges (Super DCC Model)

2.3. Next Steps for Ongoing Discussion

- Federal Housing Discussions
- Spring Legislative Session: upcoming opportunities to collaborate

To: The Hon. David Eby, Q.C., Attorney General and Minister of Housing
From: Anne McMullin, President & CEO, Urban Development Institute (UDI)
Date: February 4, 2022
Re: Policy Exchange *Strong Suburbs: Enabling Streets to Control Their Own Development Report*

Purpose

The Policy Exchange think tank in the United Kingdom (UK) recently released a report on overcoming NIMBY responses to densification in suburban "*renewal*" areas allowing "*street votes*" on the types of development homeowners would want in their neighbourhoods. Their proposal also includes provisions that would allow owners to economically benefit from higher densities and retain the character of their neighbourhoods. Development would still need to comply with government policies (e.g. green building requirements).

Background/Discussion

UDI Response

UDI is supportive of some of the approaches in Policy Exchange report – although the ideas would have to be substantially modified to work in British Columbian communities, as the UK has older suburbs and a higher reticence to high-rise projects (which clearly noted in the report). The key advantage of the idea is educating homeowners on the financial benefits of development for their households and ensuring that those benefits are shared across a street or neighbourhood.

If applied in British Columbia, a modified version of the proposal could be run in innovative municipalities with growing housing needs, but would need to be expanded to the area plan/neighbourhood plan level, rather than street-by-street. The financing mechanisms proposed would also require substantial adaptation. Overall, this tool would be most applicable to low-density areas to generate some additional housing through neighbourhood support, however it should be paired with municipal housing targets.

Street Votes and Area Planning

The Policy Exchange is advocating that residents along individual streets vote take control of and vote on whether and how growth should be accommodated on their streets. We support more democratization of the process (with the caveats noted below). However, having votes on density increases initiated by local citizens and run street-by-street would result in haphazard growth. Local governments, Metro Vancouver and TransLink would have difficulty determining where to expand and improve infrastructure and services if they have no idea when/where votes will occur. If the vote is positive, it would also not be clear how many homeowners would proceed with redevelopment. This would require that street votes be incorporated into neighbourhood or area-wide planning processes.

With an expanded area, municipal staff would likely need to lead these planning processes rather than the residents, architects and surveyors, which are proposed. Staff would be familiar with the infrastructure, environmental and soil issues as well as the overarching policies that would need be followed.

If street votes were tied into the municipal area planning process, they could allow citizens to push municipalities to pursue new area plans if a certain percentage of residents support this through petitions. In addition, when area plans are conducted, some streets/subareas may accept

www.udi.bc.ca

or demand more growth than would have been approved if they understand and benefit from new development. This could have positive impacts by opening up new areas for growth or enhancing current density levels in other neighbourhoods.

Growing Community Support

We agree with the sentiment in *Strong Suburbs* that many local neighbourhoods would vote to increase development opportunities if they benefited from the changes and understood this. Providing neighbourhoods with more control of the general character and design of new projects would likely improve this support further. We agree that this needs to be done at the front-end of the process, so there are now surprises later in the process and that projects should be fast tracked if the vote is successful.

We note that some residents may not wish to stay in their neighbourhood if densities are increased. In these cases, they would likely be willing to allow their community to be transformed if there was a financial benefit. A good example of this is Oakdale in Coquitlam where residents demanded increased heights and densities (including mid-rise towers) when they understood the positive impact on their home values.

We would also need to ensure that the results of the votes are as fair and equitable as possible to all of the homeowners. There is the potential that a supermajority from one part of a street or neighbourhood could vote themselves increased density – but not for other properties. Unless there are valid reasons for lower densities on a site (e.g. size, configuration, proximity to a stream), what is allowed should be fairly similar.

Increasing the Scale of Density

In the UK suburbs highlighted by this proposal, there were concerns about high and mid-rise projects, protecting the high number of heritage homes in the UK and shadowing. As such, the authors recommended minor density increases (only a few storeys), even if the neighbourhood supports more growth.

In some communities in British Columbia these densities, would be less viable and less cost effective to build. If there are renters in an area, much more density would be needed to fully protect them from displacement (as in the City of Burnaby), which is critical to gaining support for more growth. Housing affordability, adaptability and sustainability requirements would also need additional density to make projects viable for builders while providing the compensation needed to homeowners.

Greater densities would make these redeveloped neighbourhoods more durable. Near the Canada Line stations at Cambie/King Edward and Cambie/Broadway, new buildings have been constructed at unnecessarily low densities. They will likely need to be replaced within a few decades, which is a waste of resources and embodied carbon.

Areas with Higher Development Potential

Near rapid transit stations, senior governments and TransLink need much more growth to fully leverage the billions of dollars being invested on SkyTrain lines by taxpayers across the country and province. There should no expectation that the character of these neighbourhoods will remain the same after redevelopment occurs. In the *Strong Suburbs* report, it is noted that the UK government is providing housing targets that must be achieved by local authorities. UDI has supported targets in British Columbia – especially near transit stations. In these areas, local votes

should not override those minimum levels of development. However, if residents want to support and benefit from higher rates of growth than those targets, they should be allowed to do so.

Taxes/Development Finance

The Policy Exchange model relies on senior government taxes being remitted to local authorities as opposed to Development Cost Charges (DCCs) and Community Amenity Contributions (CACs) to fund the hard and soft infrastructure costs related to development. Thirty percent of the Stamp Duty Land Tax (similar to B.C.'s Property Transfer Tax) collected "… *on the next transfer of property* …" after a successful vote to increase density would be transferred to local governments. Given the increased revenue the Province would be collecting as land values increase as well as the additional homes that would be sold and resold, the Government should consider a similar approach.

The other proposed tax revenue sources to fund infrastructure costs would be more difficult to achieve. The Federal Government controls the capital gain tax, which would make a one-time loss of the residential capital gains tax exemption difficult to implement. There is also an expectation that local governments will benefit from an increased residential tax base. However, because of the ratio between business and residential property taxes in many British Columbia municipalities, local governments would "lose" money on new homes are built. Residents use more services than they pay for through property taxes. This impact would be moderated if retail areas rebounded as a result of new residents moving into their communities.

If the Government were to proceed with this model, the development finance issue would need to be addressed. UDI would support the use of DCCs, but local governments also charge CACs. It would be problematic if local areas voted to support development (and even fast tracking it), only to have projects derailed because local governments having lengthy CAC negotiations and taking 75% of the lift of value from the increased density. This issue is critical, especially with small density increases, because the *Strong Suburbs* model relies on homeowners benefiting from the increased development opportunities of their property. Having provincially mandated housing targets would resolve this as local governments would be incented to ensure these new homes are built.

Government Regulations

UDI agrees that overriding government priorities should be incorporated into new housing units such as adaptability or environmental standards. For example, we argue above, communities should not be able to vote to keep densities low near transit stations because building homes near these stations is a Provincial priority. However, government requirements need to be clearly established upfront and understood in terms of their impact. These policies may necessitate higher densities to offset higher costs, and residents need to be educated about this at the beginning of the process. Late hits where new costs and requirements are added near the end of the approvals process should not be allowed.

There is still the common problem of conflicting regulations and requirements. In their report, the Policy Exchange advocates for beautiful buildings that are stepped back at higher heights and have more glazing; at the same time, they note the need to improve energy efficiency. The highest steps of the *BC Energy Step Code* will result in homes with heavy envelopes (fewer windows), and simpler designs with larger floor plates. The homes will not necessarily be built to the beautiful urban design specifications in the report – without substantial cost increases which

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

would undermine affordability. We note low/zero carbon buildings would have less of impact on design and costs. In consultation with the neighbourhood, municipalities must reconcile these discrepancies.

Regulatory processes at all levels of government also need to be streamlined, so that approvals are not delayed. The benefits of having a fast-tracked rezoning process in these areas would be undermined if it takes 18 months to get a Provincial approval or it takes several months for a municipality to determine which of their conflicting regulations takes more precedence.

We support the need for on-street parking regulations as identified in the report, especially in areas well served by transit. On-street parking concerns has led many councils to restrict development or mandate expensive and underutilized off-street parking garages in projects in order to address public opposition to projects. The government should consider ways to ensure that areas near transit have on-street parking regulations. Without them, there will not be public support for growth without large expensive garages.

Conclusion and Recommendations

The *Strong Suburbs* report proposes an innovative approach to increasing density in suburban communities through greater resident involvement and decision-making. While there are several concepts that could support lower density increases in B.C. municipalities, the proposal would need significant adaptation. It would require greater municipal involvement and linkages to area planning processes to integrate with transportation, services and utilities. Overall, the *Strong Suburbs* report contains innovative ideas that would be most applicable in lower density contexts.

Hi all

Great meeting on Friday. Mark's presentation was a real highlight. Thanks so much for sharing Mark.

Below is the email that Brendan sent out prior to the meeting. We've gone through the data and his proposed changes, and agree with his conclusions that there's room to require slightly more stringent requirements for MURBs than what was initially proposed. Sharing out conclusions FWIW.

Looking forward to moving ahead together with this important Standard.

Cheers … Robyn

Subject: Suggested Updates to Metrics for Part 3 MURBs

Hi Jeff & all

Thanks for the chat earlier today.

As discussed, local governments feel that, ideally, we would tweak the metrics for Part 3 MURBs. However, we don't want to add delays. I'm writing the suggestions below, so these can be considered in advance of the ESCC meeting tomorrow.

1. **Change "Low carbon" to GHGI of 3 $kgCO_2e/m^2/yr$, instead of 4 $kgCO_2e/m^2/yr$, for Part 3 MURBs.** – Agreed. Gas hybrid option in CZ 8 is what is driving up the GHG in this category. Otherwise, all other CZ's and options for "Low" fit within 3 kg/m2 or really, really close (e.g., 3.1).
    - City of Vancouver has found that many MURBs are being submitted that would achieve the GHGI of 4, while still featuring conventional gas combustion equipment. In contrast, GHGI of 3 $kgCO_2e/m^2/yr$ will ensure decarbonization of both space heating & gas.
    - The intent of the "Low Carbon" level is to decarbonize both space heat & hot water.
        i. A concern was raised that some local governments would feel they need to go straight to "Zero Carbon" to ensure decarbonization of both space heat & DHW.
        ii. Jeff has suggested merging Zero Carbon & Low Carbon. I think there is some hesitancy to decide on this at this point, though I agree with Jeff that much of what is actually constructed will likely be all-electric new buildings, regardless of if it is "Low Carbon" or "Zero Carbon".
    - We understand impacts in Climate Zone 5 (CZ5) is a key priority for UDI – there are many Part 3 MURBs in CZ5, of course. I spoke with Alex Blue (of Evoke, who led energy modeling for this study) about whether buildings can achieve GHGI of 3 in Climate Zone 5. Alex told me she'll look into the data to confirm at the tomorrow. But, at this point, based on review of the data & conversation with Alex, <u>I believe it is very likely that MURBs in Climate Zone 5 would have no problem achieving a GHGI of 3, if decarbonizing both space heat & hot water.</u>
    - What was the reason GHGI of 4 $kgCO_2e/m^2/yr$ was contemplated? In Climate Zone 7a, the modeled MURB at Step 3 had a GHGI of 3.1 $kgCO_2e/m^2/yr$. In CZ 8, GHGI of 3.7 $kgCO_2e/m^2/yr$.
        i. However, very few (any?) Part 3 MURBs are built in CZs 7a & 8.
        ii. The model assumes conventional gas back up provides 30% of space heating energy. A small reduction of modeled gas for backup would hit 3. Likely would be viable in CZ 7a & 8, and, again, in CZ5.

2. **Change from a "Medium Carbon" to GHGI of 7 $kgCO_2e/m^2/yr$, instead of 8, for Part 3 MURBs (<u>lower priority</u>) –** Agree with this proposed change. Only modeled results that don't fit within the cap are Step 2 buildings that uses a gas condensing boiler with fan coils. Seems like workable solutions exist for Step 2 and definitely for higher Steps.
    - It will be much more common for Part 3 MURBs to achieve "Medium Carbon" by decarbonizing space heat and conventional gas hot water (e.g. baseboards, or heat pumps with cooling, plus conventional gas fired hot water).
        i. Local governments broadly see this in applications; likewise, the study suggests decarbonizing space heat will be the lower cost option.
        ii. Cooling is a common feature of new market housing, encouraging heat pump space heating.
    - The GHGI of 8 $kgCO_2e/m^2/yr$ was set to allow for all gas space heat, but all electric hot water. Very uncommon.
    - Anticipating electric space heat and gas hot water suggests a GHGI of 7 $kgCO_2e/m^2/yr$ (or actually 6.5 $kgCO_2e/m^2/yr$, in all but Climate Zone 8). For reference Vancouver requires 6.

3. **Consider changing "Zero Carbon" to 1.5 $kgCO_2e/m^2/yr$ (<u>lowest priority</u>)** – Agree with this proposed change. Based on the model, the 2.0 ceiling does nothing except allow for gas condensing with electric fan coils.
    - Study suggests this would be achieved in all but CZ8.

Below, I summarize the Province's "straw dog" metrics, and potential changes.

	Province Straw Dog Proposal			Alternate		
(all GHGI targets in $kgCO_2e/m^2/year$)	Medium	Low	Zero Carbon	Medium	Low	Zero Carbon
MURB	8	4	2	7	3	2 (or 1.5?)
Office	5	3	1.5	5	3	1.5
Retail	6	3	2	6	3	2
Hotel	9	4	2	9	4	2

I'm hoping that by summarizing this here, we can have a better chance of substantial consensus on this issue tomorrow.

Thanks & best

To: **The Hon. David Eby, Q.C., Attorney General and Minister of Housing**
From: **Anne McMullin, President & CEO, Urban Development Institute (UDI)**
Date: **March 10, 2022**
Re: **Establishing and Implementing Housing Targets**

Purpose

In summary of previous discussions, UDI is providing recommendations on establishing a municipal housing targets regime.

Summary

The amount of housing built in British Columbia has been dictated by individual municipalities with no targets linked to population growth. Building housing has often been a second priority to the desire of current residents to maintain community character, or increasing municipal revenue through development changes. The reality is that in the current development processes, most cities will not approve enough housing to address this crisis. It is critical for the Province to take a leadership role and provide municipalities with enforceable housing targets.

UDI does not recommend that the Province attempt to micro-manage all of the municipal policies that are undermining the delivery of new housing units. We believe that performance-based housing targets would be far less intrusive and difficult to impose. Performance-based targets would provide local governments with the autonomy they need to reflect community priorities – while still ensuring that provincial housing objectives are met.

Planners have chronically underestimated the number of units we need in our communities. We recommend that the Province adopt the advice provided by the *Canada-British Columbia Expert Panel* and others, and consider demographic trends and growth projections when developing the targets. To simplify them, we believe that they should be expressed as the number of housing units approved through the issuance of *Building Permits*. *Building Permits* are used universally, and are granted later the development review process. Although UDI is not opposed to using floor area, we believe that the number of units is a simpler approach. However, we support the Ministry Responsible for Housing being given the power to establish targets with both measures if needed.

Initially, UDI recommends that the targets be applied where the Province has made substantial investments in transit infrastructure and services – high-order rail (and SeaBus), Bus Rapid Transit, and RapidBus lines. The Province's funding commitments provide greater authority in areas near transit stations and stops. Growth near transit will also achieve several other provincial objectives.

For the targets to be taken seriously by local governments, there need to be clear enforcement mechanisms. However, UDI advocates that the Province not immediately utilize the enforcement mechanisms until there has been a discussion between the Province, the impacted local government(s), the Transit Authority, and builders. There may be extenuating circumstances and opportunities to work with municipalities to improve their policies/processes so even more housing can be built. UDI proposes several incentives and enforcement mechanisms that could be used to ensure the delivery of housing.

Background/Discussion

Putting Housing First: Performance-based Targets

UDI recommends that the Province adopt performance-based targets rather than attempt to manage how local governments administer the wide-ranging issues in the development review process.

One of the biggest concerns that our members have with municipal development review processes is the number of policies that often take priority over providing new housing – negotiated Community Amenity Contributions (CACs), urban design constraints (e.g. shadowing policies, regulation of floor plate sizes and unit layouts), protecting employment lands, heritage conservation, tree retention, extensive and duplicative public consultation, and many others. Whenever a new policy emerges, housing always seems to take second place.

Addressing policy layering

Conflicts often emerge due to the numerous policies affecting the development process. For example, the *Energy Step Code* (*ESC*) is much easier and less expensive to adopt if buildings have simpler designs, larger floor plates that do not recede (like a wedding cake) and have less glazing (windows). This is the opposite of the urban design policies of many municipalities. It can take months to address these types of conflicts for projects because these policies are often viewed as the client, taking precedence over the delivery of the housing project or opportunities for future tenants/homebuyers.

There are too many of these policies (and several new ones which emerge every year), for the Government to legislate one-size fits all requirements for municipalities across British Columbia. This approach could lead to complaints that the Province is micro-managing issues under the purview of local governments. It would also be costly and time consuming for Government ministries to oversee and enforce requirements on many municipal policies when they conflict with housing objectives – especially since (unlike Ontario) there is no standard provincial development review process. They differ in each community.

A Tailored Approach

Each community will have its own priorities and unique circumstances. Therefore, regulating individual policies such as CACs or heritage conservation, will result in the need for different provisions or exemptions in each community, such as sloped sites or historic brewery districts. This would make the regulations very complicated and would also likely lead to loopholes that would need to be addressed subsequently.

Even if the Province were to successfully fix these issues through regulations, there will always be other policies that could slow down development. This includes policies that the Provincial Government would have difficulty addressing such as demanding high energy efficiency/low carbon targets; difficult to achieve accessibility requirements; high park standards; and mandating affordability levels that would make projects unviable - without substantial density increases.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

As we noted in the last meeting, a Toronto Deputy Mayor last November publicly stated that he hopes the City's new inclusionary zoning policy (that has no density offsets) will slow down new housing supply. Addressing these types of challenges on a municipality-by-municipality basis would be cumbersome and resource intensive. This is the basis for our recommendation that the Province adopt a performance-based approach.

Addressing Municipal Priorities

Establishing performance-based targets is easier to administer and less intrusive. They would allow local governments to deliver the housing that communities need while balancing their unique circumstances, and supporting individual priorities. If a community wanted to protect a heritage area it could, so as long as it achieved mandated housing targets. Local governments would have the option of moving their required density to where it would be less impactful, thereby requiring trade-offs like allowing additional density for builders, in order for projects to proceed.

Targets would force municipalities to determine what their priorities are (versus nice to haves) and encourage innovative compromises and quicker negotiations for projects, speeding up the development approval process. When new policy proposals emerge, they would truly be evaluated in terms of their impact on the delivery of housing. Municipal staff and Councils would also be more likely to consult the industry. This does not mean new policies would not be adopted, but **municipalities would be more likely to work with the building industry to have the policies implemented in ways that mitigate the impact on approval processes, project risks, and housing costs.**

Innovation and Collaboration

Beyond policy, local governments would be motivated to make their approval processes more efficient; although we still recommend continued provincial funding to support the digitization of these processes. Municipalities will take advantage of the many tools in the tool box that the Ministry of Municipal Affairs has developed. The City of North Vancouver has already done so, taking advantage of the recent changes that allow increased delegation to staff, and make it easier to waive public hearings when re-zonings are in compliance with Official Community Plans (OCPs). If local governments find that new tools need to be developed, they can be, and there will be more confidence that they will be utilized.

Setting Global Targets

UDI recommends that the Province establish global housing targets which can then be allocated to municipalities – specifically the areas around transit stations and stops.
Currently, regional and local governments identify their housing needs through *Region Growth Strategies* and the mandated *Housing Needs Assessments*. Unfortunately, the methodology for these measures is not robust, and as documented in the *Opening Doors Report*, planners have consistently underestimated the number of housing units we need in British Columbia and elsewhere.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

The Province would need to establish a consistent methodology to calculate housing targets. We do not provide recommendations on a specific approach; however, we encourage the Ministry responsible for Housing to consider several key components.

UDI recommends that any methodology adopted should account for the following factors:

- **Projected immigration as well as inter- and intra-provincial migration;**
- **Foreign workers in emerging sectors;**
- **Foreign students;**
- **Rental vacancy rate;**
- **The current level of unaffordability in most B.C. markets and its impact on household formation (the "*affordability adjustment*" noted in the *Opening Doors Report*);**
- **The "*competitiveness margin*" noted in New Zealand's *National Policy Statement on Urban Development 2020*; and**
- **Netting out demolitions when redevelopment occurs.**

Once a global target has been established, it should be used to apportion housing targets for specific municipalities. **We recommend that municipality level targets be set largely based on current/future access to transit infrastructure and access to Central Business Districts, as well as the land they have available for development.**

This would need to be within the urban containment boundary, and not be restricted due to environmental issues (e.g. floodplains), the Agricultural Land Reserve (ALR) or lands reserved for Industrial uses. For example, we expect much more growth to occur in Vancouver, which has twenty SkyTrain stations and is almost completely within the Urban Containment Boundary, whereas Pitt Meadows that has no stations and has a significant portion of its land base in the ALR.

Lastly, we recommend that municipal targets be distributed across transit stations and stops to provide the greatest initial opportunity to deliver benefits to the community and accelerate growth. The Ministry Responsible for Housing would need to determine how much faster these station/stop areas in each municipality should grow relative to the rest of each community. A key factor in this assessment should be impact on TransLink's or BC Transit's operations, revenues and costs.

Application Area

UDI recommends that for the initial phase, the housing targets be focused within a minimum of 400 metres of SkyTrain stations and Light Rail Transit (LRT) stations as well as at least 200 metres around Bus Rapid Transit (BRT) and RapidBus stops. This should begin with the highest order transit in the region (e.g. SkyTrain in Metro Vancouver and RapidBus in the Capital Region), and expand in the future to cover the Frequent Transit Network and Town Centres, as well as 800 metres around mass transit stations. This would eventually lead to city-wide targets.

Rationale and Support

The 200/400 metres represents the walking shed for these stops and stations. People living and working in these areas are much more likely to shift their mode of transportation to use transit because of the convenience. It provides the greatest opportunity to locate density because:

- Multi-billion-dollar transit investments will be fully leveraged, and TransLink's as well as BC Transit's revenues will increase without raising ticket prices and taxes;
- Affordability is improved because households will not have to own as many cars, which cost $10,000 per annum to operate;
- Greenhouse Gas (GHG) emissions and energy use will drop as people will walk, roll, bike and take transit for more of their trips. Housing units in these areas are also generally smaller with less exposure to the elements than single-family homes;
- If there is a mixing of land uses (commercial and residential), the station/stop areas will become vibrant retail areas for new businesses; and
- Other economic benefits from expanding transit will be fully realized as more people will find it easier to access jobs, while businesses will have access to a wider pool of potential employees.

Despite these positive benefits of mandating housing targets around transit, the geographic impact of the targets is minimal. There are less than dozen municipalities in the Province with SkyTrain and SeaBus service now (or under construction) and only six more with RapidBus stops. The map below shows the region relative to how small of an area would be impacted by the targets in Metro Vancouver, and the current and proposed RapidBus lines that would be included in the Capital Region and Central Okanagan.

TransLink

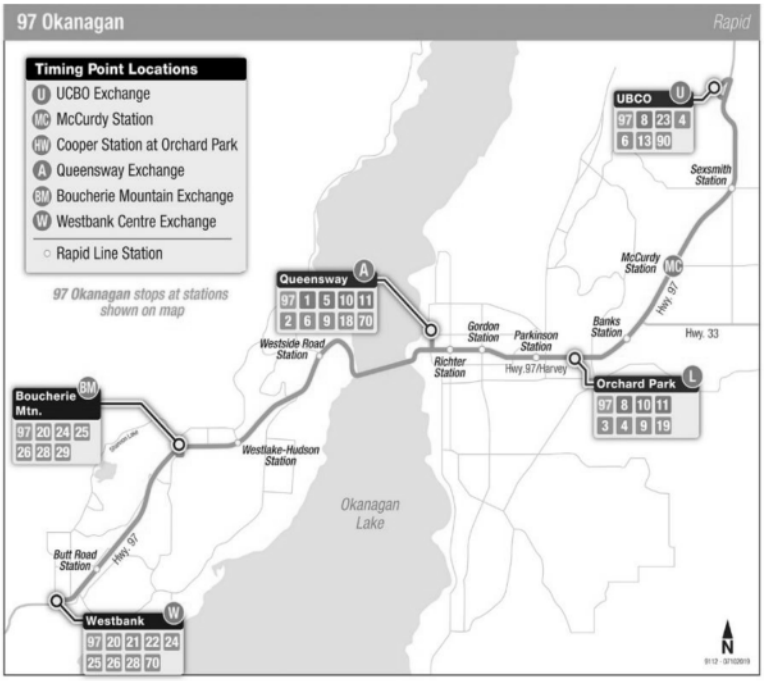
Victoria Regional Rapid Transit



Kelowna Regional Transit System – Route 97X

The Province also has a much stronger case for eroding "… *local government autonomy …,*" near transit stations because of the billions of taxpayer dollars from across B.C. and Canada used to fund the SkyTrain lines serving these areas. Port Moody was connected to the Millennium Line in 2016, yet its population declined by 16 people from 2016 – 2021 (according to the recent census), when many other growing communities did not receive these types of investments.

For the same reasons noted above, NIMBY groups arguing against development occurring near stations will face an uphill battle. Growth is coming to the region, and these are clearly the best places for it to occur from social, economic and environmental perspectives, and in consideration of the tremendous taxpayer investments made to build the lines and the stations. Taxpayers who themselves are not benefiting from transit lines want to see these projects fully leveraged, and new homebuyers and tenants want to be able to move into these areas to access high-order transit.

UDI conducted a second round of polling building on the information gathered in 2021. The results further support the implementation of housing targets in transit-oriented areas. There is

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

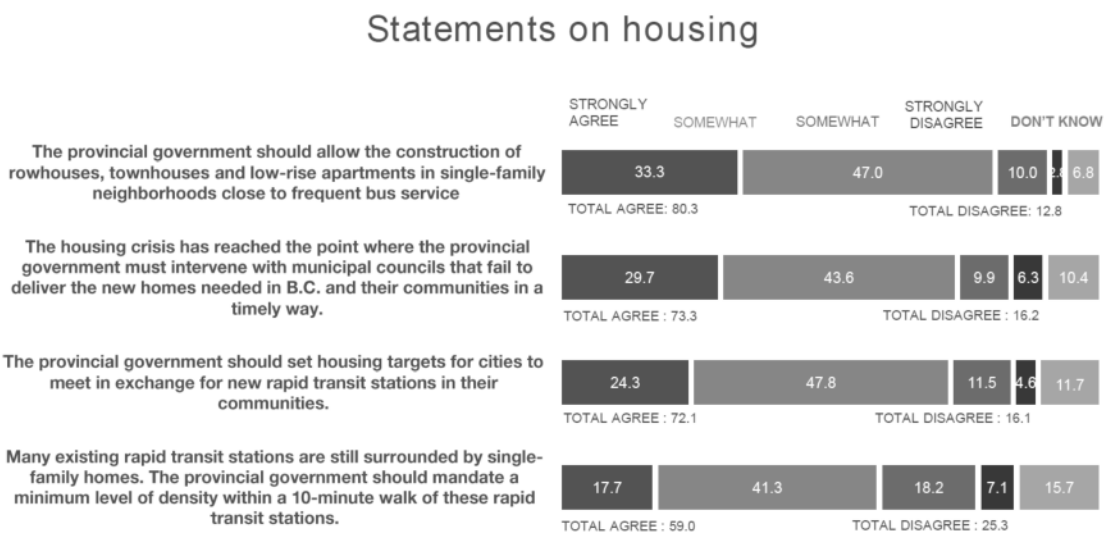
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

growing support for implementing targets in these locations. The recent polling that UDI conducted this spring shows that 60% of those polled support housing targets within walking distance of existing transit. There is also support for targets around future Bus Rapid Transit and RapidBus stops. The results show that 80% believe the provincial government should allow more density in single-family neighborhoods close to frequent bus service. These results illustrate the need to go beyond traditional Transit Oriented Development nodes and create more housing options across a wider range of areas.



[The survey was conducted by Stratcom with 801 BC residents over 18 from February 7th to 14th, 2022. A random sample of panelists were invited to complete the survey from a selection of panels and river sources through Lucid. Sample of 801 BC residents (18+) statistically weighted to match the gender, age, region and proportion of Chinese mother tongue in BC as per the 2016 Census.]

Flexible Application

UDI recommends that the Ministry Responsible for Housing allow local governments some additional flexibility to shift their target requirements between stations, or between BRT and RapidBus. This approach would accommodate unique circumstances or community priorities, including culturally or environmentally sensitive areas. Many municipalities have several transit stations. Instead of having defined targets for each station, a global target for all of the station areas could be established for each local government. Municipalities could then move their required density to the station areas where it is more easily accommodated – as long as all of the growth lands were within the walking shed of SkyTrain stations. A similar approach could be taken with BRT and RapidBus stops.

Over time, the Province could contemplate city-wide targets. However, UDI recommends these targets be limited to the fast-growing areas of the Province where housing affordability is very challenging (e.g. the communities where the *Speculation & Vacancy Tax* applies).

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

www.udi.bc.ca

We recognize that other parts of B.C. have housing affordability issues, but it is not because of local government actions or inactions. We have found that places like Prince Rupert are actively trying to attract developers and are providing wide-ranging incentives for new housing. There are, unfortunately, capacity issues for both the municipalities and builders in these communities, so separate solutions are needed for them.

Measuring Progress

UDI recommends that municipal progress towards targets be measured by the number of units that receive *Building Permits (BPs)*, and include a measure of zoned capacity during the initial transitional phase.

The issuance of *Building Permits* occurs at the end of the approval process, and it is very rare that a builder would choose not to proceed after receiving a *BP* because of the costs of obtaining them, and charges that are levied at this time (Development Cost Charges or Levies). *BPs* have an expiry window if construction does not begin within a specific timeframe. *BPs* are also universal and are issued in every municipality – for every type of construction.

However, due to the amount of time required for a development to reach the issuance of a *BP,* it will take several years to evaluate whether or not local governments will achieve their targets. The Province has reiterated its goal to address the current housing crisis through quick actions. Zoned capacity in the interim transitional phase can be used to assess whether local governments are likely to achieve their *BP* targets in the future. If there is inaction by some Councils, the Ministry Responsible for Housing can act quickly.

There were several other options that were considered, all of which had potentially challenging gaps in their application.

Units vs. Floor Area

Concerns have been raised that local governments may only approve small units to more easily achieve their targets. However, UDI supports the use of units as the measure over floor area for several reasons. First, it is simpler and easier to administer for the Province. It is also less intrusive on local governments and would be less likely to appear to as micro-managing.

Secondly, each community has their own demographic profile and market conditions. It would be difficult for the Government to establish requirements to impact the sizes of units for each station. Flexibility is needed. At stations closer to downtown, buyers and renters may expect smaller units because of higher price levels. Stations that are further out may be more suitable for families that are willing to trade off space for a slightly longer commute. Builders look at their sites and the local market conditions to determine what product is most likely to sell or rent. Their vision for projects is then negotiated with the local governments and communities. Imposing a Provincial standard on the size of units would be counterproductive and may undermine the ability of builders to sell/rent units and deliver the type of units a local community needs.

Finally, we do not believe that local governments would take advantage of using units as the target measure to approve only small units that are unsuitable for most of their growing population. Many local governments already have "family-friendly" policies that mandate a certain percentage of two and/or three-bedroom units. Also, by establishing housing targets, the Province will send a message that it is serious about housing, and would consider further regulations for local governments if they do not deliver the housing needed in their communities. In addition, if local governments do not have policies that reflect local market conditions for unit sizes, they will risk not meeting their housing targets because builders will be wary of investing in projects that will not sell or be leased.

Despite the above, **UDI also recommends that the Province give the Ministry Responsible for Housing the power to establish and regulate targets based on the total amount of newly built floor area around stations/stops and regulate a minimum amount of growth to be achieved at each station/stop**. The Minister should be able to use floor area targets based on square feet or metres in combination with the targets based on housing units if it is found that such steps are needed for local governments that are being manipulative in the delivery of housing units to achieve their targets (e.g. only zoning 400 ft^2 units). In the future, floor area targets could also be contemplated if there is a need to ensure that there is enough job space near transit. It would be difficult to establish a unit target for office, industrial and retail.

One issue that would need to be addressed when utilizing floor area targets is avoiding the use of the gross area, as this would include non-livable portions of buildings such as parking garages, storage spaces, bike lockers, elevator shafts, stairwells, halls and lobbies. This can represent 20% of the square footage of a building. In order to exercise the ability to regulate floor area targets, the Province would need to develop a standard definition of the net floor area of buildings that reflects the true living space.

Other Stages of the Development Process

Zoned Capacity

Zoned capacity would be challenging as a measure of housing delivery because it includes any unbuilt density on sites. There are many sites where this may represent only a few storeys, so it would be unviable to demolish the current structures for a redevelopment project (e.g. knocking down a four-storey structure to build a six-storey one). There is a lot of confusion in the City of Vancouver regarding this issue. There has been ongoing media attention about City studies that show an abundance of undeveloped density – but a lot of this undeveloped density will not be constructed until buildings come to the end of their useful life and/or the densities on the sites increase further.

Secondly, pre-zonings (and some re-zonings) can include conditions that make it difficult to develop. This could include excessive fees or high on- and off-site, inclusionary zoning and/or sustainability requirements.

Finally, pre-zoning and re-zonings can be overturned by Councils, as they have the ability at any time to downzone a property. UDI is not opposed to downzoning in cases where live safety is in jeopardy - although we support the use of density transfers in these cases. However, local governments have downzoned properties in response to community opposition (as described

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

below); to protect rental housing through *Residential Rental Tenure Zoning* (*RRTZ*) and job spaces; and to increase revenues (as municipalities can then charge CACs for a future zoning increase, as was done in Ucluelet).

Development Permits (DPs)

Development Permits can also include excessive conditions, but this is not the main concern. Not all local governments issue *DPs*. Burnaby, which is a critical municipality for growth with eleven current SkyTrain stations as well as a proposed new line and gondola, does not issue *DPs*. In addition, *DPs* can be revoked after they are approved as was done in the City of White Rock. In a recently released B.C. Court of Appeal Decision, the Court allowed a newly elected anti-growth Council to downzone a property that had received an OCP Amendment and rezoning in September 2017 and then a *DP* in July 2018.

Occupancy Permits (OPs)

Similarly, to *Development Permits*, not all local governments issue *Occupancy Permits*. New Westminster, which has several rapid transit stations, does not issue them.

BC Housing New Home Registrations

Another option that was considered is measuring the BC Housing (formerly the Homeowner Protection Office) registrations for new homes built. This occurs at the end of the process, and it is unlikely that builders would pay the fee and secure a warranty for a project, then not go forward with construction. The registrations are limiting because the requirements do not apply to rental housing or job space.

Time Requirements

There are two significant problems with establishing time metrics on the various stages of the development review process. First, every municipality has its own development review process that is unique. This is why Provincial ministries have struggled to align their requirements with municipal processes. Secondly, municipalities would likely reject projects more quickly. To receive an approval, the local government may expect more information, discussion and time.

There are two instances where mandated timeframes may be appropriate. Provincial Ministries may require mandated timeframes for their processes. It will be difficult for municipalities to achieve mandated housing targets if developments are significantly delayed in obtaining Provincial approvals. In addition, B.C. Housing may want to establish timeframes for the approvals of non-profit housing, so money is not tied up in long municipal processes that do not result in an approval. The funding could then be moved to municipalities that are more willing to accept affordable housing.

Target Timing

UDI recommends that the Province set a 10-year global target for growth, broken into 2-year increments and apportioned to municipalities. Targets should be updated bi-annually to ensure they remain responsive to the market and to coincide with the 2-year delivery period.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

UDI recognizes that on a short-term basis there can be changes in the market. This is clearly been exemplified over the past two years with both dramatic lows and highs in the housing market. Local governments may argue that these changes will make it difficult for them to keep up. However, the intention of having targets is not that local governments should aim to precisely achieve them and approve no more housing. They will need to ensure that they have more than enough real development capacity in their area plans near transit stations/stops, as well as adjust their policy priorities and improve processing procedures. This is able to be accomplished in several jurisdictions in North America.

We note that during the slow market when the COVID-19 pandemic began, several major housing applications were held up in key municipalities because of CAC negotiations. If they were resolved earlier, thousands of units could have been started well before the market heated to near record levels.

Enforcement: Carrots and Sticks

Without enforcement mechanisms, the targets will not be taken seriously by local governments, so **UDI recommends a wide range of incentives and penalties if local governments do not achieve their targets.** With some of these measures in place, area planning discussions near transit stations will rapidly change from "*whether or not there be density near the stations*" to do we "*how best deliver the growth we need near the stations*."

We note that *Metro 2040*, the current *Regional Growth Strategy (RGS)* for Metro Vancouver, includes housing projections. However, not only are the projections low, but they are aspirational only, and according to the Homebuilders Association of Vancouver, most local governments are not meeting these already low targets. We note that the proposed *RGS* update for Metro Vancouver, *Metro 2050*, does not include the dwelling projections by municipality. At this time, they are broken down sub-regions (e.g. Burrard Peninsula, North Shore, etc.).

Provincial Funding

Funding can be used by the Government to encourage meeting the targets and/or as a punitive measure. With regard to the former, we note that the recently released *Report of the Ontario Housing Affordability Task Force* recommended: "*The Ontario government should establish a large "Ontario Housing Delivery Fund" and encourage the federal government to match funding. This fund should reward:*

a. *Annual housing growth that meets or exceeds provincial targets;*
b. *Reductions in total approval times for new housing; and*
c. *The speedy removal of exclusionary zoning practices.*"

The Province, in conjunction with the Federal Government (under the *Housing Accelerator Fund*) could fund local governments for every additional new housing unit above the established targets. **UDI also recommends that the senior governments continue to fund the digitization of the development review process through programs like the $15-million *Local Government Development Approvals Program* and potentially assist in the funding of area plans if the number of housing units under those plans substantially increases.**

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

The Province could also prioritize transit and other infrastructure investments such as roads, transit, schools, and other community amenities to those local governments achieving or exceeding their housing targets.

With regard to penalties, the Ontario Task Force also recommends, "*Reductions in funding to municipalities that fail to meet provincial housing growth and approval timeline targets.*" UDI agrees, and this could include funding for infrastructure. TransLink and BC Transit, through regular reviews, could direct investments in bus routes, including the Frequent Transit Network and RapidBus services, to communities accepting more growth.

Transit Taxes
The regional property taxes that are used to fund transit services could be increased for those local governments that do not achieve their housing targets. This is justifiable because of the extraordinary investments made in those communities. If these investments are not being fully leveraged because of a lack of development, the regional taxes should increase to cover some of the additional operating and debt servicing costs that are being lost due to lower ridership revenues.

Municipal Powers (Tools in the Toolbox)
The Province is routinely providing additional tools or powers to local governments. A few years ago, the *RRTZ* power was provided to them, which UDI supported because we thought it would allow local governments to incent (e.g. through additional density, faster processing times, and tax reductions) the construction of additional purpose-built rental (PBR) housing. For the most part, this has not occurred as municipalities have focused on using the *RRTZ* to preserve existing units instead. The Province also provided local governments with powers to introduce the *ESC*. Now, the Housing Ministry through the Building and Safety Standards Branch will be granting powers to local governments to establish their own GHG intensity targets. In both cases, this was done even though the Province itself will be regulating GHGs in new construction over the next decade.

The Province could begin enhancing the powers of municipalities that achieve their targets and curtailing the powers for those that do not. We do not support local councils such as Port Moody being granted the power to regulate GHGs over and above provincial standards, when they have not changed their land use policies to support increased transit access for more new homes. This is especially critical as *CleanBC* recognizes that:

"*Along with directly controlling emissions from their own facilities, operations and vehicle fleets, municipalities and regional districts have the capacity to influence about 50% of our GHG emissions through decisions on land use, transportation and infrastructure that affect where people live and work, how they get around, and how their communities grow and change with time.*"

The Government could also consider limiting the ability of local governments to downzone properties if they are not achieving their targets – unless there is a life-safety issue. It would be

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

counterproductive to downzone properties in the middle of a housing crisis – especially for those communities with excellent transit service.

Provincial Land-Use Decisions

If targets are not met, the Province could impose its own pre-zoning around stations, by establishing "as of right" density and heights. Our members who work in California found that some councils were able to use the threat of losing local control over some planning decisions to convince NIMBY groups to accept more housing. Several older retail areas are now being redeveloped and revitalized with new mixed-use housing projects as a result.

We note that the Ontario Housing Affordability Task Force Report recommends allowing "… '*as of right' zoning up to unlimited height and unlimited density in the immediate proximity of individual major transit stations within two years if municipal zoning remains insufficient to meet provincial density targets*." The intent is not to have to take these steps; it is to ensure that local governments themselves plan and allow an appropriate number of units – given the amount of infrastructure investments made by senior governments in these areas.

As part of its land use decision making, the Province could increase densities even higher if PBR or non-profit housing units are incorporated into projects.

The Government may wish to consider allowing "super" density bonuses on sites where there are projects led by First Nations. We note that there has been little opposition to the Squamish Nation's *Senakw* project by the Burrard Street Bridge with towers as high as 59 storeys. As clearly shown, the densities for this project are well above what has been allowed in the surrounding neighbourhoods. Higher densities are very appropriate in this area. It is close to downtown and has great access to transit/ferries as well as active transportation infrastructure.

Supportive Policies Agreements

On a go-forward basis, the Province could extract **even higher growth from local governments** around stations **through *Supportive Policies Agreements* (*SPAs*)** for new lines and extensions. *SPAs* are agreements between TransLink and local governments that are intended to ensure coordination between the agency and municipalities receiving transit, and a local government's plan for growth along the new lines.

However, there are several shortcomings with the *SPAs* currently:

- They are not signed by senior government partners that are funding the transit projects;
- They are not clear in terms of the targets that local governments need to achieve, and there are no incentives or punitive measures regardless;
- They are not binding on future councils;
- There are loopholes that local councils can use to sidestep the agreements, such as this provision in the *SPA* for the Surrey-Langley SkyTrain Project, "… *the Parties acknowledge and agree that this Agreement is not intended to, and will not operate so as to, create legally binding rights and obligations nor to fetter the lawful discretion and powers of either Party with respect to the subject matter of this Agreement*;" and
- There needs to be a link to incentives and enforcement measures.

UDI believes that if the above changed, there would be an opportunity to use *Supportive Policies Agreements* to deliver even more housing in the future near transit stations and BRT/RapidBus stops because local governments would be agreeing to the provisions. The *SPAs* could be used to establish additional targets – not just along new lines or extensions – but for other transit stations and BRT/RapidBus stops that are already in place in the municipalities signing the *Agreements*.

This type of agreement which binds future councils is already in place through *Phased Development Agreements (PDAs).* These *PDAs* allow councils to establish agreements with developers, which can last up to 20 years and bind the specific zoning and subdivision servicing provisions that will apply to the sites under the *Agreements*.

Municipalities that do not have rail transit, and may not for the foreseeable future, could still benefit from *SPAs.* They would address the traditional issue of municipalities being wary of delivering density along corridors when transit service is subpar, and transit agencies being wary of improving services without the requisite density or ridership in place. For example, Langford, which has been taking more than its share of growth in the Capital Regional District, could agree to densify along a key corridor if a RapidBus is put in place by an established date. BC Transit would be comfortable in providing the improve service levels before the density is fully in place as there would be agreed upon density levels along the RapidBus corridors, and penalties (e.g. higher regional taxes) if they are not achieved in set timeframes.

Using Debt as an Incentive

Another approach that could be used is placing some of the debt of the new lines (e.g. the costs for the stations) onto municipalities. However, local governments could avoid interest charges

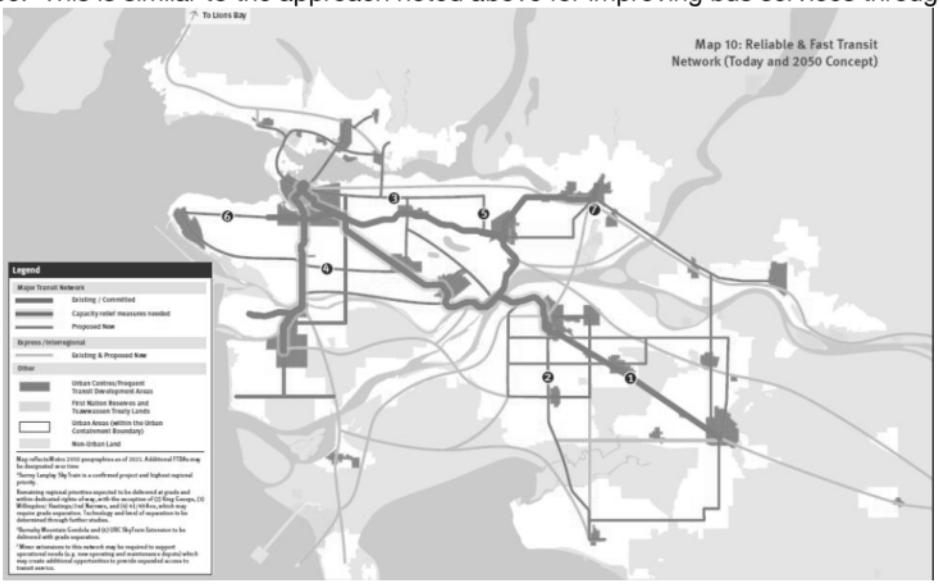
PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

and pay off the debt if they achieve their housing targets in a timely way. The Province could reduce the debt every time a unit is delivered along the new line – or other stations that are already built in the municipality.

Prioritization of Transit Expansion through Housing Delivery
TransLink's *Transport 2050* includes a large number of future lines that will be constructed over the next thirty years, but they are not prioritized as of yet. In the past, this has been determined with little reference to how much housing local governments will deliver as a result of the new and substantial infrastructure investments. The Province and the Mayors' Council could prioritize future transit lines, in part, by asking which local governments will deliver the most housing at their new as well as current stations, and establishing this as an important criterion in determining the prioritization of investments.

Many of the new lines being contemplated by TransLink in *Transport 2050* will be BRTs, which may not attract as much investment as rail options. If an *SPA* is signed or the Municipal Debt approach noted above is adopted, a local government could work with the Province and TransLink to upgrade the BRT route to an LRT or SkyTrain line; although for investments that cross municipal borders, this would require a few local governments to agree to the higher level of service. This is similar to the approach noted above for improving bus services through *SPAs*.



Transport 2050's rapid transit expansion plan. (TransLink)

Review Period

UDI recommends that before penalties are applied, there should be a review period; to address extenuating circumstances, or where more units can be delivered with changes to municipal policies.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

The Province, could first discuss why the targets were not achieved with those local governments, Transit Authorities, Regional Districts, UDI and Canadian Home Builders' Association Chapters/members. For example, if a municipality can demonstrate that there will likely be a substantial increase in new housing units because they have a high number of Re-zonings and *Development Permits* issued, then the Province does not need to act.

If this is not the case, changes in the market, environmental conditions, resource limitations and delays in senior government approvals could have prevented municipalities from achieving their targets. However, it could also be that municipal policies and processes need to be improved. These discussions could prove critical to making sure that improvements are made, more housing can be built in the future, and targets in the future are achieved. **We recommend that at the conclusion of a review, a binding agreement, such as a Supportive Policies Agreements be put in place to ensure the delivery of housing in the future.** If a municipality refuses to act or sign an agreement with the Province when they have clearly failed at achieving their targets, the Ministry Responsible for Housing could utilize enforcement mechanisms.

Capacity Considerations

In addition to the recommendations for implementing housing targets described above, there are other capacities that will impact on the ability of builders and municipalities to meet housing targets that should be considered.

- Industry capacity to develop and construct increased housing volumes – including trades and consultants;
- Municipal capacity to review and approval development applications as well as complete area plans;
- The alignment of senior government and municipal permit processes to avoid unnecessary delays; and
- *Metro 2050*, may have to be amended to further expand the residential uses that will be allowed on employment lands near transit stations. Currently, Metro Vancouver staff are recommending that affordable residential homes be allowed *"… within 200 metres of rapid transit stations within Urban Centres or Frequent Transit Development Areas..."* if the units are built on top of employment spaces. UDI has recommended that this be increased to at least 400 metres, so local governments would have the option of building more affordable homes near transit stations.

We encourage the Province to consider how capacities may need to be increased to meet housing targets in the future, and would be happy to continue to collaborate on solutions to address these potential challenges.

Recommendations and Conclusion

It is critical for the Province to take a leadership role and provide municipalities with enforceable housing targets. UDI has provided several recommendations for Province as it considers the use of housing targets:

1. That the Province establish global housing targets which can then be allocated to municipalities – specifically the areas around transit stations and stops.
2. Any methodology adopted should account for the following factors:
    - Projected immigration as well as inter- and intra-provincial migration;
    - Foreign workers in emerging sectors;
    - Foreign students;
    - Rental vacancy rate;
    - The current level of unaffordability in most B.C. markets and its impact on household formation (the "*affordability adjustment*" noted in the *Opening Doors Report*);
    - The "*competitiveness margin*" noted in New Zealand's *National Policy Statement on Urban Development 2020*; and
    - Netting out demolitions when redevelopment occurs.
3. Municipality level targets be set largely based on current/future access to transit infrastructure and access to Central Business Districts, as well as the land they have available for development.
4. Subsequently, municipal targets be distributed across transit stations and stops to provide the greatest initial opportunity to deliver benefits to the community and accelerate growth.
5. For the initial phase, the housing targets be focused within a minimum of 400 metres of SkyTrain stations and Light Rail Transit (LRT) stations as well as at least 200 metres around Bus Rapid Transit (BRT) and RapidBus stops, beginning with the highest order transit in the region.
6. That the Ministry Responsible for Housing allows local governments some additional flexibility to shift their target requirements between stations, or between BRT and RapidBus.
7. Municipal progress towards targets be measured by the number of units that receive *Building Permits (BPs)*, and include a measure of zoned capacity during the initial transitional phase.
8. The Province gives the Ministry Responsible for Housing the power to establish and regulate targets based on the total amount of newly built floor area around stations/stops and regulate a minimum amount of growth to be achieved at each station/stop.
9. Set a 10-year global target for growth, broken into 2-year increments and apportioned to municipalities. Targets should be updated bi-annually to ensure they remain responsive to the market and to coincide with the 2-year delivery period.
10. A wide range of incentives and penalties if local governments do not achieve their targets.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

11. Senior governments continue to fund the digitization of the development review process through programs like the $15-million *Local Government Development Approvals Program* and potentially assist in the funding of area plans if the number of housing units under those plans substantially increases.
12. Before penalties are applied, there should be a review period; to address extenuating circumstances, or where more units can be delivered with changes to municipal policies.
13. Finally, at the conclusion of a review, a binding agreement, such as a Supportive Policies Agreements be put in place to ensure the delivery of housing in the future.

We believe that housing targets represent an opportunity for the Province to intervene and address the current housing crisis, and encourage consideration of the methods and approaches described in this memo. By implementing housing targets focused around transit, it will compel municipalities to prioritize the delivery of housing.

To: **The Hon. David Eby, Q.C., Attorney General and Minister of Housing**
From: **Anne McMullin, President & CEO, Urban Development Institute (UDI)**
Date: **March 10, 2022**
Re: **UDI Memo on the Report of the *Ontario Housing Affordability Task Force***

Background/Discussion

In December, Ontario's Minister of Municipal Affairs and Housing, the Hon. Steve Clark, appointed an *Ontario Housing Affordability Task Force* to develop recommendations to improve the availability and affordability of market-rate homes.

Released in February of 2022, the *Report of the Ontario Housing Affordability Task Force* referred to in this memo as the *Ontario Report,* includes proposals for the "*ambitious but achievable target*" of 1.5 million new homes over the next ten years. The strategic solutions to achieving this goal include:

- More housing density across the Province;
- Ending exclusionary municipal rules that block or delay new housing;
- Depoliticizing the housing approvals process;
- Preventing abuse of the housing appeals system (which B.C. does not have); and
- Tying financial support to the construction of more housing.

Ontario Housing Affordability Task Force Report Recommendations

The *Ontario Report* outlines 55 recommendations to improve the affordability of housing in Ontario. These recommendations recognize the lack of change associated with demand-side measures that have been put in place when there hasn't been sufficient supply. They also note that Ontario's housing supply challenges are hurting the most vulnerable in society such as new immigrant communities. They argue building supply and streamlining measures as the most efficient ways to build new homes.

Recommendation Comparison: B.C. and Ontario

Many of the recommendations in the *Ontario Report* mirror those in the *Canada-British Columbia Expert Panel's Opening Doors: Unlocking Housing Supply for Affordability Report,* referred to in this memo as the *Opening Doors Report*, as well as UDI's own advocacy. UDI recognizes the Ontario recommendations are very bold, especially with regard to regulating local governments. For example, the explicit direction of reducing funding in municipalities that resist new housing is an approach that has been extends beyond the recommendations of the *Opening Doors Report.* Instead, *the Opening Doors Report* recommends that the Province considers tying transit investments to development approvals and housing targets, where the *Ontario Report* recommends, "***Reductions in funding*** *to municipalities that fail to meet provincial housing growth and approval timeline targets*."

In addition, UDI has recommended that the Province take more direct action to pre-zone near stations if targets are not achieved. The *Ontario Task Force* goes further, recommending: "... '*as*

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

www.udi.bc.ca

of right' zoning up to ***unlimited height and unlimited density*** *in the immediate proximity of individual major transit stations within two years if municipal zoning remains insufficient to meet provincial density targets*."

The O*pening Doors Report* calls for statutory timeframes for each part of the approval process, and the *Ontario Report* recommends to, "*Legislate timelines at each stage of the provincial and municipal review process, including site plan, minor variance, and provincial reviews,* ***and deem an application approved if the legislated response time is exceeded****."*

Below is a summary comparison of the recommendations in the *Canada-British Columbia Opening Doors Report* to the *Report of the Ontario Housing Affordability Task Force* as they apply to key policy themes.

Policy Theme	***Opening Doors Report*: Canada BC Expert Panel**	***Ontario's Housing Affordability Task Force***
Streamlining Processing	• The B.C. government and local governments implement some ideas presented in the *Development Approvals Process Review* (*DAPR*) *Report* including a Provincial policy review to consider tying development approvals to housing targets. • Developing a province-wide digital development permitting system designed to meet local government and industry needs in a streamlining, timely and cost-efficient fashion.	• Require a pre-consultation with all relevant parties at which the municipality sets out a binding list that defines what constitutes a complete application. • Establish province-wide zoning standards or prohibitions for minimum lot sizes, setbacks, minimum heights, angular planes, shadow rules, floor space index, etc., as well limiting floor plate restrictions. • Establish a Province-wide definition of plan of subdivision and a standard set of conditions. • Require mandatory delegation of site plan and minor variances to staff or third parties. • Fund the adoption of a consistent e-permitting system. • Fund "approvals facilitators" who would have the authority to resolve policy conflicts and ensure timelines are met.
Municipal Approvals	• Impose statutory time limits to all stages of the property development process.	• Reduce or eliminate minimum parking requirements. • Limit municipalities from requesting or hosting additional public meetings beyond those that are required under the *Planning Act* (*PA*).

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

		• Legislate timelines at each stage of the provincial and municipal review process... deem an application approved if the legislated response time is exceeded (please note that Ontario already has a standardized municipal approval process under the *PA*).
Transit-Oriented Development	• Require province-wide interests and priorities to be reflected in OCPs. Notably, minimum density requirements and sufficient pre-zoned sites for the development of market and non-market homes around provincially-funded transit infrastructure.	• Allow "as of right" zoning of six to 11 storeys with no minimum parking requirements on any streets utilized by public transit (including streets on bus and streetcar routes). • Infinite up-zoning in height and density around stations should municipalities not achieve their housing targets in these areas.
Housing Targets	• Update the *Housing Needs Reports* methodology to include an "affordability adjustment" and require local governments to use anticipated growth numbers from the *Housing Needs Reports* as binding minimum targets from which to determine land-use policies and decisions.	• Set a goal of building 1.5 million new homes in ten years across Ontario. • Require municipalities to use Ministry of Finance population projections as the basis for housing need analysis and related land use requirements. • Requiring consistent municipal reporting on housing data by enforcing compliance as a requirement for accessing programs under the *Ontario Housing Delivery Fund* (see below).
Government Incentives	• Federal and provincial governments create a municipal housing incentive program rewarding the creation of net new housing supply wherever demand occurs... to recognize municipal costs incurred in growing the housing stock and reward growth of housing supply where it is needed.	• The Ontario government should establish a large "*Ontario Housing Delivery Fund*" and encourage the federal government to match funding. This fund should reward annual housing growth that meets or exceeds provincial targets, reductions in total approval times for new housing, the speedy removal of exclusionary zoning practices. • Reductions in funding to municipalities that fail to meet

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

		provincial housing growth and approval timeline targets. • Waive development charges on all forms of affordable housing guaranteed to be affordable for 40 years. • Prohibit interest rates on development charges higher than a municipality's borrowing rate when the payment of Development Charges is delayed. • Provide provincial and federal loan guarantees for purpose-built rental, affordable rental and affordable ownership projects. • Require municipalities to accept Surety Bonds.

Conclusion

Both reports make clear that Ontario and British Columbia are in the midst of a housing crisis that needs to be addressed now; one that is harming both their economies and their social structures. UDI believes that the strong recommendations in both reports should receive serious consideration by both provinces. However, the key recommendation is the need to establish housing targets for local governments – with a focus on building near transit infrastructure. The targets should come with real incentives and penalties to ensure that they are achieved. If this were to occur, many of the other recommendations would not have to be implemented – or would be at the request of municipalities. Without enforceable targets, it is doubtful that many of the recommendations would have a strong enough impact on their own to solve the housing crises.

MJO UDI & ULI Final Speaking Notes

Please check against delivery

Event: Urban Development Institute: Capital Region – Housing Needs in the Capital Region

Time: 12:00 -1:00pm
Minister speaks at 12:08pm
Followed by a 40-minute Q&A discussion

Length of speech: 10 minutes

Contact: Emily Donner, Events & Admin Coordinator

Logistics:
Please join the meeting at 11:50am for a pre-meeting mic and video check.

Minister Osborne's unique link to join the webinar:
s.15

Event summary:
UDI Capital Region is hosting a webinar with Josie Osborne, Minister of Municipal Affairs, discussing the housing needs of the Capital region and how the province is supporting local governments. The event is a follow up to a discussion on the same topic with Minister Eby that the group had in May 2021.

What does the audience want to hear?
The audience would like to hear about the Province's 30-Point Plan for Housing Affordability in BC and improving local government development approvals processes. They would also like an update on Development Approvals Process Review and Housing Needs Reports and how these pieces all fit together to help communities reach their housing needs in the Capital Region.

Key participants:
- Adam Cooper, Director of Development at Abstract Development (moderator)
- Josie Osborne, Minister of Municipal Affairs

Audience: 50-60 UDI members

Key Messages:

- We are working closely with local governments, developers and housing advocates (including UDI) to increase the supply of housing and get the right homes built for individual communities.
- We understand that a key piece of supporting housing diversity and affordability, particularly for urban areas, is looking at the bigger picture of creating complete, compact communities.
- My ministry has been focused on taking foundational steps that will support local governments and the development sector as we work together to build the housing British Columbians need and create more resilient communities.
- To support more efficient and effective development approval processes, we have introduced legislative amendments to revise public hearing requirements for zoning matters

that are consistent with the Official Community Plan and to allow elected officials to delegate decisions on minor development variance permits to staff.

- This is one important piece in the work all orders of government must do to meet housing needs for people in our communities.
- We know there is more to do and Minister Eby and I are working together to support local governments and the development sector to deliver more affordable housing in B.C.

Agenda

11:50am – Minister Osborne joins our pre-meeting to check mics/video feeds etc.
12:00pm – Webinar goes live, welcome from Moderator
12:03pm – A word from Sponsor
12:06pm – Moderator introduces Minister Osborne
12:08pm – Minister Osborne speaking time begin
12:18pm – Q&A Session and Discussion begins
12:58pm - Final thoughts and thanks from our Moderator
1:00pm - Webinar closes

INTRODUCTION

Good afternoon.

I'd like to acknowledge that I am speaking to you from the territory of the Tla-o-qui-aht [Tu-low-qui-at] First Nation.

Thank you for inviting me to join you today.

Over the next hour, we have an important opportunity to talk about a matter that concerns us all - working together to create resilient, strong communities in the Capital Region and across the Province.

I’m going to keep my remarks brief today because I believe the real value from this meeting will be hearing firsthand from all of you who are doing the important work of delivering housing to communities throughout British Columbia.

I want to hear your thoughts, your questions and your feedback about on the things our government is doing that work for you, and how we can continue to collaborate to get the homes that British Columbians need right now, built faster.

Because it’s conversations like these that will help inform our future policy and make the biggest difference for people.

I’m hoping to gain lots of insight today so please utilize the chat tool.

30-Point Housing Plan

I’ve always believed that we get our best work done when we are working together.

One partnership I’ve been committed to since my early days as mayor of Tofino is collaboration between all orders of government and the development sector on tackling the housing crises in our communities.

It can be tough work, but it’s work we all have to roll up our sleeves and continue to do.

Because everyone deserves a place to call home.

[PAUSE]

All orders of government need to take bold steps to address the housing crisis and provide British Columbians with access to homes they can afford.

Tackling the housing crisis requires both day-to-day work and a long-term vision.

Which is why we took an historic step in 2018 and launched Homes for BC, the largest investment in housing affordability ever in our Province – $7 billion over 10 years.

Since then, we've made real progress – with more than 30,000 homes complete or underway for people who are struggling to find a place to live.

From people who are experiencing homelessness and seniors on fixed incomes, to middle-income families, students and individuals.

We know there is more to do.

And this year, we also announced an additional $2 billion dollar investment to finance the construction of thousands of new homes for middle-income families.

[PAUSE]

Working with the development sector and local governments to get the homes we need built as soon as possible is a top priority for my ministry and for Minister Eby.

We're grateful for your work and need your continued partnership to help us keep delivering more homes, faster.

But as I spoke about at the start, if we're to be successful at managing the housing issues we're facing today, we need to collectively understand our end goal – we need a vision.

Resilient Communities

Our government understands that a key piece of supporting housing diversity and affordability, particularly

for urban areas, is looking at the bigger picture of creating complete, compact communities.

We cannot achieve the housing we need without the transportation and infrastructure systems to support it.

My ministry is working with the Ministry of Transportation and Infrastructure to develop an approach to effectively integrate land use and transportation planning decisions.

And here’s where the long-term vision comes into focus.

As we work towards building complete, compact communities everyone wins, and housing, climate action, economic development and community health are all supported.

And we move the dial toward cleaner, more sustainable and resilient communities for our future and our children's future.

I will have more to say about this approach in the months ahead.

But I will point out one tactic that is already being used in other urban areas to advance this integrative approach.

Supportive Policy Agreements between TransLink and host local governments are bridging the gaps between large transit projects, like the Broadway Skytrain extension in Vancouver and the new Surrey-Langley Skytrain, and how the land around them is being used.

I know that what we learn from these partnerships will inform and greatly benefit how we work together in **all** communities, to create strong, resilient places to live for the future.

[PAUSE]

Each and every one of you, as urban developers, local government representatives and housing advocates, are key partners in this work.

And I know that many of you are already working together through community development planning and collaboration on innovative ways to contribute to sustainable regions across the province.

At the same time, my ministry has been focused on taking foundational steps that will support local governments and the development sector as we work together to build the housing British Columbians need and create more resilient communities.

Development Approvals Processes

On Tuesday, we introduced legislative amendments which when passed will give local governments more tools to simplify and speed up their development approvals processes, helping to get the homes people need built faster.

The amendments will update the *Local Government Act* to:

- remove the default requirement for local governments to hold public hearings for zoning bylaw amendments, as long as they are consistent with the official community plan; and
- enable local governments to delegate decisions on minor development variance permits to staff.

These tools will support local governments to move forward more efficiently on developments, bypassing barriers and speeding up housing approvals.

They were identified through consultation with housing providers and builders, including UDI, local governments, housing advocates, and other important stakeholders as part of our ongoing Development Approvals Process Review.

These changes will build on the work of the Local Government Development Approvals Program that is providing $15 million to help local governments modernize development permitting and approvals by removing barriers and streamlining processes.

43 local government projects [option to include the three CRD communities that received funding – Central Sannich, Colwood, and Sooke] were recently approved under the program and are now underway across B.C.

Housing Needs Reports

Another important step forward is the requirement for local governments to develop housing needs reports,

Because every community's housing needs are unique and local governments know best how to address those needs.

Since the program started, 144 local governments and seven modern Treaty Nations have received funding to help them assess their communities' housing needs.

Including all communities in the capital regional district.

This means towns, cities and municipalities in British Columbia will soon have the detailed information they need to make the best decisions for housing in their communities.

Everybody benefits when that happens, and most importantly, access to good housing makes life better for people, now and in the future.

Many housing needs reports are now complete, and we're already seeing how they are helping shape planning and land use decisions around current housing gaps.

These reports are also supporting community partners, including non-profit housing providers and home builders – giving them up-to-date information about municipalities and regional districts, including some First Nations.

In fact, in my own hometown of Tofino, I've seen home builders and developers step forward with proposals citing information and direct quotes from the housing needs assessment our community completed a few years ago.

This is important work, and it is continuing – guiding us as we build healthier, more resilient communities throughout the province.

Rental Zoning

We have also implemented legislative changes allowing local governments to require new housing in multi-family residential areas to be developed as rental units or preserve existing rentals in residential areas through their zoning bylaws.

This authority provides another way for local governments to address the housing crisis – and we are seeing many communities using it.

For example, the City of Victoria has incorporated a rental zoning framework into its bylaws, to enable use of the tool on a site-by-site basis.

So far, rental zoning has been applied to several new developments, including earlier this month when the City approved a 42-unit rental development close to downtown.

We are continuing to work with local governments as they consider whether and how to use this rental zoning tool.

We are also developing a guide for local governments outlining good practices for supporting new rental housing supply.

And this guide was postponed is expected to be ready later this year.

Conclusion

We are experiencing a housing crisis in our province.

No one solution can lift us out of that crisis, just as no one issue brought this challenge upon us.

We've all heard about measures being taken in other jurisdictions to combat housing issues.

I’m sure there are as many potential responses for dealing with housing supply and affordability as there are municipalities in B.C.

Because as I’ve said, each community in our province is unique, and has unique needs.

This is why our government has chosen the path of working closely with local governments, developers and housing advocates to get the **right** housing built for individual communities.

And we've chosen to engage with colleagues across ministries and at the federal level on the work we are doing, so that when houses are built, the vital transportation and infrastructure to service people is also in place.

This is all critical to economic recovery from the pandemic and the long-term sustainability of healthy communities.

And we all have a stake in this.

I am inspired by what we've accomplished so far.

I am committed to continuing this work with all of you and am eager to dive into the hard work in the months and years ahead.

[PAUSE]

Now, its time to hear from you.

I miss the in-person gatherings where we could so easily facilitate a dialogue, but we will rely on technology for today.

So I want to see that chat tool really heating up.

I understand we have a couple of predetermined questions, and then I'd like to hear more from you, whether it's a question, feedback, or to share best practices and ideas.

Your voices are so important for informing our vision for the future, so don’t hold back.

Let’s begin.

--30--

Speaking Notes

Hon. Josie Osborne

Minister of Municipal Affairs

ULI: British Columbia
Webinar: A Conversation with Honourable Josie Osborne, Minister of Municipal Affairs

Jan. 20, 2021
12:00pm

Length of speech: 10-15 minutes

Contact: Shannon Paterson, Events & Admin Coordinator; 604.761.8060

Logistics:
Please join the meeting at 11:50am for a pre-meeting mic and video check.

Below are the Zoom links to attend the meeting:

Join from PC, Mac, Linux, iOS or Android:
s.15

Event summary:
ULI BC chapter is hosting a webinar with Minister Osborne discussing the housing needs of communities across B.C. and how the Province is supporting local governments and the development sector to meet those needs.

ULI is a global, member-driven organization comprising more than 45,000 real estate and urban development professionals. In B.C., ULI's membership is mostly focused on Metro Vancouver with a view to expanding to the Fraser Valley. Its goal is to provide professional development opportunities for real estate and urban development leaders and to be fully engaged in communities to help them tackle the greatest urban challenges they face now and in the future.

What does the audience want to hear?
The audience would like to hear about the Province's 30-Point Plan for Housing Affordability and the plan to improve local government development approvals processes. They would also like an update on the Development Approvals Process Review, housing needs reports and rental zoning.

Key participants:
- Duncan Wlodarczak, Chair of Urban Land Institute: British Columbia (moderator)
- Josie Osborne, Minister of Municipal Affairs

Audience: 50-60 ULI members (real estate and urban development professionals)

Key Messages:

- Our government is working closely with local governments, developers and housing advocates, including ULI, to increase the supply of housing and get more of the right homes built for people faster.
- We understand that a key piece of supporting housing diversity and affordability, particularly for urban areas, is looking at the bigger picture of creating complete, compact communities.
- My ministry has been focused on taking foundational steps that will support local governments and the development sector as we work together to build the housing British Columbians need and create more resilient communities.
- To support more efficient and effective development approval processes, we have:
    - revised public hearing requirements for zoning matters that are consistent with the Official Community Plan,
    - supported local governments with funding to streamline and approve their development processes, and
    - given elected officials the ability to delegate decisions on minor development variance permits to staff, to help speed up the process.
- These are just a few key examples of the important work all orders of government must do to meet housing needs for people in B.C. communities, and ensure that everyone has a safe, affordable place to live.
- We know there is more to do, and Minister Eby and I are committed to continuing to work together to prioritize supporting local governments and the development sector to deliver more affordable housing in B.C.

Agenda

11:50am – Minister Osborne joins our pre-meeting to check mics/video feeds etc.
12:00pm – Webinar goes live, welcome from moderator
12:06pm – Moderator introduces Minister Osborne
12:08pm – Minister Osborne speaking time begins
12:18pm – Moderated Q&A begins
12:38pm – Audience Q&A begins (Zoom chat tool – moderator to facilitate)
12:58pm – Final thoughts and thanks from moderator
1:00pm – Webinar closes

INTRODUCTION

Good afternoon.

I'd like to acknowledge that I am speaking to you from the territory of the Tla-o-qui-aht [Tu-low-qui-at] First Nation.

Thank you for inviting me to join you this afternoon.

It's a pleasure to be speaking to you for the first time in my role as Minister of Municipal Affairs.

As Minister of Municipal Affairs, I'm incredibly grateful for the opportunity to work with partners committed to building stronger, more resilient communities.

Whether it’s in Metro Vancouver, the Fraser Valley, or in communities across the Province, housing is a cornerstone of this work.

The Premier has mandated me to work with the Minister responsible for Housing, David Eby, to help local governments streamline and modernize their development permitting and approvals.

When we speed up the development process, we get more housing supply, and that helps to bring the cost of housing for British Columbians down.

This collaboration is well under way and I’ll be sharing more on our work to date and where we’re going.

But today, is also an opportunity to hear directly from all of you.

I want to hear your feedback and discuss how we can continue to collaborate to get the homes that British Columbians need right now, built faster.

I've always believed that we get our best work done when we are working together.

As developers and housing advocates, I know you're on the front lines delivering on the housing needs in urban communities across the province.

It’s conversations like these that will help inform our future policy and deliver on our shared goal of housing British Columbians.

[PAUSE]

Since being first elected as mayor of Tofino, I’ve been committed to collaboration between all orders of government and the development sector on tackling the housing crisis in our communities.

It can be tough work, requiring us all to roll up our sleeves, and it’s work that our government is committed to advancing…

Because everyone deserves a place to call home.

[PAUSE]

Tackling the housing crisis requires ongoing work that supports a long-term vision.

In 2018, our government launched Homes for BC, the largest investment in housing affordability ever in our Province – $7 billion over 10 years to deliver 114,000 affordable homes.

Since then, we've made real progress – with more than 30,000 homes complete or underway for people who are struggling to find a place to live.

From seniors, to students, to people experiencing homelessness, these homes are benefitting British Columbians in every corner of the province.

We're also investing an additional $2 billion to finance the construction of thousands of new homes for middle-income families.

We know there is much more to do.

Which is why Minister Eby and I are committed to working with the development sector and local governments to meet housing needs in growing communities.

We're grateful for your work and for your continued partnership with the Province to deliver the homes we need.

But as I spoke about at the start, if we're to be successful at managing the housing issues we're facing today, we need to collectively understand our end goal – we need a vision.

Resilient Communities

Our government recognizes that a critical piece of supporting housing diversity and affordability – particularly in urban areas like Metro Vancouver and the Fraser Valley – is the creation of complete, compact communities.

This work is at the heart of a strategy being developed by staff in my ministry and the Ministry of Transportation and Infrastructure around effectively integrating land use and transportation planning decisions.

The idea is to build the communities of the future. Ones that are diverse, affordable, and resilient, connected by efficient transportation systems.

We know families and individuals thrive when their communities are truly livable…

Where there's access to reliable systems that link together neighbourhoods, regions, services, jobs, greenspaces and amenities.

I will have more to say about this approach in the months ahead.

But this work is already underway in parts of Metro Vancouver.

Supportive Policy Agreements between TransLink and local governments are bridging the gaps between large transit projects, like the Broadway Skytrain extension in Vancouver and the new Surrey-Langley Skytrain, and how the land around them is being used.

As we build complete, compact communities, we're supporting affordability, economic growth, and community health.

And we know the development of these communities will help us reach our collective climate goals.

We recognize that local governments are leaders in climate action and the Province is here to support them.

We've set aside $11 million dollars to help local governments plan better for building complete, compact, energy efficient communities.

And, over the coming months my colleague, Minister Heyman, and I will establish a new program to support local governments' broader climate actions.

[PAUSE]

Each and every one of you, as professionals in real estate and land use, local government representatives and housing advocates are key partners in this work.

And I know that many of you are already collaborating on community development planning and creative ways to contribute to building sustainable regions across the province.

At the same time, my ministry has been focused on taking foundational steps that will support local governments and the development sector.

Development Approvals Processes

In the fall, we made legislative changes giving local governments more tools to simplify and speed up their development approvals processes, helping to get the homes people need built faster.

Local governments can now hold public hearings for zoning bylaw amendments, as long as they are consistent with the official community plan,

And they can delegate decisions on minor development variance permits to staff.

These tools allow local governments to move developments forward more efficiently, bypassing barriers and speeding up housing approvals.

They were identified through consultation with housing providers and builders (including ULI), local governments, housing advocates, and other important stakeholders as part of our ongoing Development Approvals Process Review.

[PAUSE]

While these amendments affect virtually all of B.C.'s local governments, I will note that they do not apply to Vancouver as the City already has a broader ability to delegate matters to staff,

And unlike Official Community Plans, Vancouver's Official Development Plans do not require public hearings.

But we've been in touch with the City and are committed to working together to support Vancouver's plans to improve their development approval processes as well.

[PAUSE]

These legislative changes build on the work of the Local Government Development Approvals Program that is providing $15 million to help local governments modernize development permitting and approvals.

43 local government projects, including nine communities in Metro Vancouver and three in the Fraser Valley, were approved under the program and are now underway.

Housing Needs Reports

Another important step forward on housing supply and affordability is the requirement for local governments to develop housing needs reports.

Every community's housing needs are unique and local governments know how best to address them.

Since the program started, 144 local governments and seven modern Treaty Nations have received funding, including most communities in Metro Vancouver and the Fraser Valley.

This means communities across British Columbia now have detailed, relevant information to help them make the **best** decisions for housing in their communities,

And that benefits everyone – community partners like non-profit housing providers and home builders, and most importantly, the people who need homes.

Many reports are now complete, and we're already seeing how they are helping shape planning and land use decisions around current housing gaps.

This important work will continue to guide us as we build healthier communities throughout the province.

Rental Zoning

We have also implemented legislative changes allowing local governments to use their zoning bylaws to require new housing in multi-family residential areas be developed as rental units or preserved as existing rentals.

This authority is already giving many communities, including Burnaby, Richmond and Vancouver another way to address the housing crisis.

In addition, we are developing a guide for local governments outlining good practices for supporting new rental housing supply, which is expected to be ready early this year.

Conclusion

An incredible amount of work has been done since 2018 and yet, the housing crisis persists.

No one solution can lift us out of this crisis, just as no one issue created it.

Our government has chosen the path of working closely with local governments, developers and housing advocates.

Because we know that each community has its own unique needs, and it's important we get the **right** housing built for British Columbians.

We've chosen to engage with colleagues across ministries and at the federal level on the work we are doing so that when houses are built, the vital transportation and infrastructure to service people are also in place.

This work is critical as we emerge from the pandemic and continue to support the long-term sustainability of communities across the province.

I am motivated by what we've accomplished so far and am eager to dive into the hard work with all of you in the months and years ahead.

Thank you.

Hi Doug,

I haven't done a deep dive or proper analysis of the entire proposal, but here are some initial high-level thoughts for consideration for Teri/MDE. I have not added any bullets signaling future initiatives. The DAPR bullets are from MUNI.

High-level Points:

- We appreciate the perspective of UDI as a key stakeholder and representative of the development sector.
- The summary presents an in-depth suite of proposals, many of which staff in the ministries of Housing, Municipal Affairs, Transportation and Finance are aware of and review as part of ongoing policy analysis. The summary has been shared with staff for review.
- Housing Policy staff work closely with the Ministry of Transportation, Municipal Affairs, TransLink and the Cities of Vancouver, Surrey, Langley and Langley Township on federal/provincial funded mass transit projects in those communities to ensure market and affordable housing are delivered as part of those major projects (#30 of the 30 Point Plan).
- Government staff have reviewed the 55 recommendations of the Ontario Housing Affordability Task Force, the majority of which focus on land use planning and municipal governance. This information is examined together with related policy initiatives from other jurisdictions as part of our ongoing strategic housing policy analysis.
- As part of its Development Approvals Process Review, the Ministry of Municipal Affairs has implemented policies to support more efficient and effective development approval processes, including:
    - revised public hearing requirements for zoning matters that are consistent with the Official Community Plan,
    - supported local governments with funding to streamline and approve their development processes, and
    - given elected officials the ability to delegate decisions on minor development variance permits to staff, to help speed up the process.
- The Province has made great strides implementing the 30 Point Plan and we recognize that more work needs to be done to move the needle on housing to ensure BC's economic competitiveness for years to come.

Points and my initial thoughts on the following:

Good afternoon Minister Eby,

Ahead of the meeting with UDI's Executive Committee on Thursday, please find attached our suggested agenda and materials. Following the meeting, we would be happy to follow-up with any additional background or support that is needed.

If there are any questions, please let us know.

Warm regards,
Cassandra

Tiffany Warkentin
Director, Strategic Policy
Building and Safety Standards Branch
Ministry of Housing
PO Box 9844 Stn Prov Govt
Victoria BC V8W 9T2

Dear Ms. Warkentin:

Re: Greenhouse Gas Intensity (GHGI) Targets

On behalf of UDI, I would like to thank you for extending the comment period for us, so we could discuss our response with the Canadian Home Builders' Association of BC (CHBA BC).

Based on the discussions at the Energy Step Code Council (ESCC) and through the review of the *Metrics Report* and proposed *Carbon Pollution Standards*, we recommend that the Province remain in a leadership role with regard to the ongoing work with the *Metrics Report* and *Best Practices Guide* and delay the implementation of Greenhouse Gas Intensity (GHGI) targets by municipalities. UDI does not have any issue with local governments proceeding with consultations this summer regarding the GHGI targets, but we have concerns about decisions being made about them in a short timeframe when the information is incomplete.

Background and Context

A key question for UDI is the timing of when local governments will be able to make decisions on the GHGI targets as well as how they will integrate them with their *Energy Step Code* (*ESC*) targets. The length of the consultation periods is also critical. However, it is stated in the *Carbon Pollution Standards* PowerPoint presentation that "… *local governments may change their bylaws*," this summer. We are also concerned that the Province is only going to have a six-week consultation process after the release of the documents (and GHG data tables) to meet the summer deadline, and then local governments will rapidly move forward with their decisions.

We are rushing forward to allow local governments to make potentially critical decisions when there will not be enough information for those decisions to be made in the short timeframes being proposed. This is also occurring a few short months before the

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

municipal election. We also note that construction costs are rapidly increasing (due to supply chain issues) to the point where they are difficult to estimate for projects.

It would help local governments and the industry to have the time to understand the impact of these cost pressures and more work is needed with regard to the costing analyses. It is stated in the draft *Metrics Report* that "*This document is meant to be an initial costing analysis …,*" and "*… a more detailed or specific analysis …,*" is needed. **We recommend that the Province lead this work as opposed to leaving it to industry and local governments who have less capacity to conduct this work and to ensure there is more consistency.**

However, UDI does not have a problem with the summer deadline or allowing local governments to start their consultation processes on the GHGIs then, but we recommend that no decisions be made by councils regarding the GHGIs until after:

- **A more thorough *Metrics Report* is completed by the Province with more consultation with municipalities and their building industries (see below);**
- **The new energy efficiency requirements in the *B.C. Building Code* (*BCBC*) are in place, which is supposed to occur in December.**
- **The B.C. Utilities Commission (BCUC) has made decisions regarding the BC Hydro Tier 2 Rates, and the Fortis Renewable Natural Gas (RNG) proposal;**
- **There has been substantial progress made on the electrical extension fees issue, which is described in the *Bulletin*;**
- **A more detailed *Best Practices Guide* is released (or the current *ESC* one is updated); and**
- **January 1, 2023.**

UDI is generally supportive of the *Roadmap* for Provincial requirements noted in the *Carbon Pollution Standards* PowerPoint presentation:

- Medium carbon (decarbonization of space or hot water heating) in 2024;
- Low-carbon (decarbonization of space and hot water heating) in 2027; and
- Zero-carbon ready (all systems use low-carbon fuels) in 2030.

However, there are still several issues that need to be resolved over the next few years before the provincial regulations come into effect.

Part 3 Metrics Report

We want to thank the Ministry for adding the information in the *Part 3 Metrics Report* for Climate Zone 5. There are a substantial number of large buildings being constructed by our Okanagan Chapter, so it is important that this information be included in the *Metrics Report*. However, there are still several issues with the current *Metrics Reports* if it were to be used as the basis for municipal decisions on GHGI targets.

First, it only provides the costs of the measures needed to lower GHGs – not the costs of meeting the higher *ESC* steps with the GHG reduction measures – which builders and regulators need to understand. On pages 11, 19 and 25 there are tables with the energy efficiency measures needed to go above the Step 2 base case, which potentially could be used to estimate these costs.

Second, we also need more viable options for the industry to assess. For Low-Rise MURBs in the Okanagan, few options are shown that would be realistic as there are many with Initial Capital Costs (ICCs) that are $40 to $67 per square metre (with no annual energy cost savings).

There is also nothing modelled for the higher steps of the *ESC* for hotels and retail, and no modelling has been done for mixed-use buildings, which many of our members build.

On page 10, the average cost for the ten lowest ICC options are listed "… *for each archetype, Step and climate zone* …". However, they are not identified (could they be?), so it is difficult for builders to assess their viability. In the *Carbon Pollution Standards* PowerPoint presentation, the Ministry indicates that the GHG data tables will be released on the website for the public consultation. It is not clear how user friendly the GHG data tables will be and the timeframe for the consultation is only six weeks. Clear and viable options (with costs) to meet the GHGI targets will be needed by our members to assess what is being asked of them.

Third, it is critical to understand that the industry has not experienced the same costs as identified in the previous metrics reports on the *ESC*. They have generally been higher; in part, due to companies needing to learn new ways of building. For this reason, it is even more important to have a robust and detailed *Metrics Report* for GHGIs.

We need several realistic options that would be used by the industry and accepted by local governments. The GHG reduction options in the *Report* do not represent what the industry is building; what local governments would want; or what the Province is advocating through *CleanBC*. For example, Heat pumps were not modeled for hot water heating… *to reduce modelling runs*," even though "… *these are likely to be a common and viable decarbonization measure* …".

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

For low-rise MURBs, the *Report* indicates one of the most cost effective way to achieve Zero-Carbon Ready is electric resistance for hot water heating and electric baseboards for space heating. Electric resistance for hot water is not used by many of our members because of high energy costs. Many projects in the Okanagan and other areas use heat pumps for space heating because they can be used as air conditioners during the hot summers. There is also an assumption that portable A/C units will be used which would occupy too much space in new units – where space is premium.

Heat pumps are also what local governments and BC Hydro have been pushing the industry to use. UDI has held seminars telling our members to start using heat pumps because we were told this is the future. Hundreds of thousands of heat pumps are supposed to be installed in the Province over the next decade according to the Government's own *CleanBC Roadmap*, but the *Metrics Report* undermines this and shows heat pumps lead to much higher initial capital costs and higher annual modelled utility costs.

Fourth, the following is stated in the draft *Report* – "*This document should not be considered an exhaustive costing study to meet the carbon pollution steps in your area. This analysis is not representative of all buildings in all situations. Local governments and the construction industry should conduct more detailed or specific costing analysis which builds on this initial analysis*."

We are concerned that there may be an expectation that in the six weeks of consultation, industry and local governments will download the GHG data tables and determine what is best for their areas. There is no way that industry associations and local governments are going to do this work – especially in a short time period. Municipalities will be relying on the *Provincial Metrics Report*. **This is why we recommend that the Province continue its work with the *Metrics Report* to make it more robust and detailed.** We note that the Ministry has to do this work anyway for its own GHGI requirements for the *BCBC* that may be starting this year (reporting GHGs) and in earnest by 2024.

Finally, due to the timing of the *Metrics Report*, it does not reflect the proposal that Fortis has put forward to the BCUC about RNG, and it will not reflect whatever decision the Commission makes with regard to RNG or pricing for it. **As a result, we recommend a more detailed *Metrics Report* be released to reflect the regulatory environment for RNG after the BCUC makes its decision.**

Our key recommendation is the Province take a larger role with a follow-up *Metrics Report*. We support the Province releasing the draft *Metrics Report* (and GHG data tables), but use it to have consultations with local governments and their industry associations to develop a more detailed *Metrics Report* with more viable options for each climate zone. This information can then be used to

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

develop a more detailed *Best Practices Guide* (see below) and improve local government consultations with industry on GHGI targets.

Again, we do not have an issue with a Regulation coming out in the summer allowing local governments to proceed with their consultations. However, as noted above, decisions should be deferred until after a detailed *Metrics Report* and *Best Practices Guide* are released and other issues are resolved.

Provincial Policy Bulletin

The *Bulletin*, is called the *Provincial Policy Bulletin for Reducing Greenhouse Gasses from New Construction: A* ***Best Practices*** *Bulletin for Local Governments and Other Authorities Having Jurisdiction*. Is this *Bulletin* also the *Best Practices Guide*? If it is, more details will be needed (e.g. incentives, timing/geographic scope of the GHGI target steps, electric vehicle charging, urban design issues), as the original *BC Energy Step Code: A Best Practices Guide for Local Governments* was 48 pages. If it is isn't, using "*Best Practices*" in the title of the *Bulletin* will be confusing.

Under the *About the Greenhouse Gas Reduction Targets* section, you may also want to consider numbering the GHGI levels as is done with the *ESC*:

1. "*Measure-only (requires measurement of a building's emissions without reductions, and is intended to build knowledge and capacity);*
2. *Medium carbon (in most cases, will require decarbonization of either space heating or domestic hot water systems);*
3. *Low carbon (in most cases, will require decarbonization of both space heating and domestic hot water systems); and*
4. *Zero-carbon*."

With regard to the final step, we are still not sure it is necessary. It is doubtful that Fortis would hook up natural gas to a building for gas cook tops. Also, is it "*Zero-carbon*", or "*Zero-carbon ready*" (as noted in the slide deck)?

We agree with CHBA BC that the proposed *GHGI Roadmap* for Provincial requirements (noted above) be included in the *Best Practices Guide* to provide more context for local governments.

On page 3, it is stated that "*Local governments may apply different tiers of GHG reduction, which establishes maximum modeled emissions levels for new construction for different building types*." Are we assuming they can go to Zero Carbon immediately? Can we say, they "… *will be able to eventually apply* …"? **If this is the *Best Practices Guide*, much more advice is needed regarding when and how far local governments should proceed with regard to mandating the different steps of the**

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

GHGI reductions in new construction, and how this relates to their implementation of the higher steps of the *ESC*. This needs to include the timing of the changes, whether they are community-wide and the types of incentives that should be offered as well as potential changes to design guidelines.

UDI supports the general approach proposed for Part 3 under the section, *How It Works: Part 3 Buildings*. However, the GHGI targets for MURBs have been reduced. UDI has not signed off on this, but we are willing to discuss it further. We note that for Office, the metrics were reduced and the initial capital costs are high.

UDI, would accept the proposed Peer Network changes to the GHGIs being put in the Regulation this summer with a key caveat. If it is found through the more detailed *Metrics Report* work that the new targets will be difficult or costly to achieve in some climate zones, then there may have to be additional time limits on when the Low and Zero Carbon targets should be utilized by local governments through the *Best Practices Guide*; or the targets themselves may have to be adjusted – as was done several times with the *ESC*.

UDI supports the proposed approach under *How It Works: Part 9 Buildings*. We agree with the plan to offer a prescriptive approach for Part 9 buildings (as long as it remains an option for builders) to manage issues such as the Fort Nelson high carbon emitting power grid. However, will you be specifying how builders can "*Decarbonize both heat and hot water*"? It would not help to fully electrify their buildings and we are unclear if they can access RNG.

On page 6, under *Monitoring*, it is stated that "*The Local Government Peer Network will monitor uptake of the GHG reduction targets, and provide regular updates to the Province and the Energy Step Code Council*." This is an appropriate and balanced approach. However, what if a municipality does not follow Provincial, Local Government Peer Network and ESCC advice or the guidance in the *Bulletin* or *Best Practices Guide*?

We would also ask that the Peer Network create a webpage (maybe on energystepcode.ca) that includes the updates on municipal actions regarding GHGI adoption as well as the *ESC*. This would make it easier for industry associations to notify their members of municipalities starting the process to adopt GHGI targets as well as update them as local governments move forward with adoption. Ideally, this information would include potential adoption dates.

Under the first bullet point on page 6, in the *How to Implement* section, we would consider specifically noting the upcoming *Best Practices Guide* if it is coming.

With regard to the thermal conditioning permitting, it is very important that this not lead to longer processing times. Also, are municipalities allowed to use these permits now? We

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

are asking because if this is a new power, it could applied to existing buildings. If this is the case, we need to include owners of existing buildings in the discussion.

It is not clear why the language for the sub-bullet point, "*Local governments **may wish** to use common forms across jurisdictions to improve consistency for industry*," is weaker than the main bullet – "*These permitting processes **should** be coordinated with other local governments and simple to follow and administer*."

On page 7, in the *Relationship to the BC Energy Step Code* section, it is noted that the Province will be increasing energy efficiency requirements in the *BCBC* this year. Can we put in the actual date, as the December date is noted in the Bulletin already?

We are hoping the third paragraph on the page will not be necessary, as Step 3 for Part 9 and Step 2 for Part 3 will already be in place (see recommendation above) when the Provincial energy efficiency requirements are in the *BCBC*. For the same reason, we are concerned about municipalities introducing requirements "… ***on** or after December 2022* …". As noted above, we do not believe decisions should be made until after December 2022.

UDI is very pleased that the Province is recommending the current approach of relaxing the *ESC* step for lower carbon outcomes under the *Recommended Approaches for Step Code Communities* section, but there is no advice limiting what GHGI level municipalities can mandate in the initial stages – as was done with the *ESC Best Practices Guide*.

We do not understand the need for the *Recommended Approaches for Non-Step Code communities* section. This sounds like we are unnecessarily rushing forward to the point where you are going to confuse the industry with changing requirements – potentially three changes in a short period of time.

It is not clear under the *Minimum timelines* section on page 8, what is meant by "*When local governments introduce new GHG targets for buildings, local governments are advised to notify industry that they will be enforcing them at least 6 months prior to requirements coming into effect.*" Does the six-month period begin after councils adopt the GHGIs in by-laws? We ask that it does.

There is also no information provided on how long the consultation period should be with industry before councils adopt the GHGI bylaws. This is important, especially if you are asking municipalities to "*Take a regional approach and coordinate*?" In addition, under the *In-stream Requirements* section, "… *a lengthy consultation process prior to the adoption of a bylaw referencing the GHG targets*," is referenced as a reason to reduce the in-stream protection timeframe. However, it is not clear by how much or what a "*lengthy process*" would be. It is also not clear why the 12 month period would be

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

reduced if you met the first test of having a permit application into the municipality within the initial six-month period after adoption.

With regard to the regional approach, there needs to be some discussion regarding how this would work with consultations with local industry associations. For example, it is not clear whether the consultations would be done at a regional level – or by municipalities individually?

In terms of the *In-stream Requirements*, more clarity is needed regarding how they would be applied. A diagram would likely help. In fact, we should consider a diagram for the entire process – consultation to Council decision through to instream protection.

We are pleased that there is a discussion on *Electrical Extension Fees*. However, the three solutions offered are not feasible – including allowing for the use RNG because, as noted in the *Metrics Report*, "*… there is no mechanism available … to ensure low-carbon fuels will be used for the life of the building …," so it "… is not a compliance path at this time*;" hence our recommendation to delay any council decisions regarding the GHGI targets until these issues are resolved.

Again, we are pleased that the *Bulletin* addresses *District Energy Systems* (DESs), and we support the option of allowing the municipalities and utilities to provide the emissions factors for the modelling of GHGIs as well as the recommendation for local governments to "*Not establish GHG targets for buildings that cannot reasonably be achieved by buildings compelled to connect to district energy systems*." This should resolve any potential issues when local governments mandate DES connections. However, the overall issues still needs to be addressed when the Province institutes its own GHGI regulations later this decade.

Part 9 Buildings

With regard to Part 9 buildings, we defer to CHBA BC, which has had a technical committee review the documents. We support their recommendations regarding:

- Supplemental heat;
- The need to "*Clarify that all Part 9 compliance paths are acceptable*"; and
- Revising the "… *Part 9 GHG Base Allowance*."

In conclusion, UDI does not have any issue with local governments proceeding with consultations this summer regarding the GHGI targets, but we have concerns about decisions being made about them in a short timeframe when the information is

Hi Susan,

I spoke with Doug about what Teri is looking for and will schedule a call to discuss.

Essentially, we need to prepare two things: 1) a template tracker for EDs to complete with info for their in-year items and 2) a corresponding summary document Teri can take to the minister meeting in a couple of weeks (possibly sooner). We don't need to prepare anything for tomorrow.

Subject: RE: Ministers' meeting
Importance: High

Sorry for not being clear. No documents needed for me today.

Yes, one document to report back to the Minister's table.

The only thing I need today is you to reach out to the other EDs to advise we are working up a template and will have to

them asap (or even better, if we sent the template today).

I will cover verbal update tomorrow and we can connect on timelines after that.

Hi Teri,
Just so I'm clear, do we need
1) a revised placemat and narrative document today for the 8am DMs' meeting tomorrow, and
2) the status update/scoping document for all the in year deliverables for the next Ministers' meeting?

And are the other ministries to report back through us, i.e., in one master document?

Doug

Subject: Ministers' meeting
Importance: High

Hi Doug,
Thanks again to you and the team for the work to prep for Ministers' meeting. It was a great discussion, with more meetings to come over the next two to three weeks.

A couple of immediate points of feedback/edits to our material, and after the upcoming DMs discussion there will be more.

s.13

STATUS UPDATE: this is the key deliverable back to the next Minister meeting (2 weeks) and the DMs are meeting tomorrow morning so I will give this update and advise of anything else that comes out of it.

- **For all the in year deliverables**, we need to put together a scoping document that outlines the status of policy work to date (would suggest both context and % complete); remaining policy work to be done (and suggested timeline); and any impacts to other work (ie, deferred work) that would happen if this work were prioritized.
    - Could you perhaps put together a template and begin discussions asap with FIN/MUNI/TRAN etc.

Thanks Doug, T

Hi,

Yes, will do! The UDI analysis is still in approvals – hoping I'll be able to send some time tomorrow.

Cheers,

Lesley

Hi Cimarron,

Please find attached the DAPR conceptual model that may be helpful to provide context s.13
s.13 It provides an overview on DAPR work, items being explored, and a preliminary conceptual model about how the various planning tools would hang/work together. This is very preliminary, so subject to change based on further detailed policy work. s.13
s.13

Providing this in the meantime – will get comments to you as soon as we can.

Cheers,

Lesley

Hi Jessica,

Further to our IM, Doug was able to locate the attached draft s.13 document. Steve H. recalled that Doug Foster was one of the key people involved in the work, which makes sense as it looks like it was led by then MCSCD's Infrastructure and Finance Branch.

I haven't had a deep dive, but let's plan to discuss the feasibility of making this an option in the Cab Sub once you folks have had a look.

Hi Lesley,

Thank you and Eric for the input! We greatly appreciate the thoughtful analysis and factors to take into consideration as we explore options.

I'll be looking to schedule weekly touch base meetings to discuss this item specifically and the strategy pieces collectively with the four partner ministries (being mindful of schedules/time commitments, of course).

Regarding the cab sub, things are constantly evolving s.13 s.13 . We will keep you informed as we gain clarity on the plan and process.

Doug and Sue, I've filed the MUNI comments version including Lesley's bullets below on the HPB LAN.

To: **The Hon. David Eby, Q.C., Attorney General and Minister of Housing**
From: **Anne McMullin, President & CEO, Urban Development Institute (UDI)**
Date: **April 13, 2022**
Re: **UDI Commentary on the UBCM Building BC: Housing Completions & Population Growth 2016-2021 Paper**

Purpose

On March 23, 2022, the Union of British Columbia Municipalities (UBCM) released a *Discussion Paper* entitled *Building BC: Housing Completions & Population Growth 2016-2021*, in which they argue that municipalities have stepped up to the plate with regard to providing housing supply. Instead of just focusing on supply, they recommend that the Province and others focus on further demand management measures and delivering the "right supply" of housing. While there are a few points that UDI would agree with in the *Paper*, we have concerns with many of their arguments, analysis and recommendations, which do not reflect the experiences of residents of builders.

Background/Discussion

Housing Supply and Population

One of the key contentions of UBCM is that municipalities are already approving adequate supply. The main argument is that population growth is matching the growth units being completed. Many observers have noted the problems with linking these two statistics to ascertain if we have enough supply. However, even using this comparison, **we would still have a scarcity of housing because of household formation and the need to ensure there is much more supply than demand.**

Household Formation

In their Report, UBCM notes that "… *household size in B.C. will not be available until later this year* …," but this is critical information. The size of households has been declining for decades, so the number of households (and therefore needed homes) is increasing faster than population growth. The key segments of our population driving the formation of new households are growing. As Andrew Ramlo, Vice President, Advisory of Rennie and former President of the Planning Institute of British Columbia, points out **between 2016 and 2021, the number of people between 25 and 34 grew by 10% and those between 35 and 39 grew 20%, while the total population growth was 7.6%.**

This household formation is driving our growing need for new homes, and it is why for decades the number of units we build has increased far faster than population growth. As Andrew Ramlo adds, "*From 1971 to 1976, the provinces' occupied housing stock grew by 24% while its total population grew by almost half that rate (13%). Similarly, between 1976 and 1981, housing expanded by 20% in the face of a population that grew by only 11%*."

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

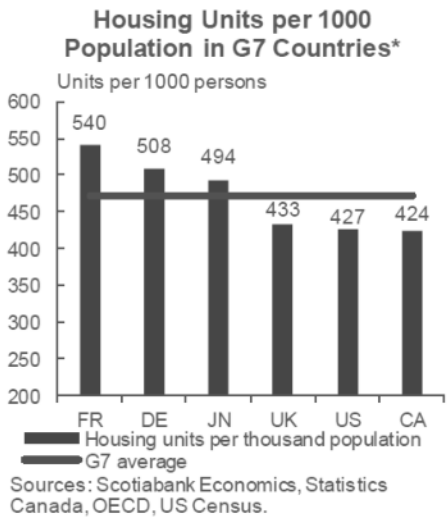
There is also the potential that the lack of supply that is leading to higher housing prices and rents is itself dampening household formation, **as younger generations are staying home longer with their parents, or sharing homes instead of renting/purchasing units.**

Chronic Under-Supply of Homes

We also need to build more housing than the demand due to undersupply of units in previous years. UBCM argues, "*More housing has been built in British Columbia over the past three years than in any three years in the past 20.*" **This does not mean we have enough housing now unless there is an assumption that we built enough housing the past.** For example, between 2010 and 2015, the Province was building far less than 30,000 units per year.

UBCM also states that between 2016 and 2021, British Columbia had the second highest increase in the percentage growth of total private dwellings in Canada. However, British Columbia also had the third highest percentage population growth rate in the country – after the Yukon and Prince Edward Island. British Columbia is also not doing as well as it has in the past. As Andrew Ramlo states, "*… the 1970s decade saw roughly 318,000 housing units completed in B.C., levels of housing development that have not been seen in the province since.* ***Even with the growing levels of housing starts over the past decade (and a much larger population), the most recent decade (2012-2021 at 310,000 completions) still falls short of what was added during the 1970s.***"

This chronic under supply of housing to the market has left British Columbia with a structural deficit, which Ramlo estimates at approximately 75,000 homes. If we continue to under-build for the growing demand in many markets, that deficit will grow.



In addition, even if British Columbia is fairing better than the rest of Canada, that is not saying much because Canada is not doing well in delivering housing relative to other G7 countries. According to Scotiabank, "*Canada has the lowest number of housing units per 1,000 residents of any G7 country.*" To catch up to the G7 average, "*… it would take an additional 1.8 million homes in Canada to achieve this level of supply of housing relative to population*," and "*To put these gaps in perspective, we have averaged 188,000 home completions in the last 10 years.*"

Immigration and Interprovincial Migration

British Columbia also has to accommodate future demand. Domestic purchasers primarily drove the high-growth in pre-sales in 2021 because the COVID-19 pandemic severely restricted immigration. With the pandemic waning, immigration is rapidly increasing and the newcomers need housing. The Federal government is targeting an average of 435,000 immigrants per year

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

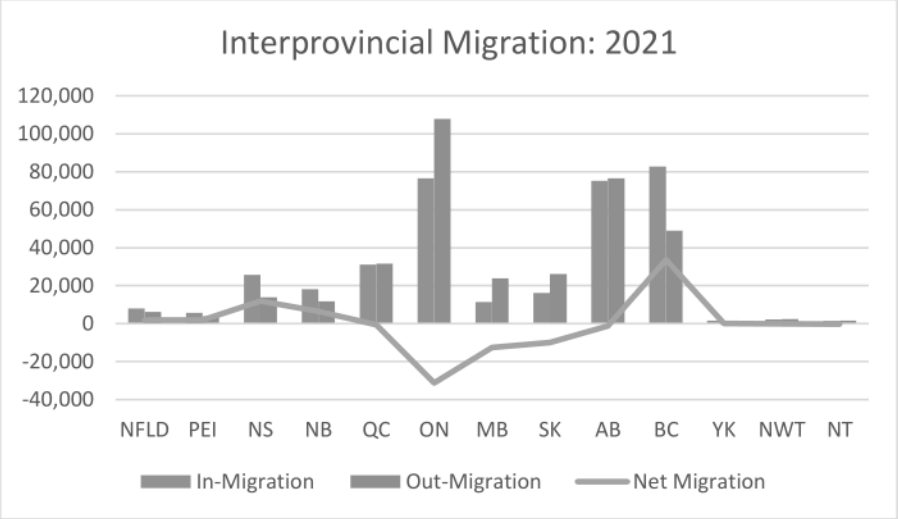
www.udi.bc.ca

between 2021 and 2024. This is substantially more than the 341,000 immigrants that came to the country in 2019 and the 321,000 that came in 2018, and these were record years. The only other time Canada brought in more than 300,000 immigrants per year was between 1911 and 1913. With 15% of the immigrants coming to B.C., this equates to over 65,000 people arriving per year. This could be even higher because in 2021, 17% of immigrants came to British Columbia.

These estimates do not account for interprovincial migration. According to Statscan, **B.C. added an additional 33,656 net new residents from other parts of Canada in 2021, nearly three times more than any other province gained.**



Source: Statistics Canada. Table 17-10-0020-01 Estimates of the components of interprovincial migration, quarterly

Allowing Mobility within the Market

As Jens von Bergman and Nathan Lauster, highlight there also "… *needs to be some extra fluff in the housing market for people to move. (And the more differentiated the housing market is, the more vacant units are needed).*" **If there is not enough fluff and supply is just equating with demand growth, prices will rise and/or people will live in homes that do not meet their needs.** This is why local government staff have constantly raised concerns when rental vacancy rates are below 3% to 5%; there are too few units available for tenants, so rents increase and housing supply is not meeting demand of households. If the vacancy rate were 0%, no tenants could move. The more supply versus demand, the more competition, which drives down prices and rents for new and existing homes. This why high growth areas such as Houston, Atlanta, Dallas and Phoenix have relatively low prices.

Despite the substantial population growth experiences by many communities in British Columbia, some municipalities were constrained by their notable lack of housing availability. Between 2016 and 2021, Port Moody, which was connected to the Millennium Line via the $1.4 billion Evergreen Extension, lost 16 people.

The "Singular Focus" on Supply Side Measures

UBCM is concerned that there is "*A narrow focus on local government development approval processes or a poorly defined notion of the supply that is needed, without addressing other elements and participants in the housing system ...*" It is not fair to say that housing supply has been the only focus of the housing debate or the only approach taken by the current Provincial Government, the previous one, and the Federal Government. There have been numerous demand side and "*right-supply*" measures applied to the housing sector by senior governments, including federal restrictions on mortgage lending, provincial and municipal tax measures, and assignment and transparency registries (full list included in Appendix 1).

UBCM also acknowledges that many of the proposals in their 2018 *A Home for Everyone: A Housing Strategy for British Columbians* "*... were reflected in the B.C. Government's housing plan ...*" These proposals included demand and "*right supply*" measures, so it is not fair to say that there has been an exclusive focus on simple supply side measures by senior governments.

Targeting Real Estate Investment Trusts (REITs) and Housing Investors

UBCM identified market activity by REITs and investors as a key source of concern, the basis for which remains unclear. Many REITs include pension funds serving employees – including public sector employees. They also have well maintained buildings compared to other landlords and face fewer barriers to reinvest in their buildings because they are well capitalized. **The Province has already introduced measures that would restrict actions from REITs and other landlords through regulatory measures to restrict rent increases and renovictions.** This is in addition to the corporate accountability inherent to being a public traded company.

REITs are also not as significant a player in British Columbia where the PBR buildings are usually owned by smaller investors. For example, in the first half of 2020, on 7% of sales were to REITs. That figure has fluctuated slightly since then but overall, REITs do not represent a significant portion of the rental market in British Columbia.

UBCM also raises concerns "*… that just over 20% of new home purchases across Canada are made by investors*." With the *EHT* and the *SVT* noted above, these units will be rented out in urban centres; **the *2021 CMHC Rental Market Report*, shows that nearly 30% of new condominium units were rented out in Vancouver CMA.** Without these rentals being available, vacancy rates would drop and rents would likely increase. UBCM raises the concern that the secondary rental market is, *"more precarious than purpose-built rental housing."* PBR buildings are a critical element in our housing system, but the secondary rental market plays an important role as well. Many municipalities are encouraging or requiring the construction of secondary suites in detached or semidetached homes, or laneway housing, these would all form a component of the secondary rental market.
There is also a concern raised about an increasing number of assignment sales with dramatic increases cited in Langley and Chilliwack between 2019 and 2021. Notably, because of the changing market, sales were very slow in 2019 and fully rebounded in 2021. For example, new condominium pre-sales in Cloverdale/Langley increased from 497 units in 2019 to 2,353 units in

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

2021. In addition, assignment changes include circumstances when there are no sales (e.g. a spouse or family member being added to the pre-sale contract).

Supply Chain Constraints and Labour Shortages

UBCM states "*The development sector currently faces significant trades shortages and supply chain issues and all signs point towards a system at capacity*," and they quote two building industry leaders regarding these concerns. **We agree that we are currently facing dramatic supply chain and labour issues.** The industry is facing a hot market due to pent-up demand from the COVID-19 pandemic. The pandemic also caused supply chain issues. While the industry is currently at capacity, this is not always the case, so improvements to municipal approval times will address supply constraints – especially during a normalized market.

In addition, during the initial stages of the pandemic, the market was slow, but several projects were held up in Burnaby and Vancouver due to protracted Community Amenity Contribution and Density Bonusing negotiations as well as other processing delays. There was an opportunity for the efficient delivery of housing that was lost, and now the market is has rebounded and we have capacity issues. We also need to take advantage of when there is overcapacity in the construction industry.

UDI continues to recommend that senior government fund more training programs to address the labour shortage, and allow more people to immigrate to the country to work in our construction industry. We are concerned, for example, that some trades programs have restricted capacities because of funding shortfalls - even though there are waiting lists.

Rural, Remote and Northern Regions

We agree with UBCM that there are real capacity constraints in rural, remote and northern regions in British Columbia for industry and local governments. Investing in building capacity in these regions needs to be a focus of Provincial policies.

Provincial Processes

UDI agrees, "*The Province could also take action to streamline and improve their own approvals as detailed in their Development Approvals Process Review Report.*" We have been advocating for improvements in processes at the ministries of Environment & Climate Change Strategy, Land, Water & Resource Stewardship, and Transportation & Infrastructure. **If the Province were to take actions like establishing housing targets for local governments, it will be critical that the timeframes for approvals for these ministries also improve.**

The alignment of local government and provincial requirements and processes is an ongoing problem. UDI members have had ongoing issues with Surrey and the Ministry of Land, Water & Resource Stewardship with regard to *Water Sustainability Act* Permits and riparian areas. One approach that the Province may want to consider is standardizing municipal processes like Ontario, so it is easier for ministries to incorporate their processes into municipal ones.

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

Environmental Regulations

UDI is mystified by UBCM's concerns about Environmental regulations and the need to respond *"… to Federal and Provincial legislation*," as well as their concerns with the implementation of the *Energy Step Code* (*ESC*). It has been our experience that the municipal sector is often lobbying for additional environmental regulations. **Local governments and UBCM were partners in the development of the *ESC*, and they have been assisting in its implementation through the Energy Step Code Council. This includes incorporating Greenhouse Gas Intensity (GHGI) targets in the *ESC* as early as this year.** UDI has been advocating slowing this process down until there is more information regarding costs, how it would be implemented by local governments, and how the GHGI targets would work with the energy ones. **If UBCM is concerned about the *ESC*, UDI would support slowing down its adoption to ensure capacity is available to deliver these objectives.**

Recommendations/Conclusion

There are several challenges with the UBCM's *Position Paper*, most concerning is the lack of understanding that B.C. is still lagging significantly behind in the delivery of new housing. The chronic undersupply of housing in many markets has had significant impacts on affordability and even household formation because there are simply no options available. This will only become further strained with the historic levels of in-migration that B.C. is experiencing.

While there is no silver bullet that will solve this province's housing crisis, municipalities play a critical role in the delivery of housing, as they decide if and when new projects are approved. Beyond the use of housing targets, there are opportunities to create better alignment across all levels of government in collaboration with the building industry. Addressing supply chain and labour shortages, the development of a *National Housing Strategy* accounting for immigration targets, streamlining provincial permits and ensuring that environmental regulations remain in-step with industry capacity are all potential areas of improvement.

Arguing that there is adequate supply in the market does not reflect the reality that many British Columbians face when searching for a home to buy or rent. Builders also face challenges in delivering housing including lengthy approval processes. Some municipalities are leaders in the delivery of housing, while others lag behind, but partnerships across all levels of government with builders is necessary to affect change. We encourage governments to collaborate with and support the delivery of more new housing across B.C.

Appendix 1

Demand management and "right supply" measures employed in B.C.

- Ongoing Federal restrictions on mortgage lending in 2008, 2010, 2011, 2012, 2016, and the "*Stress Test*" Regulation in 2018;
- The City of Vancouver's Empty Homes Tax (EHT), a 3% Luxury Property Transfer Tax (PTT), and 15% Foreign Buyers' Tax imposed by the previous B.C. Liberal Government;
- The *2018 B.C. Budget* Tax increases:
    - Increasing the Luxury PTT to 5%;
    - Increasing the Foreign Buyers' Tax to 20% and expanding the area it applies to;
    - The annual Additional School Tax for luxury homes; and
    - The Speculation & Vacancy Tax (SVT);
- Investing in Housing and Rental Supports in the *2018 B.C. Budget*, such as:
    - Rental Assistance Program (RAP) increase by $800 year;
    - Shelter-Aid for Elderly Renters (SAFER) increase $930 year;
    - $445 million over three years dedicated to the development of mixed-income social housing developments to address a broad spectrum of housing needs as well as to increase the rental affordability of existing housing projects currently planned;
    - $20 million over three years to expand the role of BC Housing through the creation of a new partnerships office, HousingHub;
    - Mirroring municipal property tax rebates for the Provincial portion of property taxes for new purpose built rental (PBR) projects.
- Reducing the annual increases in rent under the *Residential Tenancy Act* by 2%;
- Provincial regulations restricting renovictions;
- Allowing local governments to zone areas and units to residential rental tenure;
- The *Condo and Strata Assignment Integrity* (Pre-sale) *Register*;
- The Provincial *Land Owner Transparency Registry*;
- Upcoming Provincial legislation that will require "… *cooling off periods for resale properties and newly built homes*," and potentially other measures.
- A 1% annual tax on the value of non-resident, non-Canadian owned residential real estate that is considered to be vacant or unused, effective January 1, 2022;
- The recently released *Delivering for Canadians Now, A Supply and Confidence Agreement* between the Liberal Government and the NDP, which includes:
    - "*Extending the Rapid Housing Initiative for an additional year;*
    - *Re-focusing the Rental Construction Financing Initiative on affordable units (under 80% AMR) and use 80% AMR or below as definition of affordable housing;*
    - *Moving forward on launching a Housing Accelerator Fund;*
    - *Implementing a Homebuyer's Bill of Rights and tackling the financialization of the housing market by the end of 2023; and*
    - *Including a $500 one-time top-up to Canada Housing Benefit in 2022 which would be renewed in coming years if cost of living challenges remain.*"

- Federal Budget 2022 introduced new measures including:
  - Applying the GST to all assignment sales;
  - A federal review of "*… large corporate players in the market and the impact on Canadian renters and homeowners,"* which may include potential changes to tax policy;
  - A prohibition on *"… foreign commercial enterprises and people who are not Canadian citizens or permanent residents from acquiring non-recreational, residential property in Canada for a period of two years;"* and
  - An anti-flipping tax that fully taxes the profits as business income for anyone (with some exemptions) who sells a property that they have held for less than 12 months.

To: **The Hon. David Eby, Q.C., Attorney General and Minister of Housing**
From: **Anne McMullin, President & CEO, Urban Development Institute (UDI)**
Date: **April 13, 2022**
Re: **CMHC *Rental Market Report 2021* – Vancouver CMA: Data Gaps and Context**

Purpose

Earlier this year, The Canadian Mortgage and Housing Corporation (CMHC) released its *2021 Rental Market Report* and Data Tables, based on the CMHC's annual survey. The *Report* is viewed as a leading indicator on the health of the rental housing market and is often referenced by the building industry, various levels of governments and stakeholders. The data provided by these reports is important to inform municipal processes and recognize housing needs across communities.

The *2021 Report* provides some interesting findings regarding the changes to the rental universe in the Vancouver Census Metropolitan Area. This memo highlights key data points and identifies gaps related to rental growth in municipalities across the region.

Background/Discussion

The CMHC Rental Market Report provides valuable insights into the rental market across Canada. This includes reports on vacancy rates, rent levels, secondary rental usage and the size of the rental universe. The survey uses responses from landlords collected in October of the previous year to provide a snapshot of the market at that time and show year-over-year changes. The data is often referenced by governments and used to assess projects and make public policy decisions.

The *2021 Report* highlights several changes that have occurred in Vancouver, including the return to unhealthy, low vacancy rates as students and temporary residents return to the region. The *Report* also noted that the supply of purpose-built rental (PBR) apartments increased by 1,602 units (+1.4%). This reflects the rental housing starts from the past few years now reaching the market.[1]

Changes in the Rental Universe

To determine how much additional rental housing is being built, we typically review the data on changes to the rental universe (Data Tables 1.1.3 and 3.1.3). Both tables reflect the change in built rental stock across various submarkets. This is the gross number of units added, net of demolitions. For the purpose of this analysis, we will focus on Table 1.1.3 *Number of Private Apartment Units in the Universe, by Zone and Bedroom Type - Vancouver CMA.*

The 2021 data indicates that there is a substantial difference in the amount of rental housing being provided by various municipalities in Metro Vancouver:

Zone	Oct-20	Oct-21	Total Change: 2020-2021	Total Change: 2018-2021
City of Vancouver (Zones 1-10)	**59,453**	**60,333**	**880**	**2,519**
Zone 11 - University Endowment Lands	1,077	1,381	304	-197
Burnaby (Zones 12-14)	**11,879**	**11,277**	**-602**	**-588**
Zone 15 - New Westminster	9,549	9,678	129	975
Zone 16 - North Vancouver CY	6,320	6,192	-128	126
Zone 17 - North Vancouver DM	1,326	1,700	374	653
Zone 18 - West Vancouver	2,327	2,326	-1	0
Zone 19 - Richmond	3,033	2,992	-41	-105
Zone 20 - Delta	1,699	1,690	-9	-37
Zone 21 - Surrey	5,922	5,947	25	344
Zone 22 - White Rock	1,394	1,427	33	34
Zone 23 - Langley City and Langley DM	2,990	3,286	296	791
Zone 24 - Tri-Cities	4,429	4,718	289	711
Zone 25 - Maple Ridge/Pitt Meadows	1,743	1,796	53	228
Vancouver CMA	**113,141**	**114,743**	**1,602**	**5,454**

The City of Vancouver contributed over 50% of the total additions to the rental universe from 2020-2021, while several municipalities, including the City of Burnaby, City of North Vancouver (CNV), and the City of Richmond show a loss in rental housing. The data shows a similar trajectory when averaged over the past three years (with the exception of additions in the CNV).

This data does not seem to reflect the policy context or experiences of purpose-built projects in many municipalities. The incongruence can be explained through three gaps in the data.

Contextualizing the Data

There are three key gaps or areas in the CMHC *Rental Market Report* that require additional context.

Absence of Below Market Rental Data
The CMHC Rental Market Report only considers the rental universe to include privately initiated, purpose-built rental – or market rental. This would not include inclusionary rental units, provided at below-market rents as part of a larger strata condo or rental project. For example, the City of Richmond's *Low-End of Market Rental (LEMR) Policy*, requires that new residential projects provide up to 15% of the floor area at specified *LEMR* rates. The City of North Vancouver requires that projects seeking a density bonus provide units through their *Mid-Market Rental (MMR) Program*, and a similar measure is strongly encouraged under Coquitlam's *Housing*

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

www.udi.bc.ca

Affordability Strategy (HAS). All of these units would be provided at rents less than current market rates, and as such, would not be captured by the CMHC survey.

The same gap also applies to rental replacement units that are offered to returning tenants at below-market rents as part of the redevelopment of an older existing rental building. Many municipalities have a rental replacement policy in place, including Burnaby, which allows tenants to return at their previous rents. As discussed previously, Burnaby does not have a strong framework for the delivery of market rental housing, and housing is primarily delivered in the form of below-market rental and strata condominiums. In fact, they have an inclusionary zoning policy that 20% of units be below-market rental.

The gap shown in the data is further widened because many redevelopment projects require the demolition of an existing rental building, in order to construct denser housing. These existing rental units would have been considered part of the rental universe, because at the time they were built, they were market rental. When an existing rental building is redeveloped and units are replaced with below market rental, it will only be reflected as a loss in the rental universe, with no corresponding gain in the *CMHC Report*.

Units Under Construction
When a proponent is redeveloping an existing rental site, the initial phase of construction requires the building to be vacated and demolished – these units would be removed from the rental universe, often permanently as discussed above. However, even if the units are replaced with market PBR, there will still be a gap before this is reflected in the survey results.

Often projects take multiple years from the time units are vacated until new units can be occupied, this extends beyond the time horizon of the survey, and only the loss will be shown.

This reflects the situation in Burnaby, where after a moratorium on new development to put the city's new *Rental Use Zoning Policy (RUZP)* in place, projects only began to advance again in 2020-2021, and several have now reached the construction stage, but none have completed yet.

Project Timelines and Shifting Policy Context
Projects can take up to seven years from application intake to completion. This spans multiple rental market survey periods, and even in some cases Council terms. The policy context when a project was reviewed and approved may differ significantly from the context in which it is eventually occupied.

Several municipalities in Metro Vancouver have experienced major policy changes related to rental in the last three years. For example, the City of Vancouver previously provided incentives for market rental housing development through the *Rental 100 Program* (2012-2019) and prior to that the *Short-Term Incentives for Rental Housing (STIR)*. Both programs targeted market rental housing, and facilitated the approval of hundreds of units. Those programs no longer exist and were not replaced with equivalent incentives. Due to the time it takes to complete a project, units being occupied over the last three years would likely be the result of these programs.

The Cities of North Vancouver and Coquitlam also adopted rental housing incentives tied to density bonuses in 2018-2019, and we're only starting to see the results of those programs at scale today.

www.udi.bc.ca

Additional considerations

The City of Vancouver also has a unique position in the provision of rental housing across the region. Vancouver has a much larger rental universe; there are more rental units currently in the City of Vancouver (both new and existing) than all other metro Vancouver municipalities combined. In addition, Vancouver has the highest percentage of renter households, making up more than half of its population based on 2016 census data, and it's expected that this number will continue to rise. Other municipalities will continue to grow and increase their delivery of rental; however, we expect that the scale of Vancouver's market will remain a factor.

Conclusion/Recommendations

By providing additional context to the CMHC Rental Market Report and Data Tables, we have identified key gaps in the information. We recommend that the data be understood with this context when reviewing it.

We recognize that data gap for below-market rental may be the result of challenges in the collection of comprehensive data. However, the majority (79%) of "affordable" rental units are managed by various levels of government and non-profits.[2] This could be an area of future work for CMHC to better analyze these markets.

While we are continuing to build more rental housing, much more needs to be done to address chronically low vacancy rates, especially across B.C.'s urban centres B.C. has experienced significant population growth over the last thirty years, and this trend is expected to accelerate, however the rental market has not kept pace. It will be critical to support both current and future residents that the Province work with municipalities and builders to support the delivery of more rental homes.

Hello Again,
Here are the documents as promised which I provide to you in confidence, please do not share beyond yourselves nor make reference to items publicly. Please consult with us first.
You should already have our DAPR PPT that we presented yesterday as it was circulated?
Pls note that these documents, the Concept Paper on Gentle Density and the IBN on UDI's proposal are still draft/not approved so please do not share beyond yourselves and we welcome your feedback. Understand we have a meeting booked for Tues.

Kind Regards,
Tara

Subject: RE: Continuing our IM

Hi,
Its helpful for me to hear from you directly on what you need, for what purposes and by when so we can stay on the same page and keep our Ministers' needs connected, so thank you. Yes we have a lot of detail and information on all the good work we have been doing on DAPR over the last number of years. I know my team has been connecting with yours and appreciating you are new to the role, I will again offer to meet at the ADM level (with our staff) to get you all up to speed. I appreciate to date you may have been focused on deliverables as directed from your Minister, though I hope that yesterday reiterated our need to work together in partnership as we have a number of items moving forward that your Minister is likely most interested in. And we welcome your feedback.

On Gentle Density we will be going to P&P and it could be ready for Fall 2023 or Spring 2024 legislation only.

Also, on the Intentions Paper and the ppt presented yesterday, OYM and I feel that a lot more of our workplan on DAPR could be built in. Currently there is just one line item. Something else we should discuss.

I will have my office (Christina pls connect with Teri's assistant) to set up a time and walk you thru our items in more detail. I will forward you documentation that we can discuss in this meeting (as requested) as soon as I have a few minutes to pull them together.

Thanks,
Tara

Subject: RE: Continuing our IM

Great, thanks – I think our team is following up to get the concept paper and the BN on the UDI proposal to help us inform where there are synergies and potential overlap. The presentation yesterday had much more detail than I had heard in the past and myself and the team would like to come up to speed on it all s.22 s.22 . If you could send the materials over I'll get my office to set up some time to have a discussion about it?

Teri

BRITISH COLUMBIA | Ministry of Municipal Affairs

INFORMATION BRIEFING NOTE

Date: April 7, 2022

Prepared For: Honourable Nathan Cullen, Minister of Municipal Affairs (MUNI)

Topic: Urban Development Institute (UDI) recommendation for province to establish housing targets and apportion targets to municipalities.

Purpose: To set out considerations and potential implications for implementing housing targets as per UDI recommendations, and identify linkages to current policy work being undertaken to meet similar outcomes.

BACKGROUND:

The Urban Development Institute (UDI) is a non-profit association of the development industry in British Columbia (B.C.). Its mandate is to promote efficient urban growth, good planning and development practices, transit investment, affordable housing, and high quality commercial and industrial developments. UDI is often invited to participate in provincial consultations as representatives of B.C.'s development industry.

UDI has developed a proposal with an overall recommendation that the province implement performance-based targets for housing units for municipalities, with an initial focus on areas within walking distance of transit. As discussed below, there are several significant challenges with the proposal.

This note provides an overview of UDI's recommendations, along with considerations and potential implications that would need to be taken into account in considering such a proposal. The linkages between UDI's proposal and current policy work being undertaken by MUNI as part of the Development Approvals Process Review (DAPR) is also discussed.

DISCUSSION:

s.13

BRITISH COLUMBIA | Ministry of Municipal Affairs

s.13

Current work being undertaken by MUNI:

As part of the DAPR work, MUNI staff are reviewing current planning and land use tools – such as Official Community Plans and Housing Needs Reports (see below) – and approaches to planning to consider what changes may be required to, in part, meet the same desired outcomes of UDI's proposals. This work considers issues raised as part of consultation undertaken with a variety of stakeholders, including UDI, developers, local government staff, and non-profit organizations, in the early phases of DAPR.

Overview of Work Related to Housing and the Development Approvals Process Review

Speaking Notes for
Okenge Yuma Morisho
Deputy Minister, Ministry of Municipal Affairs

Housing Working Group
April 13, 2022

Slide 1 – Title Slide

- Good afternoon.
- I am pleased to have the opportunity today to speak to MUNI's work related to housing, including the Development Approvals Process Review (DAPR).
- The following presentation is a high-level overview of the work MUNI has undertaken to date and work that is underway to support local governments and the Province to take action to address important housing-related issues.

Slide 2 – MUNI Housing Program – Strategic Approach

- As we are all aware, local governments in particular are at the frontlines of planning for housing in communities.
- MUNI's strategic approach to work related to housing focuses on:
    - Ensuring local governments – and the Province and other partners – understand the unique housing needs in each community;
    - Better understanding the challenges that exist in advancing new housing supply in their communities in a timely manner (such as through the development approvals process); and,
    - Exploring what changes or new tools may be needed to address these issues.
- To this end, MUNI has been building a foundation of knowledge to understand these issues, and has taken early action to respond to some of the identified needs.
- Work currently underway continues to build on this foundation, with a greater focus on exploring approaches that would enhance

the efficiency (or timeliness) and effectiveness of the development approvals process with the aim of increasing the supply of housing.

- A further aim of this work is exploring approaches that will reduce the number of site-by-site rezonings and lead to enhanced housing supply.
- This work will require a number of different policy levers to be used – such as legislative changes and supports like funding and best practices – to focus on both (a) the practical requirements and tools set out in the local government planning and land use framework, and (b) the 'cultural' shift that is required to "bring communities along" as the look and feel of communities change to reflect new realities and population projections.
- [Can turn over to Tara to present next slides if preferred]

Slide 3 – MUNI Housing Program – Work Completed

- As noted, MUNI has taken several early actions, including:
    - Requiring local governments to develop and make public housing needs reports every five years, detailing current and anticipated housing needs.

      A $5M program has supported local governments to meet this requirement, and as of April 2022, with funding fully committed, nearly every local government across BC has completed its first report. We know that these reports are driving important community conversations about specific local housing needs and actions to address them.
    - Enabling the authority to zone specifically for rental housing, a tool which a range of local governments are now using.

- Initiating DAPR – which included province-wide consultation with a broad range of stakeholders, summarized in a 2019 report.

- Developing "early" legislation (which was passed in Fall 2021) to enhance the efficiency of some land use decisions and processes – and to address needs resulting from the pandemic.

- Launching the Local Government Development Approvals Program, which provided $15M to help local governments implement best practices and develop innovative ways to support non-profit housing organizations, developers, and other stakeholders to build essential housing for people around the province.

  Forty-three projects have received funding and are underway.

Slide 4 – MUNI Housing Program – Major Initiatives Underway

- Initiatives currently underway under the umbrella of DAPR fall into four categories: (1) Streamlining Local Government Approvals, (2) Development Finance Tools, (3) Official Community Plans and zoning authorities, and (4) Public Hearings.

- First, work underway as part of Streamlining Local Government Approvals focuses on:

  - Exploring tools and supports that could be incorporated into an online portal to facilitate development approvals and provide consistency across local governments (a "single window portal");

  - Building a Peer Learning Network to foster engagement around best practices and innovative approaches to development approvals; and,

  - Measuring and monitoring the impacts of DAPR-related actions.

- Second, MUNI is reviewing and exploring changes related to Development Finance Tools – these are the tools that support local governments in paying for, and providing amenities to support, new growth and development.

- Significant considerations in this work include ensuring clarity, certainty, and transparency for local governments and developers respecting the potential costs and 'needs' required as communities grow – these include costs for 'hard' infrastructure (for example, through Development Cost Charges – which are legislated) and "soft infrastructure".

- In particular, I would like to note that staff are exploring developing a legislated framework for Community Amenity Contributions (or CACs) – which are currently negotiated at the time of a re-zoning and may include cash or in-kind contributions for facilities like libraries, and arts and cultural spaces. Careful work is required here to ensure affordable is a priority, local government service and infrastructure costs are not stranded, and developers are still incented to build density.

- Ensuring developers are aware of what amenities may be asked for "up front", and ensuring these amenities are considered within the context of planning for things like density are important considerations.

- Both internal (for example, with MOTI and Finance) and external consultation on potential policy approaches is anticipated soon, and the Fall 2023 legislature session is being targeted for amendments.

Slide 5 – MUNI Housing Program – Major Initiatives Underway & Pending

- The third "bucket" of DAPR work focuses on reviewing and exploring changes to the framework for Official Community Plans (or OCPs) and zoning authorities – two foundational planning and land use tools.

- To ensure that proposed solutions will produce the intended outcomes, an evaluation of OCPs and zoning authorities – and their relationship with potential changes to development finance tools and the public hearings framework – will form an important component of this work.

- Key work I would like to highlight includes:

    - Exploring approaches to implement "gentle density" requirements for local governments. MUNI is finalizing a concept paper for Cabinet consideration (likely later this spring).

    - Assessing the current approach to Housing Needs Reports and looking at ways to better connect OCPs and zoning to the findings of these reports.

s.13

    - Exploring implementing requirements for local governments to set transit-oriented development policies as part of their community planning – including considering density around transit corridors and hubs.

- Exploring requirements to update certain components of OCPs on a regular basis and/or mandating that all local governments must complete some OCP requirements – even if they do not have an OCP.

  [Note: While OCPs are not mandatory, most local governments have an OCP. There is no requirement to update OCPs.]

- Exploring specific requirements to update zoning bylaws to reflect OCP land use designations and density allocations across communities .

- Consultation on potential policy approaches is anticipated soon, and the Fall 2023 legislative session is being targeted for amendments.
- Finally, work on reviewing the Public Hearings process and exploring potential changes is pending, with legislation anticipated to be proposed for late 2024 or 2025.

Slide 6 – MUNI Housing Program – Other

- Initiatives related to housing (and local planning and land use more broadly) undoubtedly involve considering local government roles, responsibilities and authorities set out in the local government legislative framework.
- MUNI is supporting – or anticipates supporting – work being undertaken on a variety of initiatives, including:
  - The Integrated Transportation and Development Strategy
  - Supportive Policy Agreements
  - Various OHCS-led concept papers
  - The planned federal $4 billion Housing Accelerator Fund, which may end up being an important source of capacity and

financial supports for local governments working to boost housing supply (program still under development by CMHC)

- Setting Housing Targets (direct linkages to DAPR work and local planning tools)
- Transit Oriented Development (also direct linkages to DAPR work)

- Additional relevant initiatives include those related to CleanBC and policy work to better integrate consideration of natural hazard and climate change risks in local government land use planning– the latter of which considers whether it makes sense or is appropriate to build on hazardous lands.
- [Hand back to DM if applicable]

Slide 7 – Thank you

- I trust this has been a helpful overview of the variety of work MUNI is undertaking related to housing – and how this work connects to various other provincial initiatives and priorities.
- We will be taking our DAPR work plan forward to a Cabinet committee soon.
- We welcome your comments and questions.

Implementing Housing Targets

UDI Executive Committee

March 10, 2022

UDI
PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

Recommendations

Summary

1. Implement performance-based targets for housing units, initially focused on areas within walking distance of transit.
2. Set a global 10-year target with deliverables every 2 years, then apportion targets to municipalities.
3. Measure progress based on the number of units that receive a Building Permit and update targets bi-annually.
4. Track other key metrics including rezoning approvals and vacancy rates as a measure of progress.
5. Use a combination of incentives and penalties to enforce targets.

Why Targets?

Putting Housing First

UDI recommends that the Province adopt performance-based targets rather than attempt to micromanage how local governments administer the wide-ranging number of issues in the development review process.

Putting Housing First

1

Performance-based targets are easier to administer and less intrusive.

- Fights policy layering without needing to address every single municipal conflict;
- Avoids a one-size-fits-all approach;
- Allows municipalities to locate units in ways that preserves key areas and meets community priorities - **if targets are met;**
- Supports innovative collaboration with builders; and
- Requires municipalities to prioritize housing delivery.

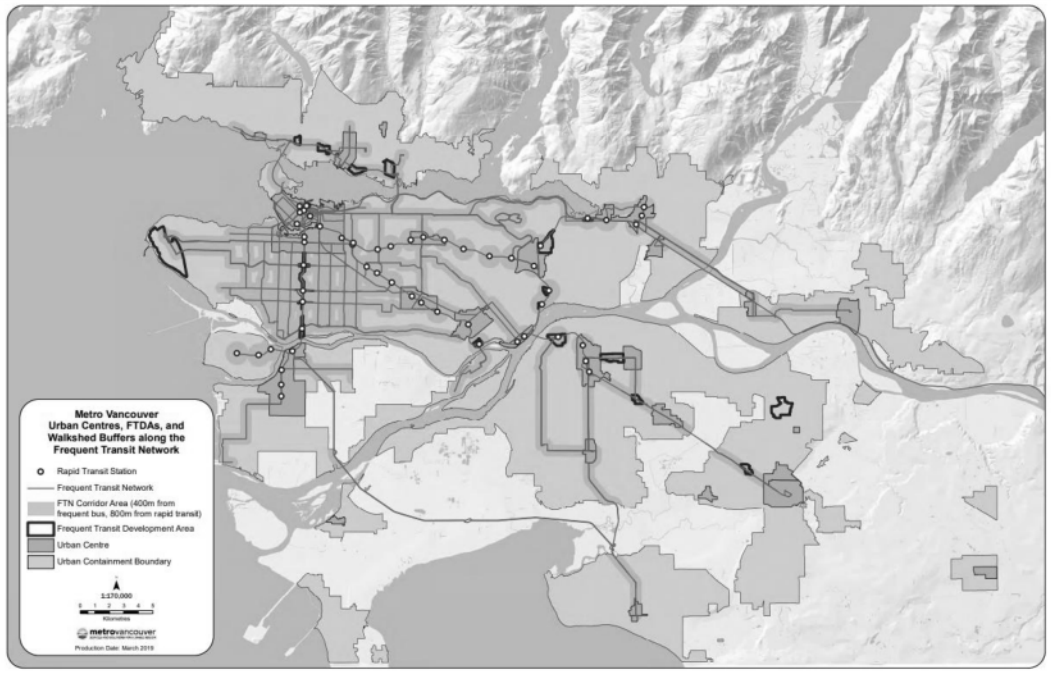
Implementing Housing Targets

Setting Global Targets

UDI recommends that any methodology adopted should account for the following factors:

- ***Projected immigration and inter/intra-provincial migration;***
- ***Foreign workers in emerging sectors/foreign students;***
- ***The current level of unaffordability in most B.C. markets and its impact on household formation; and***
- ***Demolitions and conversions of existing housing.***

Once a global target has been established, municipal targets can be set based on current/future transit & regional restrictions.



Implementing Housing Targets

Application Area

UDI recommends that for the initial phase, the housing targets apply within:

- ***400 metres of SkyTrain stations, LRT stations; and***
- ***200 metres of Bus Rapid Transit (BRT)/ RapidBus stops along Frequent Transit Corridors.***

Application Area

1

Locating density within walking distance of transit will:

- Fully leverage multi-billion dollar transit investments;
- Improve affordability for households who no longer need a car;
- GHG and energy use reductions from a mode shift to active transportation and transit;
- Increase vibrancy around stations; and
- Increase access to employment opportunities across the region.

Application Area

Implementing targets near transit is supported by communities across B.C.

Implementing Housing Targets

Measuring Progress

UDI recommends that municipal progress towards targets be measured by the number of units that receive Building Permits (BPs), while tracking other key metrics.

New residents cannot live in an approval.

Measuring Progress

1

Measuring Building Permits is the most appropriate measure because:

- Units represent homes that new and existing residents can live in.
- It is very likely to be realized.
- It is the most consistent approval across all municipalities and housing types.
    - Some municipalities do not include Development Permits in their approval process.

Implementing Housing Targets

Target Timing

UDI recommends that the targets be set for a 10-year horizon with 2-year interim requirements.

These targets should be reviewed and updated in-line with the 2-year requirements.

Implementing Housing Targets

Enforcement

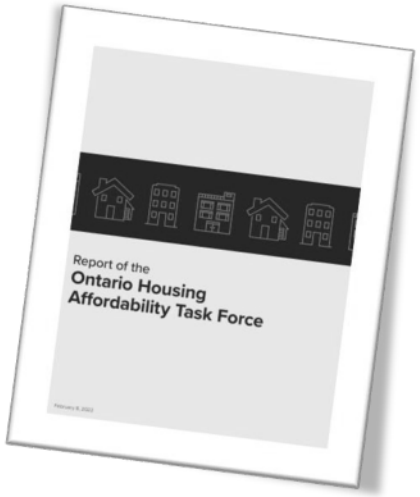
UDI recommends a wide range of incentives and penalties if local governments do not achieve their targets, and a review period prior to the application of penalties.

Enforcement

Provincial Funding Mechanisms

- Creation of a *Housing Delivery Fund*
- Increase funding for capacity upgrades and digitization

- Reduction of funding for infrastructure and community amenities
- Reduction of transit service levels



Enforcement

2

The Municipal Toolbox

- Enhance the tools available to municipalities that meet housing targets and curtailing the regulatory powers of those who do not.

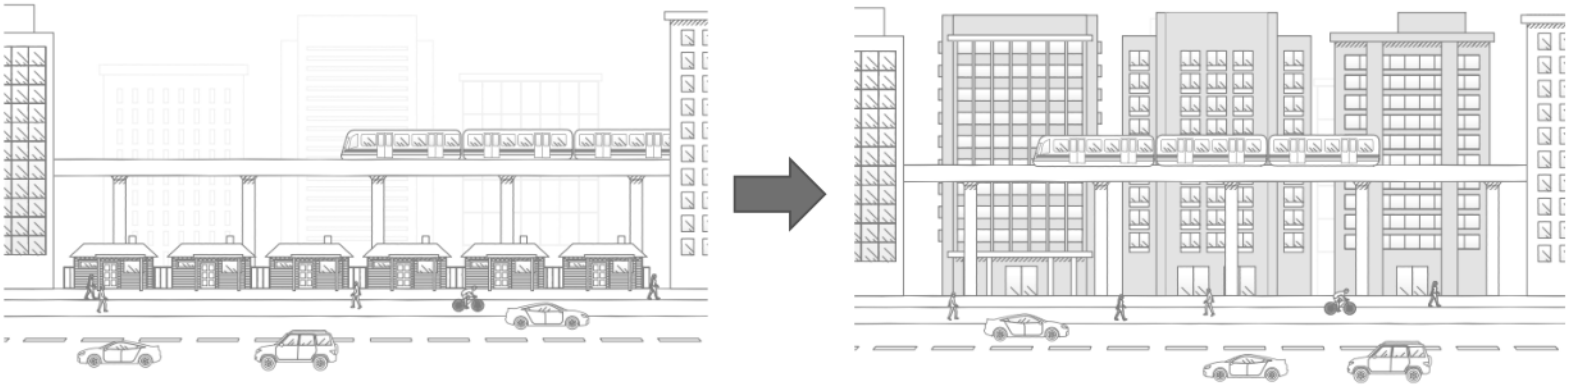
Example: regulation of GHGs in new and existing buildings or eliminating downzoning (unless life there is a safety issue)

Enforcement

3

Provincial Land-Use Decisions

- If housing targets are not met, the Province could assume the land-use decisions to pre-zone transit-oriented areas for housing.
- The intent is not to have to take these steps; it is to ensure that local governments themselves plan and allow an appropriate number of units.



Enforcement

4

Supportive Policies Agreements (SPAs)

Agreements used around new transit lines between TransLink and local governments receiving new lines.

SPAs need several improvements:

- Senior Government participation;
- Clarity in terms of density that needs to be delivered;
- Binding on future councils; and
- No loopholes.

Enforcement

5

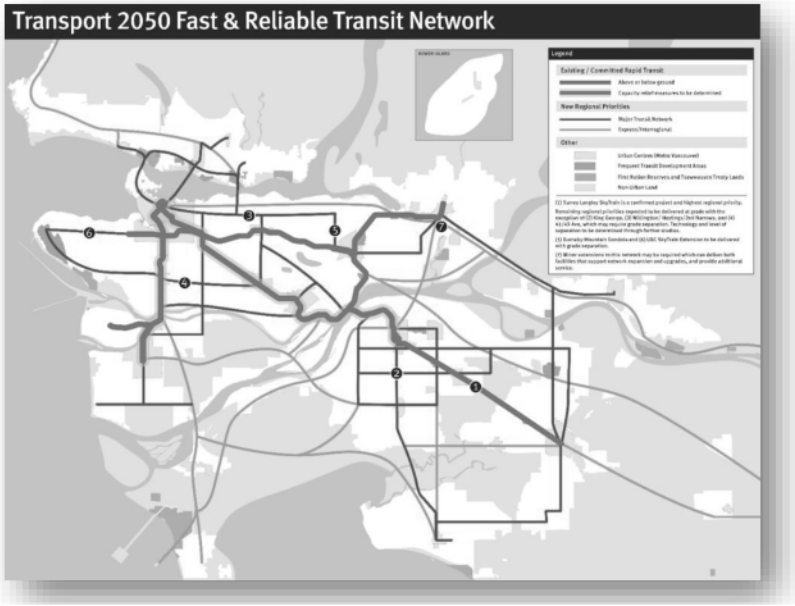
Using Debt as an Incentive

- Another approach that could be used is placing some of the debt of the new lines (e.g. costs of stations) onto municipalities.
- Municipalities could avoid interest charges and paying off the debt if they achieve their housing targets in a timely way. The Province could pay off the debt as housing is built near stations.

Enforcement

Prioritization of Transit Expansion through Housing Delivery

- The Province and the Mayors' Council could prioritize future transit lines, based on the amount of housing a local government commits to deliver at both new and current stations.



Implementing Housing Targets

Capacity Considerations

We encourage the Province to consider how capacities may need to be increased to meet housing targets in the future, including:

- ***Industry capacity to develop and construct housing***
- ***Municipal capacity to review and approve housing***
- ***Provincial capacity to review permits and align with municipal processes***
- ***Metro 2050 and limits on housing in employment areas near transit***

Federal Budget 2022 - Using Infrastructure Funding to Encourage More Home Construction

Every year, the federal government provides significant amounts of funding to provinces, territories, and municipalities to help them deliver important public infrastructure projects. At the same time, there is not enough housing being built to keep up with the needs of Canadians. A coordinated approach, involving all orders of government, is required to ensure public spending is working to build more of the homes Canadians need. To this end, Budget 2022 signals the government's intention to create flexibility within federal infrastructure programs to tie access to infrastructure funding to actions by provinces, territories, and municipalities to increase housing supply where it makes sense to do so. This flexibility would be included within the Canada Community-Building Fund, when its current administrative agreements with provinces and territories are renewed; and other future infrastructure programs.

UDI
CAPITAL REGION URBAN DEVELOPMENT INSTITUTE

April 22, 2022

Mayor and Council
The District of Oak Bay
2167 Oak Bay Avenue
Victoria BC V8R 1G2

Re: Housing Needs

Dear Mayor and Council –

As a "Partner in Community Building," The Urban Development Institute – Capital Region is committed to working with communities and governments to create and achieve the vision of balanced, well-planned, and sustainable communities. Through our membership, we promote wise and efficient urban growth, and good development practices – with an emphasis on housing across the spectrum, throughout the Capital Region.

On April 16, 2019, legislative requirements were put forward by the provincial government to require all local governments to collect and analyse data, producing a report that would help communities to better understand their current and future housing needs. The first Housing Needs Reports from Capital Region municipalities were released in 2020. It is a requirement by the provincial government that these reports be produced every 5 years going forward.

We have been facing a critical housing shortage across the Capital Region for several years, and the pandemic that we are slowly climbing out of, did not help the situation. Housing Needs Reports are a tool that municipalities can use to determine the number of housing units that need to be built in order to keep up with the population demand within each community. It is evident that while some municipalities in the Capital Region are hitting their targets laid out in the Housing Needs Reports, others are falling far behind the targets set out for them. Oak Bay is one of the municipalities that is far from meeting the expected target. During the five-year period from 2016 to 2021, the total number of additional housing units added to Oak Bay's inventory increased by only 46 units – 43 of which came from a single development. Oak Bay's Housing Needs Report states that as of February 2020 the current need of housings units was 349, and the municipality requires 130 units per year over the following 5-year period, leading to 2025 when the next needs report will be published. This reflects a substantive shortfall in housing units needing to be built.

The 2016 Census data states that the average age in Oak Bay is fifty-three. With this number on a steady rise, more housing options are needed to allow this older demographic to age in place - to be able to downsize and remain in their community. Long-time residents, whose children are aging out of their childhood home, need to be able to live on their own in the community that they grew up in. In addition, consideration must be taken for people who live outside of Oak Bay and want to move into the community.

UDI works collaboratively with other Capital Region municipalities to create and/or review policies that ensure that the creation of new housing can meet the needs of their community's population growth. We encourage Oak Bay council to take bold steps to ensure that development applications are successfully approved to fill the ever-growing housing need, ensuring a healthy, vibrant, and inclusive Oak Bay.

Oak Bay is currently not a member of UDI. We welcome Oak Bay to join our membership, like many other municipalities in the Capital Region who enjoy the benefits of our affiliation through a collaborative working relationship when addressing development related initiatives.

Kind Regards,

Kathy Whitcher (Executive Director)

Good morning everyone!

Thank you to all of you for your participation in the first consultation session on 'Development Approvals - Streamlining Approvals and Online Portal' and for contributing to a meaningful conversation. I understand that some of you may have had technical issues accessing the meeting. Our apologies for that. If you have not done so already, please reach out to me and we will ensure that we hear from those of you that missed the meeting.

For your reference, please see below the questions that were discussed in yesterday's session and attached the PowerPoint presentation slides.

Questions for breakout sessions:

- In your experience, what do you see as the key barriers to streamlining local government development permitting and approvals processes and procedures specifically related to technology and information?

- Are these barriers best addressed by improved processes/procedures or by technology (or both)?

- Can you provide examples of what your local government or agency undertaking to increase the efficiency of it's development approvals? How could these intersect with today's discussions?

- How can the province best support local governments in streamlining their development approval processes via technological improvements?

- To what degree could elements of development approvals be standardized or centralized? What elements would those be?

Next Virtual Engagement Sessions:

- Session 2: Thursday, May 5, 1:00pm - 3:30pm
- Session 3: Thursday, May 12, 1:00pm - 3:30pm
- Session 4: Thursday, May 19, 1:00pm – 3:30pm

Meeting invitation will be send closer to the next meeting.

We are looking forward to your continued participation in this engagement process.

Thank you again on behalf of the DAPR Team

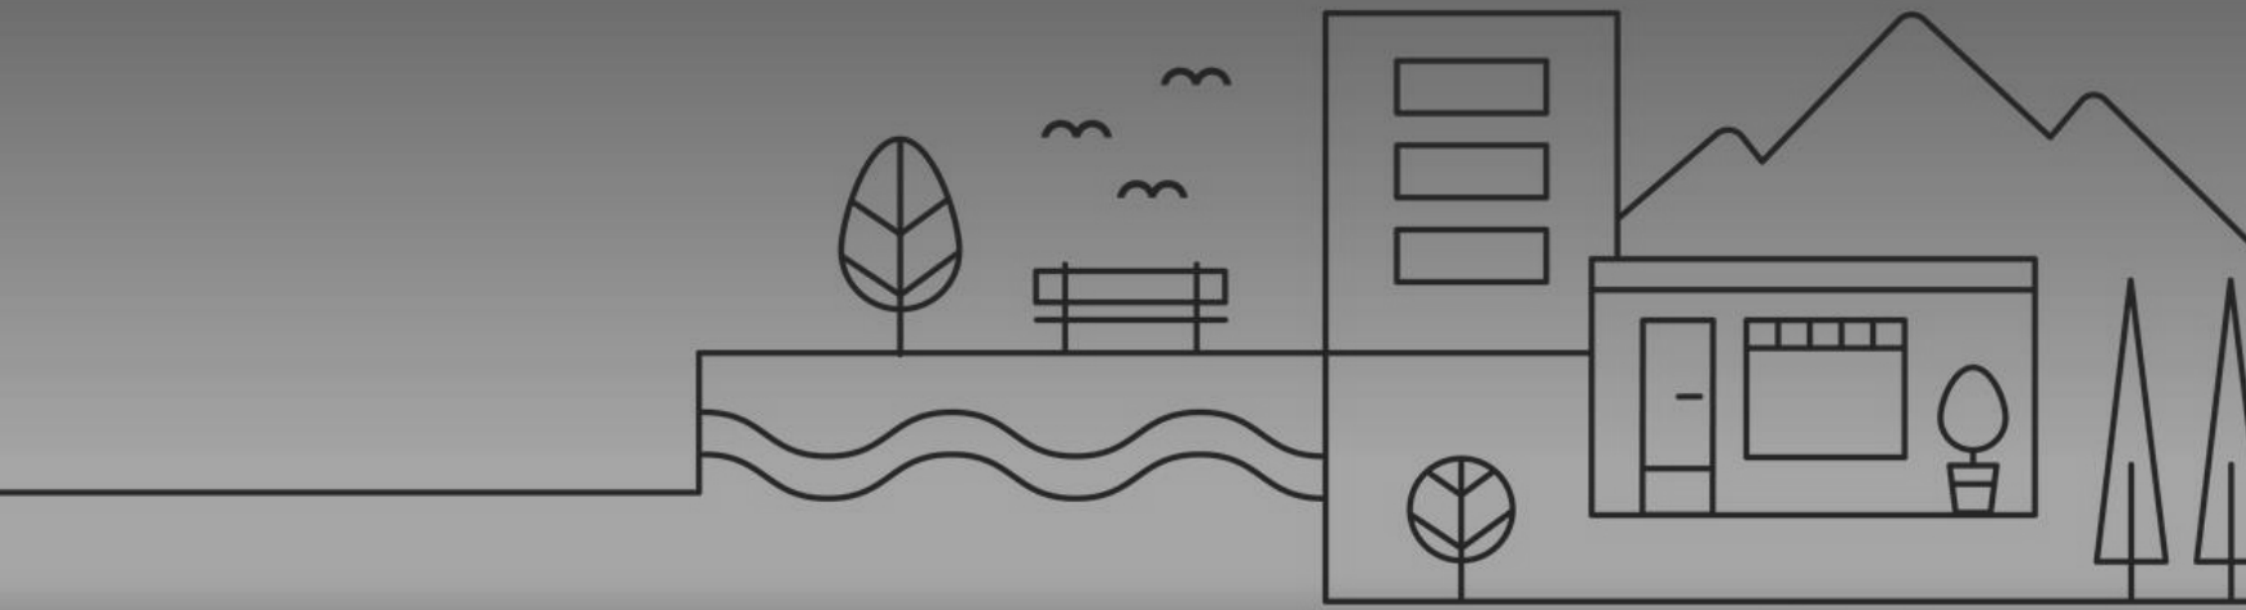
Development Approvals Process Review – Streamlining Approvals



SPRING 2022 DAPR INITIATVE CONSULTATION SESSION #1: April 27, 1:00 p.m. – 3:30 p.m.

BRITISH COLUMBIA | Ministry of Municipal Affairs

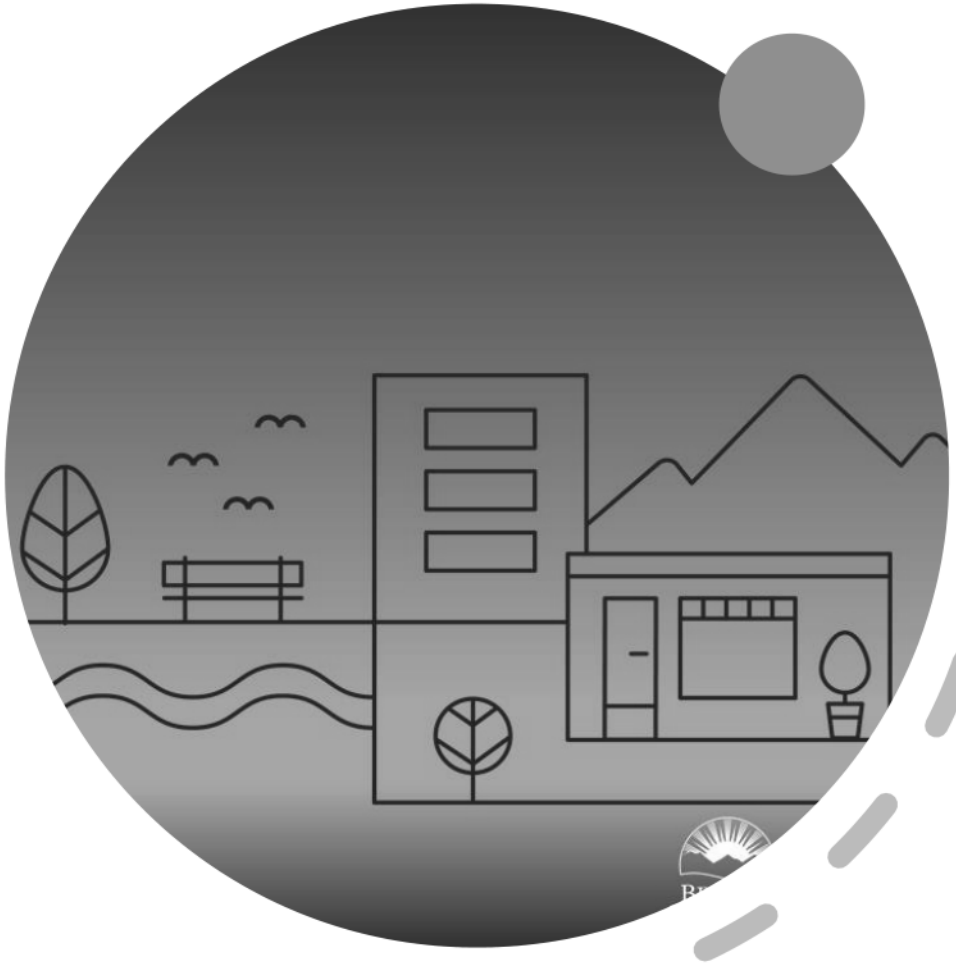
Development Approvals Process Review (DAPR) – Stakeholder Engagement Session #1

Agenda

1:00 p.m. – 1:30 p.m.	**Welcome & Introductions**
1:30 p.m. – 2:00 p.m.	**DAPR Presentation, Q & A**
2:00 p.m. – 3:00 p.m.	**Facilitated Breakout Discussions**
3:00 p.m. – 3:25 p.m.	**Plenary Report Out**
3:25 p.m. – 3:30 p.m.	**Closing of the Session**

Development Approvals Process Review (DAPR)

"To support local governments to eliminate barriers to affordable housing and to accelerate construction of new homes in their community through making the approval process more ***effective*** and ***efficient.***"



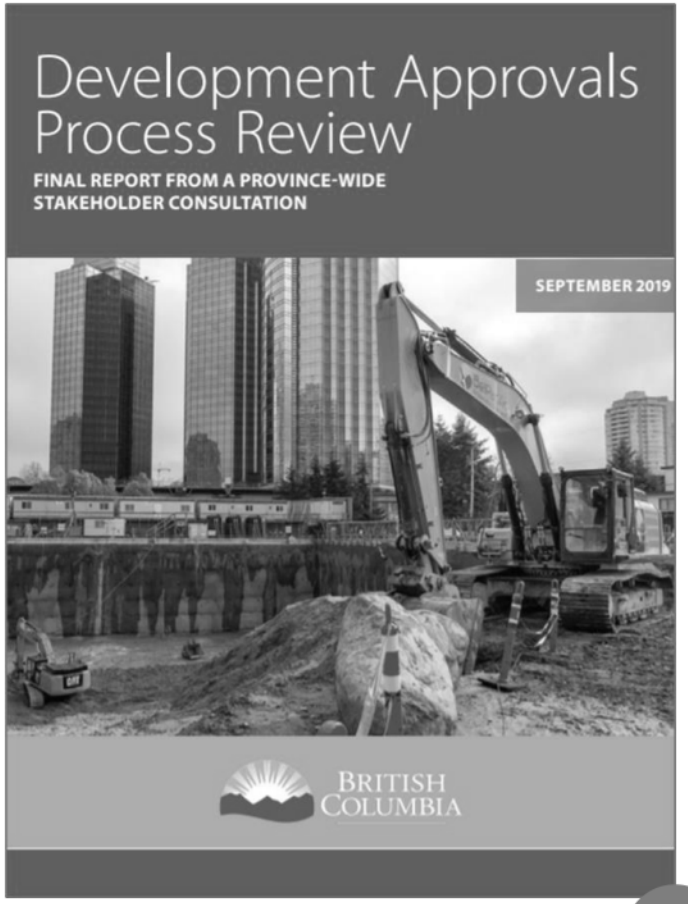
DAPR Consultation

Consultation conducted from December 2018 to May 2019

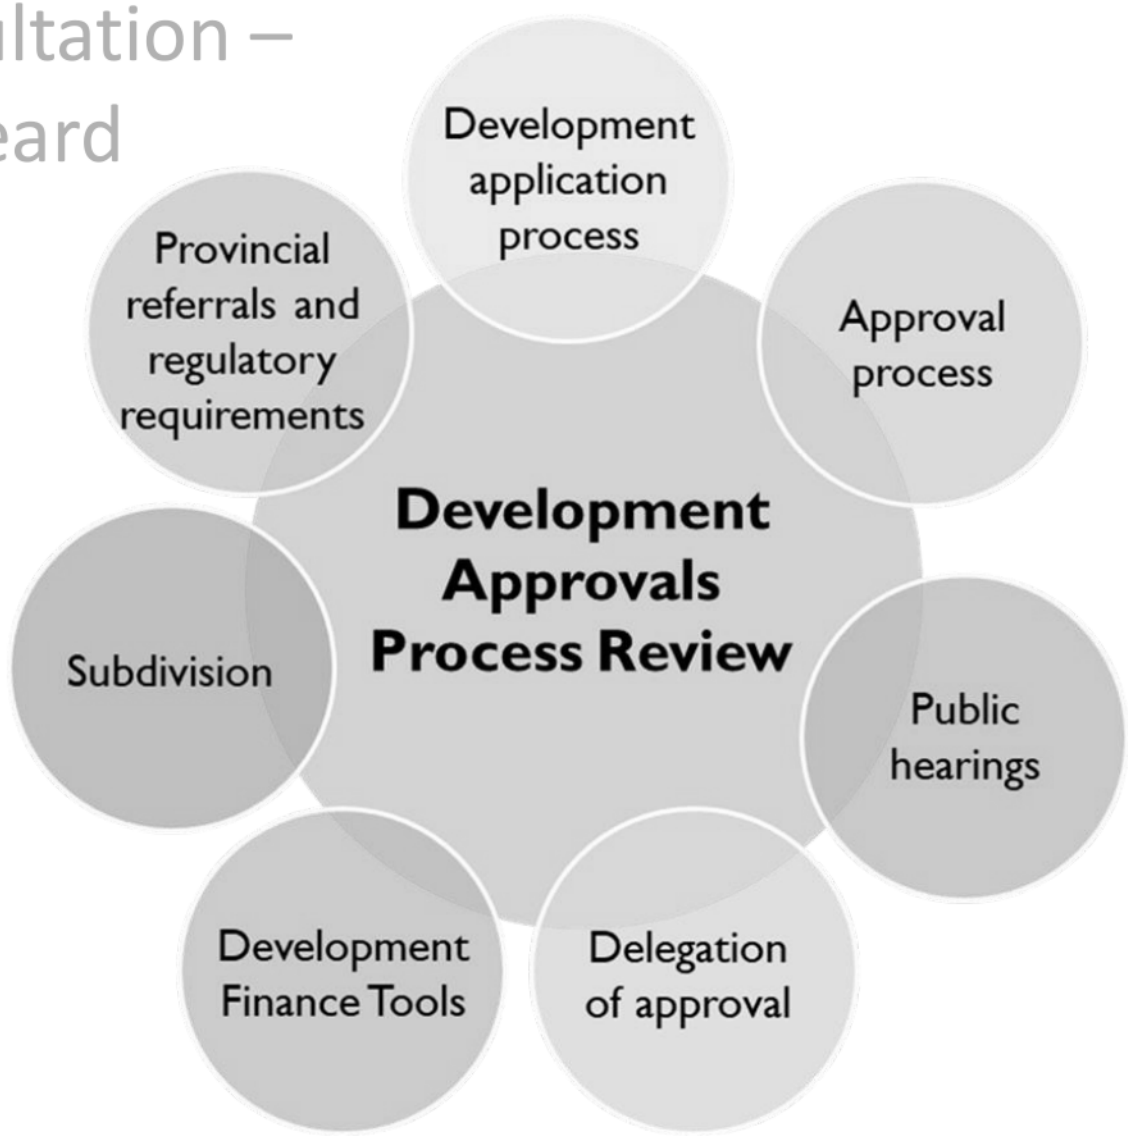
Engagement with wide range of stakeholders in robust conversation

Challenges in approvals process & Ideas for their resolution

Consultation report released September 2019



DAPR Consultation – What we Heard



DAPR's Early Initiatives

Bill 10 – *Municipal Affairs Statutes Amendment Act - Royal Assent*

- permanently authorizes local governments to conduct meetings and public hearings electronically

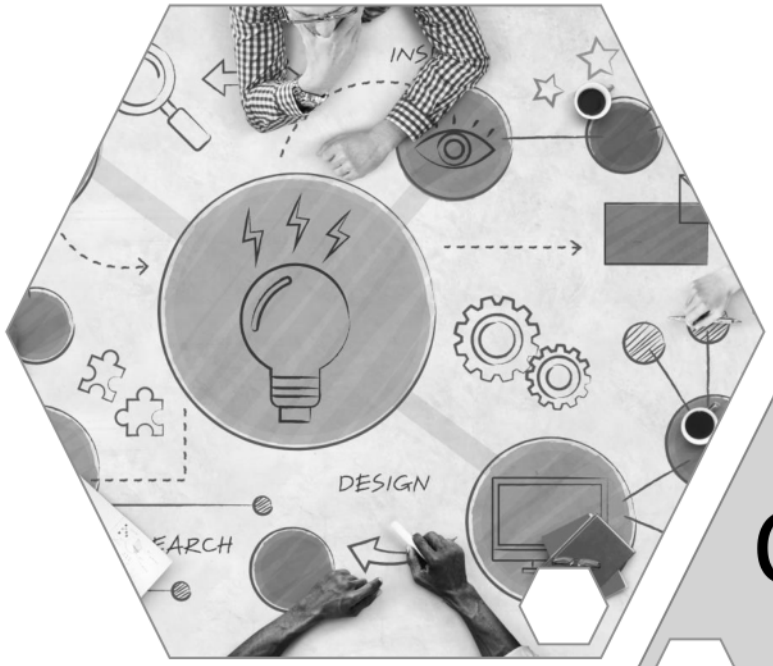
Bill 26 – *Municipal Affairs Statutes Amendment Act – No. 2*

- removed default requirement for public hearings on zoning bylaws consistent with Official Community Plans
- enables local governments to delegate minor development variance permit decisions to staff

Local Government Development Approvals Program (LGDAP)

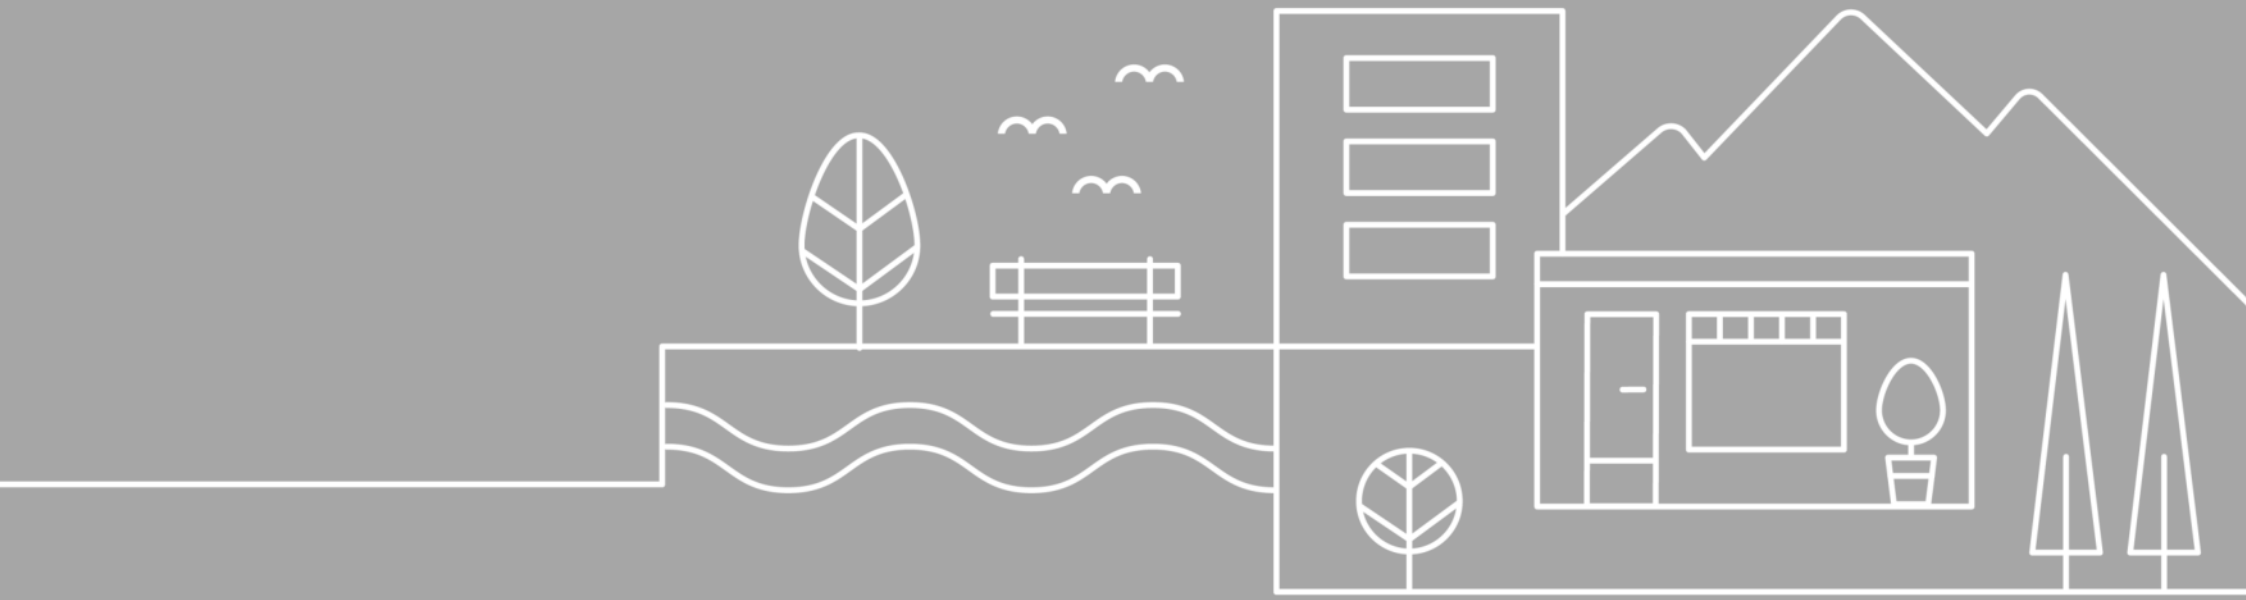
- $15 million; administered by UBCM
- Forty-three local government projects were approved and are underway

DAPR Streamlining Approvals – Online Portal Engagement



Centralized Technical Supports

Questions?



Meeting Agenda
(Pacific Standard Time)

1:00 p.m. – 1:45 p.m. DAPR Overview & Summary of ‘What we Heard’

1:45 p.m. – 3:00 p.m. Facilitated Group Discussion & Mural Prioritization Exercise:

Characterizing identified solutions for DA process improvements

Confirming understanding of user groups and specific needs

Setting the scope of essential features (next & later phases)

3:00 p.m. – 3:25 p.m. Next steps, what we heard report, next project phase

3:25 p.m. – 3:30 p.m. Closing of the session

RE: Code Question Service Delivery Discussion Summary

From: Chase, Andy OHCS:EX
To: Jensen, Jun'ichi OHCS:EX <Junichi.Jensen@gov.bc.ca>
Sent: May 11, 2022 6:21:56 PM PDT
Attachments: image001.png

I've peeled back to a one-pager (using margins to my advantage) as speaking points for you when you meet with Teri. It focuses on Code questions and sets aside CCRA. Please use this link for the Code Question Service Delivery Discussions_Brief.

Regarding the summary (linked below) to be sent to the associations met with as a follow up, are you okay with the light CCRA implications weaved in with it? I do consider the connection between BSSB exec and association exec to be both a service model redesign (taking place of code questions) while also a CCRA strategy. Would it suffice to send the summary (linked below) out with a message that more on CCRA to follow (as it comes available)?

Andy

To: Jensen, Jun'ichi OHCS:EX <Junichi.Jensen@gov.bc.ca>
Subject: RE: Code Question Service Delivery Discussion Summary

This all sounds good and apparently there are some very nasty follow up emails in the Codequestion inbox which are making this more of a priority.

I do recommend we (you) email back those we met with and share the discussion summary linked below. We can offer in that email availability to reconnect sooner than the regularly scheduled meetings at their request.

We did update the website to direct code users through the appropriate channels quite recently and it would not be too hard to add a quick 'how to' to those directions. What we will need to pull down very soon is the 'what we can answer' content. We may also need to respond with a stock response to all those inquiries in the inbox with a 'where to go for info'-type response.

My goal is to have a full enough webpage with where and what supports are available for Code users would highlight that there isn't a gap (certainly not one that our opinions fill).

We did capture in the discussion summary the confusion caused when people misinterpret our opinions as authoritative. I'd like to offer comment to that directly on our website to respect statutory interpretation and also the authority and autonomy of local authorities.

Regarding how to use the Code specifically… we should stay high level. BCIT and others already provide this service. (The Province makes rules for road safety but does not teach people how to operate their cars.)

…to be continued… it's getting late

Regards,

Andy

Subject: RE: Code Question Service Delivery Discussion Summary

Thanks, this is great. A couple additional thoughts requested follow ups/next steps:

We promised to circle back before moving ahead. Is the plan to circulate this and offer further discussion/meetings? Or perhaps just follow up when we have our next regular check ins?

One thought I continue to have is a "how to use the BCBC" type document. Nothing too comprehensive, just a short introduction to help people help themselves. Long term goal… no need to promise this.

UBCM expressed concern about the impacts on LG's. We don't have regular check in's with them and they may not be necessary, but we should circle back with them as well. The person we met with has gone.

We should brief up on this before moving ahead with shutting down the service. We also need to follow up specifically on previous direction – I think this may be why we paused:

	Code Inquiry Service	Technical staff respond directly to >1600 code inquiries annually from industry and the general public	[Nov 19 - Letters introducing review of service model and invite for discussion sent Nov 17th to the following: AIBC, ASTTBC, BOABC, CHBABC, EGBC, LGMA, UBCM, UDI. Follow up ED meetings being scheduled for weeks of Nov 22 and 29. Dec 1 - meetings under way, some concerns expressed and some support (BPAC support also…)] Met with AIBC, CHBABC, BOABC, LGMA & UDI. General agreement that there systems in place for people with questions and that the code inquiry service (1800 responses) is larger than the actual need. Support for BPAC-like committee(s). Shared about RACC -> CCRA and changes to national code development system and different opportunities for partnerships/relationships. Intent to follow up in new year with 'what we heard' discussions regarding code inquiries and also to follow up on RACC -> CCRA (public messaging expected in new year). No update other than BSSB continues to meet with valued partners (met with ASTTBC, Step Code Council) to discuss	How do we move forward and continue to support citizens. Contract out a DIY how to use the code- around town from island health infographic- model? propose a solution to how we continue to serve citizens well.

			CCRA and code inquiries. TC feedback on this? CM supported.

Hi Veronica –

To confirm our discussion, I confirm UDI can say that:

UDI has been involved in consultation, which is ongoing, and the Province understands that financial implications for strata lot owners are a primary consideration in proposed changes to the *Strata Property Act*.

Thank you very much – Best regards, Joscelyn.

From: Baker, Joscelyn

To: 'Barlee, Veronica OHCS:EX' <Veronica.Barlee@gov.bc.ca>
Subject: Confidentiality Undertaking - Strata Insurance - Draft Regulations

Hi Veronica – I had an inquiry on Friday from Jeff Fisher at UDI re an inquiry he got from a member of UDI asking about whether UDI has been involved in consultation.

Could you please give me a quick call?

UDI would like to be able to say that we are aware of the issues, and that consultation is ongoing. However, based on the wording of the attached Confidentiality Undertaking, we don't think we have permission at this point to say that. From the url below, I can see that government has already publicly stated that consultation will be made on the same issues that the UDI member raised, although the web page refers to consultation with the "strata community and insurance industry" and doesn't specifically include the real estate development community. I have copy pasted the url as well a the relevant text below.

I am at s.22 this afternoon and tomorrow afternoon between 1-5 pm, if you can spare a few minutes to give some direction on what disclosure around consultation UDI can give to its members.

Thank you in advance – Joscelyn.

https://www2.gov.bc.ca/gov/content/housing-tenancy/strata-housing/operating-a-strata/finances-and-insurance/insurance#cost

> Insurance for strata corporations and insurance for strata owners and renters
> Strata owners can purchase insurance for: personal property, e.g., household contents such as furniture, clothing, household goods, electronics, etc.; personal liability for any bodily injury or property damage unintentionally caused to others; improvements ("betterments") to the strata lot made by the current and previous owners, up to a stated limit
> www2.gov.bc.ca

Future changes

Other changes included in the bill require further consultation with the strata community and the insurance industry and may be brought into force by regulation at a later date. These issues include:

- clarifying what strata corporations are required to insure, to help strata councils and owners make informed decisions on strata corporation, strata owner and tenant insurance policies
- considering which party pays for the strata corporation insurance deductible if the strata owner or owner was legally responsible for a loss or damage, but it occurred through no fault of their own
- identifying the circumstances, if any, when strata corporations are not required to get full replacement value insurance coverage
- strengthening depreciation reporting requirements, including limiting the ability of strata corporations to avoid completing depreciation reports
- changing the minimum required contributions made by strata unit owners and developers to a strata corporation's contingency reserve fund

Subject: Re: Strata Insurance - Draft Regulations

Good afternoon Roxanne - Thank you for your email below.

I would technically not be permitted to advise my employer that I am working on this consultation without amending it. I consult during work hours, and I would like to advise my employer of the fact that I'm participating and that I am signing an undertaking that precludes me from disclosing anything about it.

Are you able to allow me to except out that I may notify my employer of the fact of my participation but not the details? It could be along the lines:

> ...not to disclose that consultation about the Draft Regulations has taken place except as provided below, and except that she may advise her employer she is participating in the consultation, and of the existence of this undertaking

I'm trying to recall why I didn't raise this some years ago when working on REDMA consultations, but I believe it was because Neil also was part of the consultation, so he was aware of my participation.

Thanks in advance for your consideration of my request - Joscelyn.

Subject: Strata Insurance - Draft Regulations

Good afternoon,

Thank you for participating in the Housing Policy Branch's engagement sessions regarding strata insurance. The feedback gathered during the consultation process has been instrumental in moving this issue forward.

At this stage, we are asking a small group of community partners that have expertise with strata legislation to review and provide feedback on a draft of amendments to the Strata Property Regulation. If you would like to participate in the review process, please sign and return the attached Confidentiality Undertaking by **Wednesday, January 26, 2022.**

We are aiming to circulate the draft regulations by the end of next week, and will be seeking written feedback on the proposal within one week of sending out the documents. Please note that the current proposal does not include any potential changes related to depreciation reports, as those consultations are still underway.

Feel free to contact me if you have any questions.

Have a great weekend,
Roxanne

To: **The Hon. David Eby, Q.C., Attorney General & Minister Responsible for Housing**
From: **Anne McMullin, President & CEO, Urban Development Institute (UDI)**
Date: **May 19, 2022**
Re: **Capacity Constraints**

Purpose

The introduction of municipal housing targets or other senior government measures may address the political nature of approvals and offer an environment for local governments to approve more housing faster, however, the next challenge will be to ensure the homes are built. Beyond the restrictive bylaws and political headwinds facing housing delivery, there are capacity constraints facing the industry that will need to be addressed in order to see widespread increases in housing delivery over the coming years.

In the memo below, we describe several of the key limitations on housing delivery which both slow the development process and increase costs. Many of these challenges have developed or increased over the past 18 months and are already present in the market, which remains constrained by a lack of approvals. This has not incentivized the industry to expand its capacity. If there is any kind of substantial increase in development volumes – as is required – these constraints are likely to intensify. There will not likely be an instantaneous increase in capacity, however addressing the constraints identified below and addressing delays in development review processes will accelerate the ability for the building industry to deliver the housing that is desperately needed.

Background/Discussion

Interest Rates

As the Bank of Canada is expected to continue to raise interest rates over the next year, there will be implication for development financing, in particular for rental housing. These changes, along with bond yield volatility, have an impact on capitalization rates (cap rates), which are a key part of rental pro formas.

As shown In Table 1, for a hypothetical project in Burnaby, changes in interest rate and cap rate assumptions result in the project requiring additional density to remain feasible or charging higher rents or a combination of the two. The density required to offset an increase in the cap rate above 0.25% exceeds an achievable Floor Space Ratio (FSR), which is often accommodated through additional height. Assuming a height constraint, additional rent would need to be charged to offset an increase in the cap rate. Both of these changes will ultimately impact viability, especially if the densities are not permitted by the municipality or the rents exceed what the market can bear at completion. Senior governments could also provide additional incentives to support rental delivery.

Table 1: Cap rate sensitivity analysis – Development Site Burnaby

Central Burnaby SkyTrain Station Sensitivity Analysis			
Sensitivity (to maintain 15% Profit on Cost)	**Cap Rate**	**FSR Required to Maintain $3.35 Rent/SF**	**Cumulative FSR Increase**
Base Case	4.00%	9.0 FSR	
+ 25 BPS Cap	4.25%	25.0 FSR	+16.0 FSR
+ 50 BPS Cap	4.50%	N/A	N/A
+ 75 BPS Cap	4.75%	N/A	N/A
*N/A denotes that unachievable density is required to offset the increase to the cap rate			
Sensitivity (to maintain 15% Profit on Cost)	**Cap Rate**	**Rent/SF Required to Maintain 9.0 FSR**	**Cumulative % Increase**
Base Case	4.00%	$3.35	
+ 25 BPS Cap	4.25%	$3.59	+7.2%
+ 50 BPS Cap	4.50%	$3.79	+13.1%
+ 75 BPS Cap	4.75%	$4.00	+19.4%

Interest rate changes also impact financing, increasing development costs. Land carrying costs will become significantly more expensive, which is compounded by the lengthy approval process for new housing. With higher interest rates construction financing costs increase; at project completion take out financing becomes more expensive resulting in a decrease in the amount of debt a project can service. This means the rental developer now needs more equity to build the same project, has a higher mortgage cost, and needs to accept a lower return while simultaneously experiencing a loss in value because of the cap rate increases.

Rising interest rates and mortgage costs have the potential to jeopardize rental development, even for those participating in CMHC financing programs. For example, one rental project was recently required to supply an additional $14 million in equity to maintain its place in the CMHC Rental Construction Financing Initiative program. Very few developers would have the financial capability to provide a $14 million cash injection to a project that is at the start line for construction. Most developers would no longer be able to continue with rental projects if leverage requirements increased significantly thus limiting the number of entrants building Purpose Built Rental (PBR) housing.

These changes are occurring at the same time as CMHC RCFI affordability targets are set to double, requiring 40% of units to be offered at below-market rents. These changes make the programs less attractive given the rising costs in other aspects of rental projects.

Concurrent with rising rates, some banks have also increased the spread that they are charging for mortgages. After a period of limited five and ten-year market spreads, 2022 has seen spreads increasing, with the expectation that this trend will continue. Lenders are pricing the instability in the markets into mortgage rates, compounding the higher borrowing costs incurred for developments. This trajectory could erode the ability to finance new housing, in particular rental, causing developments to be paused, delayed or canceled all together.

Potential Solutions

- Ensure that senior government funding programs for rental housing provide options for interest rate protections that allow projects to fix financing rates earlier in the process. This will provide certainty and protection from future rate increases.

- Encourage government funding programs allow a fast and consistent process for term loan assumption in the event of a sale of a completed rental project at occupancy or within the initial term of the loan.
- Encourage increases in density/heights for rental housing projects.
- Improve accessibility of government funding programs for rental housing through increased funding with more flexible provisions.
- Tailor funding requirements to local markets, to ensure that those areas with high land and development costs are not excluded by onerous requirements.

Labour

Builders are facing a shortage of labour and trades throughout the development process. Labour shortages are also affecting other sectors across British Columbia. Census data released in May shows that, across all industries, the portion of workers approaching retirement age is increasing. The labour market is expected to continue to tighten, and unemployment in B.C.'s construction sector has already reached historic lows at 4.6%.[1] If residential construction volumes increase over the coming years, we expect to see shortages persist due to the lack of new entrants into the industry. BuildForce Canada projects that nearly 25,000 construction workers are expected to retire in the next five years in B.C.

This will make it difficult to increase development volumes if there is limited access to more skilled tradespeople, consultants, lawyers and qualified professionals, among others. This shortage will be exacerbated by the advancement of large government-led infrastructure projects, such as the Site C Dam, which draws on the same labour pool.

This strong demand for construction and development related positions paired with a shrinking labour pool will put upward pressure on wages, further increasing project costs.

Municipalities and the Province are also subject to this labour shortage. Developers often face delays related to slow response times by government staff, who are experiencing high volumes of applications. Further delays may occur due to staff turnover, which happens regularly as staff retire or move to other positions or other regions. It is in our experience that they are not typically being replaced by enough new staff entering critical fields. In Metro Vancouver, we understand that this may partially be attributed to a regional salary framework, and this is resulting in significant processing delays.

Potential Solutions

- Evaluate labour demand of infrastructure projects alongside increased development activity.
- Increase training capacity for skilled trades in B.C. through more funding for existing educational facilities and investments in new facilities focusing on underserved markets.
- Explore options to allocate portions of PTT funding towards education initiatives for skilled trades.
- Work with post-secondary institutions to increase scholarships and bursaries for students pursuing education in the trades, as well as professions involved in development applications and construction.
- Work with the construction industry to attract high school students into the sector and review including trades training in high schools.

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

- Create a more robust equivalency framework to accredit non-B.C. or Canada trained professionals quickly.
- Advocate for increased immigration targets to include incentives for more skilled tradespeople and professions that could support the building industry.
- Support B.C.-led innovation in the modular and pre-fabrication construction sector as a form of less labour-intensive construction. Including funding for research, new facilities and training, and utilizing these products in Broader Public Sector projects – especially developments funded by BC Housing.[2]
- Increase salaries of government workers in key fields that process development applications to attract new entrants as well as review regional salary framework in Metro Vancouver. As noted in our memo on *Commentary on Improving Processing Times by Provincial Organizations*, our members would be willing to pay more in fees if the government development review timeframes are reduced.

Materials

Many of the construction materials needed to deliver new housing have been impacted by supply chain issues, and availability limitations as evidenced by the last 18 months. Inconsistent availability has resulted in much higher prices, affecting overall project costs, and in many cases, timelines. Statscan reports that nationally, the costs of key building materials including lumber, metal construction materials such as structural steel, windows, doors and other architectural metal products, electric wire, glass and concrete have all increased by varying degrees. Table 2 illustrates some of these increases.

Cement	4.8	1
Ready-mixed concrete	9.8	6.9

Source: Statistics Canada. Table 18-10-0266-01 Industrial product price index, by product, monthly

Fuel prices are also impacting overall construction costs, as contractors surveyed by Statscan indicated they were charging higher prices to account for the increased costs of transporting material to sites. Year-over-year these costs are increasing steadily, Statscan's recent report notes that across the country, *"Building construction costs for residential construction in the 11-CMA composite rose 22.6% year over year in the first quarter of 2022, surpassing the high (+21.9%) registered in the previous quarter."*
Not all projects are able to absorb these higher costs once their land cost, hard costs and soft costs are fixed and/ or pre-sales are secured. Continued cost escalation will result in decreased project viability for some sites, slowing the ability of the sector to deliver new housing.

In addition, the limited availability of specific materials (i.e., triple glazed windows, low-carbon cement, and heat pumps) may make meeting energy efficiency/low carbon requirements cost prohibitive. "Green" building policies (i.e., higher steps of and changes to the *B.C. Energy Step*

Code and upcoming embodied carbon regulations) are adding further complications to projects and limiting which materials can be used, until there is widespread market adoption, there will continue to be a premium payable for many of these materials.

Potential Solutions

- Reduce PST burden on construction materials that are necessary for housing construction.
- Increase local manufacturing capacity for building materials/equipment (e.g., heat pumps) through an industrial strategy.
- Develop government-led procurement programs to bulk-source certain products that are in high demand but may have inconsistent availability (e.g., heat pumps).
- Incorporate innovative materials (mass timber, low-carbon cement) into modular construction facilities and training.
- Apply a housing affordability lens to the development and timing of emerging provincial and municipal green building requirements, to ensure a balanced approach is adopted that achieves the key climate and housing goals of the Government.

Provincial approvals

Several ministries have permits or approval processes that interact with development applications, including the Ministry of the Environment and Climate Change Strategy, Lands, Waters, & Resource Stewardship, and the Ministry of Transportation and Infrastructure. These three ministries have chronically delayed applications, resulting in added cost and complexity for housing and employment generating developments.

UDI makes several recommendations in our accompanying memo *Commentary on Improving Processing Times by Provincial Organizations.*

What does this mean for housing costs?

These constraints will ultimately increase costs for builders to deliver housing once approved. Some of these costs may be passed on to buyers and renters, but housing prices are set by the market, and there is a ceiling with respect to what can be paid as projects become unviable. For affordable housing delivered as part of housing covenants with municipalities, rents/prices are further capped by the terms of the covenant and held below market putting more strain on projects unless there are density offsets and other potential mechanisms such as fixing or eliminating operating costs and / or taxes.

Prices for inputs required to build housing – land, materials, labour and financing – are also set by their respective markets. Builders are price-takers, meaning that as costs escalate, margins for builders are compressed and a project will become unviable when these margins are no longer sufficient to cover the risk anticipated to take on the development process.

Smaller margins and higher equity requirements will also result in fewer developers being able to participate in the delivery of housing. Larger companies with extensive portfolios will have enough equity, however, smaller developers who cannot afford higher wages or rely on the completion of one project to finance subsequent investments may be priced out. In a market already constrained in its ability to deliver housing, it is critical that these higher costs not become barriers, further limiting the amount of housing that can be delivered. We expect that some costs,

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

like wages, will increase to attract more workers to the industry, however ensuring those increases are more predictable will benefit housing delivery.

We expect that this will be most difficult during a transitionary period as municipalities adjust to new, and higher, housing expectations, but have not yet streamlined their processes.

Recommendations and Conclusion

We have identified several key constraints that have the potential to limit the development sector's ability to deliver the increased housing that is desperately needed in B.C. Many of these issues will require solutions that involve multiple levels of government as well as other sectors. While UDI has outlined several detailed solutions in the accompanying memo on Provincial processes, more work is needed to develop solutions addressing many of the issues raised above.

We would be pleased to continue to work with the Province on these issues, however we recommend that there be engagement with other sectors and associations, who are knowledgeable and more directly involved in current and future constraints in the areas of skilled trades shortage, material availability, and innovative construction.

[1] BuildForce Construction and Maintenance Looking Forward, 2022-2027, Highlights, British Columbia

[2] For example – Companies like Intelligent City and ACQbuilt are developing new construction methods that will increase the speed of housing delivery.

To: **The Hon. David Eby, Q.C., Attorney General & Minister Responsible for Housing**
From: **Anne McMullin, President & CEO, Urban Development Institute (UDI)**
Date: **May 19, 2022**
Re: **Commentary on Improving Processing Times by Provincial Organizations**

Purpose

Several ministries and organizations have permits or approval processes that interact with development applications, and have chronically delayed applications, resulting in added cost and complexity for housing and employment generating developments. Sometimes Provincial processes exceed the timeframes of municipal ones.

If the Province were to impose targets or mandates for improved processing timeframes on municipalities, it would be critical that the development review timelines of these ministries and organizations also improve in lockstep as these organizations are a critical path for the overall timeframes of municipal approvals. In response to communications from the Province regarding the need for (and potentially mandating) faster development review timeframes, the Union of British Columbia Municipalities and local government officials have already indicated that Provincial application reviews are also taking much longer.

UDI has several recommendations to assist the Province with its review of its processes that can improve development processing timelines for the Ministry of Environment & Climate Change Strategy (ENV), Ministry of Forestry, the Ministry of Transportation & Infrastructure (MOTI), and B.C. Hydro as well as other Provincial ministries and organizations.

Background/Discussion

UDI recommendations include adding more resources; utilizing professional reliance and technology; improving the development of requirements and processes and consultations with industry; and better integrating Provincial and local government processes.

Increasing Resources

Departments tasked with reviewing and evaluating applications are often chronically understaffed. As such, **UDI recommends that the ministries involved in implementing provincial regulations on development retain more staff to process applications**. Staffing levels have not caught up to the increased development activity or the added Provincial regulations on development. For example, new regulations have in part led to a 60-80% increase in applications/reports for ENV approvals on brownfield sites that are also taking longer for the Ministry to review - resulting in our members facing up to 15–17-month delays.

Our members would be willing to pay additional fees to have faster processing times because holding costs and risks increase the longer projects are stalled from moving forward to the construction stage. In 2020, Altus found in a study they conducted for the Building Industry & Land Development Association in Toronto that delays increased the cost for high-rise projects by $2.21 per square foot/month. While our members would be willing to pay more in Provincial fees, it is critical that the additional monies going towards processing improvements and are not diverted to other areas. This would also need to be demonstrated through the digital tracking/transparency measures noted below.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

Another UDI recommendation is to increase professional reliance – especially for issues that are not critical to human health or have potential significant environmental impacts. Even in instances in which professional reliance is allowed, some ministries are reviewing the materials submitted by professionals, instead of fully utilizing randomized audits, which is creating unnecessary delays.
As Attorney General, we understand that you have and are taking steps to improve the oversight of qualified professionals by regulatory bodies through the *Professional Governance Act*. With this enhanced review and enforcement of professional standards, the Province needs to consider the option of allowing more work to be completed by qualified professionals (especially for minor issues) and when this is allowed, having ministries audit some submissions – not all of them. If there are issues that arise, these matters should quickly be reported to the governing bodies of those specific professions.

For contaminated sites, the ENV helped established the Contaminated Sites Approved Professionals Society (CSAP Society), which is an independent professional organization mandated to review environmental certification applications under the *Contaminated Sites Regulation* (*CSR*). CSAP professionals manage non-high-risk sites. This model potentially could be used as a model for other Ministries to employ. For the ENV, the scope of CSAP services could be expanded to other technical services the Ministry conducts in-house, for which there are currently long waits.

UDI recognizes that there is still an overarching problem regarding the lack of professionals available to the Province and the private sector to hire, and this issue is addressed in our accompanying memo on *Capacity Constraints*.

Digitization, Tracking and Transparency

UDI was very supportive of the Ministry of Municipal Affairs' $15 million *Local Government Development Approvals Program* to assist municipalities in their efforts to improve their approval timeframes. We even supported individual local government applications. Many used the Provincial funding to digitize their development review processes to improve transparency (i.e., applicants can see where their projects are in the process) and to better track where, when and why delays are occurring. Common problems and bottlenecks in development reviews can then be identified and fixed. This includes potential issues with submissions by applicants/consultants or delays in their responses.

UDI recommends that the Province make similar investments in digitization and tracking software for ministries that review development applications to help identify roadblocks in the processes of Provincial agencies and ministries as well as the number of and reasons for applications being rejected. Ideally, Provincial ministries would utilize the same systems, or have systems that can share information as there are overlapping regulations for some sites.

Digitization may also solve another problem that both UDI members and local governments share – the inability to reach Provincial staff regarding applications in some ministries. As noted above, these software programs have the ability to provide information on where applications are in the process and which staff are reviewing them that would assist both proponents and local governments. The latter issue is critical as often there can be multiple file managers for a project

when there are extended timeframes. However, ministries would need to be more transparent and allow better access to their employees.

Regulatory Changes

Many Provincial processing issues arise because of how regulatory changes are developed. There is usually little understanding by provincial regulators and the building sector about how new requirements will impact housing development and application reviews. As noted above, part of the reason the ENV has seen an 80% increase in applications is related to this issue. Our members were surprised by the *WSA* changes and their impacts on projects because there was little consultation with our industry when the former ministry of Forests, Lands, Resource Operations and Rural Development (FLNRORD) took over the implementation. The Ministry was surprised as well, and this led to backlogs of 18 to 24 months for applicants and continue to have extended review times.

There have been instances when there has been very little consultation with industry on substantial changes to policies, processes and testing protocols. For example, the ENV released ten draft protocols for soil remediation on November 27, 2020 and asked for comments by January 11, 2021, and the protocols came-into-force on February 1, 2021. This is not the first time this has happened with the Ministry, and they have indicated in the past that documents being "… *posted for 30 to 60 days … is common practice across government*." This may be reasonable if it were one or two documents – however ten technical draft protocols being released for a 45-day review during a pandemic and over the December Holiday periods is not appropriate consultation, or enough time for the sector to understand the cost implications. Nor is it appropriate notice when they come-into-force three weeks later. Due to the short timeframes for notice of these changes, there were significant cost and scheduling implications for our sector and the Ministry which led to the backlog noted above.

In addition, little information is provided by ministries regarding the regulatory impacts of their proposals – or the potential delays for development applications. We understand that some of this information may be shared with Government, but there is little consultation with our sector on these critical impacts to housing costs and timelines.

UDI has recommended in the past that ministries consult with key stakeholders before draft documents are issued and that they stagger the consultations if there are many technical protocols requiring review. The ENV had extensive and early consultations with the key stakeholders on the soil relocation policy, which allowed for substantial improvements to it as well as providing our membership with early notice.

Alternatively, we also supported the idea of having them all be addressed (i.e., omnibus changes) through larger consultation processes – with timeframes that are much longer than thirty to sixty days. In 2015, the Ministry of Environment proposed updating the *CSR* every five years, and UDI endorsed this approach. Having these set times for regulatory updates would allow the industry to prepare for and contribute meaningfully to proposed changes. However**, this also needs to include guidelines, protocols, and other documentation.**

Ministries should also share information during their consultations about the regulatory impact (both in costs and timeframes) of their proposals, so the full extent of the changes are

understood and can be discussed. For example, ministries need to be asked how application review times will change as a result of the proposals, and if they are longer, how they need to be resourced to maintain current review timeframes. **This needs to be tracked after the regulatory changes come-into-force** (see above). In some instances, there would be a benefit to piloting proposed changes to regulations using real-world projects such as those in the broader public sector and B.C. Housing. The unintended consequences of regulatory changes are difficult to predict, especially when they are tied to other variable processes (e.g., municipal permits).

It is difficult for builders and the whole industry to adjust financial arrangements after land is purchased early in the development process. If new costs or risks are introduced afterward, projects can become unviable, or rents and house prices have to increase; both would undermine housing supply and affordability. The above approach addresses this by providing regulatory stability and reducing risks. Proponents could be certain that the rules would not change substantially until the next cycle. Longer consultation periods would also increase the notice period of upcoming changes, so builders could prepare for the changes, and adjust their bids on development sites. **Including grandparenting provisions would be helpful to the industry, and would protect projects from significant mid-process regulatory changes, which result in proponents incurring additional costs, testing and delays.**

UDI recognizes that there may be instances when new information arises that demonstrates potentially significant impacts on life safety, human health and environmental protection. In these instances, regulations should be adjusted. However, appropriate consultation is still needed.

Ongoing Consultation

In addition, UDI also recommends ongoing meeting between ministries that regulate housing development and industry (and in some cases local governments) to address any ongoing implementation issues. The Ministry of Municipal Affairs has established an ongoing *Development Approvals Process Review* (*DAPR*) initiative that includes municipal officials, builders, consultants, and other stakeholders. ***DAPR* could be utilized to assist ministries to improve their approval timeframes and the coordination between municipalities and the housing sector – including the issues noted in the next section.**

In the absence of this, we ask that the Ministry of Housing convene a quarterly standing committee with relevant ministries, municipal officials and industry stakeholders to address ongoing issues with Provincial processes. Ministries such as Forestry are not as familiar with urban issues, so having this dialogue would be helpful. We recognize that these meetings should not be one-way conversations about industry complaints. They can also allow ministries to outline their issues with municipalities and applicants (e.g., common mistakes on submissions). The Ministry can also receive market updates from our members and local governments, so Provincial officials understand future workloads.

Better Integration of Municipal and Provincial Processes

There may also be benefits with better integrating municipal and provincial processes in two different ways. Provincial ministries and organizations should be more involved in municipal area plans – especially in high growth urban areas – as these establish where substantial growth will be occurring. Last year, Surrey developed an Area Plan for Dart Hill, but did not consult BC Hydro, even though the plan included incentives to fully electrify buildings. If BC Hydro is

unaware of changes that could impact their current and future infrastructure, development delays can occur, and costs can increase. **We recommend that BC Hydro be involved in municipal area planning processes especially with new housing projects requiring more power for electric vehicle charging and building electrification.**

It may also be worth exploring other ministries being involved in area planning. For example, additional background soil assessments could be conducted that may make it easier for proponents to obtain ENV approvals for brownfield sites as well as help with upcoming soil relocation regulations. Perhaps, some *WSA* and riparian area issues such as streamside setbacks and classifications could be resolved or understood to speed up approvals.

The Province may want to potentially review providing funding for studies when critical Area Plans occur that would support these efforts. If it can be demonstrated that Provincial (or municipal) review timeframes can be reduced, builders may also be willing to cost share some of these studies through higher planning fees.

UDI would also like to explore the benefits of a standardized municipal planning process as is the case in Ontario. We have heard from some Provincial officials that it is difficult to integrate their requirements in widely divergent municipal processes where local government requirements occur at different stages, and some key steps such as Development Permit or Occupancy Permit do not occur in all communities. A standardized municipal planning process would address this concern as well as make it easier for builders, consultants and municipal staff to understand and navigate each municipalities development review process as well as compare the processing metrics of local governments. Please note that municipal policies should be allowed to vary, but the processes could be standardized.

In the past, **UDI has recommended that the Province establish growth projections for British Columbia and its regions**, which could then be used to establish growth projections for municipal *Housing Needs Reports* and housing targets. **This information would be equally useful for Government ministries/organizations involved in development applications**, so they understand future workloads and can plan for them. It is also critical that the information ministries use is consistent with what municipalities and the industry expect. Contradictory information will lead to confusion – especially for the public – who are being asked to be more accepting of growth.

Recommendations and Conclusion

In order to address the issues involving Provincial processing times by Provincial organizations, UDI recommends that:

- The ministries involved in implementing provincial regulations on development retain additional qualified staff to process applications;
- Ministries increase professional reliance;
- The Province make similar investments in digitization and tracking software for ministries that review development applications;
- Ministries consult with key stakeholders before draft documents are issued and that they stagger the consultations if there are many technical protocols requiring review;
- Changes be addressed (i.e., omnibus changes) through larger consultation processes – with timeframes that are much longer than thirty to sixty days;

www.udi.bc.ca

- Ministries share information during their consultations about the regulatory impact (both in costs and timeframes) of their proposals;
- Grandparenting provisions are included, as they would be helpful to the industry, and would protect projects from significant mid-process regulatory changes, which result in proponents incurring additional costs, testing and delays;
- Ongoing meetings occur between ministries that regulate housing development and industry (and in some cases local governments) to address any ongoing implementation issues;
- The Ministry of Housing convene a quarterly standing committee with relevant ministries, municipal officials and industry stakeholders to address ongoing issues with Provincial processes;
- That B.C. Hydro be involved in municipal area planning processes especially with new housing projects requiring more power for electric vehicle charging and building electrification; and
- The Province establish growth projections for British Columbia and its regions for both local governments and Government ministries/organizations.

The slides I sent yesterday can be shared with the building code committee. Tiffany, Scott and I are meeting at 4:30 and we can discuss sending the technical slides along, too. I think it should be OK.

I'll ask about the webinar. We've got some requests from the LGPN, too. I hope we can make it.

Thanks for coming today. Really appreciate it.

H

Hugo, will you be sharing the slides from today's presentations? If you are, can I share them with our Building Code Committee?

Also, UDI would be interested in hosting a webinar with BSSB after the consultation begins in June. We are no longer holding Breakfast Seminars due to COVID-19, so it would be a webinar. We would invite our Fraser Valley, Okanagan and CRD Chapter members to participate in it as well.

Jeff is referring to the revised Step 2 TEUI metrics for commercial and office occupancies. There is now increased stringency based on analysis done in comparison with NECB 2020.
Should these come into force for December of 2022 and if BP is submitted prior to the effective date then the applicant would follow the current requirements, if submitted after, then they would be required to follow the new requirements. This is mainly a concern for projects where design is underway and they are designing to current code requirements, but may not be able to submit for BP prior to the effective date.
Not much we can do here except broadcast the changes in advance. It would be best if we were able to have sign-off from the Minister months in advance for December 2022 so that everyone has a clear understanding of what is expected when it comes into effect.
At this stage, best case scenario is September/October sign-off.

Hi There:

Regarding this comment from Jeff:

> *We will also have to figure out what happens with in-stream applications. It is hard to adjust designs and financial commitments late in the process, and this change may impact Part 3 commercial/mixed use builders of Step 2 buildings if in the middle of their development review process, the target changes. I think we may have to consider grandparenting provisions for development applications (e.g., rezoning, DP, and BP).*

I suspect that this is something beyond our control. Once the BCBC amendments come into force, they are the law. Local government that adopt the Carbon Pollution Standard could say it doesn't apply to in-stream applications since it is voluntary. For the energy efficiency amendments, I think that the local government would have to decide to not enforce the BCBC in that regard. Also, wouldn't it only affect Part 3 builders of Step 1 buildings (and prescriptive?) as Part 3 is only shifting to Step 2.

Tracy

Subject: RE: Energy Step Code agenda and PPT

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hugo, regarding the proposed changes, we have several comments.

We generally support the approach being adopted to increase the TEUI numbers for office and retail. However, as part of the consultation package, it will be important to identify what the cost changes will be, so our membership can provide commentary as this could be a concern.

We will also have to figure out what happens with in-stream applications. It is hard to adjust designs and financial commitments late in the process, and this change may impact Part 3 commercial/mixed use builders of Step 2 buildings if in the middle of their development review process, the target changes. I think we may have to consider grandparenting provisions for development applications (e.g., rezoning, DP, and BP).

Information on the costs of the various GHGi steps also has to be shared in the consultation. This is critical now because of rising construction costs. In addition, the BC Hydro issues that have raised need to be addressed in the consultation:

- The Tier 2 Rate Structure;
- The connection fee issue in which the builder whose project passes the BC Hydro capacity threshold has to pay for electrical infrastructure upgrades for their project and future ones (this will become more prevalent with EV charging requirements being added to building electrification);
- The need for BC Hydro to be more involved in Area Plans because the importance of their infrastructure;
- The need for BC Hydro to support solar options; and
- Supply chain issues for heat pumps, VRFs, HRVs, etc..

The timing of the changes is also critical as some of my members want to ensure that the industry (especially trades/materials) is ready and local governments who will need to train staff about the new requirements. This will be an even larger issue outside of Urban Centres. One of my members pointed out that education will be critical as "*One of the biggest issues with the step code is urban design & planning staff, along with Councils asking for complex urban forms, stepping buildings, etc. all of which work against the intent of the policy*."

I understand the angst that some of the members of the Energy Step Code Council had towards allowing prescriptive standards to meet the *ESC* requirements and the GHGi requirements. However, there are legitimate issues for Northern and remote communities that need to be addressed. My members do not build in these areas, but I am concerned about how the *ESC* may be viewed in areas if we force requirements that do not work.

For the *ESC*, prescriptive requirements should be allowed in areas where there are no AHJs for now. Have you identified the communities without modellers or airtightness testers? If you have, these communities should likely be allowed to use the prescriptive requirements for the *ESC*, until modellers/testers are available. If you don't know, we should allow communities to request the ability to utilize prescriptive requirements. However, the criteria for BSSB saying yes to the request should be linked to the number of modellers/testers in the community, and if the number improves, the prescriptive requirements could then be eliminated.

Regarding GHGi in Northeastern BC where the electrical utility has a high emissions factor, it is not clear to me that Part 3 builders (although there may not be any Part 3 buildings there), and Part 9 builders (even with the prescriptive option) would be able to meet the requirements. The Province may have to focus on improving the emissions factor for the electrical utility or utilize RNG to lower GHGi.

Can we defer the decision on the RNG until the BCUC decision is handed down, or message that the recommendation to allow local governments to determine whether RNG can be used may be amended after the BCUC decision is released? I understand that RNG cannot be used now because there is no mechanism to tie the use of RNG to the life of the building (unless electricity is used instead). However, if this changes, I think further discussion is needed – especially when the Province begins establishing its own targets. This discussion would need to include the future supply levels of RNG as this is another municipal concern.

With regard to DE, having utilities establish their own carbon intensities is a well established practice. Until there is more integrated GHGi accounting/reporting this should remain the case. However, the Best Practices Guide will need to reflect municipal policies on GHGi will have to align with those emission factors. As noted above, the requirements must work. Builders cannot be expected to build a low carbon home if the energy being used has a high emissions factor.

If you have any questions, please do not hesitate to contact me.

Energy Step Code Council Meeting
Notes

Date and Time of Meeting: Thursday May 19, 2022 | Time: 1:00 p.m. to 4:00 p.m. Pacific Time
Acting Chair: Tiffany Warkentin, Building and Safety Standards Branch, Office of Housing and Construction Standards
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

1. Bea Bains, FortisBC
2. Patrick Caraher, Aboriginal Housing Management Association
3. Madeline Dams, Ministry of Municipal Affairs
4. Maya Chorobik, Community Energy Association and Local Government Peer Network Co-chair
5. Norm Connolly, City of Richmond, Planning Institute of BC rep, Part 3 Subco Co-chair
6. Madeline Dams, Ministry of Municipal Affairs
7. Patrick Enright, City of Vancouver
8. Catherine Ernst, Building Officials' Association of B.C.
9. Jeff Fisher, UDI
10. Maura Gatensby, AIBC
11. Chris Higgins, City of Vancouver
12. Pete Koepfgen, FortisBC
13. Toby Lau, BC Hydro and P3 Subco Co-chair
14. Wilma Leung, BC Housing
15. Megan Lohmann, CEA and UBCM rep
16. Richard Mathews, Part 9 subco co-chair
17. Mary McWilliam, BCIT & CBC Subcommittee Co-chair
18. Katherine Muncaster for Nat Gosman, Ministry of Energy, Mines and Low Carbon Innovation
19. Roberto Pecora, ZEBx at ZEIC
20. Harshan Radhakrishnan, EGBC
21. Kelly Reid, HKR Builders/CHBA BC
22. Ron Rapp, HAVAN and P9 subco co-chair
23. Pauline Rupp, CHBA-BC
24. Joe Hart, CHBA-BC
25. Lise Towsend for Maxwell Sykes, City of Surrey/UBCM Rep
26. Ralph Wells for John Madden, University of British Columbia
27. BSSB: William Grass, Aura McRae, Hugo Wong, Senior Policy Analysts; Scott Williams, Senior Codes Engineer
28. **Guests**: Tom Berkhout, BC Hydro; Mark Bernhardt, Bernhardt Contracting; Remi Charron, BC Housing; Nicholas Heap, City of Richmond, Charling Li, City of Vancouver, Adrian Mohareb, CAS;
29. **Regrets**: Dale Andersson, CBC Subcommittee Co-chair; Ian Cullis, BCNPHA; Katy Fairley, BCCA; Jason Jung, ASTTBC; Lisa Mak, BC Hydro; Richard Mathews, Squamish and Part 9 Subco co-chair; Sean Pander, City of Vancouver; Tyler Wightman, BOABC; Guido Wimmers, UNBC

AGENDA

Time	Topic	Speaker(s)	Purpose(s)
1 p.m.	Welcome, introductions and opening remarks	Tiffany Warkentin, Acting ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs	▪ Welcome participants ▪ Approval of agenda
1:10 pm.	Subcommittee report out	Co-chairs	▪ Part 3 and Part 9 Non-Residential ▪ Part 9 Residential ▪ Local Government Peer Network ▪ Communications and Capacity Building Sub-committee
1:30 p.m.	20%-better for Part 9 and Part 3 buildings	Hugo Wong, Tiffany Warkentin, Scott Williams, BSSB	▪ Policy and technical overview of 20%-better energy efficiency
2:30 p.m.	Break		
2:40 p.m.	GHGs for Part 9 and Part 3 buildings	Hugo Wong, Tiffany Warkentin, Scott Williams, BSSB	▪ Policy and technical overview of carbon pollution standard
3:25 p.m.	Best practices guide topics	Hugo Wong, BSSB	▪ Establishing a working group, collecting feedback

3:30 p.m.	Roundtable	All	▪ Open discussion of Energy Step Code implementation in your area
4 p.m.	Adjournment	All	

Welcome, Introductions, and Opening Remarks (Tiffany Warkentin)

20%-better for Part 9 and Part 3 buildings

Policy discussion

- Opening PowerPoint by Hugo Wong, attached.
- CHBA: Some building science concerns with prescriptive approach. U-values for windows are too low. Could see moisture problems with inexperienced builders looking to up R-values for walls. Also might give free pass to homes for large, highly articulated homes with lots of glass. Suggest having energy model only and AHJ inspecting as best they can, with no air test, so builders can at least get close.
- In response to UDI question about amount of information sessions about new code language, BSSB will do large multi-sector group events online.
- BC Housing: Introducing prescriptive code requires numerous last-minute changes to our builder education. Also concern that while there is no plan to include prescriptive backstop for Step 4, we may be at this point again in 2027 when Code steps up again.
    - BSSB: Federal funding and mandatory licensing will help education and capacity. Pushing the market in some other ways.
- Mark B: Advocate for higher prescriptive values so builders would actually choose an EA over this. In urban areas where EA market is flooded, they might choose this still instead of an EA. Agree that requiring higher U-value windows, HRVs, sub-slab insulation is low-risk, but more insulated walls are risky if builder is not educated.
- Joe: In CZ6 we're already doing what you suggest in the prescriptive. Maybe need a few hundred dollars more attic insulation. Not enough incentive. Builders want reassurances that Step 3 is not scary and cost-effective. Suggest prescriptive code option should cost the average builder $5k more as an effective deterrent.
- CoV: Also agree with improving transparent envelope first. VBBL minimum is U1.2 for all projects, U-1 for over 30% glazing in homes. Prescriptive and performance path exist in Vancouver, but prescriptive is full electric.
- Comment: Clarify whether LGs have option to go prescriptive or performance, or is it developers/builders who choose. Include in implementation guide.
- BSSB: Wanted to balance having an onerous enough prescriptive option to dissuade builders with EAs close by. Was written to make it more onerous in warmer climate zones so they default to performance.
- ZEBx: Consider keeping energy modelling but no blower door test. Could subcontract?
- BSSB: Remote energy modelling would not follow EnerGuide Rating System without in-person blower door test or verifying model is as constructed.
- Building inspector, City of North Van: Concerned local governments that have already adopted the Step Code and done training on the performance path will be negatively affected by

prescriptive path. Step Code has reduced building inspection due to EAs taking up some of that work, and sped up permit processing. LGs rely on EAs and their reports. This is a step backwards.

Technical discussion, Scott Williams

- PowerPoint by Scott Williams, see attached.
- Point taken on unintended durability consequences of increased RSI-value of walls.
- Question on how "final" these Code tables are. Still open for discussion
- Consider a certain perm rate, something a building inspector could oversee. Exterior insulation does increase cost, which may be desirable if wanting to incent builders to choose the performance path.
- CHBA: Can we consider the VBBL as the baseline for CZ4? That's higher than what BSSB proposed, but for a starting point, try that.
- Kelly: Agree; windows are low-risk with significant costs but big benefits. Unheated floors, having that as a requirement/ Low-risk, high benefit.
- CHBA: A TRC member said you shouldn't be able to opt out of having an HRV on the prescriptive path if you choose heat pump.
- BC Housing: Can a muni opt-out of prescriptive if they've worked hard to build it up in their area?
- TW: Will compile that feedback for the Minister's consideration.
- Richmond: Huge step back if we have prescriptive backstop. Don't want to turn our backs on airtightness and modelling as we agreed that's where industry needed to go.
- AIBC: Disturbed by this. Very regressive to move away from the performance path we agreed on. We do not support the prescriptive option.
- Mark B: Also agree with Richmond. VBBL base code is still higher than this, which creates a $5-10k increase that might dissuade someone who has access to EAs from going the prescriptive route.
- CAS: Could we just have Step 3 as an option but no airtightness testing?
- Joe: I appreciate it's hard to do one size fits all for the Province. I worry by helping out very few builders in the far north who need it, you've opened the door to everyone unnecessarily. Can we not regionalize this?
- TW: Not just for builders in far north, but Gabriola, Haida Gwaii, etc.
- Questions on whether local governments could opt in or out. Hard to maintain or administer. Builders still obligated to comply enforcement or not.
- Richmond opposes the current prescriptive proposal.

BREAK

20%-better for Part 3 buildings

Technical presentation and discussion, Scott Williams

- PowerPoint by Scott Williams, see attached.
    - Overheating, future of ASHRAE 90.1 and 62.1 to be discussed in 2023.

- “Reserved” is a code convention to retain existing numbering.
- Toby and Adrian like that work plan.
- Questions on GHGs:
    - The proposal to date would mean all columns of the GHG table would open to all builders. Performance or prescriptive.
- Surrey: Appreciate GHGI and carbon cap. GHGIs seem aligned with what LGs were asking for. Curious about the 1.8 instead of the 1.5, but minor overall. LGs recommended an electrification approach. Having seen the fuel neutral approach, and seeing tables like this for a decade, disappointed that this is still limiting our ability to respond on a scientific basis to the climate crisis. I understand the political issues of this. Given that, I suggest prescriptive decarbonization approach to just be eliminated. Regarding the prescriptive approach for efficiency, I have concerns on how it can be enforced, and if it is defensible as a true decarbonization approach to meet climate targets.
- ZEBx: Question on emissions factors: If you decarbonize, what emissions factor would you use? Does it reflect the molecules in the pipe or the ratio you pay for?
- BSSB: The amount you pay for. Modelling ruleset will have guidance. Wanted something readily usable by industry, hence CoV Energy Modelling Guidelines. The GGIRCA figure is still settling, and the national figure is also fluctuating. We need something for right now, a familiar figure, acknowledging that shifts will come.
- LGPN GHG working group agrees on an electric-only prescriptive path. It’s simpler to check and confirm compliance. Current decarbonization approach is fuzzy.
- CoV: Emissions factor from CoV is from 2018 PSO methodology, with slight correction for natural gas. Don’t have a figure for RNG specifically. A mention of purchased renewable energy that could be treated as zero. Could have further discussions on this.
- Richmond: Part 9 prescriptive GHG option was based on LG request for electrification pathway that was easy to regulate. What we see doesn’t fit the bill. Let’s just drop it again, back to where we started, performance options, which is fine.
- LGPN: Does a fuel neutral code mean every path has to be fuel neutral? RNG could meet the performance path. If we have a pure electric path, could that not be counted as fuel neutrality provided RNG could still use the performance path? Electric-only is straightforward, easy for LGs to enforce.
- BC Housing and Surrey: Agree.
- Kelly Reid: I actually like the proposal as written.
- FortisBC: At end of the day, ultimate objective is to achieve provincial emissions target, and the only way to do that is with all options on the table. That means decarbonizing the gas supply.
- LGPN: RNG would modelling would be onerous on the AHJ to understand whether the requirement is met. Not a compliance aspect within scope in stretched building departments. Smaller LGs seeking to lead are most interested in electric pathway. RNG could be included in the performance pathway, because another entity does the check. On prescriptive, its fully on building officials.
- FortisBC: Understand that compliance checking is onerous today, but the BCUC decision could result in the RNG following the building, not the customer. We expect a decision on our proposal at the end of the year or Q1 2023.

- Robyn: I like the creative solutions and the frankness. Maybe opt-in only for municipalities under 5,000? Could be an elegant way to not make it a wide-scale regressive action. So great to see this concrete proposals. There will be a bunch of updates to training materials and guides that will need to happen. We can work with CBCSC group on later so we have training and information to builders, developers, architects.
- BCIT: Training providers will need to update their materials; changes discussed today will have big impacts. The sooner decisions are made the better.

Roundtable

- UBC: Glad GHGI is moving forward. Neighbourhood low-carbon strategy happening for Point Grey campus. No commitments yet, but hoping to do early adoption of the zero-carbon ready target for that neighbourhood. We are also involved in lots of work on future-shifted climate and overheating issue. Adopted some requirements both residentially and institutionally.
- Joe Hart: Good news story: At our event in Prince George last week, instructor of basic carpentry courses for first-year apprentices in Dawson Creek is including Step Code in training. We've been saying forever: tell apprentices from the start. Some people are doing that.
- TW: Terrace building official says they have an EA in their community now.
- Kelly: Capacity issue wasn't nearly as bad as we anticipated. Many concerns some years ago, but not as many as we expected now.
- CoV: Really excited on the GHG work provincially and glad the CoV GHGIs in Part 3 line up with your Low option exactly. Seems like we're almost there.
- EMLI: Better Homes new construction program is open again!
- TW: Thank you for your candor, respect, and passion. Send any pre-public review comments to TW.

Adjournment

Housing Supply Act

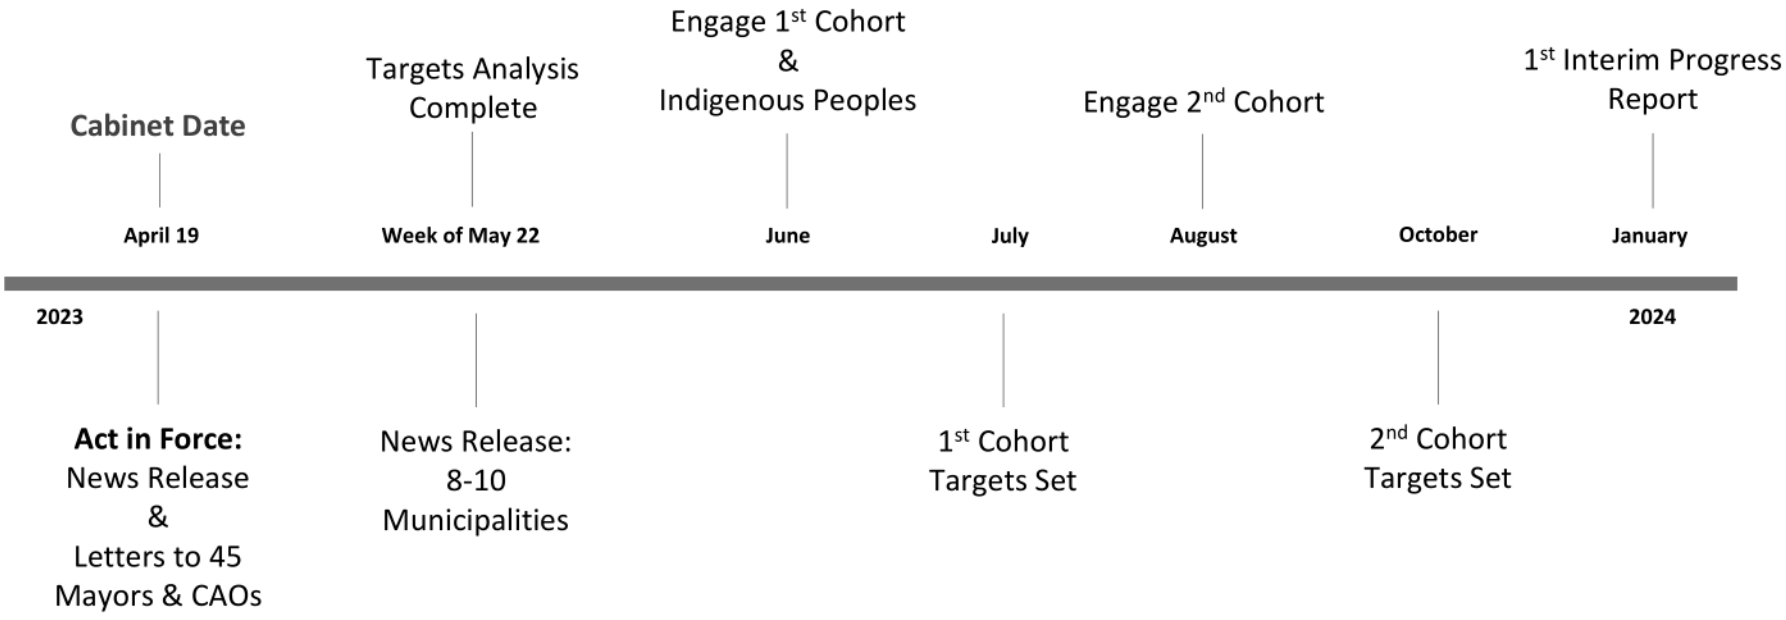
Implementation & Communication Plan

April 11, 2023
Ministry of Housing

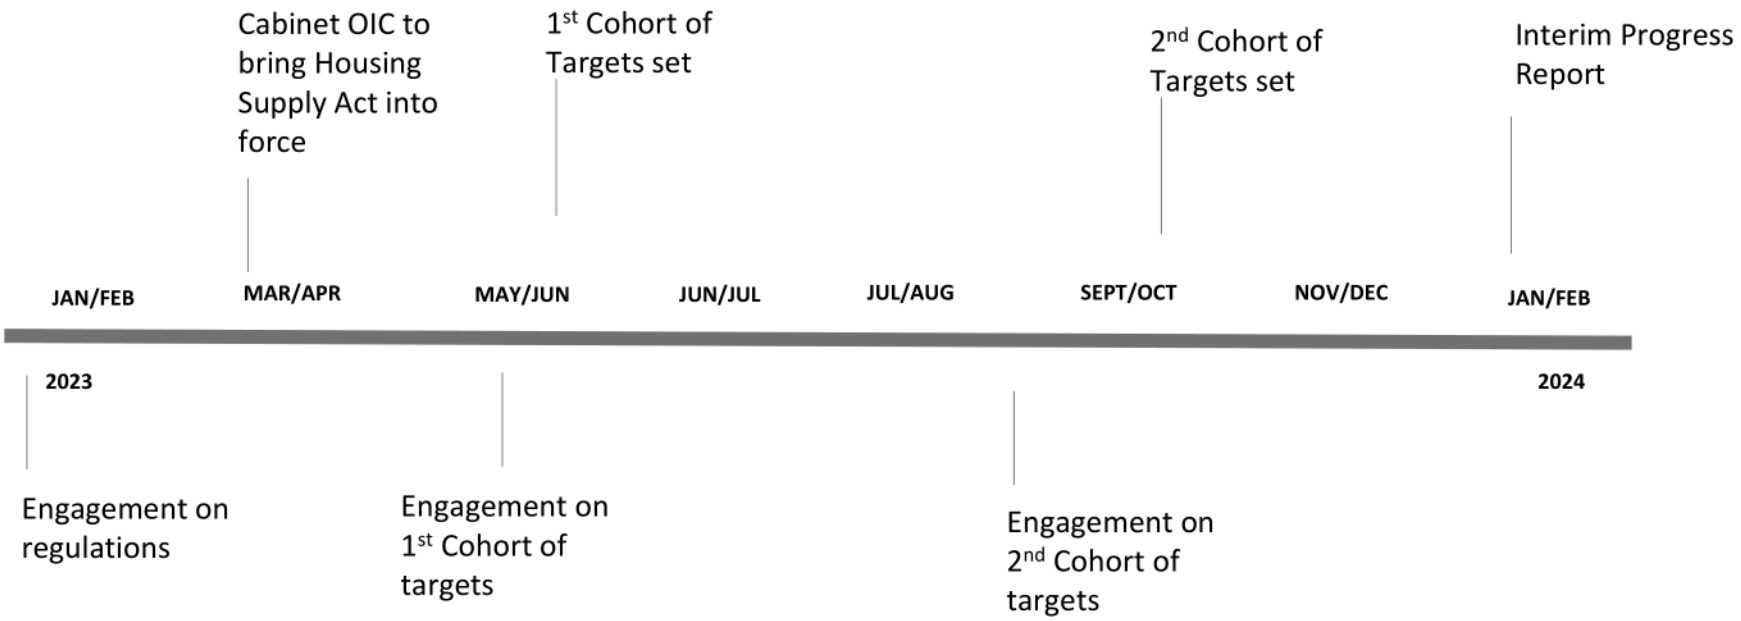
Consultation

- UBCM and representative municipalities
- Urban Development Institute
- BC Non-Profit Housing Association
- Indigenous Peoples
  - Treaty Nations
  - First Nations and Tribal Councils
  - Metis Nation BC
  - Aboriginal Housing Management Association
  - First Nations Leadership Council

Communication & Implementation Plan



Appendix: Timelines to Implement the *Housing Supply Act*



Housing Supply Act Regulations

Urban Development Institute

March 3, 2023

Ministry of Housing

Purpose and Agenda

Seeking feedback on the proposed regulations that are being developed to bring the *Housing Supply Act* into force this spring.

1. Context and Provincial Housing Measures
2. Housing Supply Act and Regulation Making Authorities
3. Regulation & Program Policy
4. Discussion and Next Steps

Context

- Growing demand is rapidly outpacing supply – more housing is urgently needed for renters and buyers.
- Government obligation to fulfill commitments on affordability and creating housing options while supporting current and future generations of British Columbians.
- Calls from the public, business community and housing advocates for the Province to address the housing crisis.

HSA Alignment with other Provincial Measures

- **Provincial Permitting Strategy** (Ministry of Water, Land and Resource Stewardship). 'Single window' for housing applications to support integration across ministries
- **Growing Communities Fund** (Ministry of Municipal Affairs). $1bn for all local governments to build infrastructure to meet population growth
- **Development Approvals Process Review** (Ministry of Housing)
- **Transit-Oriented Development** (Ministry of Transportation). Development of complete & connected communities along transit corridors

Housing Supply Act

- Enabling authority for the Province to set housing targets and timelines in collaboration with specified municipalities.
- Phased implementation in high growth areas with greatest current and forecasted housing demand.
- Municipalities encouraged to do all they can to create conditions for development.
- The Province will monitor progress and work with municipalities throughout the process to address any barriers to meeting housing targets.
- Regulations will bring the Act into force this Spring.

Housing Supply Act Regulations

1. Definitions
2. Prescribing municipalities that housing targets can apply (SVT areas)
3. Requirement that municipalities provide additional information for setting housing targets
4. Establish the classes of housing that targets apply to (e.g., rental units, shelters, apartments (condo/rental) and ground units)
5. Time for municipality to respond to a description of a proposed housing target order (45 days)
6. Time for municipal council to receive a progress report at conclusion of reporting period (60 days)
7. Time for municipality to respond before appointing an advisor or issuing a directive (60 days)

Housing Targets Program Policy

Step 1	Selecting Municipalities	Province applies benchmark measure
Step 2	Engagement & Data	Municipality submits required data and information to Province
Step 3	Validate Housing Estimates	Ministry validates municipal housing needs estimates
Step 4	Target Setting	Province applies standardized target setting methodology
Step 5	Target Consultation	Municipalities & Indigenous Peoples consulted on housing targets
Step 6	Order Issued	Municipality formally notified
Step 7	Order Published	Municipality publishes order on internet site
Step 8	Monitor Progress	Municipality prepares and submits progress report

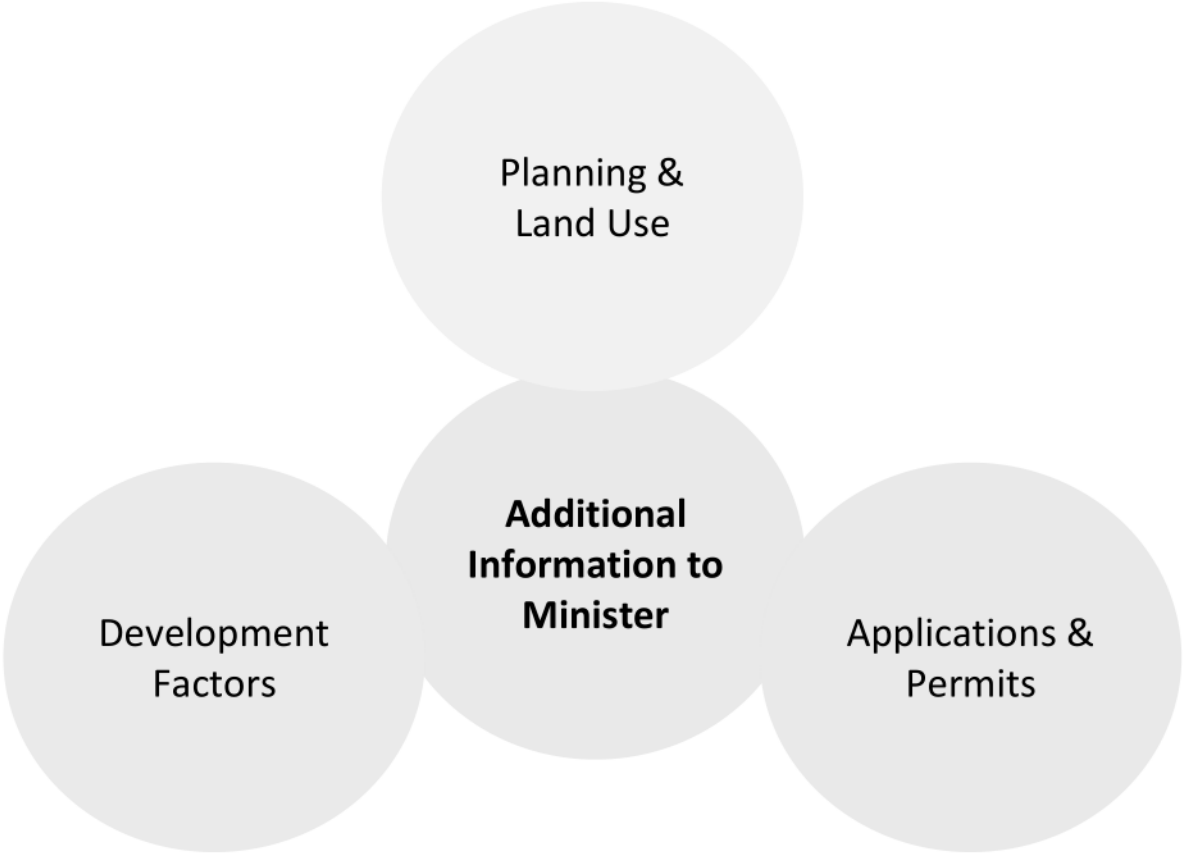
Discussion

1. Any other matters or potential unintended consequences to implementing targets as outlined?

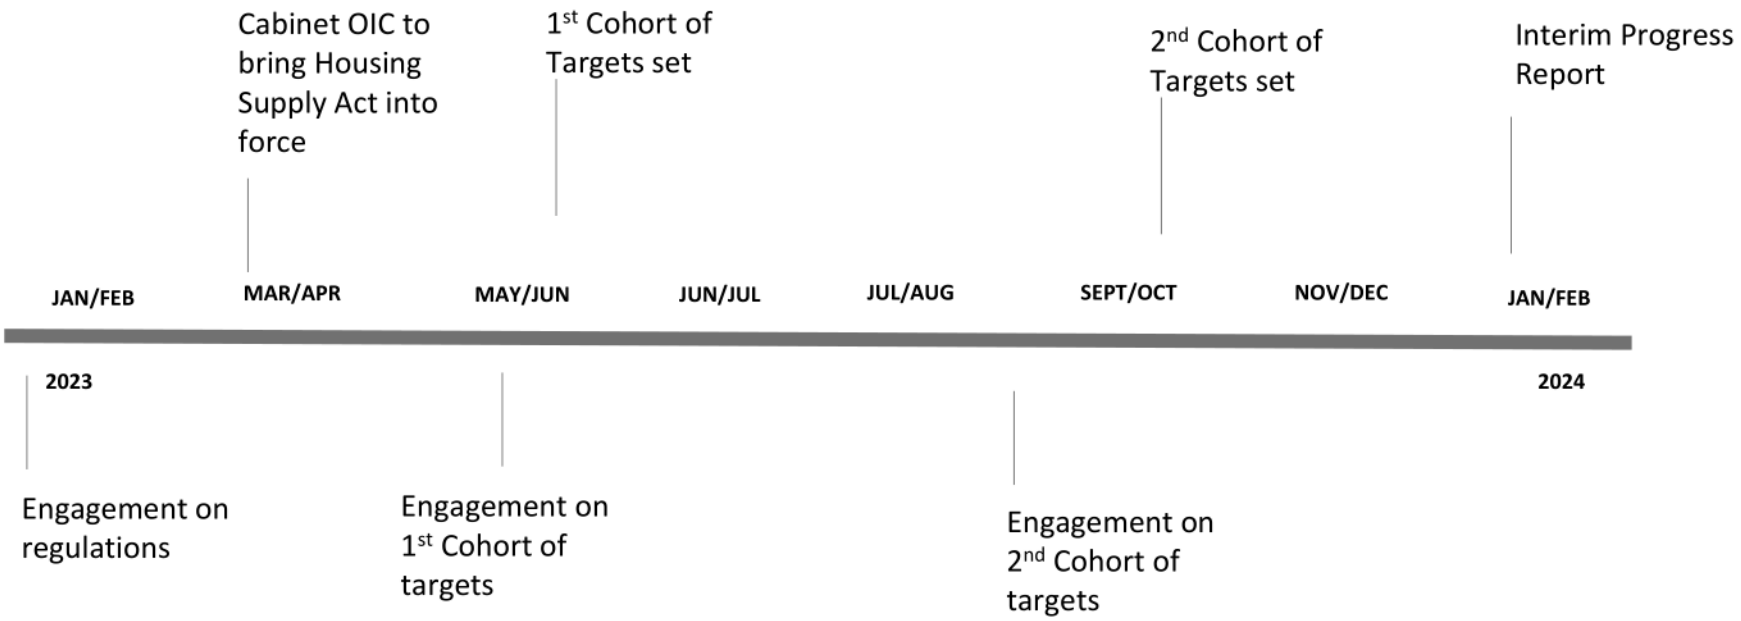
Next Steps

- Compiling feedback for regulation drafting
- Regulations will bring the Act into force in Spring 2023

Section 13: Provision of information to the Minister



Appendix: Timelines to Implement the *Housing Supply Act*



Appendix: Selecting Municipalities

163 Municipalities

- Focus on municipalities under the Speculation and Vacancy Tax

— Highest growth and demand, consistent with other Provincial initiatives

46 Municipalities

- Establish an empirical benchmark measure to rank municipalities using an index reflective of key dimensions of housing need

— Housing Needs Reports: review & validation against other data and info

— Other planning initiatives, i.e. Transit Oriented Development

8-10 Municipalities

- Opportunity to incorporate volunteer cities, and other considerations into final selection.

— Consider regional context

— Phased Implementation: gradually scale up; and possibly expand outside SVT areas

— Housing Target Order: 5 to 10-year timeframes

Regulation

Section of the Act	Regulation Making Authority
Section 20(2) (a)	prescribing municipalities as specified municipalities
Section 20(4) (c)	establish classes of housing targets
Section 4(3)	prescribed number of days after the end of the reporting period, by resolution, receive the housing target progress report at a meeting that is open to the public
Section 20(3) (b) (iii)	the time periods that must be met for the purposes of consultation
Section 3(3) (b) Section 7(3) (b)	provide, in accordance with the regulations, an opportunity for the specified municipality to provide comments to the minister [before making a housing target order, appointing an advisor, or issuing a directive]
Section 13	Provision of housing information to minister, any other prescribed information

Housing Targets Program
Branch *Housing Supply Act*

Municipality Engagement Plan - Session 1

May xx 2023

Ministry of Housing

Purpose and Agenda

Provide an overview of the *Housing Supply Act*, purpose, the verification/validation and methodology developed to create a ministry benchmark on housing targets.

1. Context and Provincial Housing Measures
2. Housing Supply Act and Regulation Making Authorities
3. Regulation & Program Policy
4. Validation process
5. Selection process
6. Required Data
7. Form
8. Q & A
9. Discussion and Next Steps

Context

- Growing demand is rapidly outpacing supply – more housing is urgently needed for renters and buyers.
- Government obligation to fulfill commitments on affordability and creating housing options while supporting current and future generations of British Columbians.
- Calls from the public, business community and housing advocates for the Province to address the housing crisis.

HSA Alignment with other Provincial Measures

- **Provincial Permitting Strategy** (Ministry of Water, Land and Resource Stewardship). 'Single window' for housing applications to support integration across ministries
- **Growing Communities Fund** (Ministry of Municipal Affairs). $1B for all local governments to build infrastructure to meet population growth
- **Development Approvals Process Review** (Ministry of Housing)
- **Transit-Oriented Development** (Ministry of Transportation). Development of complete & connected communities along transit corridors
- Align BC Housing and Federal funding and programs

Housing Supply Act - overview

- Enabling authority for the Province to set housing targets and timelines in collaboration with specified municipalities.
- Phased implementation in high growth areas with greatest current and forecasted housing demand.
- Municipalities encouraged to do all they can to create conditions for development.
- The Province will monitor progress and work with municipalities throughout the process to address any barriers to meeting housing targets.
- Regulations will bring the Act into force this Spring.

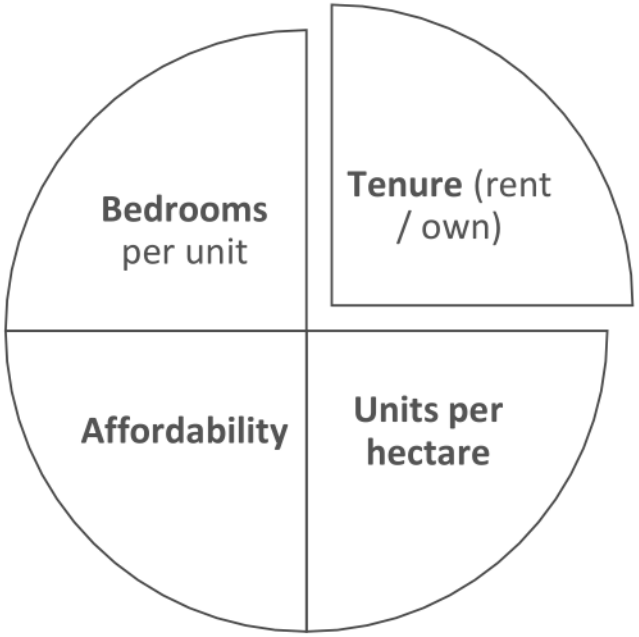
Housing Supply Act Regulations

1. Definitions
2. Prescribing municipalities that housing targets can apply (SVT areas)
3. Requirement that municipalities provide additional information for setting housing targets
4. Establish the classes of housing that targets apply to (e.g., rental units, shelters, apartments (condo/rental) and ground units)
5. Time for municipality to respond to a description of a proposed housing target order (45 days)
6. Time for municipal council to receive a progress report at conclusion of reporting period (60 days)
7. Time for municipality to respond before appointing an advisor or issuing a directive (60 days)

Classes of Housing Targets

Housing Types

1. Shelter Spaces
2. Social housing
3. Supportive housing
4. Apartments (ownership and rental units)
5. Ground-oriented housing (e.g., duplexes, rowhouses)



Housing Targets Program Policy

Step 1	Select Municipalities	Province applies benchmark measure
Step 2	Engagement & Data	Municipality submits required data and information to Province
Step 3	Validate Housing Estimates	Ministry validates municipal housing needs estimates
Step 4	Target Setting	Province applies standardized target setting methodology
Step 5	Target Consultation	Municipalities & Indigenous Peoples consulted on housing targets
Step 6	Order Issued	Municipality formally notified
Step 7	Order Published	Municipality publishes order on internet site
Step 8	Monitor Progress	Municipality prepares and submits progress report

Selecting Municipalities

163 Municipalities

- Focus on municipalities under the Speculation and Vacancy Tax

  - Highest growth and demand, consistent with other Provincial initiatives

46 Municipalities

- Establish an empirical benchmark measure to rank municipalities using an index reflective of key dimensions of housing need

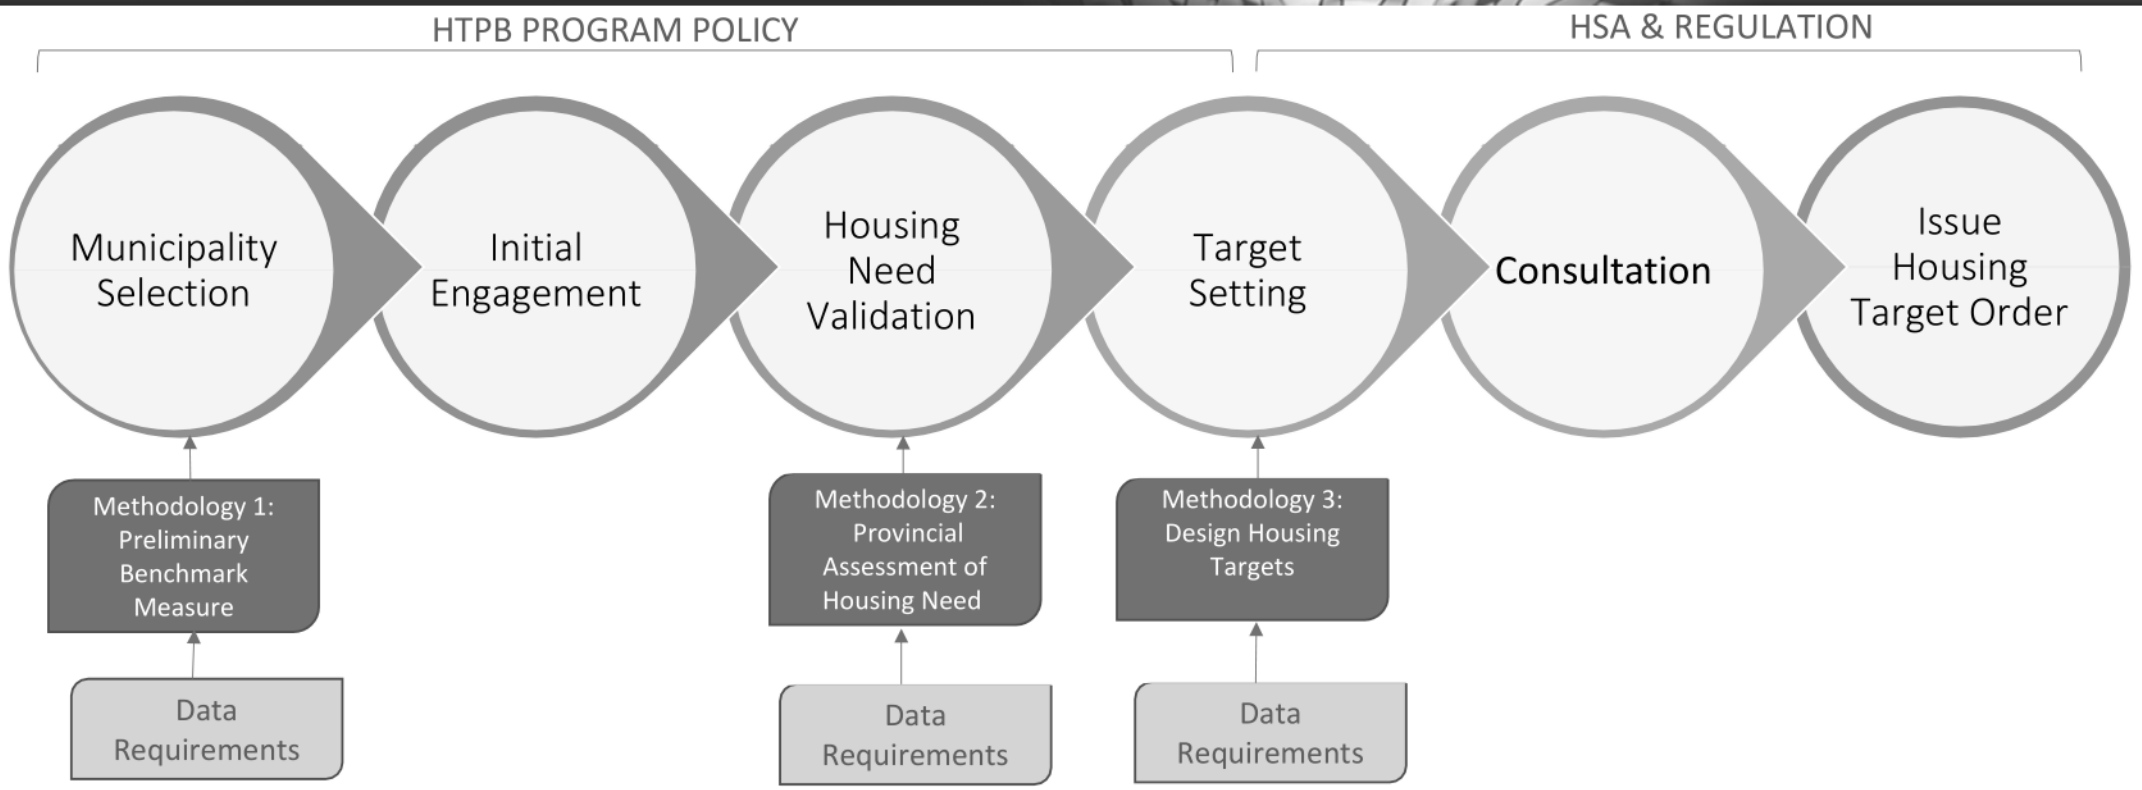
  - Housing Needs Reports: review & validation against other data and info
  - Other planning initiatives, i.e. Transit Oriented Development

8-10 Municipalities

- Opportunity to incorporate volunteer cities, and other considerations into final selection.

  - Consider regional context
  - Phased Implementation: gradually scale up; and possibly expand outside SVT areas
  - Housing Target Order: 5 to 10-year timeframes

Validation Process



Additional Data Requirement

Data

Housing Targets information to consider:

* Align with BC Housing funding streams and programs
* Ensure flexibility: community needs and how they attract development
* Consider infrastructure including transit, BC Hydro

Housing Classes:

* simplify and clarify; encourage building across spectrum of housing types and tenure; population served: homelessness and social housing

Measures:

* units per acre, Floor Space Ratio or other indicators

Requirement for additional data

- Form (insert form)
- Timeline

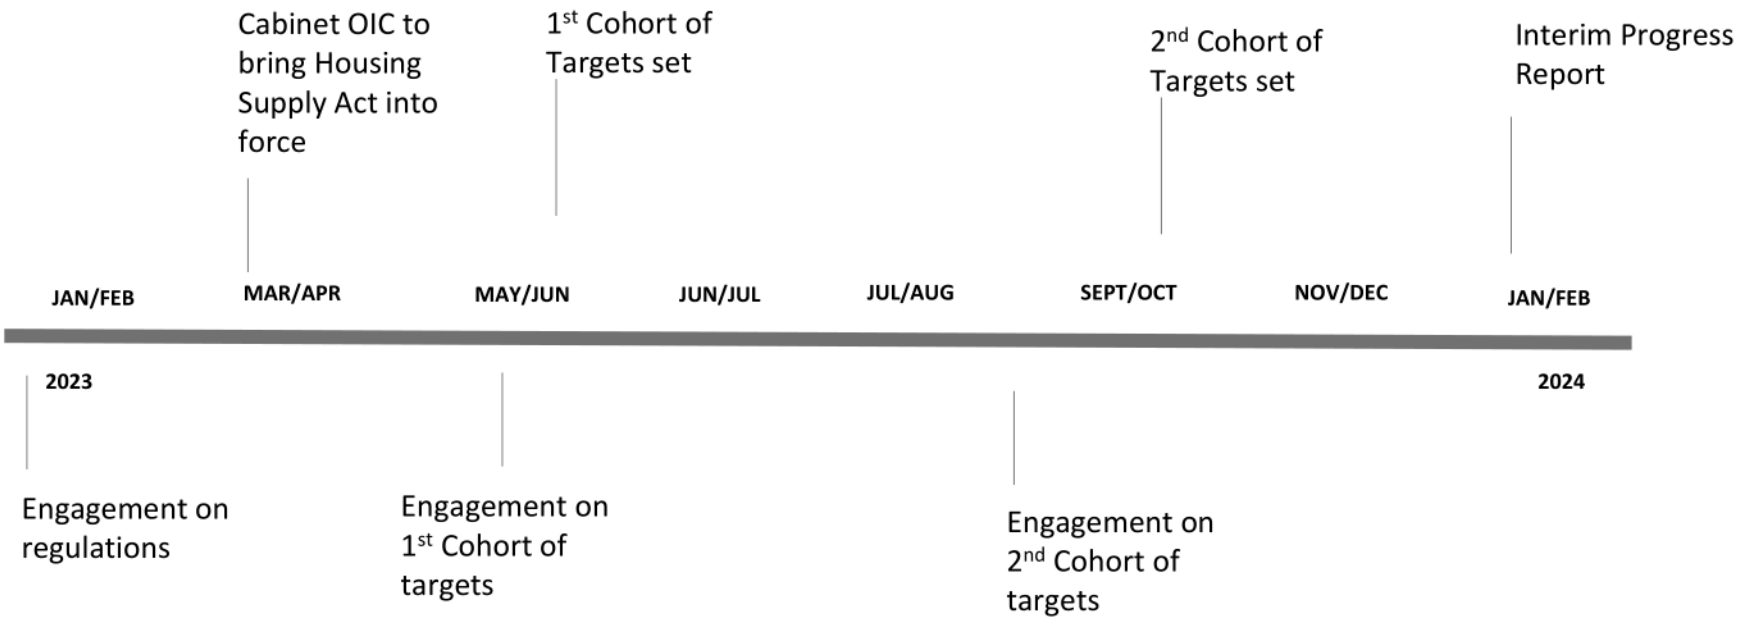
Review Questions

- Municpality questions and themes.

Discussion

- **Next Steps**
- Ministry forms will be emailed and required back within two weeks of this meeting
- Submit forms to: **HousingLegislation2022@gov.bc.ca**
- Email notifications will be sent with next meeting dates and details.

Appendix: Timelines to Implement the *Housing Supply Act*



Provincial Legislation

Ministry of Attorney General and Ministry Responsible for Housing

Meeting with

Representatives from UDI

August 4, 2022

Agenda

- Welcome & Introductions
- Context and Looking Forward
- UDI Preliminary Comments on Proposed Legislation
- Engagement / Consultation Pathways

Context

- Significant unmet need now and into future
- Many development projects do not get through local government approvals
- Increased calls from public/business community to take action
- UDI proposal

Objective – New Legislation

- Significant variability among local governments' actions promoting or inhibiting housing supply

- Legislative Objective: To provide Provincial leadership and hold local governments accountable to contribute to expanding housing supply, particularly affordable housing

Overview – New Legislation

New legislation to authorize Province to provide leadership and oversight to set housing targets and hold municipalities accountable.

- Builds on existing Housing Needs Reports – Minister to review HNRs and may set targets
- Requires annual reporting on metrics and actions taken or planned towards meeting targets
- Enables an authority for the Minister to express objections to local government matters that interfere with meeting targets and potentially recommend OICs to override municipal bylaws or land use decisions.

Applicability

- Phased approach to implementation across municipalities
  - Continuous improvement and learn from process
  - Begin with areas of highest housing need
- Will not apply to:
  - Regional Districts
  - Treaty and reserve lands

Process

- Legislation
- Regulations
  - Setting targets
  - Monitoring and Reporting
  - Enforcement

Engagement

- Plan and approach for engagement

- Next Steps

Confidentiality Agreement

1. I, _____, agree that I will treat as confidential and not disclose or permit to be disclosed, at any time, any information identified by the Province of British Columbia as confidential that I obtain verbally, electronically or in writing, in relation to Cabinet or Cabinet Committee submissions, briefings or deliberations or otherwise relating to legislative or other projects ("Confidential Information") during the 2022 calendar year ("Engagement Period"). Confidential Information may include:
   - the contents of materials I receive, or presentations I attend, including but not limited to any material covered by public interest immunity, Cabinet confidentiality, solicitor-client privilege, or other privilege, brought to a meeting or otherwise provided;
   - the conversations and discussions held at meetings relating to Confidential Information, including the comments of persons at the meetings;
   - any part of the agenda of meetings relating to Confidential Information;
   - the conversations and discussions relating to Confidential Information, including those with Provincial government representatives or others that have also signed a confidentiality agreement; and
   - any feedback, comments or recommendations relating to Confidential Information provided to the Provincial government.

2. Section 1 of this Confidentiality Agreement does not apply insofar as:
   - the information in relation to or resulting from the collaboration and consultations was not identified by the representative of the Province of British Columbia responsible for conducting consultation in relation to the Confidential Information ("Provincial Government Representative") as Confidential Information before or at the time of transmission;
   - the disclosure of Confidential Information is expressly permitted in writing by the Provincial Government Representative;
   - the Confidential Information has become general public knowledge without my disclosure of such information;
   - the disclosure is to Provincial government staff or others that have also signed a confidentiality agreement if expressly permitted in writing by the Provincial Government Representative;
   - the disclosure of the Confidential Information is required by law; or
   - the Confidential Information is as described in section 12 (2) (a) to (c) of the *Freedom of Information and Protection of Privacy Act*.

3. I further agree to the following:
   - to use the Confidential Information only for consultation purposes and for no other purpose;

- not to discuss the Confidential Information or disclose the contents of the Confidential Information except as provided in this Confidentiality Agreement;
- to store the draft Confidential Information so that no other person has access to it;
- not to make copies of the Confidential Information;
- to return any Confidential Information provided to me upon request of the Provincial Government Representative; and
- destroy any materials at the request of the Provincial Government Representative and confirm the destruction in writing to that representative.

4. I understand that this Confidentiality Agreement does not preclude a public acknowledgement that engagement related specifically to the Confidential Information or this Confidentiality Agreement has taken place.

5. I agree to keep confidential any Confidential Information I receive and acknowledge that by providing that information to me, it is not the intention of the Province of British Columbia to waive solicitor-client privilege or to waive, defeat, or negate any privilege or confidence, or any other protection provided by law, that applies to the Confidential Information or the discussions relating to it.

6. The person signing this Confidentiality Agreement acknowledges and agrees that the obligations set out in this Confidentiality Agreement apply retroactively to any information received and discussions that the person signing this Confidentiality Agreement was involved in prior to the signing of this Confidentiality Agreement.

7. I acknowledge and agree that the confidentiality obligations set out in this Confidentiality Agreement are ongoing and remain in force indefinitely. For certainty, this Confidentiality Agreement survives the expiry of the Engagement Period in relation to any Confidential Information provided to the person signing this Confidentiality Agreement during the Engagement Period. I acknowledge and understand I may be asked to sign additional confidentiality agreements for specific matters. Where so asked, I acknowledge and understand that this Confidentiality Agreement remains in effect and is not replaced by any subsequent confidentiality agreements unless that subsequent confidentiality agreement expressly states it replaces this one.

8. I agree to immediately notify the Provincial Government Representative, if I receive a summons, subpoena, order or similar instrument or otherwise become subject to a legal obligation requiring disclosure of any Confidential Information I am required to keep confidential under this Confidentiality Agreement.

Hi Anne, sorry for the delay. (Also don't see Andrea copied……..)

I would think gaining the perspective of 5-6 people from your group would be great, but also open to expanding as you feel appropriate (there isn't really a limit, but more of an efficiency issue).

I have attached here the confidentiality agreement, if we could get these signed and back to our team, including a list of names and emails for the participants that would be great.

The email responses can go to: housinglegislation2022@gov.bc.ca, but please don't hesitate to reach out if I can help or if you'd like to discuss.

Teri

Subject: Policy Consultation

Good morning Anne & Cassandra; I hope you're both well.

You may be aware we are working on some Legislation to be introduced this Fall – largely based on dialogue with UDI earlier this year around encouraging municipalities to focus on housing as an urgent priority. We would welcome engagement with a representative group of your members who would be able to give us feedback and advice on the policy approach.

Due to the nature of the material, we would ask for a signed confidentiality agreement from those wishing to participate, and would then forward documents through secure file transfer; which could then be followed up by a group dialogue or written submission of feedback to us. Our timelines are very tight and we would hope to get this underway asap and have a fairly quick turnaround.

I am wondering if you could firstly confirm interest, and secondly, would you be able to help facilitate this for us?

Thanks so much, Teri

Confidentiality Agreement

1. I, Jeffrey Fisher, agree that I will treat as confidential and not disclose or permit to be disclosed, at any time, any information identified by the Province of British Columbia as confidential that I obtain verbally, electronically or in writing, in relation to Cabinet or Cabinet Committee submissions, briefings or deliberations or otherwise relating to legislative or other projects ("Confidential Information") during the 2022 calendar year ("Engagement Period"). Confidential Information may include:
   - the contents of materials I receive, or presentations I attend, including but not limited to any material covered by public interest immunity, Cabinet confidentiality, solicitor-client privilege, or other privilege, brought to a meeting or otherwise provided;
   - the conversations and discussions held at meetings relating to Confidential Information, including the comments of persons at the meetings;
   - any part of the agenda of meetings relating to Confidential Information;
   - the conversations and discussions relating to Confidential Information, including those with Provincial government representatives or others that have also signed a confidentiality agreement; and
   - any feedback, comments or recommendations relating to Confidential Information provided to the Provincial government.

2. Section 1 of this Confidentiality Agreement does not apply insofar as:
   - the information in relation to or resulting from the collaboration and consultations was not identified by the representative of the Province of British Columbia responsible for conducting consultation in relation to the Confidential Information ("Provincial Government Representative") as Confidential Information before or at the time of transmission;
   - the disclosure of Confidential Information is expressly permitted in writing by the Provincial Government Representative;
   - the Confidential Information has become general public knowledge without my disclosure of such information;
   - the disclosure is to Provincial government staff or others that have also signed a confidentiality agreement if expressly permitted in writing by the Provincial Government Representative;
   - the disclosure of the Confidential Information is required by law; or
   - the Confidential Information is as described in section 12 (2) (a) to (c) of the *Freedom of Information and Protection of Privacy Act*.

3. I further agree to the following:
   - to use the Confidential Information only for consultation purposes and for no other purpose;

- not to discuss the Confidential Information or disclose the contents of the Confidential Information except as provided in this Confidentiality Agreement;
- to store the draft Confidential Information so that no other person has access to it;
- not to make copies of the Confidential Information;
- to return any Confidential Information provided to me upon request of the Provincial Government Representative; and
- destroy any materials at the request of the Provincial Government Representative and confirm the destruction in writing to that representative.

4. I understand that this Confidentiality Agreement does not preclude a public acknowledgement that engagement related specifically to the Confidential Information or this Confidentiality Agreement has taken place.

5. I agree to keep confidential any Confidential Information I receive and acknowledge that by providing that information to me, it is not the intention of the Province of British Columbia to waive solicitor-client privilege or to waive, defeat, or negate any privilege or confidence, or any other protection provided by law, that applies to the Confidential Information or the discussions relating to it.

6. Confidentiality Agreement

1. I, Andrea L. Nicholls, agree that I will treat as confidential and not disclose or permit to be disclosed, at any time, any information identified by the Province of British Columbia as confidential that I obtain verbally, electronically or in writing, in relation to Cabinet or Cabinet Committee submissions, briefings or deliberations or otherwise relating to legislative or other projects ("Confidential Information") during the 2022 calendar year ("Engagement Period"). Confidential Information may include:
   - the contents of materials I receive, or presentations I attend, including but not limited to any material covered by public interest immunity, Cabinet confidentiality, solicitor-client privilege, or other privilege, brought to a meeting or otherwise provided;
   - the conversations and discussions held at meetings relating to Confidential Information, including the comments of persons at the meetings;
   - any part of the agenda of meetings relating to Confidential Information;
   - the conversations and discussions relating to Confidential Information, including those with Provincial government representatives or others that have also signed a confidentiality agreement; and
   - any feedback, comments or recommendations relating to Confidential Information provided to the Provincial government.

2. Section 1 of this Confidentiality Agreement does not apply insofar as:
   - the information in relation to or resulting from the collaboration and consultations was not identified by the representative of the Province of British Columbia responsible for conducting consultation in relation to the Confidential Information ("Provincial Government Representative") as Confidential Information before or at the time of transmission;
   - the disclosure of Confidential Information is expressly permitted in writing by the Provincial Government Representative;
   - the Confidential Information has become general public knowledge without my disclosure of such information;
   - the disclosure is to Provincial government staff or others that have also signed a confidentiality agreement if expressly permitted in writing by the Provincial Government Representative;
   - the disclosure of the Confidential Information is required by law; or
   - the Confidential Information is as described in section 12 (2) (a) to (c) of the *Freedom of Information and Protection of Privacy Act*.

3. I further agree to the following:
   - to use the Confidential Information only for consultation purposes and for no other purpose;

- not to discuss the Confidential Information or disclose the contents of the Confidential Information except as provided in this Confidentiality Agreement;
- to store the draft Confidential Information so that no other person has access to it;
- not to make copies of the Confidential Information;
- to return any Confidential Information provided to me upon request of the Provincial Government Representative; and
- destroy any materials at the request of the Provincial Government Representative and confirm the destruction in writing to that representative.

4. I understand that this Confidentiality Agreement does not preclude a public acknowledgement that engagement related specifically to the Confidential Information or this Confidentiality Agreement has taken place.

5. I agree to keep confidential any Confidential Information I receive and acknowledge that by providing that information to me, it is not the intention of the Province of British Columbia to waive solicitor-client privilege or to waive, defeat, or negate any privilege or confidence, or any other protection provided by law, that applies to the Confidential Information or the discussions relating to it.

6. The person signing this Confidentiality Agreement acknowledges and agrees that the obligations set out in this Confidentiality Agreement apply retroactively to any information received and discussions that the person signing this Confidentiality Agreement was involved in prior to the signing of this Confidentiality Agreement.

7. I acknowledge and agree that the confidentiality obligations set out in this Confidentiality Agreement are ongoing and remain in force indefinitely. For certainty, this Confidentiality Agreement survives the expiry of the Engagement Period in relation to any Confidential Information provided to the person signing this Confidentiality Agreement during the Engagement Period. I acknowledge and understand I may be asked to sign additional confidentiality agreements for specific matters. Where so asked, I acknowledge and understand that this Confidentiality Agreement remains in effect and is not replaced by any subsequent confidentiality agreements unless that subsequent confidentiality agreement expressly states it replaces this one.

8. I agree to immediately notify the Provincial Government Representative, if I receive a summons, subpoena, order or similar instrument or otherwise become subject to a legal obligation requiring disclosure of any Confidential Information I am required to keep confidential under this Confidentiality Agreement.

Dear UDI members

Thank you for your signed Confidentiality Agreements. We are attaching a summary document of the proposed housing legislation and the summary legislation document under the terms of the Confidentiality Agreement you have signed. This information mu be shared with anyone but you may only discuss the contents with those on this email who have also signed Confidentiality Agreements.

As per previous communication by ADM Teri Collins, we are looking for your consolidated feedback. Teri is available for a briefing next week and will work with the UDI corporate office to arrange a briefing/discussion – following that, if you would like to provi written feedback, it would be appreciated by August 10, 2022. We will also be providing another opportunity for feedback as a consultation draft of the Legislation will be sent to you by August 17, 2022 with feedback required by August 24, 2022.

We recognize this request is under the compressed timelines and appreciate your engagement.

Best Regards

Bonnie

Proposed Housing Targets Legislation
Context and Summary

Context

New legislation is proposed (tentatively the *Housing Supply Accountability Act*) to introduce the authority for the Minister Responsible for Housing to set housing supply objectives with local governments and related outcomes and report on how they are meeting the objectives. This proposed new legislation would not apply to Treaty or reserve lands but will apply to fee simple lands owned by First Nations which are subject to municipal bylaws and zoning.

This legislation builds on the existing requirements for municipalities to create Housing Needs Reports (HNR) that identify housing demand and supply factors in their jurisdictions.

We acknowledge drafting of the legislation is under compressed timelines; we appreciate your consideration of this request on short notice.

The opportunity and Request for Legislation

BC is experiencing insufficient supply of housing to meet growing demand. Many municipalities are responding to this situation with significant actions to facilitate housing development, such as streamlining development approvals processes, contributing land to improve the affordability of housing, and increasing allowable density in residential zones. There are some municipalities who are hesitant, for various reasons, to encourage increased development or some types of development in their jurisdictions.

The proposed *Housing Supply Accountability Act* will enable the Minister Responsible for Housing to:

1. receive and review local Housing Needs Reports and metrics;
2. establish housing targets in specific municipalities;
3. require affected municipalities to report on prescribed metrics and actions taken toward meeting targets; and
4. hold municipalities accountable for meeting targets with corrective/enforcement measures to set targets for housing growth.

Ministry of Attorney General and Minister Responsible for Housing
Housing Policy Branch

Mailing Address:
PO Box 9844 Stn Prov Govt
Victoria BC V8W 9T2
www.gov.bc.ca/ag

PLEASE NOTE: The information contained in this document is privileged and confidential and must not be shared. For consultation purposes only.

The Province will be able to use targets to set expectations for growth in certain types of housing (e.g., unit sizes, density), affordability levels, tenures, and locations, and then monitor and work with local governments to address obstacles and barriers to delivering that growth.

This legislation is proposed to have the following effects:

a) Provide a way for the Province to establish expectations and accountability for municipalities to facilitate the types of housing supply that are most needed while recognizing local governments' autonomy in how that supply is facilitated and encouraged in their jurisdictions.
b) Provide greater public accountability by requiring municipalities that are subject to a target to submit annual reporting to the Minister Responsible for Housing on metrics and actions taken or planned towards meeting targets.
c) Enable the Province to direct local governments through an Order in Council (OIC), to take actions such as amending plans or bylaws if targets are not met, and if such actions are not taken by the local government, the amendments described in the OIC are deemed to be in effect.

Timelines

Government wishes to introduce the proposed *Housing Supply Accountability Act* legislation in Fall 2022. This compressed timeline is a response to the urgent need to increase the supply of housing and to address the increasing demand and the high cost of housing in BC. In line with the legislative process, the drafting phase of the legislation is scheduled to be complete by the end of August for introduction of the Bill to the Legislative Assembly in the Fall 2022.

Hello everyone,

On August 2nd, 2022 we received one email from one of our key stakeholders (UDI):

- **UDI**: Cassandra Smith (McColman), Director, Policy and Public Affairs at UDI, sent a Signed Confidential Agreement and asked for access to confidential documents.

Also, we received an email from our Indigenous Partners:

- **Karrier Sekani Tribal Council**: Leo Hebert confirmed that the techserviceunit@cstc.bc.ca is a secure work email.

Here is the link to the Engaged Stakeholders/Partners Tracker. At this moment we have **three items that still need action:**

- **BC Metis federation:** To prepare a Thank you and response letter as a follow-up to Keith Henry.
- **Women Transforming Cities:** This stakeholder has not signed an NDA. So, either
  - ask them to sign an NDA or
  - Send a general response to their letter.
- UDI: To send confidential documents to Cassandra Smith at cmccolman@udi.org.

All original Consultation Trackers are updated and moved to Tracker Folder.

Please let me know if you have any concerns or questions. Thank you.

Sincerely
Yashar

CONFIDENTIAL STAKEHOLDER SUMMARY

HOUSING POLICY BRANCH

STAKEHOLDER: URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION (UDI)

Key representatives or members:	**Anne McMullin,** President & CEO | amcmullin@udi.org |T:
Background:	A non-profit association of the development industry and its related professions in land development and planning.
Recommendations and Concerns re: Housing Supply Accountability Act	Feedback on consultation draft received August 29, 2022: • Application of penalties (rather than relying only on ability to take direct corrective action on approvals). • A speedier timeline of intervention – bypass municipal processes • The advisor should be able to conduct follow-up reviews so a muni can't revert to its previous approach to housing approvals • Consider Community charter in the leg • Suggested changes to specific sections in the leg. See: s.15 General feedback prior to consultation draft: • Strongly endorses the Ministry's efforts to take bolder action and establish a housing targets framework for municipalities that includes enforcement mechanisms. • Supports broad enabling legislation and phased-in approach • Province should: review and reform the HNRs (issues with methodology and structure) • Want building permits to be key part of target framework • Incent residents to allow new housing through tax measures, and rewards for those that meet and exceed targets • Minister should have ability to extend OICs beyond 2 years • Ability to override RGS and ensure RGS do not block directives to LGs • Advisor should be independent
UDI's housing target proposal	The UDI has met with Minister David Eby on several occasions in 2022 and has presented a proposal for provincial housing targets that would include: • Province-wide ten-year performance-based targets set by the Province, then applied to specific regions or municipalities;

	• Reporting requirements using building permits issued by local governments and zoned capacity as metrics; and • Initial implementation in the transit-oriented areas in the Metro Vancouver area. • Track other key metrics including rezoning approvals and vacancy rates as a measure of progress. • Use a combination of incentives and penalties to enforce targets
Policy Team Response:	**Key differences in legislation from UDI's proposal include:** • How targets will be set and applied: OHCS - A housing target will be established for a particular municipality, in consultation with that municipality • Applicability of targets: the selection of communities subject to a housing target will be phased in. While not specifically focused on areas around transit station and stops, focus will be on areas identified as high-growth at the outset • How targets will be measured: OHCS - Depending on the specific municipality and its unique needs, a target may be based on a suite of measures that can be taken to improve the conditions for creating more housing supply (vs. UDI - the number of units that receive a Building permit.) • How targets will be enforced: OHCS - the Housing minister may issue a directive (or Cabinet an OIC) to a municipality failing to comply if in the public interest to do so. (vs. UDI - incentives and penalties if local governments do not achieve their targets). **New ideas to consider/develop policy position on:** s.13 **For regulations/later policy documents** • Specificities surrounding building permits (methodology for measuring) **Already reflected in the legislation/incorporated into the targets approach:** • The ability of local governments to manipulate needs assessments outlined in HNRs • Building permits as an indicator • Additional sources of information the Minister may consider in establishing targets including immigration data

	• Advisor being a third-party **Outside the scope of the legislation:** • Province providing direction to regional districts regarding Regional Growth Strategies • Enforcement mechanisms associated with property tax • Provincial curtailing of land use and building powers • Development finance tools [s.13] • Councils losing powers for an extended period, delegating decision making to staff • Limiting access to Federal and Provincial funding • Incentivizing municipalities who meet/exceed targets with infrastructure funding • Legislation allows for consultation with stakeholders and experts in setting targets
Objectives or proposed communications to stakeholder:	•

Teri Collins
Assistant Deputy Minister
Office of Housing and Construction Standards
PO Box 9290, Stn. Prov. Govt.
Victoria British Columbia V8W 9J7

Dear Ms. Collins

Re: Proposed Housing Supply Accountability Act

I would like to thank you and your staff for involving the Urban Development Institute – Pacific Region (UDI) in the consultations regarding the proposed *Housing Supply Accountability Act* (*HSSA*). **We strongly endorse the Ministry's efforts to establish a housing targets framework for municipalities that includes enforcement mechanisms.** We also agree with the approach of having broad enabling legislation, because it will allow the flexibility needed so the government can nimbly react to emerging issues. However, this legislation should also be presented as a strong tool that will be utilized by the Province to address the housing crisis. UDI also supports the framework being phased-in – with an initial focus on municipalities in urban areas with acute housing challenges, but with substantial infrastructure in place and a strong building sector. As discussed, there are some areas that need to be refined and others in which the Ministry could be more forceful and directive.

Housing Needs Reports as a basis for targets

UDI recognizes that the municipal *Housing Needs Reports* (*HNRs*) have been submitted to the Government already, so it would be difficult to amend them now. As such, we are pleased that Ministry is not going to be tied to them and can establish targets above and beyond the *HNRs*. However, there are several issues the *HNR* methodology, structure and process, including:

- The ability of local governments to manipulate and politicize them to reduce their targets and argue against provincially imposed ones;
- As with many population projections by governments, there is chronic undercounting as noted in the recent CMHC report on Canada's housing shortage and the *Opening Doors Report* of the Canada-British Columbia Expert Panel on the Future of Housing Supply and Affordability (Appendix 5);
- The *HNRs* are not timed with Census data; and
- Beyond this, there is even more undercounting in local governments that have traditionally limited growth as much of the population forecasting is based on previous growth rates.

UDI recommends that the Ministry (in conjunction with local governments and stakeholders) review and reform the *HNRs*, as they are still the starting point for the proposed housing targets framework. It would also limit confusion and debates in the future regarding conflicting objectives established wither by the *HNRs* or another body, such as the Metro Vancouver *Regional Growth Strategy (RGS)*. The work that the Ministry is conducting to assess the targets for local governments could be incorporated into the next round of *HNRs* and provide direction to regional districts regarding their growth strategies.

Evaluation metrics

While UDI supports the use of a broader suite of metrics for the targets and assessments of municipalities because they provide a more complete understanding of what is occurring in their approvals processes, it is critical that Building Permits (BPs) be a key part of the target framework to ensure it is a truly performance-based system. Local governments can "approve" many projects, but introduce conditions which make them unviable and therefore unbuilt. It is the BP stage in the process where there is a clearer picture that projects will be constructed as developers will rarely pay for the consulting work and municipal charges for a Building Permit and then not proceed with construction.

If there are instances in which BPs are not being pulled by builders, this can be reviewed by the "Advisor" who would be appointed by the Minister. They could compare the issuance of BPs in other similar municipalities with what is occurring in the local government they are investigating. The "Advisor" can also discuss the issue with local government officials, builders and other stakeholders to determine why BPs are not being pulled.

Enforcement mechanisms

UDI recommends the legislative framework enable enforcement mechanisms that directly affect not only local governments, but also residents, to change the incentive structure regarding allowing new housing. For example:

- The TransLink component of the property tax could be increased if a municipality does not leverage the billions of dollars invested in SkyTrain service in their community;
- There could also be an affordable housing component added to the property tax for those communities that refuse to allow more housing;
- The Government could curtail land use and building powers (e.g., restrictions on downzoning) as well as development finance tools for an extended period. Councils could also lose powers for an extended period by delegating additional decision making to staff such as technical issues; and/or
- The Government could also limit access to Federal and Provincial funding (e.g., the Canadian Infrastructure Bank and the Housing Accelerator Fund).

In addition, this legislation needs to be paired with more carrots for those that meet and exceed their targets such as senior government funding for schools, parks and transit as well as for processing improvements and area planning; although we recognize that this is beyond the purview of this legislation.

There are also potential issues with the 2-year limitation on the length of the Orders in Council (OIC) that override municipal bylaws, policies and procedures. It would be counterproductive if a local government that is still not achieving its targets were to be allowed to revert to its old bylaws, policies and procedures when they were not delivering enough new homes. We recommend that the Minister be granted that ability to extend the OICs – especially if targets are not being met. In addition, there needs to be grandfathering for instream projects that may be negatively affected by abrupt bylaw, policy or procedure changes.

www.udi.bc.ca

Regional restrictions

The *Regional Growth Strategy* in Metro Vancouver places numerous restrictions on local governments. For example, there are limitations on housing (even affordable housing) in mixed employment areas. UDI has advocated that mixed employment areas near rapid transit stations would be ideal locations for rental and affordable housing (if the employment spaces are constructed). If the *Metro 2050* proposed *RGS* were passed, this type of housing would be allowed in these areas – but only within 200 metres of a station. UDI recommends that the legislation ensure that the *RGS* does not block any corrective action or directive to a local government that the Government deems necessary to meet its housing objectives.

In a similar fashion, the legislation needs to be written, so that it does not preclude the Province from overriding the *RGS* as well as local by-laws/policies for its own affordable housing projects and partnerships in the future – including establishing a separate approvals process. One of our concerns with the proposed framework is that it may not provide immediate results, but affordable housing could be more quickly delivered by ensuring that the Province has more flexibility and can move forward efficiently with its own projects.

Sources of information for consideration when establishing targets

The sources of information that that the Minister may consider in establishing targets on page two, should include information/data from government sources (e.g., CMHC, BC Housing and BC Stats), academia and industry as well as information from the Federal Government on immigration policy, as British Columbia is one of top jurisdictions for immigrants moving to Canada. In addition, the last bullet in the section should be broadened to "*Advice, information and data obtained at the discretion of the Minister.*"

At several stages of the proposed framework, it is noted that the Ministry and the "Advisor" will consult with local governments, to ensure these consultations are viewed as unbiased, we recommend that the legislation specify that this "Advisor" be a third-party, independent of local governments and their representatives, as well as the Province. We also recommend that the legislation be written to allow for consultation with others such as stakeholders and experts.

Thank you again for involving UDI in the consultation of this important legislation. If you have any questions regarding our comments, please do not hesitate to contact us. We look forward to working with you and your staff to increase the delivery of new homes to British Columbians.

Yours sincerely,

Anne McMullin

Attachments: image001.png, image002.png

Hello everyone,

On August 11th, 2022

1- We received two emails from two of our key stakeholders:

- **UDI**: Cassandra Smith, sent the initial comments of UDI to Bonnie through SFTS (at end of the day Wednesday, August 10th).
- **BC NPHA**: In response to an acknowledgment letter, Jill Atkey, the CEO of BC NPHA, sent **another** paragraph of feedback through SFTS.

Here is the link to the Engaged Stakeholders and Partners Tracker. At this moment we have **three items that still need action**:

- **BC Metis federation:** To prepare a Thank you and response letter as a follow-up to Keith Henry (Not assigned to anyone yet – Need discussion to coordinate the response).
- **Women Transforming Cities:** If the response letter has not been sent yet, then it is in Bonnie's eApps.
- **Treaty Nations (5 Nations)**: To prepare a response and take any other necessary action (Need discussion to coordinate the response).

All original Consultation Trackers are updated and exist in Tracker Folder.

Please let me know if you have any concerns or questions. Thank you.

Sincerely
Yashar

UDI Response Letter August 10, 2022 – Summary

New ideas to consider/develop policy position on

s.13

For regulations/later policy documents

- Specificities surrounding building permits (methodology for measuring)

Already reflected in the legislation/incorporated into the targets approach

- The ability of local governments to manipulate needs assessments outlined in HNRs
- Building permits as an indicator
- Additional sources of information the Minister may consider in establishing targets including immigration data
- Advisor being a third-party

Outside the scope of the legislation

- Province providing direction to regional districts regarding Regional Growth Strategies
- Enforcement mechanisms associated with property tax
- Provincial curtailing of land use and building powers
- Development finance tools [s.13]
- Councils losing powers for an extended period, delegating decision making to staff
- Limiting access to Federal and Provincial funding
- Incentivizing municipalities who meet/exceed targets with infrastructure funding
- Legislation allows for consultation with stakeholders and experts in setting targets

Hi Cim,

See the folder locations for UBCM, BCUMC and UDI feedback below.
Note that UDI and BCUMC have separate summaries.
The Master Document (DRAFT) contains in-depth summaries and a narrative of the engagement with each group for future reference (will be updated to include more engagement partners) whereas the individual UDI and BCUMC feedback summaries were quick summaries done to inform concurrent legislative drafting.
UBCM's engagement is more complex so our documentation approach may currently vary from other groups.

Victoria British Columbia V8W 9J7

Dear Ms. Collins

Re: Proposed Housing Supply Accountability Act

I would like to thank you and your staff for involving the Urban Development Institute – Pacific Region (UDI) in the consultations regarding the proposed *Housing Supply Accountability Act* (*HSSA*). **We strongly endorse the Ministry's efforts to establish a housing targets framework for municipalities that includes enforcement mechanisms.** We also agree with the approach of having broad enabling legislation, because it will allow the flexibility needed so the government can nimbly react to emerging issues. However, this legislation should also be presented as a strong tool that will be utilized by the Province to address the housing crisis. UDI also supports the framework being phased-in – with an initial focus on municipalities in urban areas with acute housing challenges, but with substantial infrastructure in place and a strong building sector. As discussed, there are some areas that need to be refined and others in which the Ministry could be more forceful and directive.

Housing Needs Reports as a basis for targets

UDI recognizes that the municipal *Housing Needs Reports* (*HNRs*) have been submitted to the Government already, so it would be difficult to amend them now. As such, we are pleased that Ministry is not going to be tied to them and can establish targets above and beyond the *HNRs*. However, there are several issues the *HNR* methodology, structure and process, including:

- The ability of local governments to manipulate and politicize them to reduce their targets and argue against provincially imposed ones;
- As with many population projections by governments, there is chronic undercounting as noted in the recent CMHC report on Canada's housing shortage and the *Opening Doors Report* of the Canada-British Columbia Expert Panel on the Future of Housing Supply and Affordability (Appendix 5);
- The *HNRs* are not timed with Census data; and
- Beyond this, there is even more undercounting in local governments that have traditionally limited growth as much of the population forecasting is based on previous growth rates.

UDI recommends that the Ministry (in conjunction with local governments and stakeholders) review and reform the *HNRs*, as they are still the starting point for the proposed housing targets framework. It would also limit confusion and debates in the future regarding conflicting objectives established wither by the *HNRs* or another body, such as the Metro Vancouver *Regional Growth Strategy (RGS)*. The work that the Ministry is conducting to assess the targets for local governments could be incorporated into the next round of *HNRs* and provide direction to regional districts regarding their growth strategies.

Bonnie,

I don't believe from looking at the Teams Engagement folder that UDI has received the 3 column document or summary for strata bylaw changes. Either way, we'd like to get further input on the strata bylaw legislative items from them, specifically on:

1. s.13

2.

3.

In the past, UDI has usually delegated our strata consultation requests to Joscelyn Baker, a strata expert and chief counsel for Polygon Homes who is/was also on their government relations committee. However, I don't see her on the list of those who've already submitted and NDA for UDI. Is there a preference for who should we approach to find out who they'd like to work with us? Otherwise I'd start with Jeff Fisher, one of their VPs I've worked with for a long time and who has signed an NDA already.

Dear Anne McMullin,

Greetings,

Thank you for your letter dated August 10, 2022, on the proposed Housing Supply Accountability Act legislation. We are sharing with you through the Secure File Transfer Site, a highly confidential consultation draft of the legislation. As per the terms of your Confide information and consultation draft is not to be discussed with anyone who has not signed a Confidentiality Agreement with the Province. PLEASE NOTE: the attached document cannot be shared by email even with others under a Confidentiality Agreement. It must Secure File Transfer System.

The consultation draft is not the final draft and is subject to Legislative Council editing and further revisions. It is shared for the purpose of receiving your feedback before being finalized. As communicated previously, we are working under compressed timelines and comments be received on or before Monday, August 29, 2022.

We have considered all comments received and have incorporated feedback into the draft legislation where appropriate. Other feedback not incorporated may be more appropriately suited to the drafting of future regulations and/or program design and procedures.

We look forward to receiving your comments on the attached Consultation Draft by the date stated above. **Please send your response by replying to this email through the Secure File Transfer System.**

Hello Jeff,

I'm reaching out on behalf of the Building and Safety Standards Branch regarding recruitment for the Building Officials' Association of BC executive committee. The Province is currently advertising for individuals to represent the general public. Many of the competencies seem like a great fit for people in your network.

I'm wondering if you'd be willing to share this opportunity with your network – this would be greatly appreciated.

The posting is live now: Position Details (gov.bc.ca)

If you have any questions, I would be happy to answer them. I would also be happy to chat with any individual who may be interested – please feel free to make introductions.

Many thanks,

Kevin Harding | Manager, Policy and Regulation

Building and Safety Standards Branch, Office of Housing and Construction Standards
Ministry of Attorney General and Minister Responsible for Housing
Email: kevin.harding@gov.bc.ca
Telephone: 250-213-5461 (direct)

I acknowledge with gratitude that I live and work on the lands of the Musqueam, Squamish, and Tsleil-Waututh peoples, and the lands of the Lekwungen people, traditional keepers of their lands.

Dear Ms. Collins

Re: Confidential Consultation Draft Legislation - Housing Targets 2022

We support the intent of the draft legislation and the results of improved housing affordability and stimulated housing supply that it seeks to achieve. We believe that it is an important step to be undertaken and that, if implemented and enforced, it can be an important tool available to the Province. We also acknowledge that these changes will not be made in isolation, and that further incentives will be needed to encourage and drive the supply of long-overdue housing in the forms, and locations, where it is needed most.

We recognize the need to ensure that the draft legislation is broad and ambitious, but also balanced; we feel that it largely accomplishes these goals. However, we think the draft legislation is potentially limited in three key areas and we encourage the ministry to give consideration to these issues (or, if they have been considered and not addressed in the draft, then we would appreciate the opportunity to hear the Province's views on them).

Dear Yashar,

Thank you for sharing this confidential draft with us, and on behalf of UDI and the other members of this consultation group, we respectfully submit our comments for consideration.

Should you have any questions or require clarification regarding our feedback, we would be happy to provide it.

Regards,
Cassandra

>----- Original Package -----
>Subject: Legislation Consultation Draft (Housing Targets)
>Date: 8/23/2022 11:03:08 AM
>From: Ghajar, Yashar OHCS:EX (yghajar)
>
>
Dear Anne McMullin,

>
Greetings,

>
Thank you for your letter dated August 10, 2022, on the proposed Housing Supply Accountability Act legislation. We are sharing with you through the Secure File Transfer Site, a highly confidential consultation draft of the legislation. As per the terms of your Confidentiality Agreement, the information and consultation draft is not to be discussed with anyone who has not signed a Confidentiality Agreement with the Province. PLEASE NOTE: the attached document cannot be shared by email even with others under a Confidentiality Agreement. It must only be viewed through the Secure File Transfer System.

>
The consultation draft is not the final draft and is subject to Legislative Council editing and further revisions. It is shared for the purpose of receiving your feedback before being finalized. As communicated previously, we are working under compressed timelines and kindly request written comments be received on or before Monday, August 29, 2022.

>
We have considered all comments received and have incorporated feedback into the draft legislation where appropriate. Other feedback not incorporated may be more appropriately suited to the drafting of future regulations and/or program design and procedures.

>
We look forward to receiving your comments on the attached Consultation Draft by the date stated above. **Please send your response by replying to this email through the Secure File Transfer System.**

On behalf of Teri Collins, ADM

Yashar Ghajar, Policy Analyst

Housing Policy Branch, (OHCS)

Hello everyone,

At the end of the day Monday, August 29th, we received four written comments from our key stakeholders: the **City of Kelowna**, **UBCM, BCUMC,** and **UDI**.

Attached are the letters from these stakeholders. I have archived these letters on the Teams site and you can access them via the following links:

- Link **to written comments from UDI**
- Link **to written comments from UBCM**
- Link **to written comments from UBUMC**
- Link **to written comments from the City of Kelowna**

Please let me know if you have any questions or concerns. Thank you.

Sincerely
Yashar

Hi Clara,

Yes, thanks for asking. I will send you those right away via SFTS, as it's more secure than email and helps us organize and consolidate input on the amendments.

Doug – ahead of the meeting next week on September 8th, do you have a list of questions or issues that you would like to address with respect to the proposed legislative changes and UDI or owner-developers?

Best regards,
Clara

Hi Doug – thank you for your email. I was able to download the materials without issue!

I spoke with both Ed and Chris and we appreciate your offer to have a separate call. A more focused call with your questions for UDI and owner-developers makes sense and would be happy to meet at a time that works for everyone.

Best regards,
Clara

Suspicious Attachment | Out of Character

Hi Clara, Ed and Chris,

Thanks for agreeing to provide your expertise and advice to us on this project. I hope you received the materials OK through SFTS (not the most user-friendly system).

As you can see, we had already scheduled two consultation calls next Wednesday with a group of stakeholders and experts, discussing age restrictions in the morning and rental restrictions in the afternoon. You are welcome to join one or both of these calls if your schedules permit, and I'll send the invitations/links shortly. However, we have some focused questions for UDI and the impact on owner-developers and would also be quite amenable to setting up a phone call to discuss these with just yourselves at a mutually convenient time. It'd probably be a more efficient use of your time, as much of the discussion in the larger group will likely be about the impact on strata residents and managers.

Please let me know your preference.

Doug – I wanted to confirm whether I am able to discuss the proposed legislative changes with Jeff Fisher? In that I will be consulting on behalf of UDI, I would necessarily have to discuss with Jeff or someone else from UDI to ensure that I am accurately representing UDI's position on the proposed legislative changes.

Please let me know if you require that Jeff sign the Confidentiality Agreement, and I will get him to sign it.

Best regards,
Clara

Hi Clara,

Thank you for your interest in consultation regarding the proposed housing legislation and Strata Property Act amendments. The next step is to share a confidential and privileged overview of the proposed legislation which we can do under a Confidentiality Agreement with you. As you will not be able to share this information under the Confidentiality Agreement, please also include the name, email address, and signed Confidentiality Agreement of anyone else from your organization that you would like to receive the information. Please reply to this email with signed versions of the Confidentiality Agreement and we will forward the confidential information through our secure file transfer site.

We look forward to hearing from you. Thanks.

Hi Doug – Joscelyn passed your email below to me. I'd be happy to participate, but whether I can contribute on this depends on the approximate time commitment required and if you have a particular deadline to complete this consult. If your deadline is within the next 2 weeks, I have about a week (between today and September 1) where I have some availability to review and participate in the consult, but I will be away from Sept 2 – Sept 7.

Best regards,

Clara

Hi Doug – Normally I would be delighted, however I will be starting vacation on Friday (my last day being Thursday) and returning on September 6th. In my absence, perhaps our Associate General Counsel Clara Li would be willing to participate. I checked with Jeff and he approved of me asking her if that works for you.

Please let me know if you would like me to check with Clara - she is away today but will return tomorrow.

Best regards, Joscelyn.

Out of Character

Hi Joscelyn,

My office has some important potential legislative changes to permissible strata bylaws that we wanted to consult with UDI on. I spoke to Jeff Fisher this morning, and he indicated that you would still be the go-to person.

If you're around in the next couple of weeks and willing, I could send you a non-disclosure agreement and a summary of what's proposed, and then maybe schedule a phone call to discuss. Please let me know.

Kind regards

Doug Page, (RI)

Hello everyone,

On behalf of the Province, we are very much looking forward to hosting you tomorrow at the CleanBC Highest Efficiency Equipment Standards workshop.

I wanted to direct your attention to the primer that was included in the invitation, re-attached here for your convenience. If you have time to review ahead of the workshop, this will help us make the most of our time together.

Thanks very much,
Lisa

BC Highest Efficiency Equipment Standards Primer for Stakeholder Consultation

September 2022

BACKGROUND

The Ministry of Energy, Mines and Low Carbon Innovation (EMLI) leads policy on energy efficiency standards and market transformation of space and water heating equipment. The Office of Housing and Construction Standards (under the Minister Responsible for Housing) is responsible for the Building Act, BC Building Code, and Safety Standards Act. Together these ministries are responsible for policy development on energy efficiency in the built environment.

The Province is developing policy options to implement the Highest Efficiency Standards for Space and Water Heating Equipment commitment outlined in the CleanBC Roadmap to 2030, which states:

> *Space and water heating are the primary drivers of GHG emissions from buildings. To meet our targets, we need to ensure these functions are super-efficient, improve resilience and, wherever possible, run on clean electricity or other renewable fuels. To help accelerate this transition, we're committing to highest-efficiency standards for new space and water heating equipment by 2030, and earlier where feasible.*
>
> *After 2030, all new space and water heating equipment sold and installed in B.C. will be at least 100% efficient, significantly reducing emissions compared to current combustion technology. Electric resistance technologies like baseboard and electric water heaters are 100% efficient: they convert all the energy they use into heat. But heat pump technologies exceed 100% efficiency by capturing and moving ambient heat, without having to produce it. The new requirements will encourage more people to install electric heat pumps while continuing to allow the use of electric resistance technologies. They will also allow hybrid electric heat pump gas systems and high-efficiency gas heat pumps.*

The CleanBC Roadmap to 2030 was informed by several sources, including macroeconomic modelling of climate policies, technology adoption, energy use, and market trends, and directs the Province to implement policy for time of replacement retrofits of space and water heating equipment.

PURPOSE OF CONSULTATION

Following the mandate given in the CleanBC Roadmap to 2030, the Province is now in the process of developing a set of policy approaches for consideration by Cabinet. At this stage, the Province of BC is looking for stakeholder feedback on the regulatory mechanisms and administrative tools currently under consideration for the regulation of equipment efficiency in new and existing buildings. The intent of this consultation session is to:

- Inform key stakeholders of possible policy approaches
- Obtain feedback on policy approaches
- Understand stakeholder impacts, interest, and capacity to support implementation

Following Cabinet direction, the Province plans to prepare a regulatory impact analysis and complete public consultation on a proposed policy package in 2023. Drafting of regulatory amendments and the development of an order-in-council for approval by cabinet will occur after public consultation.

POLICY APPROACHES UNDER CONSIDERATION

As per the CleanBC Roadmap to 2030, the upcoming energy efficiency standards are being designed to allow electric resistance, electric heat pump, gas heat pump and hybrid dual fuel systems (i.e., electric or gas heat pumps integrated with conventional gas combustion appliances), and *prohibit* the sale and/or installation of conventional gas equipment (such as boilers and furnaces) that are not installed as part of a hybrid dual fuel system. Only asset-based regulatory mechanisms are under consideration – not operational regulation.

The two regulatory mechanisms being considered for this policy are point of sale standards and point of installation standards. *It is not expected that one approach must be selected over the other, but rather that both mechanisms may be required but for different categories of equipment, as appropriate.*

Point of sale standards regulate the performance of specific products at the time they are sold. They are simple tools that yield high compliance rates with relatively low administration burden and are dependent on product certification programs, which require performance ratings, labelling, and certified product directories for regulated products. As these product certification programs cover single packaged products (e.g., rooftop units) and systems sold as a bundle (e.g., residential forced air systems), these types of products are well suited to point of sale standards.

Point of installation standards regulate the performance of products and systems where they have been installed. Although administratively more complex, this approach is better able to cope with "field integrated" systems – for example, some hybrid dual fuel systems consist of products that are sold separately then integrated at time of installation with conventional gas equipment. These systems are unique to each building and are therefore challenging to regulate through product certification programs. Field integrated systems instead require a more flexible, site-specific approach, which is more readily provided by point of installation standards.

Key considerations to keep in mind:

- **Gas equipment regulation.** For EESR-regulated equipment, any conventional gas-fired elements would need to be part of a packaged product or a certified system (such as AHRI certificates) to ensure gas-only options are not purchased and installed under the EESR. Regulation of assets at the point of installation could allow more flexibility in hybrid design and allow systems that fall outside a certification system. The use of natural gas for backup could also be allowed under these regulations.
- **Dual fuel system operation.** With asset-based regulation of dual fuel systems, there is some risk that during operation the gas side of a dual fuel system will be used for most of the load, resulting in limited GHG reductions. Stringent standards for heat pump or hybrid system performance are one way to influence the operation. Other policies that will influence dual fuel system operation are commissioning practices, utility rates, carbon tax, utility demand side management regulation and the GHG emissions cap on gas utilities.

A high-level summary of both approaches is provided in the table below, with more detail in the proceeding sections.

Table 1: Overview of different policy approaches under consideration

	POINT OF SALE	POINT OF INSTALLATION
How would this mechanism be applied?	Via the Energy Efficiency Standards Regulation (EESR) administered by the province.	This mechanism requires policy development. Options may include regulation under new or revised legislation, or regulation under the Building Code.
How is it enforced?	By the Province, with facilitation by certification bodies. Enforcement tools include: • Sales reporting requirements • Retail inspections • Violation tickets • Professional or third-party verification	Site inspections and/or permitting processes are likely required. Professional verification may be considered for certain systems.
What is it best suited for?	• High sales volume equipment that have certified product directories, such as residential forced air systems and rooftop units.	• Large complex heating, ventilation, and air conditioning systems, such as a central hydronic plant consisting of a heat recovery chiller and gas boiler.
What are its strengths?	• Regulates at the highest point in the supply chain and therefore minimal compliance burden placed on contractors and owners • Potential for centralized administration (i.e., by the Province) • A variety of potential enforcement tools can be used	• Potential for more flexible for climate specific, site-specific, and system-based standards
What are its potential weaknesses?	• Difficult to apply to more complex and customized heating systems, whose component parts may not be sold at the same time or from the same seller. • Relies on the development of technical standards for hybrid dual fuel systems.	• This option requires development of policy, legislative amendments, and verification standards. • Relies on the development of technical standards that can be referenced. • Administration and site inspections are more resource intensive than point of sale standards. • If standards were in the BC Building Code, enforcement would be discretionary for local governments. • Permitting processes could increase the time and cost associated with installations

POINT-OF-SALE: Energy Efficiency Standards Regulation (EESR)

The EESR is a point-of-sale regulation designed to put legal requirements on businesses manufacturing, selling, warehousing or distributing products. Equipment performance standards (i.e., testing standards) are used in point-of-sale regulations to define testing, rating and labelling requirements. Certification bodies, hired by manufacturers to comply with the regulation, are responsible for testing, labeling and for verifying compliance of products within their contracts.
The Province is responsible for ensuring all products in the market are sold under a certification program. Certification bodies publish online directories of certified products that can be used by inspectors to check compliance. The Province administers the regulation and conducts inspections to ensure all products in the market are being sold under a certification program.

The Province currently has regulatory authority for inspections of retailers and distributors. The Province also has legislative authority to amendment the regulation and implement; violation tickets up to $2,000, requirements for sellers to report information to the Province and requirements for sellers to keep information about sales.

Note: For certain products, the EESR allows verification to be completed by professional engineers and architects based on reference standards. A similar requirement could be applied to dual fuel systems that are site integrated and outside the scope of a certification program. One example is a hydronic heating system that uses an air-to-water heat pump as its primary heat source and gas boiler for peaking.

Administering the EESR

Two approaches for administering the highest efficiency equipment through the EESR are described below. Both approaches would be administered by the Province of BC.

1. POINT OF SALE REGULATIONS FOR PACKAGED PRODUCTS

This is the simplest type of point-of-sale regulation, where standards are published and administered by the Province but limited enforcement is completed. A level of compliance is obtained by businesses complying with the law. This is how products are currently regulated at point-of-sale through the EESR. Certification bodies (i.e., Standards Council of Canada accredited bodies) are responsible for testing and verifying certain products using their label, and the Province routinely inspects retailers and distributors to ensure products aren't sold without that label.

What is this type of regulation suited for?

High sales volume products that are well established in the market and are sold as a single package e.g.:

- Part 3 packaged rooftop units
- Household hot water heater
- Commercial hot water heaters

Example Scenario: Rooftop units

Under this approach, the regulation of rooftop units would result in the following outcomes:

- Electric heat pump rooftops and dual fuel rooftops would be compliant.
- Single fuel gas rooftops would not be compliant.

Note: This standard would not specify the combined performance or control scheme for dual fuel units. It would only require the unit to include a heat pump. Actual operation would be influenced by utility rates, carbon tax, the GHG emission cap on gas utilities, and building owner choices.

2. POINT OF SALE REGULATIONS FOR SYSTEMS WITH CERTIFIED PRODUCT DIRECTORIES

As noted above, products with certified product directories lend themselves well to point of sale approaches, since they can be regulated high up the supply chain with relatively low administrative burden. However, if low compliance is expected in a certain equipment category, then additional administrative tools may be applied. The Energy Efficiency Act provides authority for violation tickets and reporting requirements, with some limitations. Administrative tools include increased frequency of inspections, violation tickets up to $2,000, and sales reporting requirements.

This is how products are currently regulated at point-of-sale through the EESR, but with additional reporting requirements for sellers and violation tickets. This additional reporting requirement would be a way to manage the sale of dual fuel hybrid systems such that furnaces cannot be sold separately. Violation tickets could be given by Provincial inspectors when non-compliant sales are identified.

What is this type of regulation suited for?

High sales volume products that are sold as a certified system, e.g.:

- Part 9 residential forced air heating systems
- Small hydronic heaters

Example Scenario: residential forced air heating systems
Under this approach, the regulation of forced air heating systems would result in the following outcomes:

- Electric heat pumps, gas heat pumps and certified hybrid fuel systems (i.e., a heat pump with a furnace) would be compliant.
- Furnace replacement parts would be compliant, furnaces sold separately would not be compliant.

Note: This standard does not specify the combined performance or control scheme for dual fuel units, it only requires the unit to include a heat pump. Sizing is typically based on airflow ratios with the heat pump capacity being <=50% of the furnace capacity. Actual operation will be influenced by utility rates, carbon tax, the GHG emission cap on gas utilities and building owner choice.

Key Questions for Stakeholders

Below are the key questions that will be posed of stakeholders in the upcoming consultation:

Table 2: Questions on Point of Sale Approaches

Overall fit/ Effectiveness	• Which types of equipment are most suitable for this type of approach? • Do you see a need for any exemptions (e.g., climate zones, equipment types)?
Administrative burden	• What role, if any, might your organization/industry association have in supporting compliance? • Do you see any potential pitfalls with respect to administration and compliance? • Are you generally supportive of this approach for the equipment categories described?

Industry Readiness	• What impact do you see this approach having on industry members, if any?
	• What kinds of supports would your stakeholders need, if any?
	• If the objective is to align with replacement cycles:
	  ○ What kind of lead time is required from publication of the standard?
	  ○ Is there anything necessary to handle emergency replacements?

Emissions reduction potential	• Does this approach to regulation provide enough assurance of emissions reductions? • How does this align with your long-term emissions reduction plans?

POINT OF INSTALLATION

Administering Point of Installation Standards via the Code

Various mechanisms for point of installation standards are under consideration. One option for implementation of point of installation standards is via the BC Building Code. Developing point of installation standards would require policy development beyond the ongoing code development processes for new construction and alterations to existing buildings as well as changes in how energy codes are referenced. The Province would need to work with the federal government to ensure this policy approach meets existing commitments for code harmonization as well as other building code policy directives.

Administering Point of Installation Standards via regulation/3rd party administration

Recognizing that many authorities having jurisdiction likely do not have the resources to administer equipment standards, other administration options are also under consideration. Another option for the implementation of point of installation standards is to implement the standards through regulation and use a third party for administration and enforcement. This option would require a legislative amendment. This approach potentially provides the most effective administration and compliance process, but would likely require Provincial funding of the third-party administrator or a provision for fee for service administration. The two potential approaches to administration are described below:

1. POINT OF INSTALLATION STANDARDS WITH HEATING SYSTEM PERMIT

This approach would rely on a permit process for verification of compliant installations. A permit process would need to be facilitated by a standard that provides clear guidelines/processes for verification.

What is this type of regulation suited for?

Equipment categories that frequently involve the installation of field integrated dual fuel systems, and are typically installed without professional oversight, such as:

- Medium-sized hydronic systems

Example Scenario: Medium-sized hydronic systems

Under this approach, the regulation of medium-sized hydronic systems would result in the following outcomes:

- Medium-sized gas boilers will continue to be sold and distributed in the Province
- An apartment building could replace a gas boiler, as long as it is part of a system designed to have electric or gas heat pumps serving a significant portion of the heating load.
- A heating system permit would be required for all equipment replacements.

2. POINT OF INSTALLATION STANDARDS WITH PROFESSIONAL VERIFICATION

This approach is similar to the one described above, but includes the use of building professionals to verify that the installation meets the standard. A standard or professional practice guideline would be required to facilitate verification of compliance.

What is this type of regulation suited for?

Equipment categories that frequency involve the installation of field integrated dual fuel systems, and are typically installed with professional oversight, e.g.:

- Large-size hydronic systems

Example Scenario: Large-sized hydronic systems

Under this approach, the regulation of large-sized hydronic systems would result in the following outcomes:

- Large-sized gas boilers would continue to be sold and distributed in the Province
- A high-rise office building could replace a gas boiler, as long as it is part of a system designed to have a heat recovery chiller, or heat pumps serving a significant portion of the heating load, resulting in a seasonal system efficiency greater than 100%.
- Verification that the installation meets the standard would be completed by an authorized professional, based on a standard or professional practice guideline.
- Authorities Having Jurisdiction would be responsible for administration of the standard, but would rely on professionals for site verification and reporting.

Key Questions for Stakeholders
Below are the key questions that will be posed of stakeholders in the upcoming consultation:

Table 3: Questions on Point of Installation Approaches

Overall fit/ Effectiveness	• Do you feel this is an effective means of regulating energy efficiency? Which types of equipment are most suitable? • Do you see a need for any exemptions (e.g., climate zones, equipment types) or prohibitions (e.g., gas backup)?
Administrative burden	*Industry Associations* • What role might your organization/industry association have in supporting compliance? • Do you see any potential pitfalls with respect to administration and compliance? *Local Governments* • What is the capacity and interest from local governments for taking this on? • How/would this approach affect your municipality's activities in the day to day? • Do you see any potential pitfalls with respect to administration and compliance?

Industry Readiness	*Industry Associations*
	• What impact do you see this approach having on industry members, if any?
	• What kinds of supports would your stakeholders need, if any and in what timeframe?
	• If the objective is to align with replacement cycles:
	  ○ How much lead time from the publication of the standard does industry need to ensure it can successfully comply with the standard?
	  ○ Is there anything specific that will be needed to help handle emergency replacements?
	
	Local Governments
	• Is your jurisdiction suitable for early adoption of this approach?
	• Would your Council be interested in early adoption?

Emissions reduction potential	• Does this approach to regulation provide enough assurance of emissions reductions? • How does this align with your long-term emissions reduction plans?

Webinar Questions & Topics for Discussion

Event: UDI Webinar: BC Building Code Proposals – What You Need to Know
Speaker:
Zachary D. May, MBA, Executive Director of the Building and Safety Standards Branch and Ministry of Attorney General and Minister Responsible for Housing
Scott B. Williams, Senior Codes Engineer of the Building and Safety Standards Branch (BSSB
Moderator: Dave Ramslie, COO, OPEN Technologies

2022 Topics and Questions for Discussion

Province-wide changes

1. In addition to providing more tools for municipalities to regulate energy efficiency through the *Energy Step Code (ESC)* and GHGs in new buildings through this new regulation, the Province is also working on B.C.-wide approach over the next decade. Can you lay-out the Province's timeline for this work for both energy efficiency and GHG emissions?
2. What resources is the Province planning to provide for these broader changes, as well as the current regulatory changes.
    a. For example, will there be additional costing analysis, support in securing low-carbon systems, like heat pumps and additional education for builders, energy advisors and contractors on how best and cost effectively achieve the new energy and GHG requirements?

Commented [JF1]: This may be part of their presentation?

Fuel Sources

3. Will local governments be able to prevent the use of RNG in new projects through incentives or requirements, and would this change after the BCUC decision comes down regarding RNG? If yes, then under what authority?
4. Hydro
    a. Local distribution issues – There are areas like Langley where there are hydro distribution issues. Given the capacity constraints in municipalities, are there best practices that municipalities should consider when implementing electrification policies? For example,

area-specific requirements where infrastructure is already in place to support heavier loads?

b. Connection fees have been a long-standing issue for new developments and potentially existing buildings[s.13] [s.13] Can you discuss the challenge from the Province's perspective and any recommendations that are being provided to municipalities?
    i. The Best Practices guide recommends that municipalities establish local building electrification funds to support projects facing electrification challenges, can you provide more detail on this proposal? How would these funds be funded?

c. There are a number of ongoing challenges that BC Hydro is facing as electrification of buildings increases, for example, connection fees, Tier 2 rates, local distribution capacity and staffing shortages. How is the Province working with BC Hydro to address these challenges, which will likely be exacerbated by the push to reduce GHGs in new buildings?

[s.13]

Incentives and Flexibility

5. Are there any limitations to the adoption of higher *ESC* steps or GHG reduction targets by municipalities once these provincial regulations are approved? Can the Province clarify whether municipalities are required to provide incentives as they implement these new requirements?
6. Some municipalities provide a step-down approach currently, where new projects can build to a higher step of the *ESC* or a lower step and provide a low-carbon energy system. Do municipalities have to provide options like this, or could they require the highest step of the *ESC* and the more stringent GHG reductions simultaneously?
    a. How does the Province view this approach, is it one that is being recommended to continue with the introduction of these new regulations?
7. Some municipalities are also considering alternative requirements, such as solar panels, embodied carbon regulations, building electrification, etc. What options or powers do municipalities have to adopt alternative

Commented [JF3]: These may be addressed in the presentation

requirements, as they are outside of the proposed regulations and may not be aligned with the *Building Act*?

Notice and In-stream Protections

8. If these regulations are approved in December, how soon after can municipalities start mandating projects to meet the GHG emission reduction targets as well as increased steps under their own *ESC*?
    a. Are there any in-stream protections that municipalities will be required to provide? What recommendations does the Province have in this regard?
9. When these new regulations kick-in at the end of this year, they will become immediately effective. Some of these proposals, such as the changes for Step 2 for Part 3 commercial projects and the Provincial energy efficiency requirements for municipalities that are not already using the *ESC*, could immediately affect in-stream developments. Is the Province considering extending the implementation timeline for the regulation or having a grandfathering period to allow the building sector to make the necessary adjustments?

Monitoring and Evaluation

10. Will the Province be tracking the adoption of municipal requirements under these new regulations?
    a. Will there be an opportunity to review the types of changes that are implemented?
11. The Premier-designate has identified improving housing affordability and supply as a key objective of his government, are you concerned that these new regulations and the forthcoming municipal requirements will negatively affect both the supply and cost of housing in B.C.?
    a. Will BSSB be monitoring the impact of these regulatory changes on housing supply/affordability?
    b. Would changes to the regulation be considered?

Doug – I asked for our BC Housing contact information and was sent the attached. I tried to find Raymond's bio or title on BC Housing's website, but was unable to locate any page showing the "team" or organizational chart. I was able to find various references to presentations that Raymond has made to outside groups but I'm not sure if they have his current title (or what that title is)! Hopefully there is some inter-governmental directory that may give you better information than the attached, or of course there is always Linked In!

Best regards, Joscelyn.

Hi Kathy,

Thanks so much for your interest on our upcoming code changes. As I'm sure you can appreciate, our branch is one of many work units experiencing staffing pressures in our rapidly evolving labour market. This has resulted in the unfortunate reality that we just aren't able to accommodate most in-person speaking appearances at this time.

For this code change, we've focussed our limited resources on creating content that will replicate much of that speaking engagement experience in a virtual way, combined with an on-demand delivery model so that our audiences can access the content at a time that is convenient to them. Those resources will be available to support the public review process that is set to commence very soon. We will be certain to let you know when those materials go live online. We look forward to your members' participation in that forum and thank you again for your interest.

All the best,

TIFFANY WARKENTIN, BDes, LLB | Director, Building Policy & Legislation

Hello Hugo –

I would prefer is someone presented to my members at a lunch so that they can ask question and get answers in real time. This is part of UDI's mandate is to educate our members on topics that influence the industry.

Is there someone other then yourself that would be willing to present the changes?

Regards,

Kathy Whitcher – Executive Director

Subject: RE: Presentation to UDI Capital Region - BC Energy Step Code

Hi Kathy and Emily,

Thank you so much for the invitation. I'm wondering if the presentation might be redundant, because we're releasing a series of instructional videos this month that will go into depth about the changes to the BC Energy Step Code and the proposed Building Carbon Pollution Standard, as well as some written material.

We're planning a webinar which your members are welcome to attend (either at the end of Sept. or early October). We'll send a link when a date's been chosen.

If those don't answer your particular questions, we could also drop into some sort of virtual event if you've got one soon? We will also take questions by email throughout the six-week public review period.

Best,
Hugo

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hello Hugo –

I would like to introduce myself, my name is Kathy Whitcher, and I am the Executive Director of the Urban Development Institute – Capital Region (Victoria). I am contacting you with the hopes that you would be willing to present the changes that are coming to the BC Energy Step code to my members at our Wednesday, October 12th luncheon. It is my understanding that the Province has been working on some substantial changes and the development industry is eager to hear them.

Our lunch begins on October 12th at 11:45am at the Union Club with a plated lunch followed by a presentation that would start about 12:30pm and go until 1:30pm. UDI would be honoured to have you as our guest and presenter.

Please let me know if you are willing and able to present and attend.

Kind Regards,

Kathy Whitcher – Executive Director

- Hugo Wong, BSSB – 236 478 1406 (call only); hugo.wong@gov.bc.ca

AGENDA

Time	Topic	Speaker(s)	Purpose(s)
1 p.m.	Welcome, introductions and opening remarks	Tiffany Warkentin, Acting ESCC Chair Robyn Wark and Bob Deeks, ESCC Vice-Chairs	▪ Welcome participants ▪ Approval of agenda
1:10 pm.	Subcommittee report out	Co-chairs	▪ Part 3 and Part 9 Non-Residential ▪ Part 9 Residential ▪ Local Government Peer Network ▪ Communications and Capacity Building Sub-committee
1:30 p.m.	Part 9 Unique Building Types	Susan MacDougall, Focal Engineering; Mark Bernhardt, Bernhardt Contracting	▪ Summary of technical research regarding how log homes and small homes in cold climates can be 20%-more energy efficient
2:45 p.m.	Break		
2:55 p.m.	Roundtable	All	▪ Discussion re: Energy Step Code implementation in your area, readiness for upcoming code change
4 p.m.	Adjournment	All

Enright, Patric.

Pete K

Scott's update on P9 subco

Toby Lau report-out from P3/9

Maya: Met in June. A lot of LG participants. Lots of outreach. Working group, public review process and consolidated feedback. Meeting with that group probably twice. Next week, Oct. 5, discussing public review materials.

Will: Comms/Capacity Building Subco: WG stepped into role of co-chair alongside Bertine. Mary's stepping down. We met on Sept. 7, next mtg is Nov. 16. Had BSSB present on the code changes. Busy supporting ESCC collateral. Happy to take direction or questions as a subco.

Williams: Additional ECMs…summarizing the study. "middle of the road" and equitable to larger home sizes. A lot of work in analysis,

Susan MacDougall: Methodology, results, discussion.

2021 Metrics Research Report. Graph which describes that medium homes meet steps at much lower ICC than small and laneway homes. That's Table 6-24.

Log homes feature regional materials and low embodied carbon. Log homes struggle to meet TEDI due to lower log wall R-value

Look at two archetypes, build on the MRR: See how smaller home ICC per cent that can approach medium homes. And evaluate cost-effective ways for log-homes. See if log homes "top out" at a certain Step.

T-shaped single-storey home is the "worst-case" due to high articulation.

Strategically place liner where it'd improve R-value but not impact aesthetics.

How prevalent log homes are? They'll survey their members (log and timber builders assn) to see how prevalent they are.

Drop off R5 quite quickly. R5 walls couldn't meet any of the Step limits other than Step 3 in CZ4 even with EcMs. No adjustments recommended for R5 walls.

IN CZ8, if we applied medium ECMs to small homes, TEDI would increase by 10 per cetn from 115 to 122. That's a relaxation of TEDI there. Challenge in the base results is that these are not consistent increases. Hard to codify from these numbers. CZ8 drops an entire Step and discussion and debate on whether that was good. Maybe that's too much of a relaxation.

When considering Code options, we set some informal goals. Not increasing CZ4. Just shift those down so CZ4 doesn't relax. Hoping to get straightforward approach where values don't drop beyond lower Step.

Proposal: Linearize the trend for each Step. Haven't talked much by the laneway. But suggest to use small home archetype used for anything smaller for 210 sq m. laneway generally complies. Might be able to offer a different TEDI and HDD calc for smaller homes that includes these adjustments. One equation for Part 9 buildings, the other for small P9 buildings.

The odd climate zone gets a slightly higher relaxation than it needs, but that's the simplified approach.

Same analysis on MEUI. This is less clean. Step 5 line, it crosses the Step 4 line when relaxed. So even though it results in a MEUI relaxation, not straightforward enough, may need an interpretation. We found that here, some zones dropped 1-2 Steps,

MEUI goals: no relaxations for CZ4. Tried to drop an entire Step. The MEUI table isn't linear. Showing what base limit is and added size and cooling increase. No linearity, no equation that results in each of these values. Only two sizes. Laneway and small archetype out of five available. No simple formula. Those informed where our recs come from.

Setting delta MEUI same as delta TEDI, set using previous formula. Justification: if we increase TEDI limit by 5 kwh/m2, could be offset by 100%-efficient by electric baseboard. The MEUI would then shift up the same amount as the TEDI. Simpler approach, doesn't drop an entire Step, it still has significant relaxation, but not all scenarios met MEUI. ICC for small and laneway homes, based on MEUI, still pushed a bit higher in some scenarios.

Our proposal was to use small home for any of the smaller homes, tried to avoid another MEUI tables, lots of columns for diff sizes. If we used the small home adjustment, the laneway would also comply. Modified TEDI and TEUI were met in most cases. Even if not met, limit and result were much closer than previously. The laneway benefits from relaxed NBC %-better and energy limits as well.

NBC is less than 300 m3 for small home. Only laneway was smaller home for this archetype.

SW: Demonstrated that we looked at two archetypes among many home sizes/shapes. Hard to draw conclusions. Will have to do more research on this. Maybe absolute limit for MEUI. Could be part of additional work.

Susan MacDougall: Started digging into DHW, absolute values per size. Given it's only been a week, not enough to present on. Makes sense I think.

SW; Nothing from this study is in the code language for public review. We have existing TEDI, MEUI. What has changed is adoption of NBC to relaxation to %-better for 300 cubed or less. Susan outlined that to see how it impacted, and how there are more options for laneway homes for lower Steps. For upper Steps, we're looking at more absolute targets again. Log homes: couldn't get absolute limit for topping out for log homes. We've provided them with the prescriptive approach only. Not required to follow performance path until we get this straightened out. We will have full code in 2023, which will include all sections and subsections of the Code, not just EE and GHGs. We'll look at this further during another public review.

Not many other questions.

Pauline: No concerns from builders on TEDI for Step 3. Our sample is skewed for CZ4. But for CZ5, similarly, no concerns. Want any proposed relaxation may be not necessary for those CZs.

Patrick Enright: Folks will take a moment to process incoming GHG regulations. It changes the context. You might hear some people say: All elec and Step 3, who cares? I wouldn't put it that bluntly. As we have more direct tools to tackle GHG emissions, the overall context of EE may shift more back towards what do utilities need to manage overall EE of built environment and limited supplies of energy. Long story short, the GHG reg changes the context and the overall context of EE, IMO.

Pauline: Great point, Patrick.

Lise Townsend also agrees.

SW: Thanks Susan.

Roberto: Question: how focused, how much input is BC Hydro providing in this process? IN the sense that it's of paramount importance to BC Hydro's integrated resource process, load forecasting to see what the building infrastructure will need from the grid. And finding ways to minimize energy consumed by bldgs. Any strong connection from your study and BCH?

SW: Technical subcos and these forums. No direct contact from this study in particular, other than usual forums. TW?

TW: No, but I saw Robyn turn off her camera, maybe she can add something?

Robyn Wark: Gary Hamer's name, ID'ed on the steering committee for this project. I reiterate we're not silent or not wanting EE. That's just as important to us on the electrification side.

Roberto: is BC H pushing for the most EE possible in bldgs.? Is there a need identified that in BC H? Or are they saying, Step 3 is OK or Step 4 OK?

RW: No position on that question.

Joe: Nervous when I hear this convo. In CZ4, this is fine. As we get into colder climates, it's important that we drive lower emissions through EE. Just electrifying everything in colder climates puts cost burder on customer. Any incentives or plans or programs that get us there can put us there.

Patrick Caraher: If anything, electrically heated/DHW'd homes need to be more efficient than gas, both for DSM and mitigation of energy poverty that often comes with mandated electrification, esp. in the colder climate zones. 2 likes

One alternative time for the Public Review Q&A would be Wed. Oct. 19 from 10 a.m.-noon.

ALTERNATIVE MEETING TIMES:

PREFERRED: Wed Oct. 19 from 10-12 p.m.

Tues. Oct 18 from 10-12 p.m. (second option)

Tues. Oct 18 from 1-3 p.m. (third option)

JF: Metrics Report was absent from the presentations: what will this all cost? Costing would be great to include.

JF: Consider covering off strategies; That's where you get feedback. Well, these are some measures you'd take, does that work, that's the dialogue you might get.

Pete K: Some ICC in small home of 8% ish. If your average new house construction is $1M, 80k could be significant. Good point.

Roundtable:

Kootenays, Megan Lohmann: Lots of ppl already ref Step 3. We have some home types that some EAs . Columbia Valley doesn't' have capacity early, will follow Province. Wanted to flag: wanted to continue with builder engagement and in-person support once again. Some confusion on how we can ensure that builders get credit for those workshops now a percentage required on Step Code. Not sure whether there's flexibility in how those credits are allocated. In Step Code-specific training, building science in person, we'd love ot have that count for Step Code accreditation throughu BC H. I think that's it. Our team is growing.

TW: I've talked up BAL a lot.

Maura: Update, ppl looking at public review, they will get back to use on implications for architects. Looking at thigs in continuing education. For looking backward, we issued practice guidelines for architects but useful to others. On Step Code apaplication with respect to major occupancy. Tradiitonally, major occupancy focused on Part 3 and fire protection. But looked at differently in Part 10 and Step Code. Some architectural guidance for energy modellers. Consulted others. In some time in the future, could be part of AIBC-EGBC guidelines, but wanted to get it out ASAP. It's issued.

Ron: Big concerns with our constituents. Lots of inconsistency from one jurisdiction to the next, often with jurisdictions next to each other. This org, together with the Province has put out many educational resources, full slate of courses, new requirements for BCH 20 CPD points for 24 months, but awareness and capability of members are about 25 per cent of overall 1100 we represent that really wrapped their heads around what's coming. That's always a hard thing to do, to recognize what's coming when they're busy. It's never failed that any new code, any bldg. department, listen to someone whining at the desk, "when did that happen", notwithstanding many years of lead time. What we're trying to do at HAVAN, for request for public review, is doing what we can to get members to look at it so they know what the changes are, then offer some meaningful feedback. We'll keep doing that as long as that's open. Then we can get some traction. Something for people who do even know are changes to Metrics have also led to some confusion and lack of understanding. If you're not involved, just buzz in once ina while, some substantive changes that have taken place for the past 1.5 years, particularly with metrics. That'll leave some people asking questions as they move forward. Hopefully we can keep, along with CHBA, some education necessary to get everyone tuned in. Getting them tuned in is the challenge. I can't tell you how many times "I'm too busy". It'll be interesting ot say the least.

Roberto: I appreciate Ron's comments. We find it hard to get attention of builders who are busy and on site. Maybe ESC newsletter items populating HAVAN newsletters to inform those builders to read 1-2 bullets in a newsletter, a strategy to maybe prepare them. We have programming that will complement, hopefully, evolution of Step Code. For ZEBx programming was "aim for the top". On that note, webinars for PH MURB at UBC, some NZER challenge-case studies, the sixth one is coming up for bldg. in Golden, a Step 4 MURB. Aiming for the highest Steps, and the Steps below, needless to say.

Jeff at UDI: One particular concern: changes to office and retail metrics. They'll be implemented immediately. Right in December of reg goes forward. Some concern about builder aiming for the lower, then higher, what kind of notice is being provided, munis picking up on that issue. A lot of this will depend on, on the BP, no limits on LGs, they can go the highest Step, lowest GHG requirements. How quickly do they move there, what are time frames for that, will they do it in Steps, or just one leap. That'll have huge impact of some members to achieve what municipalities want. We would be, hosting an event, a "high-perfrmance workshop" with membesr on the 14th. Obviously, this will be critical to it. Hopeful someone from the Province can speak to what's proposed. IT's more oriented to Part 3. Hoping someone from the Province can speak to that.

TW: I wanted to do as part of public review, so people could see what we started to think about, ID stuff that's missing, and inform plan making. Runway is important. Beign as proactive as everyone can is key success factor. Welcome comments on that, too.

SW: With changes to metrics for some P3 archetypes. I understand. That can be said about any Code change. If any changes to Code and hasn't been looked at by any sort of designer, owner builder, same issue comes up. I understand issue. It's part of the process.

JF: Slight difference for me. In 2023, when the big BCBC change, lots of attention put on that. In many ways, this is going to get buried. Everyone will focus on munis can do GHG targets, Province-province-wide don't think it'll get attention it deserves. I'm a bit worried this will get missed. Some may get caught. Not a dramatic change to metrics, but I can picture some of these projects, for several years in Part 3, that somehow elevated for communications. It's hard to get through. These are major changes to ESC. Those will be the focus.

Joe Hart: EAs and building inspectors are prepared, but sure wouldn't want to be them for the first 6 months. Builders don't know as much. Lots of education required. Owner-builders are most worrisome. Zero training. For them to jump in…significant percentage of owner builders up here int eh North. Real task to get through that. I'm considering starting a company consulting for owne-rbuilders on Step Code to try help that process. Our EA, he has a pretty good string of trainees he works with, don't think capacity will be a huge deal other than most remote areas. First six months will be struggle fro everybody. Until people get used to it. Get things straight for builders. It's like this every time we get a Code change. I remember when window one came, put it off for a year, no one had a window we could buy. We make it work. I spoke to a group fo builders, thye said: we want to be part of the solution. We just need the tools to get there. Esp. on smaller homes, for affordability, in favour of what we're doing. We want to provide a home ppl can afford to live in. Not because we want to cheap out. We put a solar panel, 9kW system on our yystem this summer, our rate will go up $250 a year because of that. They may charge us more depending how much we make or save based on solar PV. Real disconnect on where we go and what they want to do with us.

TW: At BSSB< we think about how our work intersects with insurance. It's a surprising and education convo every time. About stuff like this. TO help mitigate this. Not necessarily expected.

JH: Total shock. No idea they could charge us on what we could be saving every year. If theres a committee sign me up.

Bertine: In absence of solutions to get these people, any insights, could we involve effort on EA side as they'll be the ones hand-holding some builders, provide that extra training "on the spot" when they do new building. It's a smaller group of pros we can address with training right away. Many builders out there, who are doing their job, every day, in and out. EAs will also be busy, but maybe more receptive to a quick training uptake. We're trying to do this with compliance template updates, anyway. Any other pros who engage with builders who we could train so they can train the builders?

Ron: We have advocating for "integrated design process" for some time. We've engaged all design/architect members, who've embraced training. Large contingent of EAs, too. No holds barred here. Trying to latch on to what we can to pass this info on. Getting anyone to learn anything is hard. NRC LEEP for renos, we're doing, trying to get attendees is hard. It'll be disappointing turnout we're expecting. And yet, six months ago, maybe even more than that, had difficult, we would have had a waiting list.

Pauline: That was point I wanted to make: we're finding as we dig through proposals is that there's a gap with the education and training for EAs under current scheme. Some EAs weren't using most current forms. How do we go about providing that info, archiving old compliance, so we don't see 2018 forms pop up. Maybe it's circling back with Bertine. Mechanical contractors aren't well engaged. They're not available to take the training. They're such a critical component of getting this right (sizing, equipment, etc.) But we can't bring them to the table. Anything we can do it, subsidized training, etc. etc. we could explore? We've heard that repeatedly from our committee meetings.

Roberto: Can CACEA help EAs get up to speed?

Ralph: John M had to step away, had to give an update. Shifting to Part 3, in the past, we've worked towards low-carbon strategy for all future residental construction. We've worked on that for 18 months now. Moving towards carbon targets. We're internally developing new Step Code /GHG targets. Step 2 is our base, we want to go one more. We want to move to public approval process as soon as January. Approval in first half of 2023. This is unofficial. But hopefully an early jurisdiction with the Code. We do our consultation with our developers etc. We are including in our jurisdiction for future climate design for overheating. To use the future climate files as part of our approach. More work in the 2023 update, I think, on the Codes side.

SW: Nationally, some work on overheating. We're looking at that, and as we modify code for end of 2023, something we can consider.

TW: We emailed TECA and HRAI to let them know directly.

Maya: General updates: Quite diverse. Neighbouring communities could have very different approaches. We're trying to get ahead of that some. Through the next iteration of the PN. Where we'll have regional clusters at alignment for policy and Step Code and CPS being one of those. CRD, quite a tight clustering of munis that might want slightly diff adoption schedules. For industry comms, and general structure, even if timing is off, that's the hope. It'd be great to have Ron and Jeff, Pauline, attend some of those in the coming months to help LGs hear from industry in that. Many diff councils next to each other who want to be creative. Leading LGs looking ahead for how they will be implementing this. Some of them, setting specific Level of CPS< others want two-Step approach. Best practices coming soon. Newer

members outside of urban centres, Megan spoke to this a bit, biggest question coming up was how prescriptive approach will work. Some clarity in the public review documents we'll pass on to those.

Harshan: It behooves us to support in near term, provision of responses to engagement opportunities as well as ensuring we reach out to our own networks. We've already sent note to EGBC comms, tell them a note about upcoming newsletter. Engage advisory groups, etc. We'll promote it during the EGBC conference, and hope there's good participation from EGBC-AIBC community. We will definitely reach out to energy modellers, just to ensure they know of proposed changes. Find out what kind of…for any internal…capacity-building activity. Professional practice guidance, opportunity to revisit that next year, five years will have passed since released of that. We can see if any revisions, esp with CPS, need to be reflected continue to assess those things. By and large, in the near term, we promote engagement. In longer term, assess opportunities for education events, both for EGBC, AIBC, mobilize some who are SMEs to lead training for local industry.

Tyler: Building envelkope course coming out, mechanical too. 3-part trinaing series. Starting Nov. and carrying on to new year. Zone meetings in Nov. Just had a series, ongoing this afternoon of regular zone meetings. Amendments, proposed, consultation underway, to host something specific for energy Step Code in our Zones in November as well. An additional opportunity. On a regional basis. On consistency for local authorities, have some regional discussion. May not get region-to-region consistency, at least within regions, something for LGs as they're coming through, to have nuanced info, than is currently the case.

TW: IS there parity for your training at BC Housing and BOABC? Mutual credit recognition?

Tyler Wightman: No mandatory training. We typically do that through exam. It's optional, but something requested by our members. We typically work with BC H. Maybe, we're talking with Bertine, a credential for building officials for EE and ESC. Harshan thumbs up. Support that for individuals and LGs. Some of them, esp. with more capacity, have positions for this part of the code.

Tyler: Lots of inspectors in smaller AHJs take on educational role. Some local authorities provide education to builders. Otuside or over and above regular day to day interactions. If there's key messages or anything that we can share, it's been pointed out that BOs on the front lines, at the permit counter, saying yes you can or no you can't. Or here's how maybe we can do that in the new world. If changes, key messages, things we can do to get consistent messaging out. Things we want from this group, to get to a broader audeicne, we can do that. Our members, BOs, can be educators or communicators with permit applicants. In LGs, and among constractors.

TW: So, KMs are meant for permit applicants?

Tyler: I wouldn't ignore BOs as comms channel.

Roberto: The permitting desk, I agree with Ron, BOs, permitting offices aren't where training should happen but I think for smaller builders that can't be reached well. That is a place or chance for permit dept. to direct them to resources compiled. This is where you need to go now to familiarize yourself with what's coming down the pipe. It's not training per se, but direction. Could take advantage of now. Not after changes have happened, right?

Joe: I like your idea, Tyler, but before owner-builder exams, and where customer had to hire licensed builder, that might be regulated at BO office, and it really wasn't. They just put blinders on and said that's not my job. Maybe in bigger munis. Where we are, they don't want to police anything or add more work.

Tyler: Not regulatory perspective, but just comms and ability. Either direct them to key resources, what are those, where can they access them. Education could be another one. Whether it's us or other orgs.

Joe: We'd need to put together an easy handout pkg for them, then. Talking to local office is they don't know the info and it doesn't…they don't have access to the info, though it's out there. Unless there's someone proactive in that office, they don't seem to have it. There's a disconnect somewhere.

TW: Great point, Joe. Some audiences, even though ESC is out there for years, lots of ppl don't know it's there. Maybe it's format or sheer volume of content. It's a puzzle for me. But I'd love to hear others thoughts.

Joe: I could do it locally, but to go to some of these offices and say, what do you know, what do you need to know, and maybe get it back to you. We don't know what we don't know. We're assuming there's a level of awareness that we're not thinking of.

PR: Can we pass this onto the Communications and Capacity Building subco? Paper's not necessarily wanted, but unfortunately, it might be helpful to have some small handout made, with a QR code? That directs users to wherever we need to? YouTube videos could be a great start, and it could expand. As a physical piece to get people thinking about it. That could be offered at the permit desk, or dinner meetings a tCHBA local, try not have paper.

Maura: Maybe stating the obvious, but P3 systems are designed by mechanical engineers, c/w code-mandated assurances; then installed by contractors, P9 systems are both designed and installed by contractors. That seems like the essential difference between P9 and P3.

Tyler: TBH, always 20% not paying attention until too late. At least. Given busyness, that might be higher. I've seen this play out. I think it'll take a while for machine to turn the gears, work some of this through. Hopeful that this group, all the other infrastructure, the training, collabs, etc. I feel quite fortunate to walk into something like this. Lots working towards the same goals. Change management curve will occur. As long as we cooperatecould be positive.

Joe: A lady speaking earlier, training for P9 designers and architects, a critical piece to this. I seen no designers in our area who know about EE or ESC. Constantly training them on our end. If its' a builder that doesn't know, they get the plan and figure out how to make it work. That's a big one to train. Kudos for that.

Roberto: BC Assn. of Bldg Designers (BCABD) – could be an important channel to build awareness of the change. Not the training, but could be…dunno how many archtects/designers are part of that in the north, but may be worth looking in to.

Joe: A surprise to some, in the Lower Mainland, almost zero architects in homes up here. All designers. Mostly about cost.

Jason: ON the designers, significant history in past decade, where designers live. We have many ofthose ppl part of ASTTBC. Just in middle of disseminating the info. Had a few discussions or emails with others around the table to say, how can ASTTBC partner and offer training. How can we be involved with that, that kind of stuff. Followup: When we send out info, consultation, anyone part of the building designers group part of ASTTBC will get that notification. Like you say TW, can send lots of info out, you can't take them there sometimes. But lead them to it. I can make some calls to some of the people I know ot give them a nudge. EGBC/ASTTBC can connect. ASTTBC…anyone who can get some training or courses promoting that, we could assist that. Our regulatory role…fairly specific with how we go about…advocate…can't get in trouble, how do we get that info out. So, everyone has my contact info, reach out to me. Looking to put stuff into our CPD, registered member portal. Very happy to help. Could be excellent to figure out comms on the subco what we can do in a coordinated way, so we don't just spin our tires. Be happy to get involved with that.

TW: Maybe this is related we have? Bertine?

Bertine: We want to get in touch with more orgs, that we haven't worked with in the past. Made a note for the mech contractors as well. Known addresses on that end as well. Happy to take this offline. Figure out what next steps could look like.

Pete: I looked at the public review docs: for GHG intensity document, is RNG actually still an option? Or not?

TW: Yes.

JF: Not as clear in BP. In the other parts, it said whole thing is fuel neutral, but it recommend that LGs accept RNG for now? Whole BCUC thing. IT wasn't as clear in the BP guide exactly. Didn't have a strong language about it being fuel neutral. I wasn't clear from BP what long-term on that was.

TW: To acknowledge that BCUC process is ongoing. We can't address how it fits in.

Patrick: Wasn't my reading of the documents either. No RNG until RNG is allowed. Was my reading. That BCUC process would be a factor. What the BCUC decides would be a factor. That was my understanding, it would be good to know. Tell em how to read it.

Joe: Any thought to meet in person some time soon? I feel like a lack engagement is due to Zoom fatigue.

TW: maybe we can plan further out.

HW: Consider in-person meeting.

Jeff Fisher: did we look at GHGs. SW no

Susan: Was a back of mind; if it was serviced by electric baseboard, low GHG value

Pauline: Can we purse the MEUI outside of this study? Looking more at an absolute limit rather than providing relaxations.

Scott – yes, we need to more research

Susan – looking at hot water values; an absolute limit makes more sense

Scott as the research unfolded – didn't get any of this research into the public review; TEDI & MEUI stays; adoption of NEB % better is being considered; provided log homes with prescriptive approach and prescriptive approach; 2023 Code will include all sections of this code and making necessary revisions for next round of public review.

Pauline: Reiterate on ground truthing side having heard concerns from builders on meeting Step 3 for the TEDI; work does skew towards CZ 4; any proposed relaxation may not be necessary for CZ 4

Patrick: Incoming GHG requirements does change the context. As we have more direct tools to look at GHGs, opens other doors for energy reduction.

Roberto: How much is input is BC Hydro providing in this process? How does it factor into their overall planning process. Is there a connection between this study.

Scott: No direct contact between BC Hydro and this research.

Robin: Conservation remains a priority. Energy efficiency buildings make sense and also have a low carbon mandate.

Joe: Need incentives for northern BC to off-set the costs of electrification.

ROUNDTABLE Readiness for upcoming Code changes?

Meghan – Lots of people in kootenays already referencing Step 3. The ones that haven't are saying they don't have the capacity to do so but will follow the province. Expanding team and building on the Building a Legacy North.

Maura: Have people looking at public review and will get back on implications for architects. Have issued a guideline on Step Code and major occupancy. Have to look at Part 10 differently particularly with energy modelers. At some point might become part of the joint EGBC -AIBC guidelines.

Ron: One of the biggest concerns in Metro Van, a lot of inconsistency between jurisdictions despite numerable public education initiatives. Builders are very busy and not necessarily comprehending what is coming. Will do best to raise their awareness and get meaningful feedback.

Roberto: Will put out newsletter with articles intended for builders.

Jeff: Changes to office and retail metrics are of concern. What kind of notice is being provided? Attention will be on the big changes to Step Code and CPS but not that certain metrics are also being changed.

Joe: Building officials and energy advisors seem ready for the changes. Worried about owner-builders as they don't necessarily have the training.

Bertine: Could energy advisors be best positioned to help inform builders?

Pauline: Still a gap in the education and training of energy advisors. Mechanical contractors are a missing piece of the training cohorts despite being a critical part of the process. May need to subsidize the training.

Ralph: Plan to be early adopters of new Step Code requirements. Requiring builders to use future climate files for overheating.

Scott: Nationally, things are happening.

Maya: looking at fostering regional alignment by regional clusters. Questions around how the prescriptive approach will work.

Harshan: Significant changes. Should reach out to our own networks. Will promote townhall opportunity to get good participation from EGBC. Will reach out to energy modelers community.

Tiffany: We will let UBCM and LGMA know about the public review.

Tyler: BOABC is working with BC Hydro and BCIT on training for building officials based on existing BCIT content. Three-part training coming out in November. Just has a series of zone meetings around changes and will host something specific around energy step code in November. Not thinking about it from a regulatory perspective, more of a communications perspective.

Tiffany: There is a lack of awareness of the wide range of materials.

Joe: Could go talk to some of the local government offices to see what they know and what they need to know.

Pauline: maybe this should go to the communications sub-committee; might be useful to a have a hand-out maybe with qr code

Roberto: Builder designers could be a channel to raise awareness.

Juan: History of where designers live. Many are registrants of ASTTBC

Bertine: Trying to get in touch with a broader range of stakeholders.

Hello, everyone:

Thank you for a great meeting yesterday. We will have presentations and notes to share in a bit, but I wanted to share the registration link for the live Public Review Q&A on the morning of Thurs. Oct. 13:

s.15

Please let me know if you have issues registering. I will send it out via broader emails soon but wanted to test it with a smaller group first.

Best,
Hugo

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Scott and Hugo,

I would like to take this opportunity to introduce myself as the new Director, Professional Development & Programming with the Urban Development Institute.

One of the initiatives that I have been working on with our Vice President & Senior Policy Advisor, Jeff Fisher, Dave Ramslie, of OPEN Technologies, Jonathan Meads of Streetside Development, and Bertine Stelzer of BC Hydro is putting together a 2-day seminar for our members to help prepare the market for current and future energy and sustainability related building code updates in Part 3 and Part 9 buildings. Our first session will be focused on Part 3 builds and cover topics from Approvals, Design & Construction, Financing, to Building Ownership and Handover. We would like to invite you join us to speak to the recently released proposed revisions to the BC Building Code on the morning of Friday, October 14.

The program dates and details as follows:
Date: Friday, October 14 & Saturday, October 15
Time: 8:30am-5pm Friday, 8:30am-3pm Saturday
Location: 580 West Hastings, SFU, Morris J Wosk Centre for Dialogue

We understand that it may be a challenge to attend in-person events, and if you are available, we can set-up a virtual log-in through zoom for your presentation.

Thank you so much for your consideration, I look forward to your reply.

Kind regards,
Verna

Cc: Jensen, Jun'ichi OHCS:EX <Junichi.Jensen@gov.bc.ca>
Subject: RE: RUSH REQUEST | FW: UDI Report- No Vacancy: Challenges & Opportunities for New Rental Housing Construction

Political Context – Carbon Pollution Standards for New Construction:

- CleanBC Roadmap to 2030 commitment: Zero-carbon new construction in B.C. by 2030, phased in over 2024, 2027 and 2030.
- Mandate commitment to, "support local governments to set their own carbon pollution performance standards for new buildings."

Proposed Building Carbon Pollution Standard (CPS) for New Construction:

- Current code change proposal open for public review until November 4 – feedback is appreciated.
  - Implemented like the BC Energy Step Code.
  - Local governments may opt in to any of four stringency levels.
  - Per Roadmap commitment, phased into BC Building Code (BCBC) over time so the number of opt-in levels will decrease as the stringency of minimum requirements incrementally increases.
- The CPS is outcome oriented; any sufficiently decarbonized fuel source can achieve targets (including RNG).

Implementation and Enforcement of the CPS:

- Developers represented by UDI would prefer we not give local governments a choice of CPS Levels.
  - A single province-wide standard would not accommodate differing states of readiness among and within regions.
  - By offering an incrementally more limited number of CPS Levels, we honour our mandate to support local governments to set their own standards while limiting the impact of potential short-term inconsistencies.
  - Best practice implementation guidance for local governments has been developed and will be refined based on public review feedback.
  - A peer network for local governments to coordinate and collaborate on matters including implementation has been established through the Energy Step Code Council.

- Per the Building Act, building regulations, including the BCBC, have the same force and effect as a local government bylaw.
  - Local governments choose how and if to administer and enforce the BCBC.
- After a request from FortisBC that the Province require local governments to recognize RNG in their enforcement of the CPS, ADM MacLaren conferred with MUNI and confirmed the Province has no intention to interfere with local governments' autonomy in respect of how they administer and enforce the CPS.

Hi Juni, sorry this is extremely last minute.

Can you please provide Teri with some bullets on the highlighted BSSB topic below:

Here are the suggested topics for the meeting, all at a fairly high level:
- *Annual allowable rent increase for 2023*
- *BSSB roll-out of carbon reduction tools through BC Energy Step Code*
- *Ongoing Housing Ministry work and consultations*

The meeting is scheduled for Monday, October 3rd at 2pm

Regards,

Jessica Alexander | *A/Executive Administrative Assistant*
To A/Assistant Deputy Minister Bonnie Ruscheinski

Hi Goneet,

Here are the suggested topics for the meeting, all at a fairly high level:

- Annual allowable rent increase for 2023
- BSSB roll-out of carbon reduction tools through BC Energy Step Code
- Ongoing Housing Ministry work and consultations

We were hoping to discuss some of the consultations that UDI participated in over the summer that remain under NDA, in relation to the above topics. Can you confirm whether this will still be possible.

Thanks,
Cassandra

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Teri,

I hope you're keeping well, no doubt things are busy in the Ministry getting ready for the start of the fall session next month. UDI has recently completed a report analyzing the viability of three hypothetical purpose-built rental projects and how costs have changed over time. This report highlights the challenges rental builders face and how sensitive these projects are to policy and market changes.

Through this analysis UDI aims to answer the question, in a market where there is considerable and growing demand for rental housing, why isn't more being built, and what can be done? The report, *No Vacancy: Challenges & Opportunities for New Rental Housing Construction* is available on our website.

Following the discussions with UDI's Executive Committee, we thought this report may be of interest to you. If you have any questions regarding the document, please don't hesitate to ask.

As well, I was hoping that you might have some time over the next couple of weeks for a brief call to discuss the recent annual allowable rent increase announcement in relation to the Ministry's ongoing work? Let me know if would work.

Thanks,

Cassandra

Subject: RE: Confirmation Pls re ICAC Meeting - October 31st

Hi Debbie,

Zachary May has now taken over as our ED going forward, so I've looped him in to the email. In my experience it was appropriate for the ED to attend as the building related conversation was more at the branch level. That stated, the expectation around the table with Teri and Cheryl participating was for a divisional update, which often included both housing policy and building policy matters. My recommendation would be for the ED's of Building and Safety Standards and Housing Policy Branch to attend. I don't believe the ED of housing is typically included, though. Last time this was a notable gap, and there will be an expectation for housing policy related updates this time, I suspect.

Zac- for information, the update I last gave was a high level one on major initiatives – status update of Clean BC energy and carbon work and accessibility work, and associated timelines.

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Debbie,

This Council meets twice a year and all the ADM predecessors get invited, however only Cheryl May and Greg Steves have ever attended on an occasional basis, leaving this meeting to mainly the folks who work on the guidelines for Builders and those in the construction industry i.e. step code and building code changes etc. An update on what Govt, is currently working on in regards to the building industry is also a stand alone item on the agenda. The last meeting was in April of this year and I can't recall which ADM was around then, however Jun'chi attended for OHCS the last time. The Council has been around now for approx. 12 years and meeting twice yearly.

In asking for input to the agenda for the next meeting on October 31st, a number of folks are asking for an update from Govt. on the Step Code Education builder requirements and licencing, so it would be good if Jun'chi and/or Teri can provide an update on this for the agenda.

Attached is the current Membership list, the ICAC TOR and a copy of the minutes of the last meeting.

Cheers,

Sue

Hi Zack,

Welcome back!

With the recent release of the proposed BC Building Code updates – we would like to invite you to join us for a virtual session to speak to these proposals with our UDI Members.

We hope to have this webinar ahead of the closing of the review period to provide an opportunity to help educate our members as these changes will have an immense impact to our industry.

Potential Dates/Times for this webinar:

Tuesday, October 25 (9:30-10:30am)

Thursday, October 27 (9:30-10:30am)

Tuesday, November 1 (9:30-10:30am)

Wednesday, November 2 (9:30-10:30)

Thursday, November 3 (9:30-10:30)

Please let me know if any of these dates/times work for you or alternately, please provide me with some date/time options for a 1 hour virtual session.

I look forward to your reply.

Kind regards,
Verna

From: OHCS BSSB Public Review OHCS:EX <BSSB.public.review@gov.bc.ca>
Sent: September 23, 2022 2:55 PM
To: OHCS BSSB Public Review OHCS:EX <BSSB.public.review@gov.bc.ca>
Subject: Public review launch, energy efficiency and greenhouse gas emissions, BC Building Code

Dear BC Building Code user:

I am writing to advise that the Building and Safety Standards Branch (BSSB) has released proposed revisions to BC Building Code 2018 (BCBC 2018) for public review. These include proposed changes to minimum energy efficiency requirements for most Part 9 and Part 3 buildings, as well as an opt-in carbon pollution standard.

Interested parties may visit gov.bc.ca/buildingcodes to review:

- Proposed Code Change Forms (PCFs) regarding:
  - Changes to energy efficiency language in Part 9 and Part 10 of BCBC 2018
  - Inclusion of greenhouse gas emissions in objective and functional statements
  - Inclusion of greenhouse gas emissions targets for Part 9 and Part 3 buildings
- Supplementary information:
  - Pre-recorded audiovisual presentations summarizing proposed code changes and providing interpretation supports
  - Costing and technical analysis
  - A draft best practice bulletin for local governments prepared in partnership with the Step Code Peer Network

The main goal of a public review is to receive focused, technical comments on proposed changes to the Code language, such as suggestions about targets and values, and comments about scope or application. Any relevant feedback regarding policy and technical approaches will be considered prior to making a recommendation to the Attorney General and Minister Responsible for Housing.

The public review period will end at 11:59 p.m. on November 4, 2022.

To submit your comments or upload attachments, complete the online survey. If the survey does not work for you, email BSSB.Public.Review@gov.bc.ca for further instructions. Please share this information as appropriate within your organization.

Sincerely,

Jun’ichi Jensen

Hi Tiffany,

The decision had been made to postpone this event on the 14th.

We would like to set-up a virtual session so that we can communicate this to the broader UDI member audience before the review closing period. The below dates and times have been proposed to Zack as well.

Tuesday, October 25 (9:30-10:30am)
Thursday, October 27 (9:30-10:30am)
Tuesday, November 1 (9:30-10:30am)
Wednesday, November 2 (9:30-10:30)
Thursday, November 3 (9:30-10:30)

Thank you!

Verna

Hi Scott and Hugo,

I would like to take this opportunity to introduce myself as the new Director, Professional Development & Programming with the Urban Development Institute.

One of the initiatives that I have been working on with our Vice President & Senior Policy Advisor, Jeff Fisher, Dave Ramslie, of OPEN Technologies, Jonathan Meads of Streetside Development, and Bertine Stelzer of BC Hydro is putting together a 2-day seminar for our members to help prepare the market for current and future energy and sustainability related building code updates in Part 3 and Part 9 buildings. Our first session will be focused on Part 3 builds and cover topics from Approvals, Design & Construction, Financing, to Building Ownership and Handover. We would like to invite

you join us to speak to the recently released proposed revisions to the BC Building Code on the morning of Friday, October 14.

The program dates and details as follows:
Date: Friday, October 14 & Saturday, October 15
Time: 8:30am-5pm Friday, 8:30am-3pm Saturday
Location: 580 West Hastings, SFU, Morris J Wosk Centre for Dialogue

We understand that it may be a challenge to attend in-person events, and if you are available, we can set-up a virtual log-in through zoom for your presentation.

Thank you so much for your consideration, I look forward to your reply.

Kind regards,
Verna

Thanks Zac.

Please let me know what I can do to support.

Noting that we (Juni, Tracy and myself) will be presenting to the Regional District Planning Managers (ARDPM) at the Parkside one of those days. The time and day has yet to be confirmed, but they are shooting for either the 1st or 2nd of November.

Hoping that there will not be a conflict.

Hi Verna,

If it's ok with you two, I would like to push the presentation to mid November. Between now and then we need to make sure our office is on the same page as local governments about how this will impact them, and then we can present a clear message to your members about what to expect with the proposed code changes.

Let me know if that works for you.

Also, I believe you have also made an earlier presentation request through Tiffany on this topic, so I'll treat them both as the same request and let Tiffany know she doesn't need to respond further.

Best,

Hi Zach,

Yes that is correct. We are looking at about 20-25 minutes for your presentation and potentially a representative to provide the municipal perspective/reaction (10 minutes), followed by moderated Q&A.

Hi Zach,

We wanted to check in and see if we can proceed in a virtual event with you on November 1 or 2. If possible, we would like to start notifying everyone early next week.

Please let us know if either of these dates would still work for you.

Kind regards,

Verna

Hi Zack,

Welcome back!

With the recent release of the proposed BC Building Code updates – we would like to invite you to join us for a virtual session to speak to these proposals with our UDI Members.

We hope to have this webinar ahead of the closing of the review period to provide an opportunity to help educate our members as these changes will have an immense impact to our industry.

Potential Dates/Times for this webinar:

Tuesday, October 25 (9:30-10:30am)

Thursday, October 27 (9:30-10:30am)

Tuesday, November 1 (9:30-10:30am)

Wednesday, November 2 (9:30-10:30)

Thursday, November 3 (9:30-10:30)

Please let me know if any of these dates/times work for you or alternately, please provide me with some date/time options for a 1 hour virtual session.

I look forward to your reply.

Kind regards,
Verna

Sent: September 23, 2022 2:55 PM
To: OHCS BSSB Public Review OHCS:EX <BSSB.public.review@gov.bc.ca>
Subject: Public review launch, energy efficiency and greenhouse gas emissions, BC Building Code

Dear BC Building Code user:

I am writing to advise that the Building and Safety Standards Branch (BSSB) has released proposed revisions to BC Building Code 2018 (BCBC 2018) for public review. These include proposed changes to minimum energy efficiency requirements for most Part 9 and Part 3 buildings, as well as an opt-in carbon pollution standard.

Interested parties may visit gov.bc.ca/buildingcodes to review:

- Proposed Code Change Forms (PCFs) regarding:
  - Changes to energy efficiency language in Part 9 and Part 10 of BCBC 2018
  - Inclusion of greenhouse gas emissions in objective and functional statements
  - Inclusion of greenhouse gas emissions targets for Part 9 and Part 3 buildings
- Supplementary information:
  - Pre-recorded audiovisual presentations summarizing proposed code changes and providing interpretation supports
  - Costing and technical analysis
  - A draft best practice bulletin for local governments prepared in partnership with the Step Code Peer Network

The main goal of a public review is to receive focused, technical comments on proposed changes to the Code language, such as suggestions about targets and values, and comments about scope or application. Any relevant feedback regarding policy and technical approaches will be considered prior to making a recommendation to the Attorney General and Minister Responsible for Housing.

The public review period will end at 11:59 p.m. on November 4, 2022.

To submit your comments or upload attachments, complete the online survey. If the survey does not work for you, email BSSB.Public.Review@gov.bc.ca for further instructions. Please share this information as appropriate within your organization.

Sincerely,

Jun'ichi Jensen
Acting Executive Director
Building and Safety Standards Branch
Ministry of Attorney General and Minister Responsible for Housing

Fair point. Looking at our calendars, Oct 26th or 27th at 9:30-10:30 works for the team here.

I think a 20 minute presentation followed by Q & A works best.

Hi Zach,

We were hoping to have this session before the review closing of November 4 so that our members have an opportunity to be educated and ask questions before these proposals are implemented.

Would your preference be to have a 20 minute presentation followed by a moderated Q&A vs. including an additional presentation?

Kind regards,
Verna

Hi everyone,

It was great seeing you all this afternoon!

I have sent through the calendar invites with a panelist link for Wednesday, November 2 from 9:15-10:30am for this webinar.

Attached is a brief overview of our conversation from this afternoon. We will aim to open the event registration this week. Please see this link here for the draft event page: https://udi.memberzone.com/events/details/udi-webinar-bc-building-code-proposals-what-you-need-to-know-1858?range=160 **If you have any feedback or would like to make any revisions to this page/information, please let me know before noon on October 18.**

Scott and Zach, could you please provide me with an updated headshot and short bio?

As mentioned during our meeting, I will compile some potential questions in advance of the event – if you have any questions you would like to be included in this list, please send them to me by Friday, October 28.

Zach/Scott – would you be able to send me your updated presentation by Friday, October 28?

Thank you all!

UDI Webinar – BC Building Code Proposals – What You Need to Know
Pre-meeting Notes

AGENDA:

- **Format**
  - 3-5 min introductions & Sponsor remarks
  - 20-25 min presentation
  - 20-25 min moderated Q&A & discussion

- **Notes & Presentation Focus areas:**
  - Focus on Part 3 & Part 9 (mainly townhouses)
  - Climate zones 4 and 5
  - Event will be open to UDI Pacific Region, UDI Capital Region, UDI Okanagan and Fraser Valley registrants
  - High level overview of what these proposed changes mean
  - Key issues from an industry perspective – the metrics report, how early could a municipality move forward with the reduction of GHG and how far can they go with this in terms of the energy step codes etc.
  - RNG – what municipalities can and can't do, clarification
  - District energy and how that would work under
  - GHG and GHGI – how quickly local governments can get there. What's the highest and lowest step, what's the difference?
  - Focus on fuels – what are the HVAC systems and decisions you will have to make
  - Discuss some of the break points – knowing how this all shapes out
  - Question regarding the service and staffing capacity that BC Hydro has
  - What are the capacity constraints
  - What kind of over-sight/follow-up would BSSB be doing
  - What is coming up next in terms of BSSB – last question
- **Next Steps:**
  - Verna to schedule webinar for November 2
  - Zach & Scott to send updated headshot and bio to Verna
  - Zach & Scott to update presentation and send to Verna
  - Verna to compile questions from everyone to send to Dave, Zach, and Scott
  - Event registration to open Week of October 17

Purposed Event Schedule:

November 2 – 9:30 – 10:30

TIME (Pacific)	ACTIVITY	DURATION	LEAD
9:15	Dry Run / Zoom testing	15	All
9:30	Webinar goes live UDI Introduction Intro Dave Pass to Sponsor	1	Jeff Fisher

Thanks! All I really need to be able to say is that BC Hydro is aware of the issue and how developers can engage with them on this issue. This is definitely not BSSB's lane, but it does create some issues for electrifying new buildings that needs to be addressed.

Any info or contacts are appreciated.

Best,

A presentation was made by BC Hydro to UDI last week where some of these issues were touched on (I think). Let me check on who presented and see if I can put them in touch with you. My guess is that this will save you a bit of time in pulling the info together.

Subject: BC Hydro capacity re. electrified development

Hi Nat and Katherine,

We have a presentation to UDI on Nov 2, and we're expecting some questions about BC Hydro distribution capacity and infrastructure issues. Is that something your Ministry deals with?

Best,
Zachary D. May, MBA
Executive Director

Hi everyone,

It was great seeing you all this afternoon!

I have sent through the calendar invites with a panelist link for Wednesday, November 2 from 9:15-10:30am for this webinar.

Attached is a brief overview of our conversation from this afternoon. We will aim to open the event registration this week. Please see this link here for the draft event page: https://udi.memberzone.com/events/details/udi-webinar-bc-building-code-proposals-what-you-need-to-know-1858?range=160 **If you have any feedback or would like to make any revisions to this page/information, please let me know before noon on October 18.**

Scott and Zach, could you please provide me with an updated headshot and short bio?

As mentioned during our meeting, I will compile some potential questions in advance of the event – if you have any questions you would like to be included in this list, please send them to me by Friday, October 28.

Zach/Scott – would you be able to send me your updated presentation by Friday, October 28?

Thank you all!

Teri Collins
Assistant Deputy Minister
Office of Housing and Construction Standards
PO Box 9290, Stn. Prov. Govt.
Victoria British Columbia V8W 9J7

Dear Ms. Collins

Re: Proposed Housing Supply Accountability Act

I would like to thank you and your staff for involving the Urban Development Institute – Pacific Region (UDI) in the consultations regarding the proposed *Housing Supply Accountability Act* (*HSSA*). **We strongly endorse the Ministry's efforts to establish a housing targets framework for municipalities that includes enforcement mechanisms.** We also agree with the approach of having broad enabling legislation, because it will allow the flexibility needed so the government can nimbly react to emerging issues. However, this legislation should also be presented as a strong tool that will be utilized by the Province to address the housing crisis. UDI also supports the framework being phased-in – with an initial focus on municipalities in urban areas with acute housing challenges, but with substantial infrastructure in place and a strong building sector. As discussed, there are some areas that need to be refined and others in which the Ministry could be more forceful and directive.

Housing Needs Reports as a basis for targets

UDI recognizes that the municipal *Housing Needs Reports* (*HNRs*) have been submitted to the Government already, so it would be difficult to amend them now. As such, we are pleased that Ministry is not going to be tied to them and can establish targets above and beyond the *HNRs*. However, there are several issues the *HNR* methodology, structure and process, including:

- The ability of local governments to manipulate and politicize them to reduce their targets and argue against provincially imposed ones;
- As with many population projections by governments, there is chronic undercounting as noted in the recent CMHC report on Canada's housing shortage and the *Opening Doors Report* of the Canada-British Columbia Expert Panel on the Future of Housing Supply and Affordability (Appendix 5);
- The *HNRs* are not timed with Census data; and
- Beyond this, there is even more undercounting in local governments that have traditionally limited growth as much of the population forecasting is based on previous growth rates.

UDI recommends that the Ministry (in conjunction with local governments and stakeholders) review and reform the *HNRs*, as they are still the starting point for the proposed housing targets framework. It would also limit confusion and debates in the future regarding conflicting objectives established wither by the *HNRs* or another body, such as the Metro Vancouver *Regional Growth Strategy (RGS)*. The work that the Ministry is conducting to assess the targets for local governments could be incorporated into the next round of *HNRs* and provide direction to regional districts regarding their growth strategies.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

Evaluation metrics

While UDI supports the use of a broader suite of metrics for the targets and assessments of municipalities because they provide a more complete understanding of what is occurring in their approvals processes, it is critical that Building Permits (BPs) be a key part of the target framework to ensure it is a truly performance-based system. Local governments can "approve" many projects, but introduce conditions which make them unviable and therefore unbuilt. It is the BP stage in the process where there is a clearer picture that projects will be constructed as developers will rarely pay for the consulting work and municipal charges for a Building Permit and then not proceed with construction.

If there are instances in which BPs are not being pulled by builders, this can be reviewed by the "Advisor" who would be appointed by the Minister. They could compare the issuance of BPs in other similar municipalities with what is occurring in the local government they are investigating. The "Advisor" can also discuss the issue with local government officials, builders and other stakeholders to determine why BPs are not being pulled.

Enforcement mechanisms

UDI recommends the legislative framework enable enforcement mechanisms that directly affect not only local governments, but also residents, to change the incentive structure regarding allowing new housing. For example:

- The TransLink component of the property tax could be increased if a municipality does not leverage the billions of dollars invested in SkyTrain service in their community;
- There could also be an affordable housing component added to the property tax for those communities that refuse to allow more housing;
- The Government could curtail land use and building powers (e.g., restrictions on downzoning) as well as development finance tools for an extended period. Councils could also lose powers for an extended period by delegating additional decision making to staff such as technical issues; and/or
- The Government could also limit access to Federal and Provincial funding (e.g., the Canadian Infrastructure Bank and the Housing Accelerator Fund).

In addition, this legislation needs to be paired with more carrots for those that meet and exceed their targets such as senior government funding for schools, parks and transit as well as for processing improvements and area planning; although we recognize that this is beyond the purview of this legislation.

There are also potential issues with the 2-year limitation on the length of the Orders in Council (OIC) that override municipal bylaws, policies and procedures. It would be counterproductive if a local government that is still not achieving its targets were to be allowed to revert to its old bylaws, policies and procedures when they were not delivering enough new homes. We recommend that the Minister be granted that ability to extend the OICs – especially if targets are not being met. In addition, there needs to be grandfathering for instream projects that may be negatively affected by abrupt bylaw, policy or procedure changes.

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

Regional restrictions

The *Regional Growth Strategy* in Metro Vancouver places numerous restrictions on local governments. For example, there are limitations on housing (even affordable housing) in mixed employment areas. UDI has advocated that mixed employment areas near rapid transit stations would be ideal locations for rental and affordable housing (if the employment spaces are constructed). If the *Metro 2050* proposed *RGS* were passed, this type of housing would be allowed in these areas – but only within 200 metres of a station. UDI recommends that the legislation ensure that the *RGS* does not block any corrective action or directive to a local government that the Government deems necessary to meet its housing objectives.

In a similar fashion, the legislation needs to be written, so that it does not preclude the Province from overriding the *RGS* as well as local by-laws/policies for its own affordable housing projects and partnerships in the future – including establishing a separate approvals process. One of our concerns with the proposed framework is that it may not provide immediate results, but affordable housing could be more quickly delivered by ensuring that the Province has more flexibility and can move forward efficiently with its own projects.

Sources of information for consideration when establishing targets

The sources of information that that the Minister may consider in establishing targets on page two, should include information/data from government sources (e.g., CMHC, BC Housing and BC Stats), academia and industry as well as information from the Federal Government on immigration policy, as British Columbia is one of top jurisdictions for immigrants moving to Canada. In addition, the last bullet in the section should be broadened to "*Advice, information and data obtained at the discretion of the Minister.*"

At several stages of the proposed framework, it is noted that the Ministry and the "Advisor" will consult with local governments, to ensure these consultations are viewed as unbiased, we recommend that the legislation specify that this "Advisor" be a third-party, independent of local governments and their representatives, as well as the Province. We also recommend that the legislation be written to allow for consultation with others such as stakeholders and experts.

Thank you again for involving UDI in the consultation of this important legislation. If you have any questions regarding our comments, please do not hesitate to contact us. We look forward to working with you and your staff to increase the delivery of new homes to British Columbians.

Yours sincerely,

Anne McMullin

Office of Housing and Construction Standards
PO Box 9290, Stn. Prov. Govt.
Victoria British Columbia V8W 9J7

Dear Ms. Collins

Re: Confidential Consultation Draft Legislation - Housing Targets 2022

We support the intent of the draft legislation and the results of improved housing affordability and stimulated housing supply that it seeks to achieve. We believe that it is an important step to be undertaken and that, if implemented and enforced, it can be an important tool available to the Province. We also acknowledge that these changes will not be made in isolation, and that further incentives will be needed to encourage and drive the supply of long-overdue housing in the forms, and locations, where it is needed most.

We recognize the need to ensure that the draft legislation is broad and ambitious, but also balanced; we feel that it largely accomplishes these goals. However, we think the draft legislation is potentially limited in three key areas and we encourage the ministry to give consideration to these issues (or, if they have been considered and not addressed in the draft, then we would appreciate the opportunity to hear the Province's views on them).

ACTION – OHCS to set a dedicated mtg with Juni, Jeff and OHCS ADM (Bonnie) to explore further.

Hi Nikki,

BSSB has the following action item from Meghan (as A/ADM) from the Oct 3 meeting with UDI.

Could you suggest some times that work for Bonnie at the end of October or early November for a 1hr meeting with Jeff Fisher (jfisher@udi.org), and I can work with Jenna and Jeff to finalize the meeting details?

Once we have the date set we will get an eapps started as well.

Subject: FW: RUSH REQUEST | FW: UDI Report- No Vacancy: Challenges & Opportunities for New Rental Housing Construction

Hey there,

Sharing my notes from the UDI meeting today that I joined in with Teri. My notes are purple – please forgive me if I've totally captured something incoherent but I did my best please note action item below – I will leave it with you to schedule a focussed meeting to get to the details of their concerns.

- BSSB roll-out of carbon reduction tools through BC Energy Step Code
  - UDI is on the energy step code council – have flagged this concern previously re: spring roll-out. Looking at regulations closer to Dec so municipalities could implement carbon targets in new buildings shortly after.
  - Will there be adequate guidance to do it phased/staged?
  - TC – are they requesting guidance and confirmation that it can be phased?
    - Yes
  - Unclear if natural gas can be used to meet GHG targets? Ex. If a new bldg has a contract with Fortis, they meet their GHG targets now but, in a few years time if the strata wants to switch - there's nothing stopping them from doing so.
  - Jeff Fisher at UDI is engaged with Juni/BSSB. See it being a potential speed bump to the new housing legislation.

ACTION – OHCS to set a dedicated mtg with Juni, Jeff and OHCS ADM (Bonnie) to explore further.

Thanks,

M

Sending these directly just in case. RNG = renewable natural gas, which Fortis is currently gearing up to deliver in increasing amounts over time.

Subject: RE: RUSH REQUEST | FW: UDI Report- No Vacancy: Challenges & Opportunities for New Rental Housing Construction

Political Context – Carbon Pollution Standards for New Construction:

- CleanBC Roadmap to 2030 commitment: Zero-carbon new construction in B.C. by 2030, phased in over 2024, 2027 and 2030.
- Mandate commitment to, "support local governments to set their own carbon pollution performance standards for new buildings."

Proposed Building Carbon Pollution Standard (CPS) for New Construction:

- Current code change proposal open for public review until November 4 – feedback is appreciated.
  - Implemented like the BC Energy Step Code.
  - Local governments may opt in to any of four stringency levels.
  - Per Roadmap commitment, phased into BC Building Code (BCBC) over time so the number of opt-in levels will decrease as the stringency of minimum requirements incrementally increases.
- The CPS is outcome oriented; any sufficiently decarbonized fuel source can achieve targets (including RNG).

Implementation and Enforcement of the CPS:

- Developers represented by UDI would prefer we not give local governments a choice of CPS Levels.
  - A single province-wide standard would not accommodate differing states of readiness among and within regions.
  - By offering an incrementally more limited number of CPS Levels, we honour our mandate to support local governments to set their own standards while limiting the impact of potential short-term inconsistencies.
  - Best practice implementation guidance for local governments has been developed and will be refined based on public review feedback.
  - A peer network for local governments to coordinate and collaborate on matters including implementation has been established through the Energy Step Code Council.
- Per the Building Act, building regulations, including the BCBC, have the same force and effect as a local government bylaw.
  - Local governments choose how and if to administer and enforce the BCBC.
- After a request from FortisBC that the Province require local governments to recognize RNG in their enforcement of the CPS, ADM MacLaren conferred with MUNI and confirmed the Province has no intention to interfere with local governments' autonomy in respect of how they administer and enforce the CPS.

Hi Juni, sorry this is extremely last minute.

Can you please provide Teri with some bullets on the highlighted BSSB topic below:

Here are the suggested topics for the meeting, all at a fairly high level:

- *Annual allowable rent increase for 2023*
- *BSSB roll-out of carbon reduction tools through BC Energy Step Code*
- *Ongoing Housing Ministry work and consultations*

The meeting is scheduled for Monday, October 3rd at 2pm

Regards,

Jessica Alexander | *A/Executive Administrative Assistant*

Hi Goneet,

Here are the suggested topics for the meeting, all at a fairly high level:

- Annual allowable rent increase for 2023
- BSSB roll-out of carbon reduction tools through BC Energy Step Code
- Ongoing Housing Ministry work and consultations

We were hoping to discuss some of the consultations that UDI participated in over the summer that remain under NDA, in relation to the above topics. Can you confirm whether this will still be possible.

Thanks,
Cassandra

Hi Teri,

I hope you're keeping well, no doubt things are busy in the Ministry getting ready for the start of the fall session next month. UDI has recently completed a report analyzing the viability of three hypothetical purpose-built rental projects and how costs have changed over time. This report highlights the challenges rental builders face and how sensitive these projects are to policy and market changes.

Through this analysis UDI aims to answer the question, in a market where there is considerable and growing demand for rental housing, why isn't more being built, and what can be done? The report, *No Vacancy: Challenges & Opportunities for New Rental Housing Construction* is available on our website.

Following the discussions with UDI's Executive Committee, we thought this report may be of interest to you. If you have any questions regarding the document, please don't hesitate to ask.

As well, I was hoping that you might have some time over the next couple of weeks for a brief call to discuss the recent annual allowable rent increase announcement in relation to the Ministry's ongoing work? Let me know if would work.

Thanks,

Cassandra

DRAFT

November 4, 2022

Zachary May
Executive Director
Building Safety & Standards Branch (BSSB)
Office of Housing and Construction Standards (OHCS)
Ministry of Housing
PO Box 9844 Stn Prov Govt
Victoria BC V8W 9T2

Dear Mr. May:

Re: UDI Response to Public Review of Energy Efficiency & Greenhouse Gas (GHG) Emissions Proposals for the 2018 B.C. Building Code (BCBC)

The Urban Development Institute (UDI) would like to thank you and BSSB staff for presenting the proposed changes to Provincial energy efficiency requirements, the amendments to *Energy Step Code* (*ESC*), and the Regulation that would empower local governments to establish GHG emission restrictions for new buildings to our membership at our November 2, 2022 *BC Building Code Proposals - What You Need To Know Webinar*.

In addition to the *Webinar*, we have reviewed the materials provided by BSSB on the proposed Regulation. UDI is concerned about the December timeframe for the implementation of it as well as some issues that still need to be addressed in the proposed *Provincial policy bulletin for cleaner, more energy efficient new construction* (*Best Practices Bulletin*) and other supporting documents for local governments.

Need for Delay of the Implementation of the Regulation

We recommend delaying the implementation of the Regulation as there are a number of issues that need to be further addressed, including potential housing legislation, a critical B.C. Utilities Commission (BCUC) decision on Renewable Natural Gas (RNG) and several BC Hydro issues, which are barriers to building electrification. More notice and communication regarding the changes is also needed for the industry.

Potential Provincial Housing Requirements for Local Governments

In a CBC Metro Matters interview with Premier-Designate David Eby, the issue of upcoming "… *legislation on housing targets and forcing municipalities to act* …," was discussed. While UDI has been a long-standing advocate of this type of approach to address housing supply and affordability issues, it is not known what requirements will be imposed on local governments.

If the OHCS Regulation is approved in December, local governments will be proceeding with consultations and making decisions on potentially significant changes to their energy efficiency and GHG emission reduction policies. If they are excessive, the cost impacts could undermine their ability to meet future Provincial housing requirements. Fully understanding these expectations would be critical information for local governments as they establish the *ESC* step and GHG reduction steps, and many would likely proceed more cautiously if these requirements were understood. ***UDI recommends that the Government wait until details about future legislated housing delivery requirements and regulations are released before proceeding with the proposed regulatory changes to the 2018 BCBC. When it is announced, the Best Practices Bulletin needs to reference the changes and how they might impact the new GHG emission powers being offered to local governments.*** This issue is particularly important given that under the *Best Practices Bulletin* there will be no limits on local governments in establishing *ESC* requirements and GHG reduction requirements (i.e., they can mandate the highest step for both without providing any incentives).

Renewable Natural Gas

There is also little clarity on another key issue for the GHG proposals – how RNG will be addressed. As noted in the *Draft Building Carbon Pollution Standards for Part 3 buildings in British Columbia* Report, "*… there is no mechanism available … to ensure low-carbon energy will be used for the life of the building*." We are awaiting a BCUC decision on whether strata corporations can be bound to RNG contracts if they use natural gas. Local governments are concerned that stratas can switch to less expensive regular natural gas even if developers sign contracts for RNG. This could be why the language in the documentation provided by OHSC was confusing regarding the status of RNG. Wording in the *Best Practices Bulletin* seems to give local governments potentially the option of disallowing the use of RNG, although the Office has indicated that the new Regulation is to be fuel neutral. ***UDI recommends that the Government wait until the BCUC determines if strata councils can be bound by RNG contracts before proceeding with the proposed regulatory changes to the 2018 BCBC.***

BC Hydro Issues

Having an RNG option is critical to our members because there have been ongoing issues with BC Hydro that would be further exacerbated by new building electrification policies (and electrical vehicle charging requirements, which are likely already mandated by local governments who would adopt the *Building Carbon Pollution Standard*), including:

- BC Hydro's electrical extension fees policy is still in place, which BSSB rightly notes results in some "*… developers needing to pay significantly higher extension fees (i.e., the cost of new electrical service) for larger electrical services …,"* that *"… can be difficult to predict*;"
- BC Hydro's Tier 2 rates are still in place, which financially penalizes fully electrified buildings;
- There are staffing shortages at BC Hydro in regions such as the Capital Regional District that are delaying the delivery of housing; and
- Although, BC Hydro has indicated to BSSB that they will have the generating capacity to meet the electric vehicle charging and building electrification requirements for new and existing buildings, there are still issues with the capacity of local distribution. We are hearing from our

members that there have been several reports in the Fraser Valley, especially Langley, regarding brownouts and a shortage of electricity. This is exacerbated by the lack of integration between BC Hydro and local governments regarding long range area planning in which decisions are being made about where future growth will be located in communities.

UDI recommends that the Government delay the implementation of the proposed regulatory changes to the 2018 BCBC until here is an understood plan in place to address these hydro infrastructure issues.

These issues also need to be identified in the Best Practices Bulletin. Currently, the only one specifically addressed in the *Bulletin* is the extension fees, and the solutions offered to local governments would be difficult for them to implement. Revising the electrical utility extension fees in utility tariffs is beyond their purview. It is up to the Province, BC Hydro and the BCUC to resolve this problem, as are the issues regarding RNG (see above). It is doubtful that the recommendation to establish a local building electrification fund will be utilized by municipalities as no details are provided on how it would work, and the measure will likely be considered a downloading of Provincial costs and responsibilities onto local governments.

OHCS needs to recommend that local governments discuss with BC Hydro the state of electrical infrastructure in the growth areas of their communities to assess how much load is available before making decisions on GHG reduction targets (and electric vehicle charging standards). Similarly, local governments on go forward basis need to closely work with BC Hydro on Official Community Plans and Area Plans to ensure the utility understands what infrastructure is needed across the municipality and in certain growing areas. This suggestion could also be included in the *Best Practices Bulletin*. Municipalities should also be encouraged to enquire about potential BC Hydro staffing challenges that could slow reviews of new developments as well.

Notice

Despite the efforts of BSSB, we are also concerned about the lack of knowledge in the industry in municipal jurisdictions that have not adopted the *ESC* (especially outside the Lower Mainland and the Capital Regional District) regarding the proposed regulation, which was just released in late September, and its impact on projects. The new Regulation will take immediate effect for those submitting building permit applications. Many will likely be surprised by the new Provincial energy efficiency requirements. – especially those with Part 3 projects

Even in jurisdictions with the *ESC* in place, there is another concern for Part 3 commercial builders the proposed changes to the Provincial energy efficiency requirements, which will immediately increase for Step 2 for office and retail projects in December. Designers and contractors have been using the *ESC* for guidance, and now may have to make adjustments to projects. This is especially problematic for Part 3 builders who have been potentially designing their buildings for years. In addition to delaying the approvals for their projects, there will be added costs to resubmit their designs to achieve the higher energy efficiencies.

While we recognize that this problem occurs with every code cycle, it was not clear how the Province would mesh the *ESC* with Federal codes, and the window between the notice of the changes on September 23rd and the implementation of them in December is a much smaller than previous code cycles.

UDI recommends that implementation of the proposed regulatory changes to the 2018 BCBC be delayed allowing time for designers to adjust projects, and that the Province have an extensive communications outreach program to builders and their design/construction teams about the Provincial energy efficiency requirements.

Best Practices Bulletin/Presentations

More information and direction are needed in the *Best Practice Bulletin* and presentations to guide local governments and builders on other matters. From an industry perspective, ***stronger language is needed than "… local governments are advised …," and clarity is needed regarding what steps will be taken if municipalities do not follow the Bulletin or advice from the Province (and Energy Step Code Council)***. Issues have occurred with some local governments already proceeding now to the highest *ESC* step with zero carbon requirements.

Timing of Municipal Requirements & Instream Protection

The timing of when municipal requirements can be imposed on builders is not clear. It is stated in the *Bulletin* that "*… local governments are advised to notify industry that they will be enforcing them at least 6 months prior to requirements coming into effect*." However, in Episode 5, a longer notice period is endorsed: "*… a six to 12-month notice period for local industry is strongly recommended, depending on the stringency of the carbon requirements being considered*." ***UDI agrees with the longer notice period (12 months) – especially if local governments move to the highest ESC step as well as implementing stringent GHG emission reduction requirements***.[1]

Clarity is also needed regarding how these timeframes are coordinated with municipal consultations with industry. ***Ideally there are extensive discussions with industry prior to local governments determining (and providing notice regarding) what ESC and GHG reduction targets they want to mandate for builders – especially if local governments only need to provide six months notice.***

Although there is stronger language in Episode 5, UDI is also disappointed that BSSB states in the *Bulletin* that "*… a grace period for in-stream applications may be considered*," by local governments for the *Building Carbon Pollution Standard*. ***A stronger recommendation for in-stream protection is needed in the Bulletin – especially for local governments mandating the highest ESC step and/or stringent GHG reductions with only six months notice. Advice needs to also be provided on how long the grace period for in-stream protection should be.***

[1] There may be missing information from Episode 5 as well. It is noted that there will be more information on the timeframes "*… in a little bit*," but no further information is shared.

Relaxation-type Approach

As with the grace period, little positive direction is given to local governments to utilize the relaxation-type approach that many are using now, prior to the proposed Regulation. Under this approach, local governments have offered two options to builders:

- meeting a higher *ESC* step; or
- meeting a low step with a low carbon energy system.

UDI has strongly supported this approach, and we continue to be concerned that this option may not be utilized if local governments are given the ability to mandate any *ESC* step and GHG emission reduction target – without using incentives. The Province is not even encouraging the continued use of the relaxation-type approach. The issue is not addressed in the *Bulletin*. Although an example is provided in Episode 5, it is only noted that the option is still available, and "*Communities could require or incentivize lower carbon construction using the provincial approach*." **UDI recommends that the Province provide stronger encouragement in the *Best Practices Bulletin* for the continued use of the relaxation-type approach and other incentives.**[2]

Municipal Powers Beyond the Building Carbon Pollution Standard

It is stated in Episode 5 that the Province is providing flexibility with the *ESC* and the *Building Carbon Pollutions Standard* with the caveat that local governments "*… would have to use the provincial approach, as any existing technical building requirements that conflict with the BC Building Code will have no force or effect*." However, it is not clear why builders may lose the relaxation-type approach, noted above, when it is stated in Episode 4 that the door is open for local governments to impose other energy efficiency and GHG emissions requirements:

> "*The building carbon pollution standard does not regulate so-called "luxury loads", such as hot tubs, pools, heated driveways. Some local governments may wish to explore other ways of reducing the energy use of these luxury loads, including development permit authorities for energy conservation and GHG reduction*."

Some communities are exploring and even implementing policies to mandate/incent onsite renewable energy, heat pumps, fully electric buildings and embodied carbon reductions - in addition to the *ESC* and the *Building Carbon Pollution Standard*. It is not clear what the limits of municipal powers are regarding these issues. ***UDI recommends further advice be provided in the Best Practices Bulletin on the powers local governments have regarding energy conservation and GHG reductions. This should involve consultation with local governments, the building sector and other stakeholders.***

[2] The Community C scenario in Episode 5 could include more details on how a local government using the relaxation-type approach can continue it in an appropriate manner under the new Regulation.

The Need for more Provincial Supports

It is stated in bold in the Preface of the *Draft Building Carbon Pollution Standards for Part 3 buildings in British Columbia* (the *Metrics Report*) that:

> "*This document is meant to be an initial costing analysis by illustrating whether decarbonizing a hypothetical building is cost effective across climate zones in B.C. This document should not be considered an exhaustive costing study to meet the carbon pollution steps in your area. This analysis is not representative of all buildings in all situations. Local governments and the construction industry should conduct more detailed or specific costing analysis which builds on this initial analysis*."

UDI continues to recommend that the Province conduct the ongoing work to enhance this initial costing analysis[3] with further research and analyses as well as a establishing a monitoring program of what the real costs are when high ESC step and low carbon projects are built. Most local governments, even if the recommended regional approach is utilized (especially outside urban centres), will not have resources or the interest in conducting further analysis in a substantive way. There is also little to no direction in the *Best Practices Bulletin* for local governments to conduct further costing analyses for their areas. It should also not be up to the industry to conduct the analysis in place of regulators, and it is doubtful that estimates from industry reports would sway local decision making on future regulations.

The *Best Practices Bulletin* includes the need for municipalities to *"Seek to understand industry's readiness to implement these requirements. In particular, they should seek to understand the local challenges and opportunities to implement low-carbon building systems, especially heat pump space and water heating*." This is important as we have heard that in some jurisdictions the availability of heat pumps is limited. ***However, the Province, again, needs to take the lead with understanding and improving the availability of heat pumps in British Columbia*** especially since new buildings in B.C. will have to be net-zero carbon by 2030 under the *BCBC*, and one of the actions in the *CleanBC Roadmap* is to "*… focus on growing markets for, and speeding up the adoption of, technologies we know are ready for deployment, such as … heat pumps*."[4]

For similar reasons, the Province needs to take a leadership role in ensuring that we have enough trained mechanical contractors and energy advisors across the Province. The issue should also be flagged in the *Best Practices Bulletin* for local governments to review.

The OHCS should also consider working with the Energy Step Code Council and the Local Government Peer Network to develop a model for the thermal conditioning permit proposed in the *Best Practices Bulletin*. Ideally, this approach could be extended to other forms municipalities utilize for the *ESC* and the *Building Carbon Pollution Standard*. This would help achieve the Province's objective of having permitting processes that are "*… simple to follow and administer*," as well as coordinated across local governments and inspection entities.

---

[3] Further suggestions are noted in Additional Comments section below

[4] In the *2018 CleanBC Strategy* there was also a stated desire by 2030 to have 310,000 new residential heat pumps and 53 million m² of commercial floor space heated by heat pumps in the Province.

BSSB (with other Provincial entities) needs to be given the resources to conduct this work and provide supports to local governments, or delaying the implementation of the Building Carbon Pollution Standard Regulation should be considered. These issues are critical given how soon Provincial building carbon requirements will be implemented across the British Columbia.

Provincial and Broader Public Sector (BPS) Buildings

UDI has been a strong supporter of the Province and the Broader Public Sector (BPS) taking a leadership role with their new buildings. As we have stated in the past, this leadership was prevalent when the Leadership in Energy and Environmental Design (LEED) standard was introduced to Metro Vancouver, when the BPS incorporated it in their new buildings. This ensured that the design and construction became familiar with LEED. It also allowed UDI and other organizations to educate their members on LEED case studies to show the benefits of the standard, how to reduce costs and avoid pitfalls.
BC Housing is a leader for its projects with regard to the *ESC* and other green building initiatives, and the Province is also committed to doing more through its *CleanBC Roadmap to 2030*:

- By "*Requiring all new public sector buildings to align with our climate goals beginning with performance standards (2023) and moving to zero-carbon new buildings (2027)*;" and
- With low carbon building materials by "*… supporting the development and implementation of embodied carbon targets for public sector buildings by 2030*," before they are applied to other new buildings.

However, UDI is disappointed that the BPS is still not adequately addressed under the *ESC* regime, when it is being applied across British Columbia. If the Province and the BPS want to show leadership regarding climate change, they should be doing more with their new buildings than the private sector – not less. ***UDI recommends that similar standards for ESC be developed for new BPS buildings as soon as possible***.

Additional Comments

- UDI supports local governments working the District Energy (DE) providers to establish emissions factors for the DE systems because of the language in the *Best Practices Bulletin* that municipalities "*Not establish GHG targets for buildings that cannot reasonably be achieved by buildings compelled to connect to district energy systems*." However, the Province will soon be establishing its own GHG targets for new construction, and it is not clear how these targets will work with emissions factors established by local governments and DE providers. As municipalities such as Burnaby are now considering developing new DE systems, this issue needs to be addressed as soon as possible.

- It is not clear from the episodes and *Bulletin* about whether it is up to the builder or municipality to decide which type of airtightness test is to be used (e.g., Normalized Leakage Area, Normalized Air Leakage Rate or air changes per hour). UDI would prefer that decisions on airtightness testing methods be left to builders.

- In terms of communications, we're pleased that the Province is participating in virtual events such as the UDI webinar on November 2nd as well as holding its own Live Q/A on October 13th. However, these communication efforts need to also occur after the Regulation has been approved. We would also recommend that the Province develop a Q/A document to address questions as they arise at events or through discussions with stakeholders.

- As discussed at the September Energy Step Code Council meeting ***UDI recommends that the OHCS add new episodes to review the findings in the Part 3 and Part 9 technical analyses.*** Our members are also going to want to understand the strategies and solutions they can utilize to reduce costs and risks.

- Further work is needed to address some of the issues that were left unaddressed in the current Metrics *Report*, such as:

    - Heat pump domestic hot water heaters not being modelled in the study;
    - The costs of meeting the higher steps of the *ESC* need to be incorporated with the costs of meeting the steps of the *Building Carbon Pollution standard*, as many municipalities will do both.
    - Costing information for all climate zones (other than 4 and 7a) for office, retail and hotels need to be provided;
    - Costing information for the highest steps for retail and hotels for all climate zones need to be provided, as the GHG reduction targets are more stringent for office and retail, but the incremental costs in the *Report* seem higher;
    - Including more "*Highlights from analysis*" for the various building archetypes; and
    - Providing details on the ten lowest cost incremental capital cost options.[5]

- The *Metrics Report* and the *Best Practices Bulletin* also need to be updated when new costing information is available and key decisions are made, such as the BCUC decision on RNG.

- Although this is not an issue for UDI members, the proposed decarbonization path for the Fort Nelson area, which has a high carbon emitting electricity grid, is not clear. OHCS is proposing a prescriptive path to reduce GHG emissions in new buildings for the area that is supposed to be simple and practical. However, all that is noted under the prescriptive path for the various steps is builders are to decarbonize - space heating; space heating and hot water; or the full building. It is not stated how this would be done and whether there is a cost-effective way of accomplishing this. OHCS may want to consider exempting the Fort Nelson area from the GHG requirements in the proposed Regulation – and potentially future Provincial GHG requirements.

[5] In addition, the base costs need to be included for Step 4 on the High-rise residential table for Climate Zone 4 as well as modelling for electric vehicle charging, which is required by many of the local governments that will be utilizing the *Building Carbon Pollution Standard*. The latter is critical if it increases the Tier 2 rates of buildings and units.

Sounds good. I have read the UDI BN. Can we spend some time discussing in prep for the 11am meeting. I don't want UDI to feel like they are being shuffled since I need to be brought up to speed after they spend time discussing with Meghan. Hoping to look at the most efficient use of our time but need a bit more context.
Thanks
Bonnie

Subject: Budget for accessibility project consultant

Hi Bonnie,

Quick update on this issue – it looks like we have negotiated our way out of paying for publishing the next edition of the Codes out of our branch budget, which leaves us with roughly 40k in contracts budget this fiscal to support the accessibility project.

Will discuss in more detail tomorrow, but wanted to flag since I know you were looking at other possible funding options.

Hi folks,

We just had a meeting with UDI related to the proposed Step Code and Carbon Pollution Standards changes. Notes are below. General direction going forward:

1. No significant issues with the technical content of the regulation.
2. We should start thinking about a delayed effective date, probably 6 months after signing of the regulation. Bonnie seems open to the idea and it will give us time to clarify issues and help with an orderly transition for LGs. This isn't a final decision, just direction to consider a delayed effective date and pros/cons.
3. We need to coordinate with HPB on how our proposed changes may impact their work, and ideally build housing policy implications into our communications to local governments. I have asked HPB to set up monthly meetings with us to coordinate.
4. We need to advocate for EMLI staff and BC Hydro to meaningly engage with UDI on local infrastructure challenges. I have reached out to Hydro and EMLI, but flagging for all of you as an FYI at this point.
5. We will need to do more work on guidance documentation. A delayed effective date would buy us some time to develop and release the content early in the new year.
6. We have agreed to consider further impact analysis, but not before the regulation is finalized. We need to work with the ESCC to scope out the next phase of modelling once we've completed our work on the reg.

Also, with our recent changes to the management team, I have asked Nicole to lead work on the Existing Buildings Renewal Strategy (as well as several other areas of work), but I will be stepping in as the management team lead for the proposed changes to the ESC and carbon pollution standards through to implementation (or until we have Tiffany's position backfilled). Juni and Andy will continue to provide support/oversight for the development of content for the code and ensuring due diligence on that work.

Not sure if I missed anyone working on this project. Please forward to anyone else who should be looped in.

Best,
Zachary D. May, MBA

Subject: Notes - Step Code Meeting with UDI October 28, 2022

Attendees:
Mike Drummond, VP Corporate Affairs
Jeff Fisher, VP & Senior Policy Advisor
Cassandra Smith, Director Policy and Public Affairs

Topic:
Issues to raise related to proposed Building Code changes related to energy efficiency and carbon pollution

- UDI appreciates us speaking to their members on November 2
- Concerns are not with the direction of the regulation, but with potential conflicts with Provincial goals on housing delivery with local governments
- LG consultations typically set a target then consult on that, missing the opportunity for meaningful consultation
- The only limit on LGs will be the anticipated housing targets legislation
- LG sustainability staff likely don't understand the link between housing and climate action
- **This is key issue #1** – alignment between housing policies and building energy policies by local governments
- **Issue #2** is RNG
- Contracts with Stratas aren't binding, Fortis has applied to the BCUC
- There is confusion on how this would work with applications coming online now, or after
- Seeking clarity on BCUC impacts and LG approaches to this so developers can anticipate these changes
- ZM: RNG does not fit into the regulatory system today, at least as far as the code.
- ZM: We can't pre-decide what Prov might do if/when BCUC makes a decision
- **Issue #3** – BC Hydro issues are augmented by the move to electrification and EV charging
- Staffing issues at BC Hydro, cost issues for upgrades of infrastructure, lack of local capacity on the system (Langley)
- Leading developers have to pay for all future capacity with no way to recover costs
- There hasn't been action from BC Hydro on this
- BC Hydro's long term planning seems at odds with changes in buildings and transportation
- BC Hydro issues are causing some delays in occupancy
- ZM: OHCS will advocate regarding this issue with our colleagues at EMLI and BC Hydro
- BR: very interested seeing that we consider impacts on getting occupancy for housing with these technical infrastructure issues on the electricity grid
- UDI is going to be raising these issues to Ministers and BC Hydro's board
- Seems that people involved from EMLI are supportive of electrification but not involved in the operations of BC Hydro
- **Issue #4** – areas without ESC yet and this will be an issue for development in those locations
- December enactment will cause an issue for many in-stream projects
- ZM: we are still considering what the effective date should be and appreciate the feedback.
- ZM: We will follow up with any information regarding who UDI should be speaking with at EMLI
- ZM: many of the other issues identified can likely be addressed through improved clarity in guidance documents for local governments
- ZM: we are happy to scope out additional costing analysis through the Energy Step Code Council in the coming months.

Subject: Building code implications

Hi All
Please ensure that building code/step code etc changes are contemplated in the process of setting targets along with any other new pressures on local gov'ts as a result of gov't regulations/processes etc are considered. Zac should go over what BSSB is working on and some of the concerns for local governments raised by UDI that may impact their ability to deliver on targets.

Hi Zachary,

I hope you are well.

I see that you are doing a webinar for UDI on the BC Building Code Proposal on November 2nd. I was wondering if you might be willing to do a session on this for ICBA members? ICBA would be happy to host and look after everything, you'd just need to log in and present.
I'd love to connect with you to talk more about if this would be possible. Would you be open to a video call in the next week or so?

Thanks,
Ally Bodnar

Sent: November 1, 2022 2:20:18 PM PDT

Scott,

Can you strike the highlighted text from the presentation? Ok to say this is what the proposal is right now verbally, but I would like to create some ability for us to make performance the default and prescriptive be the opt-in.

- Prescriptive compliance path comparable to performance 'Step 3', Part 9
  - Builders have the choice between prescriptive and performance compliance

Best,
Zachary D. May, MBA
Executive Director

Hey Zac,

I made a number of changes to the PPT for tomorrow's presentation. Link below in previous email.
I have marked the slides with your initials in the comment pane for those slides that are to be addressed by you. (slides 2 and 10) I will handle all others.
We have 11 slides – so about 2.5 minutes per if we want to stay within 25 minutes.
For slide 10 – I have highlighted in the comment pane the common questions that have been asked by UDI. You can use these to form your talking points.

I let Verna know that we would have these to her by end of day; however, given the time pinch, I am sure we will be sharing our screen during the presentation and could just provide after the meeting instead.

Have a look and let me know your thoughts.

Scott

Subject: UDI Presentation Slides

Hi Zac,

As discussed, slides for the upcoming UDI presentation can be found here:
G:\Building_Safety\1 ADMIN\324 SPEECHES & PRESENTATIONS\-40 Staff\2022\10-18 UDI - Proposed Code Changes

This is just a cut and past of the slides used for the Q&A a few weeks back.
Right now, slides are light regarding implementation – I will populate a few slides based on UDI comments so far.

Structure of the presentation
General intro

- Roadmap to 230
- Harmonization etc
- Public review process

Proposed code changes

-EE, GHGs with focus on Part 3
-slide on GHG summary sheets and Metrics report
-highlight of typical systems and associated costs for meeting different levels of GHGs

Implementation

- A couple slides on comments received thus far
  - BCHydro
  - LG authorities
  - Step up step down for EE and GHGs
  - Supports ie best practice guides etc.

Good morning panel,

Jeff and our team has put together some draft questions for tomorrow's session. Please see attached for your reference.

Zach & Scott - if there are any additional questions that you would like to address but do not have an opportunity to do so in your presentation, please forward them to Dave and I to incorporate in the notes for tomorrow's session.

Dave – please feel free to revise/adjust the questions.

Kind regards,
Verna

Subject: RE: UDI Webinar - Pre-Meeting Notes & Next Steps

Hi Verna,

We will try our best to have a copy of the updated presentation to you in advance and should have something to you by tomorrow end of day.
Thanks for collating the sample questions. We look forward to seeing these in advance of the presentation.

Cheers,

Scott Williams P.Eng, CPHD, LEED AP| Senior Codes Engineer

Good morning,

I would like to follow-up and see if you would be able to provide a copy of your updated presentation in advance of our event on Wednesday.

I will be preparing some sample questions with Jeff this afternoon and will share that with the group as well.

Thank you!

Verna

Subject: UDI Webinar - Pre-Meeting Notes & Next Steps

Hi everyone,

It was great seeing you all this afternoon!

I have sent through the calendar invites with a panelist link for Wednesday, November 2 from 9:15-10:30am for this webinar.

Attached is a brief overview of our conversation from this afternoon. We will aim to open the event registration this week. Please see this link here for the draft event page: https://udi.memberzone.com/events/details/udi-webinar-bc-building-code-proposals-what-you-need-to-know-1858?range=160 **If you have any feedback or would like to make any revisions to this page/information, please let me know before noon on October 18.**

Scott and Zach, could you please provide me with an updated headshot and short bio?

As mentioned during our meeting, I will compile some potential questions in advance of the event – if you have any questions you would like to be included in this list, please send them to me by Friday, October 28.

Zach/Scott – would you be able to send me your updated presentation by Friday, October 28?

Thank you all!

Verna

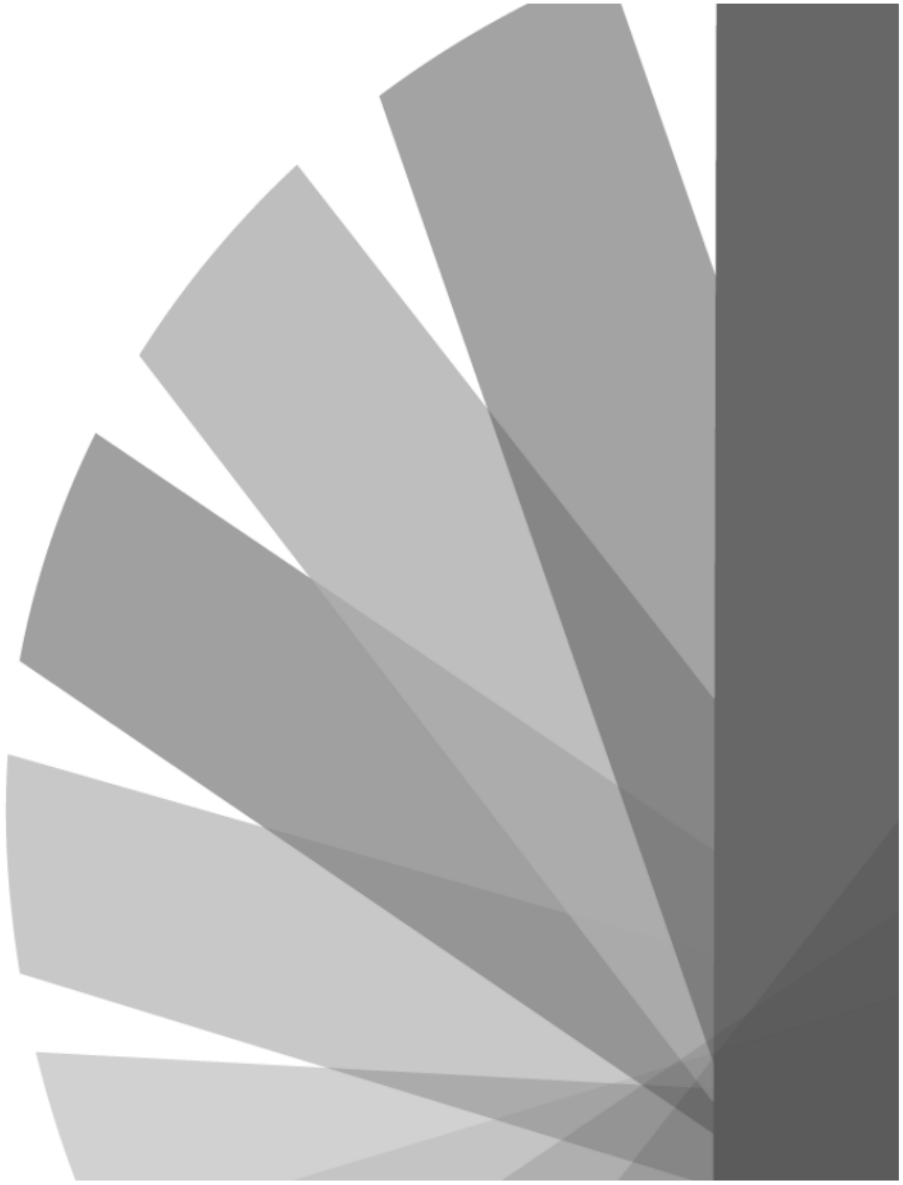
Cleaner, More Energy-Efficient New Construction

Overview: BC Building Code proposals for public review closing November 4

November 2022

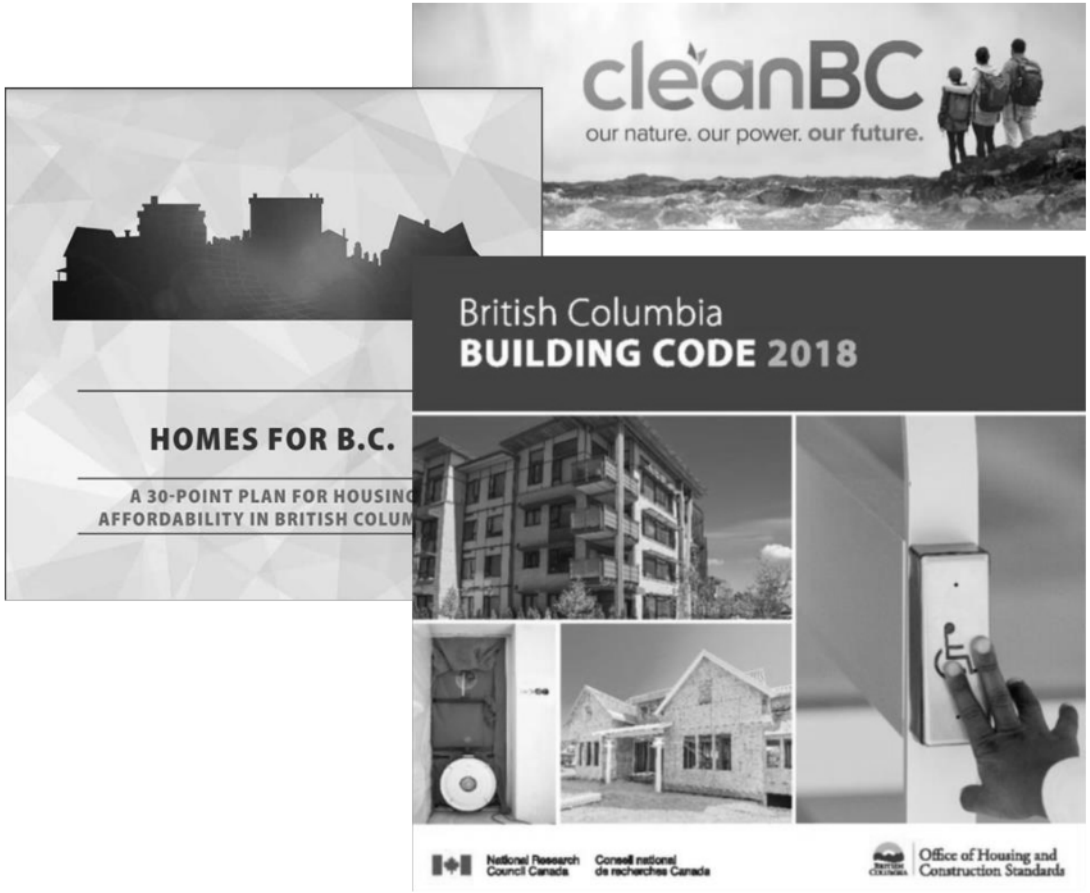
Building and Safety Standards Branch
Province of British Columbia



More Information & Contacts

National & Provincial Policy Collaboration

- CleanBC
- Harmonization with National Codes
- Homes for BC: A 30-Point Plan for Housing Affordability in British Columbia
- Pan Canadian Framework on Clean Growth and Climate Change



Two proposed building code changes

Public Review Closing November 4

1. 20%-better energy efficiency required for most new buildings

- Similar to:
  - Step 3 for Part 9 (small) buildings
  - Step 2 for Part 3 (large) buildings
- 2032 goal: Net-zero energy ready new construction in B.C.

2. Building Carbon Pollution Standard for local governments

- Implementation like the BC Energy Step Code
  - Local governments may opt in at first
  - Measure Only, Medium, Low, and Zero Carbon-Ready options for buildings
- 2030 goal: Zero-carbon new construction in B.C.

Overview: 20%-Better Energy Efficiency

Added:

- Prescriptive compliance path comparable to performance ‘Step 3’, Part 9
- More airtightness testing options for Part 9
- Introducing *some* National Building Code provisions
- New energy performance improvement compliance calculations (*Based on 2020 National Building Code*)
- **Small changes to metrics for office and commercial occupancies in Part 10**

Still under development:

- Adjusted requirements for log homes and small homes in cold climates

Overview: Building Carbon Pollution Standard

Structured and implemented like the Energy Step Code

- Four levels of increasing stringency.
- Apply to all climate zones.
- Local governments may choose to reference.
- Limits greenhouse gasses *from operation* of buildings.

Table 9.37.1.3.
Greenhouse Gas Emissions
Forming part of Sentence 9.37.1.3.(1)

GHG Emission Level	GHG Emission Compliance Options					
	Maximum GHG Emissions by House, Expressed in kg CO_{2e} per House	or	Maximum GHG Emissions by House[1]		or	Reduction of GHG Emissions by Energy Source of Building Systems
			Maximum GHGi of the House, Expressed in $kgCO_{2e}/m^2$/year	Maximum GHG Emissions by House, Expressed in $kgCO_{2e}$ per House		
Measure	Measure Only		Measure Only			N/A
medium	1050		6.0	2400		Decarbonize heating system energy source
low	440		2.5	800		Decarbonize heating and service water heating system energy source
zero carbon ready	265		1.5	500		Decarbonize all *building* systems energy sources

Table 10.3.1.3.
Greenhouse Gas Emissions
Forming Part of Sentence 10.3.1.3.(1)

GHG Emission Level	Maximum GHGi of the *Building*, Expressed in $kgCO_{2e}/m^2$/year			
	Residential Major Occupancy		*Business and Personal Service* and *Mercantile Major Occupancies*	
	Hotels and Motels	Other *Residential Occupancies*	Offices	Other *Business and Personal Service* and *Mercantile Occupancies*
Measure	Measure Only			
medium	9.0	7.0	5.0	6.0
low	4.0	3.0	3.0	3.0
zero carbon ready	2.0	1.8	1.5	2.0

Overview: Costing Methodology

Incremental Capital Costs (ICC)

- Baseline: Step 3 for Part 9; Step 2 for Part 3 with carbon intensive equipment
- ICC looks at changes in equipment over and above baseline to less carbon intensive - may not have significant impact on the ICC

Operational Costs

- Calculations included carbon tax applied over a 20-year period

Quadplex data tables: Climate Zone 6 (Cranbrook)

Zoning	Suites exterior, corridor/core interior. Several suites along each façade are combined, which allows variations in suite size within the model (each façade modeled as separate zone to account for variations in load). Zone multipliers used for intermediate floors.		

Implementation Supports in Progress

GHG Modelling Ruleset & Compliance Tools

- Will go beyond CoV Modelling Guidelines for Part 9
  - Modelling GHGs for backup (heat) systems
  - Ancillary uses
  - Training and Manuals for Compliance Tools

Best Practices Bulletin Refinements and Handbook Development

- Building on draft best practice guidance published to support review
- More content based on local government pilots

Building Official Guide

- Working in collaboration with BOABC

Issues Raised

- **Local Government**
  - Consideration of Renewable Fuels
  - Enforcement of changes to BCBC
    - Notice period
    - Industry consultation
  - ‘Step Down’ approach
    - Relaxation of energy efficiency requirement when using low-carbon systems
- **BC Hydro**
  - Capacity/distribution
  - Extension fees
- **Province**
  - Additional costing analysis and further research

More Information & Contacts

More information about the proposed code changes and interpretive supports are available online:

gov.bc.ca/BuildingCodes

Feedback can be provided through our online survey. We recommend all responses follow this format.

For assistance, or if you are unable to send comments using the survey, you may copy the questions into an email, write your answers, and send to

BSSB.Public.Review@gov.bc.ca

Questions?

Thank you!

Question	Answer
Who is training trades to implement step 3 and 4 to be more cost efficent? Is there a program?	live answered
Can you please try and translate some of the jargon for those of us who don't know waht NLR, NLA, etc mean?	live answered
Is the carbon pollution standard a separate standalone standard or is it a series of changes to Parts 9 and 10 of the BCBC?	live answered
Where can we find these Costing Methodology tables?	I have posted the link to the metrics report in the "chat"
you indicated that local governments will be able to determine whether RNG can be used to achieve the GHG emission targets	live answered
Is there still variation in the TEDI/TEUI/GHG targets for different building types? ex. Recreation centres?	live answered
what about municipalities that don't have BC Hydro infrastructure and proper load for this level of projects? Is there a plan for BC Hydro extension of its systems? Who is paying for it?	live answered
My clients have asked what happens in fossil-fuel-free buildings when there's an extended power failure. What should I tell them.	
Apart from energy efficiency are we going to see embodied carbon requirements in the code?	live answered
Any plan to change the name of the Energy Step Code to just the Step Code? Given that it's now both energy and GHGs	live answered
Can you confirm if the proposed "ghg steps" are similar to the energy step code, where municipal governments decide if their buildings need to comply to "medium" or "low" etc.	live answered
are there going to be incentives to encourage early adoption to the 2032 targets?	
What is the timeline for release of standards for existing buildings?	CleanBC Roadmap 2030 commits to a code for alterations to existing buildings by 2024.
Often, we speak about 'housing affordability'. How do the code updates and implementions reflect upon that?	live answered
Has there been/will there be an energy step code study on the comprehensive cost of delivering to the high energy targets for affordable housing projects? Considering approval timelines, supply chain, high capital costs etc.	BC Housing has done considerable research on this topic. Recommend reviewing the reserch on their website.
Why can't there be one metric measured GHG/m2?	The Province has two separate goals: 1. reduce energy use and 2. reduce carbon emissions. We need separate requirements to ensure both goals are met.

Hello Zach,

Thank you again for presenting with Scott Williams at our UDI webinar last week, our members appreciated the opportunity to learn about the upcoming regulatory changes and ask questions. As discussed with Jeff, please find attached our letter providing comments and recommendations on the upcoming energy efficiency and GHG proposals for the 2018 BC Building Code.

If you have any questions or would like to discuss any of our feedback further, please don't hesitate to reach out.

Thanks and we look forward to continuing to work with you and your team,

Cassandra

Victoria BC V8W 9T2

Dear Mr. May:

Re: UDI Response to Public Review of Energy Efficiency & Greenhouse Gas (GHG) Emissions Proposals for the 2018 B.C. Building Code (BCBC)

The Urban Development Institute (UDI) would like to thank you and Scott Williams for presenting the proposed changes to Provincial energy efficiency requirements, the amendments to *Energy Step Code* (*ESC*), and the Regulation that would empower local governments to establish GHG emission restrictions for new buildings, to our membership at our November 2, 2022 Webinar. Our members found your presentation very informative and continue to be engaged on this topic.

In addition to the webinar, we have reviewed the materials provided by BSSB on the proposed Regulation. UDI is concerned about the December timeframe for the implementation of the changes and believe that there are some issues that still need to be addressed in the proposed *Provincial policy bulletin for cleaner, more energy efficient new construction* (*Best Practices Bulletin*) and other supporting documents for local governments. We recommend that the implementation of the regulatory changes be paused until the issues can be resolved.

Need for Delay of the Implementation of the Regulation

These issues include housing delivery expectations, a critical B.C. Utilities Commission (BCUC) decision on Renewable Natural Gas (RNG) and several BC Hydro distribution issues, which are barriers to building electrification. More notice and communication regarding the changes would also support more effective industry adoption.

Provincial Housing Expectations for Local Governments

In recent months, the Province, in particular the Premier-designate, has made it clear that all levels of government, including municipalities will have to step-up to deliver more homes for British Columbians. If the OHCS Regulation is approved in December, local governments will be proceeding with consultations and making decisions on potentially significant changes to their energy efficiency and GHG emission reduction policies. If they are excessive, the cost impacts could undermine their ability to increase housing delivery in their communities. Fully understanding the expectations from the Province would be critical information for local governments as they establish the *ESC* step and

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

GHG reduction targets, and many would likely proceed more cautiously if these requirements were understood.

UDI recommends that the Government wait until details about any future housing delivery expectations or requirements are clearly defined before proceeding with implementing the proposed regulatory changes to the 2018 BCBC. The Best Practices Bulletin needs to reference these objectives and how they might impact the new GHG emission powers being offered to local governments. This issue is particularly important given that under the *Best Practices Bulletin* there will be no limits on local governments in establishing *ESC* requirements and GHG reduction requirements (i.e., they can mandate the most stringent steps for both without providing any incentives).

BC Hydro Issues

There are several ongoing issues with BC Hydro that would be further exacerbated by new building electrification policies (and electric vehicle charging requirements, which are likely already mandated by local governments who would adopt the *Building Carbon Pollution Standard*), such as:

- BC Hydro's electrical extension fee policy is still in place, which BSSB rightly notes results in some "*… developers needing to pay significantly higher extension fees (i.e., the cost of new electrical service) for larger electrical services …,"* that *"… can be difficult to predict*;"
- BC Hydro's Tier 2 rate structure is still in place, which financially penalizes electrified buildings and electric vehicle charging;
- There are staffing shortages at BC Hydro in several regions such as the Capital Regional District that are delaying the delivery of housing; and
- Although, BC Hydro has indicated to BSSB that they will have the generating capacity to meet the electric vehicle charging and building electrification requirements for new and existing buildings, there are still issues with the capacity of local distribution. We are hearing from our members that there have been several reports in the Fraser Valley of electricity shortages. This is exacerbated by the lack of integration between BC Hydro and local governments regarding long range area planning that determines where future growth will be located in communities.

While we are pleased that BSSB is also advocating to BC Hydro and the Ministry of Energy, Mines and Low Carbon Innovation to quickly address these issues, UDI has been raising them for several years. ***We recommend that the Government delay the implementation of the proposed regulatory changes to the 2018 BCBC until here is an understood plan in place to address these hydro delivery issues.***

These issues also need to be identified in the Best Practices Bulletin. Currently, the only one specifically addressed in the *Bulletin* are the extension fees, and the solutions offered to local governments would be difficult for them to implement. Revising the electrical utility extension fees in the utility tariffs is beyond their purview. It is up to the Province, BC Hydro and the BCUC to resolve this problem, as are the issues regarding RNG. It is doubtful that the recommendation to establish a local building electrification fund will be utilized by municipalities as no details are provided on how it

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

would work, and the measure may be considered a downloading of Provincial costs and responsibilities onto local governments.

OHCS needs to recommend that local governments discuss with BC Hydro the state of electrical infrastructure in the growth areas of their communities to assess how much capacity is available before making decisions on GHG reduction targets (and electric vehicle charging standards). Similarly, local governments on a go-forward basis need to closely work with BC Hydro on Official Community Plans and Area Plans to ensure the utility understands what infrastructure is needed across the municipality and in certain growing areas. This suggestion could also be included in the *Best Practices Bulletin*. Municipalities should be aware of potential BC Hydro staffing challenges that could slow reviews of new developments as well.

Renewable Natural Gas

UDI appreciates the clarification that local governments, at this time, have the ability to decide whether or not RNG can be used to meet their GHG reduction steps. We understand the Province's rationale for this approach because a key BCUC hearing on RNG has not concluded. This hearing is expected to determine if strata corporations can be bound by RNG contracts signed by developers and provide clarity to local governments regarding how RNG usage in buildings can be calculated and monitored.

However, this means in many local governments the only option to achieve the GHG emission targets would be electrification. Given the concerns noted above regarding BC Hydro, ***UDI recommends that the Government wait until the BCUC RNG hearing has concluded and the Commission has made decisions on whether strata councils can be bound by RNG contracts and how RNG usage can be calculated and monitored before proceeding with the proposed regulatory changes to the 2018 BCBC. If these issues are resolved by the Commission, UDI also recommends that the use of RNG be embedded in the Regulation, as an option that builders can utilize for their projects. This is especially important as the Province moves forward with its own GHG emission requirements. In addition, there will have to be updates to the Best Practices Bulletin and the Metrics Report.***

Notice

Despite the efforts of BSSB (including the presentation at the UDI webinar), we are concerned about the lack of knowledge regarding the proposed Regulation and its potential impact amongst builders. In particular, those who are operating in municipal jurisdictions that have not adopted the *ESC,* especially outside the Lower Mainland and the Capital Regional District.

The details of the Regulation were only released in late September. If it takes immediate effect in December, many proponents submitting building permit applications soon afterward will likely be surprised by the new Provincial energy efficiency requirements.

Even in jurisdictions with the *ESC* in place, there is another concern for Part 3 commercial builders - the proposed changes to the Provincial energy efficiency requirements, which are more stringent for Step 2 for office and retail projects. Architects, engineers and contractors have been using the *ESC* for guidance, and would have to make immediate adjustments to projects, if the new requirements

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

came into force in December. This would be especially problematic for Part 3 builders who have been potentially designing their buildings for months – even years. In addition to delaying the approvals for their projects, there will be added costs to resubmit their designs to achieve the higher energy efficiencies.

While we recognize that this problem occurs with every code cycle, it was not clear how the Province would integrate the *ESC* with national codes, and the window between the notice of the changes on September 23rd and the implementation of them in December is a much smaller than previous code cycles.

UDI is pleased that you and BSSB staff have an understanding and appreciation of this issue. ***We recommend the implementation of the proposed regulatory changes to the 2018 BCBC be delayed allowing time for designers to adjust projects, and that the Province have an extensive communications outreach program to builders and their design/construction teams about the Provincial energy efficiency requirements.***

Best Practices Bulletin/Presentations

More information and direction are needed in the *Best Practices Bulletin* and presentations to guide local governments and builders on other matters. From an industry perspective, ***stronger language is needed than "… local governments are advised …," and clarity provided on the steps that will be taken if municipalities do not follow the Bulletin or advice from the Province (and Energy Step Code Council)***. Issues have occurred with some local governments already proceeding now to the highest *ESC* step with Zero-Carbon Ready requirements.

Timing of Municipal Requirements & Instream Protection

The timing of when municipal requirements can be imposed on builders is not clear. It is stated in the *Bulletin* that "… *local governments are advised to notify industry that they will be enforcing them at least 6 months prior to requirements coming into effect*." However, in Episode 5, a longer notice period is endorsed: "… *a six to 12-month notice period for local industry is strongly recommended, depending on the stringency of the carbon requirements being considered.*" ***UDI agrees with the longer notice period (12 months) – especially if local governments move to the highest ESC step as well as implementing stringent GHG emission reduction requirements***.[1]

Clarity is also needed regarding how these timeframes are coordinated with municipally-led industry consultations. ***Ideally there are extensive discussions with industry prior to local governments determining (and providing notice regarding) what ESC and GHG reduction targets they want to mandate for builders – especially if local governments only need to provide six months' notice.***

Although there is stronger language in Episode 5, UDI is disappointed that BSSB states in the *Bulletin* that "… *a grace period for in-stream applications may be considered*," by local governments

[1] There may be missing information from Episode 5 as well. It is noted that there will be more information on the timeframes "… *in a little bit*," but no further information is shared.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

for the *Building Carbon Pollution Standard*. ***A stronger recommendation for in-stream protection is needed in the Bulletin – especially for local governments mandating the highest ESC step and/or stringent GHG reductions with only six months' notice. Advice needs to also be provided on how long the grace period for in-stream protection should be.***

Relaxation-type Approach

As with the grace period, little positive direction is given to local governments to utilize the relaxation-type approach that many are using now. Under this approach, local governments have offered two options to builders:

- meeting a higher *ESC* step; or
- meeting a lower step with a low carbon energy system.

UDI has strongly supported this approach, and we continue to be concerned that this option may not be utilized if local governments are given the ability to mandate any *ESC* step and GHG emission reduction target – without using incentives.

The issue is not addressed in the *Bulletin.* Although an example is provided in Episode 5, it is only noted that the option is still available, and "*Communities could require or incentivize lower carbon construction using the provincial approach*." **UDI recommends that the Province provide stronger encouragement in the *Best Practices Bulletin* for the continued use of the relaxation-type approach and other incentives.[2]**

Municipal Powers Beyond the Building Carbon Pollution Standard

It is stated in Episode 5 that the Province is providing flexibility with the *ESC* and the *Building Carbon Pollutions Standard* with the caveat that local governments "*… would have to use the provincial approach, as any existing technical building requirements that conflict with the BC Building Code will have no force or effect*." However, it is not clear why builders may lose the relaxation-type approach, noted above, when it is stated in Episode 4 that the door is open for local governments to impose other energy efficiency and GHG emissions requirements:

> "*The building carbon pollution standard does not regulate so-called "luxury loads", such as hot tubs, pools, heated driveways. Some local governments may wish to explore other ways of reducing the energy use of these luxury loads, including development permit authorities for energy conservation and GHG reduction*."

Some communities are exploring and even implementing policies to mandate/incent onsite renewable energy, heat pumps, fully electric buildings and embodied carbon reductions - in addition to the *ESC* and the *Building Carbon Pollution Standard.* It is not clear what the limits of municipal powers are regarding these issues. ***UDI recommends further advice be provided in the Best Practices Bulletin on the powers local governments have regarding energy conservation and***

[2] The Community C scenario in Episode 5 could include more details on how a local government using the relaxation-type approach can continue it in an appropriate manner under the new Regulation.

www.udi.bc.ca

GHG reductions. This should involve consultation with local governments, the building sector and other stakeholders.

It may also be necessary to amend the *Building Act*. UDI worked-on and endorsed the *ESC* because it was supposed to limit the number of new and differing municipal green building policies our members were facing that tested the limits of industry capacity and undermined our ability to deliver new housing as well as commercial and industrial projects.

The Need for more Provincial Supports

It is stated in bold in the Preface of the *Draft Building Carbon Pollution Standards for Part 3 buildings in British Columbia* (the *Metrics Report*) that:

> *"This document is meant to be an initial costing analysis by illustrating whether decarbonizing a hypothetical building is cost effective across climate zones in B.C. This document should not be considered an exhaustive costing study to meet the carbon pollution steps in your area. This analysis is not representative of all buildings in all situations. Local governments and the construction industry should conduct more detailed or specific costing analysis which builds on this initial analysis."*

UDI continues to recommend that the Province conduct the ongoing work to enhance this initial costing analysis[3] with further research and analyses as well as establishing a monitoring program of what the real costs are when high ESC step and low carbon projects are built.

We are pleased that resources are available to update the *Metrics Report*, as most local governments, even if the recommended regional approach is utilized, will not have resources or the interest in conducting further analysis in a substantive way. There is also little to no direction in the *Best Practices Bulletin* for local governments to conduct further costing analyses for their areas. It should not be up to the industry to conduct the analysis in place of regulators, and it is doubtful that estimates from industry reports would sway local decision making on future regulations.

The *Best Practices Bulletin* includes recommendations for municipalities to *"Seek to understand industry's readiness to implement these requirements. In particular, they should seek to understand the local challenges and opportunities to implement low-carbon building systems, especially heat pump space and water heating."* This is important as we have heard that in some jurisdictions the availability of heat pumps is limited.

However, we encourage the Province to take the lead with understanding and improving the availability of heat pumps in British Columbia especially since new buildings in B.C. will have to be zero carbon ready by 2030 under the *BCBC*, and one of the actions in the *CleanBC Roadmap* is to "*… focus on growing markets for, and speeding up the adoption of, technologies we know are ready for deployment, such as … heat pumps.*"[4]

---

[3] Further suggestions are noted in Additional Comments section below.

[4] In the *2018 CleanBC Strategy* there was also a stated desire by 2030 to have 310,000 new residential heat pumps and 53 million m² of commercial floor space heated by heat pumps in the Province.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

For similar reasons, we encourage the Province to take a leadership role in ensuring that we have enough trained mechanical contractors and energy advisors in B.C. The issue should also be flagged in the *Best Practices Bulletin* for local governments to review. More resources for the training of builders and trades are needed – especially since the industry is already facing labour shortages.

The OHCS should also consider working with the Energy Step Code Council and the Local Government Peer Network to develop a model for the thermal conditioning permit proposed in the *Best Practices Bulletin*. Ideally, this approach could be extended to other forms municipalities utilize for the *ESC* and the *Building Carbon Pollution Standard*. This would help achieve the Province's objective of having permitting processes that are "… *simple to follow and administer*," as well as coordinated across local governments and inspection entities.

We support BSSB (with other Provincial entities) being given the resources to conduct this work and provide supports to local governments, or further delaying the implementation of the Building Carbon Pollution Standard Regulation should be considered. These issues are critical given how soon Provincial building carbon requirements will be implemented across the British Columbia.

Provincial and Broader Public Sector (BPS) Buildings

UDI has been a strong supporter of the Province and the Broader Public Sector (BPS) taking a leadership role with their new buildings. As we have stated in the past, this leadership was prevalent when the Leadership in Energy and Environmental Design (LEED) standard was introduced to Metro Vancouver, when the BPS incorporated it in their new buildings. This ensured that the design and construction sectors became familiar with LEED. It also allowed UDI and other organizations to educate their members on LEED case studies to show the benefits of the standard, how to reduce costs and avoid pitfalls.

BC Housing is a leader for its projects with regard to the *ESC* and other green building initiatives, and the Province is also committed to doing more through its *CleanBC Roadmap to 2030*:

- By "*Requiring all new public sector buildings to align with our climate goals beginning with performance standards (2023) and moving to zero-carbon new buildings (2027)*;" and
- With low carbon building materials by "… *supporting the development and implementation of embodied carbon targets for public sector buildings by 2030*," before they are applied to other new buildings.

However, UDI is disappointed that the BPS is still not adequately addressed under the *ESC* regime, when it is being applied across British Columbia. The Province and BPS could adopt a leadership role regarding energy efficiency, in advance of wider private sector adoption. ***UDI recommends that similar standards for ESC be developed for new BPS buildings as soon as possible***.

Additional Comments

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

- UDI supports local governments working the District Energy (DE) providers to establish emissions factors for the DE systems because of the language in the *Best Practices Bulletin* that municipalities "*Not establish GHG targets for buildings that cannot reasonably be achieved by buildings compelled to connect to district energy systems.*" However, the Province will soon be establishing its own GHG targets for new construction, and it is not clear how these targets will work with emissions factors established by local governments and DE providers. As municipalities such as Burnaby are now considering developing new DE systems, this issue needs to be addressed as soon as possible.

- It is not clear from the episodes and *Bulletin* about whether it is up to the builder or municipality to decide which type of airtightness test is to be used (e.g., Normalized Leakage Area, Normalized Air Leakage Rate or air changes per hour). UDI would prefer that decisions on airtightness testing methods be left to builders.

- In terms of communications, we're pleased that the Province is participating in virtual events such as the *UDI Webinar* and the October 13th *Live Q/A*. However, these communication efforts need to also occur after the Regulation has been approved. We would also recommend that the Province develop a Q/A document to address questions as they arise at events or through discussions with stakeholders.

- As discussed at the September Energy Step Code Council meeting ***UDI recommends that the OHCS add new episodes to review the findings in the Part 3 and Part 9 technical analyses.*** Our members are also going to want to understand the strategies and solutions they can utilize to reduce costs and risks.

- Further work is needed to address some of the issues that were left unaddressed in the current *Metrics Report*, such as:

    - Heat pump domestic hot water heaters not being modelled in the study;
    - The costs of meeting the higher steps of the *ESC* need to be incorporated with the costs of meeting the steps of the *Building Carbon Pollution standard*, as many municipalities will do both;
    - Costing information for all climate zones (not just 4 and 7a) for office, retail and hotels need to be provided;
    - Costing information for the highest steps for retail and hotels for all climate zones need to be provided, as the GHG reduction targets are more stringent for office and retail, but the incremental costs in the *Report* seem higher;
    - Including more "*Highlights from analysis*" for the various building archetypes; and
    - Providing details on the ten lowest cost incremental capital cost options;[5]

[5] In addition, the base costs need to be included for Step 4 on the High-rise residential table for Climate Zone 4 as well as modelling for electric vehicle charging, which is required by many of the local governments that will be utilizing the *Building Carbon Pollution Standard*. The latter is critical if it increases the Tier 2 rates of buildings and units.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

- The *Metrics Report* and the *Best Practices Bulletin* also need to be updated when new costing information is available and key decisions are made, such as the BCUC decision on RNG; and

- Although this is not an issue for UDI members, the proposed decarbonization path for the Fort Nelson area, which has a high carbon emitting electricity grid, is not clear. OHCS is proposing a prescriptive path to reduce GHG emissions in new buildings for the area that is supposed to be simple and practical. However, all that is noted under the prescriptive path for the various steps is builders are to decarbonize - space heating; space heating and hot water; or the full building. It is not stated how this would be done and whether there is a cost-effective way of accomplishing this. OHCS may want to consider exempting the Fort Nelson area from the GHG requirements in the proposed Regulation – and potentially future Provincial GHG requirements.

Again, thank you for speaking to our membership at the November 2nd UDI webinar regarding these important energy efficiency and GHG reduction proposals. UDI does not oppose the Regulation being approved in December. However, we recommend its implementation be delayed until the issues we have noted above are addressed. UDI believes that this will ensure the successful implementation of these policies in a way that will not undermine the ability of our members to build their projects. If you have any questions, please do not hesitate to contact us. We look forward to working with you and BSSB on these and other initiatives.

Yours sincerely,

Jeffrey E. Fisher

Good afternoon Bonnie,

Thank you very much for meeting with our team and Zachary May last month on the Energy Efficiency and GHG Emissions Proposals. Further to that discussion, we would like to share UDI's response to the BSSB consultation that was submitted last week along with a covering note summarizing some of the concerns raised during our October 28th meeting.

If you have any questions regarding the submission, please don't hesitate to reach out.

Thanks,
Cassandra

Bonnie Ruscheinski
Acting Assistant Deputy Minister
Attorney General and Minister responsible for Housing
PO Box 9844 Stn Prov Govt
Victoria BC V8W 9T2

Dear Ms. Ruscheinski:

Longer phase-in of the Energy Step Code and Municipal Greenhouse Gas Emission Regulations Would Support Housing Supply

Premier-designate David Eby has recently articulated that both climate change and housing policy will be two of his leading priorities. This note raises concerns that provincial policy conflicts could limit the effectiveness of both priorities if the current in-force timelines are maintained. We recommend that the timelines be extended until the following issues can be addressed.

1. Housing Targets

As municipalities adopt policies regulating GHG emissions in new buildings it will add another layer of complexity, municipal review and cost to construction. This will include all forms of new housing, slowing the delivery of homes in those jurisdictions.

Premier-designate David Eby has made public statements that legislation is being considered to modernize current development processes to boost housing supply. At the most recent UBCM conference there was open discussion by many municipal leaders regarding the possibility of the government implementing some form of enforceable housing targets. It could be argued that this possibility has been well socialized and therefore would be taken into account in new municipal policies – but without a firm understanding of what legislation and regulation may come forward – enabling municipal policies that could slow the province's housing goals would be counterproductive.

2. Status of Renewable Natural Gas

In December 2021, Fortis applied to the BCUC to revise its Renewable Natural Gas Program. The application filed proposed that new gas customers would automatically receive renewable gas. One question for the BCUC is whether strata corporations can be bound to RNG contracts if they use natural gas. In addition, the wording in the Best Practices Bulletin seems to give local governments the option of disallowing the use of RNG, although the Office has indicated that the new Regulation is to be fuel neutral. UDI recommends that the Government wait until the BCUC determines if strata councils can be bound by RNG contracts before proceeding with the proposed regulatory changes to the 2018 BCBC.

Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

3. BC Hydro – Need for Greater Alignment with BC Government Climate Change and Housing Priorities

With the reliance on electrification to meet BC's new construction GHG reduction targets – the Ministry of Housing must act as an interlocutor within the government to provide prescriptive actions to BC Hydro through an updated Mandate Letter. As outlined in the consultation process, UDI member experience suggests BC Hydro needs to address both its staffing capacity and local distribution infrastructure in fast-growing metropolitan areas. In the mid-term, a review of the electrical rate structure should be undertaken to incentivize electrification.

In the immediate term, UDI believes BC Hydro's connection fee policy should be aligned with Latecomers Agreements as outlined in the *Local Government Act*. With this policy, a municipality can still require a developer to incur the full cost of roads, water, sewage or drainage – but they provide a 15-year window for the original developer to recoup a portion of these fees from subsequent developments that piggyback on this infrastructure. The current BC Hydro policy is only 5 years in duration with annual reductions in potential benefits – raising the risk that owners of adjacent properties will simply wait out this timeline.

November 10, 2022

Zachary May
Executive Director
Building Safety & Standards Branch (BSSB)
Office of Housing and Construction Standards (OHCS)
Ministry of Housing
PO Box 9844 Stn Prov Govt
Victoria BC V8W 9T2

Dear Mr. May:

Re: UDI Response to Public Review of Energy Efficiency & Greenhouse Gas (GHG) Emissions Proposals for the 2018 B.C. Building Code (BCBC)

The Urban Development Institute (UDI) would like to thank you and Scott Williams for presenting the proposed changes to Provincial energy efficiency requirements, the amendments to *Energy Step Code* (*ESC*), and the Regulation that would empower local governments to establish GHG emission restrictions for new buildings, to our membership at our November 2, 2022 Webinar. Our members found your presentation very informative and continue to be engaged on this topic.

In addition to the webinar, we have reviewed the materials provided by BSSB on the proposed Regulation. UDI is concerned about the December timeframe for the implementation of the changes and believe that there are some issues that still need to be addressed in the proposed *Provincial policy bulletin for cleaner, more energy efficient new construction* (*Best Practices Bulletin*) and other supporting documents for local governments. We recommend that the implementation of the regulatory changes be paused until the issues can be resolved.

Need for Delay of the Implementation of the Regulation

These issues include housing delivery expectations, a critical B.C. Utilities Commission (BCUC) decision on Renewable Natural Gas (RNG) and several BC Hydro distribution issues, which are barriers to building electrification. More notice and communication regarding the changes would also support more effective industry adoption.

Provincial Housing Expectations for Local Governments

In recent months, the Province, in particular the Premier-designate, has made it clear that all levels of government, including municipalities will have to step-up to deliver more homes for British Columbians. If the OHCS Regulation is approved in December, local governments will be proceeding with consultations and making decisions on potentially significant changes to their energy efficiency and GHG emission reduction policies. If they are excessive, the cost impacts could undermine their ability to increase housing delivery in their communities. Fully understanding the expectations from the Province would be critical information for local governments as they establish the *ESC* step and

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

GHG reduction targets, and many would likely proceed more cautiously if these requirements were understood.

UDI recommends that the Government wait until details about any future housing delivery expectations or requirements are clearly defined before proceeding with implementing the proposed regulatory changes to the 2018 BCBC. The Best Practices Bulletin needs to reference these objectives and how they might impact the new GHG emission powers being offered to local governments. This issue is particularly important given that under the *Best Practices Bulletin* there will be no limits on local governments in establishing *ESC* requirements and GHG reduction requirements (i.e., they can mandate the most stringent steps for both without providing any incentives).

BC Hydro Issues

There are several ongoing issues with BC Hydro that would be further exacerbated by new building electrification policies (and electric vehicle charging requirements, which are likely already mandated by local governments who would adopt the *Building Carbon Pollution Standard*), such as:

- BC Hydro's electrical extension fee policy is still in place, which BSSB rightly notes results in some "*… developers needing to pay significantly higher extension fees (i.e., the cost of new electrical service) for larger electrical services …,"* that *"… can be difficult to predict*;"
- BC Hydro's Tier 2 rate structure is still in place, which financially penalizes electrified buildings and electric vehicle charging;
- There are staffing shortages at BC Hydro in several regions such as the Capital Regional District that are delaying the delivery of housing; and
- Although, BC Hydro has indicated to BSSB that they will have the generating capacity to meet the electric vehicle charging and building electrification requirements for new and existing buildings, there are still issues with the capacity of local distribution. We are hearing from our members that there have been several reports in the Fraser Valley of electricity shortages. This is exacerbated by the lack of integration between BC Hydro and local governments regarding long range area planning that determines where future growth will be located in communities.

While we are pleased that BSSB is also advocating to BC Hydro and the Ministry of Energy, Mines and Low Carbon Innovation to quickly address these issues, UDI has been raising them for several years. ***We recommend that the Government delay the implementation of the proposed regulatory changes to the 2018 BCBC until here is an understood plan in place to address these hydro delivery issues.***

These issues also need to be identified in the Best Practices Bulletin. Currently, the only one specifically addressed in the *Bulletin* are the extension fees, and the solutions offered to local governments would be difficult for them to implement. Revising the electrical utility extension fees in the utility tariffs is beyond their purview. It is up to the Province, BC Hydro and the BCUC to resolve this problem, as are the issues regarding RNG. It is doubtful that the recommendation to establish a local building electrification fund will be utilized by municipalities as no details are provided on how it

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

would work, and the measure may be considered a downloading of Provincial costs and responsibilities onto local governments.

OHCS needs to recommend that local governments discuss with BC Hydro the state of electrical infrastructure in the growth areas of their communities to assess how much capacity is available before making decisions on GHG reduction targets (and electric vehicle charging standards). Similarly, local governments on a go-forward basis need to closely work with BC Hydro on Official Community Plans and Area Plans to ensure the utility understands what infrastructure is needed across the municipality and in certain growing areas. This suggestion could also be included in the *Best Practices Bulletin*. Municipalities should be aware of potential BC Hydro staffing challenges that could slow reviews of new developments as well.

Renewable Natural Gas

UDI appreciates the clarification that local governments, at this time, have the ability to decide whether or not RNG can be used to meet their GHG reduction steps. We understand the Province's rationale for this approach because a key BCUC hearing on RNG has not concluded. This hearing is expected to determine if strata corporations can be bound by RNG contracts signed by developers and provide clarity to local governments regarding how RNG usage in buildings can be calculated and monitored.

However, this means in many local governments the only option to achieve the GHG emission targets would be electrification. Given the concerns noted above regarding BC Hydro, ***UDI recommends that the Government wait until the BCUC RNG hearing has concluded and the Commission has made decisions on whether strata councils can be bound by RNG contracts and how RNG usage can be calculated and monitored before proceeding with the proposed regulatory changes to the 2018 BCBC. If these issues are resolved by the Commission, UDI also recommends that the use of RNG be embedded in the Regulation, as an option that builders can utilize for their projects. This is especially important as the Province moves forward with its own GHG emission requirements. In addition, there will have to be updates to the Best Practices Bulletin and the Metrics Report.***

Notice

Despite the efforts of BSSB (including the presentation at the UDI webinar), we are concerned about the lack of knowledge regarding the proposed Regulation and its potential impact amongst builders. In particular, those who are operating in municipal jurisdictions that have not adopted the *ESC,* especially outside the Lower Mainland and the Capital Regional District.

The details of the Regulation were only released in late September. If it takes immediate effect in December, many proponents submitting building permit applications soon afterward will likely be surprised by the new Provincial energy efficiency requirements.

Even in jurisdictions with the *ESC* in place, there is another concern for Part 3 commercial builders - the proposed changes to the Provincial energy efficiency requirements, which are more stringent for Step 2 for office and retail projects. Architects, engineers and contractors have been using the *ESC* for guidance, and would have to make immediate adjustments to projects, if the new requirements

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

came into force in December. This would be especially problematic for Part 3 builders who have been potentially designing their buildings for months – even years. In addition to delaying the approvals for their projects, there will be added costs to resubmit their designs to achieve the higher energy efficiencies.

While we recognize that this problem occurs with every code cycle, it was not clear how the Province would integrate the *ESC* with national codes, and the window between the notice of the changes on September 23rd and the implementation of them in December is a much smaller than previous code cycles.

UDI is pleased that you and BSSB staff have an understanding and appreciation of this issue. ***We recommend the implementation of the proposed regulatory changes to the 2018 BCBC be delayed allowing time for designers to adjust projects, and that the Province have an extensive communications outreach program to builders and their design/construction teams about the Provincial energy efficiency requirements.***

Best Practices Bulletin/Presentations

More information and direction are needed in the *Best Practices Bulletin* and presentations to guide local governments and builders on other matters. From an industry perspective, ***stronger language is needed than "… local governments are advised …," and clarity provided on the steps that will be taken if municipalities do not follow the Bulletin or advice from the Province (and Energy Step Code Council)***. Issues have occurred with some local governments already proceeding now to the highest *ESC* step with Zero-Carbon Ready requirements.

Timing of Municipal Requirements & Instream Protection

The timing of when municipal requirements can be imposed on builders is not clear. It is stated in the *Bulletin* that "… *local governments are advised to notify industry that they will be enforcing them at least 6 months prior to requirements coming into effect*." However, in Episode 5, a longer notice period is endorsed: "… *a six to 12-month notice period for local industry is strongly recommended, depending on the stringency of the carbon requirements being considered*." ***UDI agrees with the longer notice period (12 months) – especially if local governments move to the highest ESC step as well as implementing stringent GHG emission reduction requirements***.[1]

Clarity is also needed regarding how these timeframes are coordinated with municipally-led industry consultations. ***Ideally there are extensive discussions with industry prior to local governments determining (and providing notice regarding) what ESC and GHG reduction targets they want to mandate for builders – especially if local governments only need to provide six months' notice.***

Although there is stronger language in Episode 5, UDI is disappointed that BSSB states in the *Bulletin* that "… *a grace period for in-stream applications may be considered*," by local governments

[1] There may be missing information from Episode 5 as well. It is noted that there will be more information on the timeframes "… *in a little bit*," but no further information is shared.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

for the *Building Carbon Pollution Standard*. ***A stronger recommendation for in-stream protection is needed in the Bulletin – especially for local governments mandating the highest ESC step and/or stringent GHG reductions with only six months' notice. Advice needs to also be provided on how long the grace period for in-stream protection should be.***

Relaxation-type Approach

As with the grace period, little positive direction is given to local governments to utilize the relaxation-type approach that many are using now. Under this approach, local governments have offered two options to builders:

- meeting a higher *ESC* step; or
- meeting a lower step with a low carbon energy system.

UDI has strongly supported this approach, and we continue to be concerned that this option may not be utilized if local governments are given the ability to mandate any *ESC* step and GHG emission reduction target – without using incentives.

The issue is not addressed in the *Bulletin.* Although an example is provided in Episode 5, it is only noted that the option is still available, and "*Communities could require or incentivize lower carbon construction using the provincial approach*." **UDI recommends that the Province provide stronger encouragement in the *Best Practices Bulletin* for the continued use of the relaxation-type approach and other incentives.[2]**

Municipal Powers Beyond the Building Carbon Pollution Standard

It is stated in Episode 5 that the Province is providing flexibility with the *ESC* and the *Building Carbon Pollutions Standard* with the caveat that local governments "… *would have to use the provincial approach, as any existing technical building requirements that conflict with the BC Building Code will have no force or effect*." However, it is not clear why builders may lose the relaxation-type approach, noted above, when it is stated in Episode 4 that the door is open for local governments to impose other energy efficiency and GHG emissions requirements:

> "*The building carbon pollution standard does not regulate so-called "luxury loads", such as hot tubs, pools, heated driveways. Some local governments may wish to explore other ways of reducing the energy use of these luxury loads, including development permit authorities for energy conservation and GHG reduction*."

Some communities are exploring and even implementing policies to mandate/incent onsite renewable energy, heat pumps, fully electric buildings and embodied carbon reductions - in addition to the *ESC* and the *Building Carbon Pollution Standard.* It is not clear what the limits of municipal powers are regarding these issues. ***UDI recommends further advice be provided in the Best Practices Bulletin on the powers local governments have regarding energy conservation and***

[2] The Community C scenario in Episode 5 could include more details on how a local government using the relaxation-type approach can continue it in an appropriate manner under the new Regulation.

GHG reductions. This should involve consultation with local governments, the building sector and other stakeholders.

It may also be necessary to amend the *Building Act*. UDI worked-on and endorsed the *ESC* because it was supposed to limit the number of new and differing municipal green building policies our members were facing that tested the limits of industry capacity and undermined our ability to deliver new housing as well as commercial and industrial projects.

The Need for more Provincial Supports

It is stated in bold in the Preface of the *Draft Building Carbon Pollution Standards for Part 3 buildings in British Columbia* (the *Metrics Report*) that:

> *"This document is meant to be an initial costing analysis by illustrating whether decarbonizing a hypothetical building is cost effective across climate zones in B.C. This document should not be considered an exhaustive costing study to meet the carbon pollution steps in your area. This analysis is not representative of all buildings in all situations. Local governments and the construction industry should conduct more detailed or specific costing analysis which builds on this initial analysis."*

UDI continues to recommend that the Province conduct the ongoing work to enhance this initial costing analysis[3] with further research and analyses as well as establishing a monitoring program of what the real costs are when high ESC step and low carbon projects are built.

We are pleased that resources are available to update the *Metrics Report*, as most local governments, even if the recommended regional approach is utilized, will not have resources or the interest in conducting further analysis in a substantive way. There is also little to no direction in the *Best Practices Bulletin* for local governments to conduct further costing analyses for their areas. It should not be up to the industry to conduct the analysis in place of regulators, and it is doubtful that estimates from industry reports would sway local decision making on future regulations.

The *Best Practices Bulletin* includes recommendations for municipalities to *"Seek to understand industry's readiness to implement these requirements. In particular, they should seek to understand the local challenges and opportunities to implement low-carbon building systems, especially heat pump space and water heating."* This is important as we have heard that in some jurisdictions the availability of heat pumps is limited.

However, we encourage the Province to take the lead with understanding and improving the availability of heat pumps in British Columbia especially since new buildings in B.C. will have to be zero carbon ready by 2030 under the *BCBC*, and one of the actions in the *CleanBC Roadmap* is to "*… focus on growing markets for, and speeding up the adoption of, technologies we know are ready for deployment, such as … heat pumps.*"[4]

---

[3] Further suggestions are noted in Additional Comments section below.

[4] In the *2018 CleanBC Strategy* there was also a stated desire by 2030 to have 310,000 new residential heat pumps and 53 million m² of commercial floor space heated by heat pumps in the Province.

For similar reasons, we encourage the Province to take a leadership role in ensuring that we have enough trained mechanical contractors and energy advisors in B.C. The issue should also be flagged in the *Best Practices Bulletin* for local governments to review. More resources for the training of builders and trades are needed – especially since the industry is already facing labour shortages.

The OHCS should also consider working with the Energy Step Code Council and the Local Government Peer Network to develop a model for the thermal conditioning permit proposed in the *Best Practices Bulletin*. Ideally, this approach could be extended to other forms municipalities utilize for the *ESC* and the *Building Carbon Pollution Standard*. This would help achieve the Province's objective of having permitting processes that are "… *simple to follow and administer*," as well as coordinated across local governments and inspection entities.

We support BSSB (with other Provincial entities) being given the resources to conduct this work and provide supports to local governments, or further delaying the implementation of the Building Carbon Pollution Standard Regulation should be considered. These issues are critical given how soon Provincial building carbon requirements will be implemented across the British Columbia.

Provincial and Broader Public Sector (BPS) Buildings

UDI has been a strong supporter of the Province and the Broader Public Sector (BPS) taking a leadership role with their new buildings. As we have stated in the past, this leadership was prevalent when the Leadership in Energy and Environmental Design (LEED) standard was introduced to Metro Vancouver, when the BPS incorporated it in their new buildings. This ensured that the design and construction sectors became familiar with LEED. It also allowed UDI and other organizations to educate their members on LEED case studies to show the benefits of the standard, how to reduce costs and avoid pitfalls.

BC Housing is a leader for its projects with regard to the *ESC* and other green building initiatives, and the Province is also committed to doing more through its *CleanBC Roadmap to 2030*:

- By "*Requiring all new public sector buildings to align with our climate goals beginning with performance standards (2023) and moving to zero-carbon new buildings (2027)*;" and
- With low carbon building materials by "… *supporting the development and implementation of embodied carbon targets for public sector buildings by 2030*," before they are applied to other new buildings.

However, UDI is disappointed that the BPS is still not adequately addressed under the *ESC* regime, when it is being applied across British Columbia. The Province and BPS could adopt a leadership role regarding energy efficiency, in advance of wider private sector adoption. ***UDI recommends that similar standards for ESC be developed for new BPS buildings as soon as possible***.

Hi Teri,

I hope you're keeping well, I'm sure things are busy leading into session next week. It took a bit longer than I had hoped but I still wanted to share the background that you had requested outlining some of the caveats to project approvals.

I'm also attaching a slide deck from Andrew Ramlo, VP Advisory at rennie Intelligence, who presented to our membership yesterday. It has some excellent demographic data, and data on the amount of homes that we would need to build in the Lower Mainland to meet projected demand (slides 52/54). I thought you might find this interesting.

On another note, I wanted to flag that we're looking at rescheduling our meeting with the Minister that was previously set for Dec. 5, for the new year, and have been in touch with administrative staff.

If anything else comes up please let us know.

Thanks,
Cassandra

To: **Teri Collins, Assistant Deputy Minister, Office of Housing and Construction Standards**
From: **Urban Development Institute (UDI)**
Date: **November 17, 2022**
Re: **Project Vulnerability following Initial Council Approval**

Project Vulnerability following Initial Council Approval:

Issues that prevent housing developments from proceeding to construction

There is a misconception that once a project receives Third Reading or its rezoning approval that the project will undoubtedly advance to construction. The problem is – this is not the final step in a developer's journey to build a housing project. Changes made to the project at a Public Hearing or later as city staff and councils attempt to negotiate additional contributions can make projects economically unviable. When this happens, a developer will not apply for a building permit – even though the development has been approved.

The following examples outline how a more streamlined municipal approvals process that prioritize the delivery of housing over other city objectives is critical to increasing housing supply. In addition, examples of external risks are also explored as not all projects that fail to advance are the result of municipal processes.

Municipal Approval Risks

1. **Approved developments are no longer realistic because City demands are too high**

Projects aim to proceed to public hearing and secure an approval in a timely manner, resulting in situations where developers are under pressure to accept conditions that may be unrealistic.

Local governments exert onerous demands on new developments, because the decision of whether to approve new housing is ultimately left up to the Council. Requirements include high sustainability standards, funding for community amenities, new childcare facilities, housing fund contributions and construction of upgraded infrastructure or facilities, which can total in the tens of millions of dollars and add complexity to projects.

These added costs alone may prevent the project from advancing, or they may reduce the project's ability to withstand other changes, like construction cost escalations in the future. Many projects also include much market rental and below market homes, that will be delayed or simply not built if the project stalls.

2. **Approvals become unviable through changes made by Council at a meeting/public hearing**

All stakeholders have different objectives, local elected officials often propose changes to applications during Council meetings or public hearings if they believe it will improve the resulting development or provide a benefit to the community. Not all of these requests can feasibly be

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

accommodated, and when the meeting concludes, the developer may receive a conditional approval that is not realistic to build.

Local governments have required additional amenities or architectural features that were not budgeted-for, or non-required uses, like expanded park space or more office space, at the expense of housing within the project. Councils have also made sweeping demands that alter the entire form of the development, like requiring the removal of several proposed stories, or eliminating a block of townhomes on a site.

These changes are not accounted-for when the developer plans, designs and budgets the project, and could require significant redesign at added cost and time.

3. **Approved projects do not receive building permits in a timely manner**

The development process can take several years from rezoning to construction, it's not uncommon for local government to increase various fees and charges over the course of a project's development.

In both Maple Ridge and Mission the municipal Development Cost Charge (DCC) rates for multi-family housing are proposed to increase substantially this year: more than 75% and 215% respectively. Metro Vancouver is introducing a new water charge that will add approximately $1.5 million to the average high-rise project. The provincially mandated in-stream protections require projects to receive their full Building Permit within 12 months of the rate change, however in some municipalities building permit wait times exceed that 12-month period. With the length of time it takes to receive municipal building permits, due to staffing capacity shortages and the increasing complexity of applications, projects that have already been approved will likely be hit with these higher costs. These can jeopardize new housing, causing developments to not move forward.

Had these charges been phased-in, or in-stream protections more realistic, the projects might have been able to absorb the costs.

4. **Approval is rescinded prior to Building Permit application**

Local Governments have the ability to rescind approvals prior to the Building Permit stage, and have shown that they can use that authority to significantly alter projects. The greatest risk is immediately following a municipal election, if there is a major shift in Council direction

Case Study: Lady Alexandra Proposal – White Rock
In 2018, White Rock Council rescinded its approval of a 12-storey housing development, which had already passed Public Hearing and rezoning approval. The Council chose to limit the height of the project to 6-storeys, resulting in the developer taking legal action against the City.

Case Study: Multiple development proposals – Township of Langley
Most recently, at the Township of Langley's first Council meeting since July 2022, the newly elected Mayor and Council voted to rescind the Third Reading Rezoning approval – one of which had already undergone a public hearing – of 2 townhome projects, which totaled 420 townhomes and 27 detached homes. While the motivation for this decision was to seek additional information on the proposals and discuss their density, this process to rescind an approval creates a large amount of

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

www.udi.bc.ca

uncertainty for both the affected projects, and any others that may currently be under development in the Township.

External Risks

5. **Difficulty accessing financing**

An approved project may not be able to begin construction if the developer is not able to secure development or construction financing at a rate that is within the allowances of their budget. As the Bank of Canada increases interest rates to combat inflation, it results in higher borrowing costs for developers. The volatility of these rates could be enough to render a project unviable if the development already had to accommodate added costs during the approval process.

Case Study: RCFI Program
This problem is particularly acute for purpose-built rental housing relying on the Federal Rental Construction Financing Initiative (RCFI). These projects are not able to determine their interest rate to borrow funds until they are ready to use the funding – typically after the project is approved. This results in unanticipated higher borrowing costs. In addition, many projects that have been approved for funding through this program are facing higher equity requirements, meaning that the developer is required to provide multiple millions of dollars more capital in order to access the balance of their funding. This combination of factors is rendering rental housing developments unbuildable for the time-being.

6. **Change in market conditions**

If buyer demand softens, the developer may not be able to meet their pre-sale quota (typically around 80% sold required by lenders) within the 12-month early marketing window prescribed by the *Real Estate Development Marketing Act (REDMA)*. The project will be paused as a result rather than jeopardize its ability to meet pre-sale requirements.

Market changes are caused by a variety of factors beyond the developer's control, for example:
- Global, regional or local economic disruptions;
- Immigration policy changes;
- Rising interest rates; and
- Demand-side government policies like the Mortgage Stress Test or Foreign Buyer Ban.

Hello, members of the Energy Step Code Council:

We're looking to book an in-person meeting this February in Vancouver at the BC Hydro head office: 333 Dunsmuir St.

This will be a hybrid meeting, so people who can't make it in-person can still participate fully.

As the new energy efficiency and building carbon pollution standards are finalized, we're hoping to discuss some of the issues raised during the public review process, including challenges with BC Hydro service connections and questions regarding local government consideration of renewable fuels as a low-carbon compliance option. As part of our discussion of BC Hydro service connections, BC Hydro staff will be joining the meeting to document the key concerns from Council representatives and workshop some potential process improvements.

Please pick your preferred date using the Doodle poll here: https://doodle.com/meeting/organize/id/aK1W8NMd

I've also attached a draft agenda. Let us know if you have other topics you wish to include in this or future meetings.

Best,
Hugo

Contacts if You Require Assistance

- Hugo Wong, BSSB – 236 478 1406 (call only); hugo.wong@gov.bc.ca

DRAFT AGENDA (as of Jan. 5, 2023)

Time	Topic	Speaker(s)	Purpose(s)
10:00	Welcome and Introductions	Zachary May, ESCC Chair	• Welcome participants • Theme: Logistics of reducing GHGs in new construction • Meeting technology overview (Hugo Wong) • Approval of agenda
10:15	Provincial Update	Zachary May	• Progress of energy efficiency and GHG language • Progress of national code harmonization, B.C.'s role in the national system
10:30	Reducing electrification barriers	Various, BC Hydro	• Neighbourhood grid capacity • Electrical extension fees • Industry capacity issues (flag for Ministries of Energy, Mines and Low-Carbon Innovation; Post-Secondary Education and Future Skills)
12:00	Lunch Break: Lunch provided on-site for in-person attendees		
1:00 p.m.	Local best practices for RNG	Step Code Peer Network	• Discuss options for local administration of RNG
2:30	Afternoon Break – Free discussion/breakout groups		
3:00	Roundtable	All	Adjourn meeting
4:00	Adjournment		

Commented [WHO1]: May be moved to afternoon depending on staff availability. I will confirm closer to the date.

Commented [WHO2]: There's room for about 20 in-person attendees, I believe. I will poll who's coming in-person in a separate email.

I also don't immediately have anything I can bring to bear here. TSBC had tried to do some Chinese/South Asian outreach, but it mostly involved radio ads in safety campaigns, which were targeted through various communities' talk radio stations.

Richmond/Surrey's government may well be good points of contact, but in Richmond, that may just point you back to Onni or Concord Pacific

Hi, everyone:

The next Energy Step Code Council meeting will be held on Feb. 13. It'll be a hybrid meeting, so in-person attendees can go to 333 Dunsmuir St., Vancouver B.C. Online attendees can use Microsoft Teams.

To participate (either in-person or remote), please register here:
https://teams.microsoft.com/registration/AFLbbw09ikqwNtNoXjWa3A,6HjikdpByEC4GvwbRLE7qg,L_GsbQ0esEaRvXAoiKZSMw,mode=read&tenantId=6fdb5200-3d0d-4a8a-b036-d3685e359adc

If the number of in-person attendees exceeds the room's capacity (it's about 20) I will email them separately to see if anyone could come remotely instead.

As I understand it, the windows don't open but HVAC should work well. Masks/respirators optional but recommended.

Looking forward to it!
Hugo

HI all,

I have emphasized to BC Hydro organizers that high-quality sound and audio are important. Iulia and Josh Power have chosen a room that is Microsoft Teams-enabled, meaning there are puck-shaped accessory microphones along the conference table to pick up the voices of those seated at the table.

I've attached photos Josh took for me which illustrate the space.

He says the table can fit 15-16, and if people line the outside of the room we can put in 20-25 (though those seated outside might not have their voices picked up as well).

I think we can have a good hybrid meeting experience this way. Are there other ways we can make it better? I'm open to it. I am committed to running a good hybrid meeting for once. I can monitor for hands online and ask in-room participants to bring their laptops and "raise their hands" virtually as well so the question queue is accurate.

Best,
Hugo

Hi Robyn,

Any thoughts on room, sound, attendees? The hybrid meeting option is definitely a challenge if we want real participation online.

Hi Hugo,

The date for this upcoming ESCC meeting is unfortunate, as Bob Deeks and Kelly Reid are both unable to attend. While it would be nice if the date could be changed, we are looking into sending alternates since the electrification discussion is a high priority for our association. Is it possible to confirm whether Ministry staff from EMLI or ENV will be in attendance?

Also, I'm wondering if there's any possibility for a larger room? Having participated in previous hybrid ESCC meetings, the audio quality for remote participants is often challenging and we would be encouraging in-person attendance from our representatives.

Subject: Register: Feb. Energy Step Code Council meeting

Hi, everyone:

The next Energy Step Code Council meeting will be held on Feb. 13. It'll be a hybrid meeting, so in-person attendees can go to 333 Dunsmuir St., Vancouver B.C. Online attendees can use Microsoft Teams.

To participate (either in-person or remote), please register here:
https://teams.microsoft.com/registration/AFLbbw09ikqwNtNoXjWa3A,6HjikdpByEC4GvwbRLE7qg,L_GsbQ0esEaRvXAoiKZSMw,
mode=read&tenantId=6fdb5200-3d0d-4a8a-b036-d3685e359adc

If the number of in-person attendees exceeds the room's capacity (it's about 20) I will email them separately to see if anyone could come remotely instead.

As I understand it, the windows don't open but HVAC should work well. Masks/respirators optional but recommended.

Looking forward to it!
Hugo

Great summary Hugo. WE hold hybrid meetings in that room all the time. I think it can be managed well, if Hugo is the rep for the on-line folks to ensure their thoughts and opinions are heard. I think it's great when everyone still uses chat (in and outside room).

Thx … R

Hi Jarrett,

As per the attached, the City of Vancouver has put a call out for review comments pertaining to their draft Embodied Carbon Guidelines.
I know that Jeremy was actively involved in the past, but wanted to touch base with you to see if there is anyone at OMTI that has had the chance to review or has been part of the development process.
CoV has requested that comments be provide by EOD tomorrow.

Thanks and hope all is well.

Cheers,

Subject: DRAFT CoV Embodied Carbon Guidelines and Design Report

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Everyone,

As a member of our BM5 External Advisory Committee or as a stakeholder in embodied carbon, it is my pleasure to share with you our draft Embodied Carbon Guidelines. These guidelines are intended to standardize how embodied carbon calculations are carried out when demonstrating compliance with upcoming embodied carbon requirements in

the Vancouver Building By-law (for Part 3 buildings only), and with targets for City-owned buildings to pursue 40% reductions in embodied carbon. Thank you to everyone who provided input on the first draft, and I have endeavoured to incorporate your comments in this final draft.

I'm also happy to share a draft of our Embodied Carbon Design Report, to be used for submittals to the City. Thank you to anyone who has already provided input on this initial draft, and your comments will be included in the final draft. For those using this report at early design, or when using some software, I recognize some data may not be available, so the intention is the report is completed to the extent possible by the user.

Please feel free to share these with colleagues or anyone you feel may have comments to share. After receiving feedback, both documents will be published as version 1 by the end of January, for use in compliance with the Building By-law.

I invite you to review, and **please provide any comments you may have by EOD January 20th, 2023**. I invite you to reach out with questions at any time, and CLF Vancouver will be hosting a session on the topic on the morning of January 16th. Please send comments to me via email, with comments numbered for further reference.

Thank you to all of you for your efforts to reduce embodied carbon and help us advance this important City goal, each in your own way. I wish you all a restful and wonderful holiday break, and look forward to connecting when I return to the office after January 3rd.

Sincerely,

Patrick Enright, P.Eng | Senior Green Building Engineer

Embodied Carbon Design Report

Part 3 Buildings

Compliance

Whole-Building Reduction Required

Projected Date of first Building Permit application (YYYY-MM-DD)	2025-01-01	*if completing in advance of BP application, provide best available projected date. If unsure, use 2025-01-01*		
On or After 2023-07-01	Yes	2023-07-01		
On or After 2025-01-01	Yes	2025-01-01		
Building Height (in storeys)	7			
1-6 storeys	No			
If 1-6 storeys, are wood-frame or encapsulated mass timber construction permitted? (2025 VBBL ref. 10.4.1.2)			base reduction required	**10%**
One Responsible Materials Category achieved? (2025 VBBL ref. 10.4.1.3)			Reduction required	**10%**

Whole-Building Reduction Achieved (from results sheets)

	Proposed	Baseline		
Total Embodied Carbon (kgCO2e)	5,414,636	6,200,000	Reduction achieved	12.7%
Embodied Carbon Intensity (ECI, kgCO2e/m²) - w/o park.	361	413		
Embodied Carbon Intensity (ECI, kgCO2e/m²) - w park.	319	365		
Zero Emissions Construction Site Adjustment	No		adjustment	0%
			Reduction achieved (for compliance)	**12.7%**

Biogenic Carbon

	Proposed	Baseline		
Net Biogenic Carbon (tCO2e)	0	0		
Net Biogenic ECI (kgCO2e/m²) - w/o parkade	-	-		
Net Biogenic ECI (kgCO2e/m²) - w parkade	-	-		
Net Embodied Carbon (tCO2e)	5,414,636	6,200,000		
Net ECI (kgCO2e/m²) - w/o parkade	-	-		
Net ECI (kgCO2e/m²) - w parkade	-	-	Reduction achieved - w biogenic carbon	12.7%

Whole-Building Reduction Required

Reduction required	**10%**

Whole-Building Reduction Achieved

Reduction achieved (for compliance)	**12.7%**

Project and wbLCA Info

Instructions

Please complete one design report per building.
Please complete all fields that apply, using information that represents the current stage of design.
For fields that do not apply or for which there is no information yet, please enter "N/A" or leave blank.
For questions relating to this design report please email green.buildings@vancouver.ca

Project Information

Project Address			
Secondary Address			
Project Working Title / Name			
Buildnig Description and Major Occupancies			
Heating Demand (TEDI) Design Target (kWh/m²)		Heating Demand (TEDI) of Current Design (kWh/m²)	
Gross Floor Area excluding Parkade Area (proposed) (m²)	15,000	# of units (if residential)	
Gross Floor Area including Parkade Area (proposed) (m²)	17,000	# of bedrooms (if available)	
Parkade Area (m²)	2,000		
Building Height (in storeys)	7	*from Compliance sheet*	
Projected Date of first Building Permit application	2025-01-01	*from Compliance sheet*	

whole-building Life Cycle Assessment (wbLCA) Information

Location	Vancouver
Assessment timing / Application type	Design Development / pre-BP
Approximate Class of Assessment	C Assembly Estimate
Service life of building in assessment (yrs)	60
Assessment Software:	OneClickLCA
Software version:	unknown

Elements Included in wbLCA

Foundations	Yes	Exterior Walls	Yes
Floors	Yes	Windows	Yes
Roofs	Yes	Mechanical, Electrical, Plumbing (MEP) (optional)	No
Beams and Columns	Yes	Interiors / Partitions (optional)	Yes

Life Cycle Stages Included in wbLCA

A1-A3 Product Stage	Yes	B2-B4 Use Stage	Yes
A4-A5 Construction Stage	Yes	C1-C4 End-of-Life Stage	Yes
D Beyond Building Life Cycle Stage (optional, not used for compliance)	No	Biogenic Carbon (optional, not used for compliance)	No

wbLCA Compliance Summary

Reduction required	**10%**
Reduction achieved (for compliance)	**12.7%**

Attachments: AGENDA UDI Exec Committee_Minister Rankin - Tues Sept 20 2022.pdf, 626117 - AssocDM Bullets - Meeting with UDI - Mar 15.pdf

Hi Zac,

Another last-minute request has been sent out by the MO for an MRK meeting on Tuesday, Jan 24, this one with the Urban Development Institute. The MO asked for bullets by the end of today, but "if not I think verbal will work too." I'll leave that up to you as I appreciate they are asking for the impossible.

Details are highlighted in the thread below.

Kind regards
Cory

Subject: New MRK briefing on Urban Development Institute (UDI) FW: Briefing Note CLIFF ID 636183
Importance: High

Hi there – here is some background on UDI… new MRK mtg request for Tues, Jan 24th @ 10 a.m. If it's possible for rough bullets to be pulled together by end of day then great. If not I think verbal will work too.
Let me know what you think and I'll eApp over if we're doing bullets.
Thank you!

MINISTRY OF ATTORNEY GENERAL
Building and Safety Standards
MEETING BULLETS

PURPOSE: MEETING Bullets for Angela Cooke
Associate Deputy Minister

Meeting with: Urban Development Institute, Pacific (UDI) on March 15, 2022

Issue:
Introducing greenhouse gas (GHG) intensity targets to the BC Building Code

BACKGROUND

- UDI represents developers of condominiums, offices, or other large buildings.
- Most UDI members are in the Capital Region and Lower Mainland, so they are most concerned with policies that impact those regions.
    - Many UDI members are in the City of Vancouver, which uses the Vancouver Building By-Law (VBBL), not the BC Building Code (Code).
    - The VBBL has additional energy efficiency and GHG requirements compared to the Code.
    - UDI members want consistent requirements across jurisdictions.
- To date, local governments have used powers in the Local Government Act and Community Charter to incentivize lower-emission new buildings by requiring higher levels of energy efficiency via the BC Energy Step Code[1], but lowering them if a low-carbon energy system is installed, e.g., electric heat pump.
    - UDI supports this approach, as it gives developers flexibility to meet local requirements in the most cost-effective way for their project.
- Some builders are concerned that inconsistency among local government requirements or approaches can create confusion when working in multiple jurisdictions. Local requirements can also change during the years-long approvals or design phase of a building, which can impact its design and cost.
- Ministry staff are developing changes to the Code to establish requirements that will enable local governments to directly regulate GHG emissions from buildings. This meets a mandate letter commitment to enable local governments to set their own carbon pollution standards and the approach is consistent with ministerial direction[2].
- Concurrently, building regulations will also be amended to require buildings to be 20 per cent more energy efficient by the end of 2022, meeting a long-standing CleanBC commitment.
- Estimated timeline – both initiatives:
    - **Present:** Ministry staff develop draft Code language and drafting instructions for minor changes to the Building Act General Regulation
    - **Spring 2022:** Six weeks of public review for the Code language

[1] See Attachment 2 for an overview of the BC Energy Step Code.
[2] See Attachment 3 for AG DBN 621336 – Carbon Pollution Standards – AG signed.

    - **Summer/Fall 2022:** Prepare regulatory changes for deposit and coming into effect by end of 2022.
- Once in effect, local governments will be able to reference and enforce the new GHG tiers by amending their building or zoning bylaws.
- Many local governments have directed their staff to act quickly during this council term to reduce emissions wherever possible, including in the building sector.
- On March 10, 2022, UDI wrote to ministry staff, concerned that local governments may choose to implement GHG targets this summer. They would prefer these changes come later, such as January 2023.
- Although Code language will be available, local elections are scheduled for October 2022, and local governments typically avoid significant bylaw changes such as bringing in new GHG standards in the summer, leading up to elections.
- New local governments are expected to be formed in early 2023. UDI may feel this timeline creates uncertainty, as a new government may have different views.
- In consultation with UDI and other industry partners about their research priorities, ministry staff have procured and shared with UDI a significant volume of technical and costing analysis based on simulated buildings, to assess potential costs to comply with proposed standards and inform engagement.
- UDI requested even more analysis be procured and shared, but Ministry staff believe further analysis would not provide additional context. Staff recommended that industry analyze in-stream and recently finished projects, guided by the analysis, to understand potential "real-world" implications.

KEY MESSAGES

- We want to continue working with UDI to reduce operational carbon emissions from buildings without negatively impacting the development sector.
- These GHG tiers will build industry capacity and market readiness as we work towards the CleanBC Roadmap goal of zero-carbon new buildings by 2030.
- We are hoping Code language for GHG reductions will be deposited this summer so local governments can use that language to consult with their communities. Our local government partners advise it is unusual for local governments to pass substantive bylaw changes so close to their local elections in October.
- There will be time through summer and fall for local governments and industry to conduct further technical and costing analysis and community consultation.
- Local governments have their own ambitious climate goals, as does the Province. We have developed measures that our local government partners indicate provide an acceptable balance of stringency and flexibility.
- We appreciate how much builders and developers value consistency. The menu of four GHG tiers reflects consensus among industry, local governments, utilities, and other Energy Step Code Council[3] partners about the appropriate balance of flexibility and rigour to avoid infinite permutations of local requirements.
- We are grateful for UDI's ongoing participation and input in development of local government best practice guidance materials. Intended to support availability of

[3] See Attachment 2 for an overview of the Energy Step Code Council.

the new standards, these will emphasize the importance of regional coordination among local governments respecting requirements and processes.

Attachment 1: Biographies

Cassandra McColman, Director, Policy and Public Affairs

Cassandra McColman has worked at UDI since 2018, first in policy and research before rising to her current position in October 2021. She has a BA in International and Global Studies from Simon Fraser University.

Jeff Fisher, Vice President and Senior Policy Advisor

Jeff Fisher has worked at UDI since 2004. Prior to joining UDI, Fisher was a Senior Policy Advisor with the Association of Municipalities of Ontario. In this capacity, he was involved in numerous issues including Building Code reform, the development of a new Ontario Municipal Act, pension governance, labour issues and emergency services. Fisher has also worked in the Legislative Assemblies of Ontario and British Columbia and at the Canadian Urban Institute. He holds a Bachelor degree in Political Science from the University of Toronto and a Master in Urban Regional Planning from Queen's University.

- The Building and Safety Standards Branch (BSSB) has a long working relationship with Fisher, as he was involved with the creation of the Energy Step Code in 2017. He is a member of the Energy Step Code Council and has contributed to development of the GHG intensity targets being discussed today.

Mike Drummond, Vice President, Government Relations and Communications

Drummond leads the Urban Development Institute's corporate and public affairs team including communications, stakeholder relations, government affairs, and strategic planning.

Attachment 2: Overview of the BC Energy Step Code

The BC Energy Step Code builds energy efficiency into the fabric of a building (its walls, windows, doors, roof, etc.), and emphasizes certain concepts, such as minding the details of construction, reducing air leaks, and more cooperation between the builders and the design teams so a building can be made more energy efficient in a cost-effective way.

It requires builders to meet a specific energy efficiency target, but does not specify the materials and methods required to achieve them. That gives builders the flexibility to meet a target in a way that is affordable or practical for them. It also introduces quality assurance processes to validate the energy efficiency of a building.

Figure 1: This implementation timeline for the BC Energy Step Code shows that minimum energy efficiency requirements for buildings will rise over time.

The provisions of the BC Energy Step Code are located in Part 9.36. and 10.2.2.3. of Division B of the BC Building Code.

Policy rationale

The BC Energy Step Code previews the energy efficiency requirements of the future and gives local governments and builders the chance to learn and adapt to these changes far in advance before these changes become mandatory.

It was introduced in 2017, with the goal that by 2022 all new buildings would be more energy efficient as a baseline requirement (see Figure 1). Over time, the Lower Steps will fall away, so that by 2032, all buildings will meet the top Step (Step 4 for large buildings and Step 5 for small buildings). This approach will be replicated when creating new greenhouse gas emissions requirements.

The Energy Step Code Council

The Energy Step Code Council, an advisory body, meets at least quarterly and supports local governments and industry as they implement the BC Energy Step Code. It serves as a “bridge” between governments, industry, local governments, and utilities, to identify and resolve implementation issues, provide support and resources, and ensure everyone uses the regulation prudently. UDI is a founding member of the Council.

Date Decision Required: December 20, 2021

MINISTRY OF ATTORNEY GENERAL
OFFICE OF HOUSING AND CONSTRUCTION STANDARDS
DECISION BRIEFING NOTE

PURPOSE: For DECISION of David Eby, QC
Attorney General and Minister Responsible for Housing

ISSUE:
Balancing flexibility and consistency in carbon pollution standards for new buildings.

DECISION REQUIRED / RECOMMENDATION:
Option 1 (Recommended). Establish tiered carbon pollution requirements that local governments may choose to adopt and enforce in the short term with the number of available tiers reducing incrementally over time, starting in 2024.

SUMMARY:
- Ministry staff seek direction about the degree of flexibility local governments should be given as part of proposed regulation of carbon pollution from new buildings.
- The Ministry Mandate Letter indicates that enabling local governments to implement their own standards is desirable, however, Ministry staff are aware of concerns that opt-in tiered standards can create inconsistency and confusion in the sector, which can negatively impact affordability and sector productivity.

BACKGROUND:
The Ministry Mandate Letter commits to "supporting local governments to set their own carbon pollution performance standards for new buildings." Ministry staff received direction in February 2021 to develop Provincial building regulations for local governments to voluntarily adopt, rather than enabling them to develop their own (Attachment 1). Ministry staff have been consulting with local government, industry, utility, and provincial government stakeholders on options for the proposed regulation and anticipate recommendations for the Minister's consideration in the coming months.

As part of the CleanBC Roadmap 2030 (Roadmap), the Province announced a commitment to zero carbon new buildings as a minimum requirement by 2030. Ministry staff anticipate the carbon pollution standard under development for local governments will serve as the model for the Provincial commitment. The goal of zero carbon is assumed to mean an all-electric or renewable natural gas building, which is as close to zero carbon as possible using currently available energy sources.

Stakeholders have indicated support for a tiered approach to carbon pollution standards, similar to the *Energy Step Code*, with universal support[1] for a "measure-only" first tier[2] and incremental performance levels between current industry practice and near zero carbon construction thereafter. A tiered approach aligns with the Roadmap commitment to establish carbon pollution requirements that transition incrementally

[1] Notably, Canadian Home Builders Association-BC and Urban Development Institute requested it.
[2] This tier involves a calculation based on the intended design of the structure and included equipment. This will not require physical testing of the structure (e.g., airtightness testing. Because no particular result must be achieved local governments and industry can optimize their interaction in a low consequence environment.

toward zero carbon in 2024, 2027, and 2030. While 2022 is not identified in the Roadmap, introducing the regulatory changes well in advance of enforceable minimum standards supports market transformation and industry and local government readiness.

Local government legislation gives them authority to determine how they administer bylaws and the *BC Building Code* (Code). Because local governments cannot be required to enforce these standards, a balance is needed between Provincial requirements flexible enough that local governments see them as viable, and a path for builders that evolves to a consistent standard.

This subject matter falls under concurrent authority given to local governments by the *Local Government* Act and *Community Charter*. Pursuant to these Acts, local governments may exercise their bylaw making powers for purposes including the reduction of greenhouse gas emissions. Several local governments in the Lower Mainland and Southern Vancouver Island have already established carbon pollution policies through planning and land-use authorities. These are outside the *Building Act* restrictions on local building requirements. Under the *Building Act*, having regulated a building activity in the Code otherwise renders a local government's contradictory or more stringent standard for the same building activity of no effect.

DISCUSSION:

A tiered approach to carbon pollution standards modelled on the *Energy Step Code* is a compromise between the interest of local governments in flexibility and the interest of industry in consistency. It would provide several tiers that local governments could voluntarily require in bylaws or policies. Over time, minimum provincial requirements would come into force, reducing the number of tiers available and ensuring that all communities are subject to a consistent minimum requirement.

The success possible with a tiered approach modelled on the *Energy Step Code* is demonstrated by the significant number of local governments that adopted it prior to the provincial minimum in 2022. This early adoption has supported market capacity for the 2022 requirements, which improves the likelihood of success when minimum provincial requirements come into force.

It is also an endorsement of the Energy Step Code's degree of flexibility. Pursuant to local government legislation, local governments choose if and how to enforce the Code. With too few tiers, local governments are incented to continue using authorities derived from outside the *Building Ac*t, increasing the variability of requirements among jurisdictions. Alternatively, local governments may elect not to enforce requirements for the subject matter at all.

Industry stakeholders, such as the Homebuilders' Association of Vancouver (HAVAN), have raised concerns with a voluntary tiered approach creating a patchwork of requirements if each local government selects different tiers. This patchwork creates confusion for builders which is believed to lead to delays and increased project costs, although this assumption has not been quantified.

Any of the proposed options has the potential to achieve the Province's commitment to zero carbon new buildings as a minimum requirement by 2030. s.13

s.13

INDIGENOUS PEOPLES CONSIDERATIONS:
The restriction of local governments' ability to implement contradictory building requirements under Section 5 of the *Building Act* and Section 2.2(3) of the *Building Act General Regulation* does not apply to Treaty First Nations. Specific consultation with Indigenous communities and Treaty First Nations is not considered to be within scope of this initiative.

GBA+ OR DIVERSITY AND INCLUSION IMPLICATIONS: None identified.

OPTIONS:
Option 1 (Recommended): Establish tiered carbon pollution requirements that local governments may choose to adopt and enforce in the short term with the number of available tiers reducing incrementally over time, starting in 2024. The standard may start with as many as 4 performance tiers, which would be reduced over time as the provincial minimum transitions towards a zero-carbon tier.

	TIER 1	TIER 2	TIER 3	TIER 4
2022	✓ Provincial Minimum*	✓Available Provincial Standard	✓Available Provincial Standard	✓Available Provincial Standard
2024	× Not an Available Provincial Standard	✓ Provincial Minimum*	✓Available Provincial Standard	✓Available Provincial Standard

Date Decision Required: February 28, 2021

MINISTRY OF ATTORNEY GENERAL
BUILDING AND SAFETY STANDARDS BRANCH
DECISION BRIEFING NOTE

PURPOSE: For DECISION of David Eby, QC
Attorney General and
Minister Responsible for Housing

ISSUE: Options for Fulfilling Mandate to Support Local Governments to Establish Carbon Pollution Standards for New Construction.

RECOMMENDATION:
Option 1: Establish carbon pollution requirements through a provincial building regulation for local governments to voluntarily apply.

SUMMARY:
- In November 2020, the Minister's Mandate Letter included direction to build on the government's work to require cleaner buildings by supporting local governments to set their own carbon pollution performance standards for new buildings.
- This Mandate Letter commitment can be satisfied by either establishing provincial standards for local governments to voluntarily adopt, or by allowing local governments the authority to establish their own requirements without input or oversight by the Province.

BACKGROUND:
The Minister's Mandate Letter provides direction to "build on our government's work to require new buildings and retrofits to be more energy efficient and cleaner by supporting local governments to set their own carbon pollution performance standards for new buildings."

The *Building Act* limits Local Authorities to establish their own technical building requirements for carbon pollution and energy efficiency, requiring them to use the voluntary Energy Step Code in the BC Building Code (BCBC), which addresses energy efficiency but not carbon pollution.

DISCUSSION:
Supporting local governments to establish their own carbon pollution standards can be accomplished by one of two ways under the *Building Act*: 1) establish requirements through a provincial building regulation for local authorities to voluntarily apply; or 2) establish the regulation of greenhouse gas emissions by local authorities as an unrestricted matter under the *Building Act.*

Establishing provincial standards for carbon pollution through a provincial building regulation would address the specific requests of local governments and UBCM to take this specific action, although provincial standards also limit local governments to the options made available in regulation. The process of establishing a standardized provincial approach would engage a full range of stakeholders, including local governments, energy utilities, developers and homebuilders. s.13

s.13

Establishing the regulation of greenhouse gas emissions as an unrestricted matter under the *Building Act* would provide local governments with maximum flexibility to establish their own standards. s.13

s.13

INDIGENOUS PEOPLES CONSIDERATIONS:

The restriction of local governments' ability to regulate carbon pollution under Section 5 of the *Building Act* and Section 2.2(3) of the *Building Act General Regulation* does not apply to Treaty First Nations. Specific consultation with Indigenous communities and Treaty First Nations is not considered to be within the appropriate scope of this initiative.

OPTIONS:

Option 1 (Recommended): Establish carbon pollution requirements in a provincial building regulation for local governments to voluntarily apply.

Option 2: s.13

Hi Cory – I've pulled a few bullets if they're helpful context.

Cheers
Jessica

General

- The Urban Development Institute (UDI) is a non-profit association of the development industry in British Columbia (B.C.). Its mandate is to promote efficient urban growth, good planning and development practices, transit investment, affordable housing, and high quality commercial and industrial developments.

- UDI is often invited to participate in provincial consultations as representatives of B.C.'s development industry.

Related Engagement

- The Ministry consults with UDI on numerous initiatives related to housing and construction including, for example:
  - Residential rental tenure zoning (2018)
  - Development Approvals Process Review – stakeholder consultation (2019)
  - Proposed amendments to the *Local Government Act* and *Vancouver Charter* related to pre zoning and development finance (work underway)
  - **Proposed amendments to the BC Building Code related to energy efficiency and carbon pollution – stakeholder consultation in fall 2022 and regulation anticipated by end of January 2023**

- UDI is also a member of MUNI's Development Finance Review Committee, which is a multi stakeholder group chaired by the ministry that provides advice related to development finance
- UDI is also a member of the Ministry's Energy Step Code Council, a multi-stakeholder advisory body providing feedback and advice on the development of CleanBC energy efficiency and carbon pollution requirements for buildings.

Key issues:

Building Code

- UDI is generally supportive of improving standards in the BC Building Code, but has noted the importance of aligning Provincial and Local Government policies related to buildings.
- UDI has raised issues related to BC Hydro permits and fees for new developments, and the Ministry is facilitating a workshop in February for BC Hydro to present solutions to reduce costs and timelines for developers.

Hi Cory,

Just catching this now. I can provide a verbal briefing. Is that to Bindi?

Also, can you track down the note prepared for Bonnie's meeting with UDI in November for context? There were some housing issues in that note we should flag.

Best,
Zachary D. May, MBA

Subject: FW: New MRK briefing on Urban Development Institute (UDI) FW: Briefing Note CLIFF ID 636183

Hi Zac,

Another last-minute request has been sent out by the MO for an MRK meeting on Tuesday, Jan 24, this one with the Urban Development Institute. The MO asked for bullets by the end of today, but "if not I think verbal will work too." I'll leave that up to you as I appreciate they are asking for the impossible.

Details are highlighted in the thread below.

Kind regards
Cory

Importance: High

Hi there – here is some background on UDI… new MRK mtg request for Tues, Jan 24th @ 10 a.m. If it's possible for rough bullets to be pulled together by end of day then great. If not I think verbal will work too.
Let me know what you think and I'll eApp over if we're doing bullets.
Thank you!

MINISTRY OF ATTORNEY GENERAL AND MINISTRY RESPONSIBLE FOR HOUSING OFFICE OF HOUSING AND CONSTRUCTION STANDARDS MEETING BRIEFING NOTE

PURPOSE: MEETING Note for Bonnie Ruscheinski,
A/Assistant Deputy Minister
Office of Housing and Construction Standards

MEETING WITH: Jeff Fisher, Vice President and Senior Policy Advisor, Urban Development Institute – Pacific (UDI) on October 28, 2022, at 11 a.m.

ISSUE:

UDI has concerns about proposed opt-in operational carbon reduction standards for new construction.

KEY MESSAGES:

- We are grateful for UDI's continuing contributions to standards development that further our goals for cleaner, more energy efficient building.
- We know consistent local implementation is important to the development industry. UDI's participation in developing best practices to support local governments to effectively implement these new changes is welcome.
- While our stated goal is to complete this regulatory change before the end of the year, we are inviting feedback to ensure that we have a thoughtful plan for implementation.
- Building and Safety Standards Branch (BSSB) staff are looking forward to discussing these changes with your members on November 2, 2022.

BACKGROUND:

- Government is committed to making all new buildings 20 per cent more energy efficient by 2022, and introducing an operational carbon pollution standard (CPS) for local government opt-in.
- The CPS will be implemented like the BC Energy Step Code, so local governments can opt into any of four stringency levels.
    - To meet zero-carbon new construction commitments by 2030, the minimum standard will increase in stringency, reducing available opt-in levels, in 2024, 2027, and 2030 as described in the CleanBC Roadmap to 2030.
- UDI mainly represents developers of large buildings in the Lower Mainland and Vancouver Island and supports cleaner, more efficient new buildings generally.
- UDI has shared a draft copy of their feedback to the public review of the proposed changes to the BC Building Code (BCBC) in advance of this meeting (see Attachment).
- UDI advocates for delaying implementation of these changes on the basis of:
    1. Impacts to local governments' ability to achieve impending housing targets.
    2. Absence of decision from the BC Utilities Commission (BCUC) on FortisBC's renewable natural gas (RNG) tariff proposal and corresponding uncertainty

about how or if local governments will recognize this decarbonized fuel source when implementing the new standards.
3. Absence of a clear plan from BC Hydro to address high extension (of service) fees and tier two rates, staff capacity to process new developments' requests for services, and potential shortfalls in its generating capacity.
4. Insufficient time for local governments to prepare for the changes and the potential implications for instream permit applications.

In addition to the request for delay, UDI requests:

A. Explicit provincial direction to local governments about how they must implement and enforce these standards.
B. Even more detailed and granular costing analysis and establishment of a reporting program to track actual capital costs of high-performance buildings.
C. Direct provincial intervention to improve the availability of heat pumps and other high-performance technologies in BC.
D. Development of comparable requirements for public sector buildings.

Costing:

- BSSB has published detailed estimates illustrating that reducing carbon emissions from buildings can be affordable, especially if all developers will be required to meet the same requirements. However, the analysis was based on simulations of hypothetical buildings, not actual buildings. The development industry will need to conduct their own case studies and analysis to determine the most cost-effective ways to meet new code requirements for individual projects.

Renewable natural gas (RNG):

- A decision on FortisBC's proposal before the BCUC is not anticipated before 2023.
- Per the *Building Act*, building regulations, including the BCBC, have the same force and effect as a local government bylaw. Local governments choose how and if to administer and enforce it.
- The proposed CPS does not limit use of RNG. However, it also does not require local governments to accept it.
- After a request from FortisBC that the Province require local governments to recognize RNG in their enforcement of the CPS, ADM Les MacLaren, Ministry of Energy, Mines, and Low Carbon Innovation, conferred with the Ministry of Municipal Affairs and confirmed the Province has no appetite to interfere with local governments' autonomy in this regard.

Consistency:

- A single province-wide standard would not accommodate differing states of readiness among and within regions to implement a CPS.
- By offering a limited number of CPS levels for local governments to choose from, we honour our mandate to support local governments to set their own standards while limiting the impact of potential short-term inconsistencies.
- Best practice implementation guidance for local governments has been developed and will be refined based on public review feedback. We respect local governments' autonomy to administer and enforce the BCBC.

- A peer network for local governments to coordinate and collaborate on matters including implementation has been established through the Energy Step Code Council.
- BSSB will continue to work through the Energy Step Code Council to develop best practice guidance for local governments that addresses the concerns of UDI and other industry stakeholders. This use of voluntary guidelines endorsed by all stakeholders, while not legally enforceable, has been effective in informing local government implementation policies and minimizing negative outcomes for the development industry.

INDIGENOUS PEOPLES CONSIDERATIONS:

- This meeting does not directly impact indigenous peoples. Any lessons learned about effective energy efficiency or and carbon regulation will be included in future indigenous engagement on the topic.

GBA+ OR DIVERSITY AND INCLUSION IMPLICATIONS:

- There are no direct or indirect GBA+ or diversity and inclusion implications identified at this time.

OTHER MINISTRIES IMPACTED/CONSULTED:

- Ministry of Energy, Mines and Low Carbon Innovation (Ongoing)
- Ministry of Environment and Climate Change Strategy – Climate Action Secretariat (Ongoing)

DRAFT

November 4, 2022

Zachary May
Executive Director
Building Safety & Standards Branch (BSSB)
Office of Housing and Construction Standards (OHCS)
Ministry of Housing
PO Box 9844 Stn Prov Govt
Victoria BC V8W 9T2

Dear Mr. May:

Re: UDI Response to Public Review of Energy Efficiency & Greenhouse Gas (GHG) Emissions Proposals for the 2018 B.C. Building Code (BCBC)

The Urban Development Institute (UDI) would like to thank you and BSSB staff for presenting the proposed changes to Provincial energy efficiency requirements, the amendments to *Energy Step Code* (*ESC*), and the Regulation that would empower local governments to establish GHG emission restrictions for new buildings to our membership at our November 2, 2022 *BC Building Code Proposals - What You Need To Know Webinar*.

In addition to the *Webinar*, we have reviewed the materials provided by BSSB on the proposed Regulation. UDI is concerned about the December timeframe for the implementation of it as well as some issues that still need to be addressed in the proposed *Provincial policy bulletin for cleaner, more energy efficient new construction* (*Best Practices Bulletin*) and other supporting documents for local governments.

Need for Delay of the Implementation of the Regulation

We recommend delaying the implementation of the Regulation as there are a number of issues that need to be further addressed, including potential housing legislation, a critical B.C. Utilities Commission (BCUC) decision on Renewable Natural Gas (RNG) and several BC Hydro issues, which are barriers to building electrification. More notice and communication regarding the changes is also needed for the industry.

Potential Provincial Housing Requirements for Local Governments

In a CBC Metro Matters interview with Premier-Designate David Eby, the issue of upcoming "… *legislation on housing targets and forcing municipalities to act* …," was discussed. While UDI has been a long-standing advocate of this type of approach to address housing supply and affordability issues, it is not known what requirements will be imposed on local governments.

If the OHCS Regulation is approved in December, local governments will be proceeding with consultations and making decisions on potentially significant changes to their energy efficiency and GHG emission reduction policies. If they are excessive, the cost impacts could undermine their ability to meet future Provincial housing requirements. Fully understanding these expectations would be critical information for local governments as they establish the *ESC* step and GHG reduction steps, and many would likely proceed more cautiously if these requirements were understood. ***UDI recommends that the Government wait until details about future legislated housing delivery requirements and regulations are released before proceeding with the proposed regulatory changes to the 2018 BCBC. When it is announced, the Best Practices Bulletin needs to reference the changes and how they might impact the new GHG emission powers being offered to local governments.*** This issue is particularly important given that under the *Best Practices Bulletin* there will be no limits on local governments in establishing *ESC* requirements and GHG reduction requirements (i.e., they can mandate the highest step for both without providing any incentives).

Renewable Natural Gas

There is also little clarity on another key issue for the GHG proposals – how RNG will be addressed. As noted in the *Draft Building Carbon Pollution Standards for Part 3 buildings in British Columbia* Report, "*… there is no mechanism available … to ensure low-carbon energy will be used for the life of the building*." We are awaiting a BCUC decision on whether strata corporations can be bound to RNG contracts if they use natural gas. Local governments are concerned that stratas can switch to less expensive regular natural gas even if developers sign contracts for RNG. This could be why the language in the documentation provided by OHSC was confusing regarding the status of RNG. Wording in the *Best Practices Bulletin* seems to give local governments potentially the option of disallowing the use of RNG, although the Office has indicated that the new Regulation is to be fuel neutral. ***UDI recommends that the Government wait until the BCUC determines if strata councils can be bound by RNG contracts before proceeding with the proposed regulatory changes to the 2018 BCBC.***

BC Hydro Issues

Having an RNG option is critical to our members because there have been ongoing issues with BC Hydro that would be further exacerbated by new building electrification policies (and electrical vehicle charging requirements, which are likely already mandated by local governments who would adopt the *Building Carbon Pollution Standard*), including:

- BC Hydro's electrical extension fees policy is still in place, which BSSB rightly notes results in some "*… developers needing to pay significantly higher extension fees (i.e., the cost of new electrical service) for larger electrical services …,"* that *"… can be difficult to predict*;"
- BC Hydro's Tier 2 rates are still in place, which financially penalizes fully electrified buildings;
- There are staffing shortages at BC Hydro in regions such as the Capital Regional District that are delaying the delivery of housing; and
- Although, BC Hydro has indicated to BSSB that they will have the generating capacity to meet the electric vehicle charging and building electrification requirements for new and existing buildings, there are still issues with the capacity of local distribution. We are hearing from our

members that there have been several reports in the Fraser Valley, especially Langley, regarding brownouts and a shortage of electricity. This is exacerbated by the lack of integration between BC Hydro and local governments regarding long range area planning in which decisions are being made about where future growth will be located in communities.

UDI recommends that the Government delay the implementation of the proposed regulatory changes to the 2018 BCBC until here is an understood plan in place to address these hydro infrastructure issues.

These issues also need to be identified in the Best Practices Bulletin. Currently, the only one specifically addressed in the *Bulletin* is the extension fees, and the solutions offered to local governments would be difficult for them to implement. Revising the electrical utility extension fees in utility tariffs is beyond their purview. It is up to the Province, BC Hydro and the BCUC to resolve this problem, as are the issues regarding RNG (see above). It is doubtful that the recommendation to establish a local building electrification fund will be utilized by municipalities as no details are provided on how it would work, and the measure will likely be considered a downloading of Provincial costs and responsibilities onto local governments.

OHCS needs to recommend that local governments discuss with BC Hydro the state of electrical infrastructure in the growth areas of their communities to assess how much load is available before making decisions on GHG reduction targets (and electric vehicle charging standards). Similarly, local governments on go forward basis need to closely work with BC Hydro on Official Community Plans and Area Plans to ensure the utility understands what infrastructure is needed across the municipality and in certain growing areas. This suggestion could also be included in the *Best Practices Bulletin*. Municipalities should also be encouraged to enquire about potential BC Hydro staffing challenges that could slow reviews of new developments as well.

Notice

Despite the efforts of BSSB, we are also concerned about the lack of knowledge in the industry in municipal jurisdictions that have not adopted the *ESC* (especially outside the Lower Mainland and the Capital Regional District) regarding the proposed regulation, which was just released in late September, and its impact on projects. The new Regulation will take immediate effect for those submitting building permit applications. Many will likely be surprised by the new Provincial energy efficiency requirements. – especially those with Part 3 projects

Even in jurisdictions with the *ESC* in place, there is another concern for Part 3 commercial builders the proposed changes to the Provincial energy efficiency requirements, which will immediately increase for Step 2 for office and retail projects in December. Designers and contractors have been using the *ESC* for guidance, and now may have to make adjustments to projects. This is especially problematic for Part 3 builders who have been potentially designing their buildings for years. In addition to delaying the approvals for their projects, there will be added costs to resubmit their designs to achieve the higher energy efficiencies.

While we recognize that this problem occurs with every code cycle, it was not clear how the Province would mesh the *ESC* with Federal codes, and the window between the notice of the changes on September 23rd and the implementation of them in December is a much smaller than previous code cycles.

UDI recommends that implementation of the proposed regulatory changes to the 2018 BCBC be delayed allowing time for designers to adjust projects, and that the Province have an extensive communications outreach program to builders and their design/construction teams about the Provincial energy efficiency requirements.

Best Practices Bulletin/Presentations

More information and direction are needed in the *Best Practice Bulletin* and presentations to guide local governments and builders on other matters. From an industry perspective, ***stronger language is needed than "… local governments are advised …," and clarity is needed regarding what steps will be taken if municipalities do not follow the Bulletin or advice from the Province (and Energy Step Code Council)***. Issues have occurred with some local governments already proceeding now to the highest *ESC* step with zero carbon requirements.

Timing of Municipal Requirements & Instream Protection

The timing of when municipal requirements can be imposed on builders is not clear. It is stated in the *Bulletin* that "*… local governments are advised to notify industry that they will be enforcing them at least 6 months prior to requirements coming into effect*." However, in Episode 5, a longer notice period is endorsed: "*… a six to 12-month notice period for local industry is strongly recommended, depending on the stringency of the carbon requirements being considered*." ***UDI agrees with the longer notice period (12 months) – especially if local governments move to the highest ESC step as well as implementing stringent GHG emission reduction requirements***.[1]

Clarity is also needed regarding how these timeframes are coordinated with municipal consultations with industry. ***Ideally there are extensive discussions with industry prior to local governments determining (and providing notice regarding) what ESC and GHG reduction targets they want to mandate for builders – especially if local governments only need to provide six months notice.***

Although there is stronger language in Episode 5, UDI is also disappointed that BSSB states in the *Bulletin* that "*… a grace period for in-stream applications may be considered*," by local governments for the *Building Carbon Pollution Standard*. ***A stronger recommendation for in-stream protection is needed in the Bulletin – especially for local governments mandating the highest ESC step and/or stringent GHG reductions with only six months notice. Advice needs to also be provided on how long the grace period for in-stream protection should be.***

[1] There may be missing information from Episode 5 as well. It is noted that there will be more information on the timeframes "*… in a little bit*," but no further information is shared.

Relaxation-type Approach

As with the grace period, little positive direction is given to local governments to utilize the relaxation-type approach that many are using now, prior to the proposed Regulation. Under this approach, local governments have offered two options to builders:

- meeting a higher *ESC* step; or
- meeting a low step with a low carbon energy system.

UDI has strongly supported this approach, and we continue to be concerned that this option may not be utilized if local governments are given the ability to mandate any *ESC* step and GHG emission reduction target – without using incentives. The Province is not even encouraging the continued use of the relaxation-type approach. The issue is not addressed in the *Bulletin*. Although an example is provided in Episode 5, it is only noted that the option is still available, and "*Communities could require or incentivize lower carbon construction using the provincial approach*." **UDI recommends that the Province provide stronger encouragement in the *Best Practices Bulletin* for the continued use of the relaxation-type approach and other incentives.**[2]

Municipal Powers Beyond the Building Carbon Pollution Standard

It is stated in Episode 5 that the Province is providing flexibility with the *ESC* and the *Building Carbon Pollutions Standard* with the caveat that local governments "*… would have to use the provincial approach, as any existing technical building requirements that conflict with the BC Building Code will have no force or effect*." However, it is not clear why builders may lose the relaxation-type approach, noted above, when it is stated in Episode 4 that the door is open for local governments to impose other energy efficiency and GHG emissions requirements:

> "*The building carbon pollution standard does not regulate so-called "luxury loads", such as hot tubs, pools, heated driveways. Some local governments may wish to explore other ways of reducing the energy use of these luxury loads, including development permit authorities for energy conservation and GHG reduction*."

Some communities are exploring and even implementing policies to mandate/incent onsite renewable energy, heat pumps, fully electric buildings and embodied carbon reductions - in addition to the *ESC* and the *Building Carbon Pollution Standard*. It is not clear what the limits of municipal powers are regarding these issues. ***UDI recommends further advice be provided in the Best Practices Bulletin on the powers local governments have regarding energy conservation and GHG reductions. This should involve consultation with local governments, the building sector and other stakeholders.***

[2] The Community C scenario in Episode 5 could include more details on how a local government using the relaxation-type approach can continue it in an appropriate manner under the new Regulation.

The Need for more Provincial Supports

It is stated in bold in the Preface of the *Draft Building Carbon Pollution Standards for Part 3 buildings in British Columbia* (the *Metrics Report*) that:

> "*This document is meant to be an initial costing analysis by illustrating whether decarbonizing a hypothetical building is cost effective across climate zones in B.C. This document should not be considered an exhaustive costing study to meet the carbon pollution steps in your area. This analysis is not representative of all buildings in all situations. Local governments and the construction industry should conduct more detailed or specific costing analysis which builds on this initial analysis*."

UDI continues to recommend that the Province conduct the ongoing work to enhance this initial costing analysis[3] with further research and analyses as well as a establishing a monitoring program of what the real costs are when high ESC step and low carbon projects are built. Most local governments, even if the recommended regional approach is utilized (especially outside urban centres), will not have resources or the interest in conducting further analysis in a substantive way. There is also little to no direction in the *Best Practices Bulletin* for local governments to conduct further costing analyses for their areas. It should also not be up to the industry to conduct the analysis in place of regulators, and it is doubtful that estimates from industry reports would sway local decision making on future regulations.

The *Best Practices Bulletin* includes the need for municipalities to *"Seek to understand industry's readiness to implement these requirements*. *In particular, they should seek to understand the local challenges and opportunities to implement low-carbon building systems, especially heat pump space and water heating*." This is important as we have heard that in some jurisdictions the availability of heat pumps is limited. ***However, the Province, again, needs to take the lead with understanding and improving the availability of heat pumps in British Columbia*** especially since new buildings in B.C. will have to be net-zero carbon by 2030 under the *BCBC*, and one of the actions in the *CleanBC Roadmap* is to "*… focus on growing markets for, and speeding up the adoption of, technologies we know are ready for deployment, such as … heat pumps*."[4]

For similar reasons, the Province needs to take a leadership role in ensuring that we have enough trained mechanical contractors and energy advisors across the Province. The issue should also be flagged in the *Best Practices Bulletin* for local governments to review.

The OHCS should also consider working with the Energy Step Code Council and the Local Government Peer Network to develop a model for the thermal conditioning permit proposed in the *Best Practices Bulletin*. Ideally, this approach could be extended to other forms municipalities utilize for the *ESC* and the *Building Carbon Pollution Standard*. This would help achieve the Province's objective of having permitting processes that are "*… simple to follow and administer*," as well as coordinated across local governments and inspection entities.

---

[3] Further suggestions are noted in Additional Comments section below

[4] In the *2018 CleanBC Strategy* there was also a stated desire by 2030 to have 310,000 new residential heat pumps and 53 million m² of commercial floor space heated by heat pumps in the Province.

BSSB (with other Provincial entities) needs to be given the resources to conduct this work and provide supports to local governments, or delaying the implementation of the Building Carbon Pollution Standard Regulation should be considered. These issues are critical given how soon Provincial building carbon requirements will be implemented across the British Columbia.

Provincial and Broader Public Sector (BPS) Buildings

UDI has been a strong supporter of the Province and the Broader Public Sector (BPS) taking a leadership role with their new buildings. As we have stated in the past, this leadership was prevalent when the Leadership in Energy and Environmental Design (LEED) standard was introduced to Metro Vancouver, when the BPS incorporated it in their new buildings. This ensured that the design and construction became familiar with LEED. It also allowed UDI and other organizations to educate their members on LEED case studies to show the benefits of the standard, how to reduce costs and avoid pitfalls.
BC Housing is a leader for its projects with regard to the *ESC* and other green building initiatives, and the Province is also committed to doing more through its *CleanBC Roadmap to 2030*:

- By "*Requiring all new public sector buildings to align with our climate goals beginning with performance standards (2023) and moving to zero-carbon new buildings (2027)*;" and
- With low carbon building materials by "*… supporting the development and implementation of embodied carbon targets for public sector buildings by 2030*," before they are applied to other new buildings.

However, UDI is disappointed that the BPS is still not adequately addressed under the *ESC* regime, when it is being applied across British Columbia. If the Province and the BPS want to show leadership regarding climate change, they should be doing more with their new buildings than the private sector – not less. ***UDI recommends that similar standards for ESC be developed for new BPS buildings as soon as possible***.

Additional Comments

- UDI supports local governments working the District Energy (DE) providers to establish emissions factors for the DE systems because of the language in the *Best Practices Bulletin* that municipalities "*Not establish GHG targets for buildings that cannot reasonably be achieved by buildings compelled to connect to district energy systems*." However, the Province will soon be establishing its own GHG targets for new construction, and it is not clear how these targets will work with emissions factors established by local governments and DE providers. As municipalities such as Burnaby are now considering developing new DE systems, this issue needs to be addressed as soon as possible.

- It is not clear from the episodes and *Bulletin* about whether it is up to the builder or municipality to decide which type of airtightness test is to be used (e.g., Normalized Leakage Area, Normalized Air Leakage Rate or air changes per hour). UDI would prefer that decisions on airtightness testing methods be left to builders.

- In terms of communications, we're pleased that the Province is participating in virtual events such as the UDI webinar on November 2nd as well as holding its own Live Q/A on October 13th. However, these communication efforts need to also occur after the Regulation has been approved. We would also recommend that the Province develop a Q/A document to address questions as they arise at events or through discussions with stakeholders.

- As discussed at the September Energy Step Code Council meeting ***UDI recommends that the OHCS add new episodes to review the findings in the Part 3 and Part 9 technical analyses.*** Our members are also going to want to understand the strategies and solutions they can utilize to reduce costs and risks.

- Further work is needed to address some of the issues that were left unaddressed in the current Metrics *Report*, such as:

    - Heat pump domestic hot water heaters not being modelled in the study;
    - The costs of meeting the higher steps of the *ESC* need to be incorporated with the costs of meeting the steps of the *Building Carbon Pollution standard*, as many municipalities will do both.
    - Costing information for all climate zones (other than 4 and 7a) for office, retail and hotels need to be provided;
    - Costing information for the highest steps for retail and hotels for all climate zones need to be provided, as the GHG reduction targets are more stringent for office and retail, but the incremental costs in the *Report* seem higher;
    - Including more "*Highlights from analysis*" for the various building archetypes; and
    - Providing details on the ten lowest cost incremental capital cost options.[5]

- The *Metrics Report* and the *Best Practices Bulletin* also need to be updated when new costing information is available and key decisions are made, such as the BCUC decision on RNG.

- Although this is not an issue for UDI members, the proposed decarbonization path for the Fort Nelson area, which has a high carbon emitting electricity grid, is not clear. OHCS is proposing a prescriptive path to reduce GHG emissions in new buildings for the area that is supposed to be simple and practical. However, all that is noted under the prescriptive path for the various steps is builders are to decarbonize - space heating; space heating and hot water; or the full building. It is not stated how this would be done and whether there is a cost-effective way of accomplishing this. OHCS may want to consider exempting the Fort Nelson area from the GHG requirements in the proposed Regulation – and potentially future Provincial GHG requirements.

[5] In addition, the base costs need to be included for Step 4 on the High-rise residential table for Climate Zone 4 as well as modelling for electric vehicle charging, which is required by many of the local governments that will be utilizing the *Building Carbon Pollution Standard*. The latter is critical if it increases the Tier 2 rates of buildings and units.

Conclusion

RE: Register: Feb. Energy Step Code Council meeting

Hi Pauline,

Thanks for your message. It would have been nice to have Bob and Kelly there, and alternates are welcome.

Typically Katherine Muncaster from EMLI and Adrian Mohareb from ENV attend. They have not yet RSVP'ed but I can follow up with them. I also heard someone say that CHBA might be meeting with BC Hydro and EMLI separately to discuss electrification issues?

I have emphasized to BC Hydro organizers that high-quality video and audio are important for remote participants. We've chosen a room that is Microsoft Teams-enabled, meaning there are puck-shaped accessory microphones along the conference table to pick up the voices of those seated at the table. It's not the auditorium that past meetings have been held in. There's also a room camera with optical zoom that can pan around the room with a remote.

I will ask in-room participants to bring their laptops and "raise their hands" virtually just like the remote participants so the question queue is accurate and participation is more equal.

My contacts in Hydro say the table can fit 15-16, and if people line the outside of the room we can put in 20-25 (though those seated outside might not have their voices picked up as well).

Basically, our option is smaller room with better hybrid experience (the current room), or larger room with worse hybrid experience (the auditorium).

Please let me know if there are other ways that can make the hybrid experience better so not everyone has to travel far and wide to be there.

Best,
Hugo

Hi Hugo,

The date for this upcoming ESCC meeting is unfortunate, as Bob Deeks and Kelly Reid are both unable to attend. While it would be nice if the date could be changed, we are looking into sending alternates since the electrification discussion is a high priority for our association. Is it possible to confirm whether Ministry staff from EMLI or ENV will be in attendance?

Also, I'm wondering if there's any possibility for a larger room? Having participated in previous hybrid ESCC meetings, the audio quality for remote participants is often challenging and we would be encouraging in-person attendance from our representatives.

Subject: Register: Feb. Energy Step Code Council meeting

Hi, everyone:

The next Energy Step Code Council meeting will be held on Feb. 13. It'll be a hybrid meeting, so in-person attendees can go to 333 Dunsmuir St., Vancouver B.C. Online attendees can use Microsoft Teams.

To participate (either in-person or remote), please register here:
https://teams.microsoft.com/registration/AFLbbw09ikqwNtNoXjWa3A,6HjikdpByEC4GvwbRLE7qg,L_GsbQ0esEaRvXAoiKZSMw,mode=read&tenantId=6fdb5200-3d0d-4a8a-b036-d3685e359adc

If the number of in-person attendees exceeds the room's capacity (it's about 20) I will email them separately to see if anyone could come remotely instead.

As I understand it, the windows don't open but HVAC should work well. Masks/respirators optional but recommended.

Looking forward to it!
Hugo

Hi Hugo,

I appreciate the considerations to improve remote participation, and empathize with the challenges of balancing the hybrid experience.

We currently have two alternates registered for the ESCC meeting who will be joining Joe Hart: Rick Mann, IOM Property Group (HAVAN) and my colleague Carmina Tupe at CHBA BC.

BC Hydro did invite CHBA BC and UDI to a separate meeting to discuss electrification items in advanced of the ESCC meeting. It's encouraging to see the conversation being escalated and moving forward.

Thanks for your (and the BSSB team's) work on this,

Good afternoon everyone!

I'm reaching out to the Energy Step Code Council community to invite you to share your comments and perspectives on the draft recommendations from this exciting research project.

The **R2B** Project "**Realizing Resilient Buildings**: Research on the **Barriers and Enablers for Climate Adaptation and Resilience in the Building Sector in B.C.'s Local Government Context**" is co-funded by the province and BC Housing, and aims at building knowledge and alignment on removing barriers and providing enablers to make it easier and most cost-effective to build low-carbon climate-adapted resilient buildings in B.C.

Your input (received on or before **Friday, February 10th**) will help us refine the recommendations and develop a toolkit. The toolkit will be designed primarily for use by local governments but also for reference by industry and many others who have a role to play. Please feel free to forward this report for input by other relevant parties but keep me posted so I am aware. Note that the consultants are also working on a separate short report that focuses on barriers / enablers specific to Indigenous communities.

We are very grateful for your contribution, and we look forward to your comments.

Thank you, Huy chexw & Hay ce:p q̓ə,
Wilma

To honour the truth, I acknowledge that I live and work on the shared, ancestral and unceded homelands of the hən̓q̓əmin̓əm̓ and Sḵwxwú7mesh-speaking people who have been caring for these lands, along with the waters and all that is above and below, since time immemorial. As a newcomer to the Salish Coast, I am on a journey to reciprocate by working towards reconciling with all our relations here and beyond.

Zach, do we need to discuss this at the ESCC meeting next week?

From: CBHCC Secretary / Secretaire CCHCC <CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca>
Sent: February 2, 2023 9:26 AM
Subject: Seeking input on policy considerations in the National Codes

Le français suit l'anglais

Dear Stakeholder,

The CBHCC is seeking input from stakeholders, experts, code users, and the general public on the draft policy recommendations for developing and implementing greenhouse gas emissions provisions in the National Model Codes before finalizing the policy framework. The draft policy recommendations are available on the website here: https://cnrc.teamwork.com/app/tasks/37694438

The draft policy recommendations will be provided to the relevant standing committee(s) for discussion.

- Consultation wave 1 begins on February 3, 2023 and ends on March 30, 2023.
- Consultation wave 2 is planned to begin in March 2023 and end in May 2023. Note that this consultation period is subject to change as the CBHCC is still working on the draft policy recommendations for wave 2.

Instructions for providing input

To provide input on the policy recommendations, please follow the steps below:

1. Download the policy recommendations on TeamWork here: https://cnrc.teamwork.com/app/tasks/37694438
2. Submit comments to the CBHCC Secretary by email and attach any supportive material: CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca
3. Your comments will be reviewed by the Working Group on Climate Change Mitigation who will report to the CBHCC.

****

Aux parties intéressées,

Le CCHCC souhaite obtenir l'avis de parties intéressées, d'experts, d'utilisateurs des codes et du grand public sur les recommandations stratégiques provisoires en vue de l'élaboration et de la mise en œuvre de dispositions relatives aux émissions de gaz à effet de serre dans les codes modèles nationaux avant de parachever le cadre stratégique. Les recommandations stratégiques provisoires sont disponibles sur TeamWork à partir du lien suivant : https://cnrc.teamwork.com/app/tasks/37694438

Les recommandations stratégiques provisoires seront fournies aux comités permanents concernés à des fins de discussion.

- La première vague de consultation commence le 3 février 2023 et se termine le 30 mars 2023.
- Il est prévu que la deuxième vague de consultation commencera en mars 2023 et se terminera en mai 2023. Il est à noter que cette période de consultation pourrait être modifiée puisque les travaux du CCHCC sur les recommandations stratégiques provisoires sont en cours.

Soumettre des commentaires

Pour donner votre avis sur les recommandations stratégiques, veuillez suivre les étapes suivantes :

1. Télécharger les recommandations stratégiques sur TeamWork à partir du lien suivant : https://cnrc.teamwork.com/app/tasks/37694438
2. Soumettre vos commentaires au secrétariat du CCHCC par courriel et joindre tout document justificatif : CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca
3. Vos commentaires seront examinés par le GT-ACC, qui en fera rapport au CCHCC.

Consultation on Draft Policy Framework for Climate Change Mitigation

Background

The Canadian Board for Harmonized Construction Codes (CBHCC) has agreed that the National Model Codes include an objective for greenhouse gas (GHG) emissions to enable provincial and territorial regulation, and this objective should be incorporated into the 2025 codes. This objective would include regulation of both operational and embodied carbon with operational being addressed in the 2025 codes and embodied carbon in the 2030 codes.

In the initial stages of developing this policy framework, provinces and territories (PTs) noted a number of elements for consideration, including:

1. principles and factors that all PTs agree on (e.g. ultimate goal and net zero emission definition, emission factors);
2. the need to accommodate the breadth of PT fuel policies, plans and individual PT targets, and coordinate with elements that extend beyond the boundary of the code;
3. regional differences (e.g. ability to fuel switch, availability of low embodied carbon materials in Northern and remote areas);
4. the boundary of operational emissions (e.g. address scope 1 only? Or address both scope 1 and scope 2 emissions?)2 and embodied emissions (i.e. determine standard method of analysis);
5. impact on affordability (e.g. interplay between energy efficiency and GHG requirements with respect to operational GHG emissions);
6. development and availability of data (e.g. better granularity of emission factors for operational carbon, better availability of Environmental Product Declarations for embodied carbon, standard method of analysis for embodied carbon);
7. implementation approach (e.g. phased approach, flexible approach to address specific needs of PTs);
8. adoption and implementation considerations including market readiness, training, capacity-building (monitoring, reviewing and enforcement), and developing tools to enable PTs to harmonize.

Prior to the transition to the new Harmonized Code Development System, the Canadian Commission on Building and Fire Codes (CCBFC) agreed to ask the standing committees to start working on developing technical requirements that would address GHG emissions in parallel to the ongoing policy work to:

a. address the 8 policy elements identified by PTs, and
b. develop language for a new GHG objective.

A federal, provincial, and territorial Working Group on Climate Change Mitigation (WG-CCM) was struck to consider the 8 policy elements identified by PTs. The 8 policy elements were triaged based on their relevance to the parallel technical work by the standing committees.

Triage of Policy Elements

The CBHCC agreed to address the policy elements as follows:

First wave of policy elements (included in this consultation package):

- ✓ Policy element 1: principles and factors that CBHCC members agree on
- ✓ Policy element 4: the boundary of operational emissions and embodied emissions
- ✓ Policy element 7: implementation approach

Second wave of policy elements (future consultation):

- Policy element 2: the need to accommodate the breadth of PT fuel policies, plans and individual PT targets, and coordinate with elements that extend beyond the boundary of the code
- Policy element 3: regional differences
- Policy element 5: impact on affordability
- Policy element 6: development and availability of data
- Policy element 8: adoption and implementation considerations including market readiness, training, capacity-building, and developing tools to enable PTs to harmonize

Consultation Periods

The CBHCC is seeking input from stakeholders, experts, code users, and the general public on the draft policy recommendations before finalizing the policy framework. The draft policy recommendations are available on TeamWork here: https://cnrc.teamwork.com/app/tasks/37694438

The draft policy recommendations will be provided to the relevant standing committee(s) for discussion.

Consultation wave 1 begins on February 3, 2023 and end on March 30, 2023.

Consultation wave 2 is planned to begin in March 2023 and end in May 2023. Note that this consultation period is subject to change as the CBHCC is still working on the draft policy recommendations.

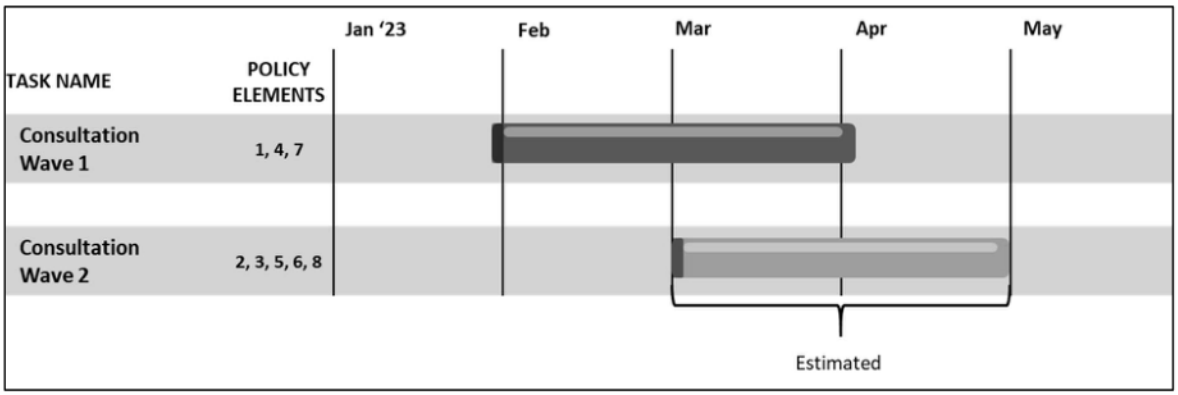

Figure 1: Estimated timeline for wave 1 and 2 consultation periods

Instructions for providing input

To provide input on the policy recommendations, please follow the steps below:

1. Download the policy recommendations on TeamWork here: https://cnrc.teamwork.com/app/tasks/37694438
2. Submit comments to the CBHCC Secretary by email and attach any supportive material: CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca
3. Your comments will be reviewed by the Working Group on Climate Change Mitigation who will report to the CBHCC.

RE: Seeking input on policy considerations in the National Codes

Subject: Seeking input on policy considerations in the National Codes

Le français suit l'anglais

Dear Stakeholder,

The CBHCC is seeking input from stakeholders, experts, code users, and the general public on the draft policy recommendations for developing and implementing greenhouse gas emissions provisions in the National Model Codes before finalizing the policy framework. The draft policy recommendations are available on the website here: https://cnrc.teamwork.com/app/tasks/37694438

The draft policy recommendations will be provided to the relevant standing committee(s) for discussion.

- Consultation wave 1 begins on February 3, 2023 and ends on March 30, 2023.
- Consultation wave 2 is planned to begin in March 2023 and end in May 2023. Note that this consultation period is subject to change as the CBHCC is still working on the draft policy recommendations for wave 2.

Instructions for providing input

To provide input on the policy recommendations, please follow the steps below:

1. Download the policy recommendations on TeamWork here: https://cnrc.teamwork.com/app/tasks/37694438
2. Submit comments to the CBHCC Secretary by email and attach any supportive material: CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca
3. Your comments will be reviewed by the Working Group on Climate Change Mitigation who will report to the CBHCC.

Aux parties intéressées,

Le CCHCC souhaite obtenir l'avis de parties intéressées, d'experts, d'utilisateurs des codes et du grand public sur les recommandations stratégiques provisoires en vue de l'élaboration et de la mise en œuvre de dispositions relatives aux émissions de gaz à effet de serre dans les codes modèles nationaux avant de parachever le cadre stratégique. Les recommandations stratégiques provisoires sont disponibles sur TeamWork à partir du lien suivant : https://cnrc.teamwork.com/app/tasks/37694438

Les recommandations stratégiques provisoires seront fournies aux comités permanents concernés à des fins de discussion.

- La première vague de consultation commence le 3 février 2023 et se termine le 30 mars 2023.
- Il est prévu que la deuxième vague de consultation commencera en mars 2023 et se terminera en mai 2023. Il est à noter que cette période de consultation pourrait être modifiée puisque les travaux du CCHCC sur les recommandations stratégiques provisoires sont en cours.

Hi Hugo,

Can you give me an ETA on when the BC Hydro document will be shared with the ESCC members? We're on a call with UDI and CHBA and they are wondering how soon they will be able to see it.

Thanks,

Tom

Subject: BC Hydro Document for the ESCC
Importance: High

Hi Hugo,

Can you please share the attached document with the members of the Energy Step Code Council. It is intended to help prepare them for next weeks' ESCC meeting and Hydro's 90 minute presentation? We had committed to getting this to the Council members a week prior to the Feb 13th meeting so the sooner it can go out the better. When sharing can you please remind members of the protocol for using materials shared via the ESCC. I believe it is something to the effect of using it to inform their members or something to that effect.

I should have a slide deck to you for Monday's presentation by EOD Wednesday (Feb 8).

Cheers,

Tom

Bullet points of other considerations - EE and GHGs

From: Williams, Scott B OHCS:EX <Scott.B.Williams@gov.bc.ca>
To: May, Zachary OHCS:EX <Zachary.May@gov.bc.ca>
Sent: February 7, 2023 2:01:30 PM PST

Hey Zac,

As we discussed last week, please see below a few items in relation to EE and GHGs that may come up in tomorrows meeting with Minister Kahlon:

Energy Efficiency

- Small homes in cold climates and cost disparities in comparison to larger homes - a methodology was developed through the research project (Focal Engineering and Bernhardt) to reduce cost burden through relaxations in metrics – refinement may be needed. CHBA has been contacted to look into the data base they have of real projects to help verify approach.
- Log Homes – research completed to verify that there are many ECM options to meet Step 3 for the homes studied. Changes to the BCBC 2023 will be looked at in more detail.

GHGs

- GHGs and supplemental heat for homes in cold climates – Some concerns were raised regarding meeting the more stringent GHG metrics for homes in cold climates given that they may be required to use more supplemental heat when employing heat pump technology. This has been somewhat addressed by the fact that back-up heat is excluded, so a secondary system could be used. Also, this is opt-in initially which give some degree of latitude to LGs as to how to enforce the GHG metrics, and have the ability to take a more relaxed approach. As this regulation evolves, we can further identify the issues and work towards solutions prior to mandatory requirements.
- As raised by UDI, more comprehensive costing analysis should be undertaken with revisions to the Metrics Report. Also, less GHG intensive technologies should be looked at as part of the expanded study (ie HP DHW). We will be discussing additional analysis and research with the SCC on Monday.
- Further development of the NBC/NECB regarding GHGs will help to inform the evolution of this standard.

Ongoing work to support EE and GHG changes in code:

- Part 9 and Part 3 calculators along with supporting educational material
- Current discussions with partners such as BCHousing and the Step Code Council to address, collaboratively, any training, training materials, studies etc
- Opportunities through the National Code Acceleration Fund

Hello, members of the Energy Step Code Council:

We look forward to meeting this coming Monday, Feb. 13. I wanted to provide some logistical updates and meeting materials (attached).

In-person registration is now closed as we have reached capacity for the meeting rooms at BC Hydro. However, we can still accept more virtual attendees.

We have booked two meeting rooms to accommodate in-person attendees. **Attendees may go to either Meeting Room 1 on the 13th floor or Meeting Room 1 on the 7th floor.** Zac and I will be on the 13th floor. I encourage any attendees who have travelled far to come here to go to the 13th floor, and anyone who's primarily listening to go to the 7th floor. But, as long as you're seated at a conference table, the mics will pick you up and you may participate fully no matter which room you're in.

A selection of sandwiches, year-round salad and coffee/tea will arrive at about 11:45 a.m. at the 13th floor conference room. It will be provided by the Dirty Apron (read the PDF menu) and should accommodate the food preferences/requirements indicated by guests on the registration form. We can all mingle there during the lunch hour.

A few reminders:

- **For in-person attendees:** bring your laptop, tablet or phone to "raise your hand" during the meeting and read questions from remote participants. Mute your mic and speakers to eliminate audio feedback.
- **For all attendees:** if you have questions about electrical extension issues you wish to ask BC Hydro staff, please email them to me at hugo.wong@gov.bc.ca **before noon on Thurs. Jan. 9** so I can pass them on and they can do any technical research if required.

I'll send a more fulsome agenda and other materials soon. In the meantime, please review the attachments. The BC Hydro package should remain within your organizations and are not to be shared publicly.

Hugo

Improving customer connections for a cleaner future

Prepared for the BC Energy Step Code Council

February 2023

BC Hydro
Power smart

INTRODUCTION

This document is intended to provide background information ahead of BC Hydro's presentation to the BC Energy Step Code Council on February 13, 2023, where we'll present and take questions on five key areas of our business: electricity supply, extension policy, distribution capacity, connection timelines, and distribution standards.

At that meeting, the Council will be considering implementation approaches for the forthcoming Carbon Pollution Standard. BC Hydro's ability to connect new customers quickly and efficiently is a key part of successful implementation of the Standard.

We understand that we have an important role to play in meeting the province's climate and electrification goals. After reading this document and meeting with us, we're confident that you'll have a better understanding of our ability to support the Carbon Pollution Standard and other future electrification through our plentiful clean electricity resources. You'll also understand the changes we're actively working on to improve our customer connections process, including:

- Improving the end-to-end customer experience, including better communication, more cost certainty, and reduced project timelines.
- Advancing our infrastructure so we are ready for connection requests.
- Increasing our capacity to support higher number of connections each year.

1. OUR ROLE IN MEETING THE PROVINCE'S CLIMATE GOALS

In B.C., we're seeing clear evidence of the impacts of a changing climate, including more intense storms, more alternating periods of drought and floods, and more forest fires. A key driver of climate change is energy use, specifically the burning of fossil fuels.

B.C. has legislated targets for reducing greenhouse gas emissions: 40% below 2007 levels by 2030, 60% by 2040, and 80% by 2050. BC Hydro has a key role to play in meeting these ambitious and necessary climate change goals. The electricity we generate is 98% clean and renewable, however, it represents less than 20% of the energy used in B.C., with 10% coming from biomass and the remaining 70% from fossil fuels.

In fall 2021, we released our Electrification Plan that outlines how we plan to invest over $260 million to advance electrification in the building, transportation, and industrial sectors to help meet the province's climate targets.

Electrification means replacing technologies that are powered by fossil fuels like gasoline, diesel, and natural gas with alternatives that use electricity. This includes switching to an electric vehicle, replacing gas furnaces with electric heat pumps, and replacing diesel equipment used by industries with electric equipment.

At the same time, we need to continue to encourage energy efficiency so that we make smart use of our clean electricity and grid. Combining the Energy Step Code and Carbon Pollution Standard is a great example of this integrated approach.

2. SUFFICIENT SUPPLY

We have 30 hydroelectric plants in the province and in the coming years, we'll be adding another large hydroelectric facility to our system.

When it comes online, Site C will provide British Columbians with an additional 1,100 megawatts of firm capacity and produce about 5,100 gigawatt hours of clean electricity each year. That's about 8% of our current supply, or enough to power nearly half a million homes or 1.7 million electric vehicles per year.

While we're confident that we have enough power to meet the medium-term electrification needs of the province, we're carefully monitoring demand trends to understand when new clean electricity generation resources will be needed. Fortunately, B.C. has excellent potential for generating more clean electricity through wind and solar, while having our hydroelectric facilities continue to serve as the backbone of our system.

Our hydroelectric facilities can ramp up or ramp down quickly in response to changing demand and act like big batteries by storing potential energy (water) behind the dam. This is particularly important as we consider a future with more wind and solar, which are not

always available when you need them. We anticipate that batteries will also be an important part of our future grid to manage peak demands at the utility, distribution, and customer level.

3. DISTRIBUTION EXTENSION POLICY

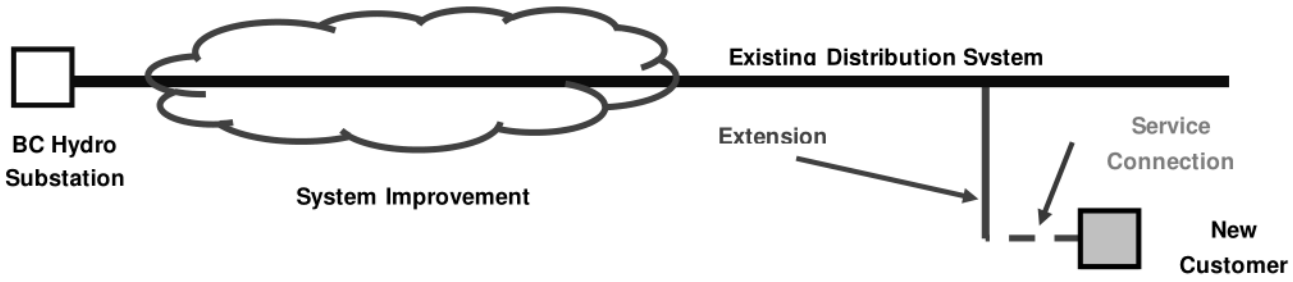
Our current Distribution Extension Policy has been in place since 2008 and outlines the responsibilities of both the customer and BC Hydro when it comes to connecting new or increased load on our distribution system. We're currently reviewing the policy and assessing options for updating it to ensure it best meets the needs of us and our customers. Over the coming months, we'll be engaging more broadly with customers to gather feedback on potential updates to the policy.

The following section provides background information on our existing extension policy, issues raised by customers about the policy, and three potential options we're considering for updating it.

3.1 Extension Policy 101

Our current Extension Policy is outlined in Section 8 of our Electric Tariff. The Tariff describes the responsibilities of BC Hydro and our customers when a distribution extension is required to serve new or increased customer load. Our current policy is based on the principle of cost causation, i.e., allocating the costs of new or upgraded infrastructure to those who first initiate them.

An example of a distribution extension is illustrated below:



As per Section 8, infrastructure requirements to facilitate new connections are defined into three main categories:

- **Service connection:** This is typically the last section of wire or cable that connects a customer to the distribution system.
- **Extension:** An "extension" is an addition to, or the increased capacity, of BC Hydro's electric distribution system that's required to serve a new or increased customer load. The extension is generally the infrastructure required to connect a customer with the closest point of the distribution system that will serve the load. Loads far away from the existing system will have higher extension costs as more infrastructure has to be constructed to connect the customer.
- **System improvement costs:** These system upgrades are typically upstream from the extension and address local capacity constraints on the distribution system. System improvement needs are assessed when service is requested by the customer and, if applicable, are only allocated for load requests that are larger than 500 kVA. Since each assessment depends on the state of the existing system at the time of request, any load can trigger the need for system improvement. However, the larger the load being requested, the higher the probability that it will trigger the immediate need for a system improvement because each distribution feeder has a finite capacity.

As discussed above, a customer that requests new load or an addition to an existing load, is allocated the cost of their service connection, extension, and any applicable system improvement costs that are required to service this request. In recognition of the incremental future revenue to BC Hydro of the new or increased load and to help offset customer connection costs, we contribute $1,475 per single-family dwelling added, and $200 per kilowatt of the estimated billed demand from a commercial customer on the General Service Rate.

the current policy outlines that the "pioneer customer" can apply to contributions of subsequent connecting customers. A more detailed explanation and illustration can be found in this brochure [PDF].

The policy outlines that if the pioneer customer pays for the distribution system extension and then a subsequent customer(s) connects to that extension within five years, the pioneer customer can apply for a partial extension fee refund.

3.2 Feedback on our current Extension Policy

Over the years, we've received feedback from customers about our current Extension Policy. The two main concerns we've heard are around the cost uncertainty and "free riders", which we discuss in more detail in this section.

Free riders

The current policy assigns the costs related to extensions and system improvements to the pioneer customer, i.e., the customer who's project first initiates the required upgrades, offset by BC Hydro contributions. To the extent these upgrades result in additional capacity, subsequent customers can benefit from the expanded system capacity without paying for it. While the extension policy allows the pioneer customer to recover some costs from future customers, in practice, this hasn't been effective in addressing this issue.

Cost uncertainty

Customers applying to connect to our system want more upfront certainty of the costs associated with their connection. The issue of cost uncertainty can be broken down into the following areas:

- **Unpredictable extension costs**: In general, greenfield developments far from existing infrastructure will cost more than brownfield developments or greenfield developments adjacent to existing loads because the distribution system must be extended further to reach these development sites.
- **Unpredictable system improvement costs:** It's difficult for any customer to predict associated system improvement costs. These costs depend on many factors such as size of load, types of upgrades required, and area capacity, which aren't directly visible to the customer and are highly location dependent.
- **Non-connection-related costs:** Costs to comply with municipal requirements or the conditions of a development permit, such as undergrounding existing overhead infrastructure can also add to costs. If the overhead infrastructure being converted to underground also serves adjacent customers, costs can escalate quickly because additional system changes may be needed for us to continue to serve existing adjacent customers. As this additional infrastructure is over and above what we require to provide service to the location, the added cost isn't eligible to be offset by the Extension Tariff's revenue contribution provision.

3.3 Alternative Extension Policy options

Given the issues identified above, we're in the process of reviewing our existing Extension Policy and assessing options to update it. Based on feedback received to date and the results of our jurisdictional review, we've explored and modelled the following four options:

1. Update our maximum contribution towards an extension.
2. Update our contribution and simplify the recovery of system improvement costs.
3. Update our contribution and simplify the recovery of all connection costs (extension and system improvements).
4. No connection fees.

Option 1: Increasing BC Hydro's financial contribution

BC Hydro's contribution towards customer connection costs is currently set at $1,475 per single-family dwelling and $200 per kilowatt of estimated billing demand for commercial customers on the General Service Rate. We're in the process of updating our cost assumptions and expect that this will result in an increase to our financial contribution. A higher financial contribution from us would then increase the number of customers whose extension fees are covered, and reduce the amount paid by those customers that don't have their costs completely covered.

This option will decrease customer connection costs by providing all new customers with an increased utility contribution to the overall project cost. However, it doesn't address the free rider and the cost unpredictability issues discussed above.

Option 2: Increasing BC Hydro's contribution and introducing average system improvement costs

In addition to updating our financial contribution, this option recognizes that all customers contribute towards the need for system improvements and includes an averaged system improvement cost recovery approach that would spread these costs more evenly across all new customers.

As a first step, we'd aggregate the cost of all system improvement costs incurred over a predefined period. It would then calculate an average customer system improvement fee. For residential loads, the fee would be on a per single-family dwelling basis. For general service customers, the fee would be on a kilowatt basis. A new customer would then be charged a fee proportional to the load being requested by that customer (i.e., small customer loads would be assessed smaller fees and larger loads would be assessed proportionally larger fees). In addition, we'd provide a financial contribution that's proportional to the customer load.

An added benefit to customers of this averaged system improvement cost recovery structure is that we'd have greater flexibility to pre-build infrastructure in regions of high growth to help speed up customer connections in those regions.

Option 2 will result in a higher financial contribution from us and help address the free rider and cost predictability issues for the system improvement component. However, these issues would still persist for the extension cost component.

Key question: Through upcoming customer engagement, we'll be asking for customer input on a reasonable and acceptable limit to the scope of infrastructure eligible under this option. For example, in a scenario where a small load requires several million dollars of system improvement costs, is it appropriate to only recover the $/kW system improvement fee which, when the fee is reviewed and recalculated, will cause the overall fee to increase.

Option 3: Increasing BC Hydro's contribution and introducing average system improvement and extensions costs

Building on Option 2, rather than charging each customer their own individual extension cost, all customers that request new or increased service are instead assessed and charged a unitized connection fee based on requested load (per single-family dwelling for residential and per kilowatt for commercial loads).

Option 3 embraces a more postage stamp approach to customer connections. A unitized connection fee would help to provide more predictable costs for customers, allowing them to better estimate their overall costs. This option also addresses the free rider issue as it removes the cost causation principle.

Key question: Through upcoming customer engagement, we'll ask for customer input on reasonable and acceptable limits to the scope of infrastructure eligible under this option. Similar to Option 2, we want customer feedback on whether thresholds for participation in this option should be established based on factors such as the distance and/or load of an extension request. For example, if this option incents increased quantities of high-cost connections to proceed, the unitized connection fee will need to be increased to recover those costs.

Option 4: No connection fees

This option would have our existing ratepayers pay for all fees related to new connections. We strongly believe in keeping our rates low for our existing customers is important and the principle of cost causation at a high level is appropriate and reasonable. Therefore, this option isn't under serious consideration.

4. CAPACITY

We have around 1,500 distribution feeders and about 230 substations serving our distribution customers. In most areas we have sufficient capacity to connect new customers in a reasonable timeframe. However, there are certain high growth areas where load is

increasing faster than the time required to complete distribution capital projects to add capacity. Depending on load, location, and timing of a customer project, distribution system capacity may not be immediately available.

We've undertaken a number of measures to reduce potential delays caused by localized capacity constraints, including:

- Updating our feeder loading planning criteria in high growth areas to increase the capacity available for new customers and advance the construction of new feeders. In the past five years, we have constructed 35 new distribution feeders and have 18 new distribution feeders under construction.
- Advancing major underground egress corridors projects to establish the underground infrastructure required to serve upcoming load growth. There are approximately 130 km of new major underground distribution civil infrastructure under construction. Building this infrastructure in advance will help to reduce the timeline to connect new customer projects.
- Ensuring spare feeder positions are available in high growth area substations to enable quick deployment of new feeders for large customers. We have increased our distribution capital budget by $100 million for Fiscal 2024 to help accelerate construction of new distribution feeders and duct banks.
- Implementing feeder level Demand Side Management to make expanded use of our existing available capacity.
- Advancing voltage conversion work to 25 kV in 12 kV areas. This doubles feeder capacity and enables larger secondary services by increasing the largest pad mount transformer size available for secondary services from 500 kVA to 1,500 kVA. Voltage conversion projects in Richmond, Surrey, Port Coquitlam, and Langley are nearing completion. There are also voltage conversion projects underway in Victoria, North Vancouver (Capilano), North Burnaby, Coquitlam, and Downtown Vancouver.
- Offering capacity feasibility reviews for major customers to provide early indication to our customers on the availability of capacity and the expected work scope and timelines.

Even with all these activities, customers and developers are always encouraged to engage with us early us to provide more time to plan and build the required infrastructure. The earlier a customer applies for service, the better chance we have of meeting customer expectations for timelines.

5. CONNECTION TIMELINES

We complete around 27,000 connections each year that don't require design work. In these cases, we have very fast connection times, averaging seven days once permits are received. The ability to apply for these fast service connections and to check their status using an online portal has been welcomed by contractors and customers.

Despite these improvements, we've heard from some customers that our connection timelines need to improve. More specifically, connection delays are creating frustration and challenges for customer projects and a general lack of consistent communication from us makes it difficult for customers to plan accordingly.

The timeline challenges we're experiencing are with more complex projects that require the work of our designers in 29 local district offices around the province. We complete around 4,800 of these types of connections each year.

Over the last two years, an increase in the number of connection requests for high-complexity projects, and staffing challenges have contributed to longer timelines.

We're committed to making connection timelines shorter and improving our communications with customers to make it easier for them to plan the critical steps of their projects that rely on the timing of these connections. To do this, we're making changes to our policies and procedures, which we provide more detail on below.

5.1 Resourcing and training

Achieving a more appropriate staffing level and the continued strategic use of our contractor resources will improve our ability to meet our customers' connection needs in a timely manner.

Over the past year, we've increased our designers and customer connections staffing at local offices across the province by over 50 people. We're focusing on training a high number of new hires.

5.2 Improving our end-to-end process

We're committed to making our end-to-end design process more efficient. Our analysis of the design process and the prioritization of recommended solutions was completed in December 2022. The implementation of these solutions has been ongoing since January 2023.

Design Lite was one of the key streamlined processes identified through our design services strategic review. The program reduces design effort for simple projects, helping to free up time for our designers to focus on more complex, higher risk projects thereby reducing customer connection timelines. The streamlined process for these less complex projects is already resulting in shorter design timelines for projects that meet the criteria and are able to be included. Provincial rollout for the Design Lite process has started and will be complete by the end of this year.

For specialized connection requests we're creating a new work delivery model with specialized teams and project managers. For example, we now have a specialized team in place for telecom carrier connections and are expanding the scope of our EV connection delivery team provincially. These new delivery models will reduce customer connection timelines and improve customer service for specialized connection requests.

5.3 Communications and customer experience

We recently implemented a new customer intake process, including customer onboarding and technical information gathering. By improving the quality of project and technical information we receive through this process, our designers can initiate and complete design work sooner. Experienced customers and contractors who are familiar with the process and the project information requirements will move through the intake process more quickly without additional wait times. Customers requiring a technical discussion with a designer will be referred to a local design office without delay. Our provincial rollout of our new customer intake process will be complete by the end of March 2023.

We're also actively updating available information and guidance for customers on our website. Increasing the availability of self-serve information on our website will help customers to find the information they need for their projects more easily and, in many instances, will answer their questions without the need to contact their designer. These web-based improvements and information packages are being developed in parallel and are planned to be in use starting in September 2023.

Starting in April 2023, we'll begin a pilot to introduce scheduled communication with our customers. Through this service, a representative will proactively reach out to customers if there's a change in planned field work. This will better inform customers of impacts to their schedules without them having to reach out to a field crew or designer. We're aiming to roll this out province wide by the end of the year.

6. DISTRIBUTION STANDARDS

Another concern customers have raised related to customers connections is our use of specific distribution standards. More specifically, customers have told us that our requirements should align more with industry standards where practical, and that we need to listen more to the ideas that customers bring forward for improving our existing standards.

We know that clear service connection requirements make it easier to get the job done right the first time. This is why we're continually reviewing and updating our standards to make it easier for customers to advance their projects. For example, last year we introduced several new standards, including:

- Standards for underground service connections that align the requirements for trench base and cover on private property with the BC Electrical Code. Customers can now use the same base and cover material for BC Hydro and BC Electrical Code work done on private property.
- Improved details for standalone kiosks and pedestals in response to growing customer demand.

- Standards for large secondary services align with industry products and CSA C22.2 standards.

As for upcoming updates and standards, these include the new 320 A service to support growing loads. This service will serve a 200 A panel plus a 125 A panel. The 320 A service is planned for release by summer 2023, subject to the availability of 320 A meters and sockets. The new 320 A service size will support customers to connect growing loads.

Many of the changes in standards listed above are the direct result of customer feedback we've received. We're committed to continuing to engage with customers, act on feedback, and communicate when our standards are updated. For example, we're currently seeking customer feedback on other topics, including gravel requirements on public property and our impact on boulevard allowances/widths.

Customers can also opt in to be notified when new or revised standards are released. Recently updated standards can also be found at bchydro.com/distributionstandards.

Finally, in addition to hearing and sharing information directly with our customers, we're actively engaging with industry groups including the Canadian Home Builders Association of BC, the Electrical Contractors Association of BC, municipalities, Technical Safety BC, and equipment manufacturers.

7. CONCLUSION

As noted in the introduction, this document is intended to provide background information ahead of a presentation to the members of the BC Energy Step Code Council on February 13, 2023.

In this document we've provided information on six areas of our business, including electrification, supply, extension policy, distribution capacity, connection timelines, and distribution standards, that are particularly relevant to the new construction sector.

We look forward to answering questions and sharing discussion with the Energy Step Code Council, as we work together towards successful implementation of the Carbon Pollution Standard.

Consultation on Draft Policy Framework for Climate Change Mitigation

Background

The Canadian Board for Harmonized Construction Codes (CBHCC) has agreed that the National Model Codes include an objective for greenhouse gas (GHG) emissions to enable provincial and territorial regulation, and this objective should be incorporated into the 2025 codes. This objective would include regulation of both operational and embodied carbon with operational being addressed in the 2025 codes and embodied carbon in the 2030 codes.

In the initial stages of developing this policy framework, provinces and territories (PTs) noted a number of elements for consideration, including:

1. principles and factors that all PTs agree on (e.g. ultimate goal and net zero emission definition, emission factors);
2. the need to accommodate the breadth of PT fuel policies, plans and individual PT targets, and coordinate with elements that extend beyond the boundary of the code;
3. regional differences (e.g. ability to fuel switch, availability of low embodied carbon materials in Northern and remote areas);
4. the boundary of operational emissions (e.g. address scope 1 only? Or address both scope 1 and scope 2 emissions?) and embodied emissions (i.e. determine standard method of analysis);
5. impact on affordability (e.g. interplay between energy efficiency and GHG requirements with respect to operational GHG emissions);
6. development and availability of data (e.g. better granularity of emission factors for operational carbon, better availability of Environmental Product Declarations for embodied carbon, standard method of analysis for embodied carbon);
7. implementation approach (e.g. phased approach, flexible approach to address specific needs of PTs);
8. adoption and implementation considerations including market readiness, training, capacity-building (monitoring, reviewing and enforcement), and developing tools to enable PTs to harmonize.

Prior to the transition to the new Harmonized Code Development System, the Canadian Commission on Building and Fire Codes (CCBFC) agreed to ask the standing committees to start working on developing technical requirements that would address GHG emissions in parallel to the ongoing policy work to:

a. address the 8 policy elements identified by PTs, and
b. develop language for a new GHG objective.

A federal, provincial, and territorial Working Group on Climate Change Mitigation (WG-CCM) was struck to consider the 8 policy elements identified by PTs. The 8 policy elements were triaged based on their relevance to the parallel technical work by the standing committees.

Triage of Policy Elements

The CBHCC agreed to address the policy elements as follows:

First wave of policy elements (included in this consultation package):

- ✓ Policy element 1: principles and factors that CBHCC members agree on
- ✓ Policy element 4: the boundary of operational emissions and embodied emissions
- ✓ Policy element 7: implementation approach

Second wave of policy elements (future consultation):

- Policy element 2: the need to accommodate the breadth of PT fuel policies, plans and individual PT targets, and coordinate with elements that extend beyond the boundary of the code
- Policy element 3: regional differences
- Policy element 5: impact on affordability
- Policy element 6: development and availability of data
- Policy element 8: adoption and implementation considerations including market readiness, training, capacity-building, and developing tools to enable PTs to harmonize

Consultation Periods

The CBHCC is seeking input from stakeholders, experts, code users, and the general public on the draft policy recommendations before finalizing the policy framework.

The draft policy recommendations will also be provided to the relevant standing committee(s) for discussion.

Consultation wave 1 begins on February 6, 2023 and end on March 30, 2023.

Consultation wave 2 is planned to begin in March 2023 and end in May 2023. Note that this consultation period is subject to change as the CBHCC is still working on the draft policy recommendations.

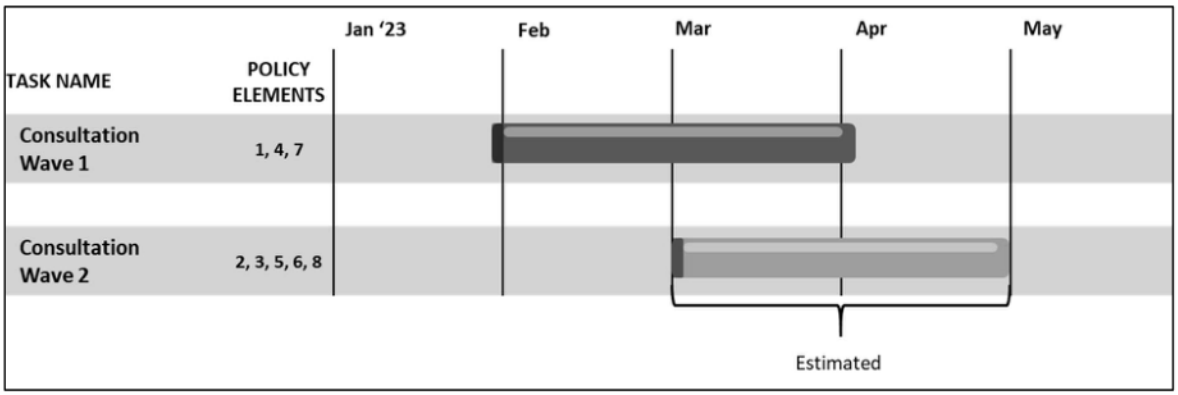


Figure 1: Estimated timeline for wave 1 and 2 consultation periods

Instructions for providing input

To provide input on the policy recommendations, please follow the steps below:

1. Download the policy recommendations here: CBHCC Policy Recommendations for consultation
2. Submit comments to the CBHCC Secretary by email and attach any supportive material: CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca
3. Your comments will be reviewed by the Working Group on Climate Change Mitigation who will report to the CBHCC.

Policy Considerations for Developing and Implementing Greenhouse Gas Emissions Provisions in the National Model Codes

DRAFT VERSION FOR STAKEHOLDER CONSULTATION

Introduction

This paper identifies and examines policy considerations related to the development and implementation of code provisions related to a greenhouse gas (GHG) emissions objective for new houses and buildings in Canada ("GHG emissions codes"). Draft policy positions reviewed by the Canadian Board for Harmonized Codes (CBHCC) are presented, which will serve to inform code development.

An updated version of this paper will include the following, along with any additions to existing sections:

- interplay of other FPT policy and programs related to GHG emissions
- regional differences
- impact on affordability
- development and availability of data, and
- adoption and implementation considerations including market readiness, training, capacity-building, and developing tools to enable PTs to harmonize.

Background

The National Model Codes currently contain an energy efficiency objective and related requirements for the design and construction of new buildings and houses. In the 2020 editions of the National Energy Code of Canada for Buildings (NECB) and National Building Code of Canada (NBC), energy efficiency tiers were introduced, containing measures that progressively increase energy efficiency and reduce the amount of energy needed to operate a building.

However, the National Model Codes do not presently address the type or quality of energy source used by buildings and houses nor do they address embodied GHG emissions.

In November 2022, the CBHCC adopted the direction set by Canadian Commission on Building and Fire Codes, including:

- developing objective(s) to address GHG emissions for inclusion in the 2025 National Model Codes;
- developing proposed technical requirements related to operational GHG emissions for inclusion in the 2025 National Model Codes;
- developing proposed technical requirements related to embodied GHG emissions for inclusion in the 2030 National Model Codes; and
- undertaking policy work, and objective and technical development in parallel.

Draft Policy Positions

Definitions

The CBHCC recommends the following working definitions be used to guide the development of code requirements:

A **net zero emissions building or house** has minimal operational and embodied GHG emissions, with remaining emissions offset through various mechanisms.

A **zero or near zero operational emissions building or house** is designed and constructed to minimize or eliminate operational GHG emissions through energy efficiency and energy source choice.

Emission factors represent the GHG emissions of energy sources (CO_2e produced per unit of energy consumed).

Operational GHG emissions are related to the amount of energy consumed and the carbon intensity of the energy source used to operate a building. Operational GHG emissions are described as scope 1 or scope 2 emissions, per the below:

Scope	Description	Equipment examples
1 (direct)	GHG emissions that are produced from fuels that are combusted on site, primarily from combustion of hydrocarbons, e.g. fossil fuels	Natural gas / propane / oil and solid fuel appliances; CHP system; gas engine heat pump.
2 (indirect)	GHG emissions that are produced from energy sources that are generated off site, e.g. purchased electricity	Electric equipment, equipment that uses purchased energy, district heating or cooling.

Guiding principles and ultimate goals

Goal, harmonization within a flexible framework

Code requirements for new houses and buildings towards zero or near zero operational GHG emissions solutions are needed in order to help support provincial, territorial and federal GHG emissions reduction targets and climate action plans.

Similar to the energy efficiency tiers, there are several advantages to a tiered approach as P/Ts move towards a low-carbon economy, including:

1. providing a flexible approach to address P/T-specific circumstances (e.g. cleanliness of electricity grids, availability of clean fuels), and
2. informing and moving the Canadian industry forward through the learnings and experience of early P/T adopters of the higher performance requirements as jurisdictions harmonize towards toward an ultimate goal of zero or near zero operational emissions.

Recommendation: That a tiered framework be developed in the NECB and NBC, with tiers progressing to zero or near zero operational GHG emissions, enabling P/Ts to follow a flexible pathway towards an ultimate end-goal of net zero emissions buildings or houses.

Recommendation: That GHG emissions requirements be separate from the NBC and NECB energy performance tiers but developed with the view to not preclude pairing the requirements in various ways.

Scope of Operational GHG emissions requirements

The CBHCC considered the benefits and drawbacks of addressing only scope 1 emissions compared to addressing both scope 1 and scope 2 emissions in the National Model Codes and has considered the benefits and drawback of various approaches to establishing emissions factors that capture the variability of grid-level (scope 2) emissions.

Recommendation: That both scope 1 and scope 2 emissions (i.e. all fuel types) be addressed to give a more realistic assessment/more complete picture of the GHG emissions emitted by a building. Furthermore, addressing only scope 1 emissions could lead to design choices that do not reduce GHG emissions overall.

Recommendation: That a standardized and fixed emission factor for grid-level scope 2 emissions be set for each province/territory. This grid-level emissions factor would be based on Environment Canada and Climate Change data and, if available, data from the provinces/territories that is specific to each province or territory, with the potential to evolve the approach to consider the impact of other policies and programs on GHG-emission trends over time. Given the complexity and policy implications of grid-level emissions data, provinces/territories may need to engage several provincial/territorial ministries in determining a standardized, grid-level emission factor that is specific to each province/territory.

Compliance paths

For any chosen target, compliance options could include:

- performance path(s) – using energy modelling software to demonstrate compliance to specific targets and/or;
- prescriptive path(s) – using acceptable solutions that are deemed to reach specific targets.

To continue to allow flexibility in design and construction for housing and small buildings, both a performance path and a prescriptive path could be made available in the NBC. Prescriptive requirements in the NECB would also be useful for buildings that are designed without undertaking energy modelling.

Recommendation: That both performance and prescriptive options be developed in the NBC and in the NECB.

Metrics

A variety of metrics could be used to assess the operational GHG emissions associated with buildings. For example, the tiered framework could use reference-based metrics, intensity-based metrics, absolute metrics, or a combination of two or more metrics.

- A reference building metric sets a threshold for the allowable amount of GHG emissions for a proposed building compared to a reference building (expressed as a percent GHG emissions less than or equal to the reference building).
- An intensity-based metric sets a threshold for the amount of allowable GHG emissions per floor area of the building (expressed in $kgCO_2e/m^2/year$).

- An absolute metric sets a threshold for the amount of allowable GHG emissions per building (expressed in $kgCO_2e$ per building). An absolute metric does not normalize for building size, enabling designers/builders to decide on trade-offs between fuel sources/equipment, energy efficiency measures and building design/size.

Recommendation: That metrics be carefully considered to ensure alignment with P/T goals.

RE: Bullet points of other considerations - EE and GHGs

Subject: Bullet points of other considerations - EE and GHGs

Hey Zac,

As we discussed last week, please see below a few items in relation to EE and GHGs that may come up in tomorrows meeting with Minister Kahlon:

Energy Efficiency

- Small homes in cold climates and cost disparities in comparison to larger homes - a methodology was developed through the research project (Focal Engineering and Bernhardt) to reduce cost burden through relaxations in metrics – refinement may be needed. CHBA has been contacted to look into the data base they have of real projects to help verify approach.
- Log Homes – research completed to verify that there are many ECM options to meet Step 3 for the homes studied. Changes to the BCBC 2023 will be looked at in more detail.

GHGs

- GHGs and supplemental heat for homes in cold climates – Some concerns were raised regarding meeting the more stringent GHG metrics for homes in cold climates given that they may be required to use more supplemental heat when employing heat pump technology. This has been somewhat addressed by the fact that back-up heat is excluded, so a secondary system could be used. Also, this is opt-in initially which give some degree of latitude to LGs as to how to enforce the GHG metrics, and have the ability to take a more relaxed approach. As this regulation evolves, we can further identify the issues and work towards solutions prior to mandatory requirements.
- As raised by UDI, more comprehensive costing analysis should be undertaken with revisions to the Metrics Report. Also, less GHG intensive technologies should be looked at as part of the expanded study (ie HP DHW). We will be discussing additional analysis and research with the SCC on Monday.
- Further development of the NBC/NECB regarding GHGs will help to inform the evolution of this standard.

Ongoing work to support EE and GHG changes in code:

- Part 9 and Part 3 calculators along with supporting educational material
- Current discussions with partners such as BCHousing and the Step Code Council to address, collaboratively, any training, training materials, studies etc
- Opportunities through the National Code Acceleration Fund

Whoot!! Thanks for sharing the good news Zach! Perfect timing for us, we're tracking toward approval of our carbon pollution target at June Board of Governors, so May 1 lines up perfectly. Will we be the first AHJ to approve..? ☺

Anyway, thanks for kickoff our weekends with this.

Best, Ralph

Subject: RE: Energy Step Code Council agenda

[**CAUTION:** Non-UBC Email]
Hello everyone,

I wanted to let you all know that the regulation for the proposed changes to the Energy Step Code and introduction of the carbon pollution standard has been signed by the Minister with an effective date of May 1, 2023. The regulation isn't official until it is published in the Gazette next Thursday, but this means we can focus on implementation. We will highlight some of the key changes we made based on public review feedback at the meeting on Monday, and we are working on having a convenience copy of the updated code language available next week.

Have a great weekend. Looking forward to connecting again on Monday.

Best,

Subject: RE: Energy Step Code Council agenda

Hugo and Scott,

I have pulled together a slide deck to navigate the meeting tomorrow:

G:\Building_Safety\1 ADMIN\200 COMMITTEES - General\-20 Committee files\ESCC Energy Step Code Council\Project Management & Contacts\2023-02-13 Meeting\ESCC Meeting Deck - 2023-04-13.pptx

Scott – are you good to walk through the brief summary of changes at 10:15?
Hugo – Do we have a document or list we can pull up when reviewing the ECIF workplan? I have a list of items on slide 8, but that's likely a partial list from what's on the workplan. Can you walk the group through this list and clarify that we're going to send out a list of key items to be completed in 2023 soon (March?) so people should reach out if they want to be involved or have critical issues that need to be incorporated.

Hoping we can sort out these minor details on the fly tomorrow.

Best,

ENERGY

STEPCODE

BUILDING BEYOND THE STANDARD

Post Public Review Changes

February 13, 2023

Part 9

- **9.36.1.3. Compliance and Application**
  - Must comply with 9.36.6. - so the performance path is now the default
  - Should an LG wish to pursue the prescriptive path, then they will need to do so via their bylaws.

- **20% Better – Prescriptive**
  - Removed the continuous insulation requirements for below grade walls and non -accessible flat roofs
  - For ceilings below attics - dialed back the RSI requirement
  - HRV efficiencies were dialed back form 75% efficiency to code minimum of 60%

- **20% Better – Performance**
  - Removed peak cooling load requirement
  - ‘Mix and Match’ option is still available

GHGs

- **Emissions Factors**
  - Emissions Factors for both electricity and natural gas have been inserted into the code (CoV EMGs)

- **Part 9**
  - **Performance Path** defined by MEUI – space conditioning, ventilation and DHW
    - Ancillary uses currently excluded
    - Back-up/redundant heat excluded
  - **Prescriptive Path**
    - EL-4 (ie zero carbon), the requirement is for 'energy sources supplying all building systems, including equipment and **appliances**' – so we have opened the door to have gas cook tops and gas dryers included in the prescriptive requirements (wood burning stoves and gas fire places would still not be included as these would still be considered 'back-up').

Subject: RE: Energy Step Code Council agenda

Hello everyone,

I wanted to let you all know that the regulation for the proposed changes to the Energy Step Code and introduction of the carbon pollution standard has been signed by the Minister with an effective date of May 1, 2023. The regulation isn't official until it is published in the Gazette next Thursday, but this means we can focus on implementation. We will highlight some of the key changes we made based on public review feedback at the meeting on Monday, and we are working on having a convenience copy of the updated code language available next week.

Have a great weekend. Looking forward to connecting again on Monday.

Best,
Zachary D. May, MBA

Subject: Energy Step Code Council meeting updates, materials

Hello, members of the Energy Step Code Council:

We look forward to meeting this coming Monday, Feb. 13. I wanted to provide some logistical updates and meeting materials (attached).

In-person registration is now closed as we have reached capacity for the meeting rooms at BC Hydro. However, we can still accept more virtual attendees.

We have booked two meeting rooms to accommodate in-person attendees. **Attendees may go to either Meeting Room 1 on the 13th floor or Meeting Room 1 on the 7th floor.** Zac and I will be on the 13th floor. I encourage any attendees who have travelled far to come here to go to the 13th floor, and anyone who's primarily listening to go to the 7th floor. But, as long as you're seated at a conference table, the mics will pick you up and you may participate fully no matter which room you're in.

A selection of sandwiches, year-round salad and coffee/tea will arrive at about 11:45 a.m. at the 13th floor conference room. It will be provided by the Dirty Apron (read the PDF menu) and should accommodate the food preferences/requirements indicated by guests on the registration form. We can all mingle there during the lunch hour.

A few reminders:

- **For in-person attendees:** bring your laptop, tablet or phone to "raise your hand" during the meeting and read questions from remote participants. Mute your mic and speakers to eliminate audio feedback.
- **For all attendees:** if you have questions about electrical extension issues you wish to ask BC Hydro staff, please email them to me at hugo.wong@gov.bc.ca **before noon on Thurs. Jan. 9** so I can pass them on and they can do any technical research if required.

I'll send a more fulsome agenda and other materials soon. In the meantime, please review the attachments. The BC Hydro package should remain within your organizations and are not to be shared publicly.

Date: **February 13, 2023**
Re: **Right of First Refusal**

Purpose

Premier David Eby has previously stated his intention to provide non-profit housing providers with the first right of refusal to purchase rental properties. This change would build on the recent announcement of a new $500-million Rental Protection Fund. Introducing a right of first refusal could undermine the delivery of new rental and even below-market housing. It is understood that the model currently operating in Montreal/Quebec is being used as a reference for this initiative, which has a different objective. This model is not applicable in many ways to the B.C. context, and should not be considered a successful example, as it has failed to meet its objectives in Quebec.

This change in-part is being driven by public commentary on the "financialization of housing" and seeking to limit the extent to which the private sector can build and operate rental, and below-market housing in Canada. Private builders remain the largest contributor to new housing delivery in B.C. and across Canada. Governments and non-profits do not have the resources to develop the large amounts of new housing needed in British Columbia, and it will take the efforts of both the private and public sector to meet the growing demand for rental housing in B.C.

Background/Context

Quebec Pre-emptive Right
"The pre-emptive right gives the city the priority to purchase certain buildings or lots in order to create community projects." - City of Montreal

The Province of Quebec conferred powers to the City of Montreal in 2017 under the *Charte de la Ville de Montreal, metropole du Quebec* (Montreal municipal charter) to exercise a pre-emptive right to purchase properties for "*community projects.*" Between 2017 and 2020, the power was used primarily to acquire land for regional parks. In March 2020, Montreal's Agglomeration Council (AC) adopted a bylaw that allows the City to pre-emptively acquire specified properties for the purposes of developing new social housing. In July 2022, this broad authority was extended to all municipalities, intermunicipal boards and transit authorities in the Province of Quebec. **This pre-emptive right was designed to facilitate the purchase of development sites by municipalities for the purposes of City-led development, not the acquisition of existing buildings to be maintained in their current form.**

The authority is exercised through a charge on title listed with the Land Registry and this charge remains in place for a period of 10 years. Upon expiry, the City's interpretation of their authority would allow them to re-apply the pre-emptive right for a different purpose (i.e., if the site was previously identified for park expansion, it would later be designated as a potential social housing site). This has not yet been tested as the process is less than 10 years old. Owners of

affected properties are notified that when they list their property for sale, the City will have the opportunity to acquire it.

To acquire property under this provision, a City must take the following steps:

1. After a specified property is listed for sale and an offer is accepted, the owner of an affected property must send the City a notice of intent together with the offer to purchase;
2. The owner must send the City a copy of any leases, agreements, studies or evaluations associated with the site, including those conducted by the prospective purchaser, and any other associated documents;
3. The City then has 60 days from receipt of the notice to decide whether or not to exercise its right of first refusal to purchase the property at the same price and terms as the accepted offer; and
4. If the City decides to purchase the property, it has a further 60 days to close on the property. The City also reimburses the unsuccessful purchaser reasonable expenses associated with the offer.

If the City declines to exercise its pre-emptive right, the initial offer proceeds with closing on the property.

B.C. Context
During his leadership campaign, Premier David Eby listed the following commitment as part of his housing platform:

"We will establish by law a right of first refusal for acquiring these at-risk homes and secure renters' housing."

This was expected to be announced with the new non-profit acquisition strategy, kick-started by a $500 million provincial funding investment.

Discussion

Ineffectiveness of the Montreal Model
UDI's Executive met with representatives of UDI's Quebec Chapter (IDU) on December 5, 2022, and they identified a number of issues with the pre-emptive right authority as it currently operates in Quebec. Although it was recognized that the pre-emptive right may be useful for municipal planners, it would have required conditions, which were not included. Neither the extension, nor the original introduction of the power in Quebec was supported by the development community. This created uncertainty with acquisitions and the willingness of lenders to finance projects acquiring properties where this charge on title exists.

Although cities are required to reimburse unsuccessful purchasers when they choose to exercise their pre-emptive right, these reimbursements have not covered the full costs associated with

offer submissions. This has become a deterrent for builders to make offers on properties with a charge on title, and has the ability to negatively impact land prices.

In the case of Montreal specifically, the City has selectively exercised its authority to restrict land assemblies and create orphan sites. For example, in an assembly involving eight individual sites all with charges on title, the City may waive their pre-emptive right for six sites and exercise it for the remaining two. This has led to negotiations directly with the City to unlock the remaining sites, without certainty that the City will waive its right.

These negotiations have resulted in the City establishing a process to generate additional financial contributions from proponents, outside of the existing development finance framework. In B.C. this would equate to an additional Community Amenity Contribution (CAC) or negotiated extraction, which will add time and cost to housing delivery.

In the approximately three years since Montreal could use its pre-emptive right for social housing, the AC has exercised this power more than 60 times, however there has been very limited action taken to redevelop any of these properties. The City lacks the capacity to act on all of the sites acquired through the pre-emptive right process, stagnating the development of new housing and freezing properties.

Inapplicability to Existing Rental Housing in B.C.
There are some key differences between the model applied in Montreal and Quebec and way in which this type of authority is discussed for B.C. Firstly, application to tenanted rental buildings in B.C. does not align with the rationale for this authority in Quebec.

In Quebec, the authority is focused on the acquisition of development sites by municipalities. Whereas the suggested application in B.C. would be designed to acquire existing rental buildings to be maintained in their current form, and it is not clear who would be able to exercise the right of first refusal.

If applied to existing rental housing in B.C., a right of first refusal or pre-emptive right to purchase power would have significant consequences for the supply of new rental housing. Currently, there are opportunities to redevelop low-density, ageing rental housing in certain locations, such as around transit and services. This would create more homes, and allow current renters to return to new, seismically upgraded, low carbon and energy efficient housing at below-market rents. The model used by the City of Burnaby illustrates the success of this approach, where thousands of new affordable rental homes are being built, with some of the most robust tenant protections in British Columbia.

A pre-emptive right to purchase, if applied broadly, would limit these opportunities to build more rental housing. It would make redevelopment riskier because a builder's ability to acquire properties containing existing rental housing would be uncertain. This would affect site redevelopments and assemblies of multiple sites, where one parcel contains rental housing. Increased risk means lenders may be less willing to provide financing in the assembly phase of a

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street

www.udi.bc.ca

project where a property is subject to this type of requirement. This is a strong disincentive to builders and lenders, who contribute to the supply of new rental housing. Creating further restrictions on rental supply will perpetuate low vacancy rates and high rents.

Further, we would be very concerned if this type of authority was provided to a municipality in British Columbia. The use of the pre-emptive right authority by the City of Montreal has added additional time and costs to the delivery of housing through unnecessary negotiations. As British Columbia seeks to streamline both development finance and housing approvals, creating a right of first refusal would be counter-productive.

Recommendations/Conclusion

As illustrated, we have significant concerns with the potential creation of a right of first refusal authority, in B.C., with any reference to the model used in Montreal and Quebec. The authority that has been provided to municipalities in Quebec is intended to meet different objectives and we would not consider it an applicable policy reference. It is also unclear whether there is a need for such a policy to intervene in the B.C. market, given the current interest rate conditions, and strong demand. Instead, we encourage the Province to work with rental providers, and non-profits to develop policies that will support the increased delivery of more new rental housing.

CHBA & Altus Meeting – February 14, 2023

Topic: Discussion on data points and researchers used to help inform the selection of municipal targets.

1. Introductions
    - Carmina Tupe - CHBA
    - Daryl Keleher – Altus – Senior Director (planner)
    - Diana Petramala – Altus – Director (analytics)
    - Candcie,
    - Sandra
    - Cimarron
    - Regrets: Bindi Sawchuk
2. Housing Supply Act Overview
3. Alus Study
    a. 13 municipalities
    b. Forecast and suppressed housing (pent up demand)
    c. Data challenges: happy to share experience
    d. Municipal process and documentation/descriptions
    e. Municipalities perceive the minimum target the maximum
        i. Cimarron: range and adjust accordingly
4. Discussion
    - Sandra: why 2001 considered affordability benchmark
        - Diana: homeownership affordability – didn't explain why…

Abundant Housing…

Hello Indiana, Cory, Thanks again to you and the housing team for the productive meeting yesterday. ADM Sawchuk asked about contacts for organizing going forward. We would like to propose a few possible topics for more focused meetings/correspondence in the near future and a point-person for each:

General Minimum Zoning ("2 FSR eight-plexes"): Point Person: Daniel Oleksiuk, s.22
Suggested Meeting Dates: Feb. 22-24

Transit- and Jobs-Oriented Minimum Zoning ("6-Storey apartments"): Point Person: Owen Brady, owen@abundanthousingvancouver.com Suggested Meeting Dates: Week of Feb. 27

Housing Needs Assessments and Enforcement: Point Person: Peter Waldkirch,
s.22 Suggested Meeting Dates: Week of Feb. 27

If we are misreading your priorities, please do not hesitate to propose alternative topics/working groups. I will serve as a general contact to delegate questions & topics for AHV. We will follow up with detailed written responses to your questions from yesterday.

We would suggest a follow-up meeting as per the availability above. As you know, for most of us, our expertise is primarily in advocacy and general issues regarding urban growth. We may wish to pull in some industry or academic contacts depending on the topic.

Since we are discussing dates, I should note that we are hosting a talk with author and researcher M. Nolan Gray in conjunction with VPL on March 15th on zoning issues. If any staff are interested in attending, it would be great to meet in person!

Kind regards,
Owen Bradley

Housing Supply Act Regulations & Housing Targets

Hi Jeff,

Further to my voicemail just now, we're in the process of drafting the Housing Supply Act regulations and would like to meet with UDI. Additionally, I would like to discuss housing targets methodology with you and/or your staff.

I'm in meetings until 4 PM today and most of Wednesday and Thursday but perhaps you could let me know when you have 15 minutes for a call this week to discuss the above? My mobile number works best for telephone calls: 250-208-0242.

Cheers!

Hi Cimarron,

Jeff shared your note with me and we'd be happy to set up an initial call to better understand what your process and timelines look like. That would also help us identify who else should be part of any subsequent discussions.

We could connect at 4pm today or Thursday afternoon looks fairly open, do you have any timeslots that might work.

Thanks,
Cassandra

Hi all,

I'll be modifying the entry in the ESC newsletter to remove the reference to public review and find something newer. We'd rather not point to the out-of-date material.

We are working on posting the convenience copy of the code language and when that is finished I will upload it ASAP and give you a new URL.

Hugo

Hi guys! The ESC newsletter goes out tmrw and the ZEBx newsletter goes out Tuesday (hopefully). For the ZEBx newsletter, is there an article, bulletin or something that we can point our newsletter recipients to for more information? The link in the ESC newsletter points to the public review. I'm looking for something more forward-looking for the ZEBx newsletter.

That's great news! I'm glad to see all the hard work BSSB put into this come to fruition. Let the implementation games begin!

Good timing for the codes accelerator fund application. Our aim is to get LGs to set a minimum for the CPS.

I'd like to delay our newsletter until Friday so we can include this announcement in it. Any risk of it not being published next Thursday?

Enjoy your weekend!

Roberto

Subject: RE: Energy Step Code Council agenda

Hello everyone,

I wanted to let you all know that the regulation for the proposed changes to the Energy Step Code and introduction of the carbon pollution standard has been signed by the Minister with an effective date of May 1, 2023. The regulation isn't official until it is published in the Gazette next Thursday, but this means we can focus on implementation. We will highlight some of the key changes we made based on public review feedback at the meeting on Monday, and we are working on having a convenience copy of the updated code language available next week.

Have a great weekend. Looking forward to connecting again on Monday.

Best,
Zachary D. May, MBA

To: Laboucane, Shannon OHCS:EX <Shannon.Laboucane@gov.bc.ca>
Subject: Invite: BC Building Code Accessibility Proposal Review

Sent on behalf of Jun'ich Jensen.

Dear valued partner:

In November 2020, the Minister responsible for Housing received a mandate to include changes in the next iteration of the BC Building Code to make new buildings more accessible for all people.

Since this time, engagement has occurred to seek input on what BC Building Code changes should be actioned first and special considerations. Valuable feedback was received and has been instrumental in developing a meaningful code change proposal that balances accessibility and housing priorities, accessibility engagement feedback, product availability, and affordability.

Before the proposal is finalized for public comment in Spring 2023, I would like to invite your organization to nominate a policy lead to review the proposed approach and discuss any questions they may have.

Please email Shannon.Laboucane@gov.bc.ca or call 778-974-3912 to provide the name and email address of the representative that we can engage with, to facilitate this discussion, on behalf of your organization.

Our office will reach out to the contact to schedule a meeting this month.

Thank you for considering this request.

Sincerely,

Jun'ichi Jensen

Hello everyone,

It felt so great to be able to see some of you face-to-face on Monday.

Some of you suggested that we extend the window for comments on the attached R2B report, and so we are moving the deadline to next **Monday, February 20th**, to provide more time for your review.

Thank you, Huy chexw & Hay ce:p q̓ə,
Wilma

Subject: Invitation to comment on draft report: R2B: Realizing Resilient Buildings

Good afternoon everyone!

I'm reaching out to the Energy Step Code Council community to invite you to share your comments and perspectives on the draft recommendations from this exciting research project.

The **R2B** Project "**Realizing Resilient Buildings**: Research on the **Barriers and Enablers for Climate Adaptation and Resilience in the Building Sector in B.C.'s Local Government Context**" is co-funded by the province and BC Housing, and aims at building knowledge and alignment on removing barriers and providing enablers to make it easier and most cost-effective to build low-carbon climate-adapted resilient buildings in B.C.

Your input (received on or before **Friday, February 10th**) will help us refine the recommendations and develop a toolkit. The toolkit will be designed primarily for use by local governments but also for reference by industry and many others who have a role to play. Please feel free to forward this report for input by other relevant parties but keep me posted so I am aware. Note that the consultants are also working on a separate short report that focuses on barriers / enablers specific to Indigenous communities.

We are very grateful for your contribution, and we look forward to your comments.

Thank you, Huy chexw & Hay ce:p q̓ə,
Wilma

Sent: February 21, 2023 10:16:32 AM PST

Hi Bindi,
I've had a check in with the team and the issue we have heard the most about has been raised by City of Vancouver (although likely affects others as well) and is concerned with the issue of when electrical system upgrades (e.g. new lines, new transformer, new substation) are needed to cope with development, BC Hydro seeks to impose the full cost for such upgrades at a single point in time (eg on a single development). So essentially, there is a electricity usage / capacity threshold and if it's going to be passed, BC Hydro needs payment to proceed. However, the existing and forecast hydro needs accumulate over time due to many different projects/development and aren't necessarily the direct result of that 'last' project. Our sense is that the alternative that Vancouver may be interested in is for Hydro to take a different, presumably more flexible approach, that somehow allows the same overall cost recovery for hydro but doesn't get triggered by a single development and is instead somehow staggered or spread more widely.
Separately and more generally, during the DAPR consultations we also heard that BC Hydro often engages late in the approvals process (unclear whether by design or capacity) which can be challenging if there are substantive design impacts. The broad feedback here was that there may be a role for the Province to support Hydro in engaging earlier on in the process.
We're happy to follow up with LGs from the workshop to see if there are any further details or issues they can provide – just let me know if more / different would be helpful.
Thanks
Jessica

Subject: Deloitte Housing Follow-up
Hi Jessica,
I will need some background information on the BC Hydro issues that were raised by cities in the Deloitte Housing forum. Could you share notes, examples etc pls?
Next week is fine.
Thanks - B
Bindi Sawchuk, CPA (she/her)
Assistant Deputy Minister| Housing and Land Use Policy |Ministry of Housing

Accessibility Mandate:

Continue work with the Minister of Housing on ensuring the next iteration of the BC Building Code includes changes that will make new buildings more accessible for all people.

Accessibility Proposal:

Require greater increases in multi-unit residential buildings (e.g., power-operated entry doors, elevators, visual alarms, and adaptable dwelling units) and modest increases for small residential housing (e.g., grab bar backing and wider entry doors).

UDI

Discussion notes:

Market lacked rancher homes and very expensive for square footage. Found two storey house with master on ground floor to prepare for senior years.

2004 building in North Van, had requirements for adaptability. Building high risers based on wood frame. Made a proposal to put in backing for grab bars in bathrooms rather wood, wanted to use flat stock and was being used in kitchen. Did some **sketches of bathrooms to identify elevations to identify where backing provided**. Was accepted by City.

Prior to that in regard to room size increases for adaptability . 1972 CMHC had Canadian Code Residential Construction. Room sizes, clearances, ventilation, were removed from code. Now finding a need to go back to what was.

Standards and where they are as building for units with financing with BCH and/or CMHC. Looking at BCBC and NBC and compare. Have four sets of guidelines. BCH conflict with BCBC and NBC on adaptability and accessibility. CMHC recent universal requirements – additional step that touches on floor space.

Whatever standard – needs to be consistent and applicable for all types of construction and all types of lending. One size fits all. No matter if building market or low cost, requirements should be the same.

Joint Task group task was to review **grab bars – graspable, size, location, and tested balance. Most challenge were for young people 6 years and younger and 70 and over due to balance challenges**. Did not include people with physical disabilities.

Using accessible shower, and flip down seat – where do grab bars go?

CMHC tried to push CSA which also conflicts.

Rick now building several units – designed for access and adaptability and universality and **CMHC requirements make it very confusing.**

Grab bar example for simple accessible shower stall. Some require vertical bar near seat, some require vertical half way between entrance and controls on end of unit. Requirements are 1, 2, 3, sometimes 4 as L shaped back wall turning 90 degrees. Confusing for builders to talk to owners…

Discussions whether 24” is adequate – settled on 40 “ as it exceeds 1 meter.

Control location – common to put on back wall instead of side wall to avoid reaching far, but also hard to reach back too. Opportunity to put in options both locations as long as adequate controls for units.

Then backing – how do you deal when each requirement is different., Used wide flat stock and gave options and did 3 sides of shower. Addressed horizontal and two side walls and vertical panel and another vertical panel to catch L shape for back wall.

Additional space for 5 ft wheelchair, doesn’t work for adaptable due to different configurations.

BCH requires lockable drawers for medications – and location and medicine cabinet. Could benefit all users. When considering bathroom – important to consider these too. Medicine cabinet be accessible.

BCH requires floor drain for accessible washroom – requires additional plumbing and additional cost. BCH reason is floor is wet someone could slip. Flooring products available to resist slippage.

Additional issues around water closet. Screw down lid and tank.

MURBS have common washrooms and use toilet with flush valve. Option to use control – should check and see if there is a need and it be adequately addressed.

Entrance of building into access to elevator and access to common areas on main floor. Increasing size of front entrance, not usually a problem, putting in a wider or double door unit. OK.

Automatic door is needed and there. Ques: If designing building for adaptability do you have to have additional entrance or exits?

Andy: status quo. If common space, accessibility required. No more entrances or exists required. 3.3.1.7. protection of accessible floor areas remains.

2nd floor and higher in time of a fire incident – where can the accessible/adaptable people go? Can they hit a door? Suite door to hallway, then stairwell – **areas of refuge** – consider adoption of this.

Andy: 2020 NBC does not provide area of refuge. Note made. Thumbs up for areas of refuge in future.

There are some areas in MURBs that are problematic for builders: accessible unit have reqs for thresholds and balconies, adaptable unit do not have height requirements for access or depth of accessibility – cater to accessible not fully to adaptable. Need commonality between the two.

Similarity common areas: laundry rooms and kitchens in amenity rooms should be designed for accessible use. There is a cost to retrofit – appliance replacements is high for stoves, dishwashers, height can be impeded to specific BCH requirements.

Clear as to which units are applicable for adaptable and accessible and potential universal and how will we achieve it. SFD ramps become expensive, need to be cooperative with issues and expenses when not recoverable for home owner.

May 1 code changes for green house gas and energy and adding on adaptable. Homeowner upgrades trigger permit and then update for ee and access. And nothing left. All BO work to get builders to comply – avoiding back underground – make sure that does not happen.

Experience with accessibility units and discussions with BCH and laundry ended up in bedroom closet.

Accessible doors can be problematic too. Bypass doors – and no access to front of unit.

Are there others in UDI we should talk to ahead of public review?

Go back with Jeff Fisher, some members on code committee, some code consultants with mobility and dimensional requirements.

Hi Cassandra,

Further to our call last week, the following days/times are available for our ADM to brief UDI on the Housing Supply Act regulations.

- Friday February 24: 1 -2:30 PM
- Tuesday February 28: 9 – 10:30 AM
- Friday March 3: 9 – 10:30 AM

I recall you mentioning a UDI meeting on Wednesday March 9th starting at 8 AM. Ideally, we can meet before then, but if that is the absolute best date for member participation, I'll confirm with the ADM Office to see if we can meet that day. Please let me know your preference.

Once we set a briefing date, we can discuss meeting with UDI staff/members regarding housing target methodologies.

Cheers!

Hi Cassandra,

Thanks for confirming that Friday March 3rd from 9 – 10:30 AM works best. Below are the names and email address of the UDI participants in the Housing Supply Act legislation briefing. Please let me know if anyone would not be participating or if there are additional people attending. Once confirmed, we'll circulate a confidentiality agreement. Agenda to follow.

Hi Cimarron,

Apologies we've just confirmed with our group, but Friday March 3rd is the date that was available for us.

Feel free to give me a call if you'd like to discuss.

Thanks,
Cassandra

Hi Cimarron,

Thanks for sending this. Let me connect with our group and I'll get back to you shortly.

As an initial thought, this Friday will most likely be too short notice for this group, so I'm looking at the other two dates.

Thanks,
Cassandra

Agenda now included below

Hello,

The District of Saanich, in partnership with Introba and the Community Energy Association, would like to invite you to a workshop on Local Government Tools for Decarbonizing Existing Buildings.

The purpose of this workshop is to solicit your ideas and insights on how local governments can best leverage the tools and authorities at their disposal to reduce emissions and increase climate resilience in their existing community-wide building stocks. Participants will hear updates on relevant provincial efforts in the existing building space, as well as what other local governments have achieved. The District of Saanich will use their draft Retrofit Strategy as a basis for collectively discussing the key opportunities available to local governments, both alone and in collaboration with one another.

You have been expressly invited as you represent a source of insight that we want you to share! Please let us know if you are able to attend, or if you plan on sending someone in your place, by responding to this calendar invite.

DETAILS:
* Date: March 1st, 2023
* Time: 1:00 – 3:00 pm PT
* Location: Zoom -
s.15

Thanks and hope to see you there,
Lisa

Time	Agenda
1:00	**Welcome and Introductions** • Participant polls
1:10	**State of Existing Building Policy in BC** • *Speakers*: Nat Gosman (EMLI), Hugo Wong (BSSB), and Tami Rothery (CEA) • Participant polls
1:40	**Overview of the District of Saanich's Retrofit Strategy** • *Speaker*: Maggie Baynham (District of Saanich)
2:10	**Participant Discussions** • Facilitated discussions on opportunities to scale up action across local governments, and increase equity in design and implementation of actions in the existing building sector
2:50	**Next Steps & Close** • Participant polls

Hello, members of the Energy (and Zero Carbon) Step Code Council:

This 30-minute lunchtime webinar is meant to cover a topic we did not have time for on Feb. 13: the proposal to include GHG emissions in the National Model Codes.

Please review the materials attached to this calendar invitation (and below), and we hope that some of you can make it on Tuesday. We understand if not everyone can be there, in which case please feel free to follow up afterwards.

As mentioned during the meeting, we encourage members to submit their own comments through the national process. This meeting is meant to build common understanding of the feedback members intend to provide through the national process, which we as provincial representatives could potentially emphasize through other channels.

Best,
Hugo

(message/meeting link continues below)

Dear Stakeholder,

The CBHCC is seeking input from stakeholders, experts, code users, and the general public on the draft policy recommendations for developing and implementing greenhouse gas emissions provisions in the National Model Codes before finalizing the policy framework. The draft policy recommendations are available on the website here:
s.15

The draft policy recommendations will be provided to the relevant standing committee(s) for discussion.

* Consultation wave 1 begins on February 3, 2023 and ends on March 30, 2023.
* Consultation wave 2 is planned to begin in March 2023 and end in May 2023. Note that this consultation period is subject to change as the CBHCC is still working on the draft policy recommendations for wave 2.
Instructions for providing input
To provide input on the policy recommendations, please follow the steps below:

1. Download the policy recommendations on TeamWork here:
s.15

2. Submit comments to the CBHCC Secretary by email and attach any supportive material: CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca<mailto:CBHCCSecretary-SecretaireCCHCC@nrc-cnrc.gc.ca>
3. Your comments will be reviewed by the Working Group on Climate Change Mitigation who will report to the CBHCC.

Sefton Hyde-Clarke
Secretary, Canadian Board for Harmonized Construction Codes (CBHCC)
Manager, Code Development System, Codes Canada
National Research Council Canada / Government of Canada

UDI Profile

- The Urban Development Institute is a non-profit association of the development industry and its related professions.
- It has over 850 corporate members, and represents thousands of individuals involved in all facets of land development and planning from developers to engineers.
- Its key policy priorities (as of 2020) were transit-oriented development, rental housing stock, "missing middle" housing and supply-side measures (faster approvals, higher density zoning, and predictable, fair fees and charges e.g. Community Amenity contributions).
- UDI has been a consistent advocate for housing targets, with the inclusion of financial rewards and penalties for performance.
- UDI released its report Taxing Growth: Analysing the Taxes and Fees on New Housing Development on February 28, 2022.
- The report largely echoes statements made by UDI previously:
    - Cumulative impact of charges from all levels of government are hindering new housing supply
    - Development approvals should be streamlined
    - Barriers to purpose-built rental supply should be removed

Issues previously raised by UDI during Housing Supply Act legislation engagement

UDI comments in italics

Housing Needs Reports as a basis for targets

Several issues with HNR methodology. Local governments have ability to manipulate data to reduce targets or chronically undercount housing need.

Response:

- Government has been actively reviewing the HNR structure and its gaps.
- Part of the housing targets process includes validation of housing needs reports housing estimates.
- This will include identification of data gaps and challenges as well as comparison of Ministry estimates and municipality-supplied estimates
- Ministry estimates will be established using a standardized methodology currently under expert development.

Enforcement mechanisms

Provide more carrots for those who meet targets; apply penalties for those who do not.

Response:

- Increasing infrastructure funding overall through the Growing Communities Fund.
- Government is reviewing local government tools with the goal of providing more tools to achieve growth and create complete communities.
- Financial penalties are not contemplated at this time.

Regional Growth Strategies

Regional Growth Strategies place restrictions on local governments. Province should be able to override RGS during the targets process.

Response:

- The Province will be taking a close look at Regional Growth Strategies during the target setting process. It is a requirement that the minister consider these when setting targets.
- While the Act does not apply to regional governments, we will still be taking a regional perspective when setting targets, to understand differences between nearby and similar municipalities,
- And to also encourage the planning of new growth in areas of infrastructure investment that cross municipal boundaries.
- We agree that mixed employment areas near rapid transit stations should have a mix of housing options, including affordable housing.
- The Province, through the Ministry of Transportation and Infrastructure, is doing work on Transit Oriented Development to ensure we are leveraging all of the benefits of public investments in transportation. You can expect to here more about this.

Advisor

Advisor should be a third-party, independent of local and Provincial government.

Response:

- The Act sets out the role of the advisor and the scope of their report.
- In the event that the Minister appoints an advisor, advisor qualifications will be set out in a publicly available Request for Proposal/Request for Quote, and subsequently detailed in the Advisor's contract.

RE: UDI Webinar Panel Invitation

Hi Verna,

I'm happy to join a panel. Both days work for me right now, so let's block those out and work on filling up the panel!

Best,
Zachary D. May, MBA

Subject: UDI Webinar Panel Invitation

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Zach,

Happy March!

We are hoping to schedule a follow-up webinar with our members on the changes to the Zero Carbon Step Code and the changes that were made to the BC Energy Step Code and what is likely to be happening to both of those on a go-forward bases. Would you be available to join us on the panel for this session?

Proposed dates and times as follows:

- Tuesday, May 2 (9:30-10:30)
- Thursday, May 4 (9:30-10:30)

Please let me know if either of these date options work with your schedule or, please advise of some alternate options.

Thank you!
Verna

Lee, Zach, Shannon:

WORKING PROGRAM

Please find attached a detailed working RT program.

We are currently seeding input from some key players across the province and different sectors. You will see them in the details column. Most have been contacted but not all.

If you think anything could/should be strengthened, please email Brad and me by EOD, tomorrow March 2. Others are also providing further input, notably our facilitators.

Liam Butler (Housing comms) and Siân Madoc Jones (MA) and touched base with me on Minister Kahlon's introductory remarks. There is no ppt, simply a number of key points

REGISTRATION

V solid registration. We have 50 mid to c-suite motivated managers and a sprinkler of key experts from really diverse sectors... There will be ~25% no shows.

There are 5 breakout facilitators so small group discussion will be with ~8 people.

Fantastic representation in housing, local gov, manufacturer, ec dev.... some key developer. Need to strengthen transpo authority, labour and a few others. (UBCM exec members are there but not UBCM.)

Amongst those that are very interested are Linda Coady (COFI), Jill Atkey, Thom Armstrong, Ken Kalesinikoff, Oliver Lang - Intelligent City, Jeff Fisher - UDI..

There are some great BC Gov registrations, AND I'm confident you can ID a few others who can really add value:-)

Please email Rebekah and me if there are other key people in your respective ministry who should be attending

Thanks so much,

Alex

UDI Feedback

1. Ensure Alignment
    a. DAPR/HNR
    b. BC Hydro systems: Rick Illich regulation change *follow up
    c. Funding programs: BCH/CMHC…
2. Targets: range – minimum to upper bound - could overlay with economy other factors, national trends
3. Matters outside muni control
    a. In economic downturn consider tax measures to encourage development
4. Expand outside SVT to province-wide (Brian McCauley)
5. S 13: be as broad as possible (Cassandra)
6. Unintended consequence of foreign investment policy (Rick Illich): follow up w/FIN
7. Market and below market linked
8. Muni progress indicators
9. Dev Fin Committee will reboot
10. Vancouver: development pre-approval process slowing and limiting development (Rick Illich): follow up with Dan

Broadway Subway Meeting

- Jesse Singer (CoV):
    - crisis in development team due to turnover; ~100 re-zonings in Broadway
    - Occupancy permits
        - don't include all details
        - Posse System: manual pull and x-ref data; time consuming…
        - Affordable housing – below market…

UDI March 3, 2023

Attendees:

Ministry

1. Bindi Sawchuk
2. Jessica Brooks
3. Cimarron Corpe
4. Gabriel Hill
5. Tiffany Warkentin
6. Candice Gartner
7. Aman Gill

UDI

8. Brian McCauley
9. Cassandra Smith
10. Cynthia Jagger
11. David Sander
12. Jeff Fisher
13. Mark V Lewis
14. Michael Drummond
15. Rick Ilich
16. Rob Blackwell
17. Anne McMullin

- ADM: Very aggressive timelines for development approvals - single window Provincial Permits
- Pre-zoning, secondary suites and missing middle
- UDI: Lack of labour in the market to achieve objectives … widespread labour market challenges
    - Refresh will include Post Secondary Ed ministry to address construction workforce needs
    - Need innovation in the industry (ADM) - immigration alone isn't the answer to labour shortages
    - Rick: BC Hydro infrastructure
        - They are behind growth and need to get ahead of it … leg change would fix it instead of being reactive
        - High schools need to have shop classes
        - Brian - kudos to all government to be working toward solutions
            - Shouldn’t just focus on SVT - look province wide - all areas have challenges and should be held responsible for delivering on their HNRs and ensuring they are doing them consistently …
            - ADM: Overtime it will be expanded to other areas too
            - Rick - foreign ownership legislation (federal) - very badly impacting developers that build rental housing … access to money … CMHC can't approve the foreign linked ownership or they may have conflicts through some foreign ownership
                - Can't start these projects now
                    - ADM - follow-up call with Min FIN
    - (Anne M) How do you deal with things out of muni's control, if it is a Provincial issue
        - ADM - Target leg doesn’t allow Province to direct the Province to do something
            - Somethings might need to be taken slow for a reason

- Rick - excited about the idea of targets - there are things city's and munis can't control - economics of constructions and feasibility of construction
    - e.g., cost of financing
    - Layers and layers of municipal and provincial objectives
    - Mechanical and envelope - costs of construction going through the roof - good intentions but driving up environmental and energy code compliance costs
    - Don't get the economics out of family oriented (3 bedroom units) housing -
        - If you could get free FSR for the third bedroom
    - CoV - tracking applications. Won't accept applications until completed 2 years of pre-application time
        - Smoke and mirrors … can be manipulated
- David - if project gets delayed and puts them off of housing target, goal shouldn't be to meet target but exceed it, contingency should be built in
    - Target setting along continuum - confusing
        - Units that get built are what matters
    - Zoned units might not even get built
    - ADM - margin around targets - what means a target has been met
- Brian - idea of supply Act … seen as big brother weighing in on municipal jurisdiction
    - What has the reaction been - ADM: Elected officials
- Cynthis Aligning funding with targets - and coordination with BC Housing
    - ADM: we will be bringing BC Housing CMHC and others to the table for setting targets on things like the social and supportive housing
- Cynthia: CoV slowing applications coming in for affordable housing
- Jeff - transitional provisions
    - When Building Permit is issued, building started
    - Can you take action sooner then the building permit target isn't met
    - Ground-oriented housing - many building's have townhouse on ground-level - are those ground-oriented
- Anne - Govt should look at economic levers too that are available to stimulate development
    - ADM - we don't have this authority, but need province-wide approach to
- Michael - pre-zoning, link to targets … applies to all municipalities to support their HNRs
- Cassandra Municipal information related to the supply and demand for housing
    - Be as broad as possible … sometimes info is out of date, not aligned with OCPs
        - Look at what kinds of applications are being approved vs. what isn't
- David - need more housing of all kinds, way more below market, affordable, other
    - Sometimes municipal numbers aren't feasible
    - Municipality could lower their requirements but then they won't meet the target
    - How do you get to the right balance
- Cynthia - inclusionary zoning, condos subsidizing market and below market housing
    - Will you ask them to propose a target? ADM could - could be a negotiation …
- Jeff - may vary depending on what target you are looking at
    - Number of units identified in an HNR are probably underestimated
    - Overall they might be underestimating; on non-profit housing it might exceed what it possible
    - Will province use paramountcy to get housing built more quickly in TOD areas
        - ADM - not sure if MOTI will be doing this, but has come up

Good morning Cim,

1. The agenda looks good, and I agree that 1 hour is sufficient.

2. The deck looks good, with one exception - slide 7, classes of housing – I think this is an older view of the approach we have been using. Pls update – happy to discuss if it isn't clear what's needed.

3. I have attached my SN's from the UDI session with a request that these notes / tone and approach be used for the BCNHA session.

4. Finally, can you confirm if this is the last scheduled session we have re: engagement on the regs? (recognizing more may need to be done with FNLC).

Subject: FOR REVIEW: BCNPHA HSA Materials
Importance: High

Hi Bindi,

The draft deck for Tuesday's HSA briefing with BCNPHA is ready for your review: HSA Regulations BCNPHA 2023 03 04.pptx The deck is based on Friday's UDI deck. We included the UBCM housing types slide as Jill Atkey (CEO) provided feedback that the HSA should address tenure and should expedite delivery of non-profit housing developments (as a right) and thought it might be worth including.

The draft agenda is also ready for review (same as UDI): Province BCNPHA HSA Regulation Briefing Agenda 2023 03 04.docx So far, I believe only Jill is attending, but will confirm Monday.

Cheers!

Energy Step Code Council Meeting
Notes

Date and Time of Meeting: Monday Feb 13, 2022 | Time: 10:00 a.m. to 3:00 p.m. Pacific Time
Location: BC Hydro Head Office: 333 Dunsmuir St., Vancouver, B.C. and online
Chair: Zachary May, Building and Safety Standards Branch, Ministry of Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Attendees:

Bea Bains, FortisBC
Tom Berkhout, BC Hydro
Maya Chorobik, Community Energy Association
Norm Connolly, City of Richmond, PIBC, Part 3 subco co-chair
Madeline Dams, MUNI
Diana Dilworth, HAVAN
Patrick Enright, City of Vancouver
Jeff Fisher, UDI
Elisabeth Baudinaud, CEA
Maura Gatensby, AIBC
James Glave, Bright Future Studios
William Grass, BSSB
Joe Hart, CHBA-BC
Altaf Hussain, BC Hydro
Jason Jung, ASTTBC
Iulia Jurgea, BC Hydro
Toby Lau, BC Hydro, Part 3 subco co-chair
Wilma Leung, BC Housing
John Madden, UBC
Rick Mann, CHBA-BC
Zachary May, BSSB
Jason Owen, City of Surrey
Harshan Radhakrishnan
Jason Rowley, CoV Chief Electrician
Laura Sampliner, CEA and SCPN
Zack Segal, BOMA BC
Bertine Stelzer, BC Hydro
Lise Townsend, City of Surrey
Carmina Tupe, CHBA-BC
Robyn Wark, BC Hydro and ESCC Vice-Chair
Ralph Wells, UBC
Scott Williams, BSSB
Hugo Wong, BSSB

Meeting started 10:27 due to technical issues.

Overview of CleanBC Code changes: Scott Williams, BSSB

- May 1, 2023 effective date
- Congratulations for last six years of hard work. Big milestone.
- Refer to presentation for additional details
- More communications on the way to support

Actions:

- ~~HW to send highlighted building code convenience copy to the Council when available (keep within your organizations)~~ **(Update, Feb. 21: Convenience copy included in Feb. Energy Step Code newsletter)**

Presentation from BC Hydro

- Refer to presentation
    - BC Hydro prefers Option 3 described in the presentation
- BC Hydro preparing for rollout of building carbon pollution standard

- BCHydro has a surplus of energy looking to 2030; however, transmission and distribution needs to be looked at in more detail.
- Anticipating quick uptake due to pace of Energy Step Code adoption
- Local governments should contact their Key Account Managers or Sustainable Communities to liaise with the Hydro grid planning team to discuss how implementing the carbon pollution standard might affect their communities
- Option 3 intended to increase cost certainty and provide a cost estimate quicker. Lowering overall costs was not the primary driver.
- BCUC ruling on this issue would take at least 12 months

Commented [WO1]: uptake?

Commented [WHO2R2]: Yes indeed.

- Attendee questions/comments:
  - BC Hydro and Province should connect to ensure local electrical capacity supports provincial housing targets (CHBA & UDI have met Hydro on this issue, Housing DM is aware)
  - No decision yet on whether new improvement charge is based on usage or fixed cost per dwelling
  - BC Hydro should present on these basics more frequently to the construction industry to improve basic literacy on these issues.
  - Reconsider Option 4, or mix that with Option 3 to bring fees more in line with other utilities to make it more competitive.
  - BC Hydro is prepared for increased electricity use in the summer due to air conditioners. Summer peak use still lower than winter peaks.
  - Do you use future weather files when planning the system? No, they use historic load used over last 30 years, and have cushion (load feeders to 75%, and 66% in high-growth areas) to capture load fluctuations.
- Action items:
  - **Hydro staff will return to ESCC with cost estimates to hear further feedback**
  - **Council members to bring a list of key issues to BC Hydro and track progress**
  - **Include guidance for local governments to foresee local electrical capacity issues**

Roundtable

Commented [WO3]: Some more roundtable notes for your consideration:
s.13

- Northern customers still prefer dual-fuel or backup heating systems.
- One customer expected $14,000 in CleanBC rebates but the rebate program was fully subscribed after 2 weeks.
- UDI: Updated case studies with savings, initial costs needed given changing energy policy landscape and availability
- Step 3 for Part 9 buildings “pretty smooth”. Allowing backup heat allays concerns.
- Mechanical contractors need further training
- CEA Climate Action Dashboard coming soon that tracks Step Code adoption.
- Step Code Peer Network:
  - Subgroup discussed making a process map for RNG. Their key questions: intended outcome of the map, intended audience, and how will it be used? A legal review might be necessarily for some AHJs, with uncertainty around timing. Continued concerns about lack of permanency, lack of clarity on how carbon intensity of RNG can be

guaranteed due to different sourcing, and administrative barriers for AHJs (time of permitting, staffing issues, expertise).
    - FortisBC staff willing to meet with SCPN members on this issue
    - SCPN also creating an implementation cohort to figure out best practices given new CleanBC code changes
- FortisBC: 18 PJ of RNG will be available in the next few years.
- Gas heat pumps not small enough for single-family homes now, but advancements are being made.
- Part 3/Part 9 Non-Residential Subcommittee met late last year, consulted a few times on CleanBC code changes, pleased that they're signed. Toby is on CSA committee for energy efficiency, interested in hybrid heating systems, working with Cam Shook from EMLI on this.
- Capacity Building/Communications Subcommittee: Energy Step Code newsletter revived. Somewhat involved in update for code compliance tools, wanting to include building officials this time, not just EAs so there's buy in from those who receive the reports. Strong desire from EAs to professionalize, as many EAs don't have Step Code-specific training. BC Housing released Market Response Study that tracks industry activity, readiness, and some costing. Key findings:
    - Builders often choose energy conservation measures that cost more. Low-cost interventions like integrated design process aren't used as much as they should.
    - Consider extension to the Matrix study given the new Zero Carbon Step Code.
    - Comment: Make costing info relative (percentage up or down) rather than absolute dollar figures, as those become obsolete quickly.
    - Comment: Use local best practices as a baseline rather than code minimum, as many Northern builders don't build to Code minimum as customers there demand more airtight buildings to save energy.
- Part 9 subcommittee: Consulted several times on CleanBC code changes. Implementation planning is next step.
- Some mechanical engineers or design teams won't sign off on heat pump designs because they want an oversized design for the project despite AHJ wanting a smaller system
    - EGBC practice advisory team can help with this.
- Builders tend not to understand mechanical systems – mechanical contractors are not required to have TECA training, CSA F280 is in the code but only about 10% use it. Most just over size.
- Action items:
    - **Zac to check internally whether Office of the Superintendent of Professional Governance (OSPG) has a role to plan in EA professionalization and whether EA professionalization can be raised as a priority with them.**

Zero Carbon Step Code PowerPoint presentation

- Thanks to James and Sarah for creating these graphics
- Mandatory carbon requirements still TBD for 2024 and 2027.
- Consider a "super-presentation" that combines new energy requirements with new Zero Carbon Step Code content, illustrating how energy efficiency and carbon interact
- Action items:
    - **Council members to find case studies that meet Moderate and Low-Carbon Performance to include in this presentation**

- **Zac to circle back with EMLI regarding market transformation of key technology and PSFS for trades transformation**
- **Acknowledging that many training resources exist from professional organizations and BC Housing, BSSB will work with partners to prepare comprehensive technical training materials for the next Code rather than rush something out this spring/summer for energy and carbon only**
- **BSSB to provide work plan for the next year, to finalize over next 1.5 months.**
- ~~BSSB to organize lunchtime webinar to answer questions regarding CBHCC poll regarding GHG requirements in the National Building Code.~~ **(occurred Tues. Feb. 28, 2023)**
    - Draft policy recommendations are available on the website here: https://cnrc.teamwork.com/app/tasks/37694438
    - **Zac encourages all organizations to individually submit responses to CBHCC poll as they may not know what the ESCC is and the sectors it represents.**
- **Next ESCC meeting in 2-3months**

Hi Cory,

This seems related to tenant right of first refusal as a result of tenant displacement (redevelopment or major renovation). I would think that Richard Rogers (ED, RTB) would be the best person to attend.

I am happy to attend if Jessica would like me there. No other staff from my branch

Cheers!

Subject: MRK Meeting with Urban Development Institute

Hi Jessica and Cim,

The MO has just confirmed a meeting on Friday from 9am to 10am between MRK and the Urban Development Institute on the 'Right of First Refusal'. The DMO has reached out to ask which staff members need to attend, keeping in mind that Bindi will be away.

Jessica, as you will be acting and Cim, as I believe you have led our meetings with UDI before, can you both confirm for me who needs to attend? Is there other staff you'd like present with you? Please let me know so I can have the DMO forward you and anyone else required.

Thank you,

Cory Scott | Documents Coordinator
Assistant Deputy Minister Bindi Sawchuk

Good Morning Zachary,

Ooh, that is great news!

Yes, I can make time this morning to connect with you. Here is my availability for this morning. If there is a time that works for you, please let me know and I will book you in. Or, if you prefer, you can book yourself in using the booking tool below.

Please select the time that works best for you.

Event: 30 Minute Video Call
Time zone: Pacific Time - US & Canada Change

MON

Mar 13

11:00 a.m.

11:30 a.m.

12:00 p.m.

Need another time? See full list of times

Thanks,
Ally Bodnar

Hi Ally,

Thank you for your patience! We have our regulations out and are able to commit to presentations related to the changes starting in mid-April, or anytime after that. Do you have time to discuss details tomorrow morning? I'm fairly flexible all morning, so let me know if there's a time that works for you between 9am and noon.

Best,
Zachary D. May, MBA

Hi Ally,

Still working on wrapping up our regulation. That could be as late as the end of January.

I have ICBA on our list for follow up when we have the regulation complete and are planning communications and training.

Best,

Subject: RE: Stakeholder Qs

We have some details on this, but the short version is that the engineering science has improved and that will require more stringent requirements in Victoria (which has one of the highest seismic risks in Canada).

We might be in a situation where government support (or local government flexibility) should be considered to offset the uniquely high costs and impacts in this region, since the same building footprint will allow less interior floor space than it used to.

Do we need some bullets or a BN on this?

Hi Zach –

More clarity in a meeting with UDI had with Minister Kahlon this morning.

Mentioned specific to Vancouver Island, that the seismic requirements in the next Building Code will make 4-6 story wood frame buildings economically unfeasible. The reasons provided were:

- Code uses anticipated seismic events that have an increased in magnitude
- Code changes soil classification from depth of footing to surface level

Minister Kahlon requested the specifics on why these projects won't be feasible.

John

Subject: Stakeholder Qs

Hi Zach –

It only took two days… I was meeting with UDI yesterday, along with Lisa Helps, and they raised some points about the upcoming changes to the Building Code which will add costs re: climate resiliency and emissions reductions principally it seemed. They also talked about the impacts of the 'reclassification of soil' requiring additional construction costs to address additional shear load requirements.

It would be super-helpful to connect with someone in BSSB to test these comments and contextualize these comments within what's happening with the Building Code. Also, if the soil piece rests with ENV please let me know, as I need to connect with them anyway on permitting and contaminated soil remediation.

As an aside, has there been costing (in BC or Nationally) on the cost implications of the upcoming changes to the Building Code? I assume there has.

Thanks.

Hi Zachary,

I hope you are well.

UDI has prepared a Draft Letter in response to the Federal government's first phase of consultation on the *Draft Policy Framework for Climate Change Mitigation* and *Policy Considerations for Developing and Implementing GHG Emissions Provisions in the National Model Codes*. I have attached the letter to this email. Given the discussion we had at the ESCC Webinar on February 28th, I know we need to send as many BC letters in as possible. Do you have any concerns with what we have said regarding aligning with the BC approach?

Do not hesitate to reach out if you have any questions.

Dear Sefton Hyde-Clarke:

Re: Phase 1 Consultation on Draft Policy Framework for Climate Change Mitigation

The Urban Development Institute – Pacific Region (UDI) is pleased to provide comments on the first phase of the consultation on the *Draft Policy Framework for Climate Change Mitigation*. We represent the building and development sector in British Columbia and these proposals will have an impact on their construction practices.

In terms of reducing operational greenhouse gas (GHG) emissions in new construction, we recommend that the Canadian Board for Harmonized Construction Codes (CBHCC) follow the approach that has been taken in British Columbia with the *Zero Carbon Step Code (ZCSC)*. However, UDI has concerns with the regulation of embodied carbon through building codes, as there are better mechanisms that should be utilized first to reduce these emissions.

About UDI and Its Involvement in Green/Sustainable Building Practices

The Urban Development Institute is the association of the development and building industry and its related professions in British Columbia. UDI Pacific Region has offices in the Okanagan, the Capital Region, the Fraser Valley and Metro Vancouver, and we represent thousands of individuals involved in all facets of land development and planning, including builders, property managers, financial lenders, lawyers, engineers, planners, architects, construction companies, appraisers, real estate professionals, local governments and government agencies.

UDI has for decades provided leadership in encouraging sustainable development and green building practices. I sit on the Provincial Mass Timber Advisory Council in British Columbia, and UDI was one of the original organizations that developed the *B.C. Energy Step Code (ESC),* and we continue to actively participate on the Energy Step Code

Council (ESCC), which developed the *ZCSC*. UDI is also a member of BC Housing's Mobilizing Building Adaptation and Resilience (MBAR) initiative, the B.C. Real Estate Association's Floodplain Maps Working Group, the Advisory Committee for Simon Fraser University's Adaptation to Climate Change Team and the Lower Mainland Flood Management Strategy Joint Program Committee.

Through our seminars and webinars, we educate our members about best practices on a wide range of topics including mass timber construction, the *ESC*, and the new *ZCSC*, and improving building envelopes and other passive design practices.

Regulating Embodied Carbon in Building Codes

UDI recommends that the Federal, provincial and territorial governments look at other approaches to reducing embodied carbon emissions before regulating them through building codes.

The CBHCC is proposing to make the reduction of embodied carbon emissions an objective under future building codes. It is unclear whether embodied carbon is best regulated in building codes, and UDI believes that it should not be the primary tool used to reduce it. Our members orchestrate the purchase and installation of materials. They are not suppliers, and have little influence over them, so embodied carbon standards would be difficult for our members to enforce. Builders, even larger ones, cannot be overly selective with building materials, as it will add delays and costs to projects – this is especially true with strained and delayed supply chains.

In the past, UDI has advocated that the Broader Public Sector (BPS) lead with improvements in energy efficiency and reducing carbon in new construction. This approach led to the successful adoption of the Leadership in Energy and Environmental Design (LEED) standard in Metro Vancouver. With embodied carbon, the case is even stronger for the BPS to take the lead. Unlike builders, senior governments can use their purchasing power to dictate to suppliers the need to reduce carbon in their products.

A good example of this is concrete, which represents 50% to 80% of the embodied carbon in some buildings. It is unclear whether there is currently enough low-carbon concrete available to build the housing and job spaces needed in the City of Vancouver, let alone the region or British Columbia. However, governments, through investments in bridges, tunnels, the Site C hydro-electric project, hospitals, new housing, schools, university/college buildings and other capital projects, are key purchasers of concrete and can use this purchasing power to push cement producers to reduce GHG emissions in their products. This would make more low carbon cement materials available to our members and potentially reduce costs. A similar approach could be adopted for other building materials, including expanding the use of mass timber. Before embodied carbon is regulated in building codes, the BPS needs to use its purchasing power to set builders up for success.

In addition to the purchasing power of governments, there are other regulatory mechanisms that should be considered such as directly regulating suppliers. In British Columbia, the Provincial Government mandates the energy efficiency of windows, appliances, furnaces and other products through an *Energy Efficiency Act*. The Federal Government has similar legislation. There is an added benefit to this approach, because the requirements apply to products being used in existing buildings – not just new

construction. A similar approach needs to be considered for mandating the reduction of embodied carbon in products and materials. This needs to be in place before embodied carbon is regulated in building codes because it will help ensure that low embodied carbon products and materials will be available to builders.

UDI also is concerned about the industry's capacity to address these substantial objectives in a brief timeframe. When the *ESC* was first introduced in British Columbia, UDI supported it because it standardized green building requirements across the province and provided a roadmap for future regulations. Our members are still adjusting to building to the ESC's higher steps and the new *ZCSC*, which regulates operating GHGs in new construction. Now we are discussing further significant changes to building codes to regulate embodied carbon emissions, which may run counter to our energy efficiency regulations that rely on heavier building envelopes with higher levels of insulation. There are also discussions of adding resiliency elements to the building codes.

With labour and supply chain constraints, this myriad of regulatory changes is going to be difficult for B.C. builders to achieve. This is the case even though many builders in urban centres have worked with the *ESC* for seven years, have some experience with low carbon energy systems[1], and operate in a province with virtually zero emissions electricity. It is not clear how builders in other jurisdictions without these advantages are going to meet all these objectives in a short period of time and still deliver housing affordably. This is especially the case in communities outside of major metropolitan centres.

If reducing GHG emissions is the primary goal, then we may need to reassess the need to achieve the goal of net-zero ready energy buildings between 2030 and 2032 in building codes. As noted above, these buildings will require heavier envelopes which will likely lead to higher embodied carbon emissions. The heavier envelopes of the highest step of the *ESC* also make it exceedingly difficult to achieve the urban design requirements of local governments and the expectations of the public without substantial increases in construction costs. Net-zero energy ready buildings also make utilizing District Energy Systems, which all levels of government are pursuing to reduce GHGs, less viable.

We would like to note that the fundamental provisions in building codes for Part 3, which specifies this type of building construction should be based on balancing cost, safety and performance, has been in place for almost a century. However, most of the provisions in the *National Building Code* (*NBC*) have been layered on top of each other – with no fundamental assessment of the balance of cost, safety and performance occurring. Before adding embodied carbon mandates to the *NBC*, this needs to be completed.

Aligning with the B.C. Approach for Operating Emissions

UDI recommends that CBHCC's approach to regulate operating GHG emissions in new construction be similar to British Columbia's approach with the ZCSC.

We are pleased to see that the approach that the CBHCC is proposing is aligned with what the Province of British Columbia has introduced with the *ZCSC* and the *ESC* as well as the approach that is being taken nationally with energy efficiency requirements.

The Energy Step Code Council, an award-winning multi-stakeholder committee made up of representatives from all levels of government, professional associations, building industry groups, non-profit housing providers, and utilities, developed the *ZCSC* over the past few years. It is based on the success of the *ESC*, developed by the Council's predecessor committee between 2014 and 2016. The ESCC since 2017 has provided guidance and support for the implementation of the *ESC* – and now the *ZCSC*. The advantages of B.C.'s *ESC* and *ZCSC* approaches, include:

- Having a consistent approach to energy efficiency and operating carbon emissions regulations across municipalities and with the *B.C. Building Code* (*BCBC*) – the timing of when the changes occur may vary across B.C., but all the regulators are going in the same direction;
- Providing clear direction to builders, design professionals and construction companies on where these regulations will be going over time, so our members can prepare for future mandates; and
- Having performance intensity metrics that allow our members (especially Part 3 builders) and their design teams to determine the best and most cost-effective approaches to achieve them for their projects - which will change with different sites and as technology evolves.

With these benefits, the work that has been put into these standards, and the familiarity our members have with the approach and will have with the *ZCSC*, we do not want to see significant changes due to another approach being adopted nationally that must then be adopted in B.C. because of the C*onstruction Codes Reconciliation Agreement* (*CCRA*) that harmonizes building codes across the country.

For these reasons, we support many of the recommendations in the *Policy Considerations for Developing and Implementing Greenhouse Gas Emissions Provisions in the National Model Codes* consultation document, including:

- Having tiered framework;
- Having "*... GHG emissions requirements be separate from the NBC and NECB energy performance tiers but developed with the view to not preclude pairing the requirements in various ways*;"
- Ensuring that there will be both performance and prescriptive options available to builders; and
- Considering several types of metrics including intensity-based, absolute and reference building ones, but ensuring that the metrics that will be used are aligned with provincial and territorial goals.

UDI is potentially concerned about the recommendation to have grid level emissions factors based on Environment and Climate Change Canada data. We believe that the emissions factors should be established by Provincial and Territorial governments as there may be issues best addressed in each region. For example, our members are mandated to connect to District Energy Systems, which may not be carbon neutral by 2025 and there is an electrical utility in northern B.C. that has high emissions factors. It would be best if each provincial and territorial government managed these matters. This approach would not violate the intent of the *CCRA* because how the emissions factors are used by design professionals could still be consistent across the country.

Conclusion

As noted above, UDI is very supportive of performance-based codes. However, improvements are needed. Going forward there is a need to re-assess the alternative solution process to permit design professionals to develop more cost-effective solutions for Part 3 projects – especially for energy efficiency and GHG reductions – but also for other provisions in building codes. We recognize that this will take time. In the meantime, a system is needed for approval of properly developed performance based alternative solutions that provide the required level of performance mandated in the *NBC* (and *BCBC*) – as opposed to the *"… level of performance provided by solutions already in the Code.*" Examples raised by our members include:

- Assessing whether an amenity facility on a small 7th level significantly affects the required level of fire safety for a 6-storey wood frame building; and

- Whether Carbon Monoxide (CO) protected vestibules and related mechanical systems are required given the shift to electric vehicles and CO detection systems.

Thank you for allowing us to comment on Phase 1 of the *Draft Policy Framework for Climate Change Mitigation.* We are concerned about the reduction of embodied carbon becoming an objective under the national building codes and recommend that other approaches be considered first. Regarding operating carbon emissions in new construction, UDI is generally supportive of the direction being taken by the CBHCC because it appears to be compatible with the approach being taken in British Columbia. If you have any questions regarding our comments and recommendations, please do not hesitate to contact us. We would be pleased to arrange a discussion with our Building Codes Committee, which includes members involved in the national code development process.

Yours sincerely,

Importance: High

Hi Zac,

It sounds like MRK is contemplating having a stakeholder meeting this Friday to highlight the digitization work and set the stage for conversations when the Strategy is released. Teri has asked if you and your team could put together some bullets for the Minister to support that – what to focus on, and if there are any areas that are still confidential or not ready to be discussed yet. Who will be there is still being worked on but Teri thought likely to be the stakeholders you would expect to be interested in this space, eg UDI etc

I don’t have much more information than that but please let me know if you’d like us to try and find out anything additional

Thanks!
Jessica

Hi Bindi,

I hope you're keeping well. Recognizing that it's been a few weeks since our discussion on the *Housing Supply Act* regulations, we'd like to offer a brief summary of some of the points raised in the meeting with several of our members, and reiterate some of the key areas of interest for the development sector.

We're looking forward to continuing these discussions with you and your colleagues and please don't hesitate to reach out to us if you have any questions.

Thanks,
Cassandra

Re: *Housing Supply Act* Regulations Discussion Follow-up

Thank you for the opportunity to engage with you and your staff on the forthcoming *Housing Supply Act* regulations. In addition to the comments provided during the March 3rd discussion, we would like to provide additional suggestions for your consideration.

Target setting

We were pleased that the Ministry is considering setting the municipal housing targets broadly based on the areas in which the *Speculation and Vacancy Tax (SVT)* applies. However, we acknowledge that the housing crisis is affecting areas all across the province, even outside of these areas, and that other steps may be required to address issues in these areas. By communicating that targets could apply to municipalities in this broad area, and assigning targets on a rolling basis, it could provide incentives for municipalities that are not assigned a housing target initially to ensure that their policies and processes do not unnecessarily hinder development. If there is the possibility that they may be assigned a housing target in the future, they may make proactive changes to support housing delivery, and avoid new policies that may undermine this[1]. This is especially critical in regions where there are many municipalities with varying levels of growth sharing an interconnected market (i.e. Metro Vancouver and the Capital Region).

In previous correspondence with the former Minister responsible for Housing, we have recommended that there be a transitionary phase for the initial assignment of a municipal housing target. Although the overall target may be tied to the delivery of housing units measured by building permit issuance, during a transitionary phase, there could be interim objectives for earlier stages in the development review process (i.e. *economically viable* zoned capacity or the number of Rezonings/Development Permits). Many projects, especially large complex developments, take several years to advance from the enquiry stage to receipt of a building permit. By setting interim targets it would provide a more timely measure of municipal progress towards broader objectives of increased housing delivery and, if necessary, enable earlier corrective action from the Province.

We also encourage the Ministry to ensure alignment of key definitions with other levels of government and government agencies, particularly BC Housing, CMHC, Regional Districts and local governments. For example aligning definitions of affordability for below market housing will be important to enabling projects to qualify for supportive funding and incentives.

T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

Responsiveness to targets

To create more responsiveness to municipal housing targets once assigned, we recommend that the Province offer additional incentives, such as funding for infrastructure and amenities to support growth. For example, municipalities exceeding their assigned target could be offered a per-door subsidy or be given the opportunity to apply to a specialized fund for critical infrastructure projects such as pump stations or local distribution capacity that can open new areas up for redevelopment. Development cannot proceed in some areas of high growth communities because a significant piece of infrastructure needs to be funded, and the local government is waiting for a large enough project or builder to fund it. We believe that by providing both a carrot and stick approach it could enable the greatest increase in housing delivery.

Advisor qualification

As part of the regulatory framework, we encourage the Ministry to require that an advisor, should they be appointed, be a third-party independent from all levels of government. This individual, or team, would require qualifications making them familiar with municipal development processes, and able to conduct both qualitative and quantitative assessments. In addition, we recommend that the practice of hiring a third-party consultant who is routinely hired by multiple municipalities for internal and policy reviews be limited, to avoid any perceived conflicts.

Program Policy

We are also encouraged by the defined timelines for responses between the Province and municipalities. We hope that this level of definition could be incorporated into other aspects of the target setting and review process.

Separately, when evaluating the response of a municipality to an assigned housing target, we would encourage the ministry to communicate the opportunities that exist for municipalities to off-set external market pressures (e.g. interest rate fluctuations, cost escalations and labour shortages), with existing policy levers. While these market factors may be outside of a municipality's control, there are generally policy and process changes that could be made to mitigate their impact, such as authorizing additional density or limiting fee increases.

Thank you again for engaging with UDI and we would be happy to provide more detailed comments with the opportunity to review the draft regulations. If you have any questions regarding comments made in the March 3rd discussion or this letter, please do not hesitate to contact us.

Hi Teri & Mark,

I wanted to give you a heads up that Minister would like to hold the digital permitting roundtable next Thursday April 6. I have time held from 3-5pm that day. It should be an hour. As I understand it he'd like Ministry staff to speak about where we are going as well as the Digital Supercluster. And then open it up to thoughts from the attendees. Below is a list of the stakeholders he'd like to join.

Mark you and I can discuss how to track down contact info, etc. and folks on Monday. Teri let us know if you have any flags or items to add.

Digital Supercluster

UDI
Homebuilders
Architects
Engineers
Planners
BC Building Trades
GVBOT
North Vancouver – Tim Ryce (Chief Building Official)
Kelowna
Surrey
Vancouver
Victoria

Secondly he'd like to do an announcement about the Digital Permitting project on April 11. I have another announcement on that date but that can be moved though I'll still need to get permission from PO to move ahead 100%. Will keep you posted/should have an update Monday.

Thanks,
Siân

Hi Zach,

Do you have some time on Tuesday April 4 between 11 - 2 next week for a brief chat with Jeff and I? We had a couple of questions about the anticipated building code changes coming out later this year.

Kind regards,
Verna

My connection paused and then I had to head to another call.

Meeting with your UK partners would be great.

UDI contact is Jeff Fisher – Vice President of Policy jfisher@udi.org
CHBA-BC is Carmina Tupe, Director of Policy and Government Relations carmina@chbabc.org and Pauline Rupp, Director, Technical & Building Innovation pauline@chbabc.org (CHBA-BC had a digital permits session last week, so they have started discussing and thinking about this topic).

Hi Zac,

Not sure what happened, but I expect the internet gremlins were at work there. Happy to schedule another call, otherwise we will work on scheduling something with our UK partners for this Thursday or next Wednesday. We have a call with them tomorrow and will confirm.

If you can provide contact names at UDI or CHBA BC that would be great. If there is any other questions let us know and happy to address them.

Thanks,

Mark

Good afternoon all,

Hope this note finds you well. In preparation for our upcoming meeting, please send me any items you would like to add to the agenda.

For your reference, I have attached the draft minutes from our last meeting.

Please send in your items by April 17th.

Warm regards,

Milly Luc (she/her)
EA to CEO | EXECUTIVE OFFICE

e: mluc@bchousing.org | d: 236.984.0309

I would like to gratefully acknowledge that BC Housing is located on the traditional and unceded territory of the xʷməθkʷəy̓əm (Musqueam), Skwxwú7mesh (Squamish), and səlilw̓ətaɁɬ (Tsleil-Waututh) people.

The 21st meeting of the **BC HOUSING INDUSTRY AND CONSUMER ADVISORY COUNCIL** was held on Monday, October 31, 2022 via conference call.

IN ATTENDANCE:

Industry and Consumer Advisory Council:
Neil Moody, Canadian Home Builders' Association of BC
Mark Sakai, BC Real Estate Association
Chris Atchison, BC Construction Association
Peter Mitchell, Engineers, and Geoscientists British Columbia
Jason Jung, ASTTBC
Tony Gioventu, Condominium Home Owners' Association

Ministry Representatives:
Zachary May, Building and Safety Standards Branch
Gord Enemark, Housing Policy Branch (In-part)

BC Housing Representatives
Vince Tong, BC Housing (Chair)
Michelle Hayes
Denisa Ionescu
Adam Terris
Esther de Vos
Sue Bate (recording)

Regrets:
Tyler Wightman, Building Officials Association of BC
Mark Vernon, Architectural Institute of British Columbia
Ron Rapp, HAVAN
Anne McMullin, Urban Development Institute
Chris Gardener, Independent Contractors Association of BC
Howard Friedman, Travelers Guarantee
Andrew Armstrong, Aviva Canada
Chris Watters, RSA Home Warranty

1. Welcome & Introductions

V. Tong welcomed participants to the meeting and acknowledged that BC Housing delivers its mission on the ancestral homelands of Indigenous Peoples across B.C., each with their own unique traditions and history. Respect was offered to their Peoples, past and present.

V. Tong introduced himself as the Acting CEO of BC Housing after the former CEO, Shayne Ramsay retired in September 2022. He noted that BC Housing's Board is currently undertaking a global search for the new CEO. Given the complexity of the process, and the importance and specialized nature of the role, it is expected that this process will extend into 2023.

Despite this change in leadership, our mission remains unchanged: making a positive difference in people's lives through safe, affordable, and quality housing.

2. APPROVAL OF AGENDA AND MINUTES

Today's Agenda and the minutes of April 25, 2022 were approved.

3. ACCESSIBILITY AND HUMAN RIGHTS UPDATE

T. Gioventu updated the Council on the Accessibility Research that the Condominium Home Oowners Association is currently working on. ~~There are currently specific issues that are huge barriers in new construction in this area.~~ It was noted that CHOA was running a seminar in early November where an overview of the Accessibility Act and the upgrades and changes to multi-family buildings to increase accessibility, were being reviewed.

4. LICENSING AND CONSUMER SERVICES UPDATE

M. Hayes provided an update on LCS. To date there are currently 5000 new builders in BC. The new step code training initiatives are now live. Its purpose is to support and prepare builders on updated changes. Builders are required to take all eight modules of the course, unless exempted.

5. OFFICE OF HOUSING AND CONSTRUCTION STANDARDS

Z. May attended the meeting to provide an update on the national building standard codes, planned to be released in March 2023, which will harmonize standards. He noted that public consultations were open until November 4, 2022. Updates to other initiatives was provided with alterations to the existing building code and moving retrofits to meet code. A further update on these initiatives will be noted at the next meeting of the council.

6. RESEARCH & EDUCATION INITIATIVES

D. Ionescu provided an update on ~~the~~ Research & Education ~~Grants program~~, to date.

The Monthly New Home Registry Reports and Research & Education ~~Project~~ project ~~Summaries~~ summaries were presented for information.

All these reports are available to view in the Council Portal New APRIO NEXT Portal *Note that the portal has recently undergone a migration to a new system. If you have not accessed the new system, please reach out to APRIO via your usual log in details and request a training session. Your permissions remain the same.*

7. ROUNDTABLE

V. Tong opened the meeting for a roundtable discussion with the Council to determine what issues have emerged for industry and consumers. Several items were discussed with the following of note:

N. Moody, CHBA referenced the recently released Municipal Benchmarking Report which is currently available on their website. The report shows evidence of housing supply shortfalls in BC and the economic consequence of those shortfalls both past and future. The study also looks at housing demands and supply trends throughout BC and 13 municipalities.

J. Jung, ASTTBC, acknowledged his return to the Council after taking over from T. McCurry. He noted the transition that ASTTBC is currently undergoing to being a fully regulated body.

T. Wightman, BOABC, was unable to attend the meeting, however wished to advise the Council that BOABC is running energy step code training through BCIT for building officials over the next few months. He also advised that the BOABC conference is scheduled from May 28-31, 2023 at the River Rock in Richmond BC.

PROPOSED MEETING DATE

The next meeting will be held Monday, April 24, 2023 from 1 to 2:30 p.m. The date/time is currently confirmed for a virtual meeting, however interest has been raised to hold this as a potential hybrid meeting going forward.

ADJOURNMENT

There being no further business, the meeting was adjourned at 2:30 p.m.

UDI Webinar Update - Zero Carbon Step Code & BC Energy Step Code Changes

From:	Verna Yu <vyu@udi.org>
To:	May, Zachary HOUS:EX <Zachary.May@gov.bc.ca>, Roberto Pecora <roberto@zebx.org>, Sheryl Peters <speters@bchousing.org>
Cc:	Wilma Leung <wileung@bchousing.org>, Jeff Fisher <jfisher@udi.org>

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Good afternoon everyone,

A big thank you to Zach and Roberto for joining us as speakers, and to Sheryl for moderating the upcoming UDI Webinar on the Zero Carbon Step Code & BC Energy Step Code Changes scheduled for Tuesday, May 2! We have also invited Laura Sampliner with the City of Coquitlam to round out our panel with the perspective from a municipality and hoping she will be available. Once we receive confirmation from the final speaker, I will schedule a pre-event briefing call with everyone to review the details.

In advance this pre-meeting, I want to highlight some of the key objectives we hope to cover off :

- Zero Carbon and Energy Step Code changes that have been passed
- National Building Code and the Canadian framework / Harmonization of the codes
- Provincial expectations
- Impact this will have for P9 and P3 buildings
- How local governments are dealing with these changes/ what are the local governments doing
- BC Hydro issues / supply and support
- Implementation - Case studies from P3 and P9 builds

I have also outlined below a draft event write-up for promotions for your review and feedback.

Join us for an informative webinar on the latest updates for the Zero Carbon Step Code and the BC Building Code, and how these changes will impact builders in British Columbia.

Our expert panel will provide an overview of the key updates and highlight the new requirements and standards for energy efficiency, emissions reductions, and sustainable building practices. Through this conversation, we will discuss the potential benefits and challenges for builders in meeting these new regulations.

Thank you everyone once again. Happy for your thoughts and feedback on the above proposed items.

Kind regards,
Verna

Subject: Contacts for digital permitting roundtable

Hi Nikki and Bindi,

I hope you both are well.

I am reaching out to see if you can help us identify contacts to invite to a digital permitting round table on Thursday, April 6.

We have time held from 3-5 pm that day. It should be an hour. As I understand it, the Minister would like Ministry staff to speak about where we are going as well as the Digital Supercluster. And then open it up to thoughts from the attendees. Below is a list of the stakeholders he'd like to join.

Digital Supercluster
UDI
Homebuilders
Architects

Engineers
Planners
BC Building Trades
GVBOT
North Vancouver – Tim Ryce (Chief Building Official)
Kelowna
Surrey
Vancouver
Victoria
Burnaby
Port Coquitlam

We are hoping to have the list of invitees finalized today so if you can please provide contact details at your earliest convenience that would be amazing.

Thanks for your help and all the best,

Mark

Digital Permitting Roundtable - Follow-up

From: May, Zachary HOUS:EX
To: May, Zachary HOUS:EX <Zachary.May@gov.bc.ca>
Sent: April 6, 2023 5:08:48 PM PDT

Hello and thank you for joining Minister Kahlon's Digital Permitting Roundtable today.

We will be releasing more information in the coming weeks, including formal engagement processes and ways to get involved. If you have any questions or ideas you think we should consider, please feel free to reach out directly.

Best,
Zachary D. May, MBA
Executive Director

Codes Acceleration Fund Selection Committee
Codes Acceleration Fund
Natural Resources Canada
Office of Energy Efficiency
19th Floor – 580 Booth Street
Ottawa, ON K1A 0E4

Dear Committee Members:

Re: Government of B.C.'s Funding Application to Stream 1 of the Codes Acceleration Fund (CAF)

Please accept this as the Urban Development Institute – Pacific Region's (UDI's) letter of support for the Government of British Columbia's funding application to Stream 1 of the Federal Government's *Codes Acceleration Fund (CAF)*.

UDI is the association of the development and building industry and its related professions in British Columbia (B.C.). UDI-Pacific Region has Chapters in the Okanagan, Capital Region, Fraser Valley and Metro Vancouver. We represent thousands of individuals involved in all facets of land development and planning including builders, property managers, financial lenders, lawyers, engineers, planners, architects, appraisers, real estate professionals, local governments, and government agencies.

For decades, we have provided leadership in encouraging sustainable development and green building practices. I sit on the Provincial Mass Timber Advisory Council in B.C., and UDI was one of the original organizations that developed the *B.C. Energy Step Code* (*ESC*). We continue to actively participate on the Energy Step Code Council – including its recent work in developing a *Zero Carbon Step Code* (*ZCSC*). Through our seminars and webinars, we educate our members about best practices on a wide range of topics including brownfield remediation, mass timber construction, electrical vehicle charging, the *ESC* and the *ZCSC*.

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada
T. 604.669.9585 F. 604.689.8691
www.udi.bc.ca

As such, we are pleased to support the B.C. Government's application for *CAF* funding. When implemented, the activities included in their application will help to strengthen our members' ability to prepare and comply with current and future higher levels of energy and low-carbon performance under the *ESC* and *ZCSC,* as well as *B.C. Building Code* (*BCBC*) requirements and national standards.

We are especially looking forward to collaborating with the Province and other key partners to help support *CAF* funded activities to:

- Digitize the *BCBC* through the Digital Innovation in Housing Construction initiative;
- Improve compliance through capacity-building with industry, local governments, and Indigenous Communities;
- Create standardized design and installation guidelines for mechanical systems; and
- Build the capacity and preparedness of key stakeholder groups such as ours to meet upcoming code changes through tailored education, education resources, training, facilitating peer-to-peer learning, and a smooth transition to digital building information and compliance systems.

We would be pleased to work with the Province to include these critical activities in our educational and professional development programming.

UDI strongly supports the Province of British Columbia's application to the *Codes Acceleration Fund* and ask that you approve it.

Sincerely,

Anne McMullin
President & CEO, Urban Development Institute

Energy Step Code Council Meeting
Notes

Date and Time of Meeting: Monday Feb 13, 2022 | Time: 10:00 a.m. to 3:00 p.m. Pacific Time
Location: BC Hydro Head Office: 333 Dunsmuir St., Vancouver, B.C. and online
Chair: Zachary May, Building and Safety Standards Branch, Ministry of Housing
Co-Vice Chairs: Bob Deeks, CHBA BC and Robyn Wark, BC Hydro

Attendees:

Bea Bains, FortisBC
Tom Berkhout, BC Hydro
Maya Chorobik, Community Energy Association
Norm Connolly, City of Richmond, PIBC, Part 3 subco co-chair
Madeline Dams, MUNI
Diana Dilworth, HAVAN
Patrick Enright, City of Vancouver
Jeff Fisher, UDI
Elisabeth Baudinaud, CEA
Maura Gatensby, AIBC
James Glave, Bright Future Studios
William Grass, BSSB
Joe Hart, CHBA-BC
Altaf Hussain, BC Hydro
Jason Jung, ASTTBC
Iulia Jurgea, BC Hydro
Toby Lau, BC Hydro, Part 3 subco co-chair
Wilma Leung, BC Housing
John Madden, UBC
Rick Mann, CHBA-BC
Zachary May, BSSB
Jason Owen, City of Surrey
Harshan Radhakrishnan
Jason Rowley, CoV Chief Electrician
Laura Sampliner, CEA and SCPN
Zack Segal, BOMA BC
Bertine Stelzer, BC Hydro
Lise Townsend, City of Surrey
Carmina Tupe, CHBA-BC
Robyn Wark, BC Hydro and ESCC Vice-Chair
Ralph Wells, UBC
Scott Williams, BSSB
Hugo Wong, BSSB

Meeting started 10:27 due to technical issues.

Overview of CleanBC Code changes: Scott Williams, BSSB

- May 1, 2023 effective date
- Congratulations for last six years of hard work. Big milestone.
- Refer to presentation for additional details
- More communications on the way to support

Actions:

- ~~HW to send highlighted building code convenience copy to the Council when available (keep within your organizations)~~ **(Update, Feb. 21: Convenience copy included in Feb. Energy Step Code newsletter)**

Presentation from BC Hydro

- Refer to presentation
    - BC Hydro prefers Extension Policy Option 3 described in the presentation
- BC Hydro preparing for rollout of building carbon pollution standard

    - BCHydro has a surplus of energy projected until 2030; however, transmission and distribution needs updates in certain areas to be looked at in more detail.
    - Anticipating quick uptake of building electrification due to pace of Energy Step Code adoption
    - Local governments should contact their Key Account Managers or Sustainable Communities to liaise with the Hydro grid planning team to discuss how implementing the carbon pollution standard might affect their communities
    - Extension Policy Option 3 intended to increase cost certainty and share costs more equitably across new developments . Lowering overall costs was not the primary driver.
    - BCUC ruling on this issue would likely take at least 12 months
- Attendee questions/comments:
    - BC Hydro and Province should connect to ensure local electrical capacity supports provincial housing targets (CHBA & UDI have met Hydro on this issue, Housing DM is aware)
    - Is BC Hydro thinking about a single extension tariff pool and corresponding charge per unit for the entire province or will it account for potential regional differences?
        - Hydro was assuming a single charge per unit for the entire province but will assess regional implications
    - Has Hydro considered having a lower charge per unit for higher efficiency homes/buildings?
        - Hydro has not considered this but will assess.
    - How is Hydro taking electrification retrofits into account when assessing grid capacity? Will these be factored into local government grid capacity assessment work with Hydro?
    - In the past, Hydro's system could handle new loads easier. What has changed?
        - Response: BC Hydro is busier than ever and loads are increasing as well with more MURBs and densification.
    - Clarification was sough on what is considered an extension versus a system improvement (for example, what is it called when a new transformer is needed but a new line is not?)
    - Comment made about the amount of time it takes to get a simple connection.
    - Would like to see Hydro do more of these kinds of presentations to other audiences. Important for people to understand what Hydro is planning.
    - No decision yet on whether new improvement charge is based on usage or fixed cost per dwelling
    - BC Hydro should present on these basics more frequently to the construction industry to improve basic literacy on these issues.
    - Reconsider Extension Policy Option 4, or mix that with Option 3 to bring fees more in line with other utilities to make it more competitive.
    - BC Hydro is prepared for increased electricity use in the summer due to air conditioners. Summer peak use still lower than winter peaks.
    - Do you use future weather files when planning the system? No, they use historic temperature over last 30 years, and have cushion (load feeders to 75%, and 66% in high-growth areas) to capture load fluctuations.
- Action items:

- **Hydro staff will return to ESCC with proposed fees to hear further feedback**
- **Council members to bring a list of key issues to BC Hydro and track progress**
- **Include guidance in Best Practices Guide for local governments to foresee local electrical capacity issues**

Roundtable

- Northern customers still prefer dual-fuel or backup heating systems.
- One customer expected $14,000 in CleanBC rebates but the rebate program was fully subscribed after 2 weeks.
- UDI: Updated case studies with savings, initial costs needed given changing energy policy landscape and availability
- Step 3 for Part 9 buildings "pretty smooth". Allowing backup heat allays concerns.
- Mechanical contractors need further training
- CEA Climate Action Dashboard coming soon that tracks Step Code adoption.
- Step Code Peer Network:
    - Subgroup discussed making a process map for RNG. Their key questions: intended outcome of the map, intended audience, and how will it be used? A legal review might be necessarily for some AHJs, with uncertainty around timing. Continued concerns about lack of permanency, lack of clarity on how carbon intensity of RNG can be guaranteed due to different sourcing, and administrative barriers for AHJs (time of permitting, staffing issues, expertise).
    - FortisBC staff willing to meet with SCPN members on this issue
    - SCPN also creating an implementation cohort to figure out best practices given new CleanBC code changes
- FortisBC: 18 PJ of RNG will be available in the next few years.
- Gas heat pumps not small enough for single-family homes now, but advancements are being made.
- Part 3/Part 9 Non-Residential Subcommittee met late last year, consulted a few times on CleanBC code changes, pleased that they're signed. Toby is on CSA committee for energy efficiency, interested in hybrid heating systems, working with Cam Shook from EMLI on this.
- Capacity Building/Communications Subcommittee: Energy Step Code newsletter revived. Somewhat involved in update for code compliance tools, wanting to include building officials this time, not just EAs so there's buy in from those who receive the reports. Strong desire from EAs to professionalize, as many EAs don't have Step Code-specific training. BC Housing released Market Response Study that tracks industry activity, readiness, and some costing. Key findings:
    - Builders often choose energy conservation measures that cost more. Low-cost interventions like integrated design process aren't used as much as they should.
    - Consider extension to the Matrix study given the new Zero Carbon Step Code.
    - Comment: Make costing info relative (percentage up or down) rather than absolute dollar figures, as those become obsolete quickly.
    - Comment: Use local best practices as a baseline rather than code minimum, as many Northern builders don't build to Code minimum as customers there demand more airtight buildings to save energy.

- Part 9 subcommittee: Consulted several times on CleanBC code changes. Implementation planning is next step.
- Some mechanical engineers or design teams won't sign off on heat pump designs because they want an oversized design for the project despite AHJ wanting a smaller system
    - EGBC practice advisory team can help with this.
- Builders tend not to understand mechanical systems – mechanical contractors are not required to have TECA training, CSA F280 is in the code but only about 10% use it. Most just over size.
- Action items:
    - **Zac to check internally whether Office of the Superintendent of Professional Governance (OSPG) has a role to plan in EA professionalization and whether EA professionalization can be raised as a priority with them.**

Zero Carbon Step Code PowerPoint presentation

- Thanks to James and Sarah for creating these graphics
- Mandatory carbon requirements still TBD for 2024 and 2027.
- Consider a "super-presentation" that combines new energy requirements with new Zero Carbon Step Code content, illustrating how energy efficiency and carbon interact
- Action items:
    - **Council members to find case studies that meet Moderate and Low-Carbon Performance to include in this presentation**
    - **Zac to circle back with EMLI regarding market transformation of key technology and PSFS for trades transformation**
    - **Acknowledging that many training resources exist from professional organizations and BC Housing, BSSB will work with partners to prepare comprehensive technical training materials for the next Code rather than rush something out this spring/summer for energy and carbon only**
    - **BSSB to provide work plan for the next year, to finalize over next 1.5 months.**
    - ~~BSSB to organize lunchtime webinar to answer questions regarding CBHCC poll regarding GHG requirements in the National Building Code.~~ **(occurred Tues. Feb. 28, 2023)**
        - Draft policy recommendations are available on the website here: https://cnrc.teamwork.com/app/tasks/37694438
        - **Zac encourages all organizations to individually submit responses to CBHCC poll as they may not know what the ESCC is and the sectors it represents.**
    - **Next ESCC meeting in 2-3months**

RE: Building Code Briefing Question

To: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
Subject: RE: Building Code Briefing Question

Juni,

I think the issue might have to do with some soil remediation requirements as well. CHBA and/or UDI brought this up at some point.

Best,
Zachary D. May, MBA

Ok, no problem- I will just amend my notes and not the slides or BN. This is really tied in to the seismic issue as the soil classification can impact seismic design.

Subject: FW: Building Code Briefing Question

HI Bindi and team,

Flagging that Minister Kahlon is asking for specifics below to be included in the building code briefing tomorrow.

- specifics on Environment's changes to enforcement and classifications of soils, and how that's impacting the building industry. He would like this information included as part of his briefing on the Building Code tomorrow.

Thank you

Regards,
Nikki

Subject: Building Code Briefing Question

Hi Nikki,

Can you please send this question through to the BSSB team?

Minister Kahlon is asking for some specifics on Environment's changes to enforcement and classifications of soils, and how that's impacting the building industry. He would like this information included as part of his briefing on the Building Code tomorrow.

Thanks,

Jesse Gervais (he/him)

The 21st meeting of the **BC HOUSING INDUSTRY AND CONSUMER ADVISORY COUNCIL** was held on Monday, October 31, 2022 via conference call.

IN ATTENDANCE:

Industry and Consumer Advisory Council:
Neil Moody, Canadian Home Builders' Association of BC
Mark Sakai, BC Real Estate Association
Chris Atchison, BC Construction Association
Peter Mitchell, Engineers, and Geoscientists British Columbia
Jason Jung, ASTTBC
Tony Gioventu, Condominium Home Owners Association

Ministry Representatives:
Zachary May, Building and Safety Standards Branch
Gord Enemark, Housing Policy Branch (In-part)

BC Housing Representatives
Vince Tong, BC Housing (Chair)
Michelle Hayes
Denisa Ionescu
Adam Terris
Esther de Vos
Sue Bate (recording)

Regrets:
Tyler Wightman, Building Officials Association of BC
Mark Vernon, Architectural Institute of British Columbia
Ron Rapp, HAVAN
Anne McMullin, Urban Development Institute
Chris Gardener, Independent Contractors Association of BC
Howard Friedman, Travelers Guarantee
Andrew Armstrong, Aviva Canada
Chris Watters, RSA Home Warranty

1. Welcome & Introductions

V. Tong welcomed participants to the meeting and acknowledged that BC Housing delivers its mission on the ancestral homelands of Indigenous Peoples across B.C., each with their own unique traditions and history. Respect was offered to their Peoples, past and present.

V. Tong introduced himself as the Acting CEO of BC Housing after the former CEO, Shayne Ramsay retired in September 2022. He noted that BC Housing's Board is currently undertaking a global search for the new CEO. Given the complexity of the process, and the importance and specialized nature of the role, it is expected that this process will extend into 2023.

Despite this change in leadership, our mission remains unchanged: making a positive difference in people's lives through safe, affordable, and quality housing.

2. APPROVAL OF AGENDA AND MINUTES

Today's Agenda and the minutes of April 25, 2022 were approved.

3. ACCESSIBILITY AND HUMAN RIGHTS UPDATE

T. Gioventu updated the Council on the Accessibility Research that the Condominium Home Owners Association is currently working on. It was noted that CHOA was running a seminar in early November where an overview of the Accessibility Act and the upgrades and changes to multi-family buildings to increase accessibility, were being reviewed.

4. LICENSING AND CONSUMER SERVICES UPDATE

M. Hayes provided an update on LCS. To date there are currently 5000 new builders in BC. The new step code training initiatives are now live. Its purpose is to support and prepare builders on updated changes. Builders are required to take all eight modules of the course, unless exempted.

5. OFFICE OF HOUSING AND CONSTRUCTION STANDARDS

Z. May attended the meeting to provide an update on the national building standard codes, planned to be released in March 2023, which will harmonize standards. He noted that public consultations were open until November 4, 2022. Updates to other initiatives was provided with alterations to the existing building code and moving retrofits to meet code. A further update on these initiatives will be noted at the next meeting of the council.

6. RESEARCH & EDUCATION INITIATIVES

D. Ionescu provided an update on Research & Education , to date.

The Monthly New Home Registry Reports and Research & Education project summaries were presented for information.

All these reports are available to view in the Council Portal New APRIO NEXT Portal *Note that the portal has recently undergone a migration to a new system. If you have not accessed the new system, please reach out to APRIO via your usual log in details and request a training session. Your permissions remain the same.*

7. ROUNDTABLE

V. Tong opened the meeting for a roundtable discussion with the Council to determine what issues have emerged for industry and consumers. Several items were discussed with the following of note:

N. Moody, CHBA referenced the recently released Municipal Benchmarking Report which is currently available on their website. The report shows evidence of housing supply shortfalls in BC and the economic consequence of those shortfalls both past and future. The study also looks at housing demands and supply trends throughout BC and 13 municipalities.

J. Jung, ASTTBC, He noted the transition that ASTTBC has undergone as a result of coming under the Professional Governance Act indicating that ASTTBC is now fully a regulatory body only.

T. Wightman, BOABC, was unable to attend the meeting, however wished to advise the Council that BOABC is running energy step code training through BCIT for building officials over the next few months. He also advised that the BOABC conference is scheduled from May 28-31, 2023 at the River Rock in Richmond BC.

PROPOSED MEETING DATE

The next meeting will be held Monday, April 24, 2023 from 1 to 2:30 p.m. The date/time is currently confirmed for a virtual meeting, however interest has been raised to hold this as a potential hybrid meeting going forward.

ADJOURNMENT

There being no further business, the meeting was adjourned at 2:30 p.m.

SUMMARY REPORT

Licensed Residential Builder Survey

BC HOUSING
RESEARCH CENTRE

2022 SURVEY DETAILS

Invites Sent:
6,897

Surveys Completed:
1,295

Response Rate:
18.8%

*Builders participating in the survey are in good standing without expired, suspended, or cancelled licences.

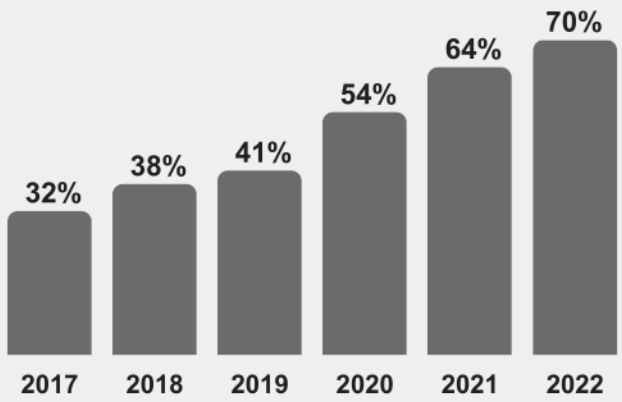
Introduction

Under the Homeowner Protection Act, BC Housing works to improve consumer protection for buyers of new homes and ensure quality residential construction in B.C. BC Housing is responsible for licensing residential builders in the province as part of this work. BC Housing also performs research and provides educational opportunities to promote better building and renovation practices.

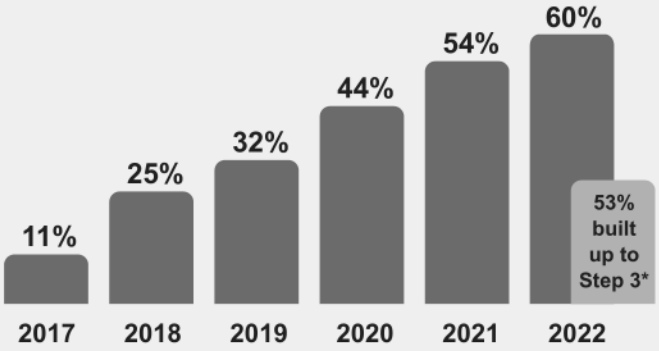
The Licensed Residential Builder Survey is an annual, province-wide survey. The survey includes builder profile information, construction activities, and satisfaction related to educational opportunities.

ENERGY ADVISORS AND ENERGY STEPCODE BUILDING BEYOND THE STANDARD

Builders Working with Energy Advisor in Past Year



Builders Meeting BC Energy Step Code in Past Year



*Fifty-three per cent of builders who were meeting the BC Energy Step Code in 2022, were building to Step 3 of the code.

SUMMARY REPORT

Current Homeowner Survey

BC HOUSING
RESEARCH CENTRE

2022 Survey Details

Mail Sent: **6,400**

Surveys Completed: **710**

Response Rate: **11%**

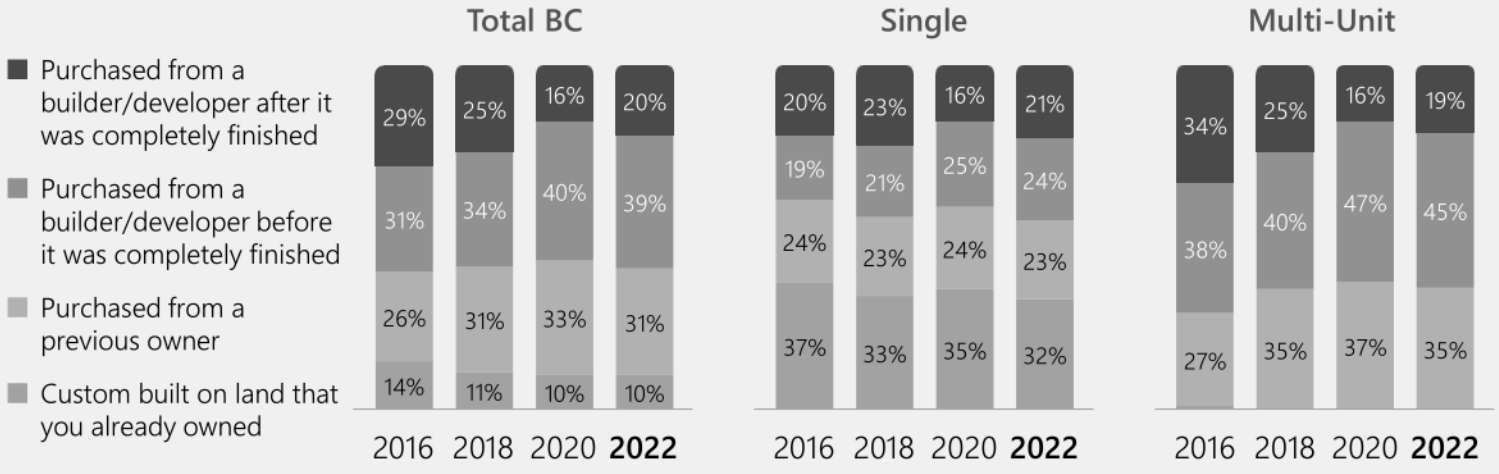
Invites were sent to a randomly selected group of owners with homes covered by warranty insurance under the Homeowner Protection Act.

Introduction

The Homeowner Protection Act provides mandatory home warranty insurance on new homes built in B.C. Since 2002, BC Housing has surveyed new homeowners whose homes are covered by the Act.

The survey covers the current homeowners' profile (age, type of home buyer, length of residency), their confidence level about their home purchase. It also measures their satisfaction with the quality of construction and building process, and their outlook on housing market conditions.

Type of Home Purchase



Satisfaction with **Overall Quality** of Construction

79% Are **very/somewhat satisfied** with the overall quality of construction

Individuals Whose Homes Impact Their **Accessibility**

13% Have homes with design elements that aren't accessible.

The Building Excellence Research & Education Grants program continues to foster innovation and best practices to strengthen the housing sector. Since its inception, the program has awarded more than $3.81 million in grants to industry and consumer organizations, education providers, and researchers. Each year, BC Housing receives a wide range of submissions and supports initiatives to expand knowledge and advance best practices. To date, the program has funded more than 119 new research and education projects. This includes innovative projects that improve the quality of residential construction and strengthen consumer protection for new home buyers. This year, BC Housing is distributing $223,600 in grant funding. This report outlines the results of the 2023 application intake and the successful grant recipients.

Funded Projects 2023

Canadian Home Builders' Association of BC (CHBA BC)

$30,000

Create an E-Learning course on managing liquid water risks from rainwater during construction and water intrusion in the building enclosure during building use.

University of Alberta

$30,000

Conduct a study using computational fluid dynamics (CFD) to examine the effectiveness of existing ventilation systems in B.C. and propose optimal ventilation models for new homes, with a goal to ensure health and promote indoor air quality.

Public: Architecture + Communication

$30,000

An examination of the proposed building code change to allow single-stair residential buildings up to 6 stories in Part 3 of the National Building Code.

HSR Zero Waste

$30,000

Creation of an online Zero Waste

certification course for the construction industry.

Small Planet Supply Canada ULC

$13,600

A study monitoring heat pumps located in parkades over a 12 month period to observe conditions and provide guidance on the suitability and safety of placing DHW system heat pumps in a parkade.

Southern Alberta Institute of Technology

$30,000

A project to develop a building planning framework to evaluate multiple construction methods and materials based on sustainable parameters.

Fast + Epp

$30,000

A project to create an Embodied Carbon (EC) Tool for calculating the EC of structural elements of a building, allowing designers to compare structural options more easily during design stages.

Morrison Hershfield

$30,000

Develop high-performance window-to-wall transition details intended for use in larger low energy/low carbon buildings in all climate zones within BC to be added to the Building Envelope Thermal Bridging Guide.

March 2023

British Columbia's Monthly

NEW HOMES REGISTRY REPORT

BC HOUSING RESEARCH CENTRE

Leading Housing Market Indicator for B.C.

Registered new homes data are a leading indicator of housing and economic[1] activity in British Columbia. The *Monthly New Homes Registry Report* provides information on registered new homes by building type, building size and location, and is intended for use by the residential construction industry, real estate community and researchers.

General Highlights

- In the first three months of 2023, 9,843 new homes were registered[2] in B.C., including 1,674 single detached[3] and 8,169 multi-unit homes[4].
- So far in 2023, total home registrations[2] are down 36.6% from 2022. Registrations for multi-unit homes[4] decreased 36.1%, while registrations for single detached homes decreased 38.7%[3].
- In March, 3,057 new homes were registered[2] in B.C., a 53.8% decrease compared with March 2022.
- Using a 12-month moving average[5], there were 3,793 new registered homes[2] in March, a 7.2% decrease from February for all registered new homes.
- Metro Vancouver accounted for 40.0% of all new homes registered[2] in March. Kelowna (537), Coquitlam (501) and Langley* (290) were the top three cities in registered new homes this month.
- In March, there were more multi-unit homes than single detached homes in Colwood, Golden, Hazelton, Kitimat, Coquitlam, Courtenay, Kelowna, Langley*, Saanich, Nelson, Langford, Squamish, Victoria, Oliver, Vernon, Campbell River, Surrey, West Kelowna, Powell River, Revelstoke, Ladysmith, Fernie, North Vancouver*, Osoyoos and Chilliwack.
- So far in 2023, 3,746 purpose-built rental units[6] were registered in B.C. Compared with the same period in 2022, the number of registered rental units decreased 27.2%.

* Langley includes the City of Langley and the Township of Langley. North Vancouver includes the City of North Vancouver and the District of North Vancouver.

Figure 1: Registered New Homes[2] by Building Type, 2002–2023 Year-to-Date

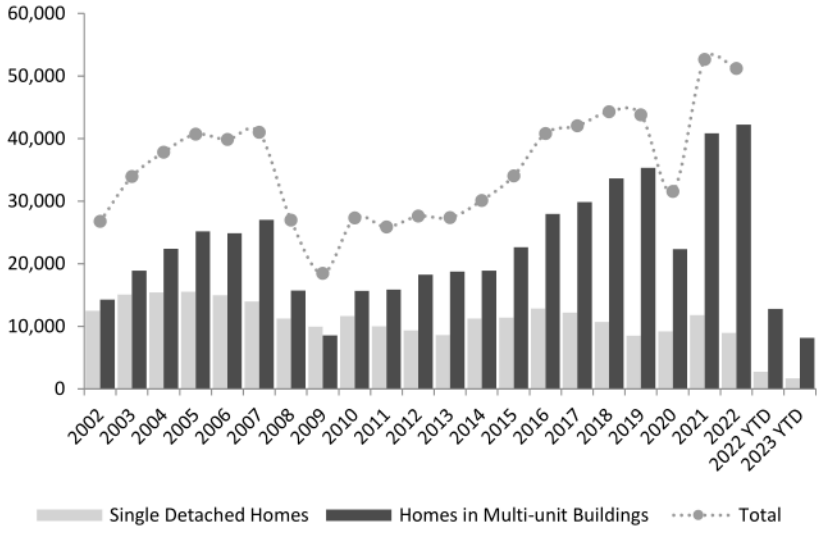

Figure 2: Registered New Homes[2] by Building Type and Selected City[7], March 2023

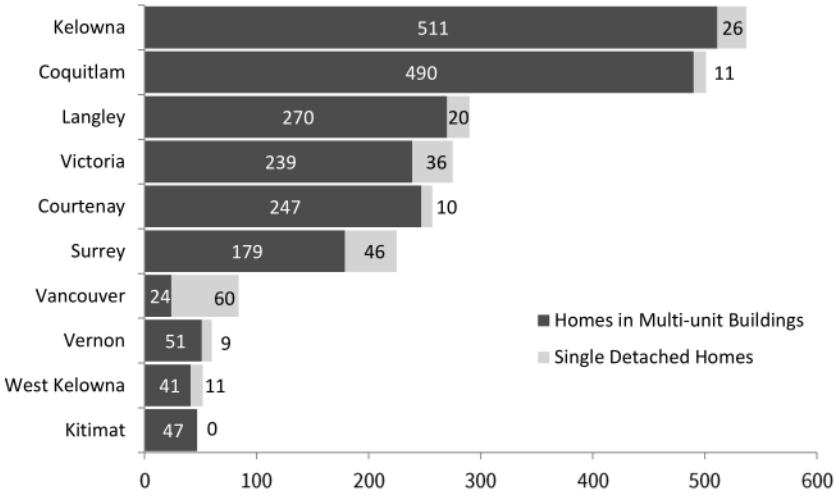

Figure 3: Registered New Homes[2] by Regional District[8], March 2023

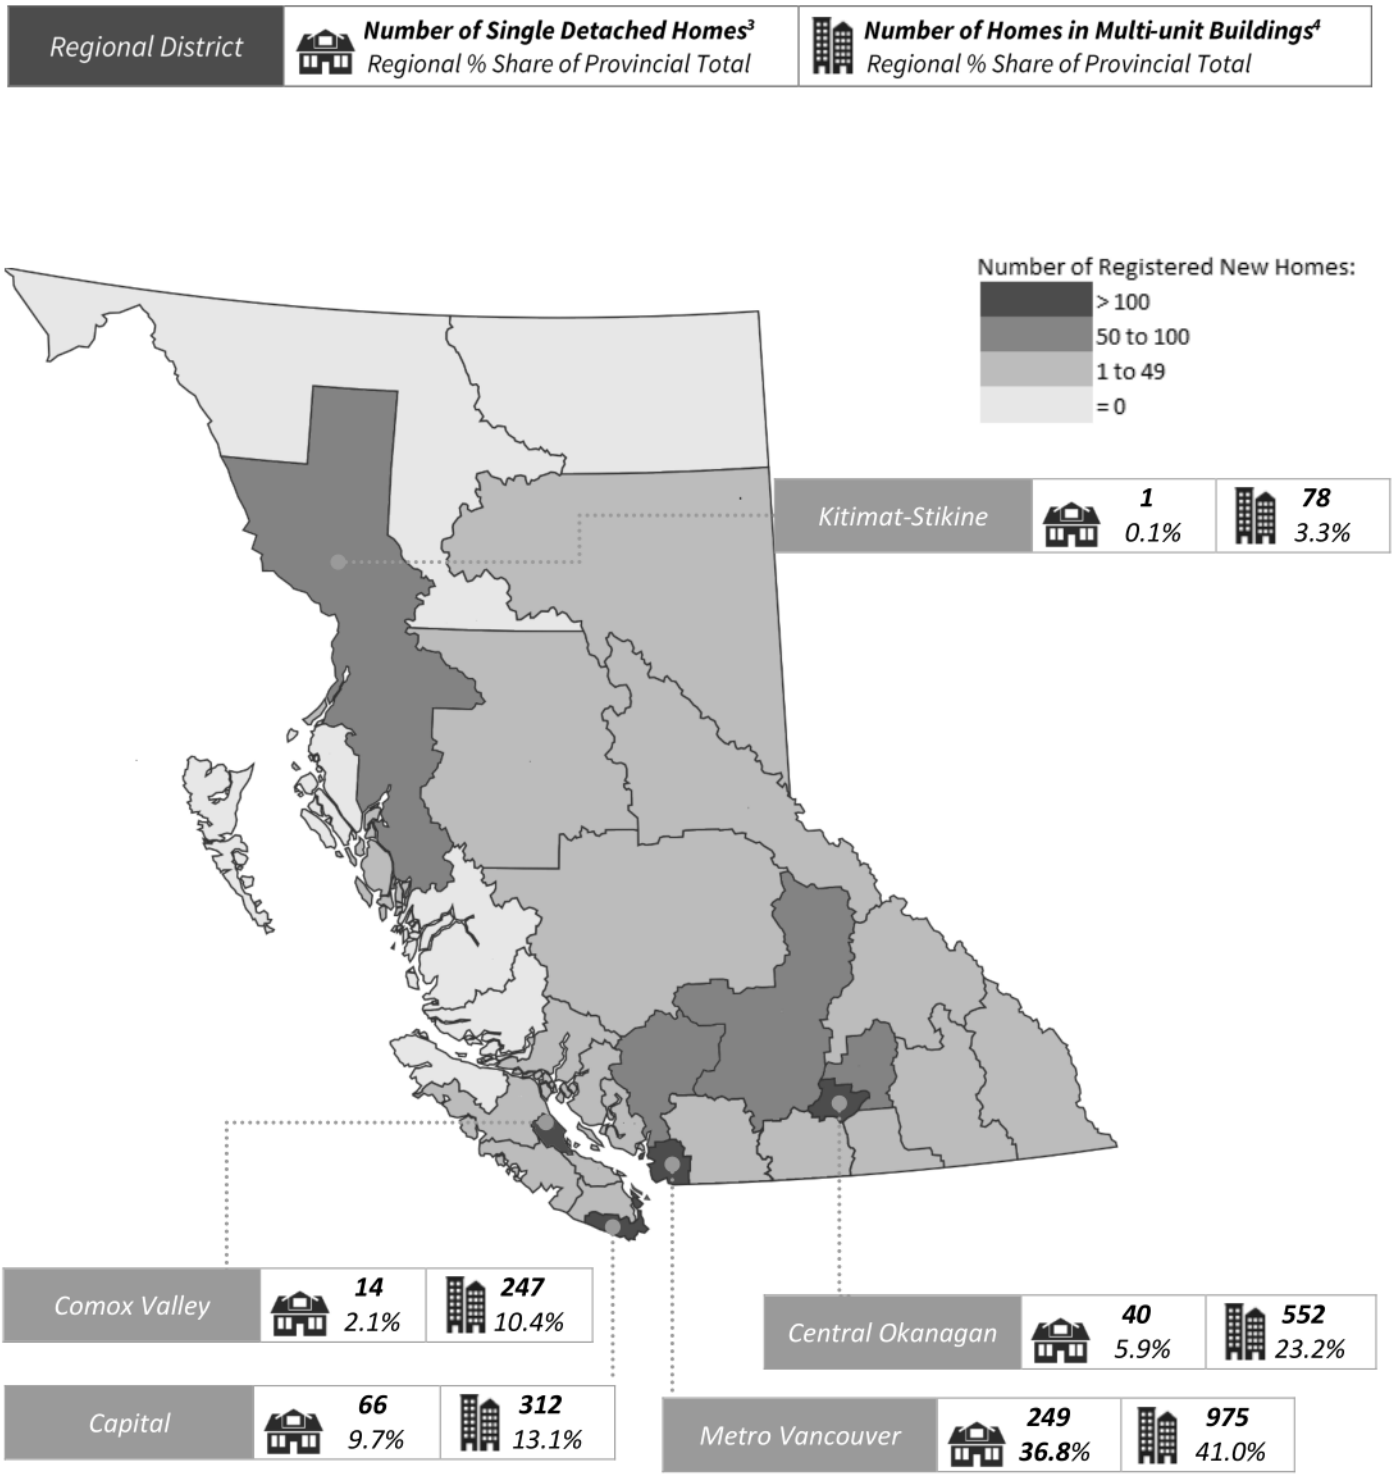

Single Detached Highlights

- In the first three months of 2023, 1,674 new single detached homes were registered[3] in B.C. Compared with the same period in 2022, single detached registrations decreased 38.7%.
- In March, 677 single detached homes were registered[3]. Compared with March 2022, the number of single detached registrations decreased 37.9%.
- Using a 12-month moving average[5], there were 657 new single detached registered homes[3] in March, trending at a 5.0% decrease from February.
- Using a 36-month moving average[5], there were 814 new single detached registered homes[3] in March, which is a 0.6% decrease from February.
- Vancouver (60), Surrey (46) and Maple Ridge (39) had the largest number of single detached homes registered[3] in March.

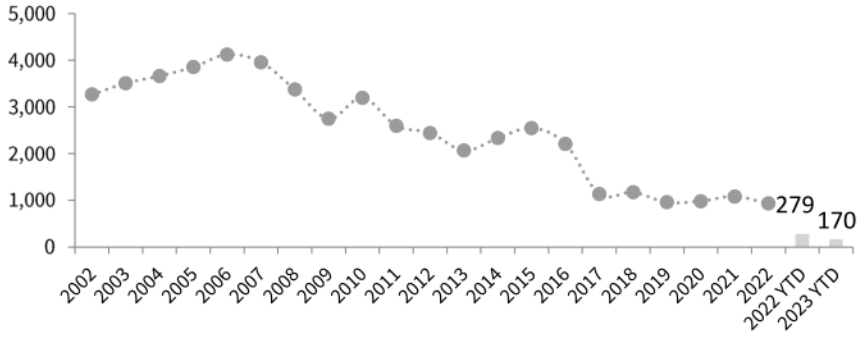

Figure 6: Registered Single Detached Homes[3] by Selected City[10] in Metro Vancouver, 2022-2023 Year-to-Date

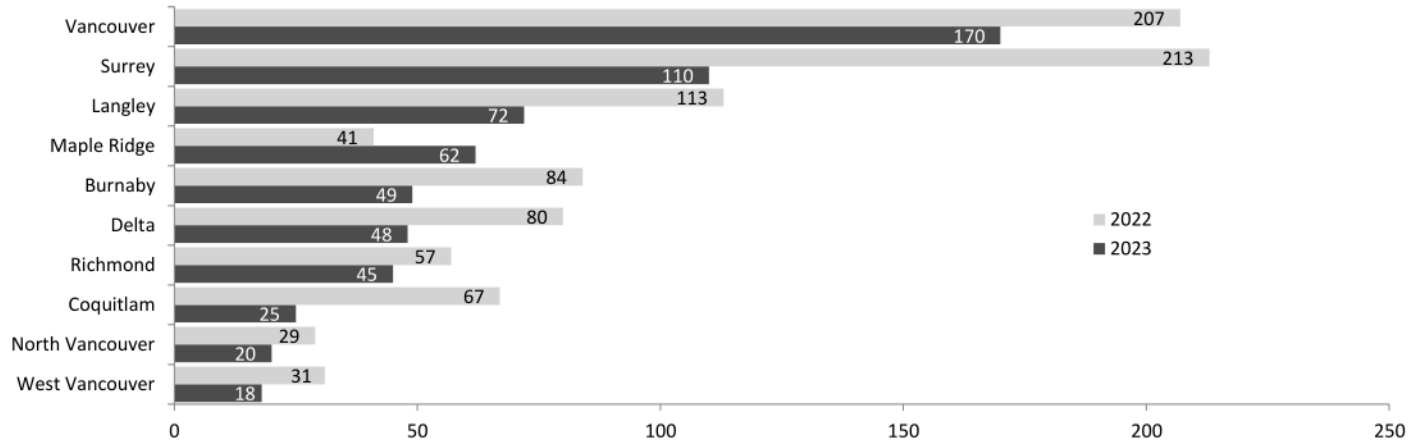

Figure 7: Registered Single Detached Homes[3] in Metro Vancouver, 2002–2023 Year-to-Date

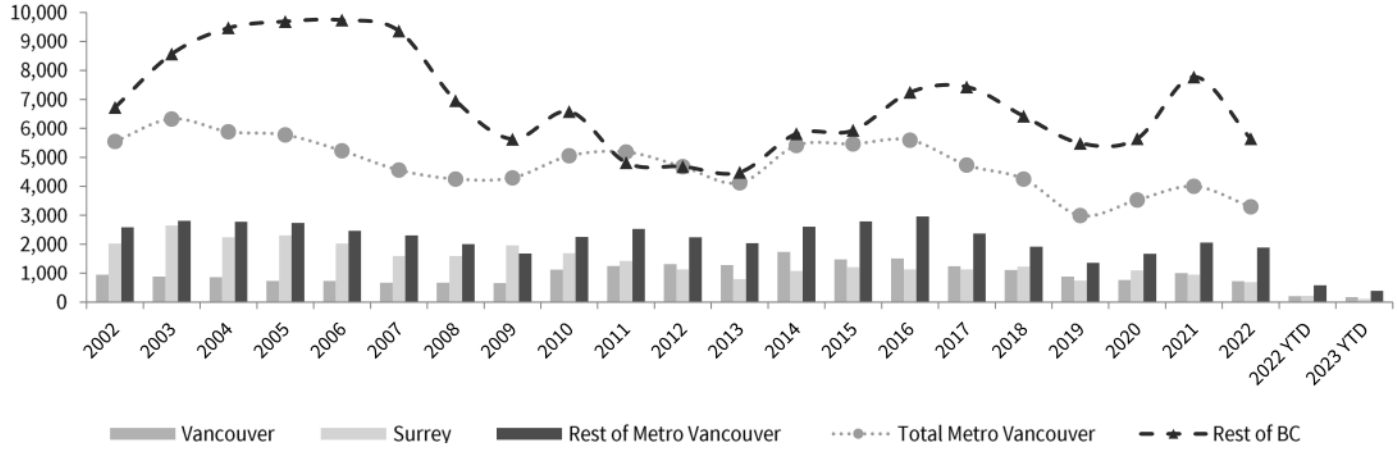

Enrolled Multi-unit Highlights

- In the first three months of 2023, 4,423 new multi-unit homes were enrolled[11] in B.C. Compared with the same period in 2022, multi-unit enrollments decreased 42.1%.
- In March, 1,538 multi-unit homes were enrolled[10]. Compared with March 2022, the number of multi-unit enrollments decreased 54.0%.
- Using a 12-month moving average[5], there were 2,041 new multi-unit enrolled homes[11] in March, trending at a 6.9% decrease from February.
- Using a 36-month moving average[5], there were 1,944 new multi-unit enrolled homes[11] in March, which is a 0.8% increase from February.
- There were 196 new multi-unit buildings enrolled[11] in March. Most of these buildings were duplexes (36.2%) and buildings of 5 to 50 units (29.1%). The largest building of 228 units was proposed to be built in Coquitlam.
- In March, Kelowna (355), Coquitlam (313), and Langley* (270) had the largest number of multi-unit enrolled homes[11] in B.C.

Figure 8: Enrolled Homes in Multi-unit Buildings[11], March 2023

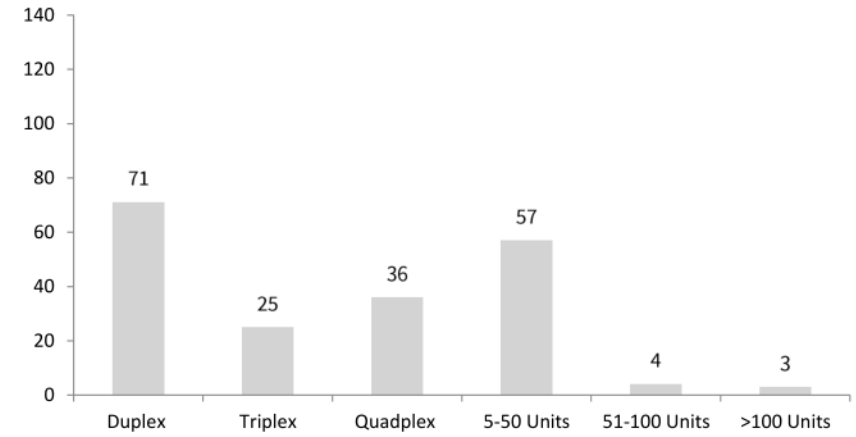

Figure 10: Enrolled Homes in Multi-unit Buildings[11] by 12-Month and 36-Month Moving Averages[5], March 2023

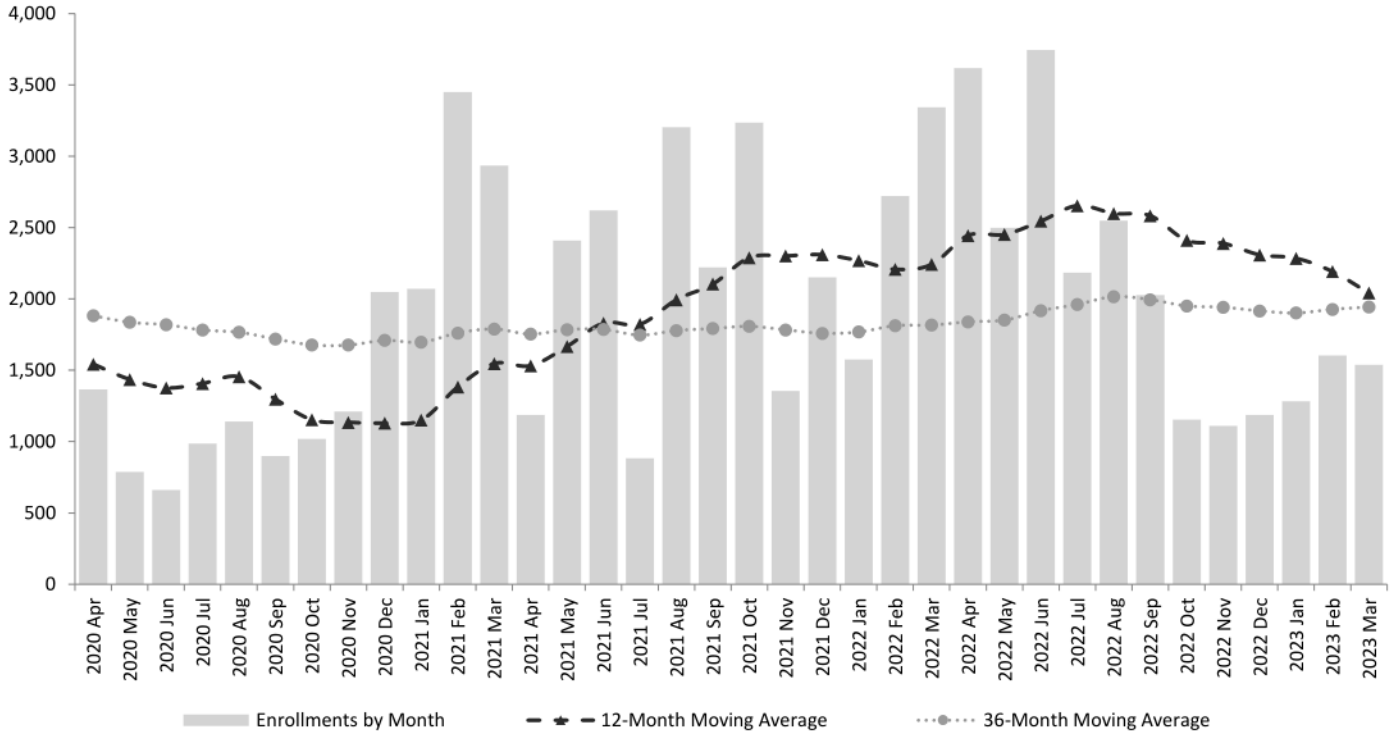

Purpose-built Rental Highlights

- In the first three months of 2023, 3,746 purpose-built rental units[6] were registered in B.C. Compared with the same period in 2022, the number of registered rental units decreased 27.2%.
- So far in 2023, rental units[6] represented 45.9% of all multi-unit registrations.
- This month, 842 rental units were registered[12]. Compared with March 2022, the number of rental units registered decreased 61.3%.
- Using a 12-month moving average[5], there were 1,095 rental units registered[6] in March, trending at a 9.2% decrease from February.
- Using a 36-month moving average[5], there were 1,053 rental units registered[6] in March, which is a 1.0% increase from February.
- There were 14 rental buildings registered[6] in March. Most of these were buildings of 5 to 50 units (28.6%) and quadplexes (28.6%). The largest building of 177 units was proposed to be built in Coquitlam.
- In March, Courtenay (247), Victoria (204), and Coquitlam (177) had the largest number of rental units registered[6] in B.C.

Background and Methodology

BC Housing is responsible for the administration of the *Homeowner Protection Act*, with a mandate to help bring about improvements in the quality of residential construction and increase consumer protection for buyers of new homes in British Columbia (B.C.). Under the Act, all new homes in the province must be registered with BC Housing. The registration of new homes in the public registry must occur prior to the issuance of building permits and housing starts. The new homes registry data measures residential construction activities at the beginning of a project before construction commences. Therefore, information in the Monthly New Homes Registry Report is a leading indicator of housing activity in B.C.

New home registration data is collected from Licensed Residential Builders and owner builders through the New Home Registration forms and Owner Builder Authorization applications. Over time, some minor adjustments may be made to the new home registration data as registrations are withdrawn or cancelled from home warranty insurance.

This report provides information on registered new homes by building type, building size, and building location. Figures for registered new homes include both multi-unit and single detached new homes enrolled with home warranty insurance, Owner Builder Authorizations, and, since the August 2016 report, purpose-built rental buildings that are exempt from home warranty insurance.

CSA-approved manufactured homes (modular homes, mobile homes and factory-built homes), floating homes, non-stratified hotels, motels, dormitories and care facilities are excluded from the definition of new home and are not reflected in the report.

Geographical terms in this publication are based on Statistics Canada's 2006 Census area. In March 2009, the regional district of Comox-Strathcona was replaced by two successor regional districts, Comox Valley and Strathcona.

Research

In collaboration with BC Housing, the Bank of Canada conducted a study to assess whether or not new home registration data can be used as a leading indicator for economic activity in B.C. Study findings reveal that quarterly increases in new registrations for single detached homes have statistically significant predictive content for growth in real Gross Domestic Product (GDP) over the next one to three quarters, providing stronger signals compared to housing starts and building permits over this forecast horizon. To view the report, go to the Staff Discussion Papers section on the Bank of Canada's website.

End Notes

[1] Bank of Canada, 2016. New Housing Registrations as a Leading Indicator of the B.C. Economy. Details are available here.

[2] Registered new homes includes: single detached and multi-unit homes enrolled in home warranty insurance, single detached homes constructed by an owner builder not covered by home warranty insurance, and purpose-built rental units that are exempt from home warranty insurance. Before August 2016, calculations of registered new homes in this report excluded purpose-built rental units.

[3] Registered new single detached homes includes new single detached homes enrolled with home warranty insurance or with Owner Builder Authorizations issued by the Registrar.

[4] Registered new homes in multi-unit buildings (two or more dwelling units) include new homes enrolled with home warranty insurance and new homes in purpose-built rental buildings with a home warranty insurance exemption. Before August 2016, calculations of registered new homes in multi-unit buildings in this report excluded purpose-built rental units.

[5] The trend analysis with moving average is based on a twelve-month and 36-month simple moving average of the monthly new home registration data. Data are not seasonally adjusted.

[6] Purpose-built rental refers to new rental homes in multi-unit buildings that qualify for exemption from home warranty insurance. These exempted homes must be constructed for rental purposes, including social housing, and have a restrictive covenant registered on title restricting the sale of any dwelling unit for a 10-year period. Rental homes with a covenant may however be captured under "enrolled new multi-unit homes" if the unit is voluntarily enrolled with home warranty insurance.

[7] Selected cities are the 10 cities that had the highest numbers of registered new homes in the reference month.

[8] The five regional districts with the highest numbers of registered new homes in the reference month.

[9] Owner-built homes refers to Owner Builder Authorizations issued by the Registrar. New homes built under an Owner Builder Authorization are exempt from licensing and home warranty insurance.

[10] Selected cities are the 10 cities that had the highest numbers of registered single detached homes in Metro Vancouver in 2022.

[11] Enrolled new multi-unit homes refers to new homes in multi-unit buildings (two or more dwelling units) enrolled with home warranty insurance.

[12] Building size is measured by number of dwelling units, which is equivalent to new homes.

[13] In this report, the five year average is the average of the most recently completed five years.

BC HOUSING

British Columbia News

B.C. invests in digital permitting to get homes built faster

https://news.gov.bc.ca/28546

People will be able to move into new homes faster as the Province invests in digital permitting and the construction industry to make the process quicker and more collaborative.

“Technology helps us do just about everything these days, but the housing sector remains reliant on the paper system,” said Ravi Kahlon, Minister of Housing. “To help speed up the homebuilding process, we’re investing in technology that will make us a North American leader in digital permitting and construction. Faster approvals and builds will unlock more homes for British Columbians sooner, easing some of the pressure on our strained housing market.”

The Ministry of Housing, with support from the Ministry of Citizens’ Services, is working on digitizing the BC Building Code and the building permitting process with pilots in select local governments in 2024.

“We don’t have time to waste when it comes to getting new housing on the market, so we need to look for efficiencies throughout the sector,” said Lisa Beare, Minister of Citizens’ Services. “That’s why we’re investing in new tools and technologies that will make it easier for homebuilders to focus on what they do best – build homes – and not worry about red tape. Most importantly, these innovations will get people into homes faster.”

The BC Building Code is currently only available in print or PDF format. The digitally enhanced code will include features that will make it faster and easier for builders and building inspectors to understand and interpret the information. It will also allow for more automation during building permit reviews.

The building permitting process currently varies widely across local governments: some use digital tools and some rely on paper. The provincial government’s work to digitize the process will include working with local governments.

The Province is also investing in innovation in the housing construction sector. Government is investing in Digital**,** previously known as the Digital Technology Supercluster, which is part of the federal Global Innovation Cluster network, with a $9-million, three-year grant to accelerate the development and adoption of innovative technologies in the construction sector. This work will involve collaborating with several partners in industry, academia and at all levels of government to create digital solutions for the construction sector and designing pilot projects to test those solutions. Digital is a B.C-based independent, not-for-profit organization that focuses on the development, adoption and deployment of Canadian-made digital technologies through a unique collaborative model that brings together Canadian small and medium-sized enterprises (SMEs), multinationals and academia.

“One of the core principles of the Stronger BC Economic Plan is embracing innovation to propel us forward,” said Brenda Bailey, Minister of Jobs, Economic Development and Innovation. “Utilizing the Digital Technology Cluster to develop a digital permitting pilot marries progressive thinking with much-needed efficiency in expediting decisions for the housing sector.”

The Province did preliminary consultation with local governments, builders, developers, architects and engineers on this work and will continue to engage with partners throughout the process.

This project builds on the government’s work to establish a single application portal for provincial housing permits and authorizations, which will go live in 2023. It also builds on the Province’s development approvals process

review, which launched in 2018 and helps local governments improve their processes. As part of this work, government created the Local Government Development Approvals Program, which is providing $15 million to help local governments create more efficient approvals processes.

Advancing digital permitting and construction is part of the Province's new housing plan, Homes for People, which was announced on April 3, 2023. The plan will speed up delivery of new homes, increase the supply of middle-income housing, fight speculation and help those who need it the most.

Quotes:

Ken Sim, mayor of Vancouver –

"Utilizing technology is vital to cutting wait times and making government more effective. We are pleased to see these further efforts being made across the province. Vancouver recently moved over to a fully digital permit system, where builders can apply, pay and receive their permit electronically through our ePlan system. Vancouver is proud to be a leading government in embracing technology, and we are excited to see other jurisdictions doing so as well.

Sue Paish, CEO, Digital –

"Digital is proud to have the confidence of the Province of B.C. to deliver one of its key priorities in improving the productivity of the housing and construction sector and unlocking more housing for British Columbians. The Province's investments in digitizing the housing sector will make B.C. a North American leader in digital construction and permitting through the digitization of the building code and advancing the adoption of technologies that help the sector work more effectively with regulators. We look forward to continuing our track record of results and making a difference in the lives of British Columbians."

Neil Moody, CEO, Canadian Home Builders' Association British Columbia –

"The housing crisis in B.C. calls for modern, innovative solutions. There is tremendous opportunity in using technology to automate code compliance and process permits so homes can be constructed faster, and this is a step we can take quickly."

UDI Webinar: Zero Carbon Step Code & BC Energy Step Code - Changes You Need to Know

Agenda:

- **Introductions**
- **Discuss speaker topics and presentation content**
    1. Zachary May, Executive Director, BSSB, Ministry of Housing
    2. Laura Sampliner, Environmental Sustainability Manager, City of Coquitlam
    3. Roberto Percora, Director, ZebX
    4. Sheryl Peters, Provincial Director, Redevelopment - Development & Asset Strategies, BC Housing (Moderator)
- **Key areas of focus**
    1. Overall
        - Zero Carbon and Energy Step Code changes that have been passed
        - National Building Code and the Canadian framework / Harmonization of the codes
        - BC Hydro issues / supply and support
    2. Provincial Level
        - BC Building Code – Current and future
        - Harmonization of codes / National Building Code
        - Provincial expectations
        - What else can we expect
    3. Municipal Level
        - How local governments are managing the Zero Carbon and Energy Step Code changes
        - How to tackle BC Hydro Issues
        - Where they see the future of municipalities
    4. Implementation
        - The impact these changes have
        - Case studies

- **Discuss Potential format**

- **Discuss draft questions**
    1. Will the Best Practices Guide for local governments on the ZCSC address the role of Councils in policy adoption? Or should there be a dedicated guide for Councils?
        - For example, the City of Victoria Council recently adopted accelerated timelines for new buildings to meet the highest steps of the ZCSC, which are shorter than the timelines recommended by staff after extensive engagement.
    2. How will you be advising municipalities to engage with BC Hydro regarding delivery capacity both on policy and local area planning
    3. Are there plans to regularly update the metrics study on costing analysis regarding the ZCSC?
    4. How does the ZCSC account for requirements to connect to District Energy Utilities that are not (yet) low-carbon?
        - As the Province institutes its own ZCSC, will this approach continue?
    5. Assuming the current concerns regarding RNG use in new construction are addr4essed by the BCUC, will the regulations and guidance be amended to provide an option for builders to meet the ZCSC using RNG, or would this remain at the discretion of local governments?
    6. Will the Best Practices Guide reference the overarching objectives for local governments to deliver increased amounts of housing and balance these objectives with achieving higher steps in the ESC and ZCSC.
    7. There is a concern in the industry regarding the incorporation of embodied carbon targets into municipal approval requirements. Given the current capacity constraints in the industry with the adoption of higher energy efficiency standards and new operational carbon requirements, is now the right time to create additional standards for new development? Does the Province have any concerns with municipalities going ahead now with embodied carbon standards?

FW: Pre-approved designs for

Cc: Thomson, John HOUS:EX <John.Thomson@gov.bc.ca>
Subject: RE: Pre-approved designs for

Excellent. I think replicability of designs and getting local governments to preapprove standard designs will be key to deal both with affordability and development time concerns. If we can get to standardized prefab designs all the better as this will help reduce construction time/cost AND prevent waste.

See you next week. Thanks for setting this up.

Lisa Helps
Office of the Premier
Housing Solutions Advisor for BC Builds

Cc: Thomson, John HOUS:EX <John.Thomson@gov.bc.ca>
Subject: RE: Pre-approved designs for

This is helpful context. Our office is just starting discussions with UDI and the Engineers' and Architects' associations to develop some design guides for the upcoming seismic requirements in the building code. It would be good to get some input from yourself, John and others at the meeting about what key issues should be addressed and if there's other actions we could be taking make it easier and faster to build.

Where: Microsoft Teams Meeting

Thanks Zach. I'm happy to have an in-person meeting if this works for everyone else.

As for background documents, I'm attaching a lateral/tangential piece that outlines a parallel process we're working on for small scale multi-unit housing. It's not directly related, but we'd like to propose a similar approach for four to six storey buildings to make it easier, faster and cheaper with preapproved designs - both woodframe and prefab - that take into consideration the building code changes. I'm sending this just to you for now, and if it makes sense to circulate it to the others just as a parallel document to help give wider context, feel free to do so.

Hi Everyone,

It was great seeing you all this afternoon. Further to our conversation, I have attached a our current attendee list for your reference on the participant demographics and a copy of the event run down for Tuesday.

You will be able to share your screen for your presentations, but we would appreciate a copy by the end of the week as back-up.

Post-event, we will be sending an email out to all participants registered with a copy of your slides, presentation, and resource links. If there are key resource and information you would like to share with the participants, please forward them to me and I will incorporate that into our email after the event.

Thank you all once again! Please let me know if you have any questions.

Kind regards,
Verna

UDI Webinar: Zero Carbon Step Code & BC Energy Step Code - Changes You Need to Know

Join us for an informative webinar on the latest updates for the Zero Carbon Step Code and the BC Building Code, and how these changes will impact builders in British Columbia.

Our expert panel will provide an overview of the key updates and highlight the new requirements and standards for energy efficiency, emissions reductions, and sustainable building practices. Through this conversation, we will discuss the potential benefits and challenges for builders in meeting these new regulations.

Date: Tuesday, May 2, 2023 | Time: 9:30-10:30

TIME	ACTIVITY	DURATION	LEAD
9:15	Dry Run / Zoom testing	15	All
9:30	Webinar goes live UDI Opening Remarks Moderator Intro	2-3	Jeff
9:33	Sponsor Remarks Setting the stage Panel Intro	3-5	Sheryl
9:40	Provincial Perspective • BC Building Code – Current and future • Harmonization of codes / National Building Code • Where are we on energy efficiency • Low Carbon • What else can we expect	8-10	Zach
9:50	Municipal Perspective • How local governments are managing the Zero Carbon and Energy Step Code changes • Electrical capacities • Low carbon pathways • Where they see the future of municipalities	8-10	Laura
10:00	Implementation • The impact these changes have • Best practices • Case studies	8-10	Roberto
10:10	Moderated Q&A & Discussion	20-25	All

10:30	Webinar Concludes Thank Speakers	1	Sheryl

About Our Panelists:

Zachary May, Executive Director, BSSB, Ministry of Housing
Zachary May is the Executive Director of the Building and Safety Standards Branch, where he leads the team responsible for British Columbia's building and technical safety regulatory systems. He has led several national and provincial building code initiatives, including the development of the BC Energy Step Code. He is the Chair of the BC Energy Step Code Council and a former member of the National Research Council's Standing Committee on Housing and Small Buildings, and the Standing Committee on Energy Efficiency.

Laura Sampliner, Environmental Sustainability Manager, City of Coquitlam
With over 7 years working in local government climate related policy, Laura has worked for 5 municipalities across BC and Ontario to help advance climate action priorities. Most notably, Laura led the City of Port Moody?s strategy for early adoption of the BC Energy Step Code and development of the Climate Ready Homes and Buildings Plan. Laura previously served as co-chair of the BC Energy Step Code Peer Network for over two years, was a member of the Energy Step Code Council for two years, and has been active in advocating for and supporting enhanced policy for emissions reduction of buildings in BC. Laura holds a Bachelors of Environment, specializing in Environment and Business from the University of Waterloo, BCIT Sustainable Energy Management Advanced Certificate, and Whole Building Lifecycle Assessment Micro Credential from BCIT.

Roberto Percora, Director, ZebX
Roberto's journey through the building industry extends back over two decades and includes stops in Ottawa and Montreal before settling in Vancouver. In addition to his mechanical engineering degree, he has extensive experience in both new developments and existing buildings. Roberto has successfully taken on project management roles for subcontractors, a general contractor and a national property management firm. In the eight years before joining ZEBx, he worked in the building science group of a national consulting engineering firm, specializing in building assessments, capital planning, asset management, energy studies and building performance. Roberto is a member of the Energy Step Code Council, some of its subcommittees and a number of other advisory groups in BC. Through his various roles, he has become very well acquainted with the real estate, property management, consulting and construction industries. Most importantly, Roberto has a deep-rooted belief that the building industry has both a responsibility and a major contribution to make to address the climate crisis.

Sheryl Peters, Provincial Director, Redevelopment - Development & Asset Strategies, BC Housing (Moderator)
After starting her career in private sector construction & development, Sheryl joined BC Housing in 2009. Her portfolio that includes partnerships with other government agencies, municipalities and non-profit housing providers in the delivery of community housing solutions in the province. Sheryl is a certified Project Management Professional with academics in urban geography (UBC) and architectural and building technologies (BCIT). She has over 23 years of experience in design, marketing, development and construction management, in both the private and public real estate sectors. Her career portfolio is a diverse range of projects that includes multi-residential developments; master planned / mixed use communities; hotels; neighbourhood shopping centres; and regional retail centres.

As Provincial Director - Redevelopment, Sheryl manages the revitalization of aging BC Housing assets with the intention of modernizing sites to meet current housing needs and bringing forward best practices in sustainable urban design, engineering & construction.

In her spare time, Sheryl has volunteered with the Women of Urban Development Institute (UDI Pacific) Committee; the Urban Land Institute (ULI-BC) Innovation Product Council & Technical Advisory Panel; and co-leads the ULI-BC Partnerships for Health Equity Team. Sheryl is passionate about facilitating affordable housing options and creating vibrant, complete & inclusive communities in BC.

Draft Questions:

1. Will the Best Practices Guide for local governments on the ZCSC address the role of Councils in policy adoption? Or should there be a dedicated guide for Councils?
    - For example, the City of Victoria Council recently adopted accelerated timelines for new buildings to meet the highest steps of the ZCSC, which are shorter than the timelines recommended by staff after extensive engagement.
2. How will you be advising municipalities to engage with BC Hydro regarding delivery capacity both on policy and local area planning
3. Are there plans to regularly update the metrics study on costing analysis regarding the ZCSC?
4. How does the ZCSC account for requirements to connect to District Energy Utilities that are not (yet) low-carbon?
    - As the Province institutes its own ZCSC, will this approach continue?
5. Assuming the current concerns regarding RNG use in new construction are addr4essed by the BCUC, will the regulations and guidance be amended to provide an option for builders to meet the ZCSC using RNG, or would this remain at the discretion of local governments?
6. Will the Best Practices Guide reference the overarching objectives for local governments to deliver increased amounts of housing and balance these objectives with achieving higher steps in the ESC and ZCSC.
7. There is a concern in the industry regarding the incorporation of embodied carbon targets into municipal approval requirements. Given the current capacity constraints in the industry with the adoption of higher energy efficiency standards and new operational carbon requirements, is now the right time to create additional standards for new development? Does the Province have any concerns with municipalities going ahead now with embodied carbon standards?
8. If we are going to step 4, are municipalities going to be looking at design issues.
9. Best practices guide – what kind of interactions are occurring at the municipal level with BC Hydro.

Bullets on seismic for tomorrow

From: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
To: May, Zachary HOUS:EX <Zachary.May@gov.bc.ca>
Sent: April 26, 2023 8:32:43 AM PDT

Hi Zac,

Small buildings (many refer to as Part 9- which is the applicable part of the building code):

- British Columbia is proposing to adopt updated seismic hazard values from the National Building Code 2020 so that seismic risks and loads on buildings can be appropriately designed for.
- A consequence of these changes is that buildings in many locations throughout British Columbia will be required to be designed by a professional engineer.
- Design solution have been developed for the National Building Code 2025 that allow small buildings in high seismic areas to continue to be designed and built safely without a professional engineer. British Columbia is proposing to adopt those solutions for the BC Building Code 2023.

Large Buildings (referred to as Part 3):

- British Columbia is proposing to adopt updated seismic hazard values from the National Building Code 2020 so that seismic risks and loads on buildings can be appropriately designed for.
- The Province's Building and Safety Standards Branch is working with industry to understand the impacts of these changes on the design and construction of mid-rise (4-6 storeys) wood frame buildings in high seismic areas of BC, and to provide guidance to industry on best practices to comply with new code requirements so that they can continue to be safe and cost effective.

I am available tomorrow to call in to UDI if it's helpful.

Oh thanks- we've been focusing on the EGBC guide- this is also a good option for updates. We have a conversation with EGBC first to explore the problem before we get to solutions, but this can go on the potential solutions list for sure.

Topic:
2023 BC Building Code seismic changes for large buildings
Key Messages :

- The National Research Council of Canada has updated the seismic hazard values in the National Building Code for locations in BC, including Vancouver Island, the Lower Mainland, and Haida Gwaii.
- These updates have been through rigorous technical and public review as part of the national codes process.

- The Ministry is aware that these changes impact BC disproportionately, because we live in Canada's most active seismic regions.
- The updated seismic hazard values are expected to be included in the next edition of the BC Building Code later this year, and will require buildings to be designed with more robust seismic resistance.
- We have already received some feedback that these changes present some design challenges for 4-6 storey wood frame buildings, and we know how important that building type is for housing in BC.
- As part of BC's review of these changes, Ministry staff will be reaching out directly to industry to
    - make sure we have a shared understanding of what these changes will mean for building design in BC, and
    - work together to identify design solutions that will allow industry to deliver the homes we need while addressing the seismic risk in BC.
- This Ministry will be reaching out to Engineers and Geoscientists BC (EGBC), the Architectural Institute of BC (AIBC), Urban Development Institute (UDI), and the Canadian Homebuilders Association of BC (CHBA-BC) in the coming weeks.

BC Building Code 2023 Changes

Building and Safety Standards Branch

Notification – BC Codes

- Farm Buildings & Facilities
- Encapsulated Mass Timber Construction (EMTC)
- Non-Potable Water
- Self-Storage
- Unsprinklered Home-type Care Occupancy (B4)
- Miscellaneous Updates
- BC Fire Code (consequential amendments)

Notification – Farm Buildings & Facilities

- NBC & NFC 2020 introduced provisions relating to large farm buildings (Part 2 of Division B of the NBC) and fire prevention provisions (Parts 2 and 4 of Division B of the NFC)
- Not adopted in B.C.

Notification – Encapsulated Mass Timber Construction (EMTC)

- NBC 2020 introduced EMTC provisions and NFC 2020 included fire prevention measures for EMTC construction sites
- B.C. early adopted these EMTC provisions, effective December 12, 2019
- B.C. will remove the restrictions that limited the jurisdictions that were permitted to build EMTC (rescind Sentence 1.1.1.1.(7) of Division A)
- Relocation of BCBC Subsections 3.1.18. and 3.1.19. to Subsection 3.1.6.

Notification – Non-potable Water

- Over 50 technical changes incorporated in the NPC 2020
- One significant change includes the provision for the harvesting and use of non-potable rainwater (Section 2.7. of Division B)

Notification – Self-Storage

- B.C. will adopt the NBC requirements for self-service storage buildings for Part 3
- Part 9 Requirements have not been changed
- Subsection 4.2.12. of Division B of the NFC 2020 restricting the storage and handling of flammable liquids will also be adopted

Notification – Unsprinklered Home-type Care (B4)

- NBC & NFC 2020 introduced provisions relating to home-type care occupancies (Part 9, Division B of the NBC) and fire prevention provisions (Part 2, Division B of the NFC)
- Not adopted in B.C.

Notification – Miscellaneous Updates

- Noteworthy miscellaneous Code changes and updates, consist primarily of provisions that for the purposes of B.C.’s harmonization commitment, will be harmonized with the National Building Code 2020 (NBC) (i.e. climatic data in Table C-2 of Division B of Appendix C)

Notification – BC Fire Code Updates & Revisions

- Relocation of historic unique to B.C. provisions
  - Fire Door Signs
  - Combustible Materials Within Classrooms
  - Posting of Fire Emergency Procedures (elevator signs)
  - Community Care Facilities
  - Construction Camps
  - Marinas and Boat Yards
- B.C. Standard Fire House Thread requirements rescinded

Notification – BC Fire Code Updates & Revisions Cont'd

- Application – Part 1 of Division A
  - Proposed code language in B.C. to clarify the retroactive application of the BC Building and Fire Code will result in harmonization of several code provisions.
  - Harmonized code provisions include (Part 2 of Division B):
  - 2.1.3.1. Fire Alarm, Standpipe and Sprinkler Systems
  - 2.1.3.3. Smoke Alarms
  - 2.7.3.1. Exit Lighting, Exit Signs and Emergency Lighting
- Consolidation of Fire Safety Plan Requirements
- Isolated Construction Projects - Exemption (TBD)

Public Review– BC Codes

- Accessibility
- Penetrations of fire separations
- Overheating
- Radon
- Seismic
- Ventilation
- Windows, Doors, and Skylights
- Steel Storage Racking

Public Review– Accessibility

- BCBC to adopt most of NBC 2020 Section 3.8. along with some amendments for clarity
- Further enhancements were implemented for existing unique to B.C. variations on adaptable dwelling unit provisions, these include
  - Requiring 100 per cent adaptable features for commercial and public buildings and in large new buildings like apartments and condos, such as
    - Accessible clearances through doorways and along paths of travel to living spaces
    - Space in a bedroom, bathroom and kitchen to support changing and unique needs
    - Switches and other controls at a usable height
    - Reinforcement of bathroom walls to allow grab bars

Public Review– Accessibility Cont'd

- Modest increases in accessibility of smaller residential housing: single-detached homes, townhomes, and row homes:
  - An accessible clearance at the entry door
  - Reinforcement of bathroom walls to allow grab bars

Public Review– Combustible Penetrations

- Proposed change eliminates B.C.'s variation to allow unspecified penetrations of fire separations and fire rated assemblies to be tightly fitted

Public Review– Overheating

- The Province will introduce technical provisions in the BCBC to limit the risks associated with overheating in new construction
- Changes to Part 9 and Part 6

Public Review– Radon

- Exemption for radon rough-in in certain areas will be eliminated in Table C-4 in Appendix C of Division B
- New reference standard CAN/CGSB-149.11, "Radon control options for new construction in low-rise residential buildings" (available for free online)
- Changes to technical provisions in Section 9.13.

Public Review– Seismic

- BCBC will adopt requirements for earthquake design for Part 9 Buildings in advance from the NBC 2025
- NBC 2025 Part changes are currently open for public review
- NBC 2020 contains increased seismic hazard values that may push Part 9 into Part 4 design
- PCF 1475 will be adopted in advance

Public Review– Steel Storage Racking

- BCBC 2023 to continue to reference the design requirements for steel storage racking from the 2018 BCBC
- In addition, Annex N of CSA S16 "Design of steel structures" will be referenced

Public Review– Ventilation

- NBC 2020 provisions on ventilation in Section 9.32. will be adopted while maintaining much of the unique to B.C. variations
- Reorganization of Section 9.32. code references and formatting; however, much of the technical provisions remain the same
- Technical provisions that are kept include:
  - Additional requirements for CO detection
  - Principal ventilation system supply air
  - Additional protection against depressurization

Public Review– Windows, Doors, and Skylights

- Section 5.9. of Division B of the BCBC will be further harmonized with the NBC 2020; Section 9.7. will remain unchanged
- Some reference standards related to glass in Table 1.3.1.2. of Division B have been updated to newer versions

Thank you!

Lots to talk about from the UDI code committee- access, seismic were the hot ones:

how does this relate to dev permits- consider application date relating to rezoning and development permits, some presold units would have to be changed .
could be offside of zoning - some zoning prescribing numbers of units. thsi could affect.

cost issue- some munis are not allowing BP to be submitted until dev permit issued. flood plain

concerns on design impacts of 100% adaptable- space requirements.

what about 500 sq ft tiny units- they may be prohibitive.

only 10% of unts need to be adaptable per BC Housing, shear walls lininig up may affectunit placement- if have to change them from DP to BP effects are substantive- need to exempt units in DP.

seismic- 4x design loads when you combine soil and foundation impacts. floor plate impacts. richmond bid impacts. need to bring munis in to this conversation- FSR, height restrictions, density restrictions.

can we hold back on seismic changes due to unique impacts?

NBC Part 4 commentary still missing! difficult to enact this without them.

lots of increased GHG from these increased structural requirements.

Hi All,

Some follow ups from the MRK briefing for the next meeting. I will need volunteers, please.

1. For each code item in the slides, provide a cost risk estimate
2. Draft options on where to draw the line on accessibility proposal for elevators
3. Ministry of Environment is proposing new regulations on moving soils that may be very costly- please find out more and provide some bullets
4. Advise on when to meet with Stephanie Cadieux to brief her on accessibility changes (I think before PR but after next meeting)
5. Provide information in final BN on what PT's have already adopted NBC and timing for others.

Thanks, all.

Good afternoon Minister Osborne,

On behalf of Anne McMullin and UDI, we're reaching out to request a meeting with you to discuss concerns within the development industry about the capacity of electrical distribution infrastructure to meet the growing demands from new homes and job spaces. UDI has been working collaboratively with BC Hydro on these challenges and would like the opportunity to discuss these issues with your office.

Attached is a letter outlining several of these challenges currently impacting housing and job space delivery across the province, along with recommendations for policy and process improvements.

We look forward to continuing to work with you in this new Ministry, on this and other topics.

Regards,
Cassandra

April 26, 2023

Hon. Josie Osborne
Minister of Energy, Mines & Low Carbon Innovation
PO Box 9060 Stn Prov Govt
Victoria, BC V8W 9E2

Dear Minister Osborne:

RE: Electrical Distribution Infrastructure Impacting Housing Delivery

For several years, UDI has identified BC Hydro policies and processes that have been impacting the delivery of new housing. This includes capacity constraints on delivery infrastructure and fee structures, which are being exacerbated by new provincial/municipal green building policies. BC Hydro has begun to address these issues, but will need further assistance from the Provincial Government to remove the barriers facing new housing. With the ongoing *Development Approvals Process Review* and the passage of the *Housing Supply Act* (*HSA*) last fall, local governments have made a valid point that provincial ministries and agencies can be an obstacle to projects moving forward in a timely way.

The three primary challenges facing new developments when connecting to BC Hydro that are creating approval and construction delays are:

- Gaps in distribution infrastructure capacity currently available to deliver energy to new developments in high growth areas;
- Unpredictability and unfairness of charges associated with utility connections and system upgrades; and
- BC Hydro approval delays.

These issues are exacerbated by the rapid advancement of electrical vehicle charging (EVC) and net-zero operating carbon building policies at the federal, provincial and municipal levels. These policies create higher demands on the existing and future electrical distribution network, increasing the frequency and scope of the upgrades required.

The Province can play a critical role in accelerating BC Hydro's ability to address these issues through policy or regulatory changes, and increased funding. The Ministry of Housing, through the Building and Safety Standards Branch can also provide guidance to municipalities implementing EVC and/or building electrification policies that engagement with BC Hydro on existing infrastructure capacity is necessary prior to the approval of new requirements.

Connection Challenges

UDI has identified several BC Hydro policies and processes that have been slowing housing projects over the past few years. There are areas in fast-growing communities such as Surrey and Langley where development has slowed or stalled because local distribution infrastructure is not available.

Engagement with BC Hydro by local governments when area plans or policies such as Electrical Vehicle Charging (EVC) and building electrification are introduced is not a common practice. This can lead to surprise demands on local distribution infrastructure that is already near its capacity limits, which is difficult for BC Hydro, builders and local governments. When upgrades are required, the builder whose project pushes beyond the distribution capacity is then responsible for unplanned costs.

Even if these discussions occur, BC Hydro is not allowed to proactively provide electrical distribution infrastructure under its current regulatory framework. The Capital Budget and Electric Tariff requires BC Hydro to wait until customers pay for connections, which hinders their ability to proactively build capacity in high-growth areas. For example, when BC Hydro adds electrical infrastructure for the Surrey-Langley SkyTrain, they are not allowed to build extra capacity for all the development that will occur in station areas until paid customers are in place. This results in projects advancing through the development approvals process without a guarantee that the infrastructure will be in place to connect housing units when they are completed. BC Hydro regularly makes best efforts to deliver these connections, however this leads to a constant just-in-time approach, where a more proactive model could provide greater certainty.

In the past, this just-in-time approach was more effective, however BC Hydro, like builders is facing longer timelines due to provincial and municipal approvals. Notably, Section 10 and Section 11 Authorizations under the *Water Sustainability Act* now commonly take 12 months or more, when previously they could have been issued in weeks. Approvals from local governments are also impacting BC Hydro's infrastructure delivery schedules, and ultimately, the new development. Although BC Hydro is working with the Province and municipalities on permitting timelines, they remain a challenge.

The current fee structure to fund electrical extensions and system improvements is also an impediment. As noted above, for upgrades not included in the Capital Plan, the builder who proposes a project that will push past BC Hydro's electrical distribution infrastructure threshold in a local area must pay for any required upgrades – not just for their projects – but future projects in the area that will benefit from the increased capacity. Under the current system, the builder is likely to receive little in rebates resulting from future projects because there is a weak latecomer approach that only lasts five years, and potential rebate payments decline annually. This approach has led to:

- Uncertainty and unpredictable charges for builders, which add unnecessary risks to projects;
- Free riders (builders who receive free electrical infrastructure at the cost of another project);

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION

www.udi.bc.ca

- Delays in housing projects moving forward because BC Hydro must wait until a large builder has the capacity to fund the substantial costs of electrical distribution infrastructure improvements before future housing can be built in an area;
- As these policies apply to existing building upgrades as well, provincial efforts to decarbonize our current building stock and promote electrical vehicles will face similar uncertainty; and
- Equity concerns, as owners and builders of lower income housing could be asked to subsidize the infrastructure costs of other buildings.

We are also aware of staffing shortages in several regions, which are slowing down response times and the approval of projects. This challenge extends beyond the Lower Mainland. UDI offices in the Capital Region and the Okanagan have also expressed concerns about BC Hydro staffing challenges leading to project delays.

These issues have reached a critical point because local governments now commonly mandate EVC in new buildings, and have now been given the authority through a *Zero Carbon Step Code* (*ZCSC*) to also mandate net-zero carbon operating emissions in new construction. The Ministry of Housing itself will be mandating net-zero operating carbon emissions in new buildings across the Province by 2030, with the first step in the process occurring next year.

At the same time, Renewable Natural Gas (RNG) is not an option that can be used to decarbonize buildings because FortisBC is still waiting for a decision from the British Columbia Utilities Commission (BCUC) that would allow it to offer RNG to builders. The Ministry of Housing is allowing local governments to ban the use of RNG to meet their *ZCSC* targets. It is not clear whether this policy will continue after the BCUC reaches a decision.

With the ongoing *Development Approvals Process Review* and the passage of the *Housing Supply Act* (*HSA*) last fall, local governments have made a valid point that provincial ministries and agencies can be an obstacle to projects moving forward in a timely way.

BC Hydro Initiatives

BC Hydro is aware of the above problems, and staff are taking several actions in the past year. Last summer, BC Hydro established an interdepartmental committee to start reviewing and resolving the issues, and are meeting with UDI, the Canadian Home Builders' Association of BC, other stakeholders and provincial ministries on regular basis. BC Hydro has since released a $260 million electrification plan and they are also looking to amend the Tier 2 rate structure, for higher usage levels. BC Hydro staff also met with the Energy Step Code Council to discuss several initiatives and proposals to address electrical distribution and staffing capacity issues, including:

- Their local distribution capital budget will increase by $100 million in fiscal 2024 – almost doubling it;
- They will be exploring regulatory changes that could allow them to be proactive in building local distribution infrastructure before customers are in place;
- Customer connection staffing at BC Hydro local offices have increased by 50 people this past year; and

- They are introducing a simplified "Design Lite" process for simpler projects that will allow them to focus more resources on more complex projects, and they will be more proactive in reaching out to customers.

BC Hydro is also proposing to change how builders and existing building owners are charged for extensions and system improvements (extension fees). Options being considered would alleviate the issue that is preventing BC Hydro from proactively installing and upgrading infrastructure, by removing the linkage between individual customer connections in an area and the provision of specific infrastructure. By making this change, BC Hydro could more quickly make connections available to new housing developments and reduce delays.

Overall, the costs to the industry should be less than what they are now, and the costs will be predictable. However, some builders and building owners who were not required to pay for extensive electrical distribution upgrades will likely see increases in costs for extensions and system improvements.

UDI Position and Recommendations

UDI is still awaiting further details on the approach that BC Hydro is proposing to provide comments. However, our members want to ensure that electrical capacity will be immediately available for their projects, especially when they are funding upgrades. One concern is the changes proposed by BC Hydro to address the current extension and system improvement fee structure may take several years to implement. The BCUC hearing process could take a year to complete. **We encourage the Province to consider providing direction to the BCUC or introduce regulatory changes to speed up this process.** These issues are currently impacting the delivery of housing, and even after the regulatory barriers are removed, will take time to proactively map and upgrade infrastructure.

Given the time that will be required, UDI is seeking action by the Government to begin addressing these challenges as quickly as possible. There is a role for the Province to quickly fund key local distribution infrastructure where there are current gaps in infrastructure and the development of new housing is being impacted in high-growth areas like Langley and Surrey.

Finally, the lack of engagement with BC Hydro by municipalities in their policy and area planning processes needs to be rapidly addressed. As noted above, local governments are proceeding with EVC and building electrification policies through the *ZCSC* as well as developing area plans where a tremendous amount of growth will be encouraged, which will likely exacerbate local distribution capacity issues in many places. In addition, there is an overlap between the local governments that are likely to aggressively implement the *ZCSC and* high-growth communities that have BC Hydro capacity issues. If these municipalities were to be subject to a housing target under the *HSA,* there would likely be impacts on their ability to deliver housing in these areas.

A Best Practices Guide for the implementation of *ZCSC* is being updated. It needs to include clear instructions for municipalities to engage with BC Hydro to discuss local distribution capacity constraints throughout their communities. In addition, BC Hydro could be more involved in the development of area plans where substantial growth is likely to be occurring, so

PACIFIC REGION URBAN DEVELOPMENT INSTITUTE

URBAN DEVELOPMENT INSTITUTE – PACIFIC REGION
#1100 – 1050 West Pender Street
Vancouver, British Columbia V6E 3S7 Canada

www.udi.bc.ca

they know where the new housing and development will be occurring in the future, and can budget and plan accordingly.

UDI is very supportive of the work currently being undertaken by BC Hydro to address many of the challenges outlined above, and we encourage the Province to provide the support required to catalyze this work. The expedited delivery of housing is a clear priority for this Provincial Government, and we hope that a housing delivery lens will be applied to these issues, spurring additional engagement with builders, municipalities and utilities to address the above challenges.

We look forward to discussing these and other topics with you, and if you have any questions, please don't hesitate to contact us.

Yours sincerely,

Anne McMullin,
President and CEO, UDI

Maximum Allowable Building Height with Single Egress for Multi-unit Residential Occupancies

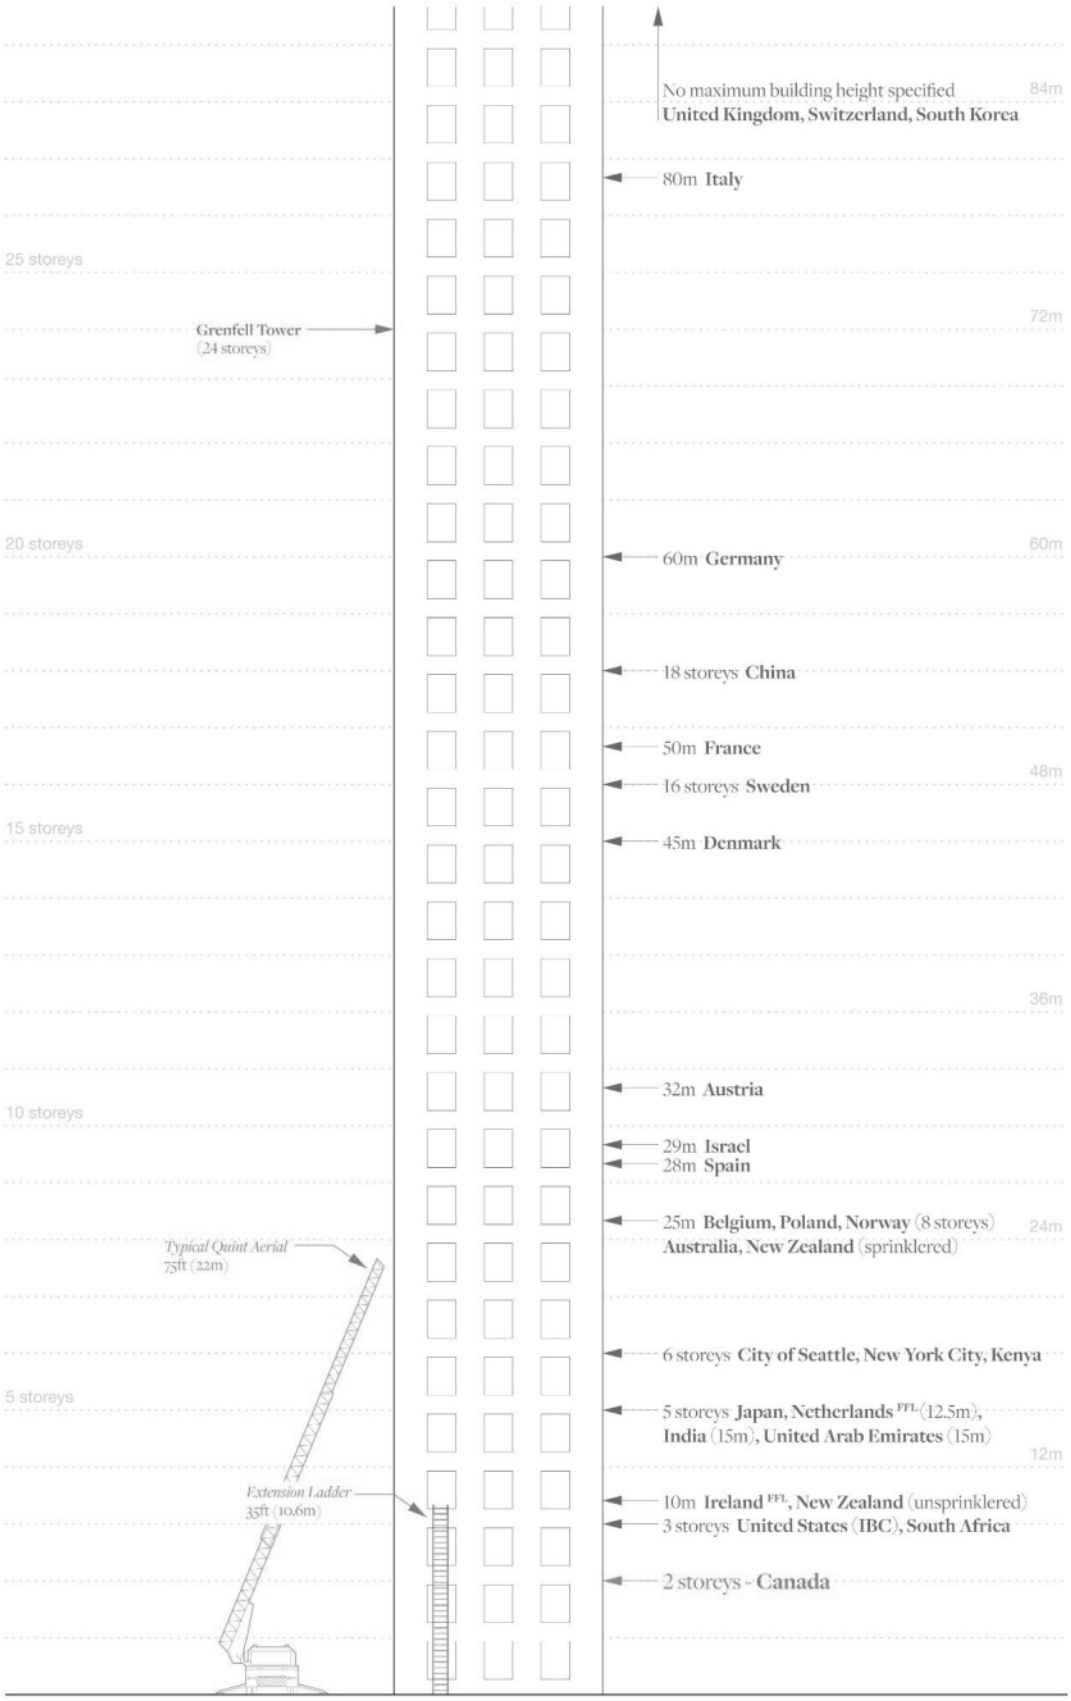
Note: this is a reference table for the maximum building height and limits on floor area, number of dwelling units and occupant load per storey. The table is a summary and simplification of the precise requirements of each jurisdiction. Please refer to the original source documents for clarification.

Jurisdiction	Max. Building Height	Max. Units, Areas, Occupant load per storey
United States (IBC)	Three storeys	max. 4 dwelling units per storey
City of Seattle	Six storeys	max. 4 dwelling units per storey
New York City	Six storeys	max. floor area per storey: 2,000 sq. ft. (186m^2)
	Four storeys	max. 3 dwelling units per storey max. floor area per storey: 2,500 sq. ft. (232m^2)
Australia	25m	-
New Zealand	25m (sprinklered) 10m (unsprinklered)	refer to travel distance limits
United Kingdom	no height specified	max. occupant load per storey: 60 people
Ireland	10m^{FFL}	max. occupant load per storey: 50 people
Sweden	16 storeys	max. occupant load per storey: 50 people
Denmark	45m	max. 6 dwelling units per storey
Norway	8 storeys	-
France	50m	-
Belgium	25m	max. occupant load per fire compartment: 50 people
Netherlands	12.5m^{FFL}	max. floor area per dwelling unit: 150m^2
Germany	60m	-
Switzerland	no height specified	max. floor area per storey: 900m^2 max. occupant load per floor area: 100 people
Austria	32m	-
Poland	25m, 9 storeys	can exceed height limit with max. floor area: 750m^2
Italy	80m	max. floor area per storey: 500m^2
Spain	28m^{FFL}	max. total building occupant load: 500 people
Kenya	6 storeys, 17m^{FFL}	-
South Africa	3 storeys	-
United Arab Emirates	15m	max. 4 dwelling units per storey max. floor area per storey: 500m^2
India	15m	max. floor area per storey: 500m^2
China	18 storeys	max. floor area per storey: 650m^2
South Korea	no height restriction	max. 3 dwelling units per storey max. floor area per storey: 300m^2
Japan	5 storeys	max. floor area per storey: 200m^2

^{FFL} maximum building height measured as finish floor level height above ground for the uppermost storey



Maximum Allowable Building Height with Single Egress for Multi-unit Residential Occupancies

Note: the drawing assumes a floor to floor height of 3m

2015 International Building Code
Chapter 10: Means of Egress

The US model building code permits single exits in apartment buildings (R-2 occupancy) of not more than three storeys in building height, with a maximum of 4 dwelling units per storey. The building must be sprinklered throughout (NFPA 13-R).

Available online: https://codes.iccsafe.org/content/IBC2015/chapter-10-means-of-egress

---

Excerpt from original:

1006.3.2 Single Exits
A single exit or access to a single exit shall be permitted from any story or occupied roof where one of the following conditions exists:

1. The occupant load, number of dwelling units and common path of egress travel distance does not exceed the values in Table 1006.3.2(1) or 1006.3.2(2).
2. Rooms, areas and spaces complying with Section 1006.2.1 with exits that discharge directly to the exterior at the level of exit discharge, are permitted to have one exit or access to a single exit.
3. Parking garages where vehicles are mechanically parked shall be permitted to have one exit or access to a single exit.
4. Group R-3 and R-4 occupancies shall be permitted to have one exit or access to a single exit.
5. Individual single-story or multistory dwelling units shall be permitted to have a single exit or access to a single exit from the dwelling unit provided that both of the following criteria are met:
   5.1. The dwelling unit complies with Section 1006.2.1 as a space with one means of egress.
   5.2. Either the exit from the dwelling unit discharges directly to the exterior at the level of exit discharge, or the exit access outside the dwelling unit's entrance door provides access to not less than two approved independent exits.

TABLE 1006.3.2(1)
STORIES WITH ONE EXIT OR ACCESS TO ONE EXIT FOR R-2 OCCUPANCIES

STORY	OCCUPANCY	MAXIMUM NUMBER OF DWELLING UNITS	MAXIMUM COMMON PATH OF EGRESS TRAVEL DISTANCE
Basement, first, second or third story above grade plane	R-2[a, b]	4 dwelling units	125 feet
Fourth story above grade plane and higher	NP	NA	NA

a. Buildings classified as Group R-2 equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.1 or 903.3.1.2 and provided with emergency escape and rescue openings in accordance with Section 1030.

b. This table is used for R-2 occupancies consisting of dwelling units. For R-2 occupancies consisting of sleeping units, use Table 1006.3.2(2).

City of Seattle

Source: Seattle Department of Construction & Inspections
Seattle Building Code 2018
Chapter 10: Means of Egress

The Seattle building code allows for single exits in apartment buildings (R-2) of not more than six storeys in building height, with a maximum of 4 dwelling units per storey. The building must be sprinklered throughout, where an interior exit stairway is provided it must be pressurized. Corridor separation is required.

Excerpt from original:

1006.3.3 Single Exits
A single exit or access to a single exit shall be permitted from any story or occupied roof where one of the following conditions exists:

7. Not more than 5 *stories* of Group R-2 occupancy are permitted to be served by a single exit under the following conditions:

   7.1. The building has not more than six *stories above grade plane*.

   7.2. The building does not contain a *boarding house*.

   7.3. There shall be no more than four *dwelling units* on any floor.

   7.4. The building shall be of not less than one hour fire-resistive construction and shall also be equipped throughout with an *automatic sprinkler system* in accordance with subsection 903.3.1.1. Residential-type sprinklers shall be used in all habitable spaces in each *dwelling unit*.

   7.5. There shall be no more than two single exit stairway conditions on the same property.

   7.6. An exterior stairway or interior exit stairway shall be provided. The interior exit stairway, including any related *exit passageway*, shall be pressurized in accordance with subsection 909.20. Doors in the stairway shall swing into the interior exit stairway regardless of the occupant load served, provided that doors from the interior exit stairway to the building exterior are permitted to swing in the direction of exit travel.

   7.7. A *corridor* shall separate each *dwelling unit* entry/exit door from the door to an interior exit stairway, including any related *exit passageway*, on each floor. *Dwelling unit* doors shall not open directly into an interior exit stairway. *Dwelling unit* doors are permitted to open directly into an exterior stairway,

   7.8. There shall be no more than 20 feet (6096 mm) of travel to the exit stairway from the entry/exit door of any dwelling unit.

   7.9. Travel distance measured in accordance with section 1017 shall not exceed 125 feet (38100 mm).

   7.10. The exit shall not terminate in an egress *court* where the *court* depth exceeds the *court* width unless it is possible to exit in either direction to the public way.

   7.11. Elevators shall be pressurized in accordance with section 909.21 or shall open into elevator lobbies that comply with section 713.14. Where *approved* by the *building official*, natural ventilation is permitted to be substituted for pressurization where the ventilation would prevent the accumulation of smoke or toxic gases.

   7.12. Other occupancies are permitted in the same building provided they comply with all the requirements of this code. Other occupancies shall not communicate with the Group R occupancy portion of the building or with the single-exit stairway. Exception: parking garages and occupied roofs accessory to the Group R occupancy are permitted to communicate with the exit stairway.

   7.13. The exit serving the Group R occupancy shall not discharge through any other occupancy, including an accessory parking garage.

   7.14. There shall be no openings within 10 feet (3048 mm) of unprotected openings into the stairway other than required exit doors having a one-hour fire-resistance rating.

New York City

Source: New York City Construction Codes
NYC Building Code 2014
Chapter 10: Means of Egress

The New York City building code allows for single exits in apartment buildings (R-2) of not more than six storeys in building height, with a maximum floor area of 2,000 sq. ft. (186m^2) per storey. The NYC code also allows for single exits in apartment buildings (R-2) of not more than four storeys in building height, with a maximum of three dwelling units per storey and a maximum floor area of 2,500 sq. ft. (232m^2) per storey.

Available online: https://up.codes/viewer/new_york_city/nyc-building-code-2014/chapter/10/means-of-egress#1021

Excerpt from original:

1021.2 Single Exits
Only one exit shall be required in buildings or from stories of buildings as described below:

1. Stories in buildings as described in Table 1021.2.
2. Buildings of Group R-3 occupancy.
3. Single-level buildings with the occupied space at the level of exit discharge provided that the story or space complies with Section 1015.1 as a space with one means of egress.
4. Buildings of Group R-2 occupancy where all of the following conditions are met:
   - 4.1. The building does not exceed four stories;
   - 4.2. The building contains not more than three dwelling units per story;
   - 4.3. The building is of construction Type I or II;
   - 4.4. The building does not exceed 2,500 square feet (232 m2) per story;
   - 4.5. Each dwelling unit has at least one window facing the street, or facing a lawful yard with open, unobstructed, and direct access to the street;
   - 4.6. The stairway extends to the roof surface through a stairway bulkhead complying with Section 1509.2 provided the roof has a slope not steeper than 20 degrees (0.35 rad). In lieu of the stairway bulkhead, the stair may be constructed against the street wall with one window facing the street at every landing and access to the roof is provided via a scuttle with a stationary, noncombustible access ladder;
   - 4.7. The stairway is enclosed in 2-hour fire-rated walls with all exit doors leading into the stairway having at least 11/2 - hour fire rating; and
   - 4.8. The building shall be equipped throughout with an automatic sprinkler system in accordance with Section 903.3.1.2.
5. Buildings of Group R-2 occupancy of construction Type I or II not exceeding six stories and not exceeding 2,000 square feet (186 m2) per story.

Australia

Source: National Construction Code Series 2015 – Volume One
Building Code of Australia Class 2 to Class 9 Buildings
Section D – Access and Egress

The Building Code of Australia permits one exit for apartment buildings (Class 2 building) of not more than 25m in building height. 'Fire-isolated' (corridor separated) exit stairs are required for buildings of more than 3 storeys or 4 storeys where sprinklering or increased fire separation is provided. A maximum dead end travel distance of 6m applies.

Available online: https://ncc.abcb.gov.au/

D1.2 Number of exits required
Excerpts from the source document:

D1.2 Number of exits required

(a) **All buildings** — Every building must have at least one *exit* from each *storey*.

(b) **Class 2 to 8 buildings** — In addition to any *horizontal exit*, not less than 2 *exits* must be provided from the following:

(i) Each *storey* if the building has an *effective height* of more than 25 m.

(ii) A Class 2 or 3 building subject to C1.5.

(c) **Basements** — In addition to any *horizontal exit*, not less than 2 *exits* must be provided from any *storey* if egress from that *storey* involves a vertical rise within the building of more than 1.5 m, unless—

NCC 2015 Building Code of Australia - Volume One Page 158

D1.3 When fire-isolated stairways and ramps are required

(a) **Class 2 and 3 buildings** — Every stairway or ramp serving as a *required exit* must be fire-isolated unless it connects, passes through or passes by not more than—

(i) 3 consecutive *storeys* in a Class 2 building; or

(ii) 2 consecutive *storeys* in a Class 3 building,

and one extra *storey* of any classification may be included if—

(iii) it is only for the accommodation of motor vehicles or for other ancillary purposes; or

(iv) the building has a sprinkler system complying with Specification E1.5 installed throughout; or

(v) the *required exit* does not provide access to or egress for, and is separated from, the extra *storey* by construction having—

(A) an FRL of –/60/60, if non-*loadbearing;* and

(B) an FRL of 90/90/90, if *loadbearing*; and

(C) no opening that could permit the passage of fire or smoke.

NCC 2015 Building Code of Australia - Volume One Page 159

D1.4 Exit travel distances

(a) **Class 2 and 3 buildings—**

(i) The entrance doorway of any *sole-occupancy unit* must be not more than—

(A) 6 m from an *exit* or from a point from which travel in different directions to 2 *exits* is available; or

(B) 20 m from a single *exit* serving the *storey* at the level of egress to a road or *open space*; and

(ii) no point on the floor of a room which is not in a *sole-occupancy unit* must be more than 20 m from an *exit* or from a point at which travel in different directions to 2 *exits* is available.

New Zealand

Source: Ministry of Business, Innovation & Employment
C/AS2 – Acceptable Solution for Buildings other than Risk Group SH (2020)
Part 3: Means of Escape

The New Zealand Building Code permits one exit (single escape routes) for apartment buildings (risk group SM) where the escape height is no greater than 25m if sprinklered, and 10m if unsprinklered. Dead-end limits on travel distance apply.

Available online: https://www.building.govt.nz/assets/Uploads/building-code-compliance/c-protection-from-fire/asvm/cas2-protection-from-fire-1st-edition-2019.pdf
Additional information relevant to New Zealand is provided in the reference document:

3.13 Single escape routes
Excerpt from the source document, page 79:

3.13 Single escape routes

3.13.1 Single *escape routes* shall only be permitted if:

a) The *dead end open path* length does not exceed the limits specified in Table 3.2, and

b) For all ***risk groups* excluding SI**, the total *occupant load* from all *firecells* on each level served by the *escape route* is no greater than 50, and

c) The *escape height* is no greater than:

Amend 2 Nov 2020
i) 10 m if unsprinklered, or
ii) 25 m if sprinklered, and

d) There are no more than two *basement* levels and the vertical *safe path* from the *basement* levels is preceded by a *smoke lobby* (see Figure 3.11), and

Amend 2 Nov 2020

e) In *buildings* with two or more floors, the vertical *safe path* is preceded by a *smoke lobby* on all floors except the topmost floor (refer to Paragraph 3.9.2 to determine the *smoke lobby* floor area).

C BUILDING CODE **Acceptable Solution**

Risk group SM

SM **3.13.4** In ***risk group* SM**, a single *escape route* from a floor is permitted provided that, in addition to the requirements of Paragraph 3.13.1:

a) The number of *people with disabilities* on any floor is not greater than 10, and

b) The *escape route* within each *firecell* terminates at a *final exit* or opens onto a *safe path* which complies with the requirements of Paragraphs 3.9.4 to 3.9.11, and

c) The particular requirements for *stairways*, balconies and split level *exitways*, given in Paragraphs 3.7.3 and 3.13.5, are satisfied, and

d) The length of any *safe path* on a floor does not exceed the maximum *dead end* length permitted by Table 3.2.

SM **3.13.5** In ***risk group* SM**, balconies, bridges and external *stairways* (see Figure 3.20) may be part of a single external *escape route* where:

a) The *escape height* is no greater than 16 m if unsprinklered, or 25 m if sprinklered, and

b) The *escape route* on the balcony, bridge and *stairway* meets the requirements of Paragraph 3.11 for protection, *construction* and ventilation, and

c) The *external wall* within 3.0 m of the *stairway* is provided with an *FRR* in accordance with Paragraph 2.3, or the length of any bridge between the *external wall* and *stairway* is no less than 3.0 m.

United Kingdom

Source: The Building Regulations 2010
Approved Document B, Fire Safety - Volume 2, 2019 edition
Requirement B1: Means of warning and escape

The United Kingdom does not establish a maximum height limit for single stair residential buildings. Section 2.6 of the code establishes an occupancy load limit of 60 people per storey and maximum travel distances in Table 2.1. Note that office buildings can have a single exit stair up to a floor height of 11m (Section 3.3).

Note: In response to the Grenfell Tower disaster, the Royal Institute of British Architects (RIBA) and London Fire Brigade have recently submitted concerns and a request to further study the fire safety of single exit stair high-rise residential buildings.

Available online: https://www.gov.uk/government/publications/fire-safety-approved-document-b
Additional information relevant to the United Kingdom is provided in the reference document:
Stock, B., Wallasch, K. (2020). Fire Safety Requirements for High-Rise Residential Towers in England and Germany. FeuerTrutz International 2020. Online: https://www.medien.feuertrutz.de/#doc/62580/5

2.6 Single escape routes and exits
Excerpt from the source document, page 13 (23 in pdf):

Single escape routes and exits

2.6 A single escape route is acceptable for either of the following.

a. Parts of a floor from which a storey exit can be reached within the limit for travel distance in one direction shown in Table 2.1 (see also paragraph 2.8), provided the following apply.

i. For places of assembly and bars, no one room in this situation has more than 60 people.

ii. For 'residential (institutional)' buildings (purpose group 2(a)), no one room in this situation has more than 30 people. Occupant number calculations are described in Appendix D.

b. A storey with no more than 60 people, where the limits on travel distance in one direction only are satisfied (see Table 2.1).

2.9 Number of occupants and exits
Excerpt from the source document, page 15 (25 in pdf):

Number of occupants and exits

2.9 The building design should be based on the number of occupants. If the number is not known, use the appropriate floor space factors (Appendix D).

Table 2.2 gives the minimum number of escape routes and exits from a room or storey for different numbers of occupants. This number is likely to be increased by the need to observe travel distances and other practical considerations.

The width of escape routes and exits is given in paragraph 2.18.

Table 2.2 Minimum number of escape routes and exits from a room, tier or storey

Maximum number of people	Minimum number of escape routes/exits
60	1
600	2
More than 600	3

Ireland

Source: Department of Housing, Planning and Local Government
Building Regulations 2006
Technical Guidance Document B, Fire Safety – Reprinted 2020 Edition

Ireland permits a single escape stairway for apartment buildings where the floor level of the uppermost storey is not more than 10m above ground level, and the occupancy load is not more than 50 people per storey.

Available online: https://www.gov.ie/en/collection/d9729-technical-guidance-documents/

1.2 Design for Horizontal Escape
1.2.2.5 Single escape route
Excerpt from the source document,
page 27 (40 in pdf):

1.2.2.5 Single escape route - In order to avoid occupants being trapped by fire or smoke, there should be alternative escape routes from all parts of the building except for the situations listed below where a single route can be acceptable:

(a) areas, except in a building of purpose group 2(a), Residential (Institutional), not likely to contain more than 50 persons, near enough to an exit to satisfy the limits on travel in one direction indicated in Table 1.2;

(b) rooms which are not likely to contain more than 50 people, or 20 people if the building is in Residential (Institutional) use, provided that the limits on travel in one direction only are satisfied (see Table 1.2); or

(c) a storey, except in the case of a building of purpose group 2(a), Residential (Institutional), which is not likely to contain more than 50 people, where the limits on travel in one direction only are satisfied (see Table 1.2).

In many cases the beginning of the escape route will be in one direction only (i.e. a single escape route) to a point where there are alternative escape routes. This is acceptable provided that the total travel distance to the nearest exit is within the limits for routes where escape is possible in more than one direction and the section with the single escape route does not exceed the limit for escape in one direction only (see Table 1.2 and Diagram 2(c)).

1.3 Design for Vertical Escape
1.3.3 Single Escape Stairways
Excerpt from the source document,
page 35 (48 in pdf):

1.3.3 Single Escape Stairways

The situations where a building (or part of a building) other than buildings of Purpose Group 2(a) Residential (Institutional), may be served by a single escape stairway are:

(a) if there is no storey with a floor level in the case of a Purpose Group 5 building more than 5 m above ground level, or in other cases more than 10 m above ground level, and where (in accordance with par. 1.2.2.5) every storey may have a single escape route, or

(b) if there is a basement the floor of which is not more than 3 m below ground level where (in accordance with par. 1.2.2.5) every basement storey may have a single escape route.

Sweden

Source: Swedish National Board of Housing, Building and Planning (Boverket)
Boverket's Building Regulations, BBR18 (2018)
BFS 2011:26 with amendments up to BFS 2018:4

Sweden permits one exit for class 3 (residential) buildings up to 16 storeys with a maximum occupant load of 50 people per storey and a maximum travel distance of 30m. Different requirements for the fire-protection rating/smoke-tightness standard of closures apply for buildings of not more than 8 storeys and buildings of more than 8 but not more than 16 storeys.

Available online: https://www.boverket.se
Note: Sweden provides an English translation of the code for reference purposes only

---

Translated excerpt from original:

5.32 Access to escape route

In a building of more than eight but not more than sixteen storeys, each dwelling and premises shall be designed to have access to at least one Tr2 stairway. In a building with more than sixteen storeys, each dwelling and premises shall be designed to have access to at least one Tr1 stairway. *(BFS 2011:26).*

General recommendation:
In buildings with more than sixteen storeys, other stairways should be at least Tr2. *(BFS 2011:26).*

5:322 Access to only one escape route

Doors directly to a secure location may be the only escape route from spaces on the ground floor for
1. spaces in occupancy class 1 (Industrial, offices, etc.) if the means to escape may be considered satisfactory and where only a limited number of people are expected to be present.
2. smaller premises and dwellings in occupancy classes 2A, 3 (residential), 4 and 5B, that are easily surveyable where a limited number of people are expected to be present. *(BFS 2014:3).*

General recommendation
What is meant in point 1 is that the walking distance to an escape route should be a maximum of 30 meters and that the number of people does not exceed 50. What is meant in point 2 is premises and dwellings with a maximum walking distance of 15 meters to an escape route, where the escape route is visible from the main part of the premises or dwelling, and the number of people does not exceed 30. *(BFS 2014:3).*

If the conditions for satisfactory evacuation are met, a stairway Tr1 may be the only escape route from dwellings in occupancy class 3 (dwellings) and from premises in occupancy class 1. If the conditions for satisfactory evacuation are in place, stairway Tr2 must be the only escape route in the premises in occupancy class 1 in buildings with a maximum of eight storeys and from dwellings in occupancy class 3 in buildings with a maximum of sixteen storeys. *(BFS 2011:26).*

General recommendation
Evacuation is assumed to be satisfactory if the walking distance to an escape route is not more than 30 meters and the number of people in each fire compartment does not exceed 50. A stairway Tr1 can be the only escape route in buildings with up to sixteen storeys. For habitable rooms in occupancy class 3B, the preconditions for satisfactory evacuation are met even if the escape route from the habitable rooms goes through a common space in another fire compartment. (BFS 2014:3).

5:245 Stairway Tr1

Stairway Tr1 shall be designed with a separate structure to ensure that the spread of fire and smoke to the stairway is limited. *(BFS 2011:26).*

General recommendation
The separating structure should be designed in a minimum of fire resistance class EI 60. The stairway should only be connected to other spaces through a protected lobby which is open to the outside. However, the lift shaft can be placed in a stairway as part of the same fire compartment as the stairway. Neither the stairway, lift shaft or protected lobby should be connected to a floor that is situated below the floor used for escape to the outside.
Doors between the stairway and the protected lobby should be designed in a minimum of fire resistance class E 30-S200C. Doors between a dwelling or premises and the protected lobby should be designed in a minimum of fire resistance class El 60-S200C. If the protected lobby is adjacent to a connection, corridor or similar space in its own fire compartment, doors can be designed in a minimum of fire resistance class EI 30-S200C. *(BFS 2018:4).*

5:246 Stairway Tr2

Stairway Tr2 shall be designed with a separate structure to ensure that the spread of fire and smoke to the stairway is limited. *(BFS 2011:26).*

General recommendation
The separating structure should be designed in a minimum of fire resistance class EI 60. Doors to stairway Tr2 should be designed in a minimum of class E 60-S200C. If the stairway serves a building with up to eight storeys, EI 30-S200C is adequate. The stairway should only have a connection through a space in its own fire compartment with dwellings in occupancy class 3, offices in occupancy class 1 and spaces comparable therewith where people are present other than occasionally. Spaces other than dwellings in occupancy class 3, offices in occupancy class 1 and spaces comparable therewith, where people are present other than occasionally, should only have a connection to the stairway through a protected lobby. Such spaces should have access to at least one more access route for rescue services. The lift shaft can be placed in the stairway as part of the same fire compartment. A stairway Tr2 which constitutes the only escape route should not be connected with the basement floor in accordance with the requirements in 5:722. This also applies to lift shafts that are part of the same fire compartment as the stairway.

Denmark

Source: *bolig og planstyrelsen* [housing and planning agency]
Bygningsreglementets vejledning til kapitel 5 – Brand [Building regulations chapter 5 – fire]
Bilag 2 - Præ-accepterede løsninger for etageboligbyggeri (version 1.4, 2021)
[Appendix 2 – pre-accepted solutions for multi-storey residential construction]

Denmark permits a single exit for multi-unit residential (category 4) buildings up to 45m in building height, with a maximum of 4 dwelling units per storey with direct access from the dwelling unit to the exit stair (no corridor separation). For building with floors more than 22m above ground, where the rescue openings cannot be reached by rescue ladder, a pressurized "security" stair with corridor separation is required and a maximum of 6 dwelling units per storey is allowed. These are prescriptive, pre-approved conditions. According to a local architect, buildings over 45m in height require a performative code-compliance process and fire engineering consultations.

2.3.2.2.1 Udgange fra brandceller som boligenhed
[2.3.2.2.1 Exits from fire cells as dwelling units]
Translated excerpt from original:

Boligenheder i anvendelseskategori 4, hvor risikoen for brandspredning fra en boligenhed til en anden er begrænset, kan indrettes, så der kun er direkte adgang til én flugtvejstrappe. Der skal være direkte adgang fra boligenheden til flugtvejstrappen.
[dwelling units in use category 4, where the risk of fire spreading from one dwelling unit to another is limited, can be arranged so that there is only direct access to one exit staircase. There must be direct access from the dwelling unit to the exit staircase.]

Adgang til boligenheder via et fælles gangareal kan kun udføres i bygninger i en etage som angivet i afsnit 2.3.2.2.2.
[Access to dwelling units via a common corridor area can only be carried out in buildings on one floor as specified in section 2.3.2.2.2.]

Der må højst være adgang til 4 boligenheder på hver etage, som har adgang til samme flugtvejstrappe, se Figur 2.3.3.
[There must be a maximum of 4 dwelling units on each floor, which have access to the same exit staircase, see Figure 2.3.3.]

Ved bygninger med gulv i øverste etage mere end 22 m over terræn eller hvor redningsåbningerne ikke kan nås med redningsberedskabets stiger, skal trapper udføres som sikkerhedstrapper. Har alle boligenheder direkte adgang til sikkerhedstrappe via fælles forrum, kan der være højst 6 boligenheder pr. etage.
[For buildings with a storey more than 22 m above ground or where the rescue openings cannot be reached with the emergency services' ladders, stairs must be designed as safety stairs. If all dwelling units have direct access to the security staircase via a common vestibule, there can be a maximum of 6 housing units per floor.]

Såfremt adgang til flugtvejstrappen sker via en altangang, hvor der ikke er risiko for, at trappen bliver røgfyldt, kan der være mere end 6 boligenheder på hver etage som har adgang til samme flugtvejstrappe, se afsnit 2.3.6.
[If access to the escape route stairs is via an exterior passageway, where there is no risk of the stairs being filled with smoke, there may be more than 6 housing units on each floor which have access to the same escape route stairs, see section 2.3.6.]

For additional information see also:

2.3.8.2 Sikkerhedstrappe **[2.3.8.2 Security staircase]**

2.3.8.3 Flugtvejstrapper og sikkerhedstrapper i bygninger, hvor gulv i øverste etage er højst 22 m over terræn
[2.3.8.3 Escape stairs and safety stairs in buildings where the floor on the top floor is no more than 22 m above ground]

2.3.8.4 Flugtvejstrapper og sikkerhedstrapper i bygninger, hvor gulv i øverste etage er højst 45 m over terræn
[2.3.8.4 Escape stairs and security stairs in buildings where the floor on the top floor is no more than 45 m above ground]

Norway

Source: *Direktoratet for byggkvalitet* [Directorate for building-quality]
Byggteknisk forskrift (TEK17) med veiledning (2017)
[Building technical regulations (TEK17) with guidance]
IV Tilrettelegging for rømning og redning [IV Arrangements for escape and rescue]

Norway permits a single exit for multi-unit residential (risk class 4) buildings up to 8 storeys so long as each dwelling unit has an operable window or balcony for rescue and firefighting. A maximum travel distance of 15m from the dwelling unit entry door to the exit stair door applies.

Note: translation of the original foreign language document by code change proponent, for reference only

Kapittel 11 Sikkerhet ved brann **[Chapter 11 Fire safety]**
§ 11-13. Utgang fra branncelle **[§ 11-13. Exit from fire cell]**
Translated excerpt from original:

(2) Brannceller i byggverk i risikoklasse 4 med inntil 8 etasjer kan ha utgang til ett trapperom utført som rømningsvei. Dette forutsetter at hver boenhet har minst ett vindu eller balkong som er tilgjengelig for rednings- og slokkeinnsats, jf. § 11-17.
[(2) Fire cells in buildings in risk class 4 (residential) with up to 8 floors may have access to one stairwell designed as an escape route. This presupposes that each dwelling unit has at least one window or balcony that is accessible for rescue and firefighting efforts, cf. § 11-17.]

Veiledning til annet led: [Guidance to the second paragraph:]

> *Denne bestemmelsen må ses i sammenheng med kravet om automatisk slokkeanlegg i byggverk i risikoklasse 4 hvor det kreves heis, jf. § 11-12 første ledd bokstav a. Bygning med tre etasjer eller flere som har boenhet, skal ha heis. Unntak gjelder der atkomsten fra inngangspartiet til boenheten kun går over én etasje, jf. § 12-3 tredje ledd bokstav b.*
> [This provision must be seen in connection with the requirement for an automatic fire extinguishing system in buildings in risk class 4 where an elevator is required, cf. § 11-12 first paragraph letter a. A building with three floors or more that has a residential unit shall have an elevator. Exceptions apply where access from the entrance to the dwelling unit only extends over one floor, cf. section 12-3, third paragraph, letter b.]
>
> *Bestemmelsen innebærer at det må være direkte tilgang for brannvesenets høyderedskap (for eksempel brannbil utstyrt med maskinstige eller snorkel) til vindu eller 14alking I hver boenhet.*
> [The provision means that there must be direct access for the fire service's height equipment (for example, a fire truck equipped with a machine ladder or snorkel) to the window or balcony in each housing unit.]

Preaksepterte ytelser [Pre-accepted benefits]

> *1. Trapperommet kan være utført som Tr 1.*
> [1. The stairwell can be made as Tr 1.]
>
> *2. Der det er nødvendig med høyderedskap, må øverste gulv ikke være høyere enn 23 meter over laveste punkt på oppstillingsplassen, jf. § 11-17.*
> [2. 1. Where height equipment is required, the upper floor must not be higher than 23 meters above the lowest point on the installation site, cf. § 11-17.]

Refer to § 11-14. Rømningsvei **[§ 11-14. Escape route] for maximum travel distance limit of 15m.**

France

Source: *Code de la construction et de l'habitation* [Code for construction and housing]
Titre II : Sécurité et protection contre l'incendie [Title II: Security and protection against fire}
Chapitre II : Immeubles de grande et de moyenne hauteur
[Chapter II: High and medium-rise buildings]

France permits a single exit for residential buildings up to 50m in building height. Two means of egress and additional life safety measures are required for high-rise buildings *(immeuble de grande hauteur)* exceeding this height.

Note: translation of the original foreign language document by code change proponent, for reference only

Section 1 : Dispositions de sécurité relatives aux immeubles de grande hauteur
[Section 1: Safety Provisions for Tall Buildings]

Excerpt from Article R122-2 (2021 version)

Constitue un immeuble de grande hauteur, pour l'application du présent chapitre, tout corps de bâtiment dont le plancher bas du dernier niveau est situé, par rapport au niveau du sol le plus haut utilisable pour les engins des services publics de secours et de lutte contre l'incendie :
- à plus de 50 mètres pour les immeubles à usage d'habitation, tels qu'ils sont définis par l'article R. 111-1 (1);
- à plus de 28 mètres pour tous les autres immeubles.
Constitutes a high-rise building, for the application of this chapter, any building where the floor level of the uppermost storey is located, in relation to the highest ground level usable for the vehicles of the public emergency and firefighting services:
- more than 50 meters for residential buildings, as defined by article R. 111-1 (1);
- more than 28 meters for all other buildings.

Excerpt from Article R122-9 (2021 version)

Pour assurer la sauvegarde des occupants et du voisinage, la construction des immeubles de grande hauteur doit permettre de respecter les principes de sécurité ci-après :
2.L'évacuation des occupants est assurée au moyen de deux escaliers au moins par compartiment. Cependant, pour les immeubles de la classe G.H.W. 1, le règlement de sécurité précise les conditions auxquelles il pourra être dérogé à cette règle ;
To ensure the safety of the occupants and the neighborhood, the construction of high-rise buildings must allow compliance with the following safety principles:
2. Evacuation of occupants is ensured by means of at least two stairways per compartment. However, for class GHW 1 (office) buildings, the safety regulations specify the conditions under which this rule may be waived;

Belgium

Bijlage 3/1 Middelhoge gebouwen (Aanvraag voor de bouw ingediend vanaf 1 december 2012)
[Annex 3/1 Medium-rise buildings (Application for construction submitted after 1 December 2012)
Translated excerpt from original:

2.2.1 Aantal uitgangen. **[2.2.1 Number of Exits]**
Elk compartiment heeft minimum:
- *één uitgang indien de gebruikers zonder door het trappenhuis te moeten gaan een gevelopening, toegankelijk voor de laddervoertuigen van de brandweer kunnen bereiken of indien zulke opening niet bestaat, een terras toegankelijk voor de ladders van de brandweer kunnen bereiken. Het terras met een voldoende grote oppervlakte ter evacuatie van de gebruikers van het compartiment, heeft een vloer REI 60 en een gevelelement E 60 of een leuning die 1 m teruggetrokken is ten opzichte van de gevel.*
- *twee uitgangen indien de bezetting 50 of meer dan 50 en minder dan 500 personen bedraagt;*
- *2 + n uitgangen waarbij n het geheel getal is onmiddellijk groter dan het quotiënt van de deling door 1000 van de maximale bezetting van het compartiment, indien de bezetting 500 of meer dan 500 personen bedraagt.*

Each compartment has at minimum:
- one exit if the users are also provided with a facade opening, accessible to the ladder vehicles of the fire brigade or if no such opening exists, a balcony which the ladders of the fire brigade can reach. The balcony with a sufficiently large surface to evacuate the users of the compartment, has a floor fire rating of REI 60 and a facade element fire rating of E 60 or a handrail set back 1 m from the facade.
- two exits if the occupancy is 50 or more than 50 and less than 500 people;
- 2 + *n* exits where *n* is the integer immediately greater than the quotient of the division by 1000 of the maximum occupancy of the floor area if the occupancy is 500 or more than 500 persons.

Netherlands

Source: European Commission Database
Bouwbesluit 2012 [Draft Building Decree 2012]
Chapter 2 Technical construction requirements to ensure safety

The Netherlands permits one exit for multi-unit residential building where the floor level of the uppermost storey is no more than 12.5m above grade (5 storeys), where the floor area served by the single exit does not exceed 800m^2, with a maximum floor area per dwelling unit of 150m^2.

The Netherlands also permits one exit for multi-unit residential buildings where the floor level of the uppermost storey is not more than 6m above grade (three storeys) with no more than 6 dwelling units served by the single exit.

Note: correspondence with a Dutch architect indicates that the 5 storey limit can be exceeded through 'alternative solutions' compliance if a "safety" stair with fire and smoke control is provided.

Section 2.12 Escape routes
Article 2.105 Additionally protected escape route
Excerpt from original:

1. An escape route shall be an additionally protected escape route from the exit of the fire compartment where the escape route starts, unless such exit directly adjoins the adjacent grounds.

2. The escape route referred to in the first paragraph shall not pass along a movable structural component of another residential function than the residential function in which the escape route starts. This shall not apply to the entrance of a residential function located directly opposite the entrance of the residential function in which the escape route starts.

3. The escape route referred to in the first paragraph shall not pass over a staircase.

4. The second and third paragraphs shall not apply if the route passes through a stairwell, where the exits of the residential functions depending on such route are directly adjacent to the stairwell, and such route is exclusively used by residential functions and ancillary functions thereof, and the exit of the stairwell directly adjoins the adjacent grounds, and:

    a. no more than 6 residential functions depend on such route, and none of the floors of any staying area of such residential functions is higher than 6 m above the terrain height, or

    b. the total usable area of the residential functions depending on the route does not exceed 800 m2, none of the floors of any staying area of such residential functions is higher than 12.5 m above the terrain height, and none of such residential functions has a usable area exceeding 150 m2.

Germany

Source: *Fachkommission Bauaufsicht der Bauministerkonferenz*
[Technical committee for Construction supervision of the Assembly of construction ministers]
Muster-Hochhaus-Richtlinie, MHHR 2008 [Model high-rise building code]

Germany permits a single exit for multi-unit residential buildings up to 60m in building height. Buildings over 22m with a single exit stair require additional fire safety measures including the fire separation and pressurization of the single exit stair as safety stair (Sicherheitstreppenraum) and assembly fire ratings of at least 120 minutes.

The model high-rise building code applies to high-rise buildings over 22m in building height and is prepared by the federal "Bauministerkonferenz" (assembly of construction ministers) tasked with establishing the model code referenced by the 16 individual states within Germany.

***4 Rettungswege* [Escape paths]**
***4.2 Notwendige Treppenräume, Sicherheitstreppenräume* [Required stairs, Safety stairs]**
Translated excerpt from original:

4.2.1 In Hochhäusern mit nicht mehr als 60 m Höhe genügt an Stelle von zwei notwendigen Treppenräumen ein Sicherheitstreppenraum.
4.2.2 In Hochhäusern mit mehr als 60 m Höhe müssen alle notwendigen Treppenräume als Sicherheitstreppenräume ausgebildet sein.
4.2.1 In high-rise buildings with a building height of not more than 60 m, one safety stair can be provided instead of the required two exit stairs.
4.2.2 In high-rise buildings with a building height of more than 60 m, all required exit stairs must be safety stairs.

Additional information for buildings not more than 22m in height (Berlin, Germany):

Bauordnung für Berlin (BauO Bln) [Building Code for Berlin]
Fünfter Abschnit - Rettungswege, Öffnungen, Umwehrungen [Fifth Section – Exits, Openings, Guards]
§ 33 Erster und zweiter Rettungsweg [§ 33 First and Second Means of Egress]

1. Für Nutzungseinheiten mit mindestens einem Aufenthaltsraum wie Wohnungen, Praxen oder selbständige Betriebsstätten müssen in jedem Geschoss mindestens zwei voneinander unabhängige Rettungswege ins Freie vorhanden sein; beide Rettungswege dürfen jedoch innerhalb des Geschosses über denselben notwendigen Flur führen.
For floor areas with at least one occupancy such as dwelling units, offices or independent commercial spaces, there must be at least two independent means of egress per floor; both escape routes can however pass through the same corridor within the floor area.

2. Für Nutzungseinheiten nach Absatz 1, die nicht zu ebener Erde liegen, muss der erste Rettungsweg über eine notwendige Treppe führen. Der zweite Rettungsweg kann eine weitere notwendige Treppe oder eine mit Rettungsgeräten der Feuerwehr erreichbare Stelle der Nutzungseinheit sein. Ein zweiter Rettungsweg ist nicht erforderlich, wenn die Rettung über einen Sicherheitstreppenraum möglich ist.
For occupied floor areas per Sentence 1, that are not on the ground floor, the first means of egress must be a stair. The second means of egress can be another stair or a designated area within the occupied floor area that can be reached by the firefighting apparatus of the fire department. A second means of egress is not required if the first means of egress is a fire separated, fire safety stairwell.

3. Gebäude, deren zweiter Rettungsweg über Rettungsgeräte der Feuerwehr führt und bei denen die Oberkante der Brüstung von zum Anleitern bestimmten Fenstern oder Stellen mehr als 8 Meter über der Geländeoberfläche liegt, dürfen nur errichtet werden, wenn die Feuerwehr über die erforderlichen Rettungsgeräte wie Hubrettungsfahrzeuge verfügt. Bei Sonderbauten ist der zweite Rettungsweg über Rettungsgeräte der Feuerwehr nur zulässig, wenn keine Bedenken wegen der Personenrettung bestehen.
Buildings, for which the second egress requires the rescue apparatus of the fire department and in which the sill height of designated windows or landings is more than 8 meters above grade, may only be erected if the local fire department has aerial firefighting apparatus. In the case of special occupancy classifications, the second egress via rescue apparatus is only permitted if there are no concerns regarding occupant rescue.

Switzerland

Source: *Vereinigung Kantonaler Feuerversicherungen, VKF*
[Association of Cantonal Fire Insurance Companies]
Brandschutzrichtlinie 2017, Stand 2021 [Fire Safety Directive 2017, 2021 Version]
16-15 Flucht- und Rettungswege [16-15 Escape and Rescue Paths]

Switzerland permits a single exit for multi-unit residential buildings without a specified maximum building height with a 900m^2 maximum floor area per storey, a maximum total travel distance of 35m and a maximum occupant load of 100 per floor area. Sprinklering is typically not required. The association of cantonal fire insurance companies establishes the fire safety regulations across Switzerland.

***2.4.2 Anzahl vertikale Rettungswege* [Number of Vertical Exits]**
Translated excerpt from original:

1 *Geschosse von Bauten und Anlagen ohne ausreichende, ebenerdig ins Freie führende Fluchtwege sind wie folgt mit vertikalen Fluchtwegen zu erschliessen:*
a bei einer Geschossfläche bis 900 m2 mit mindestens einem vertikalen Fluchtweg;
b bei einer Geschossfläche von mehr als 900 m2 mit mindestens zwei vertikalen Fluchtwegen.
Storeys of buildings and facilities without sufficient escape routes leading to the outside at ground level are to be opened up with vertical escape routes as follows:
a with a floor area of up to 900 m2 with at least one vertical escape route;
b with a floor area of more than 900 m2 with at least two vertical escape routes.

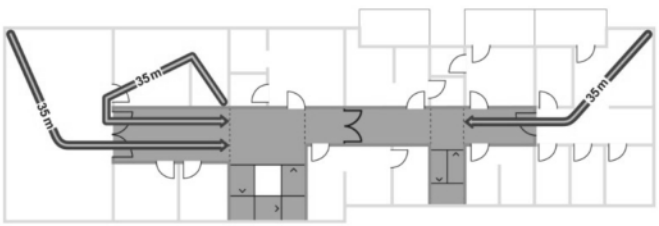
2 *Räume mit einer Personenbelegung von mehr als 100 Personen sind durch mindestens zwei vertikale Fluchtwege zu erschliessen, sofern für die Personen nicht ausreichend, ebenerdig ins Freie führende Fluchtwege zur Verfügung stehen.*
Rooms with an occupancy of more than 100 people must be opened up by at least two vertical escape routes if there are not enough escape routes leading to the outside at ground level.

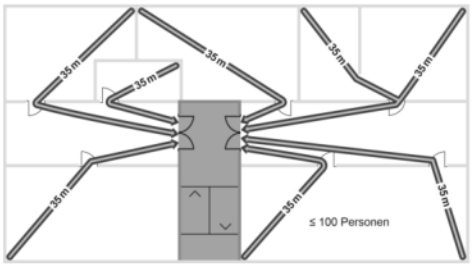
3 *In Beherbergungsbetrieben mit 3 oder mehr Geschossen sind die Bereiche, welche der horizontalen Evakuierung dienen mit mindestens je einem unabhängigen vertikalen Fluchtweg zu erschliessen.*
In accommodation establishments (hotels, hostels) with 3 or more storeys, the areas that are used for horizontal evacuation must each be opened up with at least one independent vertical escape route.

2.4.3 Gesamtlänge von Fluchtwegen [Total travel distance of exits]
Translated excerpt from original:

1 *Führen Fluchtwege nur zu einem vertikalen Fluchtweg oder einem Ausgang an einen sicheren Ort im Freien, darf deren Gesamtlänge 35 m nicht übersteigen.*
If escape routes only lead to one vertical escape route or an exit to a safe place outside, their total length must not exceed 35 m.

2 *Führen sie zu mindestens zwei voneinander entfernten vertikalen Fluchtwegen oder Ausgängen an einen sicheren Ort im Freien, darf die Gesamtlänge des Fluchtwegs 50 m nicht übersteigen.*
If they lead to at least two spaced vertical escape routes or exits to a safe outdoor location, the total length of the escape route must not exceed 50 m.





Austria

3 Gebäude mit einem Fluchtniveau von nicht mehr als 32 m
[3 Buildings with an escape level of not more than 32m]
***3.1 Fluchtwege* [3.1 Means of egress]**
Translated excerpt from original:

3.1.1 Von jeder Stelle jedes Raumes muss in höchstens 40 m Gehweglänge ein Sicherheitstreppenhaus der Stufe 1 gemäß Punkt 3.2 erreichbar sein. Bei Wohnungen wird die Gehweglänge ab der Wohnungseingangstüre gemessen. Dabei dürfen sich die Wohnungen über höchstens zwei Geschoße erstrecken.

3.1.1 A Type 1 safety stairwell in accordance with article 3.2 must be accessible within a travel distance of 40m from every point of every room. For apartments, the travel distance can be measured from the apartment entrance door. The apartments may extend over a maximum of two floors.

3.1.2 Die Fluchtwege gemäß Punkt 3.1.1 dürfen bei Wohnungen
a) auf eine Länge von höchstens 25 m gemeinsam mit dem Fluchtweg gemäß Punkt 3.1.1, oder
b) auf eine Länge von höchstens 15 m, gemessen ab der Wohnungseingangstüre, gemeinsam verlaufen (z.B. Stichgang).

3.1.2 The escape routes in Article 3.1.1 are permitted in the case of apartments
a) to have a maximum travel distance of 25 m together with the escape route according to point 3.1.1, or
b) run together over a maximum travel distance of 15 m, measured from the apartment entrance door (e.x. dead-end corridor).

4 Gebäude mit einem Fluchtniveau von mehr als 32m und nicht mehr als 90 m
[4 Buildings with an escape level exceeding 32m and not more than 90m]
***4.1 Fluchtwege* [4.1 Means of egress]**
Translated excerpt from original:

4.1.1 Von jeder Stelle jedes Raumes muss in höchstens 40 m Gehweglänge ein Sicherheitstreppenhaus der Stufe 2 gemäß Punkt 4.2 mit jeweils einem Ausgang zu einem sicheren Ort des angrenzenden Geländes im Freien erreichbar sein, wobei ohne Begrenzung der Gehweglänge zusätzlich erreichbar sein muss.
a) in jedem Geschoß mit mindestens einem Aufenthaltsraum ein unabhängiger Fluchtweg zu einem weiteren Sicherheitstreppenhaus der Stufe 2 gemäß Punkt 4.2, oder
b) ein unabhängiger Fluchtweg zu einem benachbarten Brandabschnitt mit Zugang zu einem Sicherheitstreppenhaus der Stufe 2 gemäß Punkt 4.2

4.1.1 A Type 2 safety stairwell in accordance with article 4.2, with an exit to the exterior at a safe location at grade, must be accessible from every point of every room with a travel distance of no more than 40 m, whereby the travel distance must also be accessible without limitation.
a) on each floor with at least one occupied floor area, an independent escape route to another level 2 safety stairwell in accordance with article 4.2, or
b) an independent escape route to an adjacent fire compartment with access to a type 2 safety stairwell in accordance with article 4.2.

Poland

Rozdział 4. Drogi ewakuacyjne **[Chapter 4. Escape routes]**
Translated excerpt from original:

§ 246.

1. *W budynku wysokim (W) i wysokościowym (WW), z zastrzeżeniem ust. 4, należy zapewnić możliwość ewakuacji do co najmniej dwóch klatek schodowych, które powinny być obudowane i oddzielone od poziomych dróg komunikacyjnych lub ewakuacyjnych oraz pomieszczeń, przedsionkiem przeciwpożarowym, odpowiadającym wymaganiom określonym w § 232.*
   In the high-rise building (L) and high-rise building (WW), subject to 4, you should provide the possibility of evacuation to at least two staircases, which should be enclosed and separated from the horizontal communication or evacuation routes and rooms, a vestibule, corresponding to the requirements set out in § 232.
2. *Klatki schodowe i przedsionki przeciwpożarowe, stanowiące drogę ewakuacyjną w budynku wysokim (W) dla stref pożarowych innych niż ZL IV i PM oraz w budynku wysokościowym (WW), powinny być wyposażone w urządzenia zapobiegające ich zadymieniu.*
2. Stairways and fire halls, constituting an escape route in a high building (W) for fire zones other than ZL IV and PM, and in a high-rise building (WW), should be equipped with devices preventing their smoke.
3. *Klatki schodowe i przedsionki przeciwpożarowe, stanowiące drogę ewakuacyjną w budynku wysokim (W) dla strefy pożarowej PM, powinny być wyposażone w urządzenia zapobiegające zadymieniu lub samoczynne urządzenia oddymiające uruchamiane za pomocą systemu wykrywania dymu.*
3. Stairways and fire lobbies, constituting an escape route in a high building (W) for the PM fire zone, should be equipped with smoke prevention devices or automatic smoke exhaust devices activated by a smoke detection system.
4. *Prowadzenie ewakuacji tylko do jednej klatki schodowej dopuszcza się w przypadku:*
   1) budynku wysokiego (W) niezawierającego strefy pożarowej ZL II, jeżeli powierzchnia wewnętrzna kondygnacji nie przekracza 750m2;
   2) strefy pożarowej ZL IV, jeżeli łączna powierzchnia wewnętrzna mieszkań na kondygnacji lub jej części nie przekracza 750m2.
4. Evacuation to only one staircase is allowed in the case of:
   1) a high-rise building (W) not containing the ZL II fire zone, if the internal floor area does not exceed 750m2;
   2) the ZL IV zone (residential), if the total internal area of flats on the storey or its parts does not exceed 750m2.
5. *W budynku wysokim (W) i wysokościowym (WW) dopuszcza się wykonywanie klatek schodowych, stanowiących drogę ewakuacyjną wyłącznie dla stref pożarowych ZL IV, bez przedsionków oddzielających je od poziomych dróg komunikacji ogólnej, jeżeli:*
   1) każde mieszkanie lub pomieszczenie jest oddzielone od poziomej drogi komunikacji ogólnej drzwiami o klasie odporności ogniowej co najmniej E I 30;
   2) klatki schodowe są zamykane drzwiami dymoszczelnymi;
   3) klatki schodowe są wyposażone w urządzenia zapobiegające zadymieniu lub w samoczynne urządzenia oddymiające uruchamiane za pomocą systemu wykrywania dymu.
5. In the high (W) and high-altitude (WW) building, it is allowed to build staircases, constituting an escape route only for ZL IV fire zones, without vestibules separating them from horizontal general communication routes, if:
   1) each apartment or room is separated from the horizontal road of general communication by a door with a fire resistance class of at least EI 30;
   2) staircases are closed with smoke-tight doors;
   3) staircases are equipped with devices to prevent smoke or automatic smoke exhaust devices activated by the smoke detection system.

The building code distinguishes buildings into groups based on height (see § 8):

1) low (N) - up to and including 12 m above ground level or residential up to 4 storeys above the ground level inclusive;
2) medium-high (SW) - more than 12 m to 25 m above the ground level inclusive or residential with a height of more than 4 to 9 above-ground storeys, inclusive;
3) high (W) - over 25 m to 55 m above the ground level inclusive or residential with a height of over 9 to 18 above-ground storeys inclusive;
4) altitude (WW) – more than 55 m above the ground level.

Spain

Source: *Código Técnico de la Edificación* [Technical Building Code]
Documento Básico SI - Seguridad en caso de Incendio (2019)
[Basic Document SI – Safety in case of fire (2019)]

Spain permits a single exit for multi-unit residential buildings up to 28m in building height measured as the floor level of the uppermost storey, where the total occupancy load of the building is not more than 500 people. The exit stair must be protected (fire separated) for residential buildings over 14m in building height.

SI 3 ***Evacuación de ocupantes*** **[Evacuation of occupants]**
3 ***Número de salidas y longitud de los recorridos de evacuación***
3 **Number of exits and length of evacuation routes**
Translated excerpt from original:

Floors or rooms that have a single floor exit or room exit, respectively
- 500 people in the entire building, in the case of exiting from a residential building

The descending evacuation height of the considered floor does not exceed 28 m, except in Public Residential use, (hotels, hostels etc.) in which case it is, at most, the second floor above the building exit (2), or 10 m when the evacuation is ascending.

(3) The exiting floor of the building must have more than one exit:
- in the case of building of residential housing occupancy, where the total occupancy of the building exceeds 500 people

Tabla 3.1. Número de *salidas de planta* y longitud de los *recorridos de evacuación*(1)

Número de salidas existentes	Condiciones
Plantas o *recintos* que disponen de una única *salida de planta* o salida de *recinto* respectivamente	No se admite en *uso Hospitalario, en* las plantas de hospitalización o de tratamiento intensivo, así como en salas o unidades para pacientes hospitalizados cuya superficie construida exceda de 90 m^2.
	La ocupación no excede de 100 personas, excepto en los casos que se indican a continuación: - 500 personas en el conjunto del edificio, en el caso de *salida de un edificio* de viviendas; - 50 personas en zonas desde las que la evacuación hasta una *salida de planta* deba salvar una altura mayor que 2 m en sentido ascendente; - 50 alumnos en escuelas infantiles, o de enseñanza primaria o secundaria.
	La longitud de los *recorridos de evacuación* hasta una *salida de planta* no excede de 25 m, excepto en los casos que se indican a continuación: - 35 m en *uso Aparcamiento;* - 50 m si se trata de una planta, incluso de *uso Aparcamiento*, que tiene una salida directa al *espacio exterior seguro* y la ocupación no excede de 25 personas, o bien de un espacio al aire libre en el que el riesgo de incendio sea irrelevante, por ejemplo, una cubierta de edificio, una terraza, etc.
	La *altura de evacuación* descendente de la planta considerada no excede de 28 m, excepto en *uso Residencial Público*, en cuyo caso es, como máximo, la segunda planta por encima de la de *salida de edificio*(2), o de 10 m cuando la evacuación sea ascendente.

(1) La longitud de los *recorridos de evacuación* que se indican se puede aumentar un 25% cuando se trate de *sectores de incendio* protegidos con una instalación automática de extinción.
(2) Si el establecimiento no excede de 20 plazas de alojamiento y está dotado de un sistema de detección y alarma, puede aplicarse el límite general de 28 m de *altura de evacuación*.
(3) La planta de *salida del edificio* debe contar con más de una *salida:*
- en el caso de edificios de U*so Residencial Vivienda,* cuando la ocupación total del edificio exceda de 500 personas.
- en el resto de los usos, cuando le sea exigible considerando únicamente la ocupación de dicha planta, o bien cuando el edificio esté obligado a tener más de una escalera para la evacuación descendente o más de una para evacuación ascendente.

4.16 Provision of escape routes
Excerpt from original:

4.16 Provision of escape routes

NOTE Annex D provides guidance on the application of this subclause.

4.16.1 One or more escape routes shall be provided in every building.

4.16.2 Where the travel distance, measured to the nearest escape door, is not more than 45 m, subject to the provisions of 4.16.6, 4.16.7, such escape route shall comply with the following requirements:

a) In a single-storey building, in a dwelling unit that has an escape door at ground level, or from a dwelling unit at first floor level, where such dwelling unit is served by an individual stairway to ground level, such escape route shall not be required to include any emergency route and, in the case of a dwelling unit, such escape route shall not be required to comply with the requirements of 4.17 to 4.30, inclusive.

b) In a single-storey or double-storey building with a population of less than 25 persons on either floor, the travel distance along a common path of travel shall not exceed 35 m. A secondary means of escape shall be provided where the common path of travel exceeds 35 m.

c) In a building of two or three storeys in height, such escape route shall not be required to include any emergency route, provided that a building

1) of two storeys in height where the population of the upper storey is more than 25 persons, or

2) of three storeys in height;

shall be provided with not less than two such escape routes.

d) Any building of a height of more than three storeys shall be provided with not less than two escape routes and

1) an emergency route shall form part of each such escape route, and

2) such emergency route shall include a stairway that forms part of the escape route and also that part of the escape route from the lower end of the stairway to any escape door.

United Arab Emirates

12. Single Exit Staircase Requirements

Excerpt from original:

12.1.3 The interlocking staircase requirement can be replaced with a single exit staircase (having one entrance into exit staircase shaft) if the number of units per floor in kept to a maximum of four dwelling units. See Figure 3.52 and Figure 3.53 for illustrations.

12. Single Exit Staircase Requirements

12.1 Apartment Building

12.1.1 Any non-sprinklered dwelling unit shall be permitted to have a single exit, provided that one of the following criteria is met:

i. The dwelling unit has an exit door opening directly to the street or yard at ground level.

ii. T he dwelling unit has direct access to an outside stair and serves a maximum of two units, both of which are located on the same floor.

iii. The dwelling unit has direct access to an interior stair that serves only that unit and is separated from all other portions of the building by fire barriers having a minimum 1-hour fire resistance rating, with no opening therein.

iv. Travel distance from the anywhere in the unit shall not exceed 23m to the final discharge. See Figure 3.51.

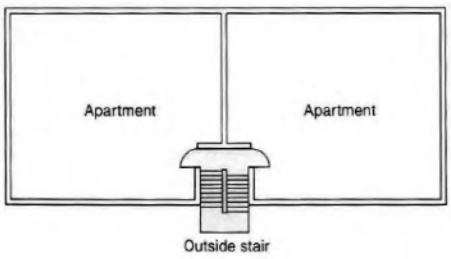

Figure 3.51: Single Exit Staircase for 2 unit apartment building

12.1.2 Any building that is protected throughout by an approved, supervised automatic residential sprinkler system having maximum building height of 15m (Low Rise) and has not more than six dwelling units per story can be permitted to have a single interlocking exit staircase (scissor staircase), provided that all of the following conditions apply:

i. The stairway is separated from the rest of the building by barriers having not less than a 2-hour fire resistance rating, with self-closing 1½-hour fire door assemblies.

Copyright © 2011, General Headquarters of Civil Defense, Ministry of Interior, United Arab Emirates

ii. The stairway does not serve more than one-half story below the level of exit discharge.

iii. All corridors serving as access to exits have a minimum 1-hour fire resistance rating with 1 hour fire doors assemblies.

iv. There is not more than 14m from the most remote point of unit to unit exit door and not more than 9m of travel distance from the entrance door of any dwelling unit to the exit staircase.

v. One hour fire-rated horizontal and vertical separation between dwelling units is provided.

vi. Smoke check doors shall be provided between the two entrances into the scissor staircase for internal corridor arrangement.

vii. Maximum total area per floor is 500m^2.

12.1.3 The interlocking staircase requirement can be replaced with a single exit staircase (having one entrance into exit staircase shaft) if the number of units per floor in kept to a maximum of four dwelling units. See Figure 3.52 and Figure 3.53 for illustrations.

12.1.4 External exit passageways, smoke proof enclosures and external exit staircases can also be adopted for the egress arrangement of residential apartments with provision of single exit staircase. See Figures 3.54 to 3.60 for examples of scissors and single exit staircase arrangement for residential apartments limited to the conditions in clauses 12.1.1, 12.1.2 and 12.1.3.

Part 4 Fire and Life Safety
4.6.2 Number of Exits
Excerpt from original:

4.6 Number of Exits

4.6.1 *General*

The general requirements of number of exits shall supplement the requirement of different occupancies in **6.1** to **6.9**.

4.6.2 All buildings, which are 15 m in height or above, and all buildings used as educational, assembly, institutional, industrial, storage, and hazardous occupancies and mixed occupancies with any of the aforesaid occupancies, having area more than 500 m^2 on each floor shall have a minimum of two staircases. They shall be of enclosed type; at least one of them shall be on external walls of buildings and shall open directly to the exterior, interior open space or to an open place of safety. Further, the provision or otherwise of alternative staircases shall be subject to the requirements of travel distance being complied with.

4.7 Doorways

4.7.1 Every exit doorway shall open into an enclosed stairway or a horizontal exit of a corridor or passageway providing continuous and protected means of egress.

China

Source: National Standard of the People's Republic of China
GB 50368-2005, Residential Building Code

China permits a single exit for multi-unit residential buildings up to 18 storeys in building height with a maximum floor area of 650m^2 per storey. A maximum travel distance of 15m from the dwelling unit door to the exit applies for buildings less than 10 storeys in height, which is shortened to a maximum travel distance of 10m for buildings between 10 and 18 storeys in height.

Available online for purchase only.
Description and translation provided in correspondence with a local architect.

Section 9
Translated excerpt from original:

9.5.1 Residential buildings shall be equipped with safety exits according to factors such as the fire resistance rating of the building, the number of floors, the building area, and the evacuation distance, and shall meet the following requirements:

1. For residential buildings with less than 10 floors, where the floor area of any storey of residential occupancy is greater than 650m2, or the distance from the door of any suite to the safety exit is greater than 15m, the number of exits on each floor of the residential building shall not be less than 2.

2. For residential buildings with 10 floors or more, but no more than 18 floors, where the floor area of any storey of the residential occupancy is greater than 650m2, or the distance from the door of any suite to the safety exit is greater than 10m, there should be no less than 2 safe exits.

3. For residential buildings with 19 floors or more, the number of safety exits on each floor of residential occupancy shall be not less than 2.

9．5．1 住宅建筑应根据建筑的耐火等级、建筑层数、建筑面积、疏散距离等因素设置安全出口，并应符合下列要求：

1 10层以下的住宅建筑，当住宅单元任一层的建筑面积大于650m2，或任一套房的户门至安全出口的距离大于15m时，该住宅单元每层的安全出口不应少于2个。

2 10层及10层以上但不超过18层的住宅建筑，当住宅单元任一层的建筑面积大于650m2，或任一套房的户门至安全出口的距离大于10m时，该住宅单元每层的安全出口不应少于2个。

3 19层及19层以上的住宅建筑，每个住宅单元每层的安全出口不应少于2个。

South Korea

Source: 건축법 시행령 - 제34조(직통계단의 설치) (2022)
[Building Law Enforcement Decree – Article 34 (Installation of Direct Stairs)] (2022)

South Korea does not set a maximum building height for multi-unit residential buildings with a single exit stair. The code limits single exit stair conditions only based on horizontal limits, including a maximum inhabited floor area of 300m^2 per storey and no more than 3 dwelling units per storey and travel distance limits. Article 35 requires the single exit stair to be a 'firefighting' stair (safe evacuation stair) for apartment buildings of 16 or more storeys.

Available online: https://www.law.go.kr/LSW/lsInfoP.do?efYd=20211102&lsiSeq=236629#0000
Description and translation provided in correspondence with a local architect.

Article 34 (Installation of Direct Stairs)
Translated excerpt from original:

In accordance with the standards prescribed by Ordinance of the Ministry of Land, Infrastructure and Transport, in a building whose use and scale for floors other than the evacuation floor fall under any of the following subparagraphs pursuant to Article 49 (1) of the Act, two or more direct stairs leading to the evacuation floor or the ground shall be installed:

3. A floor used for the purpose of an officetel (live/work dwelling unit) in an apartment building (excluding those with less than 4 households per floor) or business facilities, and the total floor area of the living room used for that purpose on that floor is 300 square meters or more;

□ 제34조(직통계단의 설치) ① 건축물의 피난층(직접 지상으로 통하는 출입구가 있는 층 및 제3항과 제4항에 따른 피난안전구역을 말한다. 이하 같다) 외의 층에서는 피난층 또는 지상으로 통하는 직통계단(경사로를 포함한다. 이하 같다)을 거실의 각 부분으로부터 계단(거실로부터 가장 가까운 거리에 있는 1개소의 계단을 말한다)에 이르는 보행거리가 30미터 이하가 되도록 설치해야 한다. 다만, 건축물(지하층에 설치하는 것으로서 바닥면적의 합계가 300제곱미터 이상인 공연장·집회장·관람장 및 전시장은 제외한다)의 주요구조부가 내화구조 또는 불연재료로 된 건축물은 그 보행거리가 50미터(층수가 16층 이상인 공동주택의 경우 16층 이상인 층에 대해서는 40미터) 이하가 되도록 설치할 수 있으며, 자동화 생산시설에 스프링클러 등 자동식 소화설비를 설치한 공장으로서 국토교통부령으로 정하는 공장인 경우에는 그 보행거리가 75미터(무인화 공장인 경우에는 100미터) 이하가 되도록 설치할 수 있다. 〈개정 2009. 7. 16., 2010. 2. 18., 2011. 12. 30., 2013. 3. 23., 2019. 8. 6., 2020. 10. 8.〉

② 법 제49조제1항에 따라 피난층 외의 층이 다음 각 호의 어느 하나에 해당하는 용도 및 규모의 건축물에는 국토교통부령으로 정하는 기준에 따라 피난층 또는 지상으로 통하는 직통계단을 2개소 이상 설치하여야 한다. 〈개정 2009. 7. 16., 2013. 3. 23., 2014. 3. 24., 2015. 9. 22., 2017. 2. 3.〉

1. 제2종 근린생활시설 중 공연장·종교집회장, 문화 및 집회시설(전시장 및 동·식물원은 제외한다), 종교시설, 위락시설 중 주점영업 또는 장례시설의 용도로 쓰는 층으로서 그 층에서 해당 용도로 쓰는 바닥면적의 합계가 200제곱미터(제2종 근린생활시설 중 공연장·종교집회장은 각각 300제곱미터) 이상인 것
2. 단독주택 중 다중주택·다가구주택, 제1종 근린생활시설 중 정신과의원(입원실이 있는 경우로 한정한다), 제2종 근린생활시설 중 인터넷컴퓨터게임시설제공업소(해당 용도로 쓰는 바닥면적의 합계가 300제곱미터 이상인 경우만 해당한다)·학원·독서실, 판매시설, 운수시설(여객용 시설만 해당한다), 의료시설(입원실이 없는 치과병원은 제외한다), 교육연구시설 중 학원, 노유자시설 중 아동 관련 시설·노인복지시설·장애인 거주시설(「장애인복지법」 제58조제1항제1호에 따른 장애인 거주시설 중 국토교통부령으로 정하는 시설을 말한다. 이하 같다) 및 「장애인복지법」 제58조제1항제4호에 따른 장애인 의료재활시설(이하 "장애인 의료재활시설"이라 한다), 수련시설 중 유스호스텔 또는 숙박시설의 용도로 쓰는 3층 이상의 층으로서 그 층의 해당 용도로 쓰는 거실의 바닥면적의 합계가 200제곱미터 이상인 것
3. 공동주택(층당 4세대 이하인 것은 제외한다) 또는 업무시설 중 오피스텔의 용도로 쓰는 층으로서 그 층의 해당 용도로 쓰는 거실의 바닥면적의 합계가 300제곱미터 이상인 것
4. 제1호부터 제3호까지의 용도로 쓰지 아니하는 3층 이상의 층으로서 그 층 거실의 바닥면적의 합계가 400제곱미터 이상인 것
5. 지하층으로서 그 층 거실의 바닥면적의 합계가 200제곱미터 이상인 것

③ 초고층 건축물에는 피난층 또는 지상으로 통하는 직통계단과 직접 연결되는 피난안전구역(건축물의 피난·안전을 위하여 건축물 중간층에 설치하는 대피공간을 말한다. 이하 같다)을 지상층으로부터 최대 30개 층마다 1개소 이상 설치하여야 한다. 〈신설 2009. 7. 16., 2011. 12. 30.〉

④ 준초고층 건축물에는 피난층 또는 지상으로 통하는 직통계단과 직접 연결되는 피난안전구역을 해당 건축물 전체 층수의 2분의 1에 해당하는 층으로부터 상하 5개층 이내에 1개소 이상 설치하여야 한다. 다만, 국토교통부령으로 정하는 기준에 따라 피난층 또는 지상으로 통하는 직통계단을 설치하는 경우에는 그러하지 아니하다. 〈신설 2011. 12. 30., 2013. 3. 23.〉

⑤ 제3항 및 제4항에 따른 피난안전구역의 규모와 설치기준은 국토교통부령으로 정한다. 〈신설 2009. 7. 16., 2011. 12. 30., 2013. 3. 23.〉

[전문개정 2008. 10. 29.]

Japan

Source: 建築申請・25-7_階段
[Building Application Memo 2020]

Japan permits a single exit for multi-unit residential buildings of up to 5 storeys in building height with a maximum floor area per storey of 200m2 for non-combustible construction and 100m2 for other/combustible construction. This applies equally for apartment buildings as well as hotels, boarding houses, dormitories and ryokans (traditional Japanese inns).

Description and translation provided in correspondence with a local architect.

Installation of direct stairs (where 2 or more are required)
Translated excerpt from original:

1 Satisfy the following conditions:
(1) Must be on the 5th floor or lower
(2) Total floor area of the living room on that floor is 100m2 (200m2)
(3) An exterior balcony or passageway is provided for evacuation, or a safe evacuation staircase.

Buildings that require the installation of two or more direct stairs:

Category 5. Hotels, Inns, Communal residences, boarding houses, dormitories	For non-combustible construction >200m2	For other construction >100m2

Code Change Request

Title	Part 3 – Single egress for multi-unit residential buildings up to 6 storeys	
Description	This request for change proposes additional sentences under NBC Div.B Section 3.4.2.1 to introduce single exit multi-unit residential buildings of up to six storeys, requiring additional life safety measures and placing limits on the occupant load and number of dwelling units per storey served by the single exit.	
Proponent	Conrad Speckert *LGA Architectural Partners*	David Hine *David Hine Engineering Inc.*
Submitted	2014-04-18	
Code Reference(s)	NBC Div. B – 3.4.2.1	
Standing Committee(s)	Use and Egress, Fire Protection	
Related CCR(s)	Part 9 – Single egress for multi-unit residential buildings up to 3 storeys	

Problem:

What is the problem? Why should the existing provision be revised, or if requesting an addition to the Code, what is missing?

The requirement for two means of egress in multi-unit residential buildings exceeding two storeys may be an outdated condition of pre-modern fire safety practices in combustible construction. The National Building Code of Canada is inconsistent with (and does not allow for the same design flexibility as) building codes in other jurisdictions and fails to recognize that a second egress may be unnecessary for mid-rise housing typologies where other life safety measures are provided.

By prohibiting single egress designs at this scale, the National Building Code limits the feasibility of buildings that are between low-rise single-family homes and high-rise apartment buildings. Making it difficult to build mid-rise housing prevents urban areas from developing more sustainable growth and increasing the balanced supply of housing with an expanded range of affordable options.

This code change request recognizes that the requirement for two means of egress is appropriate for larger buildings and non-residential occupancies. However, requiring a second egress is a prohibitive burden for smaller multi-unit residential projects, whereas one exit is permitted in many other jurisdictions:

- The United States model building allows for single exits in R-2 occupancies up to 3 storeys above grade with a maximum of 4 dwelling units per storey.
- The City of Seattle (SBC 2018: 1006.3.3.7 Single Exits) allows single exits in R-2 occupancies up to 6 storeys above grade with a maximum of 4 dwelling units per storey. New York City is similar with a maximum floor area per storey (NYC Building Code 2014: 1021.2.5 Single Exits).
- Australia (NCC 2015 Vol. 1: D1.2) requires two exits for residential buildings of more than 25m in height. New Zealand (C/AS2 - 3.13.1.) requires two exits for buildings above 25m in height if the building is sprinklered, and above 10m in height if the building is not sprinklered.
- The United Kingdom (Building Regulations 2010 – Fire Safety: Approved Document B) does not establish a maximum building height for single exit residential buildings, only a maximum occupant load of 60 people per storey and a maximum travel distance. In response to the Grenfell Tower inquiry, the Royal Institute of British Architects (RIBA) and London Fire Brigade have submitted a request for the further study of high-rise residential buildings with a single exit stair.
- Note: the supporting documentation to this code change request includes a jurisdictional scan of several building codes for the maximum allowable building height with a single egress.

This code change request falls within several of the CCBFC's strategic technical and policy priorities as a select fire and life safety topic and as a targeted topic. Accessibility is also addressed in terms of egressibility, the proposed life safety measures (particularly pressurization and better closures) improve the protection and fire safety for disabled occupants remaining in their suite during an emergency.

Single egress also indirectly addresses the priorities of climate change mitigation and adaptation, and energy-efficiency, given the improved building form factor, design flexibility for passive ventilation and daylighting, and the sustainable urban development benefit of single stair buildings. This CCR also relates to the priority of alterations to existing buildings in future code editions, for instance, as an opportunity for a five-storey apartment building with additional structural capacity to construct a sixth-storey addition provided the limitations and life safety measures of the proposed code change are met.

Requested change/addition:

What is the proposed solution and how does it address the problem?

Part 3 of the National Building Code should allow for a single means of egress in multi-unit residential buildings of up to 6 storeys above grade. See proposed life safety measures below and code wording on next page.

A related CCR will be submitted for Part 9.

The proposed code change includes reasonable limitations and additional life safety measures based on the acceptable solutions in the NBC, a review of building codes in other jurisdictions, as well as the attached reference literature and studies of fire safety in residential buildings:

- a total occupant load of 60 people on any storey served by the single exit, similar to 3.4.1.2.(2)
- no more than 4 dwelling units per storey, based on Seattle SBC 2018, 1006.3.3.7 Single Exits
- a maximum floor area of 150m^2 per dwelling unit, based on Table 3.4.2.1.-B
- Note: sprinklering is not a proposed measure for the Part 3 CCR, given the code already requires such buildings to be sprinklered throughout (NFPA 13-R up to 4 storeys, NFPA-13 exceeding 4 storeys, as required by 3.2.5.12.)
- requiring positive pressurization of the exit stair, based on the requirement for smoke control measures in high-rise buildings above 18m in building height (3.2.6.2. Limits to Smoke Movement and 3.2.6.6. Venting to Aid Firefighting) and based on the pressurization requirements of the Seattle SBC 2018, 1006.3.3.7.
- increased minimum fire-protection rating of dwelling unit entrance door closures from a 20 min rating to 45 min rating, similar to the closure ratings required by several European jurisdictions
- requiring a fire alarm system without exception, and requiring automatic monitoring of the fire alarm system in conformance with 3.2.4.7. Signals to Fire Department.

Additional life safety measures that may be appropriate to add:

- requiring sprinklering of balconies (based on Calder and Senez's 2016 study of "The Key Modes of Fire Spread in Wood-Framed Apartment Buildings, see attachments).

Proposed Wording in Part 3 – New Sentence in Section 3.4.2.1.

2025 National Building Code of Canada, Volume 1, Division B, Part 3

3.4.2. Number and Location of Exits from Floor Areas

3.4.2.1 Minimum Number of Exits

1) Except as permitted by Sentences (2) to (5), every *floor area* intended for *occupancy* shall be served by at least 2 *exits*.

2) A *floor area* in a *building* not more than 2 *storeys* in *building height*, is permitted to be served by one *exit* provided the total *occupant load* served by the *exit* is not more than 60, and

a) in a *floor area* that is not *sprinklered* throughout, the *floor area* and the travel distance are not more than the values in Table 3.4.2.1.-A, or

b) in a *floor area* that is *sprinklered* throughout

i) the travel distance is not more than 25 m, and

ii) the *floor area* is not more than the value in Table 3.4.2.1.-B.

3) Except as permitted by Sentence (4), if Sentence (2) permits a single *exit* from a *floor area* classified as Group B or Group C *occupancy*, the *exit* shall be an exterior doorway not more than 1.5 m above adjacent ground level.

4) The requirements of Sentences (1) and (2) are permitted to be waived for *dwelling units* that have an *access to exit* conforming to Sentences 3.3.4.4.(1) to (4).

5) A *floor area* classified as Group C *occupancy* in a *building* not more than 6 *storeys* in *building height* is permitted to be served by a single *exit* provided the total *occupant load* on any storey served by the *exit* is not more than 60, and

a) there shall be no more than four *dwelling units* on any storey *served* by the *exit* and the *floor area* of each *dwelling unit* does not exceed 150m^2,

b) the *building* is sprinklered throughout,

c) unless an exterior stairway is provided, an interior stairway including any related *exit* passageway or *public corridor* shall be pressurized and designed in accordance with Article 3.2.6.2 to limit the danger to occupants and firefighters from exposure to smoke in a building fire,

d) openings in required *fire separations* shall be protected with a *closure* with a *fire-protection rating* of not less than 45 min and shall be installed in conformance with Chapters 2 to 14 of NFPA 80 “Standard for Fire Doors and Other Opening Protectives”,

e) a fire alarm system is provided without exception (See 3.2.4.1. Determination of Requirement for a Fire Alarm System), and the fire alarm system is designed to notify the fire department that an alarm signal has been initiated (See 3.2.4.7. Signals to Fire Department),

f) the *floor area* classified as Group C *occupancy* served by a single *exit* is not intended for use as a retirement home.

6) *Exits* are not required directly from rooftop enclosures that are provided with *access to exits* in conformance with Sentences 3.3.1.3.(5) and (6).

References to Sentence 3.4.2.1.(5) are to be added as Exceptions in the following conflicting Sentences:

3.3.1.3. Means of Egress

9) Except as permitted by this Section and by Sentence 3.4.2.1.(2) and (5), at the point where a doorway referred to in Sentence (8) opens onto a public corridor or exterior passageway, it shall be possible to go in opposite directions to each of 2 separate exits.

3.3.4.4. Egress from Dwelling Units

6) Except as provided in Sentence 3.4.2.1.(5), if a dwelling unit has a second and separate means of egress, one means of egress from a dwelling unit is permitted to pass through

a) an interior corridor served by a single exit,
b) an exterior balcony served by a single exit stairway, or
c) an exterior passageway served by a single exit stairway.

Objective(s):

Which of the stated objectives and functional statements of the Code will the proposed solution assist in achieving?

The Functional Statement and Objective attributions to existing sentences may not have to be changed. The attributions to the new Article being introduced may be made up of the following selection, which is consistent with the code provisions the CCR complements:

2015 NBC Div. A Part 2 - Objective Statements

OS Safety
An objective of this Code is to limit the probability that, as a result of the design, construction or demolition of the building, a person in or adjacent to the building will be exposed to an unacceptable risk of injury.

OS1 - Fire Safety
An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in or adjacent to the building will be exposed to an unacceptable risk of injury due to fire. The risks of injury due to fire addressed in this Code are those caused by—

OS1.2 - fire or explosion impacting areas beyond its point of origin

OS1.5 - persons being delayed in or impeded from moving to a safe place during a fire emergency

OS3 - Safety in Use
An objective of this Code is to limit the probability that, as a result of the design or construction of the building, a person in or adjacent to the building will be exposed to an unacceptable risk of injury due to hazards. The risks of injury due to hazards addressed in this Code are those caused by—

OS3.7 - persons being delayed in or impeded from moving to a safe place during an emergency

2015 NBC Div. A Part 3 - Functional Statements

F02 To limit the severity and effects of fire or explosions.

F03 To retard the effects of fire on areas beyond its point of origin.

F05 To retard the effects of fire on emergency egress facilities.

F06 To retard the effects of fire on facilities for notification, suppression and emergency response.

F10 To facilitate the timely movement of persons to a safe place in an emergency.

F11 To notify persons, in a timely manner, of the need to take action in an emergency.

F12 To facilitate emergency response.

F13 To notify emergency responders, in a timely manner, of the need to take action in an emergency.

Impact Analysis:

What are the cost/benefit implications? Will the change entail any added costs? Will it provide benefits that are measurable?

The benefits in efficiency, cost and improved livability for a single egress building significantly outweigh the cost of the additional life safety measures. The proposed code change offers the measurable benefit of increased floor area efficiency and reduced hard construction costs for mid-rise housing types, as well as making such buildings feasible on smaller properties.

The proposed code change also has additional benefits for the environmental, spatial, and social quality of multi-unit residential buildings, such benefits include:

- making it easier for dwelling units to receive natural daylight from both sides as “through units”,
- allowing for cross-ventilated dwelling units rather than the deep, single-orientation layouts typical of double-loaded corridor buildings requiring two means of egress,
- balancing the exposure of each dwelling unit to urban and traffic noise, such that bedrooms can be placed on the quiet side and living areas along the street facing side of the building,
- making it easier to design larger, family-oriented dwelling units with three to four bedrooms, and
- improving the sense of community and social interaction in an apartment building by decreasing the number of dwelling units sharing an exit.

The proposed code change does not result in additional costs compared to buildings adhering to the existing acceptable solutions requirement for two means of egress. The proposed code change enables the alternative of a single stair design, with limitations on the building size and requirements for additional life safety measures to compensate for providing one exit. This additional design flexibility may be cost neutral or, in some cases, lead to cost savings. It may also bring buildings back into feasibility on smaller sites where the lot size does not accommodate a design complying with the second egress requirement.

Enforcement Implications:

What are the enforcement implications? Can the requested change be enforced by the infrastructure available to enforce this Code? Will its enforcement require an increase in resources?

The proposed code change can be enforced within the current enforcement framework of design review and permit approvals, as well as the administrative requirements for evacuation plans.

Additional Comments:

This code change request is being submitted in response to the official correspondence on March 31, 2022, from the Ontario MMAH (Ministry of Municipal Affairs and Housing) requesting the CCBFC to prioritize a code change to allow for “a single means of egress in some residential buildings as a Building Code change that could enable the construction of more gentle density and multi-unit housing.”

In January 2022, several architects, planners and developers co-signed a letter sent to the Ontario Housing Affordability Task Force recommending a building code change to “permit residential buildings of up to six storeys with a single exit stair” with additional life safety measures.

This code change request has been prepared by Conrad Speckert, an architectural designer at LGA Architectural Partners in Toronto, ON with the support of building code expert David Hine of David Hine Engineering. The code change request and related research is funded by the DIALOG Architects 2021 Michael Evamy Scholarship and a CMHC-SSHRC Collaborative Housing Research Network, Balanced Supply of Housing Node grant under the supervision of Prof. Nik Luka at McGill University.

The proponent is willing to provide a presentation and is willing to provide additional supporting documentation and information.

We have been tracking the BC Hydro commitments on this file through the Energy Step Code Council. Happy to share the details if anyone is interested.

As noted in the letter, we are working on the development of a best practices guide for local governments that would advise them to consult with BC Hydro as they plan for voluntary adoption of zero carbon (e.g. all electric) requirements. Victoria and Saanich have recently adopted zero carbon requirements, although I'm not sure what kind of engagement they may have had with BC Hydro.

Hello Minister Kahlon,

In previous discussions we have raised some of our concerns regarding BC Hydro's distribution capacity delaying new housing. Further to those discussions, we've written to Minister Osborne to seek a meeting and outline our concerns. We've attached that letter for your reference.

Regards,
Cassandra

FYI: CleanBC Building Code commitments for new buildings

From: May, Zachary HOUS:EX
To: Sawchuk, Bindi HOUS:EX <Bindi.Sawchuk@gov.bc.ca>, Clay GCPE:EX Suddaby (Clay.Suddaby@gov.bc.ca) <Clay.Suddaby@gov.bc.ca>
Sent: April 28, 2023 4:08:48 PM PDT

Hi Bindi and Clay,

The ENV GCPE team is planning on putting out a news release on Monday related to the new Zero Carbon Step Code requirements in the BC Building Code.

This will likely get picked up and shared widely within the sustainability community. This is the most ambitious and detailed zero carbon regulation for new buildings in Canada (and arguably North America), and builds on BC's internationally recognized leadership with the BC Energy Step Code.

This news may also receive some less favourable responses from those who see new regulations as a potential barrier to new housing, especially coming less than a month after the release of the new housing strategy. This does relate to some of the recent correspondence from UDI related to BC Hydro's capacity to support new developments.

No action needed. Please reach out if need any further info.

Best,
Zachary D. May, MBA

Hi Hugo,
Travis forwarded me your email, we (ENV GCPE) will be writing a short news release to go out to announce the upcoming May 1st CleanBC Building Code commitments for new buildings.

Do you have any Q&As prepared on the ministry side that you could share that would better help me draft the NR?
I will also send the draft your way in advance for review as well.

Thanks,
Sonia

Subject: FW: CleanBC Building Code commitments for new buildings

Hi
Here's all that I had shared with me, as well as Hugo Wong as a contact.
I think Hugo is quite on top of it.
Happy to help track down anything specific you can think of.

Subject: CleanBC Building Code commitments for new buildings

Hello Jeremy and Les,

I wanted to let you know that Minister Kahlon has signed the regulation to update the BC Building Code with a 20% improvement in energy efficiency and a voluntary carbon pollution standard for new buildings. The regulation will be official when published in the Gazette next Thursday, and has an effective date of May 1, 2023. We are working with GCPE to prepare Q&As for the Minister and email communication to stakeholders.

If you have any specific questions, please reach out to Zachary May.

Have a great weekend!

Bindi Sawchuk, CPA (she/her)
Assistant Deputy Minister| Housing and Land Use Policy |Ministry of Housing

Hi Everyone,

It was great seeing you all this afternoon. Further to our conversation, I have attached a our current attendee list for your reference on the participant demographics and a copy of the event run down for Tuesday.

You will be able to share your screen for your presentations, but we would appreciate a copy by the end of the week as back-up.

Post-event, we will be sending an email out to all participants registered with a copy of your slides, presentation, and resource links. If there are key resource and information you would like to share with the participants, please forward them to me and I will incorporate that into our email after the event.

Thank you all once again! Please let me know if you have any questions.

Kind regards,
Verna

Cleaner, More Energy Efficient New Buildings

Zachary May, Executive Director
Building and Safety Standards Branch
May 2, 2023

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

ZERO CARBON STEPCODE

Agenda

- **New** Energy Efficiency requirements
- **New** voluntary Zero Carbon Step Code
- National Building Code / National Energy Code

Energy Efficiency in the BC Building Code

Timeline for Energy Efficiency Regulatory Requirements in the BC Building Code

Here's what the province's CleanBC plan will mean for new-construction requirements.

	PART 9 BUILDINGS	PART 3 BUILDINGS	NET-ZERO ENERGY-READY UP TO:
2032	STEP 5	STEP 4	80%
2027*	STEP 4	STEP 3	40%
May 1, 2023	STEP 3	STEP 2	20%

*NEW TARGET DEADLINES

Energy-efficiency improvement above 2018 BC Building Code requirements

ENERGY STEPCODE
BUILDING BEYOND THE STANDARD

Energy Step Code

- Most new housing is already building to the May 1, 2023 requirements.
- Local Governments can still require any available energy efficiency step.

ZERO CARBON
STEPCODE

Zero Carbon in the BC Building Code

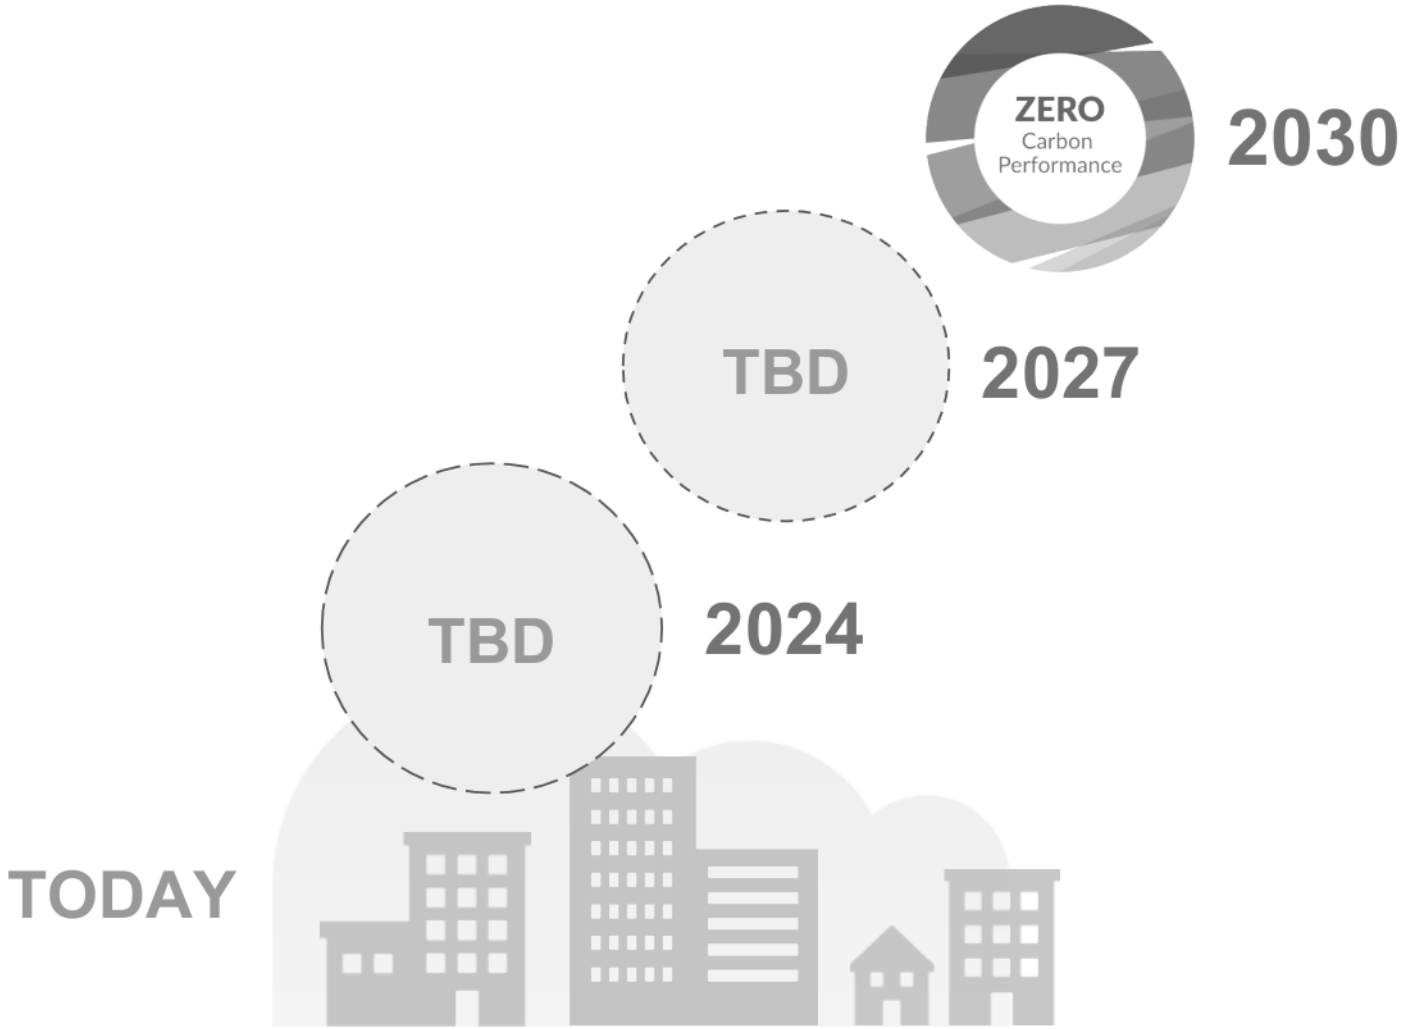
"**By 2030, all new buildings will be zero carbon**, and all new space and water heating equipment will meet the highest standards for efficiency."

– CleanBC Roadmap to 2030

ZERO CARBON STEPCODE

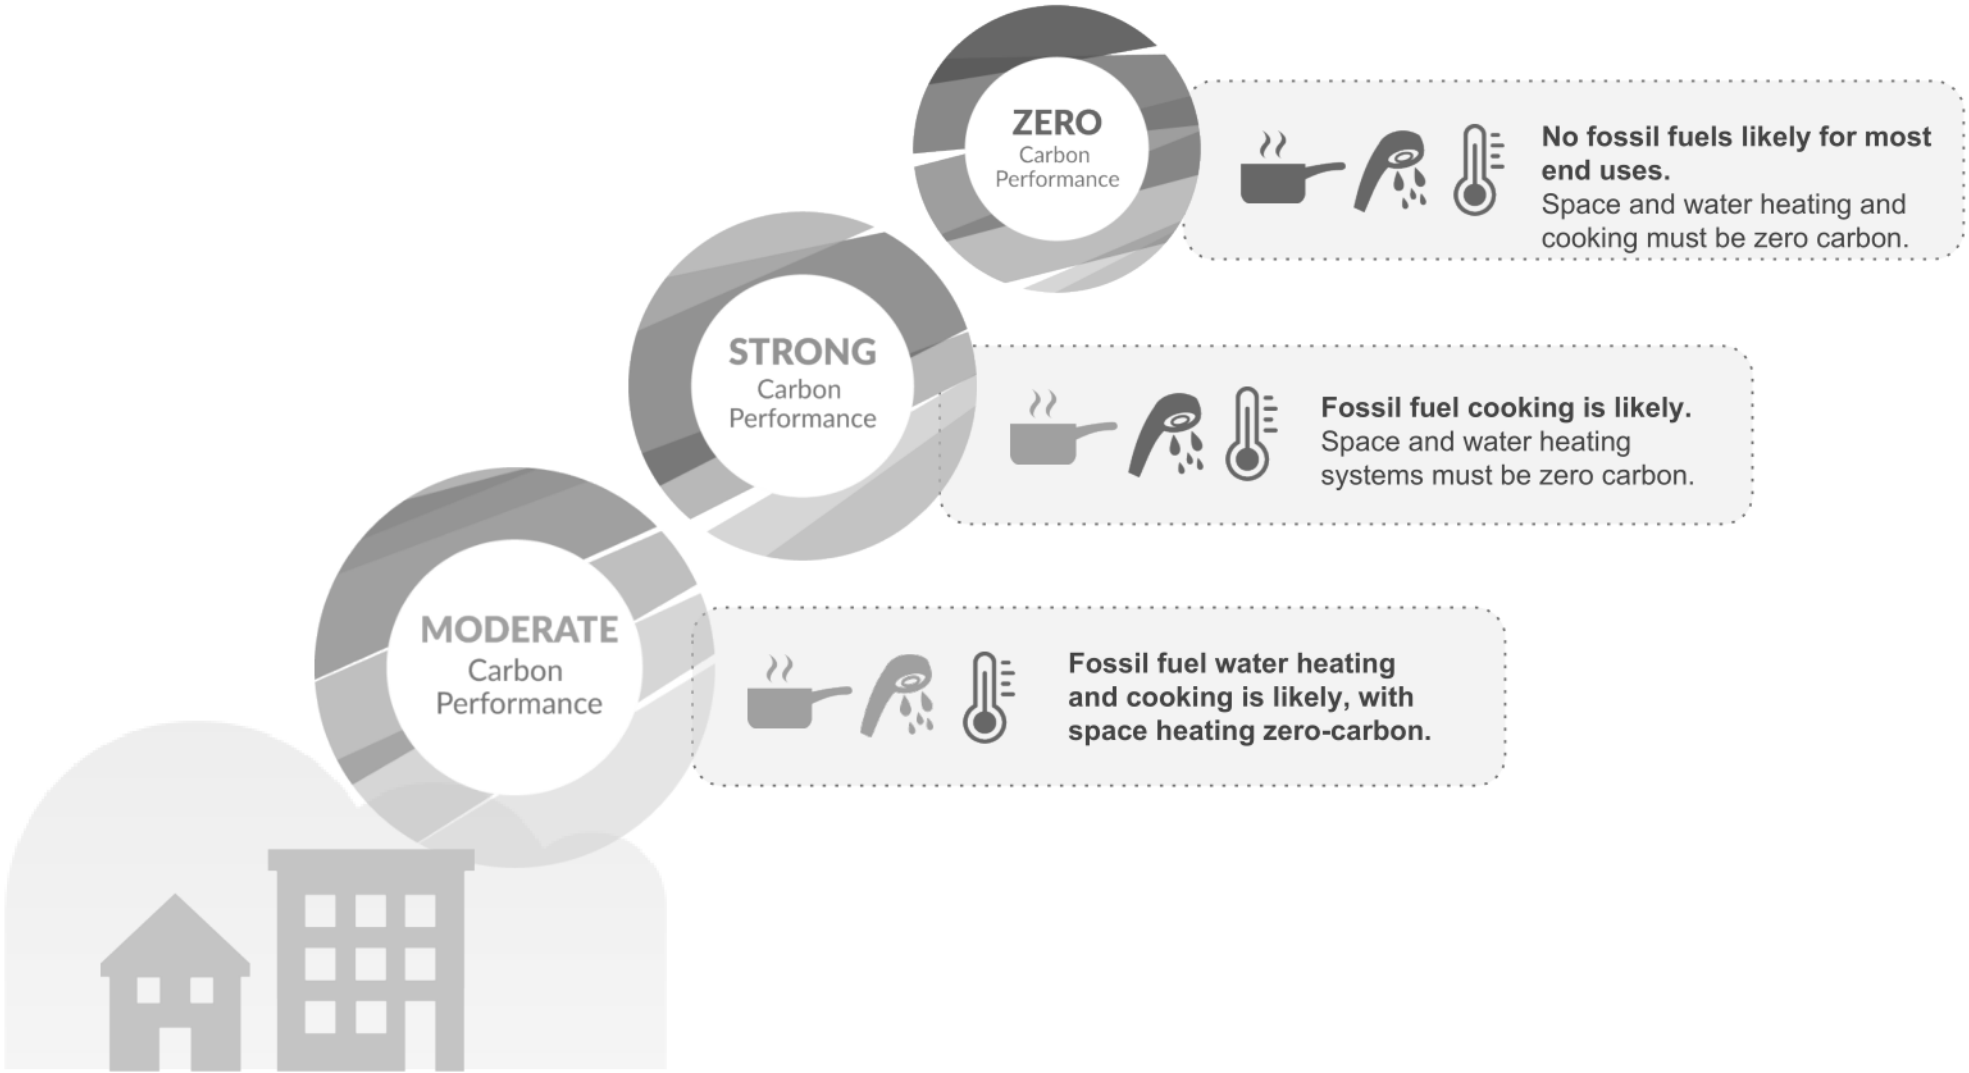
➡ Effective May 1, 2023

Provincial Pathway: Stepping up to 2030



Mandatory Carbon Limits: Stepping up to 2030

Likely <u>outcomes</u> for Part 3 buildings



Energy and Zero Carbon Step Code

- The Zero Carbon Step Code is voluntary, except when specifically required by local governments.
- Local governments can require any available zero carbon step, above the minimum.

National Codes Harmonization

- National Codes now include ‘tiered’ energy codes, based on the BC Energy Step Code.
- National Codes are developing zero carbon requirements, with input from BC.

Thank you!

ZERO CARBON STEPCODE

To: Sawchuk, Bindi HOUS:EX <Bindi.Sawchuk@gov.bc.ca>
Cc: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
Subject: 2023 Codes Public Review - MRK/PSRR Briefing Summary

Next steps:

- BSSB to launch public review week of May 15th
- BSSB to work with PS Chant to engage with Stephanie Cadieux and support PS Chant presentation of proposed changes to a June 2 meeting of the Provincial Accessibility Committee
- Minister Kahlon to provide an update on key code changes to Cabinet Committee on Economy at the next opportunity
    - Public Review of proposed code changes does not need to wait for this presentation

Accessibility:

- Briefing note has been updated in eapprovals to include key decisions on accessibility: 70735 - 57976 MIN IBN Status update on the public review of proposed BC Building Code changes
    - Elevators – only required in large (Part 3) buildings
        - Harmonized with 2020 National Building Code (NBC)
        - No BC variation on elevators
    - Adaptable dwelling units
        - 100% of dwelling units to be adaptable in large buildings where elevators and accessible path of travel is required
        - Single storey ground level units required to be adaptable in all buildings
        - 2-3 storey SSMUD buildings are **not** required to be adaptable, even when a shared hallway is provided
        - **All residential suites in all building types** will need a wider entry door and backing for handrails in the bathrooms

Seismic:

- Proposed changes to the 2023 BC Building Code will be reviewed in detail by representatives from Engineers and Geoscientists of BC, UDI, the Architectural Institute of BC, and other key stakeholders to fully understand the design implications of the new seismic risk factors
- This group of stakeholders will provide input on updating design guidelines for building 4-6 storey wood frame buildings in high seismic zones

BC Builds / Lisa Helps:

- Through recent engagement with Lisa Helps, a possible opportunity to add 'pre-approved designs' to the 4-6 storey design guidelines was identified
    - BSSB will ask the committee to determine if pre-approved designs would be a useful addition to the design guidelines
    - BSSB has agreed to report back to Lisa Helps in the summer

Best,

Zachary D. May, MBA
Executive Director

Hi Zac,

I understand at Exec Leads today that Bindi asked for a list of Stakeholders for our Division, and you mentioned we had a recent list on the LAN. Can you have a look at the attached and tell me if this is what you were referring to? It's the best I can find but hoping you may be able to confirm with a quick peak?

Thank you!

he, him

Draft Speaker Question List

Key Topics/focus Areas (What do our members want to know?)

1. BC Builds Launch/Housing Strategy
2. *Housing Supply Act* and Targets
3. Rental Housing Incentives
4. Streamlining Approvals
5. Provincial Permitting improvements

Draft Questions for Fireside:

Priority Questions:

1. BC's population is expected to grow substantially over the coming years, as Canada welcomes over 1 million new residents. How is the Province planning for these changing demographics, specifically for the housing, amenities and infrastructure that will be needed?
    a. Is the Province requesting extra resources from the Federal government?

2. The Mayor of Surrey has repeatedly said that school infrastructure is not keeping up with housing and population growth in her community. Will the Province be funding more new schools in high-growth areas?

FROM EDUC

- Government is actively working with stakeholders to explore all opportunities for future school development in high-growth areas.
- The Province is working with School Board partners in Surrey and other high-growth areas to build more schools and expansions for families.
    - For example, since 2017, 16 new schools and expansions have been completed for Surrey kids.
    - That is in comparison to zero new schools and one expansion complete from 2014 to 2017, during the former government.
- Since September 2017, the Province has approved over half a billion dollars ($520 million) for capital projects in Surrey, which is bringing over 10,000 new student seats to the district, the equivalent of over 400 classrooms.
- To continue accommodating growth in Surrey, additional new schools and expansions are in development, as well as five expansions in business case development.
    - Expansions at both Fleetwood Park (800 seat addition) and Clayton Heights Secondary (500 seat addition) are currently in business case development.
- After years of underfunding, we are making historic investments in school capital projects to give students the best educational experience possible.
- Government is working with districts and cities to make planning more efficient, reducing delays and improving work to get construction started faster and working across government to tackle labour shortages by training more tradespeople.

3. Will housing targets under the *Housing Supply Act* reflect the latent demand for housing that exists in many communities?

b. For example, household formation has been slowed due to high prices and low housing supply, while many remain underhoused. How will housing targets reflect this demand?

- We'll have news on the targets in the coming months – we're on track to bring in the Act into force as planned in mid-2023.
- Through the Housing Supply Act, we will be working with our municipal partners to speed up housing developments and increase supply in the fastest growing communities and places with the greatest need.
- This makes sure the right type of housing is built in the right communities.

c. The development process is very lengthy, how will housing targets measure progress, and what will the consequences be for municipalities that fail to deliver enough new homes?

- In the event that a municipality is unable to achieve a housing target or make satisfactory progress toward the target, the process will allow the Minister to appoint an advisor to gain a fuller understanding of the opportunities and barriers that a municipality faces.
- Overriding a local government decision would be a last resort. The goal is to work collaboratively with our municipal partners to increase housing supply.

5. In the refreshed Housing Strategy, the Province has committed to allowing more small-scale multi-unit residential housing (missing middle) - up to 3 or 4 units per lot. Additional density will be permitted in areas "well-serviced by transit"...how will this be defined?

- This initiative will focus on accessing land that is suitable to be acquired near transit hubs and transforming this land into thriving communities.
- Work on this is underway, but we envision a few additional units on single-family lots in areas close to regular and rapid transit service, including SkyTrain and rapid bus lines.
- We're talking to local governments about this, and we'll continue to as we work on the legislation.
- More information on this will come as we get closer to introducing the legislation the fall.

a. How much more density are you envisioning? In New Zealand, for example, certain municipalities are required to pre-zone up to 6 storeys around transit.

- Our budget commits new funding as an initial investment to allow us to acquire land to deliver up to 10,000 units at or near transit hubs over the next 10-15 years. ($394 million through Budget 2023)
- We know that similar changes in places like New Zealand have already delivered tens of thousands of new homes, and had a measurable impact on rent and housing prices.
- This is also a minimum density. It will still be possible to rezone for higher densities – as it is today.

- We'll be out talking to local governments about that as we fine-tune the legislation.
- We'll make sure that there is some flexibility in place for local governments to reflect local realities.

- Under the DAPR: transit-centred development includes **select communities**, setting a minimum number of dwelling units per lot for single-family zones, and setting a minimum number of dwelling units per lot for single-family zones near frequent transit.

6. Rental housing has been a primary focus of this government, will the Province consider introducing new incentives for developers who want to build new rental housing, especially market rental housing, which is already very challenging to deliver?

- We're going to work with partners to find new opportunities and ways to build new rental buildings.
- It's all part of focusing on purpose-built rentals and how we can encourage more developers and landlords to build more homes dedicated to renters and protect existing rental units.
- Among the groups we wish to involve are Landlord BC, the Urban Development Institute, Indigenous organizations and municipal representatives.

BC Hydro connections have become much more expensive and time-consuming in recent years. We expect this trend to continue as more municipalities are starting to require more buildings be fully electric. Is there work that your ministry can do to help address these issues with your counterparts in Energy, Mines & Low Carbon Innovation?

FROM EMLI

- BC Hydro and the Province are committed to ensuring new projects and developments have access to power.
- The current demand for connections from large commercial and industrial projects is unprecedented.
- And BC Hydro is committed to reducing connection timelines.
- Over the last year, BC Hydro has undertaken several measures to policy and internal processes to improve customer communication, reduce timelines and improve the end-to-end connection process.
- BC Hydro also hired more staff to help reduce connection timelines, and they are exploring options to update their Distribution Extension Policy to standardize the process which will reduce connection timelines and address uncertainty around costs.
- BC Hydro's Integrated Resource Plan outlines how it will meet the electricity needs of its customers over the next 20 years.
- The BC Hydro Task Force recently announced within our new energy action framework will also look at generation planning and procurement to ensure we have the clean, renewable electricity we need to power our economy while keeping rates affordable.

8. Are there any specific jurisdictions that your Ministry is looking at as best practices for speeding up the delivery of new housing?
9. Will your government be looking to streamline approvals for mass timber and modular construction projects to speed up housing delivery, while addressing climate change objectives and labour constraints?

Additional Questions (time permitting)

General:

1. When will the Province be launching BC Builds? And will BC Builds be partnering with the private sector to deliver middle-income housing?
2. Will the Province be using paramountcy on its sites? Would they be open to TransLink and other broader public sector organizations being given paramountcy power?

- The Province looks to use Statutory Immunity only in exceptional cases and with the support of local governments.
- The goal is to support new housing and to support municipalities to expedite the permitting process for new projects and we are doing that through our work on small scale, multi-unit zoning changes, BC Builds, speeding up provincial and local permitting, Housing Supply Act.

*Background: Statutory Immunity (often inaccurately referred to as Paramountcy which is a different legal concept), has legal limitation to developments which the government or its agent controls. It cannot be used for other developments/developers.

Housing Supply Act:

3. We understand that housing targets are going to be established, how will the Province be setting these targets and what is the vision for targets in the future?

Housing Strategy: *Homes for People:*

4. The Housing Strategy references a new anti-flipping tax, is this currently under development, and what is the objective of this tax?
    a. Could this affect pre-sales or new construction, which is already heavily regulated?
    b. Would this tax affect developers as they assemble and service sites?
5. The Housing Strategy also mentions increasing tenant protections in cases of redevelopment. Many municipalities currently have tenant relocation and protection policies in place, will the province be creating its own version and if so, will additional density be provided, as Burnaby has done?

- As government works to advance measures to increase housing supply, there is additional need to ensure that renters are better protected from displacement due to redevelopment of rental buildings.
- As such, the Province is examining ways to better protect tenants whose homes may be threatened by redevelopments.

- We'll have more to share on this as that work continues.

Streamlining Approvals

6. The provincial DAPR process and Federal-Provincial Expert Panel on Housing Supply and Affordability both made recommendations to streamline the approvals process for new housing, at the provincial level. How is your ministry working with other ministries that affect the approval of new housing to speed up the process?

7. When provincial policies and regulations are developed, they often have an impact on the approval process for new housing. Will you be applying a housing lens when new policies are developed, for example building code changes or updates to the Energy Step Code?

- We apply a housing lens to new building code policies.
- We are working together with industry, so B.C. can meet our housing needs and our climate goals.
- Building more housing is a key priority, and building the right kind of housing is just as important so that housing is safe, healthy, energy efficient and more accessible.
- We are working towards housing that is resilient and meets the future needs of British Columbians in the context of climate change, accessibility, and resistance to earthquakes.

8. Can you speak more about the work that your ministry is doing with the Digital Supercluster to digitize the BC Building Code and automate code compliance checks?

Thanks Juni and Stephen – I we are on the same page.

We have not done our formal review of this, but our at a quick glance it provides good comparison to other codes, but does not quantitatively demonstrate that it meets the level of performance required by the Canadian Code.

We agree that an analysis to demonstrate we are not reducing the level of safety in the Code is required, and the issue of persons with disabilities is needed. We are making recommendations to assess and address these items.

Other organizations, including UDI, have expressed interest.

Hi Darrell and Andrew,

Here are the initial thoughts I got back from Stephen, who sits on SCFP for us. As I mentioned, we would likely support the committee developing this in the interest of housing affordability, but with heavy caution that we do not want to take a step back in fire and life safety. One other thing I didn't mention is evacuation for persons with disabilities could be affected since we no longer have areas of refuge and this would further cut back on safe places in fire for that occupant profile. Stephen does allude to this below with his comments on aging populations. I do support the idea of GHL and SCFP looking at this in a holistic and scientific way to make appropriate recommendations.

To: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
Subject: RE: 8761.00 - BC Housing Grant – Single Stair Study

My first thoughts :

The NFC regulates occupancy load after construction and is calculated per room.

Under the NFC, each suite with a single door would allow 60 persons when the net floor area, when divided up based on .4m2 per person, will allow that number.

This means would mean that the NFC would need to be changed as well to place a restriction on the occupancy load for this type of building. (also note that regulating and enforcing the occupy load in a private dwelling may be problematic for fire code enforcement officials.)

There is also an assumption that there is a responding fire department, as we know Part 3 buildings should not be built in an area that has not fire department but this is a local government decision.

The Code would need to actually state that there must be a responding fire department in order to allow a building to be built with 1 exit, not just that there must be a fire alarm to notify the fire department.

Maintenance of the life safety systems (smoke alarms, fire alarms, sprinkler, fire doors kept closed when not in use), to ensure they are functioning as designed, will become even more critical for a building with only on exit.

45min closures are used in 1hr fire separations but they don't mention the fire separation requirements other than for the closure.

I'm also not sure how one would regulate the building to not be used for persons to retire in if they own the suite. (if all suite owners are retired does it become a retirement home?)

Hi Zac,
Hoping you can review/edit this draft email to go out to early engagement participants (User Research and April 6 Roundtable folks). I can make changes.

Hoping to get this out to this afternoon, to give these folks a chance to reach out to their respective associations

Just compiling email addresses and will locate in card, for you to send out once email is ready to go. Same process as invites that were sent on Friday.

Please let me know if questions or changes required

Thanks a bunch,
Julie

Proposed Attendee List
See Excel Sheet on Teams

Subject: Save the date: Digital Permitting Workshop – June 12th, 2023

Email Body:

Greetings,

Thank you for your participation in early conversations and research with the Ministry of Housing exploring ways to digitize the BC Building Code and implement innovative collaboration technologies to help project teams work more effectively with housing development regulators.

Momentum is continuing to build around this work. On June 12th, the Ministry of Housing with the support from the Ministry of Citizen's Services is hosting a hybrid engagement event to dig deeper into to the challenges users experience during the housing permit process and develop a shared understanding of the opportunities to resolve issue.

The AIBC, EGBC, UDI and CHBA have been given an allotment of 4 'tickets" per organization for this event. We encourage you to reach out to your association if you would like to support the association's representation at the event. We have asked the associations for a list of invitees by EOD May 26.

I have attached the specific invite sent to each of these associations, to provide some background and details about the event.

Looking forward to continuing to work with you.

Sincerely,

June invite list_4.docx

Commented [LJH1]: To be updated and add user research and April 6 roundtable invitees

Commented [LJH2]: Need full names of each

Greetings,

Thank you for your participation in early conversations and research with the Ministry of Housing exploring ways to digitize the BC Building Code and implement innovative collaboration technologies to help project teams work more effectively with housing development regulators.

Momentum is continuing to build around this work. On June 12th, the Ministry of Housing with the support from the Ministry of Citizen's Services is hosting a hybrid engagement event to dig deeper into to the challenges users experience during the housing permit process and develop a shared understanding of the opportunities to resolve issue.

The Architectural Institute of British Columbia (AIBC), Engineers and Geoscientists BC (EGBC), Urban Development Institute (UDI) and Canadian Home Builders Association (CHBA) have been asked to identify representatives for their respective organizations for this event. We encourage you to reach out to your association if you would like to support the association's representation at the event. We have asked the associations for a list of invitees by EOD May 26.

If you are not a member of any of these organizations, please feel free to reach out to me directly and our team will ensure you are still able to be part of this initiative.

I have attached the specific invite sent to each of these associations, to provide some background and details about the event.

Looking forward to continuing to work with you.

Best,
Zachary D. May, MBA
Executive Director

Greetings,

The Ministry of Housing is committed to making B.C. a North American leader in digital permitting and construction. The Ministry of Housing, with the support from the Ministry of Citizens' Services, is working on modernizing housing permitting and approvals by digitizing the BC Building Code, advancing the adoption of digital permitting processes across B.C., integrating permit systems across the housing sector, and supporting collaboration technologies that help project teams work more effectively with housing development regulators.

The Ministries are hosting a hybrid engagement event to discuss the challenges users experience during the housing permit process and develop a shared understanding of the opportunities to resolve issues.

Event Details

- **Date**: June 12, 2023
- **Time**: 8:00 AM to 4:15 PM
- **Location**: In-person (lower mainland – specific location will be shared once confirmed) and remote

An agenda will be provided closer to the event.

Your organization has a total of **four (4) invites** to ensure your organization and membership are represented. We will be connecting with individuals who participated in our early user research and engagement to let them know you have received the invite, and to reach out to you to support your organization's representation at the event.

Please let us know by EOD Friday May 26th your list of participants including their name, email address, organization, and an early indication of whether attendance is anticipated to be in-person or remote. We will provide the meeting invite to participants directly.

Best,
Zachary D. May, MBA
Executive Director

Hi John,

As discussed previously, we are aiming for a max in-person attendance on June 12th of 40 attendees, with online facilitation for additional participants who can't be there in person. The list of invitees is in the table at the bottom of this email.

- Local governments/regional districts/districts – these communities were selected based on past involvement with DAPR, growth-leader cities, housing targets, and regional representation. This list includes the key associations (UBCM, LGMA, PIBC, and BOABC).
- We have invited several Indigenous nations and organizations – most are Treaty Nations and communities/organizations we engaged in the past.
- We have given the professional and industry associations a seat allocation and allow them to select their participants.
- April 6 Roundtable participants not captured on this list were emailed directly and invited to reach out to organizations they are members of (most are part of EGBC, UDI, or CHBA-BC), and if they were not members of any organizations on the list to reach out to be included in future engagement directly.
- User Research and April 6 Roundtable list:
  - Adera Development - s.22
  - Dau Studios - mbarros@daustudio.ca
  - Dau Studios - mzupan@daustudio.ca
  - Introba - andy.chong@introba.com
  - Introba - keith.davidge@introba.com
  - Naikoon Contracting - max@naikoon.ca
  - Townline - Rick.Bortolussi@townline.ca
  - Aryze Developments (Homes for People) - luke@aryze.ca
  - Focal Engineering - riley@focaleng.com
  - HAVAN - ron@havan.ca

This will bring us to 89 invitees – full list below and assuming not all will be able to attend.

*communities with digital permitting technology (from DAPR survey)

Subject: RE: June Digital Permitting Event_Agenda

We have a draft engagement strategy that will provide more answers to the questions about what follows the June 12th session. Consistent with your highlighted text. Happy to send you the draft this week for feedback.

Also, we are getting most responses to our save the date as wanting to participate remotely. We're also having challenges sorting out a venue, **so I'm wondering if the MO would have any issues with us just pivoting to a virtual session on June 12th?** We are still working towards a hybrid meeting on the 12th, but signs are starting to look like virtual for this large engagement might be the most effective for participants and our team.

Hi Zac –

Please see my email below to Mark. Note my additions highlighted. We will need to build structure into our approach to engagement to bring consistency in participation, strategy to focus our efforts with the willing champions and those we need. Practically, this looks like named groups/tables, with lists of members and contact information, records of happenings and plans of when they need to be brought together.

I see in another email you are moving on the hiring, so I appreciate some of this will have to wait for folks to join but it is clear Minister expects something formalize, consistent and regular.

Thanks.

John

Subject: FW: June Digital Permitting Event_Agenda

Hi Mark -

Below is the list of organizations invited to the June 12 event. We will have capacity for 40 people in person, with online facilitation for additional participants who can't be there in person. The list of invitees is in the table at the bottom of this email is broken into 5 categories to ensure appropriate representation across the range of stakeholders.

- Local governments/regional districts/districts – these communities were selected based on past involvement with DAPR, growth-leader cities, housing targets, and regional representation. This list includes the key associations (UBCM, LGMA, PIBC, and BOABC).
- We have invited several Indigenous nations and organizations – most are Treaty Nations and communities/organizations we engaged in the past.
- We have given the professional and industry associations a seat allocation and allow them to select their participants.
- April 6 Roundtable participants not captured on this list were emailed directly and invited to reach out to organizations they are members of (most are part of EGBC, UDI, or CHBA-BC), and if they were not members of any organizations on the list to reach out to be included in future engagement directly.
- User Research and April 6 Roundtable list:
  - Adera Development - s.22
  - Dau Studios - mbarros@daustudio.ca
  - Dau Studios - mzupan@daustudio.ca
  - Introba - andy.chong@introba.com
  - Introba - keith.davidge@introba.com
  - Naikoon Contracting - max@naikoon.ca
  - Townline - Rick.Bortolussi@townline.ca
  - Aryze Developments (Homes for People) - luke@aryze.ca
  - Focal Engineering - riley@focaleng.com
  - HAVAN - ron@havan.ca

This bring us to 89 invitees – but we assume many will not be able to attend in person, and some won't participate online. This constitutes a comprehensive list of stakeholders that we'll bring together as a whole at regular intervals to share updates, seek advice, and champion this initiative. We will pull from this list, smaller groups of people to deal with specific topics and we will recommend a core group of champions from each of the 5 groupings for the Minister.

Please let me know if you have any questions about this list.

John

Hi John,

Thanks so much for the list and the go-forward plan. It looks like a great group of folks that will be able to provide the insight we need. The champion idea for each sector to meet with the Minister sounds like a fantastic way to make this more manageable as we drive toward a high-level consensus by September.

Our only thought was to include BC Land Title and Survey in the discussion. They met the Minister the other day and expressed interest in being of service to the project due to the digital services they already provide.

Gregory Steves
VP

Subject: Save the date: Digital Permitting Workshop – June 12th, 2023

Greetings,

The Ministry of Housing is committed to making B.C. a North American leader in digital permitting and construction. The Ministry of Housing, with the support from the Ministry of Citizens' Services, is working on modernizing housing permitting and approvals by digitizing the BC Building Code, advancing the adoption of digital permitting processes across B.C., integrating permit systems across the housing sector, and supporting collaboration technologies that help project teams work more effectively with housing development regulators.

The Ministries are hosting a hybrid engagement event to discuss the challenges users experience during the housing permit process and develop a shared understanding of the opportunities to resolve issues.

Event Details

- **Date**: June 12, 2023
- **Time**: 8:00 AM to 4:15 PM
- **Location**: In-person (lower mainland – specific location will be shared once confirmed) and remote

An agenda will be provided closer to the event.

Your organization has a total of
four (4) invites to ensure your organization and membership are represented. We will be connecting with individuals who participated in our early user research and engagement to let them know you have received the invite, and to reach out to you to support
your organization's representation at the event.

Please let us know by EOD Friday May 26th your list of
participants including their name, email address, organization, and an early indication of whether attendance is anticipated to be in-person or remote. We will provide the meeting invite to participants directly.

Best,
Zachary D. May, MBA
Executive Director

Subject: Ministry of Housing's BC Codes 2023 Public Review

Body:

Greetings,

I am writing to inform you that the Province is currently seeking feedback on proposed changes for the BC Codes 2023. Feedback will be accepted until June 16, 2023.

The BC Codes 2023 are anticipated to be adopted later this year with an effective date of December 2023, pending ministerial approval.

A video recording of the proposed changes will also be available for viewing. I will reach out again once the video has been posted online.

In the meantime, I am happy to answer any questions you may have about the public review.

Sincerely,

JJ

Sent: May 31, 2023 12:13:50 PM PDT
Attachments: image001.png

	Archetype:	Climate Zone (HDD)	Area (m2)	CZ Cost Multiplier	Base Construction Cost ($/m2) no adjustments	Base Construction Cost ($)
1	Laneway House	4 (Vancouver 2825 HDD)	69.7	1.000	2,851	198,750
		5 (Summerland 3350 HDD)	69.7	1.073	2,851	213,259
		6 (Cranbrook 4400 HDD)	69.7	1.126	2,851	223,793
		7A (Fort St. John 5750 HDD)	69.7	1.502	2,851	298,523
		7B (Fort Nelson 6710 HDD)	69.7	1.502	2,851	298,523
		8 (Uranium City 7500 HDD)	69.7	1.502	2,851	298,523

This is from page 150 of this report: https://energystepcode.ca/app/uploads/sites/257/2022/10/BC-Energy-Step-Code_Metrics-Report_2022-09-29-R1-Compressed.pdf

Data is based on 2021 Altus construction costs, which is based on 2020 data.

These laneway homes are 750 ft2 and price converts to $265/ft2 in Vancouver. Inflation since 2020 impact these costs, but this is a good baseline that was vetted by our partners on the Energy Step Code Council (UDI/CHBA) as valid numbers.

Best,

Subject: Sq ft costs for a laneway house

Can someone in your area in the next couple hours provide me with the approximate construction costs per sq ft of doing this (i.e., a stand alone ADU not a secondary suite), say in the lower mainland or Victoria, not including land costs? Ball park or range is fine.

Thanks

Gord

Greetings everyone,

In advance of the June 12 Digital Permitting engagement session, we are having a quick virtual information session on June 7th at 12:00 PM (PST) – 12:30 PM (PST).

During the call, we will:

· Outline our objectives for the event,

· Walk through the agenda,

· Share how we are approaching this work, and

· Answer any questions you may have about June 12th.

We hope that this session provides you with the information you need to feel ready to participate on the 12th.

Thank you,
Zachary D. May, MBA
Executive Director

Invitation to our next Roundtable Event
This is an event to bring together thought and practice leaders to discuss drought resilient residential and urban design.

DETAILS
* Date: Wednesday, June 14, 2023
* Time: 10:45am – 12:00pm PST
* Location: Online

s.15

ABOUT THIS SESSION

In the last decade in BC, climate change has increasingly impacted our water systems throughout the province, through extreme heat, floods, drought, and wildfires. Water security is critical not just for human life but to protect the health of the ecosystems that support the livelihoods of all British Columbians. In BC last year, many communities experienced drought, and many more expect to experience significant 2023, and the frequency, severity and duration of climate related drought is expected to increase and will impact water availability, agriculture, infrastructure, and public health.

Designing drought resilience into housing and urban settings is crucial to mitigating the impacts of water scarcity on individuals and communities. Water conservation in housing can reduce strain on local water resources and promotes responsible water usage. Housing that can protect and sustain people during drought may ensure communities have access to as drinking water, sanitation, and hygiene during other crises such as wildfire and earthquake.

We welcome you to join us as we discuss this important issue. We will also be sharing updates and announcements from BC Housing and others in the MBAR community and there will be time for networking to allow you to speak with—and get to know—others in the group.

Please accept the attached invitation and forward to others who should be involved.

CONVERSATION STARTERS & UPDATES FROM:

* Gord Baird, District of Highlands Councillor, Chair of the CRD Regional Water Supply Commission, and Chair of the Juan de Fuca Water Distribution Commission
* Dr. Stewart Cohen, Author, Doctor Climate Change Blog and Former Researcher at Environment and Climate Change Canada
* Robert Boyd, Senior Construction Manager, Toronto Community Housing
* Elizabeth Kee, Assistant Project Engineer, Metro Vancouver

To: May, Zachary HOUS:EX <Zachary.May@gov.bc.ca>
Subject: RE: SSMUH questions for MRK

Hi Zachary,

One more response for your review, please. This was signed off by Nicole.

1. **Kelowna is quickly becoming a leader, using AI to review permit applications. What is the Province doing to support this initiative? This is innovative and what can the Province do to encourage other municipalities to take this step, and do more than simply shifting from paper to PDFs?**

    - HOUS is aware of the innovative work Kelowna is doing on an AI-powered interface to answer questions and automate certain tasks for permit applications. The work that Kelowna is doing is contributing to help make B.C. a North American leader in digital permitting and construction.
    - Many of our local government partners in B.C. have started to modernize their development permitting processes using e-permitting software to coordinate workflows but many approval processes are still paper/pdf-based.
    - Advancing the adoption and integration of digital permitting and construction processes across B.C. is a commitment of the Homes for People Plan, which was announced on April 3, 2023.
    - We are facilitating digital innovation in the housing construction sector by digitizing the BC Building Code and building permitting processes, with pilots in select local governments in 2024. We are actively collaborating with local governments, industry, and Indigenous partners to understand the challenges users experience during the permitting process and ensure we are focused on addressing the highest priority issues.
    - Our digital solutions will build on and integrate with (not duplicate) existing local government technology, such as AI, e-permitting, building information modelling, GIS technologies and others.

Subject: SSMUH questions for MRK

Hi folks,

MRK is speaking at the UDI annual general meeting in Kelowna next Friday. During the fireside chat portion, he will be asked the following questions about SSMUH. Do you mind providing assistance on his responses? I'm not sure if we are able to comment on these actions yet.

1. In the refreshed Housing Strategy, the Province has committed to allowing more small-scale multi-unit residential housing (missing middle) – up to 3 or 4 units per lot. Additional density will be permitted in areas 'well serviced by transit' – will this include areas with frequent transit networks or planned routes?
   - Work to clarify the area that this density would apply to is underway. I look forward to sharing more details soon.
2. When Provincial policies and regulations are developed, they often have an impact on the approval process for new housing. Will you be applying a housing lens when new policies are developed, for example: building code changes – like the ones currently being consulted on.
   - For reference, these changes would require 100% of new multi-family units to be made adaptable, and will significantly impact unit sizes and layouts, making it more difficult to deliver more housing faster.
   - **We are responsible for balancing a range of provincial priorities when developing new building regulations, including accessibility, climate, the economy, and housing.**
   - **We work hard to find a flexible and cost-effective approaches, based on input from groups like UDI. For accessibility, this meant setting requirements that improve the baseline adaptability in homes, but don't require the full expense of accessibility features that might not work for all people.**
   - **I am committed to continuing to work collaboratively with industry groups like UDI to help us balance governments priorities and deliver on the housing commitments in the Homes for People plan.**

Thank you,

Liam Butler

Greetings everyone,

Thank you for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction. We appreciate the perspectives and insights you shared with us, and we are hard at work analyzing your feedback.

For those who would like to provide additional feedback, please note that the Mural board we used on Monday is now closed. We are still accepting feedback until EOD Wednesday June 21, 2023, via two methods:

1. An after-hours self-serve Mural board (link) that contains both breakout activities
2. Email to the building.safety@gov.bc.ca

We are working to share a summary report of the engagement in the coming weeks.

Have a great day,

Zachary D. May, MBA
Executive Director

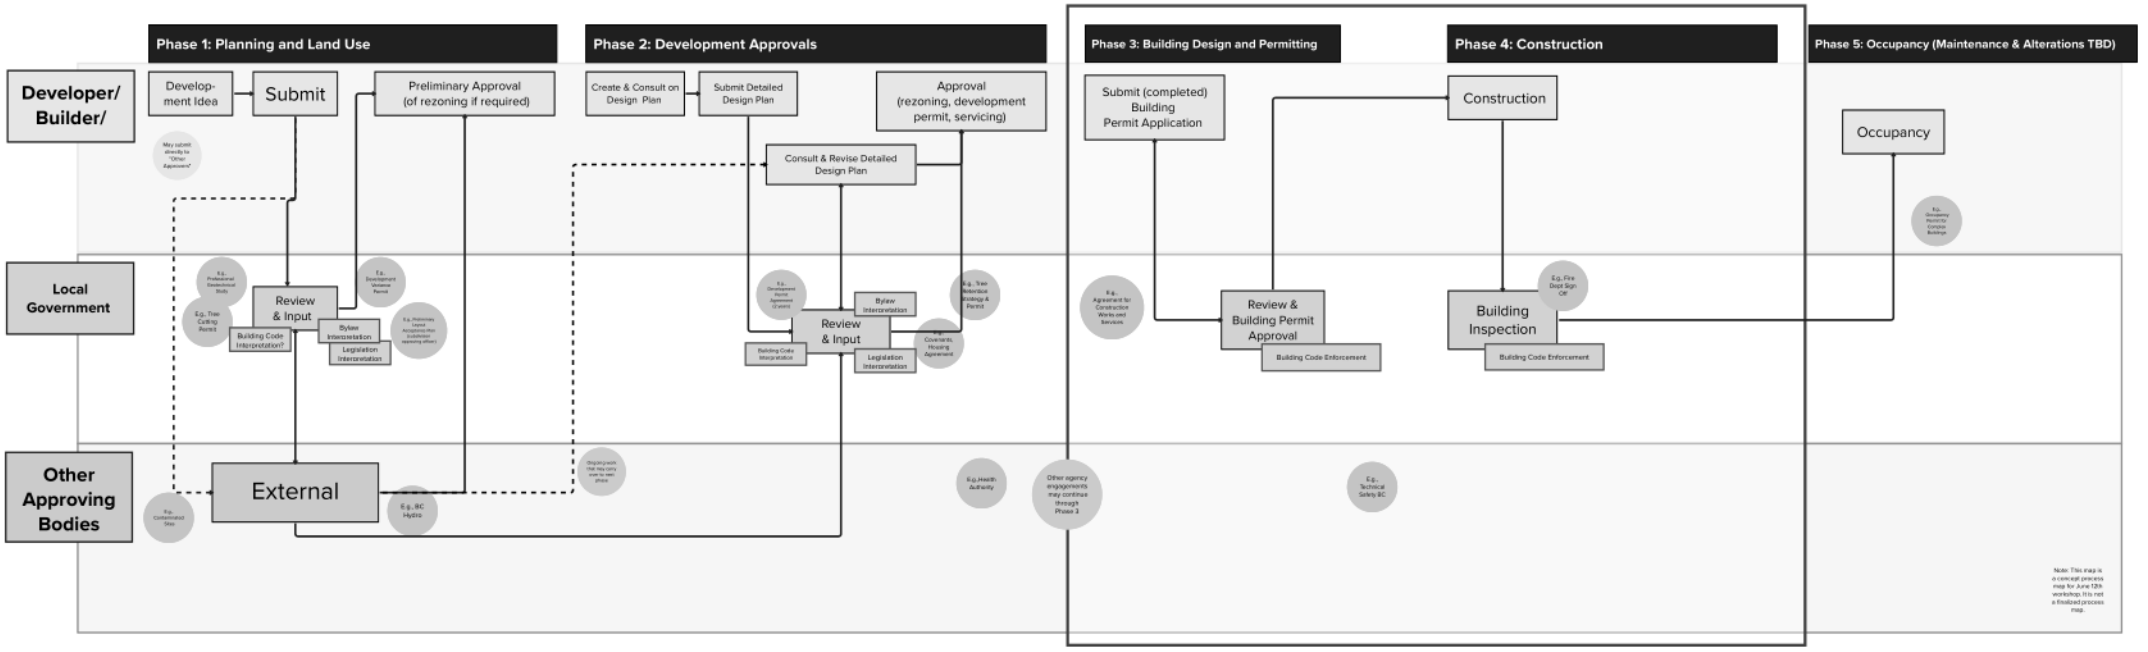
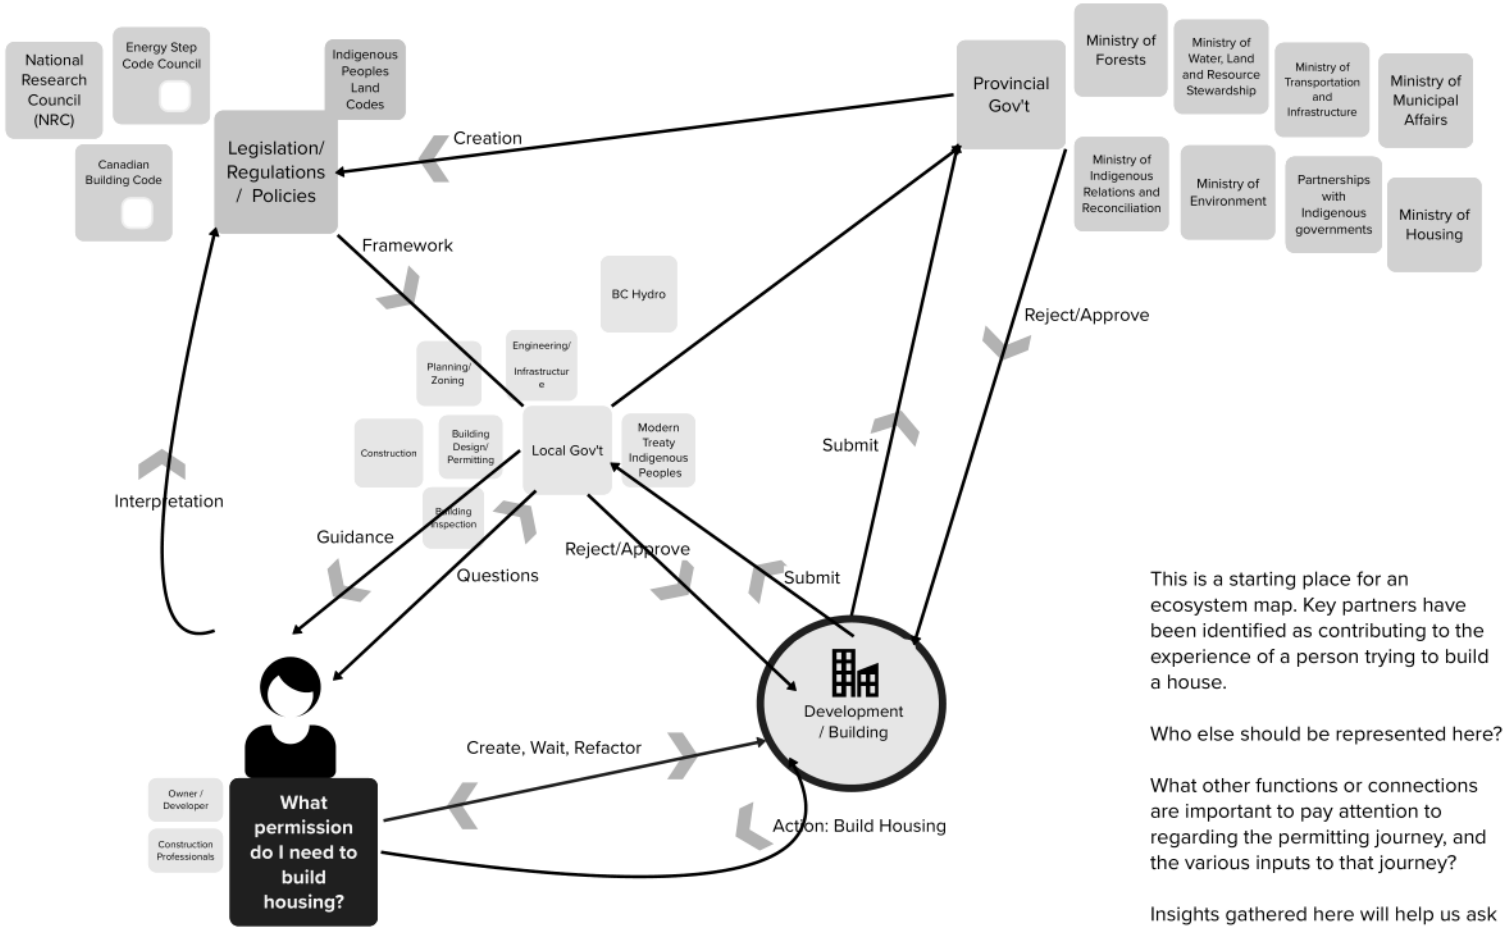
Process flow overview



Ecosystem Map overview



This is a starting place for an ecosystem map. Key partners have been identified as contributing to the experience of a person trying to build a house.

Who else should be represented here?

What other functions or connections are important to pay attention to regarding the permitting journey, and the various inputs to that journey?

Insights gathered here will help us ask better questions about what problems to solve for first and who to include in our research and colloboration.

RE: UDI Submission: proposed B.C.-specific Building Code changes

Hi Cassandra, Anne, Lily and Jeff,

Thank you for your thoughtful comments and for engaging your membership. The team will review these comments in detail and they will inform decisions going forward. As discussed last week, there may be some mitigation built in to an adoption relating to development permits, but I also acknowledge not all projects will have applied for a development permit by the proposed effective date of the code in December. There are many more points in your comments to consider and discuss as well; please be assured this will happen over the coming weeks. We will reach out if we need further clarification or discussion.

Jun'ichi Jensen

Good afternoon,

On behalf of Anne McMullin, President & CEO of UDI and our members, please find attached our submission on the proposed B.C.-specific Building Code changes. Throughout our letter we recommend that additional time be taken before implementation to analyze the impacts of the proposed changes and develop offsets to mitigate them. We reiterate our appreciation for the work being done by the Building and Safety Standards Branch, and would be pleased to provide support if it is determined that further analysis will be done.

If you would like to discuss any of our recommendations further, please let us know.

Regards,

Cassandra Smith

I assume this is logged as it cam in to the PR inbox, but Aura, please ensure so.

Zac- it would be worthwhile to have a discussion about reliance on the NBC public reviews. This letter states that we have not adequately indicated impacts of Part 3 seismic because it is not part of the BC PR. And yet that is and has always been our policy for PR. And needs to be even more so now under CCRA. I'll put this on our check in as a starting point, but we likely need some further communications and expectations management related to this.

Re: B.C. Building Code 2023 Public Review

Dear Mr. Jensen:

The Urban Development Institute Pacific Region (UDI) would like to thank you for meeting with our members on April 26th regarding the proposed *B.C. Building Code* (*BCBC*) changes that the Ministry would like to be implemented by the end of the year. We understand the Province's objectives to make buildings more accessible by increasing the adaptable features in them as well as improving health/safety with the proposed seismic design requirements. However, as discussed in our meeting, UDI has concerns about the substantial impact of these changes on the designs of buildings/units as well as the floor area and costs of projects. We have several recommendations, including:

1. Delaying the adoption and implementation of the accessibility and seismic design and accessibility requirements to allow additional time to understand the impacts on new housing supply and ways to mitigate them;
2. Working with staff in the Planning and Land Use Management Branch, and Ministry of Municipal Affairs to develop mitigation measures to protect housing supply; and
3. Enhance in-stream protection for projects already in the municipal approvals process.

Accessibility

UDI recognizes the need for the *BCBC* to include robust provisions related to accessibility and the development of adaptable units across the housing continuum, and many of the adaptable provisions such as the location of switches and plugs can be accommodated in all units. However, the proposed changes that will increase the space

in bathrooms and bedrooms far exceed the current requirements and present multiple challenges for the development industry to provide much-needed housing.

Impacts on Design and Housing Delivery

The proposed change to "*[Require] 100 per cent of dwelling units to be adaptable in new, large apartments and condos...*" could have significant adverse impacts on the number of homes being delivered and the affordability of these homes. This is especially true for smaller and more affordable units that would need to be designed to have enough space for increased mobility.

At the meeting, you indicated that 650 ft^2 one-bedroom apartments could be designed to accommodate the adaptable features. However, it is not clear how desirable or marketable these units would be if the larger bathrooms and wider halls reduce the size of the living spaces. In addition, our members are building one-bedroom units that are much smaller than 650 ft^2 as well as studios.

Fully adaptable units will have to be larger, which could negatively impact the affordability of these units as the overall square footage of the unit will increase. As unit sizes increase and corridors widen to meet the requirements, this would result in lower numbers of units per project if the same footprint was maintained. Considering the Province's goals of making housing more affordable and supporting the delivery of more housing supply, these issues need to be addressed.

Demand for Accessible Units

Although it is noted in the consultation documents that more adaptable units are needed within the housing continuum, we do not think the need is for 100% of units to be fully adaptable given the small percentage of people requiring accessibility provisions. ***UDI recommends that the BSSB delay the implementation of these changes and use the additional time to conduct more research on the demand for fully adaptable units as well as the impact of the proposed requirements – especially with regard to floor area – and mitigation measures.***

UDI acknowledges and supports that many of the proposed changes for *BCBC 2023* are intended to better harmonize it with the National Building Code of Canada (NBC). However, these proposed changes to accessibility are part of the changes being made too harmonize with the *NBC* and therefore could be given further consideration without impacting the harmonization of the codes.

There is an additional issue. There are currently several communities with no requirements for adaptable units. In the Lower Mainland, many communities require a much lower percentage of fully adaptable units ranging from 5-25%. In all these examples, a jump to require 100% of new units to be fully adaptable would be a substantial change, and it would be critical to phase-in much higher standards.

Earthquake Design

UDI recognizes that in B.C. we are in a seismic zone, and our members want to make sure their buildings are safe in the event of an earthquake. Areas such as the Capital Region, Richmond and Delta experience increased challenges with earthquake preparedness in new buildings, especially in relation to the rest of Canada. These are also some of the areas with the greatest need for new housing in the province.

In our April 26th meeting with the BSSB, it was clear that the Ministry is still understanding what the impacts of new Earthquake Design requirements would be. The timeline for new seismic requirement implementation is short, for both the Ministry and the industry to identify the complete implications of the proposals. Some members have estimated that concrete core sizes will need to increase by 20-30% for high-rise buildings. This directly conflicts with municipal requirements constraining floorplate sizes, resulting in less liveable space in each building. It will take time for local governments to adjust requirements to adapt to larger building cores without compromising housing delivery. ***UDI recommends that the Earthquake Design changes be delayed to allow for further analysis on the impacts as well as potential mitigation measures.***

For Part 9 buildings, the Province is recommending the implementation of the 2025 *NBC* seismic measures, so the timing of the implementation does not need to align with the Harmonization Agreement. UDI also suggests a delay for the Part 3 changes, and there is a precedent that has been established in the treatment of other harmonization changes. It is noted on the Province's website that changes to the *NBC* and *National Fire Code* (*NFC*) requirements for Large Farm Buildings and Home-Type Care Occupancies are being delayed to allow for impact analysis.

In addition, the public consultation information provided by BSSB focused on the changes for Part 9. We are concerned that some of our members who build Part 3 projects will be surprised by what will be substantial changes in some communities compared to the current requirements that will add significant costs to projects as well as reduce the square footage of buildings, and impact the overall affordability of new housing.

Implementation Approach

UDI has significant concerns regarding many of the proposed accessibility and seismic changes. We believe that there is a need to delay the implementation of both of these provisions in their entirety, despite the Province's commitment to the harmonization agreement. There are aspects of both provisions that may have a limited impact on the building sector, however ***we recommend against the adoption of these types of changes in a piecemeal approach.*** This would result in confusion for builders, consultants and municipalities, as well as a duplication of the Province's education efforts in these critical areas. This underscores our recommendation for the BSSB to

remove these provisions from the changes being proposed for 2023 implementation, to allow for additional time to assess impacts, then implement the changes as a package at a later date.

Mitigation Measures to Protect Housing Supply - Offsets

The Provincial government has made clear their intentions to increase the supply of housing across the province. The Ministry of Housing has announced several initiatives including mandated housing targets for municipalities under the *Housing Supply Act*. These initiatives are critical to meet the current shortfall of housing and incoming demand, work towards increased affordability, and ensure that all B.C. residents have more housing options. In order to do this, it will involve the coordination of all provincial initiatives that impact the delivery of housing, including provisions in the new *BCBC*.

As noted above, increasing accessibility and seismic design requirements in the *BCBC* will have an impact on the amount of housing that can be delivered, and the affordability of housing because of the impacts on costs and densities that can be built. These difficulties will apply to all housing types, including much-needed purpose-built rental housing as well as non-profit housing.

Requiring changes to be made by the end of this year could directly impact certain communities that have been selected as part of the first wave of housing targets. For example, Delta, Saanich, Victoria and Oak Bay, which are in areas where the seismic design requirements will have significant impacts, will need to show progress to increasing the supply of housing in their communities by the end of this year.

Mitigation measures need to be in place to avoid negatively impacting the ability of builders and municipalities to deliver the housing the Province and public are demanding. ***We recommend that these measures be offset by changes to the floor area calculations, exempting additional area required to achieve the new standards.*** However, this may also include the need to adjust site coverage, setbacks and heights, so the additional floor area can be used by proponents.

We recognize that this proposal is beyond the purview of the *Building Code,* but it is not beyond the purview of the Ministry of Housing. UDI also recommends that these offsets and zoning adjustments do not solely become the responsibility of local governments to implement. Municipalities are already struggling to find capacity to streamline processing and increase housing delivery, requiring them to develop individual offsets for these changes would likely strain already overburdened departments. A process that is led by the Ministry would ensure there is a more consistent standard across the Province and would likely result in the changes being approved and implemented more efficiently.

In addition, there are provincial measures that could be explored. This includes tax offsets for purpose-built rental housing that would allow the additional costs incurred to meet new accessibility and seismic requirements to be deducted from taxable rental income over time.

In-Stream Protection

To mitigate the impacts of the new accessibility and seismic requirements, better in-stream protection for projects will be necessary. UDI has long advocated for better in-stream protection for projects when there are substantial changes to any requirements or charges because our members purchase land and make financial commitments early in the development process. It is extremely difficult to make adjustments afterward, which can lead to projects being deferred/cancelled or prices and rents needing to be increased – both of which undermine affordability.

There are additional concerns with the proposed short implementation and weak in-stream protection provisions. Our members were notified of the changes in late April, reviewed the finalized proposals in late May, and will need to implement any changes into their projects by the end of the year. As noted above, there has not been clear communication regarding the drastic impacts of the seismic changes for Part 3 buildings.

Many will not have their Building Permit applications in on time to achieve the proposed in-stream protection. For those who do not make it in time, the implications are serious because the new accessibility and seismic requirements are so drastic, major design changes will be required – including to unit layouts.

We are concerned that pre-sales could be put in jeopardy, particularly with the recent changes to the Policy Statements 5, 6 and 13, under the *Real Estate Development and Marketing Act (REDMA),* which allow the early marketing period to commence after the receipt of Third Reading. Under Policy Statement 5 issued by the Superintendent of Real Estate (BCFSA) pursuant to *REDMA,* if as a consequence of the issuance of a building permit a unit that has been pre-sold requires material changes to its layout or size (or if the layout or size of a major common facility, or the general layout of the development, is materially changed) then the developer would need to inform the purchaser and the affected purchaser(s) would have the right to rescind (cancel) their contract. Project financing is typically dependent on securing pre-sales and cancellations could ultimately undermine the agreements with lenders, threatening builders' ability to complete new housing developments. In addition, the higher costs of the changes, which cannot be recovered from pre-sale purchasers, may make projects unviable – again resulting in cancellations.

We would also be concerned if the design changes were so drastic that other municipal approvals would need to be revisited as this would further delay projects – especially given the capacity constraints in local government planning and building departments. The potential impacts of the impacts on pre-sales and municipal approvals is another issue that the Ministry needs to assess before it proceeds with accessibility and seismic changes.

UDI would support changes to the current approach to in-stream protection to allow applications which have submitted with Development Permits on or after the date that these changes are effective to proceed under the current BCBC. Again, it would not be appropriate to rely on local governments to develop their own policies for in-stream protection because it would result in a patchwork of different approaches – changes to the in-stream protection requirements should be made at the provincial-level.

Conclusion

UDI would like to thank you again for meeting with our members to discuss the proposed changes. We are deeply concerned about the changes to the accessibility and seismic design requirements. -The timeline for implementing them is short, with new code changes scheduled to be in effect by the end of 2023. Given the substantial impacts that these changes will have on building designs, we believe that this timeline should be extended, and recommend that the BSSB allocate more time to review them and explore potential solutions to the challenges we have outlined, including having floor area exemptions and improved in-stream protections for projects. UDI would be pleased to work with the Branch and other stakeholders to navigate the best way forward to harmonize the *BCBC* with the *NBC*, while mitigating the impacts on our collective ability to build new homes throughout British Columbia. Please do not hesitate to reach out should you have any questions about our concerns and recommendations.

Sincerely,

Anne McMullin
President and CEO, Urban Development Institute

Sefton Hyde-Clarke
Secretary, Canadian Board for Harmonized Construction Codes
Manager, Code Development System, Codes Canada
National Research Council Canada
1200 Montreal Rd,
Ottawa, ON K1A 0R6

Re: *Phase 2 Consultation on the Draft Policy Framework for Climate Change Mitigation*

Dear Sefton Hyde-Clarke:

The Urban Development Institute Pacific Region (UDI) is pleased to provide comments on the second phase of the consultation on the *Draft Policy Framework for Climate Change Mitigation*. Our comments will be primarily focused on operational greenhouse gas (GHG) emissions because the documents provided indicated that "… *the focus of policy development at this time is on operational GHG emissions, and policies that pertain exclusively to embodied GHG emissions will be addressed in the future*," and we provided comments on embodied carbon in our response to the first phase of consultations.

As stated in that letter, UDI is pleased that the Canadian Board for Harmonized Construction Codes (CBHCC) proposals align with British Columbia's *Zero Carbon Step Code* (*ZCSC*), and we ask that this approach continue. Any significant changes would result in confusion for the building sector, and undermine the research, education and training that have and will continue to be made throughout the Province.

UDI is not opposed to incorporating the reduction of operating GHGs as an objective in the National Model Codes, as it is already an objective in the *BC Building Code* (*BCBC*) through the introduction of the *ZCSC*. Our concerns are primarily with embodied carbon as we believe that other approaches should be utilized before changes are made to the National Model Codes. As such, we are pleased that the focus of CBHCC at this time is on operating emissions, and that the Board recognizes there is still work to be done before embodied carbon emissions can be addressed.

In addition, we support the flexibility of the tiered framework being proposed that would allow provinces to determine the best path forward to reduce emissions and allow them

to use "… *a variety of policy instruments, including the National Model Codes*," to meet their objectives. This is especially important to British Columbia where BC Hydro grid will soon have zero emissions, and we have extensive Renewable Natural Gas resources.

This flexibility would be enhanced if the provinces could also establish their own emissions factors. In some regions of B.C., the local electricity grid has higher emissions than natural gas. There are also district energy systems and requirements that new buildings be connected to them. They may not be zero emission systems by the time the *2025 National Building Code* is implemented in British Columbia. The issue has been addressed through the *ZCSC* by allowing local governments to establish the emissions factors. We recommend that this option be allowed to continue under the National Model Codes.

UDI strongly supports the work of the CHBCC to address Policy Element 5 – the impact on affordability – and conduct an "… *impact analysis that considers the costs and benefits of the proposed code changes* …". This work needs to include lifecycle analyses and payback periods as well as the initial capital costs of requirements. The latter is important because there may be a split incentive issue as many builders do not retain ownership of their projects after construction and many initial purchasers do not own their units long enough to benefit from the lifecycle savings.

CHBCC also discusses in the updated *Policy Considerations for Developing and Implementing Greenhouse Gas Emissions Provisions in the National Model Codes Paper* that the "*Optimization of energy tiers and GHG tiers within the P/T context should be a consideration in adoption*." This could be another approach to improving the affordability of housing, however payback periods and the split incentive issue needs to be considered.

When the *Energy Step Code* (*ESC*) was developed in B.C., the primary objective of local governments was reducing carbon emissions. However, this could not be directly addressed because the *BCBC*, at the time, only had energy efficiency as an objective – not GHG emission reductions, and fuel sources were viewed as a non-code issue. The *ESC* was used to indirectly reduce emissions by reducing the amount of energy needed to operate buildings.

With the introduction of the *ZCSC* that will directly reduce emissions, it is not clear if it is necessary to go to the highest steps of the *ESC* (i.e., Step 4 for Part 3, and Step 5 for Part 9). This is critical because at the highest steps there are significantly more challenges and costs, and it is not clear what the payback periods would be. If they are long and the split incentive issue is not addressed, this could undermine the delivery of new housing. In addition, projects built to the highest steps look very different from current designs, and it is not clear how much public and market acceptance there will be of buildings with less glazing, larger floor plates, fewer balconies and less articulation.

The costs to maintain the current architectural look of buildings and achieve the highest steps are much more substantial.

Finally, affordability can be improved through Policy Element 8 – "*adoption and implementation considerations including market readiness, training, capacity-building* …". We ask that issues such as split incentives be addressed through this work and that the CHBCC and all governments review the use of incentives and financial mechanisms to help the building sector meet the new requirements.

As part of the Policy Element 8 work, senior governments should also consider industrial policies, so building materials and components needed to meet the requirements, such prefabricated mass timber panels and heat pumps, can be manufactured sourced in Canada. This would support the statement in the *Policy Considerations Paper* that the "*Implementation of new GHG emissions objectives and requirements will result in increased commercial activity in the construction sector, supporting a low-carbon economy while helping to achieve GHG emissions reductions goals*."

Thank you for involving UDI in your consultation process. Again, we would like to reiterate our support for the requirements being developed by the CHBCC being aligned with British Columbia's *ZCSC*, and we would like to continue to be involved in the process as this initiative moves forward. If you have any questions about our comments and recommendations in this letter or our previous correspondence, please do not hesitate to contact us.

Sincerely,

Anne McMullin
President and CEO, Urban Development Institute

Morning,
I believe Penticton is strongly positioned for infill “missing middle” development.

Watching this industry for almost 30 years and a bit dis-heartened to see any time gains made in one area - it is quickly eaten up in speculation and increased cost in a super-heated market.

Finding that sweet spot of health, safety and long term sustainability with economic feasibility is something needing continuing collaboration.

Sincerely,

Ken Kunka, AScT RBO

Energy Step Code Council

Pt 3 & Pt 9 Non-residential Technical Subcommittee Meeting

Date: June 6, 2023, 10-12:30 p.m.

Participants

Elisabeth Baudinaud, Community Energy Association
Luiz Bezerra, Passive House Canada
Norm Connolly, City of Richmond
Patrick Enright, City of Vancouver
Greg Gerke, Townline Construction
Jordan Levine, architect of grocery stores
Maura Gatensby, AIBC
Rachel Buskie, CEA
Rick Bertolussi, TL Housing Solutions (representing UDI)
Stephen Gatz: Whirlpool (ventilation products)
Pete Koepfgen, FortisBC
Nicholas Heap, City of Richmond
Curt Hepting, EnerSys
Pete Koepfgen, Fortis BC
Toby Lau, BC Hydro
Wilma Leung, BC Housing
Charling Li, City of Vancouver
Susan MacDougall, Focal Engineering
Greg McCall, City of Vancouver
Adrian Mohareb, CAS
Roberto Pecora, ZEBx
Kevin Ramlu, Township of Langley
Ajeen Surendran, Township of Langley
Danny Taylor, Focal Engineering
Ralph Wells, UBC
Scott Williams, BSSB

Introductions

News

FortisBC has an incentive for local governments to decarbonize. Contact Pete K for more details.

Presentation: High process loads (Curt Hepting, Principal, EnerSys Analytics)

- Grocery stores are regulated by Step Code, but must meet TEUI of 145-170 in the coldest weather region. Grocery stores do not come close to meeting those targets.
    - E.g.: An all-electric grocery store, top 10% of all your peers, they'd be lucky to get 350 (double the requirement).
- NECB doesn't have regulation on low-temp refrigeration equipment. That'd be a neutral item. A big neutral item like cooking. It'd show a large per cent savings there though we know there are potential for savings there.
- If they were just dry goods that'd be one thing, but the market wants hot meals, so more energy is being consumed to offer that service.

Potential solutions:

Idea 1: Similar to A and B type occupancies, we could pull the grocery store occupancies out for intensity metrics. And just have them follow NECB as an alternate compliance path. Tiers are always an option.

Idea 2: I would suggest rather than trying to pull sub-occupancies out, perhaps excluding process loads from the TEUI? (one thumbs up)

- I concur with Idea 2. Step Code is about efficiency of mechanical systems. We're talking about process loads (production equipment), and presumably that's covered by the Energy Efficiency Act. If they were just exempted as process loads and leave it to the Energy Efficiency Act, we could still have an energy efficiency BUILDING but exempt the production equipment. (one thumbs up)
- An extra benefit is that the waste heat/cold from process loads could be then captured and reused as needed, making achieving targets easier.
- Compliance concern that if appliances like freezer is replaced, does it need to be permitted (if it were part of TEUI compliance)
- Comment: All grocery stores are different and it's not feasible to include in TEUI as it messes with EUI expectations. Targets weren't made to break that all down. I don't think TEUI should include process loads.
- Note: Any business selling things is an E occupancy, including Costco and other 'warehouse' stores. A warehouse is a place where things are stored , but not sold. The classifications can be awkward for our energy purposes, as they are based on fire risk.
- Potential options: either a) figure out unique scenarios and come up with individual limits (lots of work) or b) try to come up with a reasonable way of breaking out "process loads" that might only work 80% of the time... perhaps some of the more nuances could be addressed with a follow up bulletin?
- Reminder: Next BC Building Code slated for late 2023, and this topic doesn't have to go to public review.

Action: Scott to create a working group to discuss grocery stores and potential synergies in process loads.

- Ajeen S and Kevin R wish to be included.

Presentation: Energy Step Code and small commercial occupancies (Ajeen Surendran, Township of Langley)

- Step Code's hard for them, especially TEDI. Township of Langley did an external study of several building archetype shapes. They also included another scenario with demand control ventilation (not typical). Their baseline is a well-designed building in Langley. With all three scenarios, close to 40 kwh/m2, but target is 30. Adding insulation for these small buildings might not be cost effective. How far should we go? These are the questions we have.
- Bigger the building, easier to meet. Even the previous Step Code metrics, with retail building larger than 2600 sq. m, TEDI was easy to meet. We also modelled two storey retail. Not common, but we did internal modelling.
- With all ECMs for two storey, we could meet the Step Code targets, but not single storey.
- Our conclusion: Revised TEUI targets can be met with better mech systems. But TEDI targets are impacted by area and form. Smaller the area = harder to meet. Squarer building, easier to meet.

Area of exposed surfaces, ventilation and infiltration also impact TEDI. Unknown: airtightness targets. Can these buildings meet 0.2. litres per second per meter squared? No solid answer.

- Township of Langley trying to figure out exemptions as an interim measure for buildings. But the May 1 code changes make that harder.

Comment: Your research matches my experience. Added insulation is not worth it in NPV analysis.

Action: This small commercial topic can be included in another work plan item: zero lot line applications for urban infill.

Presentation: Overheating in Part 3 buildings (Scott Williams, BSSB)

- Scott summarized the proposed change for overheating (cooling for Part 3 buildings). Modifying Part 6 will address Part 3 buildings as it's not conceived of as an energy efficiency issue, but rather a safety issue.
- Proposal: Cooling design temperature of 26 C for at least one living space in each dwelling unit, based on historic weather data in the Code.
- Currently, Energy Step Code occupancies reference City of Vancouver Energy Modelling Guidelines which has an ASHRAE 55 requirement for non-mechanically cooled buildings. Still must iron out how to address partially cooled buildings
- Current engagement feedback favours keeping ASHRAE 55 despite some cooling in one room, as it could still drive passive solutions.
- This is a stopgap approach until a more sophisticated one can be developed.
- Comments from group:
    - National code is considering incorporating future weather files. We haven't gotten there in B.C. We want to harmonize where possible. Even with future shifted climate files, they're still average, not peak events. It's an improvement, but doesn't get us all the way.
    - UBC has new requirements for Part 3 residential construction. We require 2050-shifted files for passive design, similar to CoV. We have both for institutional and residential Part 3 construction, introduced future shifted summer day design temp, 3 degrees higher, representing average condition for 2050.
    - We won't see a ton of construction under this particular version.
    - My interpretation of CoV EMG: any LG could specify future-shifted climate file be used for Part 3 as per CoV for the passive overheating requirement.
    - NRC has developed future SIMULATED weather files, which is different from SHIFTED. The SIMULATED files from NRC still get increased HDD for most part, but maintains those outlying cold events. Pete K agrees with this.
    - Note: UBC requires future-shifted files for overheating analysis. Regular (not future-shifted) CWEC files are used for heating design. CWEC uses long-term weather averages, which is good for evaluating energy efficiency, but less good for modelling for extreme hot or cold events.
    - Compliance would purely be through simulation
    - Question to Scott: could a bulletin or some info to LGs that they have some options that they could adopt could be useful. I support what you're proposing here as a first step in

provincial code. If LGs want to go further, can we support them to use future-shifted files for passive design?
    - Scott: LGs have ability within BCBC to set their own climate data. This is maybe something we could take up with the LGPN.

Action: Scott to provide info to members of the subco regarding how they could become involved in the national system with regards to overheating.

Code digitization update (Scott Williams)

- If you recall BeRT, an online format to input any of the Code related items for EE. Now we're doing the whole Code. We want to streamline permitting. In the future, we'll have BIM elements (Singapore being one) where they integrate building code and BIM software. For timelines: the digitally enhanced Code will be available in 12 months. Compliance tool as well in the next 12 months. A pilot project follows with about 15 jurisdictions. Digitization will take years, maybe up to four, but those are the initial milestones. This doesn't necessarily limit to the Code itself, but also to other permitting, like through Ministry of Water, Lands and Resource Stewardship (WLRS), for those other Ministries that handle permits.
- Note: Some Code topics will go first (climate and energy is one, fire/spatial separations are another)
- Work is happening simultaneously nationally and there is collaboration. BC is going first.
- Would be great to avoid duplication with national efforts.

Part 3 Energy Design Checklist (Susan MacDougall, Focal; Mark Bernhardt, Bernhardt Contracting)

- No major changes. Addition of summary page. Renamed from Report to Checklist to avoid confusion with other Energy Model Report submissions. Better aligned with Part 9 checklist for consistency for AHJ reviews and Vancouver Energy and Emissions Design report. More tooltips. Blank area for LGs to put their logo.
- New Section F. Balance request from AHJ to have more info and not asking modeller for too much.
- Some FAQS: Checklist requirement is up to AHJ; GHGI reporting is not required if ZCSC is not required; Step 2 vs Step 2 (NECB) (the latter replaces Step 1 for public sector building.
- Aiming to finalize by end of June.

City of Vancouver Energy Modelling Guidelines

- Issue: If designers account for on-site renewables that generate electricity, CoV lets you modify the emissions factor. That's not compatible with a static emissions factor in the Code.
- City of Vancouver could maintain this approach, but there are some implications for B.C. Option 1: Issue a bulletin? Provide clarity. Option 2: We also reference only certain sections of the CoV EMG as opposed to the whole set of guidelines.
- For non-Step Code occupancies and following NECB, they have some different airtightness assumptions. NECB isn't as strict for the assumed rate as opposed to COV EMG.

- CoV EMG states that for fenestration used in building, U-value in the model should be representative of the building design. This has created confusion within industry regarding approach and methodology. NFRC is typically used to evaluate the U-value of standard assemblies. To standardize this whole approach, they have standardized test sizes so as not to create an onerous process. Discussions ongoing with Fen Canada, CoV, and EGBC.
- CoV EMGs have instructions regarding de-rating of assemblies when the NECB reference building approach is used for mixed used buildings with Step Code occupancies. With the changes to NECB 2020 and its adoption into the BCBC, derating no longer applies.
- Comment: Should we consider requiring gas appliances to be metred per unit, if provided? To prohibit MURBS with strata paying? That's why fireplaces are being used as primary heating by occupants.

Whole Building Energy Modelling Standard (CSA/ANSI Z5020:23)

- Comment: CSA Z5020. This standard relates to all types of modelling. Including the Step Code, but also ASHRAE 90.1 and NECB. As a BCBC reference standard, all modelling for compliance, it wouldn't necessarily just be for Step Code, as CoV EMGs are. It's a North American standard. Great benefit of a CSA standard, CSA standard team kept us on the straight and narrow. It sets clear expectations and written in correct Code language. Others are recommendations, but clearly not requirements.
- Downside of using CoV EMG: Definition difficulties, and references to CoV policies and processes, and lots of great stuff in there that is "design advice", which is nice, but not so nice in the Code ref standard which sets minimum standard. CSA Z5020 is more rigorously written as a standard for a minimum level.
    - Suggestion: some of the design advice in the CoV EMG should move elsewhere. Ref ASHRAE 90.1 and NECB in Step Code don't have code reference standard.

Updated Subcommittee Work Plan

- Updates to the subcommittee workplan were discussed. Key items identified:
    - Occupancies with high process loads
    - Small commercial occupancies/urban infill projects
    - Clarifying air tightness testing requirements for smaller buildings with larger footprints
    - Future shifted climate files
    - Floor area calculation to be standardized
- Co-chairs will formalize the work plan to be presented at the next meeting.

ED updates and action items

From: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
To: Chase, Andy HOUS:EX <Andy.Chase@gov.bc.ca>, Laboucane, Shannon HOUS:EX <Shannon.Laboucane@gov.bc.ca>, McCrae, Aura HOUS:EX <Aura.McCrae@gov.bc.ca>, Grass, William HOUS:EX <William.Grass@gov.bc.ca>

Sent: June 22, 2023 4:11:20 PM PDT

Hi All,

Some notes and follow ups from my ED check in. Please find those that apply to you and action as appropriate.

TRAX RFI! ZM will brief ADM tomorrow s.13 s.13 He will check in with the digital team as well.

Access-
s.13
s.13 include in PR briefing if possible? ZM to briefing discuss options with Bindi
PR briefing? Aim for late July. Unless there is new information, proceed as planned with PR items.

CCE briefing? Informed his colleagues PR items are coming, could be some inquiries.

Accessibility legislation and LG 's as designated organizations- possible confusion related to BA and BAGR? LG's have broad discretion on what to put in their plans. One inquiry received so far from nanaimo (SDPR minister's riding). Must be compliant by September this year. May be related to a RHF grant Nanaimo received as well. ZM comfortable with BAGR as is during this LG plan development- aligns with consistency approach.

BCBC
Seismic part 3- **- MRK indicated support for pulling together LG's to encourage them to use tools they have to compensate. Best practice guidance. May consider similar approach with accessibility. Solutions will likely be communication, not technical changes.** Will – I have asked for further support on this so you can pass the baton after the EGBC phase.

UDI expectation of communication of impacts of NBC changes- BC reliance on NBC PR- thoughts? OK to continue to work with national system PR- review post project- did a meeting with step code council to discuss providing feedback to carbon national standard- this could be a model

PR- comments re National code- s.13
s.13 no individual disposition of comments tracked, summary report of feedback provided internally- ok

EGBC SRG- thanks to ZM for speaking to the use of these. How do we keep moving forward? Speaking to RPLC on this. Working to gain support for SRG in municipalities. Action- PM will send a draft bulletin for us to review and discuss with ZM **- ok aligns with AEB strategy of no code yet but endorse best practices. JJ to relay to PM at EGBC (done)**

Hi Julia,

I can work with you on the newsletter. In July we'll have two newsletters going out – one on July 11 and July 25. The content usually has to be finalized by the Friday before (i.e., July 7 and July 21). Do either of those work for you in terms of timeline?

Best,
Jenny

Hugo, we have a newsletter going out to members a week Tuesday (June 27th). Is there anything that we can share with our members about this – or should we wait until the process is further along?

Subject: Follow-up: June 12th Digital Innovation in Housing Construction Workshop

Greetings everyone,

Thank you for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction. We appreciate the perspectives and insights you shared with us, and we are hard at work analyzing your feedback.

For those who would like to provide additional feedback, please note that the Mural board we used on Monday is now closed. We are still accepting feedback until EOD Wednesday June 21, 2023, via two methods:

1. An after-hours self-serve Mural board (link) that contains both breakout activities
2. Email to the building.safety@gov.bc.ca

We are working to share a summary report of the engagement in the coming weeks.

Have a great day,
Zachary D. May, MBA
Executive Director

ESC Targets for Smaller Part 3 Non-Residential Buildings

Presented by Township of Langley

Township of Langley
Est. 1873

Ajeen Surendran – Building Energy Specialist
Kevin Ramlu – Green Buildings Manager

Tuesday, June 6th, 2023

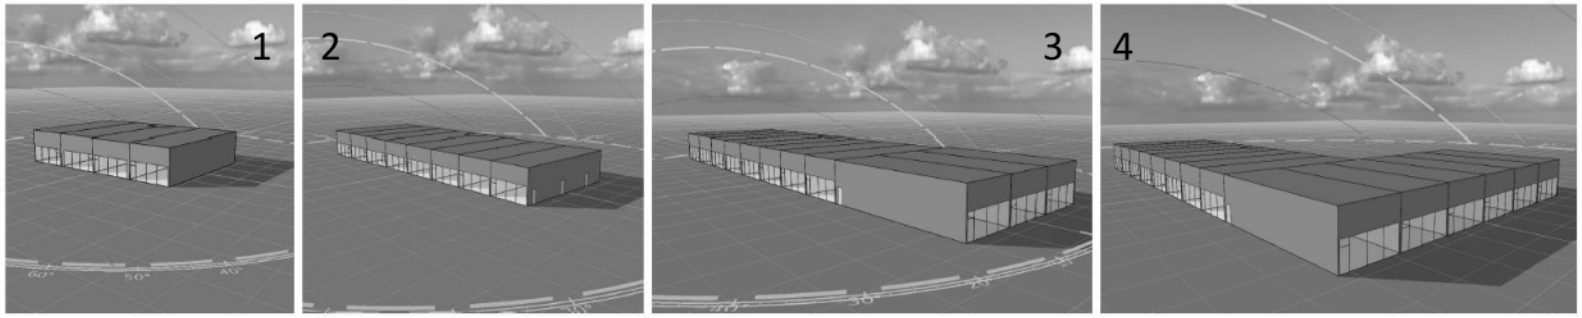
ESC Adoption for Part 3 Non-Residential

- For context, Step Code performance requirements for Non-Residential are provided below

Building Type	Step	TEUI	TEDI
Office	~~1~~	~~Part 8 of NECB~~	
	2	110	30
	3	100	20
Group D Other Business & Personal Service or Mercantile	~~1~~	~~Part 8 of NECB~~	
	2	145	30
	3	120	20

Modeling Study

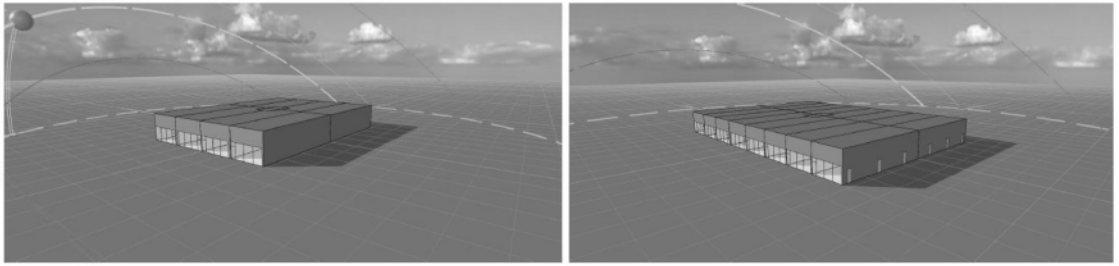
Scenario 1
Varying Area →
2& 3 are commonly seen in the Township



Archetypal CRUs (Scenarios 1, 3: 575 m^2, 1136 m^2, 1557 m^2, 1977 m^2)

- An energy modeling study was conducted by an external consultant
- Three different Scenarios were studied
- **Scenario 3** – Demand Controlled Ventilation (Typically not designed in small retail buildings)

Scenario 2
Varying Geometry↓
Not common



Archetypal CRUs (Scenario 2: 1150 m^2, 2272 m^2)

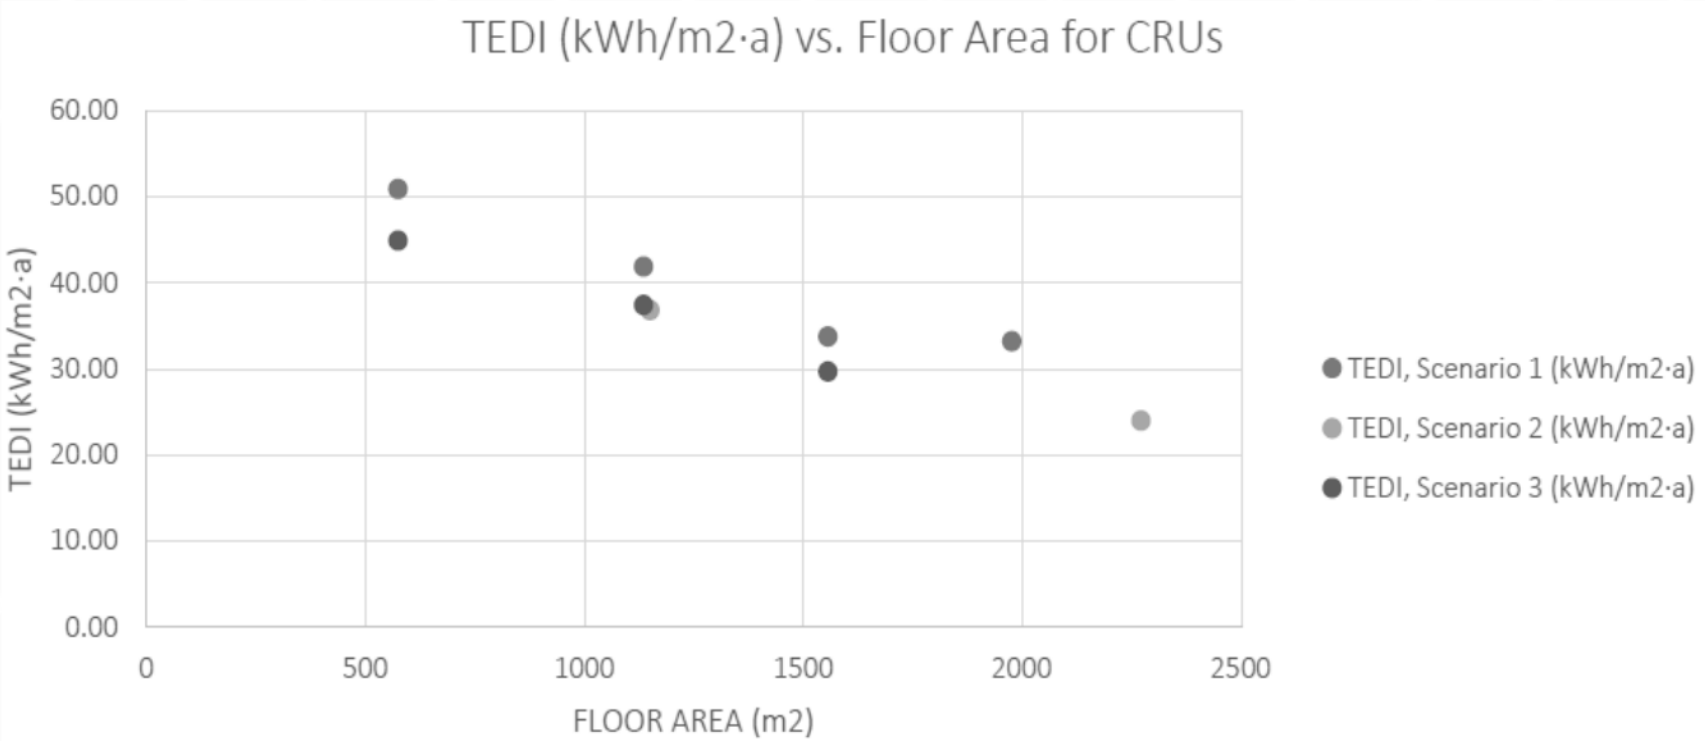
Modeling Study – Inputs

The baseline is a well-designed building, in Langley

Building Component	Performance
Walls	R27; Effective R13
Roof	R40;
Windows	USI1.3 SHGC 0.35
FDWR	20%
Infiltration (Above grade walls only)	0.2 l/s/m2 (CoV Guidelines)
Heating and Cooling	RTU - Gas furnace (80%) and DX Coil (COP3.61)
Ventilation	HRV 70% Effectiveness

*These inputs are constant for all scenarios

Modeling Study - Results



Internal Modeling Study

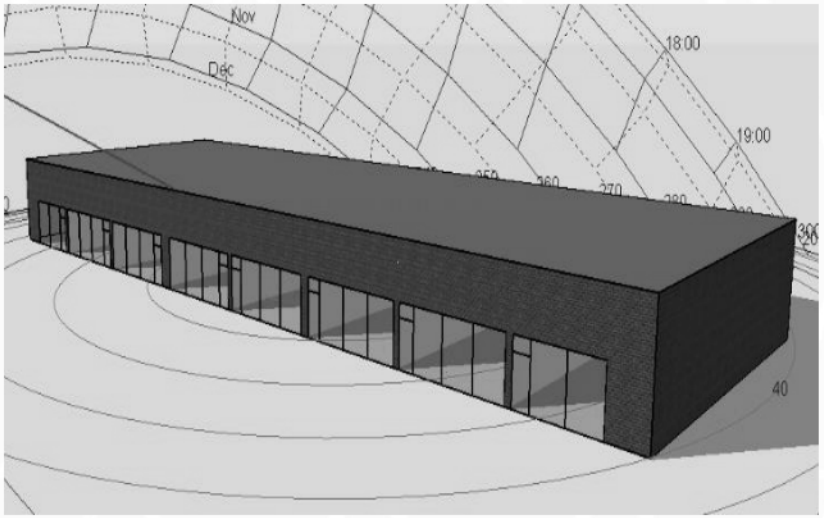


Figure 1: One-Storey Retail

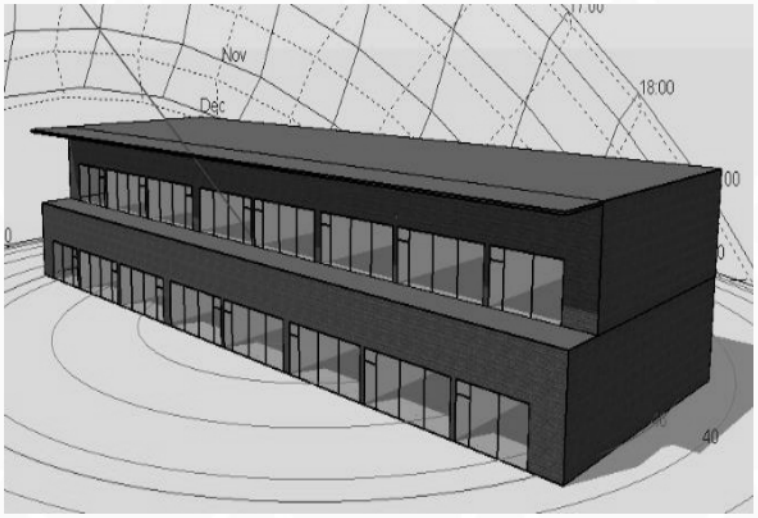

Figure 2: Two-Storey retail

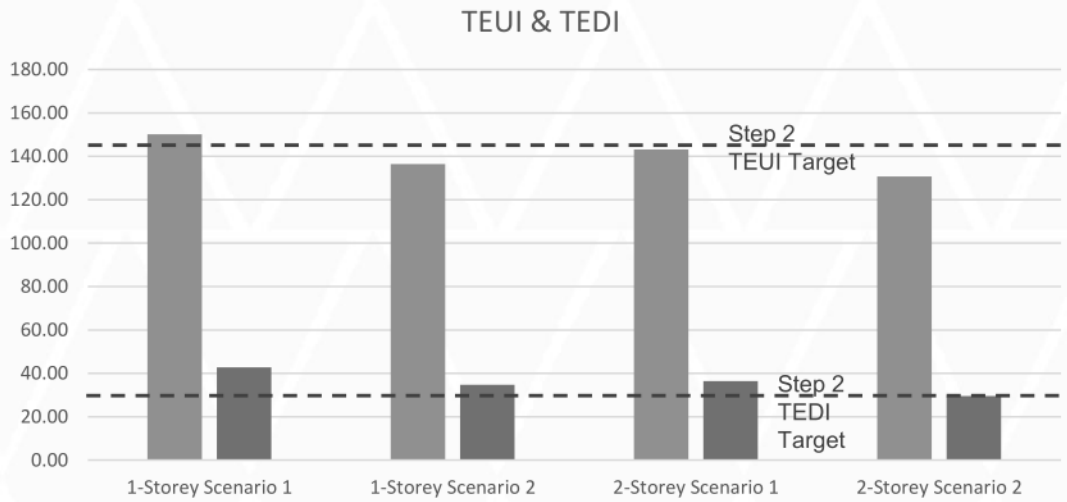
Internal Modeling Study – Inputs

Building Component	1 Storey – Scenario 1	1 Storey – Scenario 2	2 Storey – Scenario 1	2 Storey – Scenario 2
Walls	R27; Effective R13	Effective R15.6 (RSI 2.75)	R27; Effective R13	Effective R15.6 (RSI 2.75)
Roof	R40;	R50 (RSI 8.8)	R40;	R50 (RSI 8.8)
Windows	USI1.3 SHGC 0.35		USI1.3 SHGC 0.35	
FDWR	20%		17%	
Heating and Cooling	RTU - Gas furnace (80%) and DX Coil (COP3.61)		RTU - Gas furnace (80%) and DX Coil (COP3.61)	
Ventilation rates	210 l/s per CRU	140 l/s per CRU (Min required per ASHRAE 62-2001	210 l/s per CRU	140 l/s per CRU (Min required per ASHRAE 62-2001
Ventilation	HRV 70% Effectiveness	HRV 75% Effectiveness	HRV 70% Effectiveness	HRV 75% Effectiveness

Internal Modeling Study – Results

Performance Metrics	Step 2 Target	1-Storey Scenario 1	1-Storey Scenario 2	2-Storey Scenario 1	2-Storey Scenario 2
TEUI (kwh/ m^2 .yr)	145	150.10	136.45	143.20	130.67
TEDI (kwh/ m^2 .yr)	30	42.72	34.73	36.41	29.60
GHGI (kgCO2e/ m^2 .yr)	NA	11.28	9.44	9.87	8.30
Step Code targets met		Failed	Failed	Failed	Passed



Conclusion

- Revised TEUI targets can be met with improved mechanical system efficiencies.
- TEDI targets are impacted by:
  - Area and form – The smaller the area, the harder to meet, the “Squarer” the building, the easier to meet.
  - Area of exposed surfaces.
  - Ventilation and infiltration
- Unknown factor – Airtightness targets – can these buildings meet the 0.2 l/s/m2?

Date	2023-05-01

Step Code Summary

Occupancy

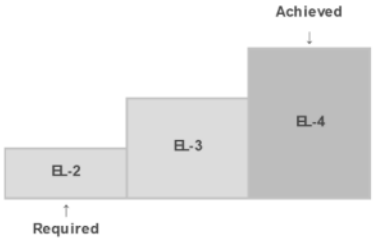
Group C - Other Residential

Energy Step Code

Step Required	Step Achieved
Step 3	Step 3

Zero Carbon Step Code

Level Required	Level Achieved
EL-2	EL-4



Summary for Mixed-Use Buildings

Additional detail provided below for projects with more than one occupancy class (i.e. Section B, or multiple Section C occupancies) or zero Step Code occupancies (i.e. Section B only).

	Whole Building Requirements		
	TEUI (kWh/m²/yr)	TEDI (kWh/m²/yr)	GHGI (kg CO₂e/m²/yr)
Blended Requirements	128	31	7.7
Performance Achieved	78	28	2.0
Does Building Comply?	YES	YES	YES

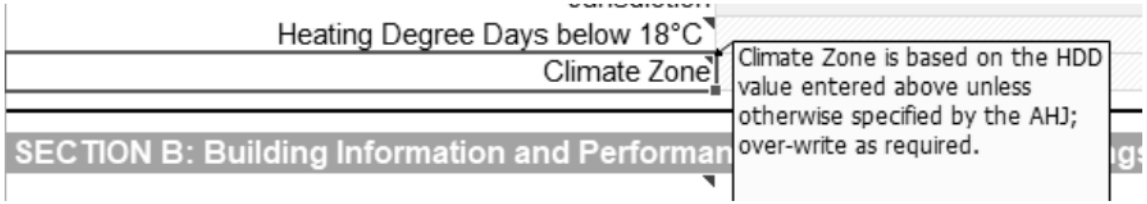
Occupancy	Energy Requirement	Zero Carbon Requirement
Group A2 - Assembly (not	Step 2 (NECB)	-
Group C - Other Residential	Step 3	EL-2

	Step Code Portion Requirements		
TEDI Requirement	-	30	-
TEDI Achieved	-	26	-
Does Building Comply?	-	YES	-

BC Energy Step Code - Part 3 Energy Design Checklist v3.0 BETA

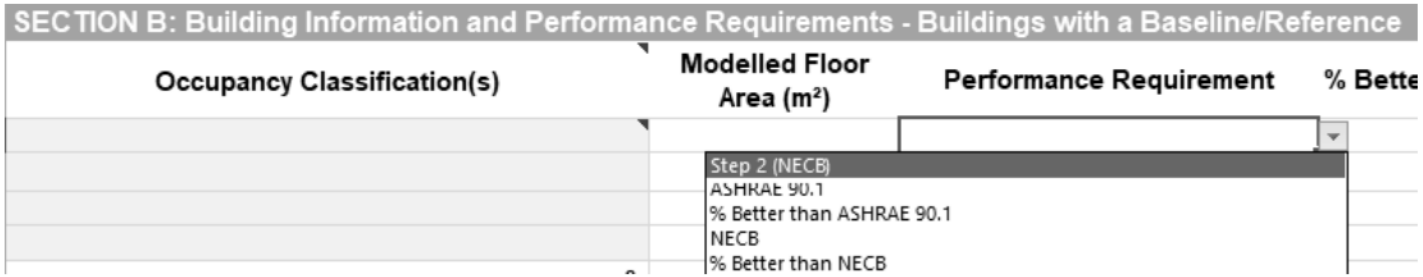
Checklist Tab

More extensive of popup tool tips



Requirements reflect BCBC Revision 5

- Not intended as backwards compatible or for buildings without Step Code occupancies
- No more option for Step 1 compliance for Group C, D, E



Checklist Tab cont'd

GHGI determined by Emissions Level (EL) and occupancy instead of manual input

Occupancy Classification(s)	Modelled Floor Area (m^2)	Step Required	GHG Emissions Level	Ref Rez
Group C - Other Residential	4,000	Step 3	EL-2	
			N/A EL-1 EL-2 EL-3 EL-4	
Total Modelled Floor Area (m^2)	**4,000**			**Area**

Elec/gas emissions factors (EF) from BCBC instead of CoV Guidelines

- Other fuel EF must be determined to the satisfaction of the AHJ, including district energy

Expanded Emissions Factor & Renewable Energy section

Description	Emissions Factor ($kgCO_2e/kWh$)	Reference/ Source
Electricity	0.011	BCBC Division B Subsection 10.3.1.3
Natural Gas	0.180	BCBC Division B Subsection 10.3.1.3
District Energy System		
Other 1		
Other 2		
Other 3		

Tweaks to Overheating and Corridor Pressurization sections

Modelled Inputs Summary

Section F

Intent

- Additional inputs to assist AHJ high-level review (requested)
- Doesn't replace the modeller's detailed energy report
- Balance between asking for too much, and requesting information to inform future code

Key Changes

- References to key documents from other disciplines that the model is based on
- Added inputs for assumed and tested (as-built) modelled infiltration rate
- Room for more specific HVAC description

FAQs (so far)

Where is the Checklist required?	Up to AHJ
Is GHGI reporting required if SCSC is not?	May still be entered, ZCSC adoption voluntary by AHJ
Step 2 vs. Step 2 (NECB)	Step 2 (NECB) replaces Step 1 for Public Sector building types
Where to send feedback?	Building and Safety Standards Branch at building.safety@gov.bc.ca

Thank you!

Greetings everyone,

Thank you again for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction.

Attached is the *Ministry of Housing – Digital Innovation in Housing Construction, What We Heard Summary*. It also includes the Ministry's key engagement activities planned over the summer as we prepare to move into our product development stage this fall.

We really appreciated your participation and look forward to continuing to collaborate on this important work.

Wishing you all a safe and happy weekend!

Best,
Zachary D. May, MBA
Executive Director

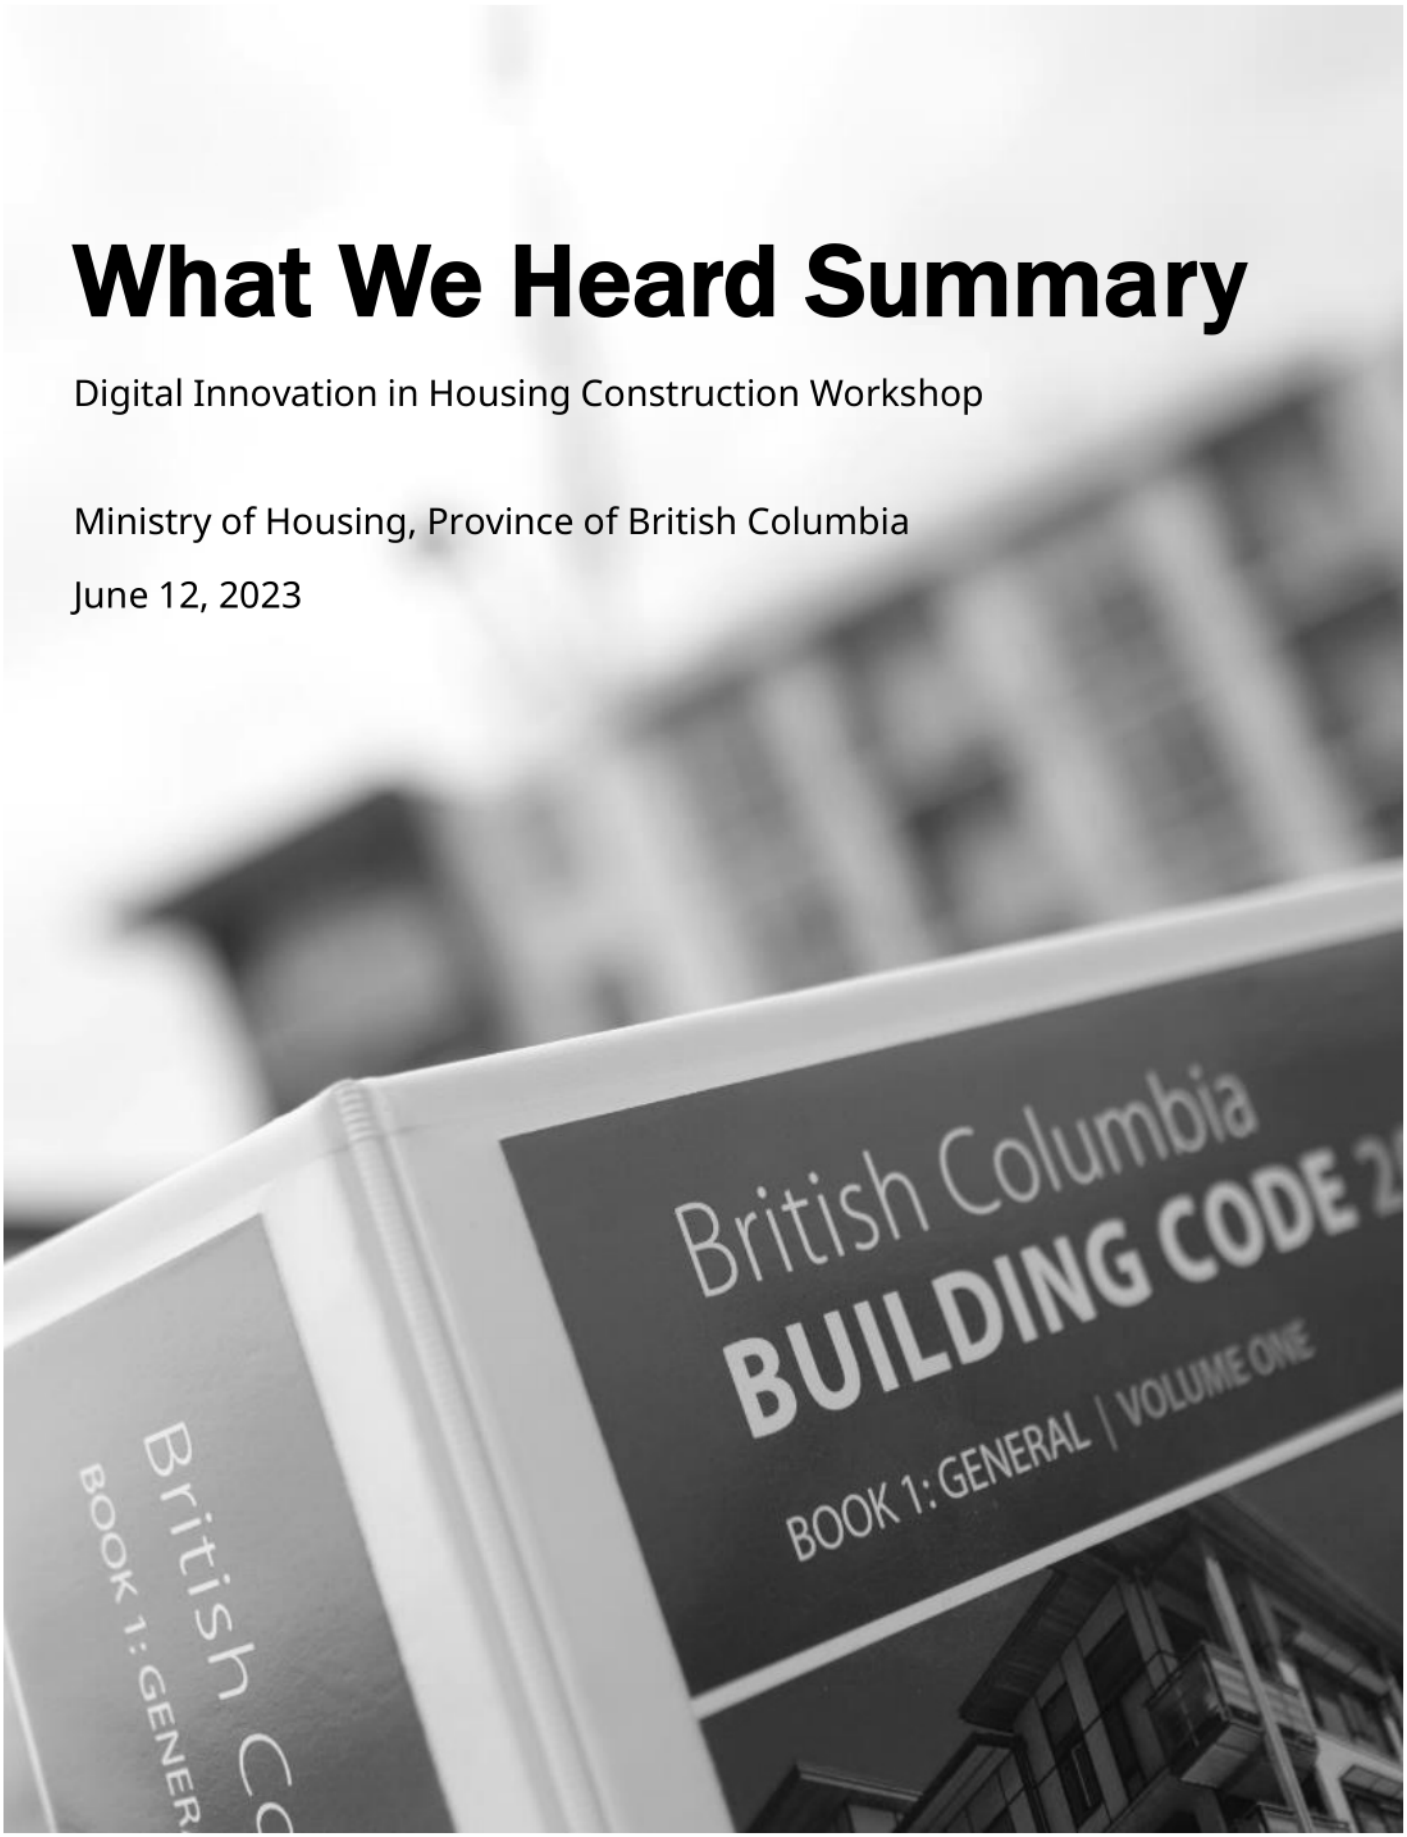
What We Heard Summary

Digital Innovation in Housing Construction Workshop

Ministry of Housing, Province of British Columbia

June 12, 2023



Land Acknowledgement

We acknowledge with respect and gratitude that this report was produced on the territory of the lək̓ ʷəŋən peoples, known as the Songhees and Esquimalt (Xwsepsum) Nations. Our virtual sessions brought together participants from all across the province, and we would like to acknowledge the many First Nations and Métis Charter Communities throughout B.C.

Executive Summary

Through the 2023 Homes for People plan, the Ministry of Housing committed to making B.C. a North American leader in digital permitting and construction. The focus of this work over the next three years is on modernizing housing permitting and approvals by digitizing the BC Building Code, advancing the adoption and integration of digital permitting and construction processes across the housing sector, and supporting industry adoption of new collaboration technologies that enable project teams and regulators to work together.

On June 12th, 68 external partners attended the Ministry of Housing's (HOUS) Digital Permitting Workshop to discuss the challenges users experience in the housing permit process and opportunities for digital tools to support improvements. Workshop participants included local governments, the construction industry, Indigenous communities and organizations, academia, and independent partnering organizations.

Key Engagement Themes

- The issues present in the digital permitting ecosystem have interaction effects that make the issues worse (e.g., lack of staff and confusing processes puts even more pressure on staff).

- Using technology is not the desired outcome of this work; it is the use of technology to effectively address challenges that slow down building permitting processes.

- During this transformative work of building permitting, there is an opportunity to make the system more capable to handle future changes and innovations.

- There is a lack of data around building performance, permitting times, etc. – this is needed for evidence-based decision making in process improvement.

- Local governments are seeking peer learning and collaboration spaces. These spaces should also bring local government and industry together.

'[A] builder's worst enemy is the unknown.'

---- workshop participant ----

Moving Forward

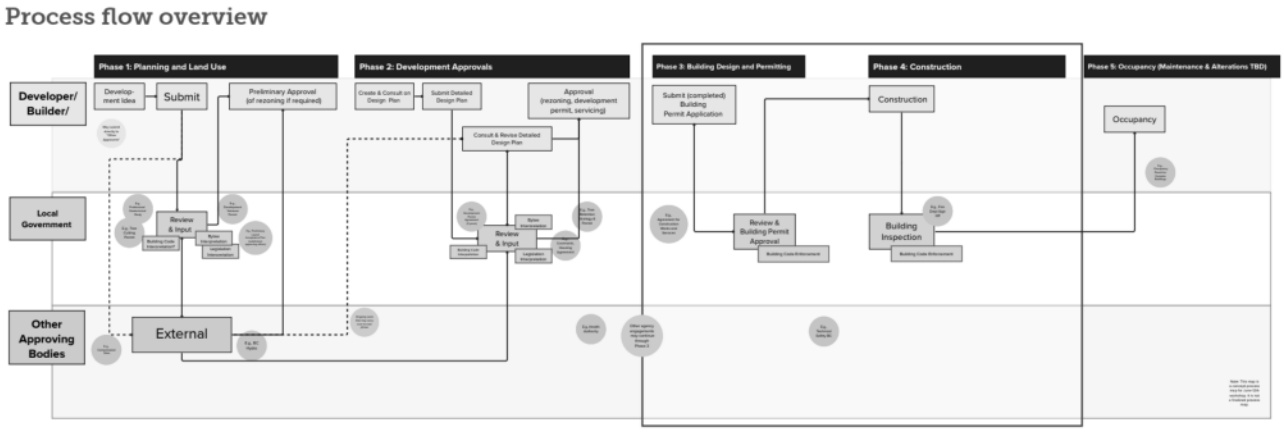
- Create a communication channel for the June 12 workshop participants to share information, lessons learned and to provide ongoing updates.
- Communicate the full governance structure for engagement.
- Identify 15-20 partner jurisdictions for pilot implementation of the digital permitting tools.
- Conduct service design research.

What We Heard

Pain Points and Opportunities

During the first breakout session, participants were asked to identify key pain point and opportunities during the housing development process, with a primary focus on building design and permitting stage and construction phase.

Table 1: Process Flow Overview



Note: This map is a concept process developed for the purposes of generating discussion during the June 12th workshop. It is not a finalized process map.

Phase 1: Planning and Land Use, the main need for improvements identified was for pre-applications and preliminary approvals and improvements to the collaboration and communication of the internal local government departments and external approvals process of other approving bodies (e.g., provincial approvals and technical studies such as geotechnical).

Phase 2: Development Approvals, one of the biggest challenges participants identified was tied to consistency and predictability and the need for transparency on approval timelines and where applications are at in the development process. Participants proposed working toward improvements to the review and input process (e.g., harmonized forms and checklists) and to the communication sequencing by other approving bodies (e.g., linking with prefabrication).

Phase 3: Building Design and Permitting, this phase is often circular rather than linear. Incomplete applications and the requirement for resubmission was the biggest pain point identified for this phase as well as the shortage of building inspectors and a high staff turnover. Suggestions were made to clearly define what information is required in building and development permit applications, and what constitutes a complete or acceptable submission.

Phase 4: Construction was seen as providing opportunities for automation and more reliance on certified professionals. The need for improved coordination of construction and inspection was identified as well as the coordination of professionals. Inconsistent building inspection standards[1] and interpretation were also identified as a pain point.

Phase 5: Occupancy, there appears to be an issue with conditional occupancy and the closing permit and title registration process.

Visioning – Opportunities for Digital Tools

During the second breakout session participants were asked to take a deeper dive into current challenges and priority opportunities for digital tools including visioning their ideal permitting experience, process efficiencies, how and where data may be shared meaningfully and collaboration opportunities to support BC becoming a North American leader in permitting and construction.

Table 2: Opportunities for Digital Tools – Questions and Responses

Question	Response

What outcomes would you expect to see from an improved process?
 	
Describe the ideal permitting experience.
	• A more simplified process with a customer service and user centered focus on user needs (e.g., user journey, concierge service, pre-application, and progress site meetings, etc.) with one single source of information on development guidance, and all necessary partners at the table to resolve issues
	
	• Reduce paper applications, however, in some circumstances paper application or hybrid systems may be required.
	
	• The ideal permitting experience would save costs, time, and reduce duplication by:
	  ○ less complex with fewer steps
	  ○ easier to understand for applicants and elected officials.
	  ○ more consistent (e.g., regional scale) and predictable
	  ○ provide clear expectations on requirements and timelines (e.g., real-time updates, tracking)

What would make the process more efficient? **Identify barriers that need to be**	• The participants focused on the front end of the development process and identified a need for a stronger requirement for pre-screening to ensure only complete application are submitted with an option for an automated intake and pre-submission check. • A more efficient and consistent process would also provide the opportunity for concurrent review of zoning, engineering and plan checking.

[1] allow other than architects to prepare drawings for Part 9 buildings, providing staff training & guidance to be more flexible in accepting of code requirements by distinguishing safety items & non-safety items.

Question	Response
removed to help people build homes.	• Labour shortages (particularly for building inspectors) across all the activities under the housing construction ecosystem. • Participants also identified a need for step-by-step guidance particularly for smaller local governments and builders, providing pre-approved design plans that meet zoning and for renovation projects.
How and where data might be shared meaningfully to improve the process? **What approaches might not work and why?**	• The participants focused on the quality of applications and the need to understanding the workflow based on project types and developing customer specific resources. • Sharing of review software resources, staff training and a problem-solving focus before construction occurs (e.g., insights from the field, process knowledge, common alternative solutions, technology) • Training for technology is needed for all experts across several sectors, participants pointed out that is no longer sufficient to have proficiency at a role without the ability to communicate digitally or use time-saving digital tools. • Specifically related to data, participants discussed the need to determine what data is required (e.g., geo-spatial information) and the usefulness of a provincial data dictionary (e.g., data for evidence-based decisions, data on covenants, floodplain information, improve BC Hydro data sharing).
What work are you doing within your organization that supports BC becoming a North American leader in permitting and construction?	• Needed improvements to inter-municipal communication, collaboration, and partnerships, to local government collaboration with industry, applicants, peers, and educational institutions (e.g., UBCM, contractor database, virtual support). • Support for a stronger focus on a professional expertise reliance model for complex buildings.
Where can the Ministry of Housing support and make meaningful change in the process?	• To make meaningful change in the process was focused on providing education and best practices (e.g., knowledge sharing for building officials, technical sessions), and guidance[2] provincial liability protection, stable innovation funding, and information on legislation (e.g., FAQs on legislative changes).

[2] 'must-do' list for permitting, 'how the city development process works', building requirements, workflow tools, performance measures, updating provincial guidance, definition of terms dictionary, pre-approved software. etc.

Question	Response
	• Strong and ongoing interest from participants in seeing process efficiencies also applied to the provincial approvals processes specifically related to contaminated sites, the Agricultural Land Commission, archaeological sites.

Moving Forward

The workshop generated interest and general support for Provincial action in the digital innovation space. Over the summer, the Ministry will continue to build this momentum by:

- Creating a communication channel for the June 12 workshop participants to share information, lessons learned and to provide ongoing updates.
- Communicating the full governance structure for engagement.
- Identify 15-20 partner jurisdictions for pilot implementation of the digital permitting tools.
- Conduct service design research.

Appendix: Workshop Agenda and Participants

Workshop Agenda

Date: June 12, 2023
Time: 9:00 a.m. to 3:00 p.m.

Time	Activity
9:00 AM – 9:20 AM	Welcome and Indigenous Opening
9:20 AM – 9:30 AM	Warm Up: Share current challenges and opportunities for digital tools
9:30 AM – 10:30 AM	Speakers and Q&A • Helen Goodland – SCIUS Advisory • Tim Ryce – City of North Vancouver • Jim Munroe – First Nations National Building Officers Association • Sue Paish – Digital (formerly the Digital Technology Supercluster) • Jennifer Anthony – Ministry of Water, Land and Resource Stewardship • Zachary May – Ministry of Housing
10:30 AM – 10:45 AM	*Coffee / Screen Break*
10:45 AM – 11:40 AM	Activity 1: Explore current ecosystem map to validate information and identify current pain points
11:40 AM – 12:00 PM	Activity Report Back
12:00 PM – 1:00 PM	*Lunch Break*
1:00 PM – 2:15 PM	Activity 2: Identify opportunities for improvements within the ecosystem
2:15 PM – 2:45 PM	Activity Report Back
2:45 PM – 3:00 PM	Closing and Next Steps

Participants

Local Governments 36 Participants	• Abbotsford, City • Bulkley–Nechako, Regional District (2) • Burnaby, City • Campbell River, City • Coquitlam, City • Delta, City (2) • Fraser-Fort George, Regional District (2) • Kimberley, City • Lake Country, District • Langley, City • Nanaimo, City (4) • Nanaimo, Regional District • Nelson, City	• North Vancouver, City (2) • Oak Bay, District (2) • Port Moody, City • Prince George, City • Quesnel, City • Richmond, City • Saanich, District • Sparwood, District • Summerland, District • Surrey, City • Terrace, City • Vancouver, City (3) • Victoria, City
Indigenous Communities & Organizations 4 Participants	• Aboriginal Housing and Management Association (2) • First Nations National Building Officers Association	• Tla'amin Nation
Engineers, Architects, & Professional Associations 6 Participants	• Building Officials' Association of British Columbia • Engineers & Geoscientists of British Columbia	• Dau Studios (2) • Introba • Jensen Hughes
Industry & Industry Associations 11 Participants	• HAVAN (2) • Naikoon Contracting • SCIUS Advisory • Syncra Construction • Urban Development Institute	• Applied Science Technologists & Technicians of BC • BC Construction Association • Canadian Home Builders' Association of British Columbia (3)
Academia, Housing Providers, & Other 11 Participants	• University of British Columbia (2) • BC Housing (3) • Digital (2) • National Research Council	• Ministry of Jobs, Economic Development and Innovation • Ministry of Water, Land and Resource Stewardship (2)

Subject: Digital Innovation in Housing Construction

CAUTION: External E-mail.

Greetings everyone,

Thank you again for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction.

Attached is the
Ministry of Housing – Digital Innovation in Housing Construction, What We Heard Summary. It also includes the Ministry's key engagement activities planned over the summer as we prepare to move into our product development stage this fall.

We really appreciated your participation and look forward to continuing to collaborate on this important work.

Wishing you all a safe and happy weekend!

Best,
Zachary D. May, MBA

Hi Eric,

Please see the request below and attached related to BC Hydro. So far the information coming in has been anecdotal and one off related to issues with BC Hydro capacity and permitting as it relates to getting more housing built.

Could you please put together a list of bulleted examples of communities or regions, and any specific issues or circumstances related to BC Hydro, and the issue Teri has raised. It may be helpful to check in with MUNI/UBCM to see if they have any more specifics… although I don't want the response to this request to drag out so if they don't have it readily at hand move on.

Lori please track.

Thanks - Bindi

Bindi Sawchuk, CPA (she/her)

Thanks Sian, we can have Bindi pull something together - it is both examples of delays, but also needing some shifts in the way BCH approaches the work – ie., I understand they don't proactively service new subdivisions until a certain point in the process, which is an overall delay. I'll get a summary for you. t

To: Magre, Leela <Leela.Magre@bchydro.com>
Subject: Follow up

During the Minister chat yesterday, she indicated that she was continuing to hear from communities on connections/connection timelines and we are wondering if you can make some inquiries with her office to better inform our understanding on which communities or regions, and any specific issues or circumstances, they could cite as examples. This would be incredibly helpful as we are looking to ensure we hit the mark on our planning for UBCM and other municipal strategy work underway too. I know we haven't seen too many escalations come our way lately through the office so we just want to see what we can learn.

Could you assist Charlotte and I in getting more info here?

We have been tracking the BC Hydro commitments on this file through the Energy Step Code Council. Happy to share the details if anyone is interested.

As noted in the letter, we are working on the development of a best practices guide for local governments that would advise them to consult with BC Hydro as they plan for voluntary adoption of zero carbon (e.g. all electric) requirements. Victoria and Saanich have recently adopted zero carbon requirements, although I'm not sure what kind of engagement they may have had with BC Hydro.

Hi Bindi,

Beyond the Vancouver and other info in the attachments (which originated with us), one of our analysts will comb through our recent consultation records and see if we can name other communities that have raised similar issues. We know it has come up pretty often as a significant impediment to development capacity/sequencing/costs/timelines.

One question – when would you like this back?

Eric

Hello Zach,

Thank you again for presenting with Scott Williams at our UDI webinar last week, our members appreciated the opportunity to learn about the upcoming regulatory changes and ask questions. As discussed with Jeff, please find attached our letter providing comments and recommendations on the upcoming energy efficiency and GHG proposals for the 2018 BC Building Code.

If you have any questions or would like to discuss any of our feedback further, please don't hesitate to reach out.

Thanks and we look forward to continuing to work with you and your team,

Cassandra

Subject: RE: BC Hydro

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Generally, BC Hydro connection timeframes are lengthy – especially for larger complex projects – and this is primarily due to staffing/internal processes. This is certainly the case in high growth regions like the Lower Mainland, CRD as well as the parts of the Okanagan that they serve. I am not sure of other areas because our membership is generally in these larger regions; maybe talk to CHBA BC about smaller communities.

In terms of capacity, we have also heard about problems in Surrey (residential/commercial/industrial), Delta and Coquitlam. I would also note that Burnaby is building a District Energy system, in part, because they have concerns about Hydro capacity in their municipality. Also, please see the article below.

Although BC Hydro is taking positive steps to adjust their funding approach for local distribution infrastructure, we have noted in their presentations, BC Hydro has a big caveat regarding costs – "*Note: Non-extension costs such as Service Connections, pole relocations and undergrounding of overhead lines are not included above. These dedicated costs can potentially cause a substantial increase to the total cost.*" They also state "*Costs to comply with municipal requirements or the conditions of a development permit, such as undergrounding existing overhead infrastructure along development frontages, can also add to costs. If the overhead infrastructure being converted to underground also serves adjacent customers, costs can escalate quickly because additional system changes may be needed for BC Hydro to continue to serve the existing adjacent customers. As this additional infrastructure is over and above what we require to provide service to the location, the added cost isn't eligible to be offset by BC Hydro's contribution, as provided for in the Electric Tariff*. If you read the section in yellow below, local government approvals also cause delays for BC Hydro upgrades. We may need to work with BC Hydro and your Ministry to address these concerns.

BC Hydro's distribution grid not keeping pace with development

Delayed connections short-circuit plans for public, private projects

Hi Jeff and Cassandra,

There is some internal discussion about which communities have experienced delays or other issues related to BC Hydro connections and capacity. I think you have mentioned Langley in the past as having some acute issues. Are there any other examples you're aware of?

Subject: RE: Materials for tomorrow's Implementation Impact Workshop

Hi Cory,

My understanding is that this is a brainstorming session, but we should all be prepared to provide the info outlined in the agenda that Lori shared with me earlier this week (I think this is still draft, but sharing since I don't think everyone has seen this):

Agenda:

1. **IDENTIFY WHAT'S HAPPENING:** List all initiatives and major milestone timelines & status of planning.
    - LGDI - Pre-zoning, SSMUH, TOD, Public Hearings, Dev Finance
    - Peer Learning Network
    - Complete Communities
    - STR
    - Housing Targets
    - Building Code

2. **CLARIFY OUTCOMES:** What are the outcomes we want? By when?

3. **IDENTIFY IMPACTS:** What happens from September 2023 to September 2024? List Key Partners…
    - Inside our Ministry?
    - Across Prov Gov't
    - With Local Gov'ts?
    - Federal Gov'ts?
    - Indigenous Gov'ts?
    - Key Industry Partners? UDI / CHBA / Air BNB / Other?
    - Public

4. **PLANNING**: What do we need to do to make this run smoothly?
    - List it all out
    - What is already underway? Resourced?
    - What is not? And what is needed to get it there?

5. **FOLLOW-ON PHASES:** What happens after the election?

Best,
Zachary D. May, MBA

Ph: 778-405-3465 Email: Cory.Scott@gov.bc.ca

Group	
Planning Institute of B.C.	General concern was noted that infrastructure would be costly for municipalities and developers to implement SSMUH, BC Hydro was viewed as most significant.
Canadian Home Builders Association	Noted in SSMUH consultation that BC Hydro is a physical and financial barrier for this style of development. Note about Pad mounted transformer (PMTs): should either have pole mounted or have PMT on city land, located to service multiple homes without being on their property. This change will free up additional lot space and avoid having to protect it during future renovation/construction.
UDI	Electrical extension fee policy issues: • Results in some developers needing to pay significantly higher extension fees (cost of new electrical service) for larger electrical services which can be difficult to predict. • Tier 2 rate structure which financially penalizes electrified buildings and electric vehicle charging. • Staffing shortages which are delaying the delivery of housing. • Concerns with capacity of local electricity distribution (Fraser Valley). Connection timeframes are lengthy due to staff and internal process, especially in Lower Mainland, CRD and parts of the Okanagan. Heard concerns about capacity in Burnaby, Delta, and Surrey.
Delta	Areas in the municipality are challenged for appropriate electricity connection which impedes development potential, specifically industrial.
Surrey	Areas in the municipality are challenged for appropriate electricity connection which impedes development potential.
City of North Vancouver	Issues with the number of EV chargers being installed in residential developments and BC Hydro able to accommodate the number.
Langley	Has had a history of brownouts (reduced amount of electricity in the system, can be intentional or unintentional)

Good morning Jenny,

Let's work towards the July 25 newsletter publication, finalized by July 21 deadline.

We are preparing a summary of the June 12th workshop to be emailed to participants. That information should provide some great content for the newsletter.

I'll touch base once the summary is finalized in the next couple of weeks.

Looking forward to working with you on this Jenny.

Warm regards,

Subject: Follow-up: June 12th Digital Innovation in Housing Construction Workshop

Greetings everyone,

Thank you for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction. We appreciate the perspectives and insights you shared with us, and we are hard at work analyzing your feedback.

For those who would like to provide additional feedback, please note that the Mural board we used on Monday is now closed. We are still accepting feedback until EOD Wednesday June 21, 2023, via two methods:

1. An after-hours self-serve Mural board (link) that contains both breakout activities
2. Email to the building.safety@gov.bc.ca

We are working to share a summary report of the engagement in the coming weeks.

Have a great day,
Zachary D. May, MBA
Executive Director
(he/him/his)

Building and Safety Standards Branch | Ministry of Housing

END OF JULY 2023 NEWSLETTER

PROVINCIAL

Ministry of Housing

Digital Permitting: Under the *2023 Homes for People Plan*, noted in previous newsletters, the Government committed to "*Become a North American leader in digital permitting*," following the examples of Singapore and Finland, which "*… streamlined their permitting processes through digital technology …*".

The Ministry of Housing will initially be digitizing the *B.C. Building Code* (*BCBC*) and other construction codes, but they are also looking at "*… integrating permit systems across the housing sector, and supporting collaboration technologies that help project teams work more effectively with housing development regulators*," as well as "*Using tools like automatic code compliance checks …*".

On June 12th, UDI participated in a Ministry of Housing *Digital Innovation in Housing Construction Workshop* with 68 representatives from "*… local governments, the construction industry, Indigenous communities and organizations, academia, and independent partnering organizations*." The Ministry has now released a *What We Heard Summary Report* (see attached).

Workshop participants first identified several needed changes to the current development review system, including:

- "*… improvements to the collaboration and communication of the internal local government departments and external approvals process of other approving bodies (e.g., provincial approvals and technical studies such as geotechnical)*;"
- More consistency and predictability in development approvals and transparency regarding approval timelines;
- "*… providing opportunities for automation and more reliance on certified professionals …*;" and
- Having more consistent building inspection standards and *BCBC* interpretations.

During the second phase of the Workshop, participants identified "*Opportunities for Digital Tools*" to improve development review processes such as:

- Having a less complex process with fewer steps that is *"easier to understand for applicants and elected officials*," but is also more consistent and predictable;
- Providing clear expectations and requirements for proponents;
- Being more customer focused with clear timelines through real-time updates/tracking;
- Ensuring that software used by regulators can share relevant information and data between partners, which should improve transparency, collaboration to resolve issues and processing times as well as provide data for evidence-based decisions to improve regulatory requirements and processes;

- Having stronger requirements for pre-screening applications to ensure they are complete, including having the option to have "… *an automated intake and pre-submission check*;"
- Allowing for concurrent reviews;
- Having "… *pre-approved designs plans*" that meet municipal *Zoning By-law* requirements to speed up approvals;
- Developing "… *common alternative solutions* …" for the *BCBC*; and
- Supporting the use of certified professionals and other professional expertise reliance models for complex buildings.

Participants also saw a significant role for the Ministry of Housing to provide education, best practices and guidance for building officials, as well as offer "… *provincial liability protection, stable innovation funding and information on legislation* …". They also wanted to ensure that Provincial approvals also improve as a result of this initiative.

As a next step, the Ministry will be identifying "… *15-20 partner jurisdictions for pilot implementation of the digital permitting tools*," that will be developed over the next few years.

Hi Jun'ichi,

Thank you for reaching out and glad to hear you are enjoying your summer!

We would be pleased to meet to discuss the options you are looking at. Our next Building Codes Committee meeting is scheduled for September 21st, 10am-11am. If it is preferred to meet with the group earlier, or if you require more than 1 hour, this can be adjusted.

Please let us know what your timing looks like to receive feedback on this and we look forward to continuing this discussion.

Best regards,
Lily

Hi Lily and Cassandra,

I hope you are both finding some time to relax this Summer. I've got some vacation coming up next week :)

When is your UDI building code committee meeting next? I would like to discuss with the group some proposed options for delayed implementation of some code requirements. This is based on the suggestion of tying the new code requirements to development permits.

Thanks,

Jun'ichi Jensen

Good afternoon,

On behalf of Anne McMullin, President & CEO of UDI and our members, please find attached our submission on the proposed B.C.-specific Building Code changes. Throughout our letter we recommend that additional time be taken before implementation to analyze the impacts of the proposed changes and develop offsets to mitigate them. We reiterate our appreciation for the work being done by the Building and Safety Standards Branch, and would be pleased to provide support if it is determined that further analysis will be done.

If you would like to discuss any of our recommendations further, please let us know.

Regards,

Hi Nicole and Julia,

Please see below a draft of the section for the newsletter. This version will be on our website and an abbreviated version that doesn't list the feedback in bullet points will go on the newsletter.

Ministry of Housing's Digital Innovation in Housing Construction Workshop
Under the *2023 Homes for People Plan* noted in previous newsletters, the Province committed to "*Become a North American leader in digital permitting*". The Ministry of Housing will initially be digitizing the *B.C. Building Code* (*BCBC*) and other construction codes, but they are also looking at integrating permit systems across the housing sector and using tools like automatic code compliance checks.

On June 12, UDI participated in a Ministry of Housing *Digital Innovation in Housing Construction Workshop.* During the workshop, participants identified changes that could improve the current development review system, as well as opportunities to leverage digital tools to further streamline the process, including:

- Improvements to collaboration/communication across government departments and other approving bodies (e.g., provincial approvals and technical studies such as geotechnical);
- Transparency regarding approval timelines through real-time updates/tracking;
- Use of automation (e.g., automated intake and pre-submission check);
- More consistent building inspection standards and *BCBC* interpretations;
- Simplified process with fewer steps and clear expectations/requirements for proponents;
- Sharing of relevant information and data between partners for evidence-based decision-making;
- Stronger requirements for pre-screening applications to ensure they are complete;
- Allowing for concurrent reviews;
- Implementing pre-approved design plans that meet municipal *Zoning By-law* requirements to speed up approvals;
- Developing "… *common alternative solutions* …" for the *BCBC*; and
- Supporting the use of certified professionals and other professional expertise reliance models for complex buildings.

Participants also saw a significant role for the Ministry of Housing to provide education, best practices, and guidance for building officials, as well as offer provincial liability protection, stable innovation funding, information on legislation, and improvements to the Provincial approvals process.

All of the feedback received has been summarized in the Ministry's recently released *What We Heard Summary Report*. As a next step, the Ministry will be identifying 15-20 jurisdictions as a pilot for the digital permitting tools that will be developed over the next few years.

Best,
Jenny

Subject: RE: Follow-up: June 12th Digital Innovation in Housing Construction Workshop

Hi Jeff – what is the frequency of your newsletter (i.e., after June 27th when is your next one)? I am just finishing up my workday before a week of vacation, but I will have Julie connect with you next week on this.

Thanks,
Nicole

Subject: Follow-up: June 12th Digital Innovation in Housing Construction Workshop

Greetings everyone,

Thank you for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction. We appreciate the perspectives and insights you shared with us, and we are hard at work analyzing your feedback.

For those who would like to provide additional feedback, please note that the Mural board we used on Monday is now closed. We are still accepting feedback until EOD Wednesday June 21, 2023, via two methods:

1. An after-hours self-serve Mural board (link) that contains both breakout activities
2. Email to the building.safety@gov.bc.ca

We are working to share a summary report of the engagement in the coming weeks.

Have a great day,

Zachary D. May, MBA

Attention: Mr. Jun'ichi Jensen, Director, Codes and Standards

Re: UDI Letter – B.C. Building Code 2023

Dear Mr. Jensen:

We are writing to express our wholehearted support for the recommendations put forth by the Urban Development Institute Pacific Region (UDI) in their letter of June 16, 2023 regarding the forthcoming changes to the B.C. Building Code (BCBC). After thoroughly reviewing the UDI's concerns and suggestions, we agree with the need for a more comprehensive assessment of the potential impacts of these changes before their implementation.

The UDI has raised valid concerns regarding the substantial impact of the proposed code changes on building designs, unit sizes, floor areas, and project costs. While we appreciate the Province's objectives of increasing accessibility and improving health and safety through seismic design requirements, it is crucial to carefully consider the implications on the housing sector, particularly with respect to housing supply and affordability.

The proposed increase in space requirements for bathrooms and bedrooms, although intended to enhance accessibility, poses significant challenges for the development industry in providing much-needed housing. The potential reduction in living space due to larger bathrooms and wider halls could affect the marketability and desirability of units, especially smaller and more affordable options. Additionally, the increase in unit size to accommodate adaptability features is likely to negatively impact affordability, contrary to the goal of making housing more accessible and affordable.

The UDI's recommendation to delay the adoption and implementation of the accessibility and seismic design requirements is justified. This additional time would allow for a thorough understanding of the impacts on new housing supply and the exploration of effective mitigation measures. Conducting further research on the demand for fully adaptable units and the overall impact on floor area will provide insight into achieving the desired balance between accessibility and housing affordability.

1550 -1185 WEST GEORGIA ST, VANCOUVER BC V6E 4E6 T 604.638.0771 denciti.ca

Further, we support UDI's call for enhanced in-stream protection for projects already in the municipal approvals process. Providing adequate protection to ongoing projects when substantial changes are introduced is crucial for ensuring project viability, avoiding cancellations, and minimizing potential delays. The UDI's proposal to allow applications submitted with Development Permits after the effective date of these changes to proceed under the current BCBC would be a fair approach to mitigate the negative consequences on pre-sales & leasing, project financing, and subsequent municipal approvals.

Considering the pressing need to increase housing supply, UDI's recommendation for mitigation measures and offsets to balance the additional costs incurred by meeting new requirements is necessary. These measures, such as adjusting floor area calculations, site coverage, setbacks, and heights, should be implemented in collaboration with the Ministry of Housing to ensure consistency and efficiency across the Province. Exploring provincial measures, such as tax offsets for purpose-built rental housing, could also contribute to alleviating the financial burden on developers.

Together, we can navigate the path forward and harmonize the BCBC with the National Building Code of Canada while safeguarding the interests of the housing sector and the community at large. By adopting a holistic and measured approach, we can strike a balance between accessibility, seismic safety, and housing affordability, thus ensuring the long-term well-being and prosperity of our communities.

Thank you for your attention to this matter.

Respectfully submitted,
DENCITI DEVELOPMENT CORP.

The Leadership Council will be made up of 12-15 leaders from across the housing development system, including regulators, industry, the technology sector, and other organizations. We are currently planning an initial kickoff meeting of the Leadership council in September 2023.

At this time I'm just trying to gauge Neil's interest. Formal invites will come from the Minister's Office in a few weeks.

Let me know if you have any questions and if you think this is something Neil would be interested in.

Hi Zachary,

Daniel reached out to one of our Principals in Victoria after seeing an update on the working committee towards digital innovation and was asking to get involved, is this something you can include Daniel in future meetings/emails?

I'll allow Daniel to introduce himself, but we have worked on a lot of projects between Introba and RJC.

Thanks,
George

You don't often get email from zachary.may@gov.bc.ca. Learn why this is important

Greetings everyone,

Thank you again for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction.

Attached is the *Ministry of Housing – Digital Innovation in Housing Construction, What We Heard Summary*. It also includes the Ministry's key engagement activities planned over the summer as we prepare to move into our product development stage this fall.

We really appreciated your participation and look forward to continuing to collaborate on this important work.

Wishing you all a safe and happy weekend!

Best,
Zachary D. May, MBA

Hi Andy,

We saw in the recent UDI update that there is a committee working on digital innovation of housing construction with the Ministry of Housing and Introba is listed as one of the participants from the engineer side. Do you know if there is any way that we could get involved in the discussion as well?

Thanks,

Daniel Gao,P.Eng.

Hi Everyone and thank you George for the introduction!

Sorry I've been preoccupied for the earlier part of this week with a seminar so I haven't had a chance to catch up on emails.

I'm an Associate with RJC Victoria in the structural engineering practice group. My background has included CAD, BIM/Revit, programming (various environments/languages), process improvement, and structural design. Keen to get involved and help out where I can.

The following times work for me, based on the availability list from George below.

- 6th September, 9-11am
- 12th September, 9-11am & 3-4pm
- 14th September, 11am-3pm

Cheers,

Daniel Gao, P.Eng.

Subject: RE: Digital Innovation in Housing Construction

Morning Zachary,

Sounds great, below is a range of dates and times I'm available.

- 6th September, 9-11am
- 12th September, 9-11am & 3-4pm
- 13th September, 2-4pm
- 14th September, 11am-4pm

Regards,
George

Thanks George and Daniel,

We have been doing lots of planning work over the summer and have some committees and technology development happening this fall. I will get Daniel's name added to our contact list.

Is there any chance the two of you would be available for a call in the next couple weeks to help us with some background questions about BIM/machine readable codes?

If you can send some times that work in the first or second week of September we can set something up.

Best,
Zachary D. May, MBA

Hi Zachary,

Daniel reached out to one of our Principals in Victoria after seeing an update on the working committee towards digital innovation and was asking to get involved, is this something you can include Daniel in future meetings/emails?

I'll allow Daniel to introduce himself, but we have worked on a lot of projects between Introba and RJC.

Thanks,
George

> You don't often get email from zachary.may@gov.bc.ca. Learn why this is important

Greetings everyone,

Thank you again for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction.

Attached is the *Ministry of Housing – Digital Innovation in Housing Construction, What We Heard Summary*. It also includes the Ministry's key engagement activities planned over the summer as we prepare to move into our product development stage this fall.

We really appreciated your participation and look forward to continuing to collaborate on this important work.

Wishing you all a safe and happy weekend!

Best,
Zachary D. May, MBA

Hello Jun'ichi,

As I mentioned previously, we have put together some additional examples to illustrate the impacts of the proposed BC Building Code changes on new construction, specifically the adaptability requirements. Please find attached a letter outlining these impacts and our concerns, along with suggested mitigation measures.

If you would like to discuss these further or have questions related to the specific examples, please let us know and we would be happy to schedule a follow-up session.

Thanks,
Cassandra

Hello,

As mentioned at the BC Codes team meeting yesterday, attached is a summary of the public review feedback. Feedback is organized by topic theme, which will help you see the specific items folks were asking for clarification on that may be helpful to include in a bulletin.

Please feel free to forward to Jim once Juni has briefed him on the seismic bulletin.

If you have any questions, please let me know.

Thank you.

~251 responses including 26 email submissions = provided to ADM on July 14th (SL updated Aug 17/23)

Accessibility

Summary of comments

- 85 responses received (including 9 thorough and valuable email submissions)
- One comment received suggesting greater design flexibility and identifying possible floor space implications. This comment raised the VBBL as an example of a balanced approach.
- One comment concerned changes will impact floor space which may reduce or eliminate certain features
- Eight commented on perceived impacts to affordability
- One comment is concerned with the in availability of products in the market
- Two comments expressed concern that adaptable dwellings are less desirable for purchase in the market
- One comment is concerned with door availability and existing doors becoming non-compliant particularly for small buildings/homes (Fenestration and Glazing Industry Alliance)
  (Note: recommended action is to consider proposal amendment)
- One comment requesting increase to clarity for entrance door widths (CHBA BC)
- Two commented validating proposals and request they go further
- One commented concern in regard to stair design safety
  (Note: harmonized with National code requirements)
- Six comments recommend requiring less than 100% adaptable (UDI, CHBC BC, Homebuilders Assn. Pioneer Code Consultants, Polygon Homes, Urban Thrive)
- Three commented on concerns to floor space, layout, and materials with the proposal for 100% of larger buildings and the first floor of smaller buildings
  (Note: recommended response is to give design solution examples in handbook with little to no impact on design and material impact)
- One comment in regard to transfer space in washrooms and impacts to rental and sale prices
- One comment in regard to adequate mauverability space for powerchairs
- One comment notes language for reinforcements does limit design and flexibility of grab bars
- One comment is concerned with competency of designers and need for education to support consistency
- One comment recommends the market determine the need
- One comment notes solid backing for grab bar could be expanded to accommodate various configurations
- Three comments recommend allowing in-stream projects to continue without changes by having the development permit application date establish the applicable code edition (CHBA BC, UDI)

- One comment concerned with increase pressure on local govs to adjust zoning requirements in response to ADUS occupying more space
- Two comments suggest tax breaks to manage increased costs
- Two comments recommend floor area exclusions be granted or maintained by local governments
- One comment highlights that current LG voluntary provisions enable them to test other implementation policies
- One comments recommends municipalities retain control of ADU targets
- Four recommend delaying implementation to allow further consultation with industry and local governments (Homebuilders Assn, Polygon, CHBABC, UDI)
- One comment shared concerns that the light requirements in common spaces are excessive
- One comment suggested SAFERHomes training for residential builders
- One comment recommends clarity on landings for ramps that do not lead to a door.
- One comment raises concern that adding 'ramps' to Sentences 3.8.2.4.(1) and (2) may cause unintended consequences as written as it may require additional routes even if the ramp is accessible
- One comment recommends clarity on location and operation of power door openers.
- One comment questions whether Clauses 3.8.2.3.(2)(g)(i) to (iv) should be separated with an 'or' or an 'and'.
- One comment recommends clarity on landings for ramps that do not lead to a door. [BSSB disposition: No action. This is national content which is unchanged from the 2015 edition and which appears in the BCBC 2018. B.C. has not proposed any changes to this provision.]
- One comment recommends clarity on location and operation of power door openers. [BSSB disposition: No action. This content is carried over from the BCBC 2018 and is explained and illustrated in the Building Accessibility Handbook 2020. B.C. has not proposed any changes to this provision.]
- One comment questions whether Clauses 3.8.2.3.(2)(g)(i) to (iv) should be separated with an 'or' or an 'and'. [BSSB disposition: No action. The 'and' is the intended policy (must satisfy all conditions) and is carried over from the 2018 edition.]
- One comment raises concern that adding 'ramps' to Sentences 3.8.2.4.(1) and (2) may cause unintended consequences as written as it may require additional routes even if the ramp is accessible. [BSSB disposition: Action – Code. Delete B.C.'s addition of the term (application to) 'ramps' from Sentences 3.8.2.4.(1) and (2). Keep the scope of application to those stated in the NBC Article title. Further Code development to avoid unintended consequences is required to address ramps and when they must be accessible or when a separate accessible ramp may be required.]
-

Public review themed email comments (full submissions saved here)

Canadian Homes Builders Association
Pauline Rupp, Director, Technical and Building Innovation
pauline@chbabc.org

- Recommend provincial approach to in-stream protection to allow Development Permit applications submitted prior to the effective date of the next edition of the BCBC to comply under the BCBC 2018
- Recommend floor area exclusions be granted or maintained by local governments
- Recommends a phased-in requirements for ADUs in Part 3 residential buildings, and start with minimum of 10 to 15%
- Recommends requirements specifics to increase clarity for entrance doors widths – "shall have a width no less than 914 mm or a clear width of not less than 850 mm when door is in open position"
  Respond with in the code or Notes change.
- Notes language for reinforcements does limit design and flexibility of grab bars

Homebuilders Association
Dianna Dilworth, Director of Government Relations
Diana@havan.ca

- Concerned 100% adaptable will present new housing supply and affordability challenges
- Concerned adaptable policies for larger corridors, bedrooms, bathrooms, will result in larger suites which may affect number of suites in a project and affordability
- Concerned with the loss of floor space exemptions
- Supports Polygon Homes request to delay implementation to allow further research and consultation with industry and local governments

Pioneer Code Consultants
Michael Meszaros, M.Eng, P.Eng
mmeszaros@pioneerconsultants.net

- Concerned 100% ADUs will cause affordability impacts
- Concerns with the lighting requirements for common spaces were excessive
- Recommend changes do not proceed at this time

Polygon Homes
Scott Baldwin, Senior VP Development
sbaldwin@polyhomes.com

- Concern proposed changes impact floor space in a way that may reduce or eliminate certain features
- Concern that adaptable dwellings are less desirable for purchase in the market
- Concerned about impacts to local government density bonuses and floor area exclusions and perceived impacts to housing affordability
- Current voluntary provisions enable local governments to test other implementation policies
- Recommends further research and consultation with local governments and industry to understand impacts to housing affordability

SAFERhome Standards
Colin Doylend, Executive Director
cdoylend@saferhomesociety.com

- Applaud and support efforts to make new buildings more accessible
- Suggested SAFERHomes training for residential builders

Urban Development Institute
Anne McMullin, President & CEO
amcmullin@udi.org

- Recommends delaying adoption and implementation to allow time to understand floor area impacts on new housing supply and mitigation strategies
- Recommends enhancing in-stream protection for projects already in municipal approvals process
- Recommends more research to fully understand demand for fully adaptable units
- Concerned 100% adaptable will impact number of homes and affordability and recommends a phased approach
- Concern with increased pressure on local govs to adjust zoning requirements in response to ADUs occupying more space
- Concerned about marketability of one-bedroom adaptable homes
- Suggests tax breaks to manage increased costs

Lapis Homes
Ryan Jabs, President, Community Builder
Ryanjabs@lapishomes.com

- Concerned adaptable homes will lead to less and more expensive housing
- Preference for ground floor adaptable
- Recommend government guarantee income tested housing for people with a need and then build subsidized accessible housing
- Incentivize accessible housing with grants and provisions that housing be matched
- Perception that population demand is low

Urban Thrive
Julian West, Principal & Owner
julian@urbanthrive.ca

- Recommend gov use the Housing Supply Act rather than the BC Building Code to set local government targets
- Recommend municipalities retain control of ADU targets

Survey

- I believe the changes are appropriate and clear, however the application to design drawings, supplied materials and installation by builders and trades still needs some industry work. Building suppliers are still selling non-compliant grab bars, etc, which gets purchased for

renovation projects and then get failed - holding up occupancy. Is there any work the province can do with the supply chain. Some of the awareness and education should be directed to Planners as it may collide with existing Zoning regulations. Adaptability is definitely a valid topic for aging in place and the challenges of affordable (shared multi generational) housing and I know our Social Development team is watching this. More education with mechanical trades is required to ensure drawings are being read and plumbers are fully aware as there is little extra time available for Building and Plumbing Officials to educate thru plan reviews (adding tons of notes to drawings) and educating by failing. Most communities do have their own guides taking the great information from the larger handbook - what is needed is some provincial wide cheat sheets that can provide consistency.

- 2023-06-19 09:50 a.m.
- We rarely have people requiring accessible units, I believe the market should dictate what is being built and not the code
- 2023-06-16 07:57 a.m.
- FGIA is recommending not adopting the proposed changes to BC Building Code for Adaptable Dwelling Units to include clearance of 850 mm at entry doors for Part 9 buildings. The issue of applying Part 3 accessible code requirements to Part 9 was raised at the National Standing Committee on House and Small Building (SC-HSB) at their face-to-face meeting in Ottawa on May 31 and June1. The SC-HSB recognized that it was premature to apply Part 3 accessible requirements to Part 9 and is sending the proposed changes to Part 9 back for further review. If BC is to adopt possible National code changes that are still being reviewed, this could push the province further away from a harmonized code. Further work is needed to determine the appropriate clear opening for Part 9 entry doors. Taking a Part 3 code requirement to Part 9 without the proper review is not appropriate. Typical 36” (35.75”) entry doors for Part 9 residential applications may not provide an 850 mm clear opening. While the clear opening measurement may be close, fenestration manufacturers need more time to evaluate their full scope of products to determine if such a change would continue to readily allow availability of affordable products in a variety of style options. The door industry would strongly recommend that the adaptability requirement for a clear opening of 850 mm for Part 9 residential buildings be reconsidered and not included in the BC code at this time by not including the change in 3.8.5.1.(2)(a). Submitted by Janice Yglesias, Executive Director Fenestration and Glazing Industry Alliance (FGIA) 2023-06-15 07:26 p.m.
- Test 2023-06-15 03:33 p.m.
- Regarding 3.8.5.7.(1)(a) - having transfer space within a private residence are huge cost and space concerns in a region absolutely gripped with affordability issues. Having enlarged washrooms in units that are very small (driven by the economy and affordability) will increase overall sales and rental prices for the owner/tenant. 2023-06-15 11:44 a.m.
- too restrictive and costly 2023-06-14 11:33 a.m.
- requiring 100% of units to be adaptable will increase cost substantially. Does that means all counter tops and light switches must also be lowered to meet the adaptable requirements? Maybe requiring a minimum number of adaptable unit in 100% of apartments and condo is a better option, instead of the current, IF adapable units are provide. Roughing in for grab bars is all good but what if the std for bars changes again like it did in the 2018 BCBC? 2023-06-14 08:58 a.m.

- **Already captured ---**
- referencing within 3.8.2.1. regarding the need for accessibility for dwelling units is confusing and unclear. 3.8.2.1.(1)(a) clearly exempts certain buildings. Sentence (2) refers all buildings described in Clause (1)(a) to 3.8.5.1.(2) which provides further directions. When reading this and the further references is it the intent that all dwelling units including detached houses and houses with secondary suites be constructed as adaptable dwelling units as this is how it reads to me? The reference in 9.8.1.5.(1) to article 3.3.1.19 is incorrect this article does not relate to tactile warning. added sentence 7. although the language regarding signage for stairs and ramps that continue past the exit level has been in the code for quite a few years, the original requirement for a tactile treatment on the handrails when they extend past this point should be added back into the code it provides additional guidance.
- 6/13/2023 07:45 AM (Reference checked and comment is incorrect. B.C. has harmonized technical requirements for noted features)
- Concerns over affordability and increased cost of new housing. Making 100% of new apartments comply to adaptability standards will drive-up costs as these units require more materials, space and components to build. It will also result in less desirable unit layouts for those unaffected by mobility issues. 50% adaptable units for new construction is a much more appropriate mandate which will help increase the stock of adaptable housing while still helping mitigate growing construction costs, helping keep medium density construction feasible for builders and future buyers.
- 6/12/2023 01:56 PM
- Requiring 100 per cent adaptable features for large multi-unit residential buildings, may eliminate the risk of adaptable units being sold at a premium price point and help to ensure more equity and availability of these units for all people. However, this may cause an overall increase the price point of all units which makes building affordable housing that much more difficult to accomplish. It is important not to add additional cost barriers to building affordable housing.
- 6/12/2023 10:19 AM
- 3.8.3.5.(1)(c) & (d) - Suggest providing clarity if the top and bottom of ramps that do not lead to a door require a level area conforming to clause (c) or (d). CSA B651-18 states that a clear area measuring 1350mm long by the width of the ramp is required at the top and bottom, suggest adding similar wording under a new subclause (d)(iii). In my opinion, the landing area will be a common question due to the interpretation of the wording in (c), where previously ramps and landings/corridors were generally 1500mm wide. 3.8.3.6.(6)(a)(iii) & (iv) - Provide clarity on the location requirements for power/auto door operators (ADOs). (iii) requires ADOs to be placed between 600mm and 1500mm for door swing; however, (iv) which refers to 3.8.3.8.(1)(a)(iii), requires a clear area adjacent to a 1350mm x 800mm space. The addition of the 600mm requirement overlaps with the requirement in 3.8.3.8.(1)(a)(iii), potentially causing confusion about what applies, it is suggested to align the wording more closely with CSA B651-18 to mitigate confusion. The suggested wording for 3.8.3.6.(6)(iii) is: "are located adjacent to a floor space, clear of door swing, measuring 1350mm by 800mm, by either the length or the width, but located no more than 1500mm away." Additionally, subclause 3.8.3.6.(6)(c)(iv) can be removed. 3.8.2.3(2)(g)(iii) - Should this subclause end with "or" rather than "and"? It implies that if the project does not conform to all the subclauses under 3.8.2.3(2)(g), then the floor above/below does not need to be accessible. This also contradicts what is stated in the

comment box discussing (g). 3.8.2.4.(1) & (2) - The addition of the word "ramp" may cause some confusion, as the sentences could be interpreted to mean that any ramp, whether accessible (per 3.8.3.5) or not, will require an alternative accessible path to be provided (e.g., an elevator). Clarify if you specifically mean to state "or other paths of travel not designed to be accessible in accordance with Subsection 3.8.3." (i.e., ramps not designed to meet the requirements of 3.8.3.5.)
6/11/2023 06:45 PM
(B.C. has harmonized with NBC 2020 which resulted in larger landings as referenced by the commentor.)
AC provided analysis – Thursday, July 6, 2023

- added accessibility to all homes increases the construction cost of homes. We need less barrier to housing for all. less costs = more housing = more affordability
- 6/9/2023 09:22 AM
- driving up the cost of construction at a time every dollar counts. the current code more than meets the criteria of the percentage of People who require this .
- 6/9/2023 08:51 AM
- but the proposed changes do not go nearly far enough.
- I feel backing for future grab bars in SFD and secondary suites as well as having the accessible clear space for at least one bathroom, entrance ways and hallways in SFD and secondary suites meet accessible requirements for width. With the entrance way and hallways built to accessible dimensions, it would be possible to adjust the door framing in the future to be compliant with accessible requirements if the SFD or suite needs to be converted to be accessible. This would be close to the changes for the buildings already addressed in the update for new multi-unit residential buildings.6/7/2023 02:28 PM
- I support the fact that the changes proposed embrace the concept of "accessibility", over the more arcane "barrier-free". One major aspect of accessibility is totally missing - that is standards for stairs! The current Codes outline the requirements for stairs for tactile and and high contrast features but ignore the fact that stair design, as currently permitted, is inherently unsafe and dangerous. Most builders, and architects, continue to build the steepest stair possible with the smallest foot plant space, because the code permits it. My firm has been designing shallower stairs with full foot plant space since the 1980's - the penalty, from a planning point of view is six square feet per floor! It is amazing to me that our codes try to mitigate the problems of stairs for visually impaired and mobility challenged people, without addressing the problem itself - the stair design promotes hazard. 6/5/2023 02:23 PM
- The technical version is difficult for the public, but the lay summary is clear.
- 6/5/2023 11:09 AM
- What is the meaning of build able....can it mean possible to build , with out regard for cost..if that is the case then a staircase to the moon is buildable , just not practical..buildable is highly subjective ... not everyone has the bill gates Bank account 6/4/2023 06:41 PM
- all doors ways should be 32" to allow for wheel chairs to get thou 6/3/2023 04:17 PM
- testing
- 6/1/2023 10:20 AM
- Difficult issues arise with adaptability requirements, especially as they now apply to all MURBs. Requirements jump from some accessible residential suites and some adaptable suites as

determined by the AHJ, to 100% adaptable suites with very significant requirements. 1) Sentences 3.8.5.4.(3) and (4) (door swing clearances to bedrooms, bathrooms, living rooms, kitchens) are onerous requirements within residential suites. Sentence (3) would be impractical in most cases. Sentence (4) would most likely be universally employed. The rough-in is costly, and in practice, the location of the controls is difficult. 3.8.3.6.(6) specifies the location of automatic door controls (between 600 and 1500 from the door swing), but only for those required by 3.8.2.7.(1). It would be helpful to explicitly exempt location of the ADO controls required in 3.8.5.4.(3/4) from location requirements, leaving location to the discretion of the architect. In fact, I have never quite understood how ADO control locations would work with the deadbolt and door latch on a suite entry door (as per VBBL2019.) As a closure, a suite entry door requires a closer a latch. Would someone in a wheelchair approach the door and unlock the deadbolt, then somehow unlatch the door and then go back to the ADO control and push the button to operate the door? If used within a suite, presumably the door latch would be removed. 2) 3.8.5.5 requires accessible paths of travel within suites (1000mm). This could be reduced to 900mm because the context is private and residents would be familiar with their environments. 3) The clear space requirements of 1500x1700mm in a bedroom, in front of a closet and in a kitchen are onerous space requirements. In our practice, these would require additional floor area to be required within a suite – with an end cost implication. The impact on kitchens would be particularly significant and severely restrict kitchen design in the typical MURB. 4) The lateral transfer requirement for an adaptable suite (900mm wide by 1500mm long) is also particularly onerous. The result may be tiny vanities to accommodate the transfer space. The general concern is that “adaptability” requirements are essentially becoming “accessibility” requirements. What appears in BCBC2018 as a fair accommodation in a certain number of suites allowing conversion by owners, to a requirement that 100% of residential suites be near-accessible. It might be useful to consider what proportion of suites would actually be used in the way they are intended and to evaluate the cost (particularly the cost of additional floor space) to accommodate these changes. Will these add 5%? to the area (and effectively cost) of all residential suites? Without understanding these implications, it is hard to support these proposed changes. The current VBBL2019 adaptability approach is more balanced – while requiring all suites to be adaptable, the actual requirements are reasonably achievable.

- 5/31/2023 12:36 PM
- Unintended consequences are increase in construction costs, which erodes the affordability of housing.
- 5/31/2023 09:36 AM
- 5/29/2023 01:15 PM
- The increased costs to do the proposed changes are not realistic. We need to make building homes, condos, and apartments more affordable. The unintended consequence is making home ownership or condo ownership unaffordable and increasing the cost of rent with these proposed changes.
- 5/25/2023 10:54 PM
- 3.8.2.3 is unclear and requires additional consideration - this section as is would continue to result in inaccessible housing. 1/20 apartments is too low of a goal for high-density living, given the increasing need. The Section as-is will be an improvement, but not meet the need that is expressed by people living with mobility barriers as expressed via the Accessibility Feedback Tool, and those who have been and are trying to use the Right Fit Pilot Project - the RFPP has been cutting edge and failed many individuals in locating housing given the restricted options.
- 5/24/2023 08:03 PM

- I think the proposal is clear but in flood-prone areas or areas with rocky mountain terrain there may be challenges baking single family dwellings with an accessible clearance on smaller parcels as there may not be adequate space on the property to build the required ramping. I've worked as a planner in rural (regional district) mountainous areas where there is barely enough room to have a parking space on a property, even with significant blasting work.
- 5/23/2023 09:16 AM

Combustible penetrations

Summary of Comments

- 23 responses
- The majority indicate proposal is clear and buildable
- 1 comment request guidance be provided through diagrams

Survey

- Yes the wording of the change is clear - just wanted to recommend some good diagrams int the Appendix to show this for consistency. 6/19/2023 09:53 AM
- This change seem to clarify and correct the existing language. 6/18/2023 08:50 AM
- Test 6/15/2023 03:34 PM
- this reads as no penetrations are permitted through a fire separation or fire rated assembly 6/9/2023 08:58 AM (B.C. harmonizing with NBC 2020 for penetrations of fire rated assemblies)
- What is the definition of buildable. It may always be buildable if expense is not a factor ...most people affected by these changes are modest income earners... the richest income earners have implemented these and beyond 6/4/2023 08:00 PM
- Need clear examples of how this changes construction methods and detailing 6/2/2023 03:40 PM
- Updated data is required and regional differences considered Cost to taxpayers must be mitigated. 6/2/2023 07:25 AM

Earthquake design

Summary of Comments

- 38 responses
- 1 comment suggests the code require a higher performing wall assembly across the board
- 4 comments suggest the proposed solution is complicated
- 1 comment raised concern on availability of qualified designers
- 7 comments flagged that higher seismic values result in more time and material costs
- 1 commented on disparity of new buildings and what old buildings were allowed to be built to.
- 1 comment identifies that changes to values will impact instream projects and limit their potential
- One comment states that registered professionals are already required in locations with high seismic values and costs for designers are expected to increase and not decrease
- One comment raises that energy requirements can result in exceeding the weight category for construction (analysis done on normal weight category and not heavy weight category) [BSSB note: example – heavy glazing for energy performance]
- One comments states that engineers are required to apply more stringent requirements than Part 9 (Part 4 – CWC)
- One comment has concerns about the analysis of assumption of increased wall length which is not practical for many projects. A more realistic approach would be increased wall strength which has implications for foundations and connections
- One comment states that analysis is unclear and questioned if cost analysis considered connections
- One commented on substantial cost impacts (e.g., 20-30% concrete core sizes increase) recommend further impact analysis for B.C. locations
- One comment questioned justification of adopting seismic hazard values in the NBC 2020
- One comment recommended delay in adoption until further analysis is completed
- One comment suggests removing suitably qualified and experienced language from note A-9.4.5.5(2)
- One comment recommends updates to guidance and materials such as BC Housing's Illustrated Guide – Seismic Bracing Requirements (2019 Edition)
- One comment recommends additional consultations and analysis before implementing Adaptable and Earthquake Design policies
- One comment recommends additional consultations and analysis prior to implementation (commenter noted delays in Farm and B4s and considers issues are similarly complex)
- One commented on substantial cost impacts (e.g., 20-30% concrete core sizes increase) recommend further impact analysis for B.C. locations
- One comment raises concern of less livable space due to increased structural elements
- One comment raises significant cost increases impacting livable space and affordability
- One comment recommends changes to floor area calculations to help offset impacts on space
- One comment recommends the Ministry to prescribe density bonus
- One comment recommends tax offset for purpose built rentals for access and seismic requirements

- One commented on impacts to in-stream projects (land and financial commitments made early in the project development process) with timeline too short for building permit applications
- One commented on timeline likely to affect pre-sales of development threatening cancellations and/or cost increase that may result in fewer built units
- One comment suggests code applications linked to development permit application date

Survey

- The costs associated with increased seismic codes are significant. I don't understand why we are continually changing the seismic and gravity code to make it more expensive. It seems that this is a continuous cycle; why is it being changed so often? 6/16/2023 07:59 AM (BSSB to explore code application to development permit application rather than building permit)
  [BSSB Note: which could result in delays and loss of building potential and housing supply]
- Test 6/15/2023 03:35 PM
- There needs to be more clarity about the increased prescriptive seismic requirements for our region. This will lead to different interpretations by municipal inspectors. Also what are we building to? What would it be on the Richter scale? If Earthquakes Canada did not provide this measure after seismic events, the public would be concerned. The same applies to changing the seismic design. The changes in the code are not readily transferable. Considering this is a prescriptive option, there needs to be a lay-person's interpretive document. 6/15/2023 01:52 PM
- Already captured ------
- Concerned with how the revised seismic and structural code requirements will impact design and building costs that will directly result in worsening affordability in BC and Canada. Low density projects will not be feasible for development. Neighborhoods with low density zoning will be left with vacant lots. There is an affordability and feasibility threshold that needs to be considered before implementing changes like this that will immediately increase costs by 15-20%.
  6/12/2023 02:13 PM
- The "unintended" consequences of enacting this seismic/structural change to the BCBC are: 1) a significant increase in costs to builders for additional building materials and redesign costs given the lack of a grandfathering period; 2) a decrease in residential unit sizes through a 10%-20% increase to concrete core depths in tower construction; and 3) limiting former 6-storey woodframe building sites to a new 4 storey maximum, which in turn decreases land values, puts new projects in jeopardy with land that was acquired before this change, and ultimately limits the total volume of new housing in the province. This change in legislation is shortsighted; at a time when non-profit housing developers, builders, and other government agencies are calling for greater flexibility and a lessening of government intervention in order to increase the desperately-needed supply of housing in this province, this seismic/structural change to the BCBC only further impedes residential construction. Why not focus this money and effort into upgrading the huge supply of ageing, 4-storey wood frame apartment buildings across our province that were built in the 60's and 70's? They pose a much greater risk to the public in the event of an earthquake than a new building ever could.
  6/9/2023 11:15 AM

- This code update will add unbearable costs to new housing. whether it is non-market affordable housing, new rental homes or condos this will add a magnitude of cost that will make construction of new home unfeasible for the majority of land in BC. Structural engineers have calculated that this code change could at 15-20% in construction costs of a building. Capital for new homes will dry up as soon as this gets implemented. I am glad that I own my home because this will only drive up the costs of any new construction going forward.
  6/9/2023 09:25 AM
- building designs are more than adequate for todays living spaces, there is no Rational or reasons to increase the designs, causing significant cost to an industry trying to provide affordable housing.
  6/9/2023 08:58 AM
- The cost implications caused by this change in code will increase construction costs on multi-family residential projects by 10-20% depending on the location of the project. This will significantly impact the feasibility of projects, which will in turn drive up the costs of rental rates and purchase prices for the public, which only adds to the affordability crisis. Perhaps the government can provide a rebate to developers to offset this construction cost increase?
  6/9/2023 08:52 AM
- This should be based upon areas of earthquakes level not right across the board
- ☑
- The increase in required seismic forces is untenable
- 6/7/2023 10:10 AM
- What is a buildable definition. These changes will affect modest income earners significantly more than high income earners ...additionally , most high income earners already surpass these provisions so that makes the new proposals redundant to the , petty in fact
- 6/4/2023 08:03 PM
- The cost implications of the code update (~10-15% increase in hard costs tor typical wood frame apartment building) totally contradict affordable housing objectives and it is making the best buildings better (from a seismic perspective) versus dealing with the 99% of inventory built under past codes which are far more vulnerable in a seismic event. Also, the site classification approach for Victoria, BC needs clarification (based on rock at surface versus rock at excavation depth). This has massive implications and the structural and geotech engineering community is very confused. Site class should be based on condition at excavated depth.
- 6/1/2023 02:36 PM
- 5/30/2023 09:05 PM
- I'm curious why the code continues to allow for drywall braced wall panels? Most builders in our area use wood anyway and furr out the remaining wall. It's difficult for us to explain why drywall is an acceptable material for braced wall panel when it's such a fragile material. In reality, increasing the minimum width to 1.2m and adding a bunch of extra screws won't be sufficient. Why not just delete that option and stick with wood or engineering?
- 5/25/2023 08:57 AM
- There are no specifics noted. I am working on a tower project that is dramatically affected by this code but the details are not outlined adequately.
- 5/25/2023 08:12 AM

- We are getting to the point where this is getting so complicated that framing is almost a specialty trade within carpentry and building inspections. There is no way that this is going to go well. You would need a PhD in order to do the code review an onsite inspection with any sort of competency. For the trades and the designers this is going to be a nightmare. At a certain point this just needs to be an engineered design.
- as
- 5/23/2023 01:48 PM
- Lack of registered professionals in certain areas of the province may impact building timelines.
- 5/23/2023 07:39 AM
- Does the review intend to consider the use of storage container as building materials? Other jurisdictions are doing so effectively, while addressing structural concerns at the same time.
- 5/19/2023 02:57 PM

Overheating

Summary of Comments

- 64 responses
- 7 comments noted increases to construction costs for cooling equipment
- 3 comments support passive cooling measures
- 1 comment recommends clear, acceptable passive cooling design measures that will allow for a living space to be exempted from mechanical cooling
- 4 comments suggested the proposed solution may not be adequate for other extreme events, more could be done to increase buildings' resiliency to minimize fatalities
- 8 comments suggested we consider future climate projections.
- 2 comment on the risks of using historical climate data
- 1 commented on concern for confusion for cooling facility term (confusion between cooling system and appliance)
- 1 comment suggest using operative temperature instead of dry bulb temperature.
- 3 comment recommended that cooling should be voluntary
- 2 comments raised the potential tension between operating cooling systems and energy efficiency measures
- 1 comment suggested that a different structure of code provisions (e.g., earlier in the code) be used
- 1 comment indicated that the code should not include cooling provisions
- 1 comments suggests we expand cooling requirements to seniors and long term care facilities
- 1 comment raised the value of enforcement
- 2 comment raised the suggestion of plug-in portable equipment as an option
- 3 comment recommends providing education and guidance examples
- 1 comment raised challenges for modelling in Part 9
- 1 comment is concerned with design choice limitations
- 1 comment recommends prescriptive parameters to determine when cooling is/isn't required
- 3 comments recognize the need for next steps and a holistic approach to overheating

- 2 comment recommends more specific language and guidance on a living space as shelter e.g., where occupants can sleep and live comfortably over many days.
- 1 comment recommends an entire living space or normal bedrooms of the dwelling unit cooled to 26 degrees.
- 1 comment suggested considering filtration for air quality in coordination with cooling for a place to shelter [note: this comment also copied in the ventilation feedback]
- [Note: support acknowledged but not reproduced on this list]
- 1 comment recommending for more consultations
- 1 comment raises the concern of existing buildings
- 1 comment asking for clarity for occupants to determine designated cooled space
- 1 comment raises concerns with the "show it to be unnecessary" language that it is vague and difficult to enforce (note: difficult for builder to prove "unnecessary")
- 1 commented on applying requirements on locations based on cooling degree days [note: this comment = no action as proposal already provides climate specific application]

- One comment asks for more clarity for good engineering practice and guidance on loads and temperatures.
- One comment raises that the F280 standard is for equipment sizing of the whole building and requests guidance on working in a single room.
- One comment supports passive design measures
- One comment raises concern that comfort is not addressed (recommends ASHRAI-55)
- One comment asks for clarity for when designers go above and beyond and also when good engineering practices shows cooling to be unnecessary for Part 9 [BSSB note: bulletin]
- One comment recommended stricter requirements for thermal comfort
- One comment notes alignment with City of Vancouver
- One comment raises concerns on historical climate data and suggests future shifted climate files
- One comment asks for clarity on what is considered as living space
- One comment asks to extend the requirement to two living spaces
- One comment recommends requirement for protection from overheating
- One comment validates proposed changes
- One comment recommends requirements for air filtration [MERV 13] as opening windows may go against recommendations during wild fire season [BSSB note: bulletin to elaborate on which passive measures to use e.g., shading, lessen reliance on opening windows as it can present risk for poor air quality]
- One comment notes that requiring Step 3 Energy Step Code promotes the use of heat pumps which coordinate with protection from overheating
- One comment recommends extending the requirement to all bedrooms
- One comment recommends extending cooling throughout the whole building
- One comment raises concern with historical climate data
- One comment recommends the design state of the upper and lower temperature limits of equipment
- One comment recommends system verification and commissioning be required (Part 6)
- One comment raised concern on high solar heat gain windows and suggests eliminating energy rating metric for windows

Survey

- The preamble says most deaths "occurred in homes without adequate cooling such as air conditioners or fans." Therefore fans prevented deaths. The requirement for mini-split air conditioning will add $10,000 to $12,000 to the cost of a home. a couple of fans will add a few hundred dollars. Builders of very energy efficient homes report an attic fan in particular will do a very good job cooling a home. A ceiling fan combined with an attic fan should be effective and affordable. 6/18/2023 01:34 PM [Equipment out of scope from code perspective]
- Section 6.2 needs more details on how to design cooling system Section use of future weather file is critical. Part 9 HOT2000 currently does not have a capacity to perform an adaquete overheating analysis both update on the software and training to Certified Energy Advisor is critical. 6/15/2023 10:05 PM [
- The overheating provision in the code is not clear. It does not attempt to reference future climate files . There is no indication that the existing appendix that references historical local climate conditions from 1981 to 2006 will be updated. The stated motivation for the policy

change is the heat dome and the fatalities that occurred as a result. The severity of that Heat Dome can not be contemplated with the existing local climate parameters used in the code. Established cooling requirement ostensibly solves the issue of overheating in new builds, but in reality it will not affect a change. This amounts to a large gap between the intended policy goals and practice. Authorities Having Jurisdiction (AHJs) are able to specify other parameters via bylaw, but AHJs are without guidance as to how they might identify those parameters. This leaves out smaller communities without the resources to identify an alternative. There are several data sets and methodologies available to estimate future climate conditions. This will create confusion in larger communities with the available resources to identify alternatives to what is specified in the code. Two adjacent communities could establish two different standards, which would create enforcement issues. At minimum the building and safety standard branch should provide a technical bulletin that accompanies the updated code with guidance on the resources available to communities to establish different future climate parameters and the provincially preferred future climate data set.
6/15/2023 03:08 PM
[BSSB Note; this comment raises the complexity of dealing with overheating more holistically. This is a first step. HOUS working with NRC for a more holistic approach]

- Using the July 2.5% dry values as the design temperature may not adequately ensure that these living spaces are safe for residents during heat waves or extreme heat events. If a suite can be passively cooled to meet the July 2.5% dry values, this may be an unsafe area in an extreme heat event as there is no available additional cooling if outdoor temperatures exceed the July 2.5% dry value, which is increasingly likely with current observed trends of climate change. Analysis should be done to investigate the effectiveness of this design temperature in extreme heat, and the design temperature in the proposed code change should be raised if it is found to be insufficient for the safety of occupants. 6/15/2023 02:53 PM
- Your proposed code change says "most (deaths) occurred in homes without adequate cooling such as air conditioners or fans." The change does not provide reasonable, affordable options. A mini-split a/c for a suite will be an $10,000 to $12,000 added cost to a home. There are more affordable, and very effective options including a ceiling fan for a couple hundred dollars, the lack of which contributed to casualties. In addition, providing a long list of reference documents “Heating, ventilating and air-conditioning systems, including mechanical refrigeration equipment, shall be designed, constructed and installed in conformance with good engineering practice such as that described in, but not limited to” etc enables municipal inspectors to choose their favourite option rather than create a focused, uniform solution. 6/15/2023 02:00 PM
- [BSSB Note: Good engineering practice is given to designers to have options, not something enforcement officials dictate. Education/clarification opportunity about how to practically interpret and apply the code.]
- The proposed changes are clear and buildable (and urgently needed to address the risk of overheating in new buildings), however the changes do not go far enough because the default climate parameters in Appendix C reference climate variables based on past climate, and do not reflect temperature increases that are experienced in the present, and in the future. Without these updates, it is still possible to design code compliant buildings without active cooling, that will overheat in the future, putting residents at risk. The methods to incorporate future climate shifted parameters exist and are straightforward, and this change should be incorporated into this code update. 6/15/2023 09:51 AM
- 9.33.2.1 (2) uses language that is very vague with “or good engineering practice according to Article 6.2.1.1. can show it to be unnecessary” Does good engineering practice imply that an

Engineer would need to be doing an analysis to demonstrate that cooling isn't needed according to some standard? Maybe the article can refer to the same requirements for Part 3 to demonstrate a maximum number of hours above a certain temperature. Otherwise, it could list specific standards that have been developed by other organizations for this purpose instead of the general list provided in 6.2.1.1. 6/15/2023 09:24 AM

- The Canadian Association of Consulting Energy Advisors recognizes and commends the government on recognizing the safety issue of overheating. We want it recognized, that while in a step in the right direction, it does not address the need for the house to perform better and be more comfortable for the occupant. We are generally in favour of the addition of cooling to the building code and agree in principle to the proposed changes. However, there will be challenges related to executing and measuring this requirement in a consistent and reliable manner. As the association representing energy advisors who perform modelling for code compliance, we would like to assist the government in designing a commonly used methodology along with any supportive tools. You can reach me, Cindy Gareau CACEA's executive director at manager@cacea.ca or 1-888-315-2774. 6/15/2023 09:14 AM
- Too costly to mandate. let market decide 6/14/2023 11:39 AM
- going to be hard to enforce. Requiring all homes to have air conditioning at time of construction will add additional cost to the home buyer again. If the window is big enough to accept a in window unit, does that meet the requirements of the code? Does a plug-in meet those requirements? 6/14/2023 09:04 AM [Plug-in portable equipment out of scope from code perspective]
- Already captured ----
  Again the proposed changes are clear and buildable. However, the biggest concerns are just related to the overall affordability costs. Any changes to code forcing additional air-conditioning systems bring up the overall cost/unit. Our North American ideals of need for cooling on demand is certainly a luxury. Many of the overheating issues can be solved with a more passive design changes and/or education of tenants with best practices to prevent overheating. Current code designed spaces shouldn't overheat if proper best practices are utilized to prevent heat gain are utilized. Design conditions do not necessarily mean actual temperatures are met when people do not follow best practices.
  6/12/2023 10:33 AM
- Senior facilities are in desperate need of air conditioning in the higher temperature months. I've worked in several facilities and by far, longterm care facilities lose residents from heat exhaustion, I've seen it.
  6/9/2023 04:49 PM
- The main impediment to successful implementation will be ins'ection and enforcement. we rely too much on the trades to evaluate their own work. City inspectors need to be more thorough in their inspections.
  6/9/2023 09:35 AM
- It should be up to the market to decided if cooling is required for new homes. As a realestate developer we, in certain markets, include mechanical cooling. the market will advise what is required and what is not. this should not be regulated by any level of government.
  6/9/2023 09:26 AM
- you are demanding that all areas or municipalities to be created equal which again causes an increase in Building Cost and who can afford the extra cost of living.
  6/9/2023 09:03 AM (individual building design and location determines application)

- There are many alternative methods to provide cooling other than A/C. A/C only adds costs to housing, in an already challenging environment for affordability. Communities all around the world are able to make it work without A/C, I am not sure why this is necessary for BC.
- 6/8/2023 08:17 AM
- Out of scope – not part of a proposed change. The intent of 6.2.1.1 1) is obvious and good, but there is too much room for interpretation. Has anyone proven that the external guidelines listed in a-j contain zero conflicts with any of the other guidelines listed? Would someone review the entire list again for conflicts as those external guidelines are updated? Suggestion #1; This language be adjusted to specifically allow installations described in ANY of the guidelines, provided of course that it conforms to all code requirements. Remove the ability for a random municipal inspector to take issue with an install conflicting with one particular guideline, despite it being allowable or even recommended in another on the same list. Suggestion #2: Remove "but not limited to" language from 6.2.1.1 1) as this opens the door to an inspector bringing any old random book to site and demanding changes found therein. Pathways to rejection of installed work must have bounds.
- Proposing that air conditioning be integrated in the code is stupid to say the least, there have been thousands of death related to covid and no proposals to fix that ...ant the the very least , code should not mandate personal comfort ...what could be next ...mattress testing and certifications? 6/4/2023 08:09 PM

☑

- Costs to taxpayers is too high.6/2/2023 07:26 AM
- The unintended consequences is the increase in construction costs, which erodes the affordability of housing. Cooling has, traditionally, been associated with higher price point homes, and is easy to retrofit if needed later. 5/31/2023 09:38 AM
- We should be mandating heat pumps and not old school ac 5/26/2023 09:25 PM
- Mandating mechanical cooling will increase the building and operating costs, which will be transferred to the occupant/home owner. Given the rising costs of living and that wages have not risen with inflation, it is imperative to also insure that passive or natural cooling solutions are explored and implemented. Use of mechanical ventilation will also increase the burden on the energy grid and should be only solution given the chance of mechanical failure, brown-outs, natural disasters, etc. Protection of life is of utmost importance and ensuring that people are safe and able to stay cool is important for the future of BC.
- Outdoor shade structures are a simple solution to heat events. Shade Sails are the most cost-effective.5/24/2023 05:52 PM
- The reports quoted that describe desired systems for cooling are based upon a period when unnecessary lockdowns, isolation mandates and social/physical connections were restricted which led to the increased loss of life to residents. Far more elderly and health impaired people die during cold winters not that this should deter the installation of cooling systems but this new proposal totally avoids the actual cause of the deaths that it proposes to avoid in future. I certainly would not comply with these proposals and or upgrade my home to this proposal. 5/24/2023 03:33 PM
- The code language is clear but cooling requirements should be based on future projected climate data, not historical 5/24/2023 07:44 AM

- I feel strongly that a requirement to include mandatory cooling systems should not be implemented through Building Codes. With all of the scrutiny around energy efficiency and lowering our footprints, a requirement like this seems to be going in the opposite direction. If a homebuilder or someone purchasing a new home would like to add cooling, that is a convenience. Further, many homeowners have never had air conditioning in their homes for their whole lives, to force someone to spend an addition $5-10,000 to put in an un-wanted cooling system seems very excessive. 5/23/2023 12:01 PM

Public review themed email comments

Association of Consulting Engineering Companies British Columbia
Caroline Andrewes, P.Eng., CPA, CMA
President & CEO
caroline@acec-bc.ca

- Commented on a preference for forward looking climate data. They suggest using operative temperature instead of dry bulb temperature.
- Comment suggested a different structure of code provisions e.g., earlier in the code.
- Note: plumbing comment not part of public review.

BC Lung Foundation
Noah Quastel LLB LLM PhD
Director, Law and Policy, Healthy Indoor Environments
nquastel@bclung.ca

- Recommending more specific language and guidance on a living space as shelter e.g., where occupants can sleep and live comfortably over many days.
- Ideally, then, the entire living space or normal bedrooms of the dwelling unit would be cooled to 26 degrees.
- Comment suggested considering filtration for air quality in coordination with cooling for a place to shelter

Ministry of Environment and Climate Change Strategy
Clean Government Team, Climate Action Secretariat
Adrian Mohareb, M.Eng., P.Eng., LEED® AP, Senior Policy Analyst
adrian.mohareb@gov.bc.ca

- One comment recommended expanding the living space to include all potential occupants.
- One general support for overheating

Canadian Home Builders' Association of BC
Pauline Rupp, Director, Technical & Building Innovation
pauline@chbabc.org

- 1 comment recommending for more consultations
- 1 comment raises the concern of existing buildings

- 1 comment raises concerns with the "show it to be unnecessary" language that it is vague and difficult to enforce (note: difficult for builder to prove “unnecessary”)
- 1 comment recommends clear, acceptable passive cooling design measures that will allow for a living space to be exempted from mechanical cooling.
- 1 commented on applying requirements on locations based on cooling degree days [note: this comment = no action as proposal already provides climate specific application]
- 1 comment raised the potential tension between operating cooling systems and energy efficiency measures

Efficiency Canada
Kevin Lockhart, Research Manager
kevin.lockhart@efficiencycanada.org

- 1 comment on future shifted climate files

Engineers and Geoscientists British Columbia
Harshan Radhakrishnan, P.Eng., SCR®, M.A.Sc., Manager, Climate Change and Sustainability Initiatives
hradhakrishnan@egbc.ca

- 1 comment on future data inclusion
- 1 comment on the risks of using historical climate data

Fraser Health
Dr. Emily Newhouse, Medical Health Officer
Emily.Newhouse@fraserhealth.ca

- 1 raised concern for using historical climate data
- 1 raised use of future shifted climate data e.g., cooling facility term (confusion between cooling system and appliance)
- 1 comment asking for clarity for occupants to determine designated cooled space

Heating, Refrigeration and Air Conditioning Institute of Canada
Sajjid Lakhani, Manager of Government Relations and Strategy
sajjid@impactcanada.com

(John Harris also submitted comments via PR portal)

John Harris
DSG Building Diagnostics
on behalf of HRAI
jharris@dsgi.on.ca

- One comment asks for more clarity for good engineering practice and guidance on loads and temperatures.
- One comment raises that the F280 standard is for equipment sizing of the whole building and requests guidance on working in a single room.

Introba
Thomas Bamber, MEng, CEng, MCIBSE, Associate Passive Design
thomas.bamber@introba.com

- One comment supports passive design measures
- One comment raises concern that comfort is not addressed (recommends ASHRAI-55)
- One comment asks for clarity for when designers go above and beyond and also when good engineering practices shows cooling to be unnecessary for Part 9 [BSSB note: bulletin]
- One comment recommended stricter requirements for thermal comfort

BC Hydro
Katherine King, MA, ACC, Policy Specialist
katherine.king@bchydro.com

- One comment notes that requiring Step 3 Energy Step Code promotes the use of heat pumps which coordinate with protection from overheating
- One comment recommends extending the requirement to all bedrooms
- One comment recommends extending cooling throughout the whole building
- One comment raises concern with historical climate data
- One comment recommends the design state of the upper and lower temperature limits of equipment
- One comment recommends system verification and commissioning be required (Part 6)
- One comment raised concern on high solar heat gain windows and suggests eliminating energy rating metric for windows

VanCity
Molly Henry, Senior Policy Analyst
Molly_Henry@vancity.com

- One comment notes alignment with City of Vancouver
- One comment raises concerns on historical climate data and suggests future shifted climate files
- One comment asks for clarity on what is considered as living space
- One comment asks to extend the requirement to two living spaces
- One comment recommends requirement for protection from overheating

Vancouver Coastal Health
Ryan Chan, Administrative Assistant/Analyst to Dr. Michael Schwandt, Medical Health Officer
ryan.chan@vch.ca

- One comment validates proposed changes
- One comment recommends requirements for air filtration [MERV 13] as opening windows may go against recommendations during wild fire season [BSSB note: bulletin to elaborate on which passive measures to use e.g., shading, lessen reliance on opening windows as it can present risk for poor air quality]

Radon

Summary of Comments

- 23 responses
- The majority of respondents indicate the proposal is clear and buildable. The following comments were received:
    - One comment raises concerns with existing buildings and recommends fulltime radon monitoring of all homes
    - One comment suggests testing of radon pipe installation and for the pipe to include a clean out
    - One comment about installation after construction not being an option
    - One comment requesting stronger wording on sealing of air barrier, be raised with TG-R
    - One comment about possible confusion about low pressure drop screen terminology
    - One comment about "compactable fill" not being likely in Notes
    - One comment recommends diagrams on particularly air barrier ceiling details
- One comment suggests improvements for rough-ins effectiveness and usability (BSSB note: supports BC Lung submission)
- One comment recommends expanding the radon requirements to non-residential buildings
- One comment raises concerns with referencing the CGSB 149.11 standard as it contains best practice language that may not be clear or enforceable. [BSSB disposition: Action – Bulletin. Provide clarity on what is required versus what is recommended and await further development/decisions by SC-HSB on how best to reference the standard.]
- One comment questions the justification for the pipe material which comes with a cost premium. Recommends allowing the same pipe permitted in the Plumbing Code for above-ground drainage as a cheaper alternative material. [BSSB disposition: Action – Other. Proceed with drafting as presented, but raise material discussion with national Task Group.]
- One comment raises concerns that the proposed language is unclear on whether side wall venting is permitted and recommends it be permitted. [BSSB disposition: Action. Commenter raises a valid point that the reference to 7.2.4.6. of CBSG 149.11 discusses only through-roof venting. Policy has been to allow side-wall venting. Revise proposed Clause 9.13.4.3.(3)(b) to read: "Clause (2)(f) where it terminates outside the building, not less than 1.8 m from a property line, and located in accordance with either 7.2.4.6 or 7.3.4 of CAN/CGSB-149.11, "Radon control options for new construction in low-rise residential buildings," with the opening of the pipe fitted with a low pressure drop screen conforming to Sentence 6.3.2.9.(4)." Discuss in bulletin the options for termination location. *Note also there are proposed changes as a result of PR comments with regards to the screen language.*]
- One comment raises concern about using 'conditioned space' language which scopes-out unconditioned crawlspaces (and commenter discusses radon risks of unconditioned crawlspaces). [BSSB disposition: No Action. Proposal follows BC and NBC application which is specific to assemblies separating conditioned space from ground. Comment can be considered by national Task Group.]
- One comment raises concern with "Unless the space between the air barrier system and the ground is designed to be accessible for the future installation…" language stating it is too subjective. [BSSB disposition: Action – Bulletin. Discuss example such as crawlspace where a future installation is easily possible and practical.]

- One comment recommends additional requirements to achieve better potential outcomes. Recommends requiring an extension of perforated pipe below the slab, a straight vertical rise, rise through conditioned space, insulation where rise not through conditioned space, room for a fan, and an electrical rough-in. [BSSB disposition: Action – Bulletin. Discuss these matters as best practice in a bulletin to help inform reasons for rough-in (builders more likely to build appropriate rough-ins if they are given the big picture as to what the purpose and performance is meant to be.]
- One comment *[now two comments I believe]* raises confusion with language used in Clause 9.13.4.3.(2)(d). [BSSB disposition: Action. Revise language for clarity (e.g. pipe not allowed to be half-buried in insulation…).]
- One comment recommends further explanation of what does not constitute a hazard in Clause 9.13.4.3.(2)(f). [BSSB disposition: Action – Bulletin. Discuss hazards in bulletin and provide examples of terminations in safe locations.]
- One comment raises concerns that requirements for labelling the radon vent pipe could cause occupants to believe the pipe is functional and that they are protected. [BSSB disposition: Action – Bulletin. Discuss appropriate labelling in bulletin. Language proposed is consistent with BC and NBC language. Work with BC Lung and others to encourage appropriate messaging on labels.]
- One comment recommends better coordination with other Code provisions such as ventilation and air barrier detailing. [BSSB disposition: Action – Bulletin. Draw attention to importance of ventilation and aid barrier system detailing (energy efficiency) as contributors to protection from radon.]
- One comment recommends shift in focus from lowering high levels to getting (all) levels as low as reasonably achievable. Commenter provides references of exposure at low doses causing negative health effects and death. [BSSB disposition: Action – Bulletin. Explain risk at all levels in bulletin and encourage testing and actions according to Health Canada guidelines. Direct 'ALARA' principle to the national code development system.]

Survey

- Happy to see this implemented across the province! Highly recommend some good diagrams on the proper way to install the air barrier membrane (how to seal to fdn, dealing with penetrations like tub/shower traps). The actual site implementation is critical to provide better consistency. Labeling the pipe should be a little more robust (where would someone accidently tie plumbing into a radon pipe) and confirming the pipe thickness and should the under-slab be perforated as studies are showing an end of solid pipe are getting blocked up. Also, a better understanding of carrying the piping thru the building efficiently.
  [BSSB note: Opportunity to highlight BCH Guides and others CGSB Standard] 6/19/2023 10:06 AM
- Please see attached document 6/17/2023 05:03 PM
- Ccc 6/16/2023 02:01 PM
- Test 6/15/2023 03:38 PM
- Sentence 9.13.4.3.(2) states 'The radon vent pipe required...' which does not make mention of fittings. Although pipe and fittings are stated in Clause (e), I feel it is still clearer to change Sentence 9.13.4.3.(2) to read, 'The radon vent piping system required...'. Also, Clause 9.13.4.3.(2)(d) reads awkwardly, possibly because it is missing a word. I would suggest specific changes, but unfortunately I do not understand what requirement it is trying to make regarding conditioned spaces. For this reason, a revision of the Sentence should be considered. Clause 9.13.4.3.(3)(b) and its requirement for a screen may prevent the use of the RadonX rain cap (see pg.18 of RadonX Technical Manual: https://ipexna.com/wp-content/uploads/2022/08/manual-

caen-ipex-radonx.pdf). The RadonX rain cap was developed and testing with the NRC specifically for use on radon venting systems and its air flow performance was confirmed through testing to exceed that of a standard mesh type roof termination. In the 2023 edition of the CGSB 149.11, which I have been told is close to being issued, Article 7.2.4.7. has a change request from the public review to read, "In all discharge types, the end of the discharge pipe for the passive vertical radon stack shall be protected by a low pressure drop stainless steel mesh with 10mm to 12.5mm openings, or by a product providing equivalent performance. When using a product other than metal mesh it shall have equivalent airflow performance." Since the edition of CGSB 149.11 that the 2023 BCBC will reference does not contain the allowance for non-mesh terminations, please consider using the verbiage from the 2023 edition of CGSB 149.11 in Clause 9.13.4.3.(3)(b). The purpose for this is so that installers in BC are permitted to use the code compliant, esthetically pleasing and better functioning option of an NRC tested radon venting rain cap that doesn't contain metal mesh. 6/15/2023 09:53 AM

- Already captured -----
- Sentence 9.13.4.2.(1) references Subsection 9.25.3. although Article 9.25.3.6. relates specifically to air barrier systems in floors on ground the wording in Sentence 9.25.3.6.(6) is not sufficient for maintaining a complete seal of the air barrier. The wording implies that only a seal of floor drain penetrations is required. This wording should be revised to be more direct, similar to the wording in Sentence 9.18.6.2.(4) “All penetrations of the ground cover required in Sentence (1) shall be sealed against air leakage." thereby removing any ambiguity around what is expected. Sentence 9.13.4.2.(2) has anyone seen or used a system that would allow for the installation between the air barrier and the ground after construction? If a method does not currently exist, then this language provides a false option which can lead to confusion and potential conflict. if we are revising this area then this part of the sentence should not exist and it should just simply read "(2) Buildings shall" as part of the impact analysis is cost for installation after the fact and installing a rough-in system during the construction process is going to more cost effective than something that may exist to install under the air barrier at a later date. Sentence 9.13.4.3.(3) references Sentence 6.3.2.9.(4) for "low pressure drop screen" not sure what this is supposed to look like, but the referenced sentence talks about a mesh screen of a given size which is similar to Sentence 9.32.3.9.(1). Is the part 6 sentence being revised to add some additional language and if not, why would we not just reference the requirement that is already contained in part 9. Leave the use of the information within part 6 to those that choose to use Clause 9.13.4.2.(2)(b). in the notes second paragraph "In some cases, subfloor....." talks about where compactable fill is installed. I am unclear how this can occur based on the requirements in sentence 9.13.4.3.(1) for the material that is required to be installed under the air barrier system.
  6/13/2023 09:08 AM
- Requesting stronger wording on sealing of air barrier – Recommend no change for 2023 but to raise air barrier sealing details with TG-R
- Comment about installation after construction not being an option appears to have forgotten about crawlspaces where this construction can occur after initial construction…
- Raised possible confusion about ‘low pressure drop screen’ terminology – this terminology was borrowed from a national PCF 1713 [I raised this with the TG citing it will cause confusion and offered the same alternative…] Recommended action of either adapting language from CGSB-149.11 or adapting language from 9.32.3.13.(15), or both. E.g. “corrosion-resistant screen or grill with a mesh size of…”. Note; align BC 9.32. language with NBC 9.32. language. (Doing this should address the Part 6 comment that suggests staying within Part 9 for references.)

- Comment about 'compactable fill' not being likely in Notes – recommend no action; the Note is NBC content and alerts designers that if sub-slab communication is not possible/realistic, then other solutions (apart from depressurization) would be better
- It does not make sense to require radon protection where radon doesn't exist. 6/12/2023 07:26 AM (Data does not support this comment)
- Not a practical solution - This issue is completely solvable by opening windows 6/4/2023 08:12 PM
- While I can understand your proposed changes, and they are clear, they are missing a critical part: Ongoing radon monitors in EXISTING homes and buildings must be installed, similar to CO2 and SMOKE/FIRE alarms. What we have found in construction in the Okanagan is that radon gas is released into nearby existing homes during adjacent construction of new homes - this must therefor be monitored before, during, after construction given Radon gas health impacts. A provision needs to be made that all new homes have a radon gas monitor installed in living areas. Moreover, all existing homes should have one retrofitted given the serious health impacts of radon gas. 5/31/2023 01:21 PM
- As the first radon tech in canada from 2005 and a RBO I would recommend that some consideration be given to the testing of the radon pipe for leaks. I have encountered numerous radon piping installations where the fittings are not glued. The risk to health and safety from a leaky radon pipe is the same and potentially greater than a leak on a DWV vent pipe. A cleanout should be provided at the base of the stack so that testing of the portion of pipe above the air barrier system can occur. 5/23/2023 12:16 PM

Public review themed email comments

BC Lung Foundation
Noah Quastel LLB LLM PhD
Director, Law and Policy, Healthy Indoor Environments
nquastel@bclung.ca

- One comment with the opinion that the organization and language used in the Code is not clear or accessible to lay people. [BSSB disposition: No action. B.C. adopts the organization and language conventions from the national model codes as part of the Construction Codes Reconciliation Agreement.]
- One comment recommends we use clear language to convey that passive systems are required. [BSSB disposition: No action. B.C.'s proposal is to continue the concept of 'rough-in' and wait on national code development on passive systems to complete before amending and describing the requirements that way. (B.C.'s proposal still allows sidewall venting so the proposed 'allowable' rough-ins are not necessarily 'passive' systems. This allows design flexibility and is consistent with the intent of preparing a home for a subfloor depressurization system but not- at this point- forcing or requiring mitigation.)]
- One comment raises concerns of ambiguity of language used to describe rough-ins, extended rough-ins, and passive stacks. [BSSB disposition: Bulletin. A supplementary bulletin is recommended to aid the roll out of the new changes. Bulletin should elaborate on B.C.'s 'extended rough-in' which is more than a capped 'T' but not necessarily a passive stack (the way CGSB 149.11 would describe it). Some mild confusion is expected as a result of B.C.'s radon changes and we can clarify that the changes are to make the 'extended rough-in' better and more likely to function and save costs in the future to support an active system.]

- One comment that functional passive systems should be required at the construction stage. [BSSB disposition: No action. Allow national development on passive systems to complete.]
- One comment that we should clarify that a passive system is required versus an extended rough-in. [BSSB disposition: Bulletin. A passive system is not what is proposed, rather an extended rough-in. Bulletin to make clear what the requirements are and what they prepare for.]
- One comment that builder should be responsible for building homes below Health Canada action levels. [BSSB disposition: No action. Allow national code development to continue before assigning responsibilities for actual performance- which would likely be coordinated with new home warranties and BC Housing.]
- One comment states that labelling is done poorly and recommends stronger language in the requirement. [BSSB disposition: Bulletin. Make clear what labelling requirements are and why they are important.]
- One comment raises concern that ventilation requirements may be insufficient in the part they play for managing indoor radon levels. Recommends strengthening ventilation requirements. [BSSB disposition: No action. Allow proposed change for ventilation to receive due process. Indoor air quality, including radon, is a shared concern in HVAC design.]
- One comment raises concerns that industry is not aware and/or not following Code requirements regarding radon. Recommends guidance and education. [BSSB disposition: Bulletin. Explain what is required and why.]
- One comment recommends adding additional resources to Notes of the Code. [BSSB disposition: Bulletin. Consider adding recommended references to bulletin.]

Canadian Home Builders' Association of BC
Pauline Rupp, Director, Technical & Building Innovation
pauline@chbabc.org

- One comment raises concerns with referencing the CGSB 149.11 standard as it contains best practice language that may not be clear or enforceable. [BSSB disposition: Action – Bulletin. Provide clarity on what is required versus what is recommended and await further development/decisions by SC-HSB on how best to reference the standard.]
- One comment questions the justification for the pipe material which comes with a cost premium. Recommends allowing the same pipe permitted in the Plumbing Code for above-ground drainage as a cheaper alternative material. [BSSB disposition: Action – Other. Proceed with drafting as presented, but raise material discussion with national Task Group.]
- One comment raises concerns that the proposed language is unclear on whether side wall venting is permitted and recommends it be permitted. [BSSB disposition: Action. Commenter raises a valid point that the reference to 7.2.4.6. of CBSG 149.11 discusses only through-roof venting. Policy has been to allow side-wall venting. Revise proposed Clause 9.13.4.3.(3)(b) to read: “Clause (2)(f) where it terminates outside the building, not less than 1.8 m from a property line, and located in accordance with either 7.2.4.6 or 7.3.4 of CAN/CGSB-149.11, “Radon control options for new construction in low-rise residential buildings,” with the opening of the pipe fitted with a low pressure drop screen conforming to Sentence 6.3.2.9.(4).” Discuss in bulletin the options for termination location. *Note also there are proposed changes as a result of PR comments with regards to the screen language.*]

Falcon Engineering

[BSSB disposition: Action – Bulletin. Discuss these matters as best practice in a bulletin to help inform reasons for rough-in (builders more likely to build appropriate rough-ins if they are given the big picture as to what the purpose and performance is meant to be.]
- One comment *[now two comments I believe]* raises confusion with language used in Clause 9.13.4.3.(2)(d). [BSSB disposition: Action. Revise language for clarity (e.g. pipe not allowed to be half-buried in insulation…).]
- One comment recommends further explanation of what does not constitute a hazard in Clause 9.13.4.3.(2)(f). [BSSB disposition: Action – Bulletin. Discuss hazards in bulletin and provide examples of terminations in safe locations.]
- One comment raises concerns that requirements for labelling the radon vent pipe could cause occupants to believe the pipe is functional and that they are protected. [BSSB disposition: Action – Bulletin. Discuss appropriate labelling in bulletin. Language proposed is consistent with BC and NBC language. Work with BC Lung and others to encourage appropriate messaging on labels.]
- One comment recommends better coordination with other Code provisions such as ventilation and air barrier detailing. [BSSB disposition: Action – Bulletin. Draw attention to importance of ventilation and aid barrier system detailing (energy efficiency) as contributors to protection from radon.]
- One comment recommends shift in focus from lowering high levels to getting (all) levels as low as reasonably achievable. Commenter provides references of exposure at low doses causing

negative health effects and death. [BSSB disposition: Action – Bulletin. Explain risk at all levels in bulletin and encourage testing and actions according to Health Canada guidelines. Direct 'ALARA' principle to the national code development system.]

Steel storage racking

Summary of Comments

- 8 responses indicate it is clear and buildable
- 1 comment raised the concern of inconsistent enforcement on steel pallet storage racking

Survey

- Good to see this increased wording as for some time there was not a lot of guidance for local governments on our Authority (info bulletin No.B07-06). There is definitely a discrepancy from the Lower Mainland and the remainder of the province in this area as seismic is typically not top of mind - so what about the rest province - are there other structural triggers that are involved. Loading by forklift or not? It's a bit over the map on racking permits - Local government permit requirements https://www.google.com/search?q=racking+permits&rlz=1C1GCEB_enCA960CA960&oq=rac&aqs=chrome.0.69i59j69i57j46i131i433i512l2j0i131i433i512j69i60l3.1345j0j7&sourceid=chrome&ie=UTF-8 Industry outline https://www.arpac.ca/product-support/permit-application-process Is there any direction between racking and floor stacking (Palletized) storage. Seems like it's a trend in warehouse to reduce racking costs and allow for more flexibility on floor layouts as products change. Note WorkSafe BC also has commentary on racking systems due to the number of failures over the years. https://www.worksafebc.com/en/health-safety/tools-machinery-equipment/storage-racks

Ventilation

Summary of Comments

- 39 responses
- One comment expressed concerns with the effectiveness of the passive ventilation option for secondary suites
- One person indicated preference for substantial increase to ventilation rates
- Three comments stated why would we change requirements when B.C. has working requirements
- One comment concerned with protection from insects and rodents when using passive inlets
- One commenter raised potential for conflicts between referenced best practice documents.
- 2 comment concerns over lack of requirements for filtration that allows bad air quality and recommends filtration requirements (MERV 13, HEPA) [BC lung and Vancouver Health).
- One comment points out that passive inlets are not allowed for Step Code buildings and therefore not an actual option [BSSB note: technical change already happened and would require messaging e.g., ventilation bulletin should be clear on Step Code 3 changes and impact]
- One comment suggests to not allow passive ventilation solution for homes built to the zero carbon Step Code
- One comment with a concern of allowing noisier equipment (e.g., 2.0-2.5 sones from 1 sones) recommends limiting all exhaust fans to 1 sones.
- One comment validates the CO detector requirements for non-residential buildings
- One comment raises performance concerns with passive ventilation. Comment states that passive ventilation is uncontrolled and conflicts with requirement for tempering outdoor air (9.32.3.5.(8)) and air tightness. [BSSB disposition: No action. Policy decision to continue to allow passive ventilation as low cost solution.]
  One comment raises overlap and potential confusion with Clause 9.32.3.8.(1)(c) being a stand-alone clause. Recommends revising Clauses (a) and (b) as such: "a) dwelling units that contain a vented appliance that is subject to back drafting (see Note A-9.32.3.8.(1)(c)) ~~a fuel-fired space-heating appliance or fuel-fired water-heating appliance of other than direct-vented or mechanically vented types,~~

  b) ancillary spaces that contain an exhaust device, where the space is not within a dwelling unit in a house with a secondary suite and where the house with a secondary suite contains a vented appliance that is subject to back drafting (see Note A-9.32.3.8.(1)(c)) ~~a fuel-fired space-heating appliance or fuel-fired water-heating appliance of other than direct-vented or mechanically vented types~~". [BSSB disposition: Action – Code. As a result of adopting the content and organization of NBC's 9.32., B.C.'s provisions for NAFFVA appear in a new structure and may be seen as overlapping. Recommend providing clarity in associated Note. E.g. "NAFFVA, typically appliances with draft hoods, are subject to back drafting when a negative pressure condition occurs in the dwelling. Although Clauses 9.32.3.8.(1)(a) and (b) may capture NAFFVA, Clause 9.32.3.8.(1)(c) reinforces the application of Article 9.32.3.8. in all instances where a vented appliance is subject to back drafting regardless of where they may be located. The following tables describe the conditions under which Clause 9.32.3.8.(1)(c) applies:…" FOR DISCUSSION WITH TECHNICAL TEAM.]

- One comment questions the provisions for CO alarms within Section 9.32. as CO alarms do not impact ventilation system design. Recommends requirements for CO alarms be located in a separate Section as they are often dealt with by different trades than those involved with the ventilation system. Commenter also points out that B.C.'s provisions for CO alarms in non-residential occupancies is a further challenge to 'fit' within the scope of 9.32. [BSSB disposition: Action – Other. Leave content as presented, however flag issue of 'scope' for further development of CO requirements nationally. Track in BC Variations Database that scope of 9.32. is not an ideal fit for CO alarm requirements.]

Survey

- Already captured ----
- 9.32.1.1.(3) refers to 4 motor vehicles which is not identified as a change as the current code refers to more than 5 vehicles which is in keeping with the language in Article 9.10.9.16 so not sure if these need to be synced. significant change from the current BCBC which will require some very comprehensive training to ensure all clearly understand how this section is to be implemented. Article 9.32.3.11. has no language regarding equivalent duct length due to the exhaust hood and changes in direction. Is this no longer relevant to duct sizing? Sentence 9.32.3.11.(5) although not changes refers to duct intakes within 3m horizontally of a cooktop, should there not be a vertical or a radius dimension also or instead of?
  6/13/2023 10:03 AM
  (B.C. has harmonized with the NBC provisions and scope and application)
- Are we no longer to accept having the duct-type smoke detector installed in the ducting of shared heating and ventilation equipment between a primary dwelling and secondary suite?
  6/13/2023 09:26 AM (B.C. has harmonized with the NBC provisions)
- passisve ventilation of a secondary suite usually means a couple of holes in the walls, on opposite sides of the suite. Tje homes are dressed up with plastic trim and an adjustable cover which is screwed in or out to adjust airflow. It is a perfect opening for bugs ane even mice to enter the suite. There needs to be a provision for preventing prsts from entering.
  6/9/2023 09:43 AM
- I agree with the dedectors in all forms, but the Ventallation Changes are all uncalled for, thier again driving up the cost of all construction in a time we need to build affordable units
  6/9/2023 09:08 AM
- 9.32.3.2. 1) falls afoul of the same issues I provided for 6.2.1.1 1). Multiple "best practices" external guideline sources are listed - I doubt anyone has reviewed these in intense detail to determine there are zero conflicts found between them. Suggestion: Place these external guidelines in an order of precedence so that any conflicts in current or future versions can be resolved cleanly. 6/6/2023 12:44 PM
- [Note: There is little empirical evidence to indicate a need for changes] ...few or no serious reports related to ventilation other than the consequence of sequestered off gassing due to chineses building products . This toxic off gas is trapped in homes due to previous vapor barrier and interior caulking.nice engineering ...cause a problem then suggest the cure
- 6/4/2023 08:21 PM
- [Note: Have been considered] - Again...building costs and regional data differences must be considered. 6/2/2023 07:26 AM
- Passive ventilation is not controllable and even in secondary suites will lead to over ventilation and comfort complaints. 6/1/2023 07:21 AM

- ~~We should be requiring all indoor spaces to be ventilated similar to outside to decrease spread of viruses. 5/26/2023 09:26 PM~~
- I dont believe the use of passive air inlets should be available to the cold climate indicated. The design data should limited the January design limit temperature to -5C max
- 5/25/2023 02:48 PM
- I find this read very convoluted. Heating Season vs Non heating season, room sizes and implication of some opening (window?) that may or may not be open but must be of a certain size. Surly this could be reduced to a requirement for X amount of air turnover per cubic meter of space with provision for special appliances like dryers and stoves
- with the increased air tightness and less air exchanges the following air pollutants need to be monitored for a healthy home especially for the safety and health of our children being the most vulnerable - Radon monitor - co2 monitor - voc monitor - particulate matter (PM) - humidity - temp - air pressure. 5/24/2023 12:36 PM
- Unintended consequence of changes to the language from 2018 BCBC. The proposed language change for 9.32.3.5.(15) from the previous 2018 BCBC 9.32.3.4.(6) unintentionally reverses the desire to keep passive air vents as a low cost option for secondary suites with baseboard heat. By changing "dwelling unit" from 2018 9.32.3.4.(6).(a) to "secondary suite" in (2023) 9.32.3.5.(15).(a) combined with removing "except for a secondary suite," from (2023) 9.32.3.5.(15).(iv), the language now reads that passive airvents are not permitted in a secondary suite when the building is designed to 9.36.6 (Step Code). Since every building applied for on or after May 1, 2023 is required to meet Step Code, this means by the proposed language that a secondary suite may not propose passive air vents and must have a mechanical system.
- N/a 5/24/2023 10:04 AM
- Please consider requiring HVAC installers to have a trade certification as sheet metal installers and to F280 for heat/ loss, with the same requirements for plumbers, having to provide a trades qualification for doing HVAC work. 5/23/2023 12:18 PM

ryan.chan@vch.ca

- One comment concerns over lack of requirements for filtration that allows bad air quality and recommends filtration requirements (MERV 13, HEPA).

Windows, doors, and skylights

Summary of comments

- 39 responses indicate change is clear and buildable
- One comment questions why B.C. would allow loads prescribed in part 5, when following NAFS and the Canadian supplement
- Six comments raised the concern of bird window collisions (the same comment was submitted six times)
- One comment on the value of enforcement
- One comment suggested the market determine requirements
- Two comments received flagged that there could be increased costs with the increased requirements
- One comment indicates we should require windows with greater efficiency
- One comment recommended changes to proposed language that they felt would limit misunderstandings and inform flexibility between testing and engineering analysis.
- One comment recommends the ability to use engineering analysis to qualify size and configuration modifications for composite and combination assemblies through use of AAMA 450-20 without needing to test every configuration. Commenter proposed to adopt Sentence 5.9.2.3.(1) from the NBC- deleting the amended Sentence (1) BC had proposed- and also to add the following subclauses to Clause 5.9.2.3.(1)(b): *"(i) mulled assemblies and composite assemblies are permitted to use AAMA 450-20 when complying with the standards listed in Sentence 5.9.2.2.(1). (ii) AAMA 2502 and WDMA I.S.11 are referenced within the standards listed in Sentence 5.9.2.2.(1) and provide engineering analysis guidance based on testing."* Commenter also proposed a new Sentence 5.9.2.3.(2) as follows: *"Where windows, doors, and skylights and their components are designed and constructed in accordance with Sentence 5.9.2.3 (1)(b), the aspects of the design that may not be addressed by the standards listed in Sentence 5.9.2.2 (1) shall be designed in accordance with Sentence 5.9.2.3 (1)(a). (See Note A-5.9.2.2.)"* The commenter also proposed deleting the first paragraph of Note A-5.9.2.2.(1) which is a NBC Note that BC had proposed amendments to and recommended adding an additional paragraph to Note A-5.9.1.1.(1) as follows: *"Rating Limitations. A rated window, door or skylight assembly may not meet all the applicable requirements stated in Part 5 or other applicable areas of the building code. The standards listed in 5.9.2.2 may not provide ratings, produce specifications or provide professional design and field review for areas of performance that may be applicable such as deflection of assembly components, anchorage of the assembly to the building, resistance of components to guard loads, additional resistance due to project-specific structural loads, and resistance to seismic loads."* [BSSB disposition: Action – Other. B.C.'s proposed changes to NBC's Part 5 already expand compliance options and allow consideration of Part 5 loads when following NAFS. This request asks for more flexibility and reliance on engineering analysis. This change proposed by the commenter may have impacts on testing programs and manufacturers. As such, considering the commenter's proposed changes goes beyond the scope of B.C.'s proposal. B.C. has demonstrated interest in design flexibility and engineering solutions but the commenter's suggestions go beyond and would introduce further change for industry. Commenter should be directed to the national code development system. It is recommended that B.C. support that the changes, if proposed to the NRC by the commenter, be further developed.]

- One comment recommends the ability to use engineering analysis provisions built into NAFS (i.e., AAMA 2502 and WDMA I.S.11) to be efficient with required testing and calculate performance based on actual test reports for size and configuration modifications. [BSSB disposition: Action – Other. B.C. has demonstrated interest in design flexibility and engineering solutions but the commenter's suggestions go beyond and would introduce further change for industry. Commenter should be directed to the national code development system. It is recommended that B.C. support that the changes, if proposed to the NRC by the commenter, be further developed.]
- One comment recommends clarification that there are other building design considerations that must be addressed even when NAFS compliance has been achieved. [BSSB disposition. Action – Bulletin. It is recommended that BSSB produce a bulletin to guide industry through the changes which can include alerting designers to provisions (in new organization of content) that apply in addition to NAFS. It may be possible that the commenter's organization could collaborate on a bulletin to ensure maximum value to their membership.]

Survey

- It is extremely disappointing and almost embarrassing that the persons in charge of the BC building code do not take windows, doors and glazing efficiency more seriously. With so much emphasis today on Step Code, efficiency, carbon reduction, building green, YOU HAVE ABSOLUTLY MISSED THE MARK ON WINDOWS, EXTERIOR DOORS AND GLAZING. Why are builders allowed to use windows, exterior doors and glazing today for Part 9 single family buildings that were standard building code 13 plus years ago with a 1.8 metric or 1.6 metric u-value in 2023-2024 ? This is insane and should have been adjusted long ago. Every window company has had the ability to supply windows and doors with much better performance than a 1.6 metric u-value for over a decade. I regularly walk through new construction (South Okanagan) that is Step Code 3 or even 4 and the windows, exterior doors and glazing are absolutely brutally inefficient at a 1.6 metric u-value or even higher (This is only an R Value of 3.5 - terrible and unacceptable today in 2023). The BC Building Code and the industry is pushing hard to build better and smarter all the time however, builders are allowed to use absolutely garbage efficiency windows and doors. An R value of 3.5 on your windows and doors should never be allowed anymore. Who allows this to keep happening ? I have been a builder for 13 years and cannot believe you have dismissed such a great opportunity with Code updates and Step Code to make all windows, exterior doors and glass much more efficient province wide so as to fall within the message that is being currently pushed to tighten up the envelope and go green. Whomever is in charge of this please change this by 2024 so that windows, exterior doors and glazing for single family part 9 buildings must have a minimum u-value of 1.25 metric or lower and add more rebates to the step code to get lazy and stubborn builders to upgrade. Many homes have 20% or more of their envelope in glass. There are so many rules to follow with new construction yet you have missed such a large, important and key part of the building code with allowing such terribly inefficient glazing to be still currently be used. It costs a little more for higher glazing efficiency however, if you are still allowing builders of single family homes to install 1.6 or higher metric u-value windows (from code 13 years ago) and doors in new construction, then I am formally asking you to change the code as fast as you can and force all builders including myself to use much more efficient windows and doors. Why are you allowing such incompetency in a place that is trying to lead North America with building practices ? Make triple glazing minimum code as fast as you can in windows and doors province

wide. No more waiting just get it done and stop being so lazy. You have the power to change this quickly and you absolutely should have done this 5 plus years ago. Thank you and Sincerely,

- 6/16/2023 04:33 PM [BSSB note:
- "We request that the CSA A460:19 Bird-friendly building design standard be incorporated into the Building Code to avoid unintended environmental consequences associated with new building construction. Bird-window collisions are a leading direct source of bird mortality in Canada, resulting in as many as 25 million preventable bird deaths each year. Bird populations in Canada are rapidly declining due to human factors. The Canadian government has committed to advance a wide-ranging domestic strategy and action plan to halt and reverse nature loss in Canada. Bird-friendly building design significantly reduces risks for birds at minimum additional cost and with little impacts to overall building aesthetics. Incorporating the standard into the Code is necessary to ensure it is applied in building designs that otherwise do not fall under municipal authority. The CSA A460:19 is being considered for addition to the National Building Code and the Ontario Building Code."

  6/12/2023 05:53 AM (Note: Not withing current BCBC objectives)
- Substandard contractor work…a friend bought a brand new condo and needed all the 2nd floor patio doors replaced as they were totally foggy. Also, window frames were not fitted tight. On a condo building just built up island, the painters were told to fill in the window gaps with caulking then paint over it.
  6/9/2023 05:12 PM (Note: Quality of work is not within scope)
- Enforcement of code requirenents is critical here, as the homeowner has no reasonable ability to evaluate. 6/9/2023 09:47 AM
- market will advise what is required and what is not. 6/9/2023 09:27 AM
- another design overlaod not required, this code alone will increas the cost of windows by 50 %, in a time when we need to supply affordable housing units. 6/9/2023 09:10 AM
- this will be too expensive and increase thecost of housing even further. Modern windows in BC are already very well performing. 6/9/2023 08:58 AM
- The proposed sentence BCBC 5.9.2.2.(1) requires compliance with NAFS unless exempted under BCBC 5.9.2.3.(1). BCBC 5.9.2.3.(1) states that windows, doors, and skylights that do not conform to 5.9.2.2 shall be designed and constructed according to other provisions within Division B, Part 5. These two requirements create a circular argument that cannot be satisfied. You cannot have a Code sentence that requires compliance with a Standard, but exempts the product from doing so if the product does not conform to the Standard. If a Code requirement is to allow an exemption from compliance, then the exemption must be provided as a measurable characteristic of the product. The way the BCBC Code language is provided in the proposed

change does not provide a measurable characteristic of the window, door, or skylight under BCBC 5.9.2.3.(1) that would clearly then distinguish the product and remove the requirements under BCBC 5.9.2.2.(1). What the proposed wording appears to do is allow a product that does not comply with a Standard to not comply with the Standard. A recursive paradox. The 2020 NBC articles are more clear as the measurable characteristic of the door, window, or skylight in NBC 5.9.2.3.(1)(a) that allows exemption from complying with NBC 5.9.2.2 is when the window, door, or skylight does not fall under the scope of NAFS. The intent of NBC 5.9.2.3.(1)(a) is to provide minimum requirements for windows, doors, and skylights that do not fall under the scope of NAFS. The intent of NBC 5.9.2.3.(1)(b) is to ensure that windows, doors, and skylights that do fall under the scope of NAFS are required to meet the requirements in NAFS. 6/2/2023 12:52 PM

Hi Jun'ichi,

Thank you for the update.

If you think the timing would work to have more information later in the fall, we would be happy to move our Building Codes Committee meeting. Are you available in the afternoon on October 18th? Any time between 1pm – 4 pm works on our end.

Thank you,
Lily

Hi Cassandra,

Thank you, I did receive your other email and will respond soon after we've had time to review and discuss.

On this note, I don't have a set day yet, but we do expect to know a bit more in late September or early October. I can definitely attend a meeting shortly after, but I'm sorry that I don't have a specific date I can give you.

Hi Jun'ichi

Thanks for following up on this. If the Sept. 21 timing no longer aligns, we can shift our meeting date to accommodate your schedule. This will avoid us needing to have two meetings in short succession, as the Building Code changes remain a major topic of discussion. Please let us know what timing would work better.

As well, we have gathered additional information from our members estimating the changes required to comply with the proposed accessibility requirements and we be able to share that next week. Hopefully this information is helpful and can still be considered as part of the process.

Thanks,
Cassandra

Subject: RE: UDI Submission: proposed B.C.-specific Building Code changes

Hi Cassandra,

It sounds like there will be some further clarity on this just after your meeting- closer to the end of September. That means I won't have anything to share on September 21. Please feel free to let folks know we are expecting to know more shortly after the meeting. If helpful, I could attend the subsequent meeting to answer questions. For now, please do not hold a space for me on Sept 21. Thank you so much for working with me on this and for accommodating the changes as they've happened.

Hi Jun'ichi,

Thanks for the update. We will plan to have you provide a virtual update at the September 21st meeting. There may also be topics that our members want to discuss with you related to the BCBC changes as well.

I'd also flag that going into the fall our members will be looking for confirmation of the implementation timeline for the Building Code changes, as they were slated to come into effect by the end of the year. They're already reaching out to us looking for information to help direct their design processes, since these proposed changes will have a large impact. If you have any updates on when they will be effective that would be of interest to our members in September, or whenever information is available.

Feel free to reach out to myself or Jeff if there's any way we can be of assistance.

Thanks,
Cassandra

Hi Jun'ichi,

I hope you had a great vacation and got some R&R! I'm just picking up this thread from last month to confirm the timing of a follow-up meeting with UDI and our Building Codes Committee. We still have our next Committee meeting booked for Sept. 21, but could convene the group earlier if needed.

Let me know what the timing looks like for the next steps and we can set up a meeting with our Committee.

Thanks,
Cassandra

Hi Jun'ichi,

Thank you for reaching out and glad to hear you are enjoying your summer!

We would be pleased to meet to discuss the options you are looking at. Our next Building Codes Committee meeting is scheduled for September 21st, 10am-11am. If it is preferred to meet with the group earlier, or if you require more than 1 hour, this can be adjusted.

Please let us know what your timing looks like to receive feedback on this and we look forward to continuing this discussion.

Best regards,
Lily

Subject: RE: UDI Submission: proposed B.C.-specific Building Code changes

Hi Lily and Cassandra,

I hope you are both finding some time to relax this Summer. I've got some vacation coming up next week :)

When is your UDI building code committee meeting next? I would like to discuss with the group some proposed options for delayed implementation of some code requirements. This is based on the suggestion of tying the new code requirements to development permits.

Thanks,

Good afternoon,

On behalf of Anne McMullin, President & CEO of UDI and our members, please find attached our submission on the proposed B.C.-specific Building Code changes. Throughout our letter we recommend that additional time be taken before implementation to analyze the impacts of the proposed changes and develop offsets to mitigate them. We reiterate our appreciation for the work being done by the Building and Safety Standards Branch, and would be pleased to provide support if it is determined that further analysis will be done.

If you would like to discuss any of our recommendations further, please let us know.

Hi folks,

I don't have any technical expertise on the pieces UDI is raising but I'd like to get BSSBs take on what they've raised and whether we either have/intend to addressed their concerns or are factoring in a response to their concerns for when we announce the code. It's not a huge rush as I know folks are very busy but if you can let us know by next week, prior to the announcement that would be great.

Tx,
Siân

2023 BC Building Code Impacts of the Proposed Adaptability Requirements

Dear Mr. Jensen:

Impacts to New Construction

UDI members have been expressing significant concern with the proposed requirements for 100% adaptability in all new part 3 buildings apartment buildings. The proposals require the development community, new homebuyers and tenants to overcome a systemic issue in the existing building stock. UDI and the industry have always supported the principle that new projects pay their fair share of growth-related costs. However, asking for every unit to be adaptable, without offsets and mitigation measures, is well beyond a growth-related cost.

Further, solely focusing on new construction to generate accessible housing will not alleviate cost pressures as these new units will be larger (see below) and subject to market rates which are already high. In a province already struggling with affordability, introducing options that are only available to the upper-end of the housing market will not achieve widespread access and may be beyond the reach of many individuals requiring accessible housing.

If the proposals are adopted without effective mitigation measures and offsets, bathroom, bedrooms and hallway sizes will be substantially increased relative to other living spaces in homes – especially in smaller units. Liveability and marketability will be compromised – unless overall unit sizes increase – reducing the total number of dwelling units per project, which will undermine affordability.

Changes to Unit Sizes and Layouts

Our members have shared with us a few examples from real projects that illustrate these major issues. The plans that correspond with the points below are attached to this email.

Example 1: A new housing application containing 850+ family-friendly rental homes, including 5% at below-market rates, located next to a rapid transit station would need to increase the size of the homes in order to meet the requirements. This would result in a loss of more than 120 homes, or about 15% of the project, and is significant enough that it would render the project unviable.

Example 2: In another example, the bathrooms become very large, and suite entries increase in size, making it difficult to fit entryway closets, or resulting in lost space in kitchens. The bedrooms become 12' wide excluding the closets. There would also be impacts to bathroom sizes to accommodate the changes. If unit sizes remain the same, this would result in a decrease in the size of the kitchens and living rooms. Projects currently in-stream, will need to restart unit planning and elevations to accommodate layout changes.

Mitigation Measures
We strongly encourage the Province to delay the implementation of the proposal to make 100% of new part 3 buildings adaptable and look at mitigation measures, offsets or alternatives to this proposal. These include:

- Having stronger in-stream protection for projects currently in the development review process, in particular ones with pre-sales to avoid substantive changes having to be made to designs. As we noted in our June 16th letter, our members are concerned that pre-sale purchasers will not accept significant changes to their unit layouts, which could jeopardize projects.

- In some municipalities, density offsets are offered to accommodate accessibility requirements, which helps to mitigate the loss of units due to increases in square footage. This needs to be implemented for any adaptable unit under the proposed policy at the Provincial level through a standardized FAR exemption. It is imperative that this established at the Provincial level to avoid downloading the responsibility onto municipalities, who are facing their own capacity challenges while trying to speed up approvals timelines. Further, setback and height requirements will likely have to be adjusted to accommodate the increased allowable density. Without these adjustments, density offsets will be ineffective.

- If the Province is considering FAR exemptions for the requirements based on those already employed by some municipalities, the scale of the requirements would need to be accounted for. Current exemptions are meant to offset much smaller requirements – for example up to 20% adaptability – meaning the exemption criteria for a 100% adaptability requirement would need to be much greater to provide the same level of offset.

- Many municipalities do not currently have adaptability requirements for new residential construction, so moving from a 0% requirement to 100% requirement will be a dramatic shift. The Province could consider announcing the direction to achieve 100% adaptability in the future by phasing in more incremental

percentage requirements over the next few years. This will allow municipalities and builders to adjust to the provisions and prepare for full adaptability through staged increases.

- The Province should also consider adopting the City of Vancouver's approach to adaptable bathrooms, which allow for full accessibility but are much smaller – as described in Example 3 below.

Example 3: In a comparison between the Vancouver Building By-law (VBBL) requirements and the proposed BCBC 2023 requirements, the following impacts would occur:

- In a typical washroom adhering to the VBBL adaptability requirements, the square footage (sf) would increase between 2 – 4sf. Under the proposed 2023 BCBC requirements the square footage would increase by approximately 8sf. Considering the additional requirement for clear areas outside the washroom required in the 2023 BCBC proposals, but not the VBBL, this would total an increase of 15sf.

- If the 2023 BCBC adopts 100% adaptability requirements under the current proposal, the impact of the overall density of a project is considerable at 15-25sf per unit, further impacting the affordability of the units and the number of new homes delivered.

The adaptability proposals (as well as the seismic ones) are so substantial that there would need to be robust education and guidance for implementation of these changes, which will require time.

We hope to continue these discussions with the Ministry of Housing and Building and Safety Standards Branch prior to the finalization of the proposals, as there are multiple considerations that still need to be discussed to ensure new adaptability requirements in the 2023 BCBC do not impact the ability to deliver new housing in the province.

Yours sincerely,

Anne McMullin
President & CEO, Urban Development Institute

Subject: RE: For review: UPDATED Draft MO Bullets - UDI Letter - Proposed BCBC Changes 2023

Hi Juni – thank you for the clarification.

I've made the required change. Here is a link to the updated file for you and Andy's review and comments.

I will send the eApproval with UDI's response to you as well.

Thank you,
Shannon

To: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
Subject: RE: For review: Draft MO Bullets - UDI Letter - Proposed BCBC Changes 2023

Hello,

Other points raised include:

- Suggestion that the Province establish floor area ratio exemptions

- Suggestion that setback and height requirements will need to be adjusted
- Recommendation to adopt the VBBL adaptable requirements

I believe our bullets capture the key issues the one-year transition provides to mitigate concerns. Although happy to revise in any way.

Thanks, this looks just right. Are there other points made by UDI to address or was it limited to impact on building size and existing projects? In other words, is this the whole document or will there be more points? IF there are lots more points, you can probably strive to be more brief. If this is all, it's looking great.

Hello Juni,

Here is the first draft for your review/input. I know a line by line comment was required, but when rolled up I thought the bullets address each concern from a Provincial level.

Thoughts? Happy to set a time to discuss.

Thank you,
Shannon

Hi folks,

I don't have any technical expertise on the pieces UDI is raising but I'd like to get BSSBs take on what they've raised and whether we either have/intend to addressed their concerns or are factoring in a response to their concerns for when we announce the code. It's not a huge rush as I know folks are very busy but if you can let us know by next week, prior to the announcement that would be great.

Tx,
Siân

Hello Jun'ichi,

As I mentioned previously, we have put together some additional examples to illustrate the impacts of the proposed BC Building Code changes on new construction, specifically the adaptability requirements. Please find attached a letter outlining these impacts and our concerns, along with suggested mitigation measures.

If you would like to discuss these further or have questions related to the specific examples, please let us know and we would be happy to schedule a follow-up session.

Thanks,
Cassandra

CONFIDENTIAL ADVICE – SEPT. 28, 2023 (DRAFT)

Digital Permitting
Questions & Answers

Key Messages:

- The Province is taking action to position BC as a North American leader in digital permitting and construction, in partnership with Indigenous, local government, and industry leaders.
- The Province is establishing a Digital Leadership Council, consisting of 11 organizations representing the housing development and technology sectors, to keep the Province moving towards our vision and to become a North American leader.
- One of the first changes be the development of a provincial building permit submission tool that will make it easier and faster to submit building permits for new housing.
- We have heard from industry and local governments that different processes and formats in each community creates barriers and increases costs for new housing. The provincial building permit submission tool will make it fast and easy to determine when a building permit submission is complete and provide automatic review of key parts of the BC Building Code to speed up the review process.
- This is why we are partnering with 15 local governments and one First Nation government, along with select industry partners, to development and pilot the new building permit tool in March 2024. These partnerships will ensure that we build a tool that addresses the real challenges that communities and industry are experiencing in during the building permit process.
- The new tool will address these challenges by:
    - Standardizing the information collected in building permit applications across the province,
    - Checking the completeness of a building permit application,
    - Providing an evaluation of compliance with selected parts of the BC Building Code, and
    - Allowing for online permit submission.
- Through this we will help make the building permitting process quicker, more collaborative and deliver better outcomes for British Columbians.
- Advancing digital permitting and construction is part of the Province's new Homes for People plan, which was announced on April 3, 2023.

Questions and Answers:

1. What are you announcing?

- We are continuing to take action to make BC a North American leader in digital permitting and construction by:
    - Establishing a new Digital Leadership Council, made up of 11 representatives from across the housing development and tech sectors to keep us on track to becoming a North American leader.
    - Pilot partnerships with 15 local governments and one First Nation community to work closely with us to guide the development of the new digital permitting tool and test the tool in their communities.
- The Digital Leadership Council will commence in October.
- We are starting to work with pilot communities and select industry partners in October to develop the new digital building permit tool.

2. What are the organizations in the leadership council?

Table 1: List of Leadership Council contacts

Member	Organization
Jazz Pabla Director of Information Services	City of Kelowna
Tim Ryce Chief Building Official	City of North Vancouver
Rene Cravioto Program Manager – Innovation & Service Delivery	City of Vancouver
Tyler Wightman Executive Director	Building Officials' Association of BC
Helen Goodland Principal, Head of Research and Innovation	SCIUS Advisory, Inc.
Heidi Yang CEO	Engineers and Geoscientists BC
Mark Vernon CEO	Architectural Institute of British Columbia
Neil Moody CEO	Canadian Home Builders Association of BC
Anne McMullin President & CEO	Urban Development Institute
Sue Paish CEO	Digital
Dr. Sheryl Staub-French Director of BIM TOPiCS Lab	University of British Columbia

3. What is the pilot partnership?

- The pilot communities have committed to working very closely with us to guide the development of the digital building permit tool and test the tool in their communities.
- The pilot communities will share their challenges with the permitting process, lessons learned through their digital journeys to-date, and provide feedback on the design and development of the tool's features throughout the entire process.
- A small group of select industry partners, including homebuilders, developers, architects, and engineers will join the pilot communities in supporting the development of the tool.

- Bringing communities and key industry partners together through the pilot partnership ensures that we are developing a new tool that makes the building permitting experience better for those involved in the process.

4. What local governments comprise the pilot partnership?

Jurisdictions
1. District of Saanich*
2. City of Burnaby
3. City of Campbell River
4. City of Coquitlam
5. City of Kamloops*
6. City of Langley
7. City of Maple Ridge
8. City of Nanaimo
9. City of North Vancouver
10. City of Surrey
11. City of Terrace
12. City of Victoria*
13. City of Vancouver*
14. Cowichan Valley Regional District
15. Town of Qualicum Beach
16. Tsleil-Waututh Nation

*Selected municipalities for housing targets

5. Why is there only one First Nations community involved?

- Ensuring First Nation representation in our pilot partner communities is important to reflecting their unique experiences and priorities in the new digital building permit tool.
- We are continuing to discuss pilot partnership opportunities with a few First Nations communities. We understand that the capacity of communities may be limit their ability to be a pilot partner, and we are seeking additional resources with the goal of supporting more First Nations communities to join as pilot partners.
- Throughout the development of the building permit tool, all local governments and First Nations will have an opportunity to see demos of the features and provide feedback. This provides a less time-consuming way to provide feedback without being a pilot community.

6. What will digital permitting look like?

- We know that it is hard for homebuilders to know what is required for a building permit application when each community has its own administrative requirements. This creates confusion, slows down the process, and often leads to local governments receiving incomplete submissions that they can't accept.

- Once a building permit is ready to be reviewed for compliance with the BC Building Code, inconsistent interpretation of code requirements across communities creates disagreements between building officials and homebuilders, mistakes, and further slows the approvals process.
- The new tool will address these challenges by:
    - Standardizing the information collected in building permit applications across the province,
    - Checking the completeness of a building permit application,
    - Providing an evaluation of compliance with selected parts of the BC Building Code, and
    - Allowing for online permit submission.

7. How long will it take to get digital permitting up and running?

- The digital building permit tool will be ready for piloting in the 15 local governments and at least one First Nations community in March 2024. Some features will be available prior to March for testing.
- Following March 2024, we will work to expand the use of the digital building permit tool to other communities.
- The digital permitting tool will be updated on an ongoing basis to respond to the changing needs of the building sector.

8. Are you modelling your approach on one that's proven successful already?

- We know that digital permitting has had a lot of success in countries like Finland, the UK and Singapore, where timelines improved considerably.
- We've also seen numerous local governments across the province implement digital permitting with success.
- These are digital permitting models that will certainly inform our approach, to understand what works well and what doesn't, and this is why working we are working closely with a small group of local governments.
- We want to build upon the existing success of local governments and take the next step forward by creating a standard set of building permit information requirements across the province and adding unique code compliance functionality.

9. Will this integrate with the single permitting window approach you announced?

- The Ministries of Housing and Water, Land and Resource Stewardship are working towards a common goal of making permitting processes for housing more transparent and easier for homebuilders/developers to understand how to comply with permit and regulatory requirements.
- The Ministries are working closely to align our approaches, share lessons learned, and support the integration of our systems in the future.
- As my ministry developers the new building permit tool, we are considering how this work will lay the foundation for a platform that integrates all the different types of permits across the housing development process.

10. How much will this cost government?

- This work is critical to B.C.'s housing priorities and B.C.'s economy, and we are working with partners in industry and all levels of government to determine what investments are required to make this work a success.

- The Province has committed $1.45M in capital funding and staffed a dedicated team to develop the pilot building permit submission tool.

11. By how much will it speed up the permitting process?

- Countries that have digitized their permitting processes have seen real success with the move to digital and significant improvements in permit processing times.
- Every situation is somewhat unique, but it's clear that a move to digital permits can deliver significant improvements in permit timelines.
- We believe that digitization here in B.C. will also result in a marked improvement in local government permitting times.

12. Will digital permitting work the same for all cities (local governments)?

- The goal is for a uniform digital permitting program to use with the BC Building Code, however, some local governments, such as the City of Vancouver, have already launched interactive digital tools for the permitting process that are currently unique to their administrations.

13. What is different about the City of Vancouver's role in this partnership?

- The City of Vancouver is one of the local governments helping to guide the development of a provincial digital permitting tool for the BC Building Code.
- However, the City of Vancouver is unique in that it has its own building by-laws.
- Earlier this year, the City of Vancouver proudly introduced two new interactive digital tools as part of its ongoing commitment to modernize and prioritize the permitting experience.
- Please contact the City of Vancouver for more information.

Subject: RE: UDI Letter - Proposed BCBC Changes 2023

Hi Sian, summary below on concerns raised by UDI on Building Code changes and provincial response info.

1. **UDI encourages the to Province delay implementing the 100% adaptable code requirements.**
    - The Province received several requests from industry partners, including developer and building organizations, to delay implementation of the new requirements to enable mitigation measures to provide the marketability and ensure affordability of new housing.
    - In response, the Province is planning to a one-year transition period. The adopting Ministerial Order, pending the Minister's approval, defines the application effective date as December 2024.

2. **UDI requests stronger in-stream protection for projects under the review process.**
    - The December 2024 effective date allows the continuation of in-stream projects when a building permit application is submitted prior to December 20, 2024.

3. **UDI suggests the Province implement a standardized floor area ratio exemption to avoid responsibility on local governments.**
    - The Province plans to collaborate with and encourage local governments to continue to offer density bonusing and floor space area exemptions to support developers and the creation of more accessible and sustainable housing.
    - Discussions with local governments and First Nations are planned to occur this fall.

4. **UDI recommends the Province consider an incremental approach to achieving 100% adaptable.**
    - To increase the supply of equitable and accessible housing options, the Province plans to proceed with 100% adaptable. This is considered a significant shift that considers human rights "duty to accommodate", prevents premium pricing for adaptable housing, support the housing needs of more people, and represents an important move towards complete accessibility.

5. **The Province should consider adopting the City of Vancouvers' adaptable bathroom requirements.**

- The new BC Building Code 2023 adaptable bathroom requirements harmonize clear maneuvering space with those of the National Building Code 2020.
- The new clearance space considers anthropometric data (i.e., the study of how the human body interacts with the built environment) to include the 90 percent of wheelchair devices.
- This is more than what is required (approximately 50 percent of wheelchairs per the 2015 National Building Code).
- City of Vancouver has not yet adopted these requirements.

6. **UDI indicates a considerable impact to useable and sellable floor space when implementing the new proposed adaptability requirements.**
   The Province's one-year transition provides time for regulated industry education partners to develop design solutions to better support developers and builders to implement the new requirements. The delayed effective date also provides architects and engineers time to adjust projects to protect the viability and affordability of housing, while also incorporating adaptable dwelling units.

   The Province has begun collaboration with BC Housing to develop and deliver adaptable dwelling unit floor plans to illustrate how the new requirements can be achieved.

Hi folks,

I don't have any technical expertise on the pieces UDI is raising but I'd like to get BSSBs take on what they've raised and whether we either have/intend to addressed their concerns or are factoring in a response to their concerns for when we announce the code. It's not a huge rush as I know folks are very busy but if you can let us know by next week, prior to the announcement that would be great.

Tx,
Siân

Hello Jun'ichi,

As I mentioned previously, we have put together some additional examples to illustrate the impacts of the proposed BC Building Code changes on new construction, specifically the adaptability requirements. Please find attached a letter outlining these impacts and our concerns, along with suggested mitigation measures.

If you would like to discuss these further or have questions related to the specific examples, please let us know and we would be happy to schedule a follow-up session.

Thanks,
Cassandra

Good morning all,

Hope this note finds you well. In preparation for our upcoming meeting, please send me any items you would like to add to the agenda.

For your reference, I have attached the draft minutes from our last meeting.

Please send in your items **by October 9th, 2023 EOD.**

Thank you,

Milly Luc (she/her)
Executive Assistant to Vincent Tong, CEO

e: mluc@bchousing.org | d: 236.984.0309

I would like to gratefully acknowledge that BC Housing is located on the traditional and unceded territory of the xʷməθkʷəy̓əm (Musqueam), Skwxwú7mesh (Squamish), and səl̓ilwətaʔɬ (Tsleil-Waututh) people.

The 21st meeting of the **BC HOUSING INDUSTRY AND CONSUMER ADVISORY COUNCIL** was held on Monday, April 24, 2023 via TEAMs conference call.

IN ATTENDANCE:

Industry and Consumer Advisory Council:
Mark Sakai, BC Real Estate Association
Chris Atchison, BC Construction Association
Peter Mitchell, Engineers, and Geoscientists British Columbia
Jason Jung, ASTTBC
Tony Gioventu, Condominium Home Owners Association
Anne McMullin, Urban Development Institute
Ron Rapp, HAVAN

Ministry Representatives:
Zachary May, Building and Safety Standards Branch

BC Housing Representatives
Vincent Tong, Acting CEO (Chair)
Michelle Hayes, Executive Director and Registrar, Licensing and Consumer Services
Denisa Ionescu, Senior Manager, Technical Research and Education
Adam Terris, Director, Content Strategy
Milly Luc, Executive Assistant to CEO (recording)

Regrets:
Tyler Wightman, Building Officials Association of BC
Mark Vernon, Architectural Institute of British Columbia
Ron Rapp, HAVAN
Chris Gardener, Independent Contractors Association of BC
Howard Friedman, Travelers Guarantee
Andrew Armstrong, Aviva Canada
Chris Watters, RSA Home Warranty
Neil Moody, Canadian Home Builders' Association of BC
Mary Gerges, ED, Reconciliation and Equity Strategies

1. Welcome & Introductions

V. Tong welcomed participants to the meeting and acknowledged that BC Housing delivers its mission on the ancestral homelands of Indigenous Peoples across B.C., each with their own unique traditions and history. Respect was offered to their Peoples, past and present.

V. Tong went through the agenda and noted that we have updates from attendees.

2. APPROVAL OF AGENDA AND MINUTES

Today's Agenda and the minutes of October 31, 2022 were approved.

3. HOUSING STRATEGY ANNOUNCEMENT

V. Tong advised earlier this month, on April 3rd, the Province released the Homes for People action plan, a refreshed housing strategy that builds on the 2108 Homes for B.C.: A 30-Point Plan for Housing Affordability in British Columbia but focuses more on the housing needs of middle-income groups so that housing can be within reach for everyone.

Homes for People includes the launch of Belonging in BC, a comprehensive Homelessness Plan with the goals to prevent and reduce homelessness, through prevention, immediate response, and stability and community integration. This plan is the result of significant efforts across Ministries and BC Housing.

The new housing strategy includes funding for BC Housing to create approximately 25,000 new affordable homes for individuals, seniors, families, women, people experiencing or at risk of homelessness.

4. LICENSING AND CONSUMER SERVICES UPDATE

M. Hayes provided an update on licensing and new home construction stats. Updated on the BC Energy Step Code condition for licensed residential builders, which requires all general contractors to demonstrate competence building to Step 3 of the step code by taking training or providing evidence of demonstrated experience. To date 187 builders have satisfied the condition.

4.1 Consumer and Builder survey results

M. Hayes provided a high level of the results of the annual survey. The licensed residential builder survey is an annual provide wide survey. Overall satisfaction with the Residential builder Licensing System remains consistent with 90% very or somewhat satisfied. Some feedback includes builders would like to see improved CPD content and feels it is too repetitive and expensive. 70% of builders reported working with an energy advisor last year, up from 64% in the previous year. The top challenges reported associated with building to BC Energy Step Code is cost and lack of trades.

The (consumer survey) Current Homeowner survey takes place every two years.

M. Hayes highlighted some of the major findings including new residential building activities by region, climate changes factors and how that impacts the construction industry, and the percentage of builders building to step code 3.

5. RESEARCH UPDATES

5.1 Building Excellence Grant

D. Ionescu provided an update on the 2023 Building Excellence Research & Education grant program has wrapped up. BC Housing will fund 8 projects this year for a total of $223,600 in grant funding.

5.2 March 2023 New Home Registry Report

D. Ionescu provided highlights of the report. In the first three months of 2023, 9,843 new homes were registered in B.C., including 1,674 single detached3 and 8,169 multi-unit homes.

So far in 2023, total homes registration is down compared to 2022; registration for multi-unit homes decreased by 36.1%; single detached down by 38.7%.

6. OFFICE OF HOUSING AND CONSTRUCTION STANDARDS

6.1 Update on Building Code Consultation

Z. May provided an update on Building codes to date. Effective May 1, 2023 BC Building codes changes enable 20% better energy efficiency and provide an opt-in zero carbon step code for all new construction.

6.2 Digital Building Codes and Permits Initiative

The BC Building Code is currently only available in print or PDF format. The digitally enhanced code will include features that will make it faster and easier for builders and building inspectors to understand and interpret the information. It will also allow for more automation during building permit reviews.

Government is investing in Digital, previously known as the Digital Technology Supercluster, which is part of the federal Global Innovation Cluster network, with a $9-million, three-year grant to accelerate the development and adoption of innovative technologies in the construction sector. This work will involve collaborating with several partners in industry, academia and at all levels of government to create digital solutions for the construction sector and designing pilot projects to test those solutions. The plan will speed up delivery of new homes, increase the supply of middle-income housing, fight speculation and help those who need it the most.

7. BCH RECONCILATION STRATEGY

This update has been deferred to the meeting on October 23, 2023.

8. BCH ACCESSIBILITY STRATEGY

This update has been deferred to the meeting on October 23, 2023.

9. DISCUSSION ITEMS

9.1 Heat Pumps

T. Gioventu introduced this item for discussion. Recently some heat pumps were installed in some units in Vancouver for cooling; however, the installation did not meet code.

As the first few units are being installed in another building, engineers from Morrison Hershfield will be documenting detailed specification and come back to BCH and perhaps we can establish some standards collectively. Warranty providers have made it clear that if owners install the heat pumps with penetration after the envelop and cladding are complete, that will nullify the warranty.

D. Ionescu added that BCH + CoV (City of Vancouver) are putting together a document for builders of existing buildings on wall penetration when installing heat pumps or exterior wall or balconies and what provisions they need to look at.

9.2 Glass Balconies

T. Gioventu introduced this item for discussion. There is a research project underway understanding the effects of glass panels on balconies that came off during recent windstorms last fall; this is not limited to BC but to other provinces. CEO Engineering in Ottawa are writing the research and creating the test mock up imaging for the bulletin. The bulletin will be release in the

coming months. This is to bring awareness of the issue that suspended glass panels will need regular maintenance and inspection.

10. **ROUND TABLE**

V. Tong opened the meeting for a roundtable discussion with the Council to determine what issues have emerged for industry and consumers.

T. Gioventu noted that there will be a 1 Day Electrification Conference scheduled for October 11th. It's a partnership between BCH, CoV, BC Hydro, and Ministry of Energy.

T. Gioventu advised that there is a spike in complaints from market to lease hold housing on indigenous lands that are not in the BC charter agree. Is there a way BCH facilitate conversation or relationship with FNs with respect to building failures, management issues, cost affordability various issues to provide support.
V. Tong advised if Tony has contacts to those market lease hold stakeholders, then BCH can look into facilitating something in the near future and partnership with the Ministry of Housing.

T. Gioventu also advised entered Industry partnership with AHMA and Landlord BCH for an application to the National Research Council grant for the electrification and energy upgrade grant. Will enable facilitation opportunities for energy managers, coaches and consultants if successful with the application.

P. Mitchell – busy working with Architectural Institution of BC in terms issuing communication to various stakeholders regarding architectural regulations , new thresholds requirements go in effect Feb 2023.
Also discuss the various work that EGB is doing on building resiliency, including workshops/ presentations to the public.

ADJOURNMENT

There being no further business, the meeting was adjourned at 2:30 p.m. Next meeting will be scheduled in October 2023.

URBAN
DEVELOPMENT
INSTITUTE

SUITE 1100
1050 W PENDER STREET
VANCOUVER, BC V6E 3S7

To: The Hon. Ravi Kahlon, Minister of Housing
From: The Urban Development Institute (UDI)
Date: September 28, 2023
Re: Metro Vancouver Development Cost Charge Increases

Context

Metro Vancouver Regional District (MVRD) currently charges builders development cost charges (DCCs) on new residential and non-residential construction. The funds that are collected are used to pay for regional serving infrastructure and service delivery for water and liquid waste. These are allocated based on a Capital Plan approved by Metro Vancouver's Board of Directors.

These DCCs are charged by the regional district, although they are administered by local governments. The charges are in addition to the development charges levied by local governments, and TransLink. Metro Vancouver follows the requirements set out in the *Local Government Act* for DCCs which prescribes only a one-year in-stream protection.

Proposals

Metro Vancouver is reviewing its DCC program and proposing to make three key changes:

1. Create a new DCC for parkland acquisition: This will fund regional parks and increase the amount of park space available to residents beyond the current municipal park standards.
2. Decrease the regional assist factor for all DCCs to 1% by 2027: The assist factor represents the component of infrastructure investments supported directly the municipality and tax base.
3. Account for cost increases and new items added to Metro Vancouver's financial plan.

These proposals will increase Metro Vancouver's combined DCCs by up to 3.5 times by 2027, resulting in charges of between $17,663 and $22,108 per apartment unit – including purpose-built rental homes. These are illustrated in the table below:

TOTAL REGIONAL DCC

TOTAL REGIONAL DCC	Existing	Step 1	Step 2	Step 3 1%
VSA				
Residential Lot Development Unit	$10,027	$21,941	$29,196	$34,133
Townhouse Dwelling Unit	$8,679	$19,874	$26,406	$30,861
Apartment Dwelling Unit	$6,249	$13,392	$17,873	$20,906
Non-Residential (per square foot)	$5.02	$10.84	$14.37	$16.78
NSSA				
Residential Lot Development Unit	$9,992	$21,203	$28,385	$33,214
Townhouse Dwelling Unit	$8,482	$19,277	$25,748	$30,113
Apartment Dwelling Unit	$6,291	$13,099	$17,548	$20,533
Non-Residential (per square foot)	$5.06	$10.54	$14.04	$16.40
LISA				
Residential Lot Development Unit	$10,005	$17,126	$24,058	$28,512
Townhouse Dwelling Unit	$8,452	$15,208	$21,423	$25,404
Apartment Dwelling Unit	$6,303	$10,610	$14,906	$17,663
Non-Residential (per square foot)	$4.93	$8.09	$11.43	$13.56
FSA				
Residential Lot Development Unit	$12,946	$22,886	$30,218	$35,270
Townhouse Dwelling Unit	$11,086	$20,296	$26,865	$31,375
Apartment Dwelling Unit	$8,530	$14,396	$18,956	$22,108
Non-Residential (per square foot)	$6.69	$10.95	$14.49	$16.91

Challenges

Cost Impact

The proposed DCC increases are significant and will add to the cost of new construction. These increased costs will put upward pressure on home prices and rents, in contrast to the objectives of the Province and local governments to build more housing and make it more affordable. Due to the rapid escalation of these costs, along with the other cost pressures currently experienced by builders, it will be challenging for the land market to adjust. This will undermine the ability of builders to obtain development sites and deliver new housing.

This was acknowledged through the economic testing conducted by Coriolis Consulting, as part of Metro Vancouver's review. Metro Vancouver estimates that the impact of the proposed DCC increases is similar to the impact of rising financing costs on new housing over the past 12 months, which have had an enormous impact on housing construction.

This is occurring at a time when construction costs across the country, including Metro Vancouver are rising. A recent report from RBC Economics found that residential construction costs in Canada have increase by 51% over 2020 levels.

The following cost summary illustrates the impacts on a hypothetical project if it was subject to the proposed DCC rates. The summary shows the DCC increases over a five-year time horizon, including the large increases that Metro Vancouver had introduced at the beginning of 2023. ***For this example, the Metro Vancouver DCCs will have increased by over 6 times the 2022 rates, over a five-year period.*** The cumulative impact of these increases along with fee increases from other levels of government, interest rate increases, and construction cost escalations are creating substantial barriers for new housing.

BURNABY PROJECT DCC FORECAST					*623 Units*
	Previous	**Existing**	**Proposed**		
	01-Jan-22	**01-Jul-23**	**01-Jan-25**	**01-Jan-26**	**01-Jan-27**
Water DCC	$0	$2,656,023	$4,233,057	$6,541,883	$7,619,003
Liquid Waste DCC	$2,200,367	$2,661,010	$4,551,580	$4,896,283	$5,414,273
Park DCC	$0	$0	$188,870	$377,740	$747,377
Total	$2,200,367	$5,317,033	$8,973,507	$11,815,907	**$13,780,653**

For rental housing the impacts are even more severe, as these projects are more sensitive to interest rate increases as a result of their high equity requirements. ***The recent announcement by the Federal Government to rebate 100% of the GST for new rental housing will certainly support future projects and those stalled in the pipeline. However, if the cost forecast above were for a rental project, we estimate that nearly 70% of this benefit could be eliminated by 2027 because of Metro Vancouver's DCC increases.*** This means that rental projects will continue to face the barriers that have resulted in decisions to defer projects – or to not proceed with them at all.

	Total	Per Unit	% of GST rebate savings eliminated by DCC increases
Savings from Federal GST Rebate	-$19,708,920	-$31,619	
Cumulative increase in costs from DCCs	**$13,780,653**	**$22,108**	**69.9%**

Cost Proportionality
The proposed DCC increases will disproportionally affect new homeowners and renters, meaning that those households are now able to buy a new home or live in a new purpose-built rental building are paying the most to expand and upgrade regional infrastructure. By decreasing the assist factor to 1% for all DCCs by 2027, this shifts the burden onto the new home sector and off of those who already own homes in the region. If housing supply increases in the region, inevitably, so will the number of residents paying for regional infrastructure

Timeline and Process
UDI has repeatedly raised the challenge created for builders when charges are increased without adequate notice to factor these cost increases into the price of the land. Although Metro Vancouver is attempting to address this concern by setting out the DCC increases to 2027 – this will still likely affect many projects that are already underway, due to the lengthy review and approval timelines. In addition, the land market will adjust very slowly, faced with these rapid cost increases, as vendors will likely maintain their price expectations or take properties off the market until they can be met.

Metro Vancouver is currently conducting engagement with stakeholders, including the development industry, however, the proposals are planned to be finalized and submitted to the Provincial Inspector of Municipalities for review by the end of October – leaving little time to address the many concerns raised during the engagement.

This engagement process will not allow for the review of additional economic testing currently being conducted by Metro Vancouver. The testing that has been made available is both limited in scope and fails to assess the impact that other identified cost pressures (financing and hard costs) will have in addition to the proposed DCC increases. The cumulative impact that these costs will have on new construction, the land market and the ability of builders to deliver new homes cannot be understated, given that Metro Vancouver municipalities will be expected to achieve housing targets.

Recommendations
We recognize the need to upgrade and expand regional infrastructure to serve new residents coming to Metro Vancouver. We also acknowledge the principle that growth pays its fair share of these costs. However, the impact that these cost increases will

have on new housing delivery is substantial. The impacts are so large that they will impact the ability to deliver new housing of all tenures and levels of affordability.

We recommend four key measures in response to Metro Vancouver's proposed DCC increases:

1. That these changes *not be approved* by the Provincial Inspector of Municipalities, until a robust analysis of the impact of that these changes will have on the viability of development is conducted and provided for consultation.
2. Going forward, we recommend that role of the Province in reviewing regional and municipal DCCs includes the impact to economic viability of projects
3. Extend in-stream protections beyond the standard one-year period and phase in cost increases over a much longer period. Further, the new Parks DCC program needs to be deferred to after the other DCC increases are phased in.
4. Financial support from senior levels of government to regional districts to pay for the infrastructure that is needed to service growth. For example, regional projects should be eligible for the Federal *Housing Accelerator Fund*. However, this additional funding should be tied to reducing charges on new development.

UDI Executive Committee Meeting
Thursday, September 28, 2023
9:00 am – 10:00 am
Zoom

Attendees (UDI)

Rick Ilich, Townline (UDI Chair)
Jon Stovell, Reliance Properties
Evan Allegretto, Intracorp
Rob Blackwell, Anthem
Cynthia Jagger, Goodman Commercial
Byron Chard, Chard Development
Roque Hsieh, KPMG
Jordan Milne, GMC Projects
Mike Mackay, Strand Development
David Sander, Hollyburn Properties
Beau Jarvis, Wesgroup
Rob Bruno, Polygon
Anne McMullin, UDI
Jeff Fisher, UDI
Mike Drummond, UDI
Cassandra Smith, UDI

Agenda

1. **Welcome and Opening Remarks** *(UDI Chair-Min. Kahlon)*

2. **Rental Housing – Barriers and Opportunities**
   - Tax reductions: PST on materials, property taxes, and federal tax measures (EIFEL)
   - GST on PBR and concerns regarding local government expectations: Inclusionary Zoning, CACs, Offsites, and heights/densities
   - Annual allowable rent increase and rising operating costs

3. **Metro Vancouver Development Cost Charges**
   - Impact to new development (Memo)

4. **BC Building Code Changes**
   - Impact of proposed seismic and accessibility changes
   - Mitigation measures: standardization of FSR calculation and exemptions
   - Next steps and in-stream protections

5. **Next Steps and Future Meetings**

Cliff: 61625
Date Prepared: September 25, 2023

MINISTRY OF HOUSING
MEETING BULLETS

PURPOSE: MEETING Bullets for the Honourable Ravi Kahlon, Minister of Housing

Meeting with: UDI Executive Committee on September 28, 2023

Issue: Government Policies Affecting Housing Development in British Columbia

BULLETS: Meeting bullets follow UDI meeting agenda (Attachment 1).

Agenda Item #2: Rental Housing – Barriers and Opportunities

Tax measures and other implications for rental housing

- In publications from recent years, the Urban Development Institute (UDI) has advocated for tax measures to create certainty for home builders, and intentionally support the development of new rental housing.
- This includes removing barriers to purpose-built rental (PBR) supply, such as:
  - Government Sales Tax (GST) rebates criteria reform (which has seen recent federal action).
  - Provincial Sales Tax (PST) rebates for construction materials for new and substantially renovated PBR projects.
  - Provincial Property Transfer Tax exemption for properties purchased for new PBR development, rather than for the sale of new rental buildings.
- The Province has two related tax exemptions for rental housing:
  - Provincial Property Tax Exemption (Additional School Tax): Where a municipal revitalization exemption bylaw is in place for the purpose of new rental housing, eligible properties can apply for an exemption to their provincial property taxes.
  - Property Transfer Tax Exemption (Forthcoming, January 2024): An exemption for eligible purchasers of new PBR buildings from the further 2% property transfer tax on the amount of the residential property value exceeding $3 million.
- The Ministry of Finance holds responsibility for tax policy and the Ministry of Housing shares information with the Ministry of Finance on recommendations to support the development of rental and other forms of housing.
- Possible additional requests for provincial support for advocacy on municipal and federal policy levers from UDI include the following:
  - UDI appears to have concerns that municipal governments may leverage the GST rebate to attempt to secure deeper affordability for housing projects or to advance other policy priorities through tools such as inclusionary zoning, Community Amenity Contributions (CAC), etc.

- Excessive Interest and Finance Expenses Limitations (EIFEL) limit the interest and financing costs that companies can write off, which has become challenging for the development sector in the context of rising interest rates.

Inclusionary Zoning

- The Ministry of Housing is aware that some local governments currently have inclusionary housing policies to facilitate affordable housing.
  - s.13

  - There are a variety of factors to consider in any inclusionary zoning framework, including how it works with other development finance tools (such as amenity charges) to avoid deterring development, and being flexible enough to accommodate the variability of local market and economic conditions.

Allowable Rent Increases

- UDI has argued that limits to rent increases are insufficient to cover increasing expenses and operating costs. Further, UDI has previously criticized the model of setting allowable rent increases for lacking predictability.
- The Province introduced a process of setting annual allowable rent increases and processes to serve tenants with a Notice of Rent Increase to provide predictability, and to balance the differing needs of landlords and tenants.
- For the second consecutive year, BC's maximum allowable rent increase is being set below the inflation rate, at a maximum increase of 3.5% for 2024.
- The 2024 allowable rent increase is set below the inflation rate but is higher than the 2023 cap of 2%. This protects renters from increased costs of living while ensuring that landlords can recoup costs of maintaining their rental properties.
- Before 2018, the annual allowable rent increase was based on the inflation rate plus 2%. Following a recommendation by the Rental Housing Task Force, the Province reduced the rent increase to just the inflation rate.
- As inflation returns to normal levels, the Province intends to return to an annual rent increase that is tied to BC's Consumer Price Index in future years.

Agenda Item #3: Metro Vancouver Development Cost Charges

- UDI provided a draft memo on Metro Vancouver Development Cost Charge Increases (Attachment 2).
- The Minister of Municipal Affairs (MUNI) has responsibility for the *Local Government Act* that sets out the regulatory scheme for Development Cost Charges (DCCs) and the Inspector of Municipalities. UDI's feedback in the memo will be shared with MUNI.

- Development Cost Charges are calculated so that developers pay for the share, or capacity of, new infrastructure that will service their developments. This is the core goal of the DCC as a development finance tool (growth pays for growth).
- The Inspector (an ADM in MUNI appointed to that role), relies on the professional responsibilities of the engineers and planners that prepare these calculations to ensure that the share attributed to new development is as accurate as possible.
- The Inspector is aware of the significant increase in total DCCs for lower mainland communities, however that role is focused on ensuring legislative and policy requirements are met, and is not a “market watchdog” with a mandate to ensure cost fairness or balance.
- If developers are relieved of their share of DCCs by a greater assistance factor, that foregone revenue is most likely to be recovered from existing property taxpayers, who are facing their own affordability pressures.
- Similarly, extending in-stream protection beyond the current allowance of 12 months may delay the construction of much needed service infrastructure or increase the cost burden on existing property owners.
- Financial support from senior levels of government, such as the $1 billion Growing Communities Fund, may help reduce the impact of DCCs.
- The economic study by Metro Vancouver and information provided by UDI will help inform the Inspector’s policy for impact analysis of DCC bylaws.
- Senior government funding programs are not tied to DCCs or the reduction thereof.

Agenda Item #4: BC Building Code Changes

- In a 2022 report, UDI identified energy efficiency and building code changes as a threat to rental development, based on the costs that accrue and uncertainty when policies change during a project’s development.
- The Ministry of Housing is finalizing the next edition of the BC Building Code and anticipates its adoption by the end of this year or early next year.
- The Ministry is reviewing input on changes related to adaptability and seismic provisions to ensure a smooth transition to new requirements.
- The next edition of the code will contribute to making buildings in BC more accessible, safer, and more climate resilient than before. The code will also advance changes related to cooling, mass timber construction, and radon safety.
- Public review of the draft BC Building Code resulted in generally positive comments from the public, interested parties, and industry partners.
- The Ministry continues work to identify and review opportunities to support cost-effective and efficient construction of new homes for people. The Ministry is working with fire safety professionals and national parties to examine opportunities in codes, such as egress stairs, that may simplify the design of smaller buildings and create options for quicker and more affordable construction.

Attachment:

- Attachment 1 – UDI Executive Committee Meeting Agenda (September 28, 2023)
- Attachment 2 – Draft Memo on Metro Vancouver Development Cost Charge Increases

UDI MRK Meeting September 28, 2023

Rick Illich

- Appreciate support on GST policy
- Building Code: seismic is sufficient
- All things stacked on increase costs

MRK

- UDI is a partner
- Appreciate concerns
- Rent Freeze; s.16
- Pleased with GST; advocating for some time
- s.13; s.16

Anne McMullin

- 24,000 units under construction in BC; $915 million rolled in

Rick

- Equity is 2.5 times for rental vs condo

Anne

- Significant amount of capital

Evan

- GST does not affect land cost, so a really good tool

MRK

- Anne, one page? Yes.
- Building Code: appreciate challenges, especially, seismic. s.13; s.16
  s.13; s.16

Rick

- Independent technical groups in siloes. Need to connect these to assess impact on residential construction costs.
- Anything that touches housing should go through the Ministry of Housing to assess impact.

MRK

- We do that in BC. Code changes came from national…

Beau

- Code: adaptability and accessibility
- Ministry of Environment: soil is an issue… response "We have a mandate…"
- Propose a moratorium on all policy changes (code, environment, all levels of government, working groups etc.) a looking off time to allow time to collaborate and assess impact on costs

MRK

- We have limited influence
- We are back in Legislature next week with a lot of policy changes… and then take time to assess (staff overwhelmed).
- Policies are edgy…
- Metro Vancouver
    - Understand Minister Fraser's position s.16 s.16
    - I called an emergency meeting on Tuesday with MSF and MV to address the issue…
    - We will reconnect tomorrow.
    - s.16
    -
    -

Rick

- Need a provincial methodology for calculating FSR
- Simplify so we don't have to negotiate with LGs
- Additional FSR would allow us to recover some costs
- Evan Allegretto (chat): Kelowna and Esquimalt are best examples for FSR

MRK
Agree on FSR, just not now. Happy to meet in the future

Rob Blackwell

- Hurley comments today re s.16 s.16
- DCC was a done deal - no real consultation, or considering comments
- s.16
-
- MV needs to rethink how they will pay for infrastructure

MRK

- Your points are valid.
- We need to pause before we reconvene.
- I don't have an answer for you right now.

Rob

- MV will go to decision to move this ahead.

Anne

- Can we pause until we know how these changes affect construction costs

Jon

- ON HST – the GST waiver applied after… but understand that PST portion also waived 2-3% of cost of construction.
- Cynthia: Yes, Ontario removed PST

MRK

- Minister of Finance is reviewing
- We spent two days back and forth to fully understand
- Not all provinces have aligned.
- ON and BC wrote a joint letter to feds on waiving GST
- BC doesn't change PST on transfer of property. s.13; s.16

s.13; s.16

Jon

- MV position is that infra costs are the result of growth
- New construction pays the price whereas existing owners/renters do not…

MRK

- LG mayors ask me for loans, and I wonder my they don't borrow from Infra Bank

Beau

- Reports that new housing is taxed upward of 30%+ which is breaking the back of housing cost
- TransLink, BC Hydro LGs etc. are getting into this game
- My understanding is that the Province plays a role: application for fee
- MV issue is shedding light on the issue
- Hope we can move toward a coordinated approach to assess cumulative impacts in a regional context
- MV mayors voting on this in lieu of raising property taxes

Evan

- Coquitlam + Metro Van + TransLink is over $50k increase per unit to housing

MRK

- We must consult LGs
- Two important conversations this fall: 1) parking minimums, and 2) digitizing permitting process (BIM-enabled code compliance – will take a couple of years to move to a standardized system). More details on the next call.
- Please share your ideas on these initiatives. Anne will sit at this table.

R. Bruno

- Township of Langley in the range of $35K to $70K per unit depending on product type

David Sander

- Thanks for HTO
- Re: ON rent increase is limited to 2.5%; ON is not a great example… housing issues are policy
- BC in 2018: property tax matching?
- BC Assessment assesses on assumption of rental buildings are highest and best use

Jordan Milne

- BC Assessment:
    - Segregate rental mill rate that is not greater than owner

- Market rent and tax
    - Rental: pay for services like trash, better use of land…
    - Capital improvements: significant upgrade that owners would like to make, and tenants want, but need to make capital invest to get Annual Rent Increase
    - Fed with GST send message that we need PBR.
    - BC would waive property tax of new PBR

Beau

- Fully agree
- Need a working group on aging PBR

MRK

- Please submit a bulleted list of topics. We can then assess working group and topics.
- Everyone looks at BC and ON, so we are always linked together
- HTO: net new. 75% minimum. Vancouver is 38K. We'll announce next group in a couple of months

Anne: BC Builds?

MRK

- s.16
-
- When we want something built, who can we partner with…
- We'll get back to you on how that will be structured for our next meeting. Internal processes before sharing.
    - Land Bank
    - Financing
    - Legislative tools

Rick

- If we lose sight of the BCBC issues, there will be a huge pause on building permits next year
- Need to understand timing… just ticking a box…

MRK

- We're not ticking a box. There are a lot of vulnerable people

Comments

Jon Stovell

- Seismic Life safety standards have been achieved several building codes ago. What is really being achieved with the latest code?
- Can we talk about the PST potion of GST?
- Re Metro a lot of the costs are replacements of old infrastructure that benefit all the rate payers. These costs should be paid through property taxes. Not new homeowners and new renters.

And if you do that energy or life safety work you may have to pay GST on the entire value of the rental property. So those renos should be exempted if they do no result in evictions.

Jordan Milne

- For better. The exclude common areas which enables developers to include thoughtful amenity spaces that improve livability and help to foster social connection. When common and amenity spaces are included in FSR it creates a disincentive to create anything more than is required by building code or municipal requirement.

Mike McKay

- Cost relief for rental housing is going to become acutely important given that bond yields continue to spike and the expectation is that “rates will be higher for longer”. This is affecting valuations for rental apartment buildings and serves to disincentivize new investment in rental housing. Further, with cap rates increasing, anyone looking to develop rental housing cannot expect to realize compensation for the risk of developing that housing by way of realizing a spread between a market cap rate and one’s “going in yield”. Effectively rental developments are producing negative leverage. I have not seen a time like it in my career where demand is so high and supply so scarce for this type of housing yet it remains so unappealing to make new investments in this asset class.

Cynthia

- My point was - "existing stock" brings up the image of an old building. But, each one of these new builds effectively becomes the existing stock one day after occupancy. They are subject to the same constraints - rent control and increasing expenses. A wholesale shift in mentally is needed on the policies applied to buildings once they are complete and operating.

Jordan

- When does the new building code come into effect? Are there any considerations for the Island?
- There is an avalanche of building permits coming in order to vest under the current code. Currently we are limited to 12 months from the date of building permit approval to pick up the permit. Given the current landscape, can the Province extend this two 24 months so we can see this product more likely created?

Bruno

- One more thought on Metro Vancouver. New costs estimates are based on today's costs which we all know have increased significantly over the last 5 years. If cost relief (or design improvements) occurs we all know that the fees never decrease …

Mile McKay

- Add the doubling of CMHC premiums to the pile...

Jon

- Wood Frame may become unviable.

RE: FOR ACTION DUE Oct 5 | Stakeholder list Updates

To: Harding, Kevin HOUS:EX <Kevin.Harding@gov.bc.ca>, Gill, Aman X HOUS:EX <Aman.X.Gill@gov.bc.ca>, Vukosavljevic, Nicole HOUS:EX <Nicole.Vukosavljevic@gov.bc.ca>, May, Zachary HOUS:EX <Zachary.May@gov.bc.ca>
Sent: September 29, 2023 9:26:09 AM PDT
Attachments: image001.png

Hi, I do see the big or "primary" ones on there such as BOABC, AIBC, EGBC, ASTTBC, UBCM, UDI, CHBA. Some "secondary" ones could be added but not sure the level of depth expected. Any thoughts from the team? I suspect if we pull out our master list there are dozens in the "secondary category". At that point I think we can just get Brian to transcribe, maybe with some help to identify which of the 100's make the dozens list…

Examples off the top of my head:

Mobile Home Association BC – Sukh Johal (no longer Gord Rattray)
Municipal Insurance Association-?
Fenestration and Glazing Industry Alliance- Amy Roberts Amy Roberts Aroberts@fgiaonline.org or Janice Yglesias jyglesias@fgiaonline.org
Fenestration Canada – Terry Adamson terry@fenestrationcanada.ca

Hi Nikki,

Can you secure a date and time for the first meeting of the Minister's Digital Advisory Council during the week of Oct. 30? Agenda and attendee list attached. Once a date/time is chosen please let me know so I can update our consultant and the invitations to other attendees.

I have a separate eapps for the signed invitation letter that we will have the CU send out next week.

Let me know if you have any questions.

October 30, 2023 (90 minutes)
Proposed Agenda

Time	Agenda Item	Notes
30 minutes	Minister's Opening • Minister's Opening Statement • Participant Introductions ○ Why is this work important to your organization? ○ If you were to select one thing your organization would need to consider BC a North American leader, what would it be?	Minister's articulation of why he thinks this work is important.
30 minutes	Provincial Vision & Streams of Work • Stream 1: Digitized Codes (Ministry of Housing & BC Housing) • Stream 2 and 3: Digital Building Permit and Integration Platform (Ministry of Housing, City of Vancouver, & Ministry of Water, Land and Resource Stewardship)	Articulation of the vision and highlighting the economic and social benefits that will come from this work. Confirmation of the Province's articulation of the vision and identification of any adjustments. Key partners to speak to where they have seen success and positive results from
10 minutes	Accelerating Industry Innovation (Digital)	Update on their mission map, call for partners, and challenge projects.
15 minutes	Key Milestone Overview	Highlighting key milestones over the next 1-year period to where Leadership Council advice and guidance will be required. Showing March 2024 pilot solution and seeking advice whether more features should be added before it is rolled out to more communities. Build shared accountability and seek members to direct their membership / organizations to engage in this work and to prepare for the digital transformation across the housing development system.
5 minutes	Next Steps / Next Meeting	Mid-January 2024

Subject: Call for Agenda Items for Upcoming ICAC Meeting - October 23, 2023

Good morning all,

Hope this note finds you well. In preparation for our upcoming meeting, please send me any items you would like to add to the agenda.

For your reference, I have attached the draft minutes from our last meeting.

Please send in your items **by October 9th, 2023 EOD.**

Thank you,

BC HOUSING

Milly Luc (she/her)

Executive Assistant to Vincent Tong, CEO

e: mluc@bchousing.org | d: 236.984.0309

I would like to gratefully acknowledge that BC Housing is located on the traditional and unceded territory of the xʷməθkʷəy̓əm (Musqueam), Skwxwú7mesh (Squamish), and səlilwətaɁɬ (Tsleil-Waututh) people.

URBAN
DEVELOPMENT
INSTITUTE

SUITE 1100
1050 W PENDER STREET
VANCOUVER, BC V6E 3S7

To: **The Hon. Ravi Kahlon, Minister of Housing**
From: **The Urban Development Institute (UDI)**
Date: **October 6, 2023**
Re: **Follow-up to September 28 Meeting - UDI Recommendations**

Minister Kahlon,

Thank you for taking the time to meet with UDI and members of our Board and Executive on September 28. In follow-up to that discussion, we have outlined several recommendations made in the meeting for consideration.

General

- **Pause regulatory changes, policy changes and fee increases at the municipal, regional, and provincial levels that add new costs and delays to housing development.**

Rationale: Market factors, like construction costs, and the cost of financing have strained development pro formas in recent years. New development is particularly sensitive to interest rate changes and the cost and availability of capital have made it considerably more difficult to deliver new housing.

Government-driven taxes, fees and charges have compounded these challenges and new and proposed requirements that increase construction costs or complexity have had a similar effect. These include:

- Proposed BC Building Code changes;
- Energy efficiency and carbon reduction requirements,
- Contaminated sites remediation policies,
- Provincial permits and authorizations,
- Municipal inclusionary zoning,
- Municipal fees and levies
- Property taxes, and
- Development fees such as Community amenity charges, and Development Cost Charges.

To implement these new changes without addressing the existing barriers to housing delivery will only compound the challenges. The cost burden placed on new housing has become untenable and if these increases do not stabilize and/or not mitigated, new housing developments continue to be delayed or deferred.

- **Ensure that the Ministry of Housing retains visibility into policy development across other ministries that affect housing delivery.**

Rationale: As policy development occurs in other ministries there is frequently an impact on housing delivery, whether through cost increases, process complications or delays. This is particularly relevant for the Ministries of Environment, Forests, Finance, Water, Land and Resource Stewardship, Transportation & Infrastructure and BC Hydro. It is critical that a "housing lens" be applied to draft and new Provincial policies and requirements, which includes a financial analysis to assess the full impact any proposals.

- **Develop more comprehensive oversight and monitoring of cumulative taxes, fees and charges levied on new development.**

Rationale: Taxes fees and charges are levied across all levels of government, without coordination. This frequently leads to cumulative charges increasing significantly in a short timespan. Each level of government frequently assesses the impact of a new charge independent of other levies leading to the underestimation of the impact on new housing delivery.

The proposed Metro Vancouver DCC increases are an example of this challenge, where the increases are occurring at the same time as other fee increases at the municipal level without coordination. A coordinated approach, overseen by the Ministry of Housing, would allow for the financial impact of these fees to be evaluated holistically in the context of the delivery of new housing and affordability.

- **Eliminate Community Amenity Contributions (CACs) on rental housing.**

Rationale: This represents an opportunity to incentivize rental housing by reducing the government-driven fees and charges. Rental housing remains very challenging to build due to cost sensitivity, and requiring that local governments not charge CACs on this form of housing would improvise viability.

BC Building Code

- **Standardize the density calculation as it applies to all provincial and municipal policies.**

Rationale: Floor Space Ratio (FSR) calculations should be standardized across the province, as this is critical to maintaining consistency between municipalities. Some jurisdictions currently use a calculation for FSR that corresponds to net saleable/leasable density. UDI views this as a best practice. This would measure livable space and would make the calculations less sensitive to building code, energy efficiency, and other building changes. This approach is currently used in Esquimalt and Kelowna. In addition,

to ensure any exempt FSR can be utilized by builders, local government setback and height policies may need to be adjusted.

In addition, to incentivize certain types of units, a standardized exemption for the third bedroom and associated space increases would reduce the financial burden of providing larger homes.

- **Reduce or mitigate the proposed adaptability measures in the BC Building Code update.**

Rationale: The proposals require the development community, new homebuyers and tenants to overcome a systemic issue in the existing building stock. UDI and the industry have always supported the principle that new projects pay their fair share of growth-related costs. However, asking for every unit to be adaptable, without offsets and mitigation measures, is well beyond a growth-related cost.

If adopted, the proposals would result in either increases to unit sizes to accommodate the requirements, meaning that the cost and square-footage of units would increase and the number of units would be reduced. Alternatively, unit layouts would shift, reducing livable space. Neither outcome will support the accelerated delivery on more new housing units.

We strongly encourage the Province to delay the implementation of the proposal to make 100% of new Part 3 buildings adaptable and look at mitigation measures, offsets or alternatives to this proposal.

Tax Measures

- **Waive the Provincial portion of property taxes on new rental housing and require municipalities to take similar steps using the Revitalization Tax Exemption (RTE) tool.**

Rationale: Municipalities have the ability to waive property taxes on specific types of development for a defined period of time using the RTE, and in the 2018 Homes for B.C. Plan, the Province agreed to match any property tax exemptions municipalities provided for rental housing. Property tax waivers or reductions for rental housing would contribute to lowering development risk and stabilize operational costs, particularly in the first years after construction.

- **Remove the Provincial Sales Tax (PST) embedded in rental construction.**

Rationale: Although there is no PST charged on the transfer of a completed rental development, B.C. still charges sales tax on materials used for the construction of rental housing. During previous discussions with the Ministry of Finance when the HST reverted to a separated sales tax, the embedded PST was estimated at 2-3% on costs.

Existing Rental Housing

- **Develop a working group with rental builders and operators to review and provide recommendations on provincial measures affecting rental operations.**

Rationale: There are several cost barriers affecting existing rental operators, which will require in-depth discussion to develop solutions. Areas this group could address include: property tax reductions, BC Assessment valuation methodology, Additional Rent Increase framework, BC Hydro rates, and annual allowable rent increases.

NEWS RELEASE

Not Approved
Oct. 10, 2023

Ministry of Housing

New digital building permit tool will help create more homes faster

VICTORIA – More new homes for people will be approved faster as the Province works with partners to develop a new digital building permit tool.

"People will soon see new homes approved faster as we make good on our commitment to position B.C. as a North American leader in digital permitting and construction," said Ravi Kahlon, Minister of Housing. "We are excited to start work together with our partners to design and then implement this new digital building permit tool, so we can speed up the delivery of new homes and create the types of housing options people need in B.C."

Currently, many jurisdictions in B.C. rely on a paper-based application process for new housing developments that leads to delays and slow approval times. Once completed, the new digital building permit tool will make it faster and simpler for builders and developers to digitally submit building permits for new housing and for local governments to receive and process the application. The tool will also automatically review the submission to ensure it is compliant with key parts of the BC Building Code to prevent any delays with the submission process.

Establishing a provincial building permit submission tool is the first step towards a modern housing development process that embraces innovation and digital collaboration technologies like Building Information Modelling (BIM). The Ministry of Housing is also working with the National Research Council of Canada to make construction codes machine readable, which will allow for more automated and faster permit reviews in the future.

"A fast, efficient permitting process is key to ensuring infrastructure projects are able to move forward in a timely manner," said Lisa Beare, Minister of Citizens' Services. "Citizens' Services staff are lending their expertise to help develop the new digital permitting tool which will help make this happen."

The tool is being developed through a pilot partnership between the Province, 15 local governments and one First Nations government that will implement the new digital building permit tool. The tool is expected to begin testing in partnership communities by March 2024, following which it will be expanded into other communities.

"In this critical time, it is imperative that we work together to tackle the housing crisis head on so we find housing solutions that support all members of the community-families, individuals, young people and seniors," said Linda Buchanan, mayor, North Vancouver. "Involving local and First Nations governments in the development of the new digital building permit process tool is vital to ensuring people with diverse needs are able to find appropriate and affordable housing faster. That goal perfectly aligns with our city's Housing Action Plan, too."

In addition, the Province has also created a new digital advisory council to provide strategic advice, ensuring the Province is achieving the broader vision of becoming a North American leader in digital permitting and construction. The council will include representatives from 11

leading organizations across the housing development system, such as construction organizations, engineers, architects, local governments and the tech sector. The council will begin regular meetings this fall.

"Digitizing the BC Building Code and building permit processing will help builders more

efficiently obtain approvals to deliver the homes and job spaces British Columbians need," Anne McMullin, president and CEO, Urban Development Institute. "UDI is pleased to participate on the digital advisory council for this pilot partnership and is committed to working with the government on innovative solutions like this."

These projects build on the government's work to digitize the BC Building Code and establish a single-application portal for provincial housing permits and authorizations, which was launched in September 2023. It also builds on the Province's development approvals process review, which began in 2018 and helps local governments improve their processes.

"This is an important initiative that is designed to help get more housing built faster and to mitigate costs related to delays," said Tom Dyas, mayor, Kelowna. "The City of Kelowna has been working on a similar system over the past year and is eager to share our learnings as well as learn what else can be done by working collaboratively across governments."

Advancing digital permitting and construction is part of the Province's new housing plan Homes for People. The plan will speed up delivery of new homes, increase the supply of middle-income housing, fight speculation and help those who need it the most.

Ministry of Housing

Local governments partner with Province to test new digital tool

Through a new pilot partnership, 15 local governments and one First Nations community are working with the Province to design the new digital permitting tool and test the tool in their communities, starting in March 2024.

They include:

- Tsleil-Waututh Nation
- District of Saanich
- City of Burnaby
- City of Campbell River
- City of Coquitlam
- City of Kamloops
- City of Langley
- City of Maple Ridge
- City of Nanaimo
- City of North Vancouver
- City of Surrey
- City of Terrace
- City of Victoria
- City of Vancouver
- Cowichan Valley Regional District
- Town of Qualicum Beach

In addition, the new Digital Advisory Council will provide feedback and guidance on how the new digital permitting tool will look and work. The council is comprised of the following 11 representatives from across the housing development and tech sectors:

- Digital (previously known as Digital Technology Supercluster)
- Building Officials' Association of B.C.
- Scius Advisory
- Engineers and Geoscientists of B.C.
- Architectural Institute of B.C.
- Canadian Home Builders Association of B.C.
- University of British Columbia
- Urban Development Institute
- City of Kelowna
- City of North Vancouver
- City of Vancouver

Hi Jun'ichi,

I hope you're doing well. I'm confirming that you're still able to participate in our Building Code meeting next Thursday afternoon via Zoom? Let me know if you have any slides/materials that we can circulate to our committee in advance.

I'm hoping that you'll be able to provide an update on the status of the 2023 BC Building Code updates and any potential mitigation measures, would this be possible?

Thanks,
Cassandra

Hi Jun'ichi,

Please see a few alternate times below:

Monday, October 16th at 10 am
Thursday, October 19th at 2pm

Let me know if either of these dates work for you.

Thanks,
Lily

Hi Jun'ichi,

Thank you for the update.

If you think the timing would work to have more information later in the fall, we would be happy to move our Building Codes Committee meeting. Are you available in the afternoon on October 18th? Any time between 1pm – 4 pm works on our end.

Thank you,
Lily

Hi Cassandra,

Thank you, I did receive your other email and will respond soon after we've had time to review and discuss.

On this note, I don't have a set day yet, but we do expect to know a bit more in late September or early October. I can definitely attend a meeting shortly after, but I'm sorry that I don't have a specific date I can give you.

Hi Jun'ichi

Thanks for following up on this. If the Sept. 21 timing no longer aligns, we can shift our meeting date to accommodate your schedule. This will avoid us needing to have two meetings in short succession, as the Building Code changes remain a major topic of discussion. Please let us know what timing would work better.

As well, we have gathered additional information from our members estimating the changes required to comply with the proposed accessibility requirements and we be able to share that next week. Hopefully this information is helpful and can still be considered as part of the process.

Thanks,
Cassandra

Hi Cassandra,

It sounds like there will be some further clarity on this just after your meeting- closer to the end of September. That means I won't have anything to share on September 21. Please feel free to let folks know we are expecting to know more shortly after the meeting. If helpful, I could attend the subsequent meeting to answer questions. For now, please do not hold a space for me on Sept 21. Thank you so much for working with me on this and for accommodating the changes as they've happened.

Hi Jun'ichi,

Thanks for the update. We will plan to have you provide a virtual update at the September 21st meeting. There may also be topics that our members want to discuss with you related to the BCBC changes as well.

I'd also flag that going into the fall our members will be looking for confirmation of the implementation timeline for the Building Code changes, as they were slated to come into effect by the end of the year. They're already reaching out to us looking for information to help direct their design processes, since these proposed changes will have a large impact. If you have any updates on when they will be effective that would be of interest to our members in September, or whenever information is available.

Feel free to reach out to myself or Jeff if there's any way we can be of assistance.

Thanks,
Cassandra

Hi Jun'ichi,

I hope you had a great vacation and got some R&R! I'm just picking up this thread from last month to confirm the timing of a follow-up meeting with UDI and our Building Codes Committee. We still have our next Committee meeting booked for Sept. 21, but could convene the group earlier if needed.

Let me know what the timing looks like for the next steps and we can set up a meeting with our Committee.

Thanks,
Cassandra

Hi Jun'ichi,

Thank you for reaching out and glad to hear you are enjoying your summer!

We would be pleased to meet to discuss the options you are looking at. Our next Building Codes Committee meeting is scheduled for September 21st, 10am-11am. If it is preferred to meet with the group earlier, or if you require more than 1 hour, this can be adjusted.

Please let us know what your timing looks like to receive feedback on this and we look forward to continuing this discussion.

Best regards,
Lily

Good afternoon,

On behalf of Anne McMullin, President & CEO of UDI and our members, please find attached our submission on the proposed B.C.-specific Building Code changes. Throughout our letter we recommend that additional time be taken before implementation to analyze the impacts of the proposed changes and develop offsets to mitigate them. We

reiterate our appreciation for the work being done by the Building and Safety Standards Branch, and would be pleased to provide support if it is determined that further analysis will be done.

If you would like to discuss any of our recommendations further, please let us know.

Subject: update on BCBC

Hi team,

Still awaiting more direction before we proceed with these items, but heads up below that this is what will likely go to the Minister this week, so will likely be where we are going next. I suspect next up is a DBN on seismic, which Kevin and I can take care of.

- Timing for Minister's regulation dependent on direction re: Seismic.

- Working with Engineers and Geoscientists BC (EGBC) to assemble industry experts to analyze impacts of changes to seismic requirements proposed to be adopted from the model National Building Code. White paper to advise engineers from Structural Engineers Association of BC possible for fall 2023. This work is intended to inform approaches to work with local governments to mitigate space impacts of the code changes on new housing projects.

-

Additional round of consultation with key interested parties (UDI, CHBABC, potentially others) being planned to identify pressures on housing supply arising from seismic
risk mitigation measures and to identify options such as floor space ratio adjustments that may help address pressures.

- Note on options to mitigate pressures arising from seismic and adaptability provisions in code being drafted to advance.

Kevin – Meeting invite (below) has been updated based on Juni's suggestion. A few questions for you

- Did we want to add an agenda (see attached) or it could be added to the invite afterwards once attendance is confirmed?
  Send the agenda once attendance is confirmed
- Confirm whose name should be on the signature line (ADM or You, right now drafted with ADM)
  Send under my name.
- Review the distribution list and confirm that it is ok
  Distribution list OK
- Are you ok with October 20, 2:30 to 3:30?
  OK – let's do this

Shannon – Once approved by Kevin, are you able to send from the BSSB inbox? Distribution List is attached.

***Subject**: BCBC Seismic Requirements – Review and Discussion of Industry Feedback*

Greetings,

The Ministry of Housing is working toward finalizing the 2024 British Columbia Building Code. Thank you for participating in the earlier public review of code changes and providing feedback on proposed seismic mitigation provisions. The purpose of this session is to continue that discussion and consider options to mitigate any unintended impacts of the seismic provisions in the proposed 2024 British Columbia Building Code.

Please feel free to send the appropriate representative from your organization.

Sincerely,

Bindi Sawchuk,
Assistant Deputy Minister
Housing and Land Use Policy Division

Hi Kevin:

I'm happy to coordinate with ADMO to find a time Thurs/Fri next week. I'll prepare a draft invite and send your way this morning as well. Do we have a list of key representatives from the organizations?

Thanks,

Aman Gill | A/Director, Policy & Legislation

Ministry of Housing
Building and Safety Standards Branch
Email: Aman.X.Gill@gov.bc.ca
Phone: 778 974-3899

I respectfully acknowledge the Lekwungen People, known today as the Esquimalt and Songhees Nations, and all the Indigenous Peoples of British Columbia, on whose territories I am grateful to work, live and grow on.

Subject: Booking consultation session next week on seismic
Importance: High

Hi folks,

We have the go-head to book a meeting with Bindi and stakeholders for a consultation on *seismic* requirements and potential mitigation. s.13
s.13

Attendees would be:

- UDI
- CHBABC
- HAVAN
- EGBC
- AIBC (?)

Bindi would like a meeting to be scheduled at the end of next week so that she can get past the introduction of legislation early in the week. Can we find someone with time to connect to ADMO (Indy/Lori) to find an hour or so Thurs/Fri with Bindi for a teams meeting and then invite stakeholder contacts?

The invitation to stakeholders is to be general, a continuation of review of their feedback relating to seismic requirements pending BCBC approval. I'd like to review text of the invite.

Thank you,

Kevin Harding | A/Executive Director

Hi Denisa,

The purpose of the council is to provide advice to the Minister of Housing on the Province's commitment to position BC as a North American leader in digital permit and construction. Minister Kahlon is the chair, and the group consists of executive leaders from across the construction and tech sector (see current membership list below).

The most helpful thing for Vincent to provide at this council is how digital transformation in the sector can be done in a way that provides positive outcomes for BC Housing and the people BC Housing serves. In practice, this likely means some close collaboration between our teams on this work so you can provide background info to Vincent in advance of the quarterly meetings.

Hi Esther and Denisa,

Flagging this letter that went to Vincent for you. The first meeting of the advisory council is Oct 31 from 11-12:30, and we're hoping Vincent (or his delegate) can speak to BC Housing's perspective on digital transformation in construction.

Let me know if a pre-meeting would be helpful to make sure everyone is prepared.

Dear Vincent Tong:

Sending the attached letter on behalf of the Honourable Ravi Kahlon, Minister of Housing.

Greetings,

The Ministry of Housing is working toward finalizing the British Columbia Building Code.

Thank you for participating in the earlier public review of code changes and providing feedback on proposed seismic mitigation provisions.

The purpose of this session is to continue that discussion and consider options to mitigate any unintended impacts of the seismic provisions in the proposed British Columbia Building Code. An agenda is attached.

Please feel free to send this invitation to the appropriate representative from your organization.

Sincerely,

Kevin Harding

Subject: notes from seismic

Impacts to non seismic communities- Quesnel due to snow load

John Sercombe- costs are always more than originally anticipated, shear walls settle at different rates, which can lead to other problems. Step code scoring- engineering requirements affect how they can meet step code- need to do more to achieve step code due to engineering. 2 storey wood frame- the inspectors don't accept prescriptive. 3-5% increase is still big due to overall cost in relation to affordability. 2 storey wood frame- no deaths in earthquakes in Canada.

Cassandra smith- UDI- summary captures mitigation measures, but add nuance on FSR- standardize FSR calculation for province- definitions vary. Look at net saleable area (eg Esquimalt or Kelowna). Changing what we can do on a site- can we do a density transfer to allocate density elsewhere?

Casey Edge- diminishing returns on seismic- why is the old inadequate? Why not focus cost on existing? New is the safest and most energy efficient. Reno rebates? Costs are already so high, any increase is significant. Every small increase contributes to the problem. If we need to save, need to cap costs – DCC's have increased a lot.

Pauline- FSR may not be as suitable because because they are not needing to add extra walls- it will be more a case of extra plywood and materials, rather than floor space impacts. Question for EGBC- can engineers use the prescriptive path? If not, they may not get used and cost savings may not be seen. Amy Fehr noted that an engineer may or may not use part 9- professional discretion. Often they move towards Part 3. Allison noted Guidelines provide that you should follow CWC guidelines, which is above and beyond. Need dates- what is the longest runway?

Amy Fehr- EGBC- concerns with not adopting seismic- life safety- thorough research and better understanding of ground motions- 3 types of earthquakes. Science is correct- may seem like overdesign until we experience an earthquake. Schools in BC all being upgraded and using NBC 2020- site specific response analysis is confirming the new seismic loads are similar to NBC. 20-40% increase in load is 3-5% increase in cost.

Harrison Glotman engineer- cost is minimal, but EQ loads have gone up 50% due to newly discovered fault line, so wood frame with concrete topping is less viable. May need a new acoustical product instead of concrete topping.

Alison Chen- EGBC- if you push a material too far it is costly and may need to switch to hybrid concrete and wood. Acknowledge increasing cost- cost is also from land- is there a solution there? SRG- uses 2020 NBC for 3 years- the SSRA is very close to NBC values- not overdesigned.

Here's another email from Wilma about that meeting.

Jun'ichi Jensen
Acting Executive Director
Building and Safety Standards Branch
Ministry of Housing
250 858 1325

The Ministry continues to review feedback on the new BC Codes and expects to confirm the updated Codes in fall 2023. An implementation date is not currently available.

Until new codes are adopted, the current BC Codes will continue to be in force.
When the new BC Codes are adopted, a transition period will provide local governments, the construction industry, education providers, and others time to adapt and adjust their practices and training materials.

Subject: High rise residential buildings in cold climates

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi everyone,

I've just finished a call with my colleague from City of Vancouver, and concluded there may be a need to have a multi-disciplinary research project on high-rise residential buildings in cold climates, potentially covering the following aspects:

- Compartmentalization
- Base/segmental isolation (for seismic zones)
- Exterior shading and other passive cooling strategies
- Cooling Energy Demand (CEDi)
- Elevator designs
- Accessibility
- Refuge area/floor
- Social interaction space (Dunbar's number etc.)
- Outdoor and planting space
- Multigenerational living/units
- Resilience : power, water, V2B, future-proofing
- Parking, flooding prevention, decarbonization of foundation construction
- Zero carbon, circularity, biodiversity and nature-based solutions

If you (or your colleagues) are interested to participate in this fairly open-ended discussion to identify what this multi-solving research project may look like, please provide your availability using this doodle poll. Ideally, we'll be able to identify some building design/typologies that will be most conducive in getting more of our real needs met.
https://doodle.com/meeting/participate/id/e39jW7nb

An example of inquiry may be "Would the sweet spots for the following overlap: segmental isolation, Dunbar's number, compartmentalization, refuge area and elevators?"

Please also respond to me with your suggested questions to discuss. I'll use them to develop the agenda.

On another news, we will be working on redesigning the MBAR initiative as an innovation program, and will be hosting an info session for prospective new pilot projects on Nov 14. I hope to see more of you at our quarterly MBAR Roundtables and Deeper Dive Circles (email mbar@bchousing.org for details). Our research library has a growing volume of resources (Tags: MBAR) but there are more shared by our MBAR network of practitioners on the SharePoint site.

Thank you, Huy chexw & Hay ce:p q̓ə,
Wilma

To honour the truth, I acknowledge that I live and work on the shared, ancestral and unceded homelands of the hən̓q̓əmin̓əm̓ and Sḵwxwú7mesh-speaking people who have been caring for these lands, along with the waters and all that is above and below, since time immemorial. As a newcomer to the Salish Coast, I am on a journey to reciprocate by working towards reconciling with all our relations here and beyond.

Hi Zac,

MRK has the mats in his calendar since this mtg is being moved and Teri as well.
I will now send the materials to all the participants attending this mtg ASAP.

Thank you!

Sincerely,

Kiran Kaur

Hi Lisa and Jana,

The materials for this meeting have been sitting with the Minister's Office for a while now. Can you see if we can get them approved so they can be shared with participants? Ideally sent by tomorrow (Wednesday).

Speaking of sending out materials, we have a consultant facilitating meetings and able to send out materials. Is that something we can delegate to them, or do materials need to come from the DMO?

Best,
Zachary D. May, MBA

Housing Targets Methodology Follow-up Technical Briefing: November 2023

Dates/Times: Week of November 20th (Tues/Wed preferred; between 9-10:30 AM)
Duration: 45-minutes
Attendees: MRK/MO, HOUS executive & staff – Bindi to Chair, Matt Thomson (Urban Matters) and stakeholders (see appendix).

Agenda:	Lead	Time
Introduction	Bindi	5 mins
Presentation		
▪ Purpose: lessons learned, confirm previous feedback/concerns, broader context: CMHC report		5 mins
▪ Review Concerns (7 Qs etc.)	Bindi/Candice	5 min
▪ Methodology	Matt	15
Discussion & Next Steps	Bindi	15 mins

Approach and Framing

- Acknowledgement of contributions and feedback from previous meetings
- s.13
- Include T. Davidoff's concerns s.13 with Abundant Housing's concerns
- Balance of information presented at meeting to be primarily methodological, with high-level information on key policy underpinnings as needed to support the methodology discussion, e.g.
    - Alignment of selection index and targets methodology
    - Comparison of targets and CMHC estimates
- Address critique that the targets are too low

Key Messages

- We understand you may have some remaining questions or concerns and we want to give space to hear them and have a robust yet purposeful discussion.
- We want to gain clarity on your perspectives before we select the next cohort of municipalities.
    - We've learned a lot from you already and value your input.
- We are not necessarily looking for full consensus or agreement – it may be that we agree to disagree in some areas.
- Your feedback may inform the program policy objectives in a future review.

Meeting Goals

- Housing Advocates and experts leave the meeting with:
    - more in-depth understanding of the methodology used (additional information and value added over previous meeting);
    - additional perspective on rationale for select HOUS policy decisions made relating to targets
- Urban Matters and HOUS have fuller understanding of any remaining concerns of housing advocates and experts.
- HOUS will be positioned to consider potential future additional analysis or communications work to further address remaining concerns.

Housing Targets Methodology Follow-up Technical Briefing: November 2023

Proposed Participants

1. Owen Brady: Director, Abundant Housing
2. Thomas Davidoff, UBC Sauder School of Business
3. Jens von Bergman: Mountain Math
4. Peter Waldkirch: Abundant Housing (Lawyer – Appellant Advocacy)
5. Andy Yan, SFU City Program

Potential Attendees

6. Alex Hemingway: Canadian Centre for Policy Initiatives
7. Mark Sakai: Advocacy Projects Manager, BC Real Estate Association

October 3rd Participants (not included in this meeting)

- Bridgitte Anderson: Greater Vancouver Board of Trade
- Casey Edge: Executive Director, Victoria Residential Builders
- Lindsay Fernandes: Greater Vancouver Board of Trade
- Anne McMullin: CEO, UDI
- Cassandra Smith: Director of Policy and Research, UDI
- Greg Gillespie: Director at UDI, Capital Region
- Ron Rapp: CEO: Homebuilders Association Vancouver (HAVAN)
- Leo Spalteholz, Homes for Living
- Carmina Tupe (CHBA BC)
- Andrés Peñaloza: BC Non-Profit Housing Association
- Duncan Wlodarczak: Onni Group of Companies (real estate developer)
- Russil Wvong: Software Engineer (Vancouver Needs More Housing)
- David Gregory: No information

PROPOSED: Housing Targets Methodology Follow-up Technical Briefing: November 2023

Dates/Times: Week of November 20th (Tues/Wed preferred; between 9-10:30 AM)
Duration: 45 minutes
Attendees: Matt Thomson (Urban Matters), HOUS staff, MO staff, and stakeholders (**see Appendix A**).

Agenda:	Lead	Time
Introduction & Purpose	Bindi or Teri	5 min
Methodology Overview	Matt	15 min
Review Questions and concerns & discussion	Bindi/Candice	20 min
Next Steps	Bindi or Teri	5 min

Meeting Goals:

- Participants leave the meeting with:
  1. More in-depth understanding of the methodology above what was presented in the previous meeting
  2. s.13
  3.

- Urban Matters and HOUS have fuller understanding of:
  1. s.13
  2. Any remaining concerns of housing advocates and experts s.13 s.13
  3. s.13

Approach and Framing

- s.13
- Acknowledgement of contributions and feedback from previous meetings
- Balance of information presented at meeting to be primarily methodological, with high-level information on key policy underpinnings as needed to support the methodology discussion, e.g.
  - Alignment of selection index and targets methodology
  - Comparison of targets and CMHC estimates
- Communicate s.13 the concerns and response (Abundant Housing, T Davidoff and any others)

Preliminary Key Messages

- We understand you may have some remaining questions or concerns and we want to give space to hear them and have a robust yet purposeful discussion.
- We want to gain clarity on your perspectives before we select the next cohort of municipalities.
  - We've learned a lot from you already and value your input.
- We are not necessarily looking for full consensus or agreement – it may be that we agree to disagree in some areas.
- Your feedback may inform the program policy objectives in a future review.

Sent: December 5, 2023 11:51:48 AM PST

Hi Tasha,

A bit more context might be helpful but I think it's probably ok, if a little incomplete. I say the latter because we have already started education and assessing impacts to design, and in fact the impacts to design were discussed throughout all code changes. But we do plan to do more in this regard, which may be what this is pointing to?

Hi – reporter just asked me if this line is accurate for her story. Any concerns with this?:

- Specifics on how the codes will influence building techniques and the design of projects will be included in future discussions.

Subject: RE: (Time sensitive) Media questions re. new BC Building Code

Tasha – re floor space ratios – this is something that we committed to yesterday in a meeting with UDI and CHBA to "look at" in the future. There is something in the pending Small Scale Multi Unit Housing policy guidance document to be delivered to local governments, but we will not release that today (not BSSB's file).

From now until 2025, Ministry staff will be working to engage with housing partners to identify additional mitigation strategies to address increases in costs from the building code and it's possible that floor space rations will be part of that conversation for larger buildings. It's part of our work to come.

Kevin

Hi Tasha,

By regulations, I'm referring to the technical regulations that are attached to the new codes (things like floor space ratios, accessibility requirements, etc.) will those also be published today for the construction industry to look at?

Thanks!
Claire

CAUTION: This email originated from outside of the organization.

Hi Claire,

Here is our response about the Building Code….we will be in a position to release more information, soon. Sorry to get you this so late on a Friday!

- The Province is committed to delivering buildings and homes that meet people's needs. That is why we are adopting a new BC Building Code to ensure that buildings across the Province are more accessible, adaptable, safe, and healthy.
- The Province anticipates adopting the updated BC Building Code next year.
- The Ministry of Housing's website was updated prematurely and has since been fixed. We intend to issue a news release once a date has been confirmed.
- Until new Codes are adopted, the current BC Codes will continue to be in force.
- Proposed changes include new standards on accessibility, earthquake design, mass timber construction, radon safety, and overheating requirements.
- The application of the Code is linked to a building permit's application date. When the next edition of the building code is adopted, the adopting Ministerial Order will establish the 'effective' date.
- The adopting Order will establish that building permits for new buildings and permits for alterations to existing buildings as of a certain date will need to conform to either the existing (2018) or new edition of the Building Code.
- Building permits applied for before the date established in the Ministerial Order will generally not be affected.
- The Province will continue to collaborate with education partners to develop and deliver training and educational resources to support low to no-cost design solutions to support developers and builders in implementing these code changes.

- The Ministry of Housing is reviewing and considering all public review feedback in drafting the updated building code.

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Tasha,

Hope you're having a pleasant morning!

I wanted to reach out as I noticed that the BC gov webpage for the BC Building Codes was updated to indicate that the new building codes will come into effect in March 2024.

Does the Ministry of Housing handle the BC Building Codes? If yes, I have a few questions on how these codes will differ from Building Codes 2018 and what new regulations are available now.

We are hoping to get something up by end of day with at least of an overview of what the construction industry can expect.

Thanks so much!

Best wishes,

Claire Wilson

Subject: CHBA request for meeting with MRK

Hi Indiana,

Do you know if the meeting CHBA requested with MRK occurred? We had an e-app 131-1054 and sent it to 2 other branches for input and it got stuck, now the meeting date has passed. We're not sure if the meeting occurred on Nov 28

as indicted in the e-app or if it got rescheduled. It's a broad set of concerns they want to discuss related to housing legislation, so I doubt they would have cancelled, (nor been satisfied with other building code related meetings that have since happened).

Subject: RE: 8761.00 - BC Housing Grant – Single Stair Study

Hi Darrell and Andrew,

Here are the initial thoughts I got back from Stephen, who sits on SCFP for us. As I mentioned, we would likely support the committee developing this in the interest of housing affordability, but with heavy caution that we do not want to take a step back in fire and life safety. One other thing I didn't mention is evacuation for persons with disabilities could be affected since we no longer have areas of refuge and this would further cut back on safe places in fire for that occupant profile. Stephen does allude to this below with his comments on aging populations. I do support the idea of GHL and SCFP looking at this in a holistic and scientific way to make appropriate recommendations.

To: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
Subject: RE: 8761.00 - BC Housing Grant – Single Stair Study

My first thoughts :

The NFC regulates occupancy load after construction and is calculated per room.

Under the NFC, each suite with a single door would allow 60 persons when the net floor area, when divided up based on .4m2 per person, will allow that number.

This means would mean that the NFC would need to be changed as well to place a restriction on the occupancy load for this type of building. (also note that regulating and enforcing the occupy load in a private dwelling may be problematic for fire code enforcement officials.)

There is also an assumption that there is a responding fire department, as we know Part 3 buildings should not be built in an area that has not fire department but this is a local government decision.

The Code would need to actually state that there must be a responding fire department in order to allow a building to be built with 1 exit, not just that there must be a fire alarm to notify the fire department.

Maintenance of the life safety systems (smoke alarms, fire alarms, sprinkler, fire doors kept closed when not in use), to ensure they are functioning as designed, will become even more critical for a building with only on exit.

45min closures are used in 1hr fire separations but they don't mention the fire separation requirements other than for the closure.

I'm also not sure how one would regulate the building to not be used for persons to retire in if they own the suite. (if all suite owners are retired does it become a retirement home?)

Subject: CHBA+UDI Briefings & eApproval logs

Hi All,

Just reaching out in regards to eApp 131-1054, as there seems to be some confusion. The below meeting that I shared with you is a rapid-fire briefing to CHBA + UDI regarding Bill 44, 46, 47, and STR. There are no references to the building code in the meeting tomorrow.

The original CHBA + UDI housing briefing on November 28thth was cancelled, and split into two staff-level briefings without MRK:

1. December 4th on Building Code (eApp 131-3031)
2. December 14th on Bill 44, 46, 47, and STR (eApp 131-2393)

eApp 131-2393 is the correct eApproval log for tomorrow, and it correctly ONLY contains information for bills 44, 46, 47, and STR. Building codes and digitization are not included in tomorrow's briefing. Unfortunately, I believe that eApp 131-1054 was a duplicate eApp log to 131-3031 and can be closed.

Thank you,

Subject: CHBA request for meeting with MRK

Hi Indiana,

Do you know if the meeting CHBA requested with MRK occurred? We had an e-app 131-1054 and sent it to 2 other branches for input and it got stuck, now the meeting date has passed. We're not sure if the meeting occurred on Nov 28 as indicted in the e-app or if it got rescheduled. It's a broad set of concerns they want to discuss related to housing legislation, so I doubt they would have cancelled, (nor been satisfied with other building code related meetings that have since happened).

Subject: RE: Ministers DAC and Housing updates

Hi Jen –

It does seem like a long time, so thanks for reaching out!

1. DAC – first meeting was Nov 15 1-2:30. We are doing follow-up meetings with all members, so we can bring you up to speed. We are planning the next meeting for February but no date set yet. (John/Zac on this piece)
2. I am not 100% sure to what this refers. We have an RFP that just closed to start work on a set of standardized designs (for local government's to pre-approve) for small-scale multi-unit housing in support of the new legislation. We are working with MOTI, Metro Van and BC Housing who are focussing on different elements of low-rise MURBs. Tied to the notion of pre-approved standardized designs, modules and panelized components is the question of how to promote off-site manufacturing. These are things we intend to dig into more after the holiday season. In case you mean overall standards, there is also the new Building Code which was released allowing tall mass timber province-wide (and a bunch of other things) and some early work underway looking into the idea of small, single-egress MURBs. (John/Zac/Bindi on different parts of this)
3. Yes please, we'd love to participate. Let me know when and we'll get the most appropriate person there.

I'll try and find some time for us to connect as there are a lot of moving parts and our Digital Permitting systems development work is starting to run into questions that touch the provincial permitting work.

John

Subject: Ministers DAC and Housing updates

Hello Bindi, Zac and John,

It feels like a long time since we connected, which likely means we've all been very busy!

Few questions for you both before the holiday season is fully upon us:

1. Did MRK Digital Advisory council ever meet? If not, do we have a set next date?
2. What work is HOUS advancing on standards for housing developments?
3. The NRMs (MOTI/ENV/WLRS) are meeting with CHBA and UDI to bring forward a discussion on the many Housing related initiatives, policies and regulations and get a sense of how they all intersect. CHBA requested it and suggested it might be valuable to set up a 1 day session/workshop to talk through the many moving pieces.
   Can you pls let me know if you're interested in joining that meeting? Initially it will be to canvas approach/topics/opportunity of bringing a focus to that discussion.

Thanks and happy almost holidays! I'm around until end of next week if you want a quick connect as well!
Jen

Hello,

We have Feb 13 from 10-12 pm as a HOLD in the minister's calendar for a 2 hour DAC meeting. We will need to confirm early January with Molly who manages the minsiter's calendar if this has to change.

Lisa – please send a hold the date invites from Teri's calendar to John and Zac. Please connect with Molly when she is back from vacation regarding confirming this time for the Minister and once that is done we can have invites sent out.

Thank you

Subject: REQUEST | Minister Digital Advisory Council Meeting

Good Afternoon,

We are looking to secure a date/time in calendars for the next Minister's Digital Advisory Council meeting during the week of February 12th . The last meeting was on November 15th. Can you please provide some date/time options where the minister would be available for an in person 2.5 hour meeting or if this week does not work provide some alternate options. The meeting will include a generative discussion/workshopping.

The location will be Vancouver area, our program area will manage securing a site and the DMO will manage invitations.

CLIFF # | eApps #	**TBD**
Request submitted by:	*Deputy Minister's office*
Meeting/Briefing Title/Group:	**Minister of Housing's Digital Advisory Council (DAC)** *HOUS staff and leaders from the housing, construction, and technology sectors.*
Meeting/Briefing Purpose:	*DAC Meeting # 2 – update on key initiatives related to digital transformation in housing and workshop on a common vision about digital transformation in the sector.*
Requested Participants:	*Same contact list as meeting #1 (Nov 15, 2023)*
Timing Implications:	*Ideally week of Feb 12, 2024. House is in session the following week.* *Seeking Minister's availability for an in-person meeting in the Vancouver area.*
Meeting Duration:	**2.5 hrs**
Materials:	*Powerpoint presentation, annotated agenda, and background pre-meeting handouts to be finalized in January, 2024.* *Meeting materials will be available to participants one week prior to the meeting.*
Other Notes:	

Regards,

Nikki Papadopoulos

Thanks Jennifer.

Zac, happy to discuss next steps with you. Our offices close on Wednesday, so maybe we can have a sidebar on when to connect.

Just as an FYI, CHBA BC and UDI did meet with Housing staff last week with a large group of members. There were a number of questions, many of which are captured in submissions (mine will be submitted this week). I want to be mindful of staffs time, so this might be the first step to getting clarity but again, we can discuss.

Happy Holidays everyone until then.

Subject: Public review on mass timber code changes

Greetings Mass Timber Advisory Council members,

I hope you are doing well and that you are managing to wind down for a little rest and relaxation over the holiday period.

You will have recently received an email from our colleagues in the Ministry of Housing about the public review on proposed code changes related to encapsulated mass timber construction (EMTC). The proposed code changes build on the 2020 National Model Code provisions for EMTC and would expand the use of mass timber to more building occupancies, enable taller buildings, and vary encapsulation requirements. This work represents a very exciting and important milestone in our shared goal of moving mass timber from niche to mainstream.

As noted in that email, the EMTC public review runs until January 26, 2024. Information to support your participation is available on the Canadian Board for Harmonized Construction Codes public review website: https://cbhcc-cchcc.ca/en/advancing-emtc-provisions/. Please note, there are 6 proposed code changes. You have an opportunity to express your opinion and provide comments on each one of them separately. For a plain language explanation of the proposed changes, please see the attached two-page summary or watch the YouTube video: Proposed Code Changes for Mass Timber Buildings - YouTube.

We strongly encourage you to circulate this news, respond, and ask your colleagues and professional associations to respond. Following the public review, the B.C. government will consider adoption as early as Spring 2024. You may also be interested in the announcement by the Minister of Housing (former MTAC chair, Minster Ravi Kahlon): B.C. expanding use of mass timber in buildings | BC Gov News.

As we wrap up 2023 and look ahead to 2024, on behalf of the Office of Mass Timber Implementation's I'd like to express our sincere gratitude and thanks for all the work you do to promote and advance mass timber in British Columbia.

With warm regards,

Lee

Subject: FW: REQUEST | Minister Digital Advisory Council Meeting

Hi Zac, I hope you're well…

I'm in the DMO helping this week while Kiran and Lisa are away, and Jana asked me to request materials for the upcoming DAC meetings:

Jan 24 – DM briefing – mats due by Monday, January 22
Jan 30 – MRK briefing – mats due by Friday, January 26
Feb 13 – DAC meeting – mats due to DAC attendees by February 6

Materials: I'm guessing this is up to you, but the meeting request below mentions a *PowerPoint presentation, annotated agenda, and background pre-meeting handouts*.

Just a heads up!
Thank you,

Cory Scott | Correspondence Coordinator
Governance and Accountability Branch

Ok these are the DAC meetings.
The emails are confusing but we have it sorted

The dates are:

Jan 24 – DM briefing
Jan 30 – MRK briefing
Feb 13 – DAC meeting

MATS:

Talked to Teri today and we need the mats for the 24th DM briefing no later than the 22.
Can you connect with Zac and get that ball rolling?

We need the MRK mats no later than the 26th
Can you check in with Zac on that as well?

Much appreciated!!!

Subject: RE: REQUEST | Minister Digital Advisory Council Meeting

Hi Jana,

It looks like we have some scheduling confusion on this meeting. Hoping you can help us get to a solution here.

- MRK is the chair of this meeting and all scheduling decisions follow his availability.
- John confirmed to me that the Minister is NOT available on Feb 13, and the meeting was likely getting moved to Feb 12 in the morning (10-12?).
- We need to confirm that MRK is good for Feb 12 and that is secured in his calendar so we can update the meeting details with all the attendees (or some other date, we just need a date/time finalized).
- I also need a confirmed date and time so I can secure a venue and have other meeting logistics finalized.
- The MO communicated to Lisa that this is "our meeting," which has left us in an endless circle of indecision about the meeting date as they wait for us, we wait for them, and all our lovely participants are left in limbo.

My request:

- I respectfully request that the MO confirm what date/time the Minister is available for this meeting, in person, in Vancouver and we can make all other arrangements based on that.

Thank you!!!

Best,

Hello,

We have Feb 13 from 10-12 pm as a HOLD in the minister's calendar for a 2 hour DAC meeting. We will need to confirm early January with Molly who manages the minsiter's calendar if this has to change.

Lisa – please send a hold the date invites from Teri's calendar to John and Zac. Please connect with Molly when she is back from vacation regarding confirming this time for the Minister and once that is done we can have invites sent out.

Thank you

Subject: REQUEST | Minister Digital Advisory Council Meeting

Good Afternoon,

We are looking to secure a date/time in calendars for the next Minister's Digital Advisory Council meeting during the week of February 12th . The last meeting was on November 15th. Can you please provide some date/time options where the minister would be available for an in person 2.5 hour meeting or if this week does not work provide some alternate options. The meeting will include a generative discussion/workshopping.

The location will be Vancouver area, our program area will manage securing a site and the DMO will manage invitations.

CLIFF # | eApps #	**TBD**
Request submitted by:	*Deputy Minister's office*
Meeting/Briefing Title/Group:	**Minister of Housing's Digital Advisory Council (DAC)** *HOUS staff and leaders from the housing, construction, and technology sectors.*
Meeting/Briefing Purpose:	*DAC Meeting # 2 – update on key initiatives related to digital transformation in housing and workshop on a common vision about digital transformation in the sector.*
Requested Participants:	*Same contact list as meeting #1 (Nov 15, 2023)*
Timing Implications:	*Ideally week of Feb 12, 2024. House is in session the following week.* *Seeking Minister's availability for an in-person meeting in the Vancouver area.*
Meeting Duration:	**2.5 hrs**
Materials:	*Powerpoint presentation, annotated agenda, and background pre-meeting handouts to be finalized in January, 2024.* *Meeting materials will be available to participants one week prior to the meeting.*
Other Notes:	

Regards,

Nikki Papadopoulos

Gents

Does it make sense to have a pre-meeting ahead of the Feb 5th meeting? It might be good to check in around agenda.

For example, I was thinking people would likely have questions around the 2024 levels (now we are in 2024). I understand that it is politically sensitive, and you are considering deferring the 2024 decision to post election (ie Nov), but it might be useful to at least float some ideas of levels being considered.

Below are some times that work for me next week, in case you guys are interested / available.

Hi JP,

Yes, please feel free to set this up in a way that works for you. I suspect separate calls is good as each contact is coming with a different perspective. We'll leave it with you but please reach out if we can contribute from a technical/codes perspective. My impression was that ORCA has that part well in hand, but just in case we're needed, we're happy to help.

Hello again folks,

As discussed, I've reached out to a few key contacts on behalf of Orca. They all have interest in learning more about your company and products, and have allowed me to share their contact information via CC in this email.

From an industry perspective:
Pauline Rupp: Director, Technical & Building Innovation, Canadian Home Builders Association BC (pauline@chbabc.org)
Cassandra Smith, Director, Policy and Public Affairs, Urban Development Institute (csmith@udi.org)

As well, our partner branch in the Ministry of Housing, Housing Innovations is interested in new technologies that may enable more new housing. I've copied Meghan Gunn, Senior Policy Analyst. (Meghan.Gunn@gov.bc.ca)

I hope this helps.

Hi Jeff and Jenny,

Hope this email finds you well. I'm reaching out on behalf of our Ministry of Housing's Digital Delivery Team to see if we can organize a 1-to-1.5-hour Lunch and Learn session or other type of presentation for your membership in late February/early March to discuss our work underway on digitizing the BC Building Code and building a digital building permit tool?

These important initiatives are key parts of our ongoing work with partners from across the housing construction sector to improve the permitting experience for new housing and encourage the use of tools and practices that will position British Columbia as a North American leader in digital permitting and construction.

Let me know if your organization has other options for us to connect with your membership.

I look forward to hearing from you.
Julie

Gents

Does it make sense to have a pre-meeting ahead of the Feb 5th meeting? It might be good to check in around agenda.

For example, I was thinking people would likely have questions around the 2024 levels (now we are in 2024). I understand that it is politically sensitive, and you are considering deferring the 2024 decision to post election (ie Nov), but it might be useful to at least float some ideas of levels being considered.

Below are some times that work for me next week, in case you guys are interested / available.

Mon 29th – any time
Tues 30th – any time after 1pm

Thx … Robyn

To: McCrae, Aura HOUS:EX <Aura.McCrae@gov.bc.ca>; Laboucane, Shannon HOUS:EX <Shannon.Laboucane@gov.bc.ca>
Subject: FW: 2024 BCBC Measures

FYI on mitigation measures.

Shannon – embedded in this is a strategy that I think may be beneficial to Accessibility, alongside what Andy has been describing as 'design guidance.'

s.13

You did a good environmental scan of what current local governments do – may be worth some pre-emptive thinking on what the range of solutions may be. That same approach could be applied to seismic.

Sent: Thursday, February 1, 2024 1:52 PM
To: Cassandra Smith <csmith@udi.org>; Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>
Subject: RE: 2024 BCBC Measures

Hi Cassandra –

Re timing, absolutely understand. We're doing what we can to speed our work through this to try to generate ideas early so that we can signal where we may be going.

Re info needed – we have your earlier submissions and some of the ideas UDI submitted, in particular around floor area ratios, are ones we're very interested in exploring more. The info that we need is a picture as to the quantifiable impact of both accessibility and seismic provisions. s.13

s.13

s.13 we need to have some evidence-based info that tells us what the amount is.

As an example, NRC's analysis says that the impact may be between 2-5% of a project cost in total. I know that some industry leaders have pointed about structural requirements changing in some building components – such as concrete cores – that have a larger number in terms of change required (some suggestion that the depth of concrete cores may need to increase up to 30%), but we need to know how that one building component factors into a broader consideration – does it push the overall impact towards 8%? Etc. s.13

s.13

We'd also certainly be open to hearing about any other ways to look at the impacts or mitigation measures your members may suggest, along with why they think that the measures may help us mitigate the impacts of the codes.

Looking forward,

Kevin

Subject: RE: 2024 BCBC Measures

[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.

Hi Kevin,

That approach makes sense to us. The only feedback I have is that builders will need time to determine if the final mitigation measures will work for their projects prior to the implementation date of next March, and they are already be thinking about project designs. So as much time as can be provided would be helpful.

I trust you've received our previous correspondence on the seismic and accessibility provisions from last year? We described the impacts at a high level there, but it sounds like you're looking for something more detailed?

I will ask my members to pull together estimates of the impact to floor area/density, unit counts, and cost. Is there any other metric that you would be considering?

I'll also see if my members have seen mitigation measures or flexibility in other jurisdictions that could be applied here.

Once your work plan is approved, and you have approximate timelines for engagement please let me know and I can help organize a session with builders and consultants.

Thanks for the connection Jun'ichi, and looking forward to working with you both on this.

To: Jensen, Jun'ichi HOUS:EX <Junichi.Jensen@gov.bc.ca>; Cassandra Smith <csmith@udi.org>
Subject: RE: 2024 BCBC Measures

Hi Cassandra,

Thanks for the connection, Juni. Cassandra – we're rapidly developing our work plan and anticipate doing a couple levels of outreach this year.

First, hopefully in the first half of the year, we're planning to reach out to hear from you better the impacts that you're anticipating from the new code and in particular the adaptability and seismic provisions next year. Getting better understanding of the numbers gives us a better metric to understand what we actually need to mitigate.

Following from that, we're going to do a lot of work on seeing what levers we can pull to help mitigate the impacts.
s.13

I really appreciate the offer of your Codes Committee's time. To try to help make our engagement as productive as possible on both sides – I'd ask if you could encourage them to start thinking about measuring the impacts they anticipate.

We're working on finalizing our workplan and getting it approved, so what I've written above is subject to change, but it's how we intend to do this work, and I'd certainly welcome any initial comments you may have on what we could do to improve it.

Best,

Kevin Harding | Director, Safety Policy

Building and Safety Standards Branch, Housing and Land Use Policy Division

Subject: RE: 2024 BCBC Measures

Hi Cassandra,

I know the team is developing a draft plan to consult on – Kevin Harding is copied and can likely give an idea of when the team will be reaching out. Thank you for your offer of assistance.

Hi Jun'ichi,

I thought I'd just send a quick note to seem if you had any updates on the timeline for engagement on offsets/additional measures to address the costs of implementing the 2024 BCBC changes. Our Codes Committee is happy to participate once the process gets underway.

Thanks,
Cassandra

Hi Julia,

That works well. How about Monday?

Thanks,
Cassandra

Hi Cassandra,
Are you available for a quick 20 minute or so call to discuss planning details with our team?

Checking calendars, it looks like Nicole and Zac have some time **Thursday, February 8 @ 11:00 – 11:20am or Monday February 12@ 2:00-2:20pm.**

Let me know and I'll send a meeting invite.
Much appreciated,
Julie

This

Hi Julia,

Thanks for reaching out, and this sounds like a great opportunity to share the digitization work being done. Can you explain in more detail what you had in mind, how we could support you in getting this message out? For example, is this something that you will be hosting that we can help promote or are you looking to collaborate on an event? Presuming that this would be virtual?

Thanks and looking forward to hearing from you,
Cassandra

Subject: Lunch n Learn - Digital building permit tool and BCBC

Hi Jeff and Jenny,

Hope this email finds you well. I'm reaching out on behalf of our Ministry of Housing's Digital Delivery Team to see if we can organize a 1-to-1.5-hour Lunch and Learn session or other type of presentation for your membership in late February/early March to discuss our work underway on digitizing the BC Building Code and building a digital building permit tool?

These important initiatives are key parts of our ongoing work with partners from across the housing construction sector to improve the permitting experience for new housing and encourage the use of tools and practices that will position British Columbia as a North American leader in digital permitting and construction.

Let me know if your organization has other options for us to connect with your membership.

I look forward to hearing from you.
Julie

MINISTER'S DIGITAL ADVISORY COUNCIL
Meeting # 1

Date & Time:	November 15th, 2023 1:00PM - 2:30PM
Location:	Microsoft Teams
Attendees:	**Chair:** Minister Ravi Kahlon Anne McMullin, President & CEO, *Urban Development Institute* Duncan Wlodarczak, Chair, *Urban Land Institute* Helen Goodland, Principal, Head of Research and Innovation, *SCIUS Advisory Inc* Jazz Pabla, Director of Information Services, *City of Kelowna* Jill Tipping, CEO, *BC Tech Association* Michael Pistrin, *BC Housing (In place of Vincent Tong, CEO)* Neil Moody, CEO, *Canadian Home Builders' Association* Rene Cravioto, Program Manager, Innovation & Service Delivery, *City of Vancouver* Sue Paish, CEO, *Digital* Theresa McCurry, CEO, *Applied Science Technologists and Technicians of British Columbia* Tim Ryce, Chief Building Official, *City of North Vancouver* Tyler Wightman, Exec. Director, *Building Officials' Association of BC*
Regrets:	Dr. Sheryl Staub-French, Director of BIM TOPiCS Lab, *University of British Columbia* Heidi Yang, CEO, *Engineers and Geoscientists BC* Jennifer Anthony, Exec. Lead Permitting Solutions Office*, Ministry of Water, Land, and Resource Stewardship* Mark Vernon, CEO, *Architectural Institute of BC*
Ministry Attendees:	John Thomson, Exec. Lead Housing Innovation, *Ministry of Housing* Mark Hosak, Senior Advisor, *Ministry of Housing* Nicole Vukosavljevic, Director Digital Delivery, *Ministry of Housing* Teri Collins, Deputy Minister, *Ministry of Housing*
KPMG Attendees:	Nathan Stewart, Facilitator, *KPMG* Aadim Rajan, *KPMG* Dana Fallis, *KPMG* Phil Duffy, *KPMG*
Invited Guests:	Opreet Kang, *Urban Land Institute*

DRAFT

Ministry of Housing

Meeting Minutes

Topic	Discussion
1. Welcoming & Opening Remarks	Members shared what success looks like for the digital transformation of the housing development system. Key themes that were raised include: • To establish BC as a leader in digital innovations for the housing and construction sectors. • To make building processes (permitting & design) more efficient and deliver more housing to BC communities faster. • To build processes and tools that can be implemented across communities in BC. • To share learning from local government experiences and leverage existing tools. • To seek buy-in from members, broader industry and all levels of government while continuing to iterate and implement quickly (not getting stuck moving at the pace of the slowest actors). • To focus on outcomes and set clear and measurable targets (grounding efforts in progress towards improving KPI's). • To foster an environment that embraces the Agile methodology: building small transformations, developing forward-thinking solutions, and failing fast.
2. Provincial Vision & Streams of Work	***1. Digitizing Construction Codes*** • Clarity was sought on what is meant by an interactive Code. The interactive Code will be a step towards a more sophisticated BIM-enabled Code. This will mean that users can hover over words for key definitions, clickable links, cross-references, etc. It will not address compliance; this will come with the BIM-enabled Code. • Consideration should be given to how to address current challenges with the interpretation of the Code within the interactive Code product. ***2. Streamlining Housing Approvals*** • Members discussed the impact of the Ministry of Housing's work on the approval timelines. • Consideration should be given to the scope and strategic lens being applied to the project and priority setting. There would be a benefit in a series of workshops to ensure the focus is on impact and capitalizing on low-hanging fruit.

Topic	Discussion

	• Several members agreed with the notion that it would be possible and good to standardize most requirements across local governments.
	  ○ Standardization across local governments would be a benefit for engineering technologists. Currently, some local governments accept digital signatures and others do not. While a small item, it can halt an entire process.
	
	• The Ministry shared the 18 jurisdictions that will be piloting the digital building permit submission.
	  ○ Tsleil-Waututh Nation
	  ○ Musqueam Indian Band
	  ○ District of Saanich
	  ○ City of Burnaby
	  ○ City of Campbell River
	  ○ City of Coquitlam
	  ○ City of Kamloops
	  ○ City of Kelowna
	  ○ City of Langley
	  ○ City of Maple Ridge
	  ○ City of Nanaimo
	  ○ City of North Vancouver
	  ○ City of Surrey
	  ○ City of Terrace
	  ○ City of Victoria
	  ○ City of Vancouver
	  ○ Cowichan Valley Regional District
	  ○ Town of Qualicum Beach
	
	• Several members suggested that construction sector KPIs do not always reflect the metrics that matter to this initiative, nor does the sector always have transparency around performance management.

Accelerating Industry Innovation	Nil.
Key Milestones Overview	• The timeline of reaching a digital permitting by 2025/26 it too long. Leveraging existing local government successes can help bring an MVP together more quickly. • The proposed timeframe has been built from the perspective of required effort. Consider reframing the timeline with the view of what is mission critical and build the timeline based on the desired outcome.

DRAFT

Topic	Discussion
	• **Action:** The Ministry of Housing will schedule one-on-one meetings with all members to ensure members can provide more comprehensive feedback.
Follow-up Actions & Update on Next Meeting:	
Our next meeting will be in February 2024. A member from the Ministry of Housing will reach out to members following this meeting for feedback on the proposed approach.	

DRAFT

Ministry of Housing

Minister's Digital Advisory Council

Meeting #2 Primer

PURPOSE OF THE DIGITAL ADVISORY COUNCIL

The purpose of the Digital Advisory Council is to advise the Province on becoming a North American leader in digital permitting and construction. Through discussion members will:

- Advise on the Province's vision for a housing construction sector that is faster, more collaborative, and delivers better outcomes;
- Support an understanding of how a digital transformation in the construction sector can support positive outcomes for their organization's membership and everyone who is involved in the construction sector;
- Identify opportunities for further development and adoption of new digital collaboration technologies;
- Identify and advise on roadblocks to innovation and sector needs to support successful adoption of new digital collaboration technologies;
- Identify and advise on strategic issues, trends, and emerging priorities related to digital innovation in the housing construction sector;
- Review and inform priorities, key objectives, and plans; and
- Champion innovation and digital collaboration technologies within their organizations and sector.

The Advisory Council is not a decision-making body and operates through consensus, with the opportunity to engage and receive input from all participating members, to provide recommendations that align with Provincial policies and priorities.

MEMBER REFLECTIONS

Following our first meeting, members of the Ministry of Housing connected with Council members individually to gather additional input on the Ministry's approach to the digital transformation program and understand each organization's priorities.

Through the follow up discussions, the following themes emerged:

- **Collaboration and Coordination:** effective partnerships and coordination are key to innovation and the long-term digital transformation's success. Improved digital permitting systems and digital advances in the construction sector will have the greatest impact on delivering more housing if they are developed in coordination.

- **Balancing Objectives:** speed, quality and cost are often viewed as tradeoffs when establishing new processes. A faster permitting or construction process is only an improvement if it maintains quality and minimizes additional costs.

- **Providing a Clear Value Proposition:** there must be a clear value proposition for the different parties throughout the housing development system to get individuals to change the way they have always operated. Individuals involved in developing housing need to have confidence that new processes will provide cost savings, time savings, or increased certainty, and regulators need to have confidence that new processes will improve their ability to provide effective and efficient oversight.

- **Change Management Support:** there is a need to support digital readiness and adoption over the long term. This requires committed resources. Digital transformation activities should amplify what is already done well, tackling known pain points, and focus on process over digital solutions. Non-financial mechanisms play an important role in supporting different parties to move quickly. Supporting the different parties requires clear communication, education, awareness building, and knowledge mobilization.

- **Strategic Standardization:** can deliver a more efficient design, construction, and oversight process by reducing the confusion of navigating similar permitting processes in different jurisdictions or at different points in the housing development process. This includes standardization of how permits are submitted, use of technologies like digital signatures, or some standardization of designs to allow for more automated approvals. At the same time, standardized processes should not limit the ability of industry or regulators to continue to innovate and be flexible.

- **Building a Common Digital Environment:** Today information about regulations, bylaws, permitting systems, and individual projects exist without a way to easily gather or share information and in every conceivable format. Coordinating the way we digitize regulations, permit processes, and share information between project teams and with regulators is essential to realizing the full potential of current and emerging technologies. A common approach can also help reinforce the benefits of collaboration across organizations and avoid every organization having to resource the change independently. This work may not deliver instant results, so tracking progress on this foundational work is critical to ensure continued support.

ESTABLISHING OUR SHARED VISION

The Ministry of Housing is working with partners across all levels of government and industry to position British Columbia as a **North American leader in digital permitting and construction**, resulting in a housing construction sector that is **fast, collaborative, & delivers better outcomes.**

During the first Digital Advisory Council meeting, members articulated the importance of being guided by clearly defined outcomes for a modern housing development system that is fast, collaborative, and delivers better outcomes.

The National Research Council of Canada, in coordination with BC's Ministry of Housing, is hiring a consultant to work with the Digital Advisory Council to:

- Develop an end-state vision for what a modern housing development system looks like,
- Develop a roadmap for achieving the end-state vision, and
- Propose industry-level KPIs against which to benchmark and report on progress.

The roadmap will consolidate Council discussions and provide a central focus for aligning the actions of all regulatory authorities, industry organizations, and private companies in a manner that effectively supports the achievement of the vision. The final report package is anticipated to be delivered by May 31, 2024.

This meeting will be used to discuss and establish consensus on the key outcomes driving the digital transformation of the system. As a starting point for discussion, the following objectives are proposed.

1. A Housing System Built for Digital Collaboration: A coordinated approach to digitizing codes, regulations, and permitting systems to provide a seamless experience for everyone involved in delivering housing and to realize the full potential of digital tools.

2. A Housing Construction Sector with the Capacity to Deliver More Housing: Focus on innovation in the housing construction sector that makes a measurable impact on labour productivity and the sector's ability to deliver more housing, faster.

3. A Digital Transformation for All Communities and Organizations of All Sizes: Ensuring that digital processes and tools enhance the capacity of small and medium sized communities and organizations.

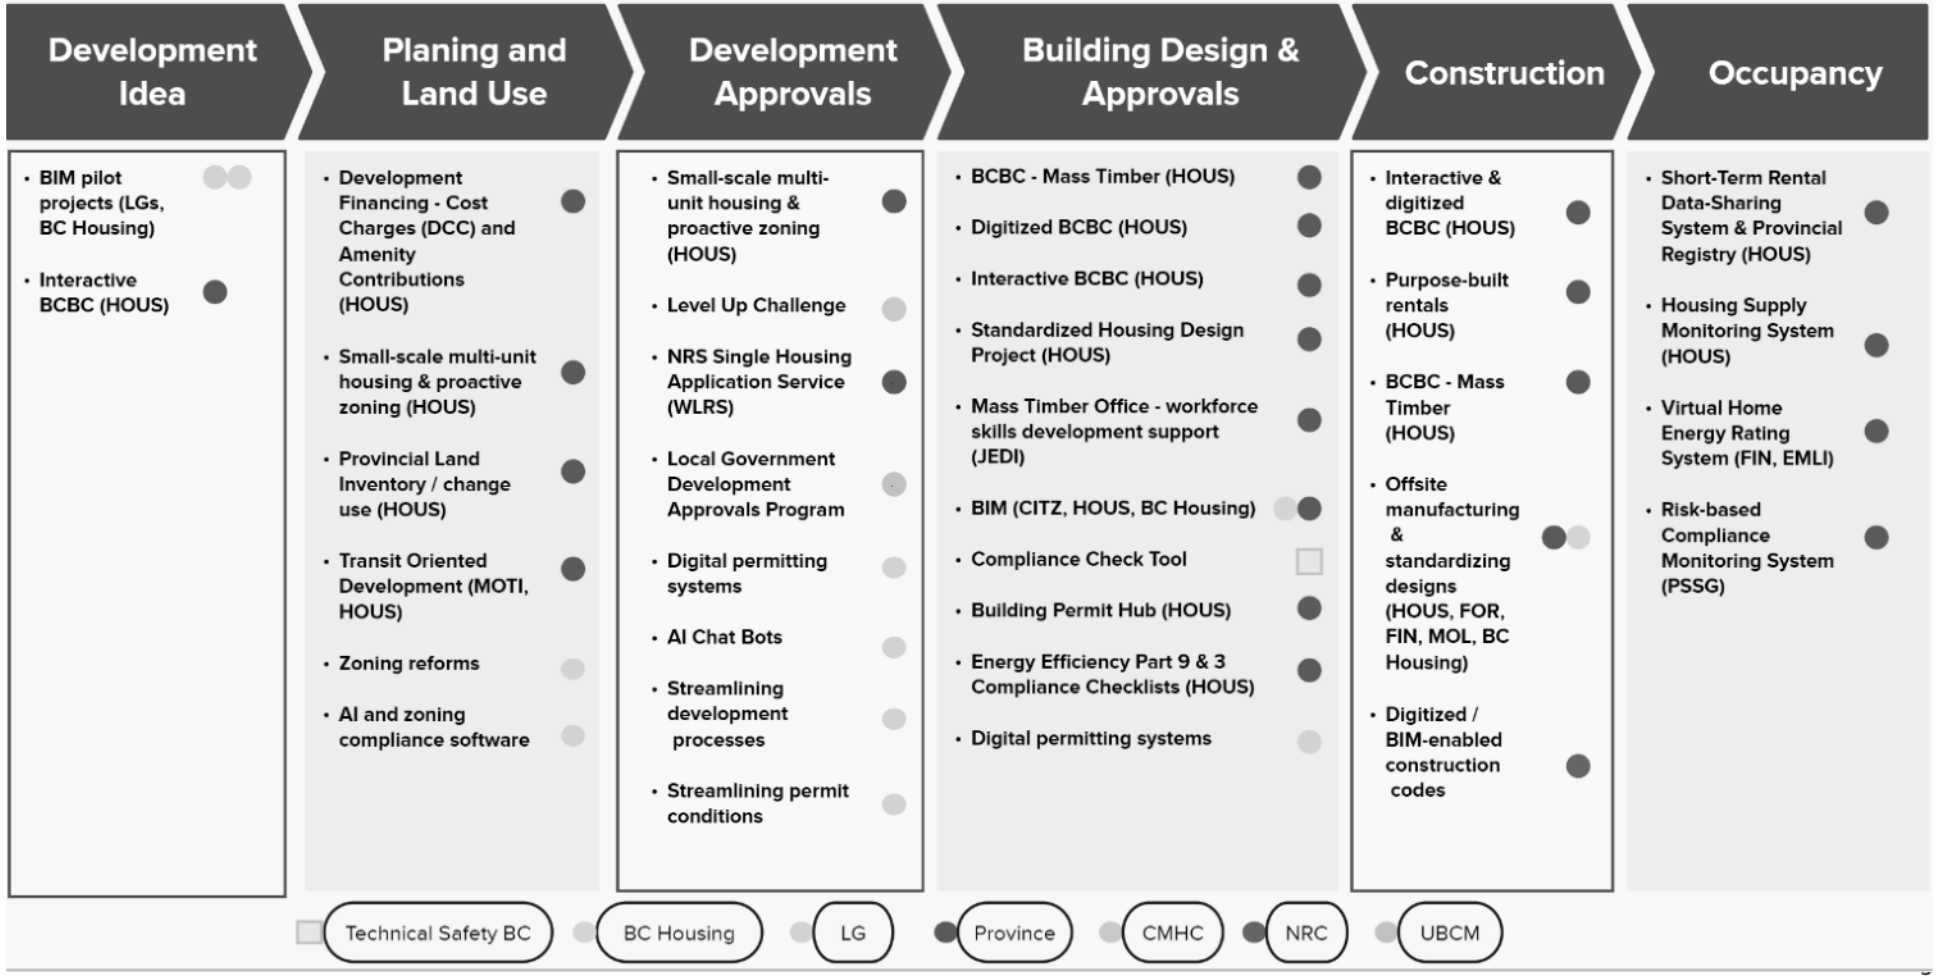
ONGOING HOUSING DEVELOPMENT SYSTEM INITATIVES

In the effort to deliver more homes for people faster, there are many initiatives underway that touch on improving the housing development system. Council members expressed an interest in having relevant programs and initiatives consolidated into a single reference, which is provided in Tables 1, 2, and 3 below. Tables 1 and 2 are an initial depiction of the initiatives that are currently underway by a range of organizations within the regulatory system. The initial tables are populated primarily with Provincial initiatives and the Ministry will continue to add initiatives underway by local governments, industry, or research organizations over time.

This overview provides a starting point for understanding existing initiatives and supports discussions on how these initiatives are connected and identify gaps in action. Table 3 outlines relevant funding programs to a modern housing development system and highlight opportunities where organizations can align funding to maximize investment.

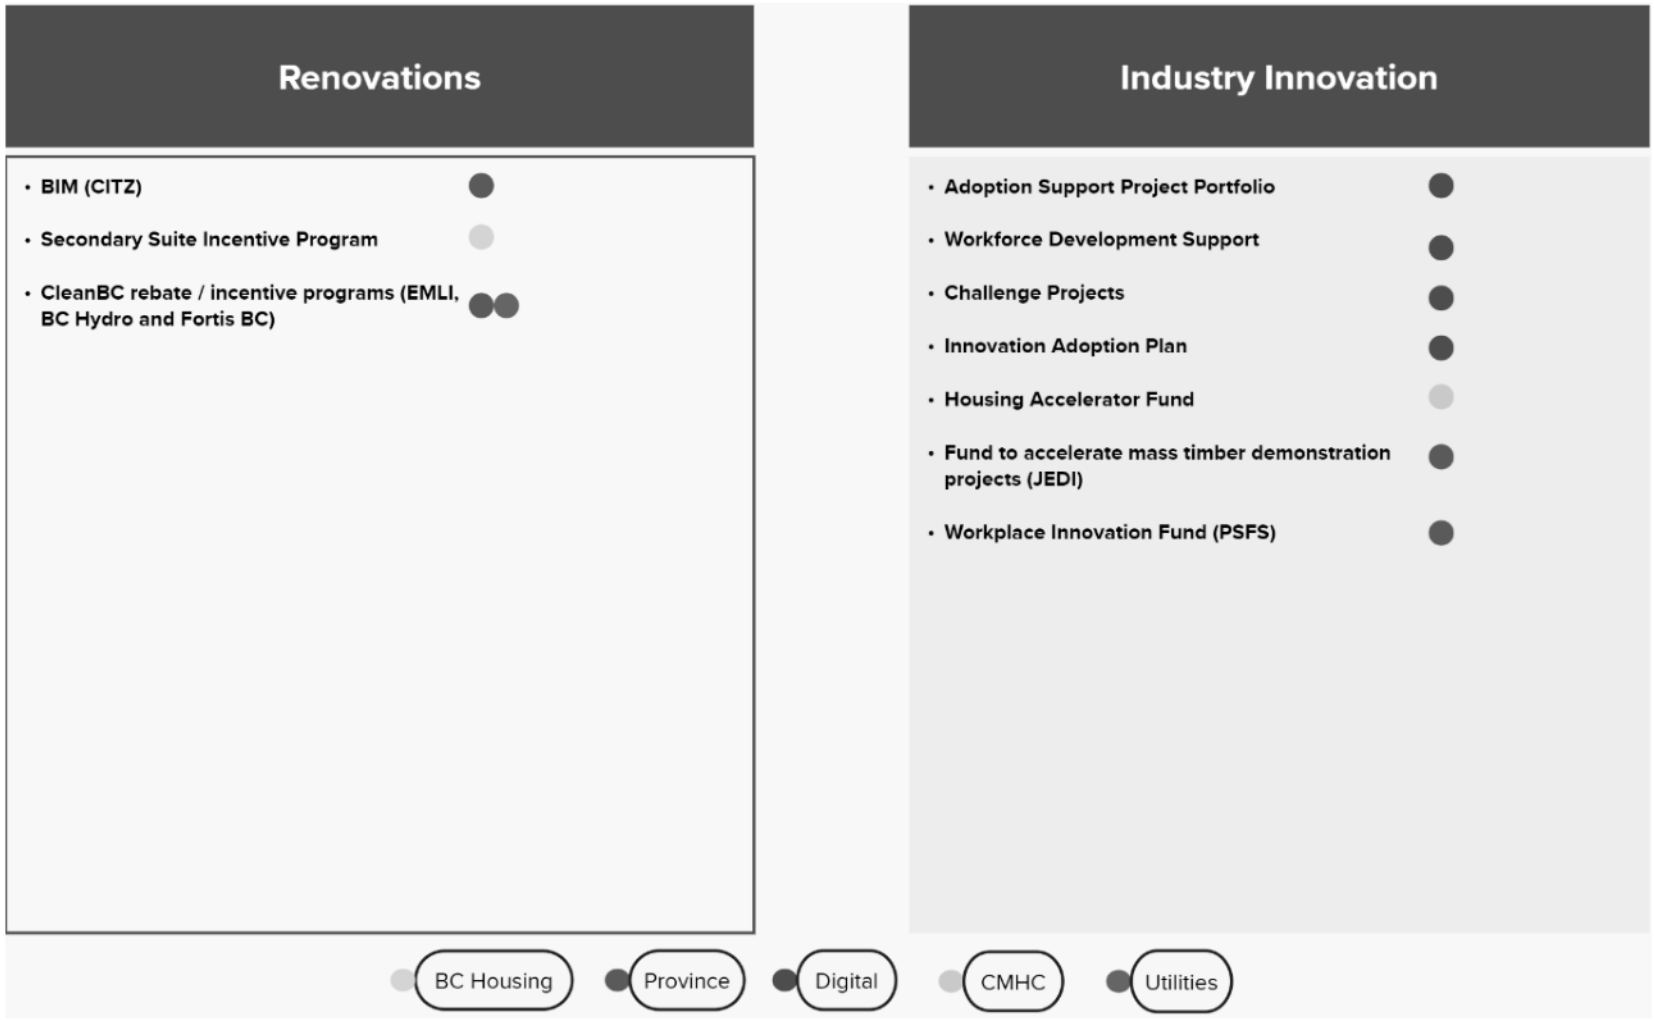
Ministry of Housing

Table 1



Ministry of Housing

Table 2



Ministry of Housing

Table 3

Funding Programs

Workforce Development Support
- Funding for projects to provide skilling, reskilling, or upskilling related to the digital workforce

• **TBA 2024/25**

Adoption Project Portfolio
- Funding to 30 to 60 organizations to support associated training and planning an innovation adoption project

• **TBA 2024/25**

Challenge Projects
- DIGITAL is leveraging a $9M investment from the Government of British Columbia to harness data-driven digital innovation to help grow housing production capacity

• **Accepting EOIs - reviewed weekly**

Housing Accelerator Fund
- Provides incentive funding to local governments encouraging initiatives aimed at increasing housing supply

• **Currently closed for applications**

Fund to accelerate mass timber demonstration projects (JEDI)
- Funding costs associated with the design and construction of buildings that demonstrate mass timber building systems and construction processes.

• **Currently closed for applications**

Codes Acceleration Fund (NRC)
- Supports LG/FN government efforts to accelerate code adoption, and to address gaps in code compliance and enforcement in their jurisdiction

• **Open to Indigenous applicants until March 2025**

Workplace Innovation Fund (PSFS)
- Supports labour supply and inclusion, along with new ways of improving productivity and employee retention

• **First intake closed**

Local Government Development Approvals Program
- Supports the implementation of established best practices and to test innovative approaches to improve development approvals

• **March 8, 2024**

Incentive program for secondary suites
- Provides money to help homeowners create a new secondary suite on their property to be rented out for below market value

• **Open April 1, 2024 - until funding is gone**

Level-Up Challenge
- Supports the adoption of transformative, system-level solutions that enable the quicker delivery of both community and market housing

• **Starting March 2024**

CleanBC rebate / incentive programs (EMLI, BC Hydro and Fortis BC)
- Provides rebates for improving a home's energy efficiency through select upgrades

• **Ongoing; within 6 months of invoice date**

Affordable Housing Innovation Fund
- Supports innovative housing providers driving innovation across the housing continuum

• **Ongoing**

GCWood Program
- Funding the demonstration of schematic designs, innovative building systems for wood construction, and the use of advanced building bio-products in new and existing buildings

• **June 30, 2024**

NRCan | NRC | BC Housing | Province | Digital | CMHC | Utilities | UBCM

Ministry of Housing

Minister's Digital Advisory Council
Meeting #2 Agenda

Location: Virtual

Date: Monday, February 12th, 2024

Time: 9:30-11:30am

Time	Topic	Lead
9:30- 9:40 (10 mins)	**Welcome & Discussion of the Agenda**	**Minister Ravi Kahlon**
9:40-10:05 (25 mins)	**Provincial Updates on Programs and Product Development**	**HOUS/WLRS**
10:05-11:05 (60 mins)	**Vision of Digital Transformation Discussion** **Activity:** Facilitated discussion to validate guiding outcomes for the sector and success metrics.	**HOUS**
11:05- 11:25 (20 mins)	**Roundtable Reflections**	**HOUS**
11:25-11:30 (5 mins)	**Closing Remarks** Next Meeting: May 2024	**Minister Ravi Kahlon**

DRAFT

Minister's Digital Advisory Council

Meeting #2

February 13, 2024

Land Acknowledgement

We acknowledge the we are attending this meeting from the traditional, ancestral, and unceded territories of First Nations covering all regions of British Columbia.

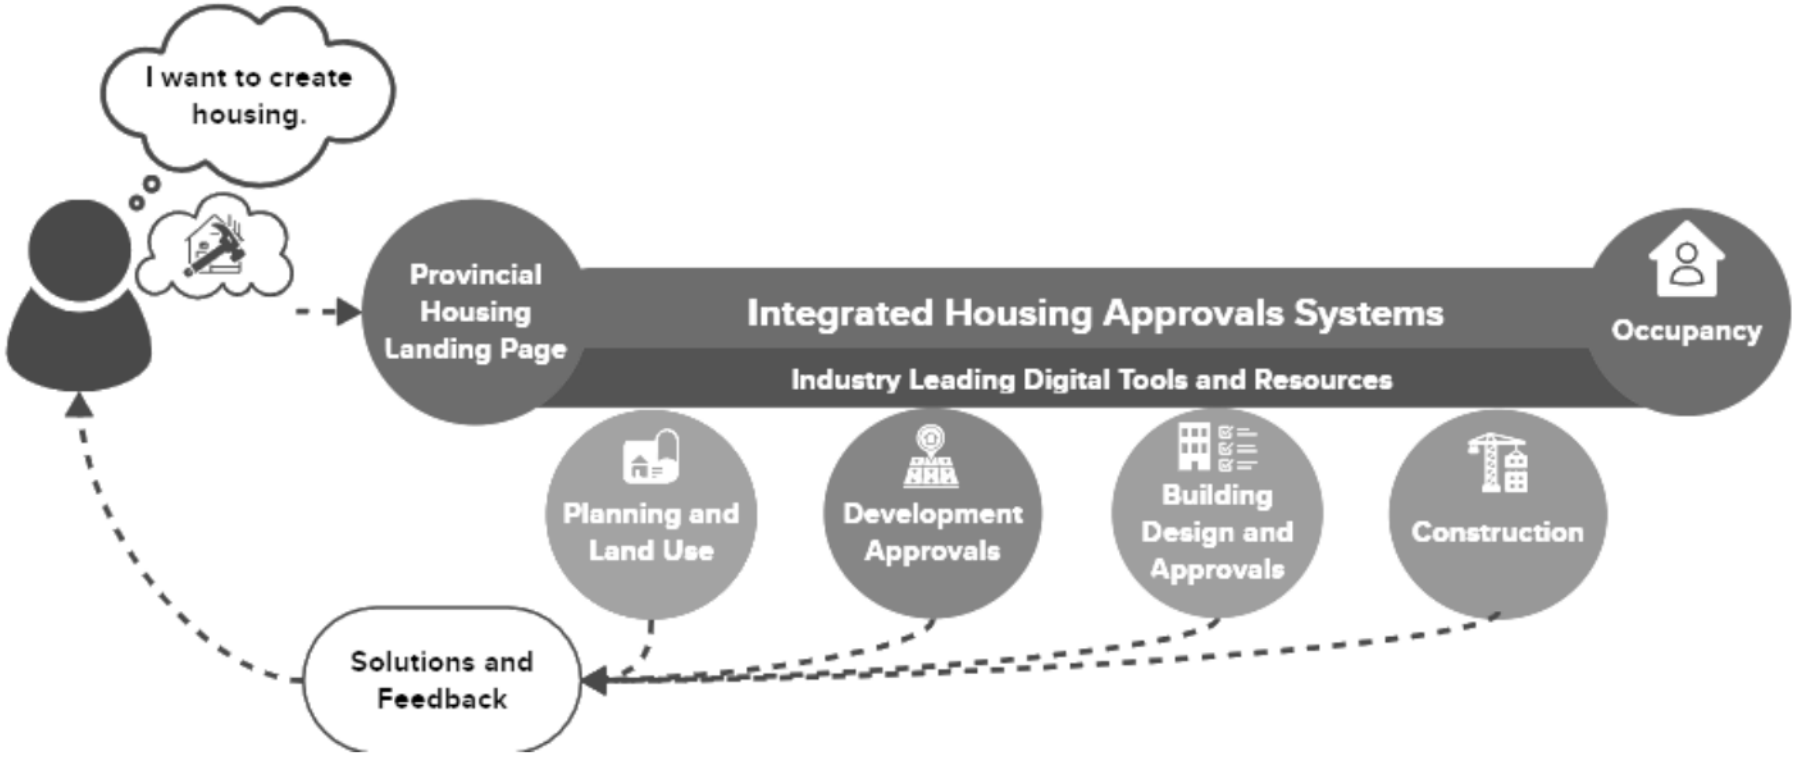
BRITISH COLUMBIA | Ministry of Housing

AGENDA

01	Welcome & Discussion of Agenda
02	Provincial Updates on Programs and Product Development
03	Vision of Digital Transformation Discussion
04	Roundtable Reflections
05	Closing Remarks and Next Steps

BRITISH COLUMBIA
Ministry of Housing
Provincial Updates on Programs & Product Development

An integrated housing approvals system built for collaboration



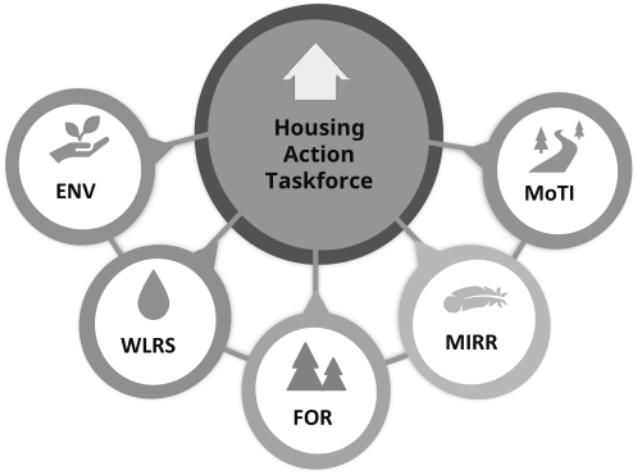
Water, Land and Resource Stewardship (WLRS)

Responsible for authorizations that support housing developments under the Land Act, Water Sustainability Act, Wildlife Act and Riparian Areas Protection Regulation

- Lead cross-government work to improve timing and transparency of permitting processes to support sustainable economic development, housing and electrification while maintaining high levels of environmental protection
- Coordinate Natural Resource Ministries to advance an integrated approach to housing projects
- Find new solutions to BC's permitting and authorizations system to improve timelines and reduce caseloads.

Housing Action Taskforce (HAT)

Provides dedicated and coordinated oversight and solutions for provincial natural resource housing authorizations.



- Established March 2023 - additional 85 staff focused on housing applications
- Identified and prioritized housing applications across NRM
- Of 914 applications identified March 2023, 75% have been resolved
- Overall NRM housing-related application process times have been reduced by 44-days

Permit Connect BC

- One-stop shop for all needed NRM provincial information
- Gateway to Single Housing Application Service and Housing Navigators.
- Important to share with homebuilders.

- Contaminated sites
- Archaeology
- Zoning, preliminary subdivision, highway use
- Riparian area protection, water license, Crown Land tenures (lease, license, right-of-way)
- Licenses for cutting/removing timber

https://permitconnectbc.gov.bc.ca/

Housing: Single Housing Application Service & Enhanced Navigator Service

Single Housing Application Service (SHAS)

- **SHAS Launch**: Launched September 18, 2023.
- **Purpose**: SHAS identifies NRM applications for a housing project, streamlining processes.
- **Usage Statistics**: 30 SHAS submissions received as of December 31, 2023.
- **Ministry Collaboration**: Integration underway, expanding throughout Natural Resource Ministries.

https://permitconnectbc.gov.bc.ca/

Enhanced Navigator Service (ENS)

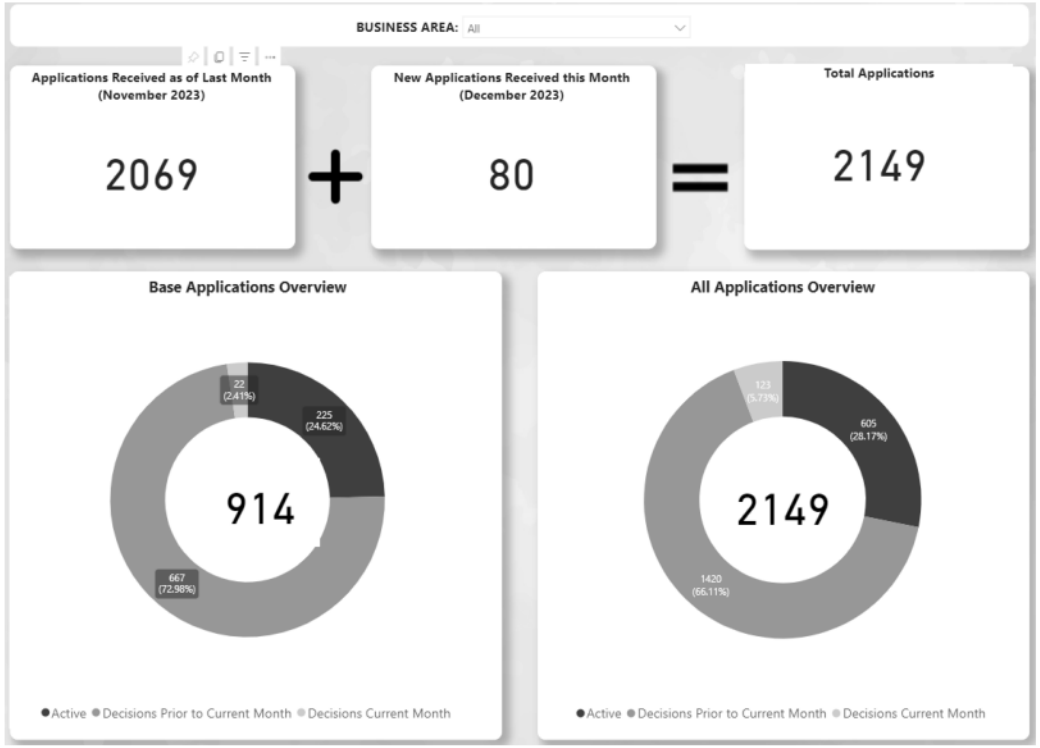
- **Services Provided**: Interfaces directly with homebuilders to navigate provincial requirements.
- **Government Interaction**: Direct communication and accessible government experts to help homebuilders.
- **Enquiry Focus**: Received 85 housing-related inquiries since March 2023.
- **Collaboration**: Works across NRMs, HOUS and MUNI.

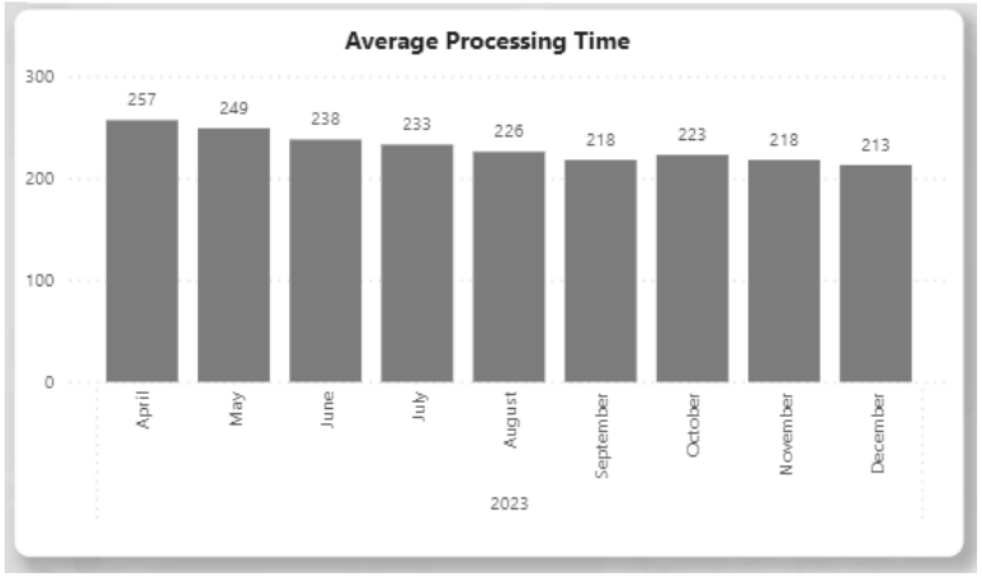
Navigators

Housing.Authorizations@gov.bc.ca or 1-844-687-4644

Applications & Authorizations Insights Tool (AAI)

Dec 2023





Looking to the Future

Where are we going?

- Proposed Legislation/Regulation/Policy changes
- Transformation in business processes/systems – integration, data collection, reporting across NRMs
- Integration with Ministry of Housing- Digital Transformation
- Alignment with local government processes
  - Permitting queue information-sharing for
  - ✓ Alignment (minimize impediments)
  - ✓ Ideal process flow
  - ✓ Shared ownership of goals and results

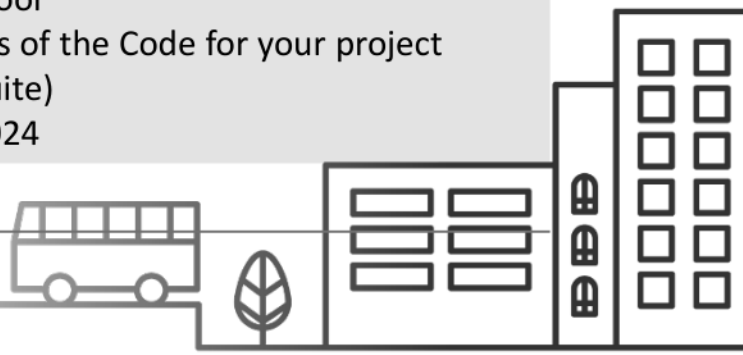
Regulatory System: Digitizing Construction Codes

The BC Building Code is a helpful resource to builders making it easier to design and build new homes

- Easier and faster to navigate
- Easier to understand
- Supports more detailed design and code compliance

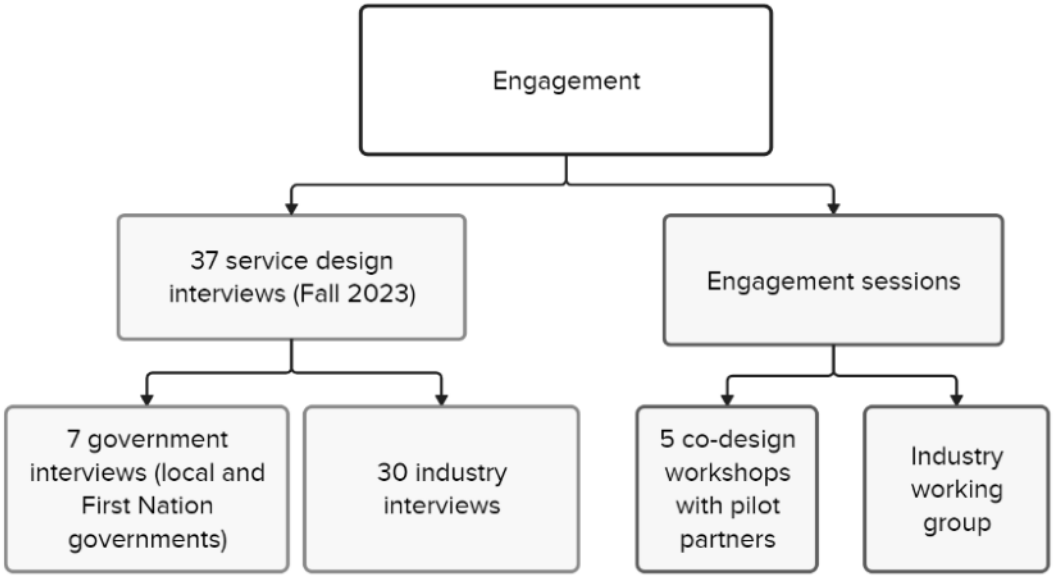
Work Near Completion (March 2024)	Work In Progress

A more interactive Building Code:
• Single PDF version of the Code with highly requested improvements
  ○ Improved navigation tabs
  ○ Improvements to satisfy web accessibility standards
  ○ Embedded links in the document
	For experienced Building Code users:
	• BIM-enabled Code with NRC
	  ○ Roadmap in June 2024 and BIM-enabled Code in 2026
	• Ongoing improvements to interactive Building Code features
	
	For less experienced Building Code users:
	• Automated code consolidation tool
	  ○ Identify only relevant pages of the Code for your project (e.g. adding a secondary suite)
	  ○ Proof of concept for Fall 2024



Building Permit Hub Updates

(a.k.a. the online building permit submission tool)



What We Have Done

Software development team onboarded

User research

Initial technical framework established

Confirmed housing scope: Part 9 low density housing (1-4 units)

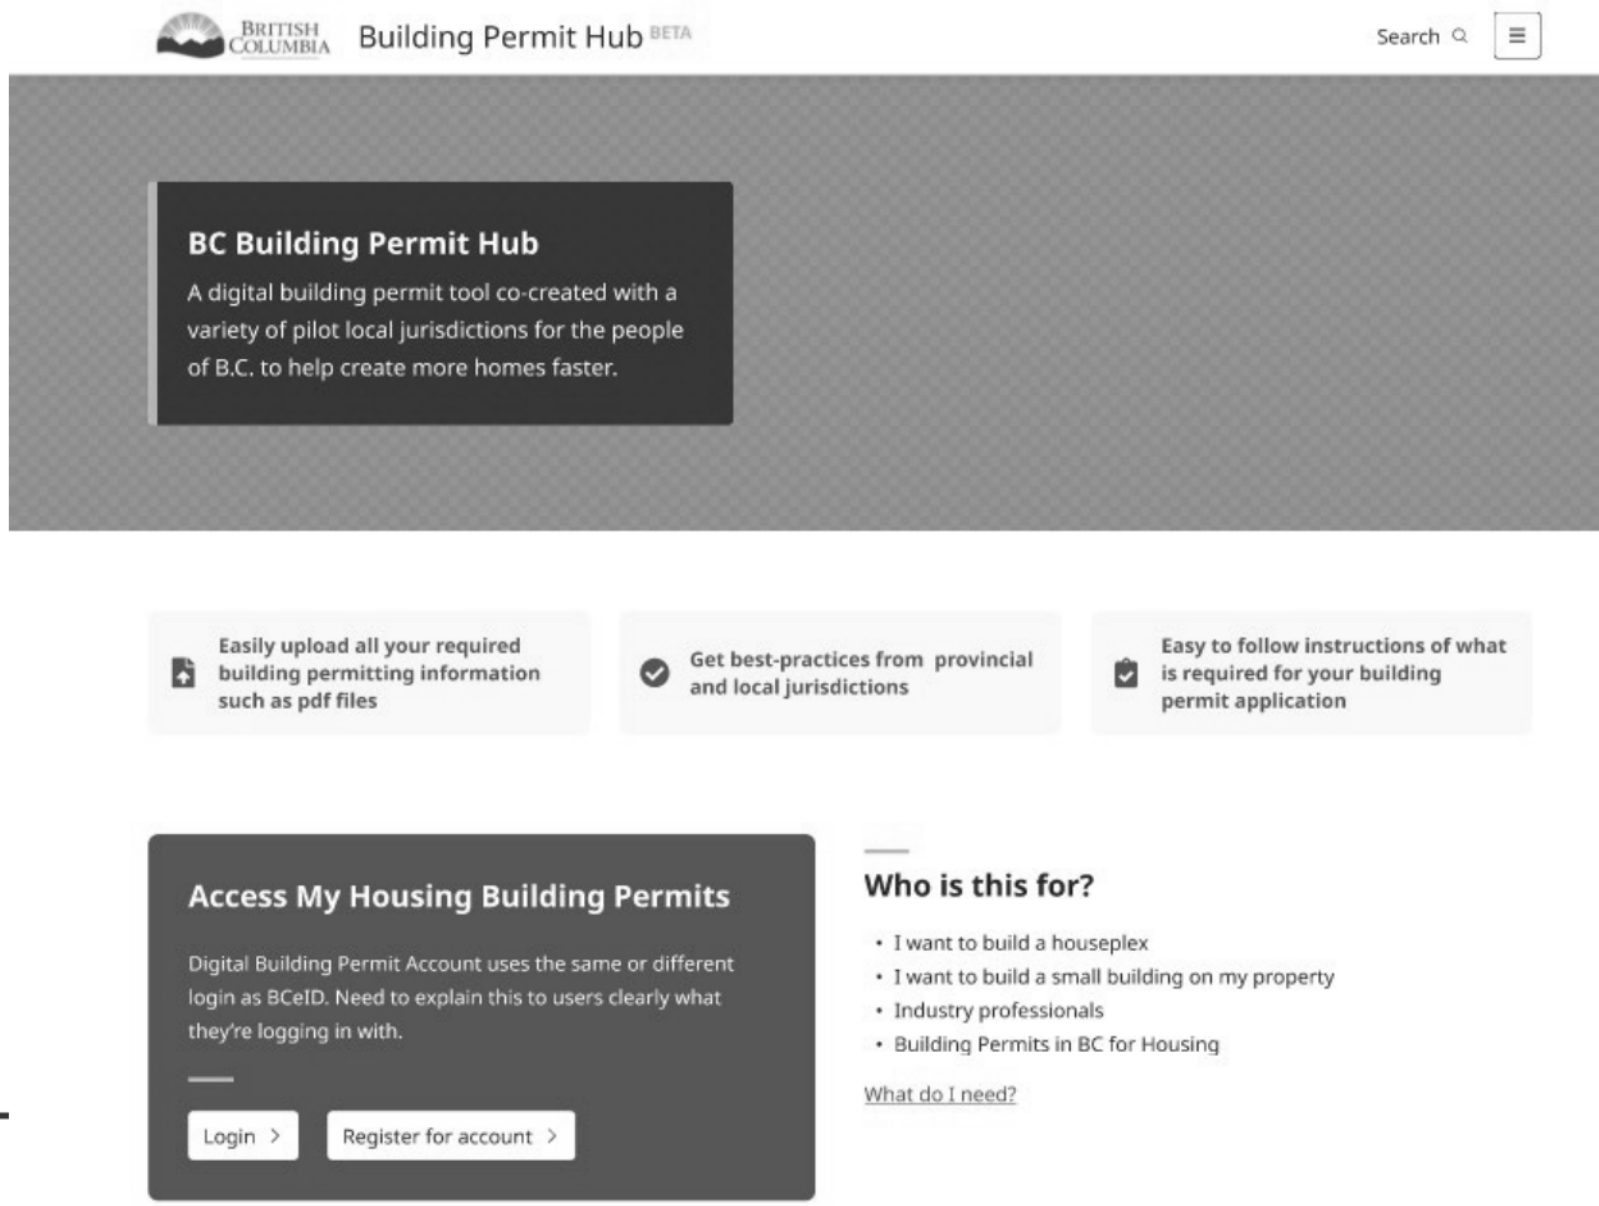
Initial success metrics

- Satisfaction
- Uptake
- Completeness

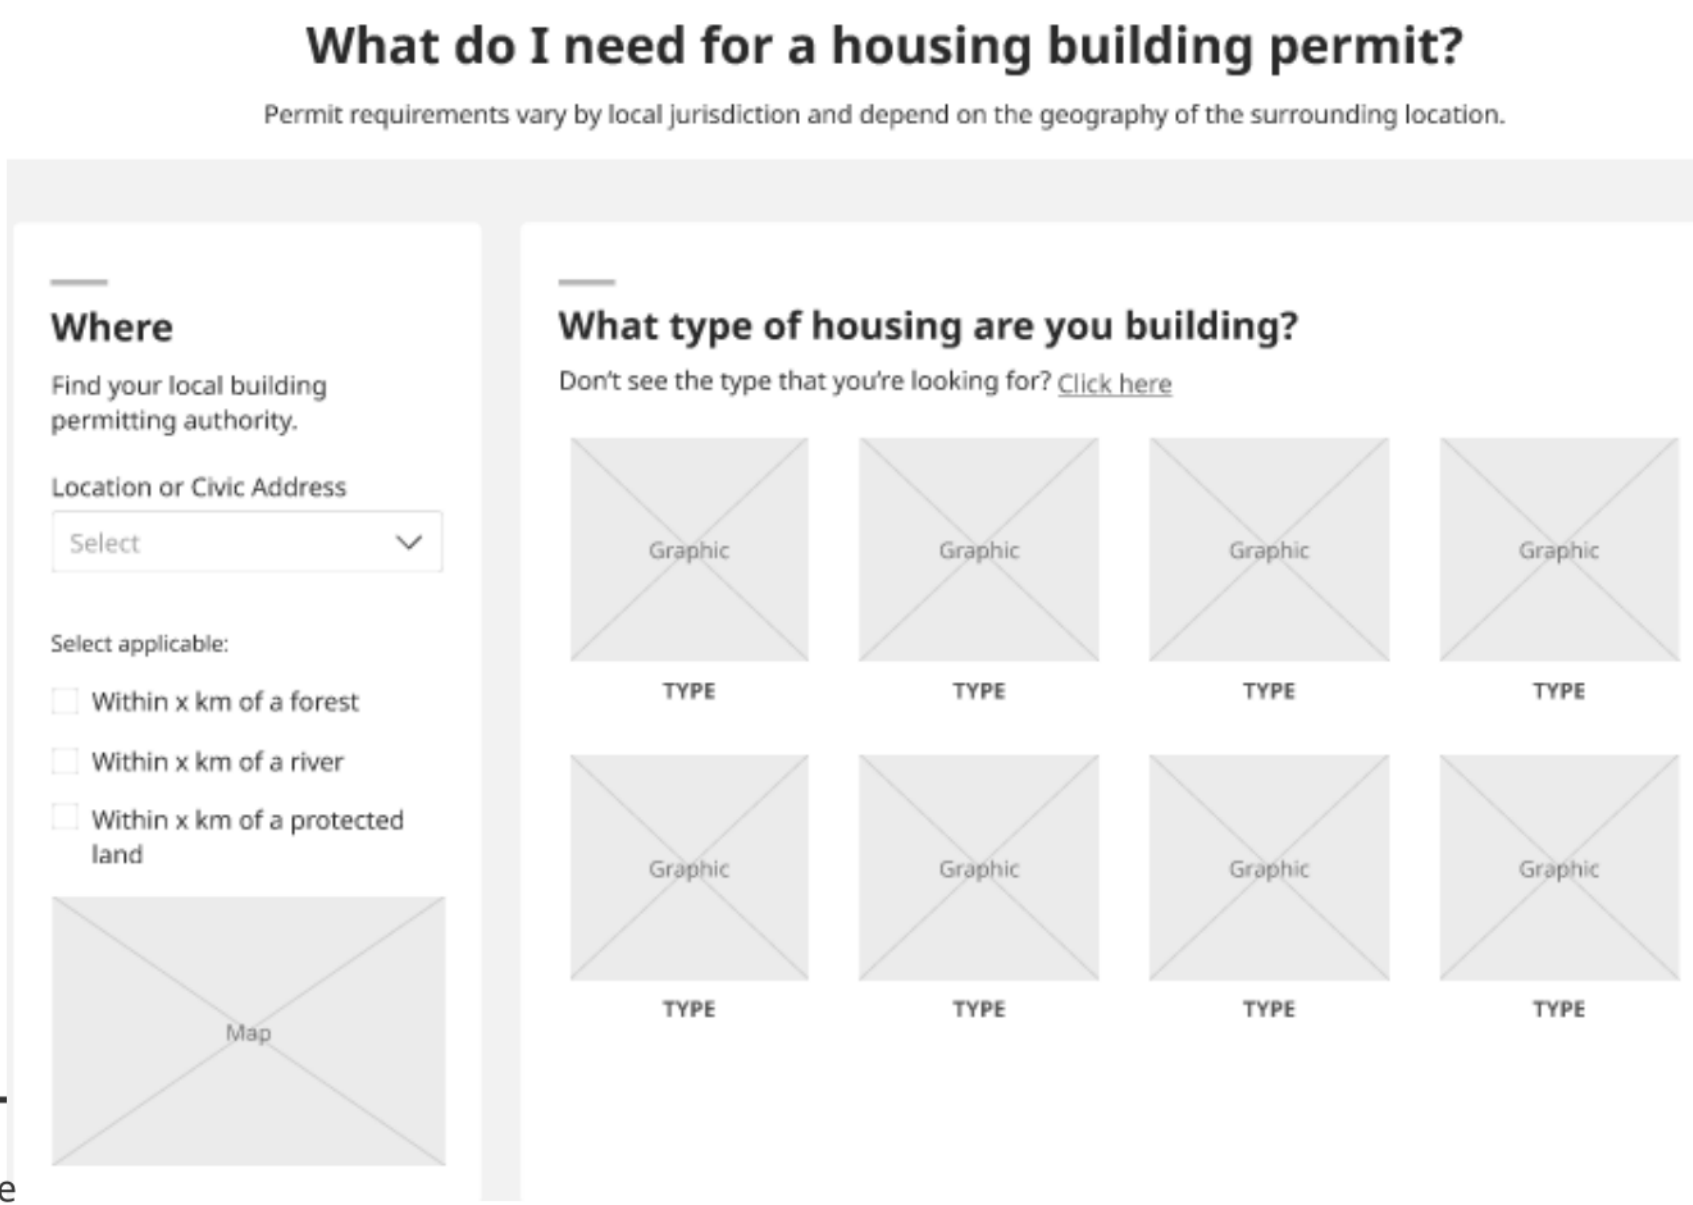
Prototype of standardized permit checklist

Building Permit Hub: Platform Wireframes

Wireframes are a work in progress and subject to change



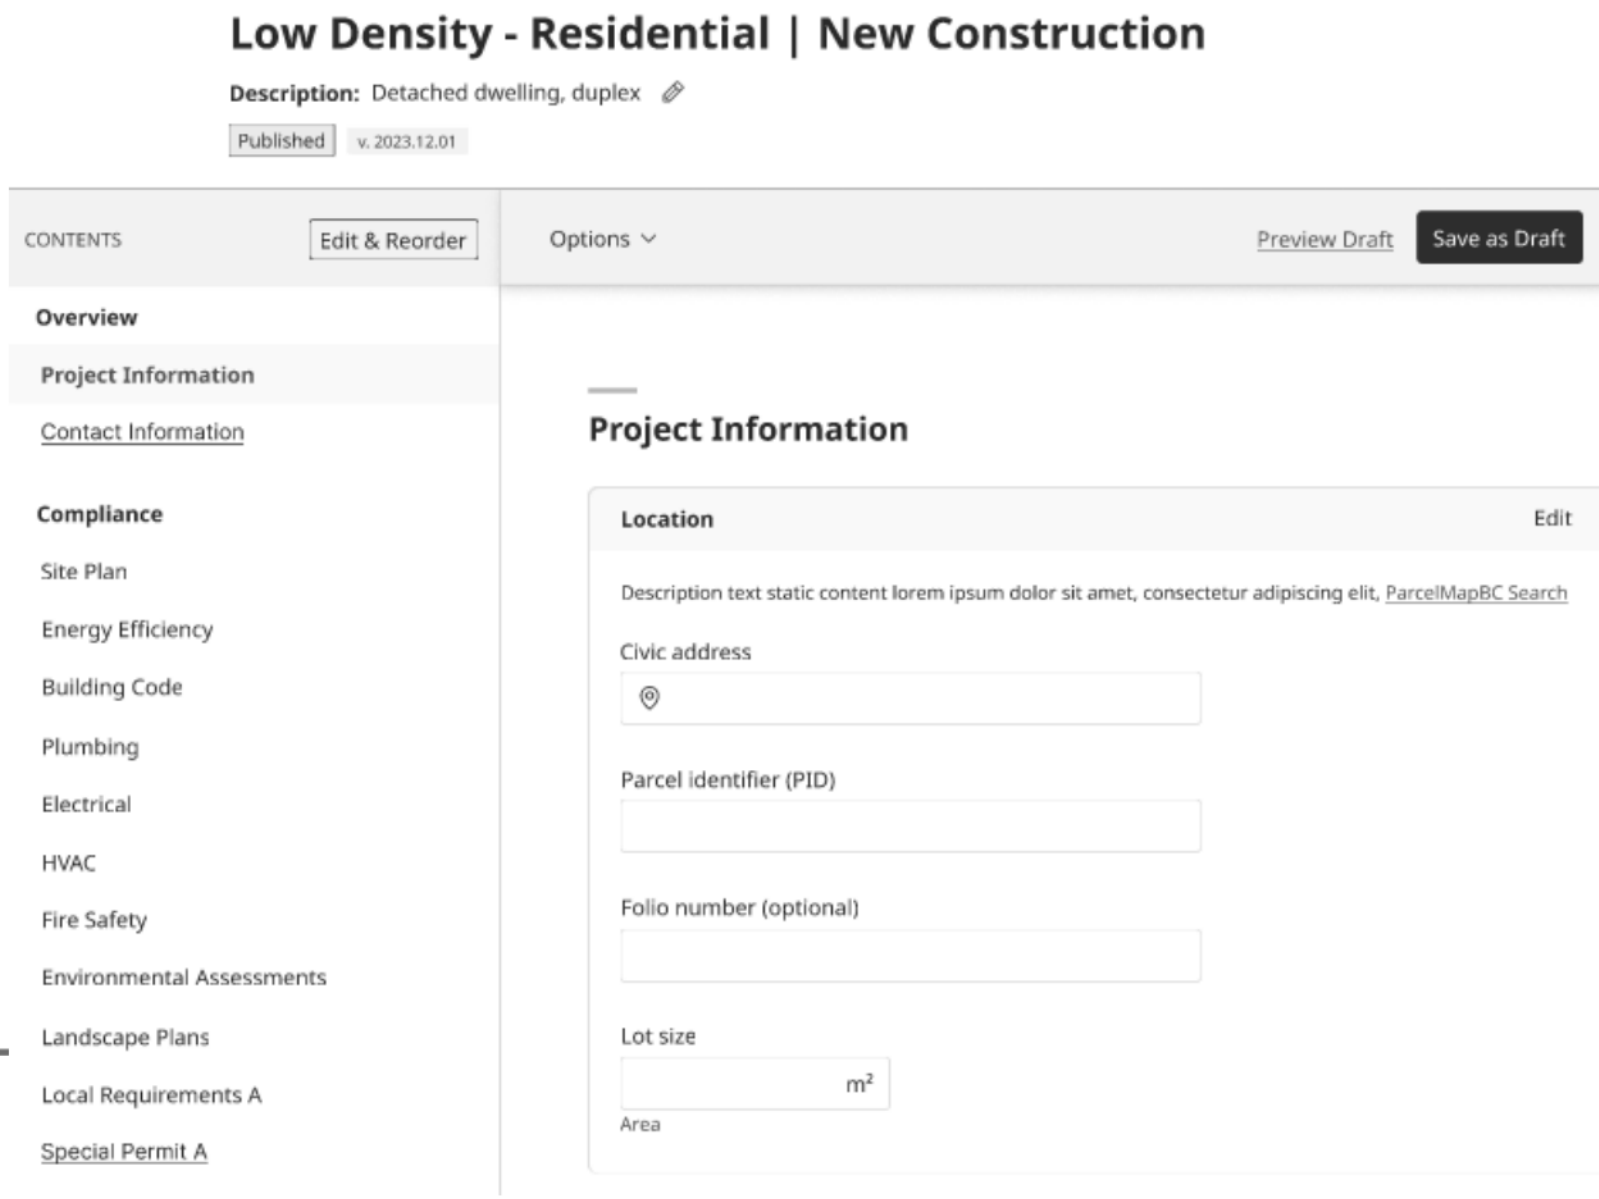
Building Permit Hub: Platform Wireframes



Wireframes are a work in progress and subject to change

Building Permit Hub: Checklist Prototype

Wireframes are a work in progress and subject to change



BRITISH COLUMBIA
Ministry of Housing
Envisioning Digital Transformation

High-Level Vision

The Ministry of Housing is working with partners across all levels of government and industry to position British Columbia as a **North American leader in digital permits and construction**, resulting in a housing construction sector that is **fast, collaborative, and delivers better outcomes.**

Complementary Visioning Work

DIGITAL is working with partners to collaboratively develop a mission map to develop a vision of an innovative construction industry. Focusing on what kind of innovations need to happen and how to stimulate the creation of collaborative projects. This work complements the Ministry's initiatives within the regulatory system.

Scius Advisory has been engaged by the National Research Council to develop an end-state vision and roadmap for a modern housing development system that is fast, collaborative, and delivers better outcomes. This will include proposing industry level KPIs which will support benchmarking and progress reporting.

What We Heard: Individual Meetings

- Collaboration and Coordination
- Balancing Objectives
- Providing a Clear Value Proposition
- Change Management Support
- Strategic Standardization
- Building a Common Digital Environment

What We Heard: Objectives (Draft for Discussion)

1. **A Housing System Built for Digital Collaboration:** A coordinated approach to digitizing codes, regulations, and permitting systems to provide a seamless experience for everyone involved in delivering housing and to realize the full potential of digital tools.

2. **A Housing Construction Sector with the Capacity to Deliver More Housing:** Focus on innovation in the housing construction sector that makes a measurable impact on labour productivity and the sector's ability to deliver more housing, faster.

3. **A Digital Transformation for Communities and Organizations of All Sizes:** Ensuring that digital processes and tools enhance the capacity of small and medium sized communities and organizations.

Visioning Activity

BRITISH COLUMBIA | Ministry of Housing

Duration: 75 minutes

- Small Groups review the high-level statements (outlined in the pre-read)
  - Validate objectives and consider any that may be missing
- For each objective, use sticky notes to provide input on:
  - KPI's
  - Enablers
  - Milestones
- Think big and adopt a 'blue sky' mentality

Vision Activity: Objective 1

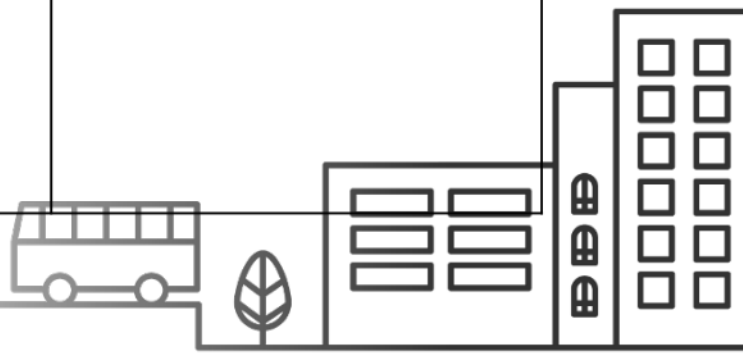
Objective: A Housing System Built for Digital Collaboration
A coordinated approach to digitizing codes, regulations, and permitting systems to provide a seamless experience for everyone involved in delivering housing and to realize the full potential of digital tools.

- What needs to be undertaken to make this possible?
- When can we expect to see changes?
- How can we measure progress?

Vision Activity: Objective 1

Objective: A Housing System Built for Digital Collaboration

Objective Components	**KPIs:** How can we measure our progress?	**Enablers:** What needs to be true to make this possible?	**Milestones:** When do we expect to see changes?
Widescale adoption of standard permitting technologies			
Development of a common data environment for codes and regulations			
Integration of permitting systems between points in the regulatory system			



Vision Activity: Objective 2

Objective: A Housing Construction Sector with the Capacity to Deliver More Housing
Focus on innovation in the housing construction sector that makes a measurable impact on labour productivity and the sector's ability to deliver more housing, faster.

- What needs to be undertaken to make this possible?
- When can we expect to see changes?
- How can we measure progress?

Vision Activity: Objective 2

Objective: A Housing Construction Sector with the Capacity to Deliver More Housing

Objective Components	**KPIs:** How can we measure our progress?	**Enablers:** What needs to be true to make this possible?	**Milestones:** When do we expect to see changes?
Increased adoption of labour productive processes (e.g. off-site manufacturing)			
Adoption of digital collaboration tools (e.g. BIM)			
Increased sector productivity			

Vision Activity: Objective 3

Objective: A Digital Transformation for All Communities and Organizations of All Sizes
Ensuring that digital processes and tools enhance the capacity of small and medium sized communities and organizations.

- What needs to be undertaken to make this possible?
- When can we expect to see changes?
- How can we measure progress?

Vision Activity: Objective 3

Objective: A Digital Transformation for All Communities and Organizations of All Sizes

Objective Components	**KPIs:** How can we measure our progress?	**Enablers:** What needs to be true to make this possible?	**Milestones:** When do we expect to see changes?
Adoption of digital permitting processes outside of urban centres			
Programs supporting innovation in small/medium sized businesses

Hi Kiran,

The minister's office would like a **meeting briefing note** prepared for a UDI meeting next week. The topics for the meeting are in the attached agenda.

Molly, I have copied you on this for your awareness that this will come up to you via eapprovals for MRK's materials.

Request submitted by:	*Mark Hosak, Senior Advisor*
Type of Request: • **Priority** (2–5-day turnaround and/or as requested)	Meeting Materials. IN.
Date Information Needed By	By February 14th
Detailed Description of Request	*The Minister is meeting with the UDI executive in a private meeting prior to him taking part in a fire side chat with the President of UDI at an event the same day.* *UDI has provided a detailed agenda with topics they would like to discuss with MRK. He needs to have an IN to help him respond to their questions.* *The agenda is attached.*
Intended Use	**To support the Minister in a meeting with stakeholders.**

Thank you

Nikki Papadopoulos
Director, Executive Operatons

Subject: RE: IN for UDI meeting

Hi Nikki,

Thanks so much for clarifying. A meeting briefing note would be preferred here.

Thanks again and all the best,

Mark

Subject: RE: IN for UDI meeting

Hi Everyone,

If you could clarify what type of materials are needed

- Issues Notes and speaking notes for everts – these are prepared by GCPE
- Materials for a meeting - Information Briefing Note (IBN) or an Meeting Briefing Note (MBN), Bullets, speaking notes etc – these material requests are included in the meeting template Molly provides to the DMO when scheduling

Hope that helps clarify. The MO information inbox is not for material requests for meeting.

Thank you

Nikki Papadopoulos

Hi folks, I wonder though because it is for a meeting I think it should through Molly – whether it's bullets, and IN, a BN etc.

I'm cc'ing Nikki to clarify.

Thanks,
Siân

Subject: IN for UDI meeting

Hi Molly,

I hope you are well. We need DMO to produce an IN that addresses the agenda points for MRK's talk with UDI taking place on February 15th. MRK would need this by Feb 14th.

Is this considered an info request that is put through the new email address or is this still something you request for meetings?

Cheers,

Mark

Hi Mark,

Here are the agenda topics for the meeting with UDI's Executive Committee and some notes for context. I've also provided a list of attendees.

Regarding the second agenda item (*Standardizing Density Calculations*), I've also attached a previous memo that includes commentary on the issue.

Lastly, I've attached the proposed question list for the luncheon event. We will also be taking questions from the audience via Slido, but we can screen these as they come in. Please share the brief with anyone else on your team that needs it, and if you have any questions, let us know! I've CC'd Verna as well.

We're sold out, and it looks like just over 500 people will be attending.

Thanks,
Cassandra

Hi Mark,

That is good news, thanks for confirming! Looking forward to seeing that in the guidance document.

It might be helpful if that Minister clarified that during the luncheon as well. I can include a question to that effect.

Thanks,
Cassandra

Subject: RE: Slides

Hi Cassandra!

Good news! My interpretation was correct.

The slide refers to the fact that municipalities are NOT required to pre-zone minimum allowable densities when they designate TOAs this year. However, municipalities **will be required** to zone for these densities (at least) when they update their OCPs and then prezone for that new OCP by Jan 1st 2026.

A new guidance document will be provided for the prezone to OCP process in June/July that will spell all of this out for municipalities.

I hope this helps and all the best,

Mark

URBAN DEVELOPMENT INSTITUTE

1100-1050 West Pender Street
Vancouver, BC V6E 3S7

UDI Executive Committee Meeting with Min. Ravi Kahlon
Agenda Topics
February 15, 2024 11:00-11:30am

Attendees (UDI)

Rick Ilich, Townline (UDI Chair)
Jon Stovell, Reliance Properties
Evan Allegretto, Intracorp
Rob Blackwell, Anthem
Cynthia Jagger, Goodman Commercial
Roque Hsieh, KPMG
Jordan Milne, GMC Projects
Mike Mackay, Strand Development
David Sander, Hollyburn Properties
Byron Chard, Chard Development
Anne McMullin, UDI
Jeff Fisher, UDI
Mike Drummond, UDI
Cassandra Smith, UDI

Agenda

1. **Chair's / Minister's opening comments**

2. **Standardizing Density Calculations**
   - Discussion on the need to standardize how municipalities calculate density (FSR/FAR).
   - Currently municipalities include/exclude various building components at their own discretion (e.g. amenity space counts toward a project's overall density in some municipalities, but not others).
   - We view the approaches taken in Esquimalt and Kelowna as best practices. They define density as net saleable/leasable space.
   - This could support mitigation measures for 2024 B.C. Building Code and implementing minimum densities in TOAs.

3. **Timing of Development Charge Payment**
   - There is an opportunity to establish this timeline for the new ACC created by Bill 46, however it would have broader applicability to other charges (DCCs, Density Bonus).
   - Payment could be a condition of receiving occupancy.

4. **Ensuring municipal policies and approaches align with the intent of the new housing legislation**
   - It would be helpful to understand what measures the Ministry is taking to ensure municipalities pass policies and bylaws that align with the objectives of the legislation.

Agenda

1. **Chair's / Minister's opening comments**

2. **Standardizing Density Calculations**
   - Discussion on the need to standardize how municipalities calculate density (FSR/FAR).
   - Currently municipalities include/exclude various building components at their own discretion (e.g. amenity space counts toward a project's overall density in some municipalities, but not others).
   - We view the approaches taken in Esquimalt and Kelowna as best practices. They define density as net saleable/leasable space.
   - This could support mitigation measures for 2024 B.C. Building Code and implementing minimum densities in TOAs.

3. **Inclusionary Zoning in TOAs**
   - How will inclusionary zoning mechanisms being developed impact TOA minimum heights and densities?
   - If a portion of the specified heights and densities could be required to be below-market housing it will impact project viability and could result in more rezonings.

4. **Timing of Development Charge Payment**
   - There is an opportunity to establish this timeline for the new ACC created by Bill 46, however it would have broader applicability to other charges (DCCs, Density Bonus).
   - Payment could be a condition of receiving occupancy.

5. **Ensuring municipal policies and approaches align with the intent of the new housing legislation**
    - It would be helpful to understand what measures the Ministry is taking to ensure municipalities pass policies and bylaws that align with the objectives of the legislation.

Hi Candice

Quick Q here – UDI asking about the intervention.

19. Does the Ministry have to wait the full five years to intervene?

And if there is anything else that stands out, but i think that's mostly it for housing targets.

Hi Julia,

Thanks for reaching out to us about this webinar opportunity covering the digitization work that's underway.

Here is the section we included in our newsletter last July for reference.

Ministry of Housing's Digital Innovation in Housing Construction Workshop
Under the *2023 Homes for People Plan* noted in previous newsletters, the Province committed to "*Become a North American leader in digital permitting and construction*". The focus of this work over the next three years will include digitizing the *B.C. Building Code* (*BCBC*), advancing the adoption and integration of digital permitting and construction processes across the housing sector, and supporting industry adoption of new collaboration technologies that make it easier for project teams and regulators to work together.

On June 12, UDI participated in a Ministry of Housing *Digital Innovation in Housing Construction Workshop* with 67 other representatives from local governments, Indigenous communities, construction industry, academia, and independent partnering organizations. During the workshop, participants identified changes that could improve the current housing development process, as well as opportunities to leverage digital tools to further streamline the process, including:

- Improving to collaboration/communication across government departments and other approving bodies (e.g., provincial approvals and technical studies such as geotechnical);
- Increasing transparency of approval timelines and where applications are at in the permit process;
- Clearly defining what information is required in building and development permit applications, and what is considered a complete or acceptable submission;
- Providing more opportunities for automation and improved coordination and consistency of construction, inspections and industry professionals;
- Implementing more consistent building inspection standards and BCBC interpretations;
- Simplifying the process with fewer steps and more transparent and consistent permit requirements;
- Ensuring that software allows for the sharing of relevant information and data between partners;
- Enhancing pre-screening of applications to ensure they are complete;
- Developing "… *common alternative solutions* …" for the *BCBC*; and
- Supporting the use of certified professionals and other professional expertise reliance models for complex buildings.

Participants also saw a significant role for the Ministry of Housing to provide education, best practices, and guidance, provincial liability protection, stable innovation funding, information on legislation, and improvements to the Provincial approvals process.

A complete summary of the feedback received at the June 12 workshop can be found in the Ministry's recently released *What We Heard Summary Report*. Included in next steps, the Ministry will identify 15-20 jurisdictions as a pilot for the digital permitting tools that will be developed over the next few years.

Looking forward to working with you on this,

Cassandra

Hi Cassandra,
Are you available for a quick 20 minute or so call to discuss planning details with our team?

Checking calendars, it looks like Nicole and Zac have some time **Thursday, February 8 @ 11:00 – 11:20am or Monday February 12@ 2:00-2:20pm.**

Let me know and I'll send a meeting invite.
Much appreciated,
Julie

Hi Julia,

Thanks for reaching out, and this sounds like a great opportunity to share the digitization work being done. Can you explain in more detail what you had in mind, how we could support you in getting this message out? For example, is this something that you will be hosting that we can help promote or are you looking to collaborate on an event? Presuming that this would be virtual?

Thanks and looking forward to hearing from you,
Cassandra

Subject: Lunch n Learn - Digital building permit tool and BCBC

Hi Jeff and Jenny,

Hope this email finds you well. I'm reaching out on behalf of our Ministry of Housing's Digital Delivery Team to see if we can organize a 1-to-1.5-hour Lunch and Learn session or other type of presentation for your membership in late February/early March to discuss our work underway on digitizing the BC Building Code and building a digital building permit tool?

These important initiatives are key parts of our ongoing work with partners from across the housing construction sector to improve the permitting experience for new housing and encourage the use of tools and practices that will position British Columbia as a North American leader in digital permitting and construction.

Let me know if your organization has other options for us to connect with your membership.

I look forward to hearing from you.
Julie

Thanks Jun'ichi for the follow-up!

I have contacted my clients at Westhills so see if they can provide their studies, and will circulate to your group as soon as I receive them.

I also contacted Sadia Afrin at BC Housing, who is responsible for their *Design Guidelines and Construction Standards* manual. This is our "bible" for all our funded affordable housing projects. I believe next year's adaptability code changes will have major changes to this document and I'd like to get a head start on understanding this for our future projects.

https://www.bchousing.org/publications/BCH-Design-Guidelines-Construction-Standards.pdf

I think you mentioned much coordination has already happened with BC Housing and the changes and impacts may be well quantified. If not and there's any input I can provide I'd be happy to do so.

The analysis that I believe would be most insightful would be a comparative study of each of the standard BC Housing apartment types (350 sf studio, 525 sf One-bed, 725 sf two-bed, 925 sf three-bed). This would give a side-by side comparison of a prototypical floor plan for each of these as they are typically designed, and then under the new adaptability code.

If this has been done I'd love to see it, otherwise I know someone in my office will do it at some point and we can share with anyone who's interested.

Subject: RE: GHL Seminar Follow-up

Hi Rob,

Thank you for following up. The Province did some analysis on impacts of adaptable units but we did not publish any formal reports. My team may be aware of the report you note, but we did not commission it. We are currently developing a comprehensive strategy to look at ways to support implementation of these requirements. I believe you mentioned you may have some contacts with folks doing analysis on real impacts to some current projects- we'd be interested in seeing those if they are available to you and you are able to share. We will also be reaching out proactively through UDI and CHBA to further discuss implementation strategies in the near future.

I've included a few folks on the team that are involved in this work for their reference.

Thank you again for sharing your perspectives. We will continue to consider these real world implications as we move forward.

Hi Jun'ichi,

I'm the one that asked about adaptibility yesterday afternoon and then chatted with you at the end. Thank you for your time yesterday and giving me lots of insight into what's behind the code updates.

As you know many of us in the construction industry fear the impacts of the seismic and adaptability changes will have to our business, more than we did with the 2018 change; especially the shift to 100% adaptable suites in Part 3.

I question if truly thorough analysis has been done on the floor area impacts to units using on an apples-to-apples comparison. I think the developers can worry about marketability of the new layouts but we should at least have a crystal clear picture of the relative area differences.

I saw a comparative report by McAuley consultants for example which has some flaws in evaluation. Units with unusual shapes were used, which is mostly applicable to condo towers, but doesn't apply to 95% of Part 3 development, which is simple rectangular units separated by straight double shear walls. Area increases were given between units with different sized living and dining rooms. I think room spaces and furniture layouts need to be the same to properly reflect market value, usability etc.

Perhaps this has been done and I just haven't seen it. But either way I wanted to share my thoughts.

All the best,

Rob Whetter, Architect AIBC

Updated QA, as requested.

2024 B.C. Building Code Changes

1. **Will your Ministry be looking at density/cost offsets, and flexible implementation?**
   - The Ministry continues to support implementation by considering density and cost offsets. The Ministry examined historical requirements looking for opportunities to right-size requirements based on current evidence. The 2024 edition of the BC Building Code aims to offer design flexibility so that designers can make cost-effective decisions.
   - We will be working with industry to get an accurate picture of what the impacts are in terms of costs – there's a wide range that we're hearing and we need to better understand that to understand what we can do to support industry to implement the advancements in the codes.
   - We're open to hearing what ideas industry has, that may help address the code's changes. We've heard about density and offsets for increased demands on floor space, and we are looking forward to engaging more. We also know there is high demand for guidance and best practice materials which we are working on.
2. **Going to 100% adaptability so quickly was one of the development industry's biggest concerns – is your Ministry considering lowering or phasing that requirement in over time?**
   - For British Columbians who need accessible and adaptable living spaces, a lot of housing in the province is 100% inaccessible. Changing the code to require adaptable designs in certain dwelling units – those on ground floors or accessible by elevators – helps reduce costs of renovating an apartment later to be accessible as peoples' needs change as they age, have children, or as their mobility needs change.
   - In May of 2023, the Ministry invited comments from the public, including code users, Treaty Nations, Indigenous partners, local governments, building owners, construction industry professionals, and others on changes proposed. Based on feedback, the adaptable dwelling unit requirements, and seismic requirements, come into force a year later [March 10, 2025, versus March 8, 2024] than the rest of the code, providing nearly two-years since first notice. This transition period allows time for education and training to support smooth implementation. The Ministry will be busy during this time supporting industry on education and training and implementation.
   - We've heard from industry that they need time to understand how to change their design practices to meet the adaptability requirements, which is why we're implementing those requirements in 2025.
   - We're looking forward to working with industry to develop guidance and tools to help them design adaptable units.

- The housing crisis is even worse for people who need adaptable or accessible dwelling units, which is why we've made this change. The requirements will help make apartments and suites more easily renovated in the future to support changing needs.
- Industry has demonstrated their ability to work with new requirements even when transition periods are less than ideal, and the Ministry's work to support implementation will help adapt to the rest of the new requirements that come into force on March 8, 2024.

3. **100% adaptability is impacting suite sizes (e.g. larger bathrooms) and adding costs which ultimately is negatively impacting housing affordability. Does the Ministry understand this and are they reconsidering some of these code changes?**
   - The Ministry heard that we need adaptable housing and that adaptable dwelling units are affordable homes for people to age in place, and who have temporary or permanent disabilities because of the ability to cost-effectively furnish and finish a unit to their unique needs. Adaptable units also provide for people with temporary or permanent disabilities to visit their friends and families.
   - We understand that without guidance on adaptable suite designs, there can be confusion on how best to implement them to make sure that all British Columbians can move around small suites no matter their mobility.
   - We're working with partners to provide guidance on wise practices to implement adaptability rules in suites. This will help developers and designers better understand the changes that need to be made to make sure that British Columbians can access and continue to live in their homes as their needs change.
   - We have heard that in certain circumstances with small suites there can be pressure on the size of certain parts of a suite, like making sure there's enough room in a bedroom to turn a wheelchair around so that someone can get into and out of the room, or be able to use all parts of a bathroom with a mobility aid. We're looking forward to working with industry to get an understanding of how much pressure there is on suite sizes – in terms of a number of square feet or a percentage of the unit size – and see if we can offer guidance on how that pressure can be offset.
   - The 2024 BC Building Code reduces the accessible corridor width from 1 500 mm to 1 000 mm. The Ministry analyzed all requirements to ensure they were current with recent studies and justified. This change results in almost 33 square feet of space that can be reallocated per 20-foot-long corridor. This reallocation supports to offset these changes.
   - We know that some people see these design rules as challenging, but we also know the deep challenge that British Columbians face when next to no suites or dwelling units on the market are accessible or adaptable to their needs. Adaptability requirements help address the housing crisis for some British Columbians who feel it most acutely, but they also help to reduce the cost of renovating suites or apartments to be able to support you when your needs change as you age, add family members, or need help getting around.
   - The Ministry continues its work advancing the national model codes. The work B.C. has done helps to informs national development. The Ministry continues collaboration with fellow provinces and territories, the National Research Council, standards development organizations such as the Canadian Standards Association and Accessibility Standards Canada, as well as industry and advocacy groups.

Subject: RE: QA for Minister's UDI Luncheon on Thursday

Hi Juni –

Shannon, Aura, and I prepared some As to the Qs here

2024 B.C. Building Code Changes

1. **Will your Ministry be looking at density/cost offsets, and flexible implementation?** s.13
   - The Ministry continues to support implementation by considering density and cost offsets, s.13 The Ministry examined historical requirements looking for opportunities to right-size requirements based on newest evidence. s.13 the 2024 edition of the BC Building Code offers design flexibility so that designers can make cost-effective decisions s.13
   - We will be working with industry to get an accurate s.13 picture of what the impacts are in terms of costs – there's a wide range that we're hearing and we need to better understand that to understand what we can s.13) do to support s.13 industry implement the advancements in the codes.
   - We're open to hearing what ideas industry has that may help address the code's changes. We've heard about density and offsets for increased demands on floor space, and we are looking forward to engaging more. We also know there is high demand for guidance and best practice materials which we are working on.

2. **Going to 100% adaptability so quickly was one of the development industry's biggest concerns – is your Ministry considering lowering or phasing that requirement in over time?**
   - For British Columbians who need accessible and adaptable living spaces, a lot of housing in the province is 100% inaccessible. Changing the code to require adaptable designs in certain dwelling units – those on ground floors or accessible by elevators – helps reduce costs of renovating an apartment later to be accessible as peoples' needs change as they age, have children, or as their mobility needs change.
   - s.13 In May of 2023, the Ministry invited comments from the public, including code users, Treaty Nations, Indigenous partners, local governments, building owners, construction industry professionals, and others on changes proposed. Based on feedback, the adaptable dwelling unit requirements, and seismic requirements, come into force a year later [March 10, 2025, versus March 8, 2024] than the rest of the code, indicating almost two-years since first notice. This s.13 allows time for education and training to support a smooth s.13 The Ministry will be busy during this time supporting industry on education and training and implementation.
   - We've heard from industry that they need time to understand how to change their design practices to meet the adaptability requirements, which is why we're implementing those requirements in 2025.
   - We're looking forward to working with industry to develop guidance and tools to help them design adaptable units.
   - The housing crisis is even worse for people who need adaptable or accessible dwelling units, which is why we've made this change. The requirements will help make apartments and suites more easily renovated in the future to support changing needs.

   - Industry has demonstrated over and over the ability to work with new requirements even when transition periods are less than idea, and the Ministry's work to support implementation will help adapt to the rest of the new requirements that do come into force on March 8, 2024.

3. **100% adaptability is impacting suite sizes (e.g. larger bathrooms) and adding costs which ultimately is negatively impacting housing affordability. Does the Ministry understand this and are they reconsidering some of these code changes?**

- The Ministry heard s.13 that we need adaptable housing and that adaptable dwelling units are affordable homes for people to age in place, and who have temporary or permanent disabilities because of the ability to cost-effectively furnish and finish a unit to their unique needs. Adaptable units also provide for people with temporary or permanent disabilities to visit their friends and families.
- We understand that without guidance on adaptable suite designs, there can be confusion on how best to implement them to make sure that all British Columbians can move around small suites no matter their ~~mobility~~ s.13
- We're working with partners to provide guidance on wise practices to implement adaptability rules in suites. This will help developers and designers better understand the s.13 changes that need to be made to make sure that British Columbians can access and continue to live in their homes as their needs change.
- We have heard that in certain circumstances with small suites there can be pressure on the size of certain parts of a suite, like making sure there's enough room in a bedroom to turn a wheelchair around so that someone can get into and out of the room, or be able to use all parts of a bathroom with a mobility aid. We're looking forward to working with industry to get an understanding of how much pressure there is on suite sizes – in terms of a number of square feet or a percentage of the unit size – and see if we can offer guidance on how that pressure can be offset.

- s.13 the 2024 BC Building Code reduced the accessible corridor width from 1 500 mm to 1 000 mm. s.13 the Ministry analyzed all requirements to ensure they were current with recent studies and justified. s.13 s.13 resulting in almost 33 square feet of space that can be reallocated per 20 foot long corridor. s.13 this reallocation s.13 supports these changes.

- We know that some people see these design rules as challenging, but we also know the deep challenge that British Columbians face when next to no suites or dwelling units on the market are accessible or adaptable to their needs. Adaptability requirements help address the housing crisis for some British Columbians who feel it most acutely, but they also help to reduce the cost of renovating suites or apartments to be able to support you when your needs change as you age, add family members, or need help getting around.
- The Ministry continues to work advancing the national model codes. The work B.C. has done informs national development and the Ministry continues collaboration with fellow provinces and territories, the National Research Council, standards development organizations such as the Canadian Standards Association and Accessibility Standards Canada, as well as industry and advocacy groups.

Adaptable designs help reduce the cost of future renovations and help you continue to live in your home when your needs change

Subject: RE: QA for Minister's UDI Luncheon on Thursday

Hi Travis –

The team has developed the below answers that are responsive to the three questions relating to adaptable dwelling units.

I think they're long but we're hard pressed to really be able to identify where to trim – can you take a look at it with an eye to shortening?

Juni has reviewed so if you can shorten it, it could go to ADM for review.

Thanks,

Kevin

2024 B.C. Building Code Changes

1. **Will your Ministry be looking at density/cost offsets, and flexible implementation?**
   - The Ministry continues to support implementation by considering density and cost offsets. The Ministry examined historical requirements looking for opportunities to right-size requirements based on current evidence. The 2024 edition of the BC Building Code aims to offer design flexibility so that designers can make cost-effective decisions.
   - We will be working with industry to get a more accurate picture of what the impacts are in terms of costs – there's a wide range that we're hearing and we need to better understand that to understand what we can do to support industry to implement the advancements in the codes.
   - We're open to hearing what ideas industry has that may help address the code's changes. We've heard about density and offsets for increased demands on floor space, and we are looking forward to engaging more. We also know there is high demand for guidance and best practice materials, which we are working on.
2. **Going to 100% adaptability so quickly was one of the development industry's biggest concerns – is your Ministry considering lowering or phasing that requirement in over time?**
   - For British Columbians who need accessible and adaptable living spaces, a lot of housing in the province is 100% inaccessible. Changing the code to require adaptable designs in certain dwelling units – those on ground floors or accessible by elevators – helps reduce costs of renovating an apartment later to be accessible as peoples' needs change as they age, have children, or as their mobility needs change.
   - In May of 2023, the Ministry invited comments from the public, including code users, Treaty Nations, Indigenous partners, local governments, building owners, construction industry professionals, and others on changes proposed. Based on feedback, the adaptable dwelling unit

requirements, and seismic requirements, come into force a year later [March 10, 2025, versus March 8, 2024] than the rest of the code, providing nearly two-years since first notice. This transition period allows time for education and training to support smooth implementation. The Ministry will be busy during this time supporting industry on education and training and implementation.

- We've heard from industry that they need time to understand how to change their design practices to meet the adaptability requirements, which is why we're implementing those requirements in 2025.
- We're looking forward to working with industry to develop guidance and tools to help them design adaptable units.
- The housing crisis is even worse for people who need adaptable or accessible dwelling units, which is why we've made this change. The requirements will help make apartments and suites more easily renovated in the future to support changing needs.

3. **100% adaptability is impacting suite sizes (e.g. larger bathrooms) and adding costs which ultimately is negatively impacting housing affordability. Does the Ministry understand this and are they reconsidering some of these code changes?**
   - The Ministry heard that we need adaptable housing and that adaptable dwelling units are affordable homes for people to age in place, and who have temporary or permanent disabilities because of the ability to cost-effectively furnish and finish a unit to their unique needs. Adaptable units also provide for people with temporary or permanent disabilities to visit their friends and families.
   - We understand that without guidance on adaptable suite designs, there can be confusion on how best to implement them to make sure that all British Columbians can move around small suites no matter their mobility.
   - We're working with partners to provide guidance on wise practices to implement adaptability rules in suites. This will help developers and designers better understand the changes that need to be made to make sure that British Columbians can access and continue to live in their homes as their needs change.
   - We have heard that in certain circumstances with small suites there can be pressure on the size of certain parts of a suite, like making sure there's enough room in a bedroom to turn a wheelchair around so that someone can get into and out of the room, or be able to use all parts of a bathroom with a mobility aid. We're looking forward to working with industry to better understand how much pressure there is on suite sizes – in terms of a number of square feet or a percentage of the unit size – and see if we can offer guidance on how that pressure can be offset.
   - The 2024 BC Building Code reduces the accessible corridor width from 1 500 mm to 1 000 mm. The Ministry analyzed all requirements to ensure they were current with recent studies and justified. This change results in almost 33 square feet of space that can be reallocated per 20-foot-long corridor. This reallocation supports to offset these changes.
   - We know that some people see these design rules as challenging, but we also know the deep challenge that British Columbians face when next to no suites or dwelling units on the market are accessible or adaptable to their needs. Adaptability requirements help address the housing crisis for some British Columbians who feel it most acutely, but they also help to reduce the cost of renovating suites or apartments to be able to support people when their needs change as they age, add family members, or need help getting around.
   - The Ministry continues its work advancing the national model codes. The work B.C. has done helps to informs national development. The Ministry continues collaboration with fellow provinces and territories, the National Research Council, standards development organizations such as the Canadian Standards Association and Accessibility Standards Canada, as well as industry and advocacy groups.

Thanks, Pauline – much appreciated.

I'll work with Shannon and Aura to find a time for us to talk about mitigation efforts – I really liked what I heard from Juni about your conversation and would love to hear more.

Re electrical code – are the interpretation challenges the kind of thing that could be clarified by a bulletin or do you think they rise to the zone of needing amendments to the codes? Happy to talk about this too – we're balancing the need to try to get the code updated with the pending election and our inability to do policy work for much of the second half of the year, so if we're lucky we may be able to get the new code in effect in 2025. If amendments are seen as necessary, our process will need to take a different path, but if it's something that a bulletin from TSBC could clarify, it may not be an issue. I think that the electrical industry is anxious to see the code adopted (they'd probably prefer it adopted now). Happy to set some time to chat on this one too.

I am definitely sorry to hear about the 3-view limitation. I haven't personally encountered this, but that's a major frustration.

Hope you have a great weekend,

Kevin

Hi Kevin,

I can imagine schedules have been crazy, and really appreciate the follow-up!

Re. mitigation efforts, I floated an idea with Jun'ichi about industry possibly contracting a consultant to assess space impacts based on seismic and accessibility changes. Happy to have an informal conversation about this – let me know what days work best.

Re. 2024 CE Code, I see that the final version is now available for viewing. However, the draft version of 2024 CE Code was not available for viewing during the time of TSBC's consultation, so it hindered our ability to assess the changes. I was able to connect with our National staff and relay some comments on energy storage systems, but the issues stemmed from clarifying specific code language (we're supportive of the intent of allowing ESS to be located in dwelling units.) Based on the high level impact assessment document that TSBC issued for the consultation, there were some interpretation challenges for the electric vehicle charging requirements that UDI and CHBA BC submitted feedback on. In terms of 'view access', this was a just minor point that users are limited to 3 free 'views' only (I unfortunately discovered this after being timed out a few

times.) While there are workarounds available, it can be challenging for those who do not regularly need access to CE Codes.

Subject: BSSB - quickly checking in

Hi Pauline,

I apologize for missing the check-in with you and Juni earlier this week! My calendar got a little bit too crazy.

Juni mentioned two items that I thought I ought to follow up on with you – one was a potential way that CHBA and UDI could help out in our work to understand the space impacts of the building code to work towards mitigation efforts, and another was a comment that you couldn't access the 2024 Electrical Code?

I'd love to chat with you about the space impacts question and I'm copying Shannon and Aura, senior policy analysts, because they're preparing our questions for consultation on mitigation efforts that we plan to start as soon as we have clearance from above. Perhaps an informal, preliminary conversation about what questions you may be able to seek to answer may help us direct efforts effectively?

With regard to the electrical code – you should be able to create a CSA Group website account and get "View Access" to the code. A draft version of the 2024 code was published a few months ago and the final version was published on March 4 and should be available. Technical Safety BC is also conducting their impact review, and I know that CHBA Canada participated in the technical committees. My understanding so far is that there are limited impacts to costs that can be justified through safety advances (like labelling of panelboards) and that the main issues around energy storage systems were addressed in an interim fashion until the NBC catches up (we may consider issuing a bulletin with TSBC to clarify application). While arc fault circuit interrupters are still there, I don't believe there are major cost drivers in other situations.

I'm copying Christine here as she's our senior policy analyst working on the Electrical Code this time around. If you have any comments about the Electrical Code that may be of value in our review we'd also love to hear them, though make sure you submit to TSBC as well. We're proceeding on the assumption that the electrical code would be adopted early in 2025, but have no confirmation on that of course as we haven't started the process yet.

Happy to set a time to chat more if that would be helpful,

HOME BUILDERS' ASSOCIATION
BRITISH COLUMBIA

March 1, 2024

Hanna Rogoza
Advisor, Insights & Engagement
Technical Safety BC
Suite 600 - 2889 East 12th Avenue
Vancouver, BC V5M 4T5

Submitted via e-mail to: engage@technicalsafetybc.ca

Dear Ms. Rogoza:

Re: 2024 Canadian Electrical Code consultation

The Canadian Home Builders' Association of BC (CHBA BC) is the leading advocate for the residential construction industry, representing 2,350 member firms through our eight locally affiliated home building associations. Our members are small- and medium-sized businesses who are builders, renovators, tradespeople, service professionals, and suppliers. We are essential to supporting the province's housing, economic, and climate change efforts, such as those outlined in the CleanBC Roadmap to 2030. In 2022, as one of the largest sources of employment in the province, the residential construction industry provided 274,875 on- and off-site jobs, $19.9 billion in wages and $35.5 billion in built investment value in British Columbia.

CHBA BC appreciates the deadline extension to inform Technical Safety BC's (TSBC) public consultation on the impact of adopting the 2024 Canadian Electrical Code (CE Code).

'Pilot' approach to CE Code consultation process

While it remains unclear why the B.C. adoption of the 2024 CE Code is being expedited before the 2024 edition has been published, CHBA BC understands the desire for a streamlined consultation process and offers the following recommendations for future CE Code consultations to improve industry engagement.

- Provide online technical information sessions to review key impacts of the 2024 CE Code for B.C. as identified by TSBC. The sessions should occur prior to the three-week consultation period. Otherwise, the consultation period should be extended to allow industry sufficient time to consult with code users and technical experts.
- Provide CE Code language for each proposed change. The 2024 Canadian Electrical Code (CE Code) – Impact Assessment is a useful summary document, but by itself lacks adequate details that are necessary for industry to properly assess impacts and make informed decisions. For example, the public review of 2020 National Model Codes provides the problem statement, proposed code language, justification, and impact analysis with cost details. If the proposed code language cannot be presented at the time of consultation, the consultation should be delayed until this material is available.

The condensed consultation period for this pilot lacked sufficient preparatory materials to lay the groundwork for collecting comprehensive feedback. Consequently, CHBA BC's feedback reflects uncertainty and confusion around the proposed CE Code changes.

Section 8

Under TSBC's Section 8 analysis, it is unclear whether apartments and similar buildings must include electric vehicle supply equipment (EVSE) loads to the calculated load if EVSE is not actually installed for the project. As identified in TSBC's impact assessment, the proposed change may result in a larger calculated demand. This is problematic for both cost and local capacity constraints, particularly in grid-constrained high growth areas where EVSE are increasingly required by local government by-laws.

It is also unclear how the relaxation of 8-106 11) can still be applied to multi-unit residential buildings, provided the electric vehicle energy management system (EVEMS) monitors and controls the consumer's service, feeders, and branch circuits and control the EVSE loads in accordance with Rule 8-500. No justification has been provided on why Table 38 has been deleted, nor how often services have been overloaded as a result from applying demand factors below 100% under Table 38.

Section 64

Under Section 64, CHBA BC supports the intent to permit the installation of battery-based Energy Storage Systems (ESS) inside dwelling units. However, some additional language may be warranted for proper enforcement. Rule 64-1100 2) should explicitly state that the fire resistance rating of not less than 1 hour required for a dedicated room or utility room applies for ESS located "outside of a dwelling unit" in buildings containing multiple dwelling units. The proposed language creates confusion on when the fire resistance rating applies for a dedicated room containing ESS. It should also be made explicit that ESS can be located in a dedicated room or utility room "in a dwelling unit", which is different from in an attached garage, detached garage or exterior surface of a building.

Closing Remarks

We look forward to future industry engagements and sharing our members' experience with Code interpretation and implementation. If you have questions, or would like to have a follow up discussion, please contact the undersigned.

Regards,

Pauline Rupp

Advisor, Insights & Engagement
TECHNICAL SAFETY BC (TSBC)
Suite 600 - 2889
East 12th Avenue
Vancouver, BC V5M 4T5

Dear Mrs. Rogoza:

Re: Canadian Electric Code (CEC) consultations

Thank for extending the timeframe for the Urban Development Institute (UDI) to submit its comments to Technical Safety BC regarding the adoption of the *2024 Canadian Electric Code* into British Columbia regulation as well as the "*pilot*" consultation approach TSBC used to streamline the adoption process.

It is difficult for us to respond to the proposed changes because there is inadequate information. While a summary document (the *2024 Canadian Electrical Code – Impact Assessment*) is linked on the TSBC website, the actual language of the proposals is not included in the summary – nor has a cost/benefit analysis of the changes been provided.

We are particularly confused about the first proposed change - "*Electric vehicle supply equipment demand rules*," in Section 8, which is a critical issue for our members; especially since some have been informed that this Section would mandate electrical vehicle charging (EVC) for all residential parking stalls.

From the *2024 Canadian Electrical Code – Impact Assessment*, it appears the amendment would mandate a 100% demand factor be applied to electric vehicle supply equipment in all buildings but single dwellings, which would increase the estimated loads for new buildings. However, "*This could be mitigated using EVEMS equipment that would see the reduction in the calculated load and potentially no increase in service size*."

It is not clear whether this applies only to circumstances when electric vehicle supply equipment (EVSE) is incorporated into a new building or if a builder must assume a 100% demand factor for EVSE even if they do plan to include EVC in a project – or only

have it for a small percentage of stalls. If it is the later, it is not clear how they could take advantage of mitigating the load impact by "… *using EVEMS equipment* …," without it being installed, which may require the EVSE to be installed as well. This is especially confusing for strata builders who will not retain ownership of the buildings after occupancy. They would not know what EVEMS equipment would be utilized when the strata corporation installs EVC equipment.

Mandating 100% EVC in parking stalls either directly or indirectly through the *Canadian Electrical Code* would be problematic. In areas of the Province where electrical vehicles are not prevalent, providing charging for every stall will make the Government's objective of providing housing more affordably even more challenging for builders, and it is not clear whether adoption rates for electric vehicles in these areas would substantially increase as a result of the change in the near term.

Increasing load factors for buildings could exacerbate another problem. Our members are already finding it difficult and costly to connect to the grid due to electrical distribution infrastructure in some areas reaching capacity, as well as an antiquated approach to funding electrical distribution upgrades that unevenly distributes the cost amongst builders. Some projects have been stalled because of the above problems. Adding substantial demand factors to account for EVSE (which may occur even with EVEMS mitigation) would worsen this issue.

UDI has been working with BC Hydro to address the local distribution capacity issues. There have been improvements, and more are planned such as changes to how BC Hydro charges for service upgrades and extensions. However, they will require approval from the BC Utilities Commission, and it is not clear what the implementation timeframes will be. ***We recommend that the adoption of Section 8 be delayed until these improvements have been implemented by BC Hydro (and FortisBC Electric).***

We are also concerned about the impact on instream projects – especially since TSBC is seeking to increase the speed of adoption of the *CE Code* in BC. This may result in projects that are instream in the planning review process (which can take several years) having to be redesigned to accommodate the changes to Section 8. This would result in substantial costs and delays for projects and undermine the delivery of new housing for British Columbians.

Although UDI represents builders and developers, some of our members own existing buildings and the implementation of Section 8 could potentially be problematic if the 100% demand factors applied when building owners begin to provide EVC in their rental, commercial and industrial buildings.

Regarding the other proposed *CEC* sections, we are unsure about many because no cost/benefit analysis (or even a cost analysis) has been provided, and it is stated in the

2024 Canadian Electrical Code – Impact Assessment that the "*Impact rating*" for each section is "*HIGH*".

However, we are supportive in principle of Section 64 ("*Energy storage and renewable energy systems requirements"*), although more clarity is needed regarding the required fire rating. Allowing energy storage will allow residents to better take advantage of future time-of-use BC Hydro rates, so the utility can peak shave to reduce infrastructure costs.

UDI is pleased with Section 2 ("*Marking of equipment*") and Section 10 ("*Equipotential bonding*") because both have a positive safety impact while reducing costs. We are also generally supportive of Section 6 ("*the use of bare neutral in consumer's services*") because of the positive safety impact with "… *no significant cost* …," impact.

We support Section 26 ("*Additional receptacles for the outside of dwelling units*"), although we are assuming that the increased number of receptacles will not be too high given the estimated "*Minor cost increase …*".

UDI also supports Section 56, that allows more flexibility when installing fibre optic cables that should result in "… *cost savings to industry …*" with no impacts to safety. Section 36 ("*New method for connecting high voltage equipment for temporary and portable power installations*") is also positive because of the added flexibility.

TSBC also requested comments on the "*pilot*" for the streamlined consultation. UDI has several concerns with it as outlined below.

- The timeframe for the consultation was too short (February 5th to February 27th), which does not provide industry associations with enough time to seek feedback from their members. Again, we thank TSBC for extending the comment period for UDI.
- However, one of the reasons we needed the extension was we were not informed about the consultation until much later in the process, so communications regarding these consultations need to expand in the future. TSBC may want to utilize BC Hydro, the Ministry of Energy Mines and Low Carbon Innovation, the Building and Safety Standards Branch and local governments to share information to their networks about future consultations.
- As noted above, it would be helpful to include the code language of the changes as well as cost/benefit analyses for them.
- TSBC should also consider holding webinars about proposals in the future should there be questions from stakeholders as UDI had for some of the sections of the *2024 CEC*. This would also clear up misunderstandings such as the confusion regarding Section 8.

Thank you again for extending the consultation period for UDI. If you have any questions regarding our comments and recommendations, please do not hesitate to contact us.

Yours sincerely,

Anne McMullin

Building Code Mitigation Project Engagement Plan

The Project:

- Effectively mitigate potential cost impacts with the implementation of adaptable dwelling unit and earthquake design provisions in the BC Codes 2024 with measures that seek to balance important health, safety, and accessibility improvements with the urgent need to provide more housing in BC.
- Effective mitigation means practical mitigation of actual costs in the building code and the perceived impact of costs amongst industry.

Project Challenge Statement:

- Changes in the BC Codes 2024 relating to increasing readiness for adaptable dwelling units and improving earthquake design safety have a cost or space impact on homes, challenging delivery of homes for people.

- Changes in the BC Codes 2024 may impact “in stream” developments.

How This Will Be Done:

- Engage with designers, builders, developers, local governments, and professionals to scope the costs of implementing the adaptable dwelling units and earthquake design provisions of the BC Building Code in 2025

- With interested parties, identify and analyze options to mitigate those costs that can be reasonably mitigated. Communicate intent clearly and early.

- Support the delivery of much-needed safe and accessible homes for people.

Audiences for Consultation

Development and Building Community	Local Governments	Professional Associations	Education and Regulator Partners
- Urban Development Institute - Canadian Homebuilders Association - HAVAN - Victoria Homebuilders' Association - Rick Hansen Foundation (adaptable dwelling units) - BSSB General Codes Bulletins List	- Targeted outreach to Vancouver, Burnaby, Coquitlam, Surrey, Victoria - Local Government Management Association - Treaty First Nations - Metro Vancouver planning and permitting working group - General outreach through BSSB and PLUM contacts to permitting and planning departments	- Engineers and Geoscientists of BC - Architectural Institute of BC - ASTTBC	- BC Housing (Research and Consumer Licensing groups) - Building Officials' Association of BC - National Research Council of Canada - Office of the Fire Commissioner - Accessibility Directorate (SDPR) - Accessibility Standards Canada -

Engagement Plan

Time	Phase	Key Work / Deliverables	Audience
Jan – Mar 2024	Planning	Requires: • problem statement Delivers: • Project charter • Work streams • Assign project team • ADM Briefing	Internal: • BSSB staff • PLUM (ongoing consultation) Professional Associations (regular scheduled meetings): • EGBC • AIBC • ASTTBC Key Construction Industry: • CHBA • UDI • Others selected from audience list above Education Partners and other external partners: • NRC • BCH

			• City of Vancouver • Office of the Fire Commissioner • Others selected from audiences above
March-May 2024	Initial Engagement	Requires: • ADM input into scope and project charter • Environmental and strategic scan of Ministry/Government work • Internal alignment on threshold for code changes (high bar) • Potential: may require external consultant contracts to conduct study or impact assessments for space from adaptability and seismic requirements Delivers: • Targeted consultation with industry (CHBA, UDI, smaller development associations, accessibility community, professional associations) • Grounded estimates on scope of challenge expressed as $, % of proforma budget, or square feet • Options on measures to mitigate cost increases from BCBC 2024	Local Governments • Vancouver • Burnaby • Coquitlam • Surrey • Victoria • Others interested Professional Associations (regular scheduled meetings): • EGBC • AIBC • ASTTBC Key Construction Industry: • CHBA • UDI Education Partners and other external partners: • NRC • BCH • City of Vancouver • Office of the Fire Commissioner
May-July 2024	Options and Analysis	Requires: • Grounded estimates on scope of challenge • Suggestions from targeted consutlations on measures that could support implementation • Potential: may require contract funding for consultation, consultant, or contractor to support work Delivers: • Analysis of options • Identification of options that can be implemented • Analysis on how options can be implemented (regulation, legislation, guidance, education, training, etc)	• Independent consultant • Local governments • Selected industry groups (those who provide options and related groups for targeted consultation)

July-August 2024	Validation Consultation	Requires: • Analysis of options • Collaboration with other branches in Ministry, including PLUM • Potential options for implementation • Background information • Resources and time for consultation Delivers: • Clear message of direction of Ministry on mitigation efforts • Timeline for implementation of mitigation measures • Statement on how in-stream projects will be protected	• Independent consultant • Local governments • Industry associations • Professional associations • Other HOUS branches
August-November 2024	Interregnum	No public facing policy work, consultation, engagement possible. Time used for drafting of implementation of options or further analysis of changes.	• None, policy work or consultation not possible.
November 2024 – January 2025	Implementation	Requires: • Finalized options • Implementable options Delivers: • Guidance on mitigation measures • Potential amendments to code • Potential regulatory amendments • Other measures to support implementation (education, training, guidance)	• Local governments • Industry associations • Professional associations

Subject: Invitation to the Ministry of Housing's Industry Working Group

Good afternoon,

I hope this email finds you well. The Ministry of Housing (the Ministry) is excited to invite you to join a working group dedicated to developing and testing phase two of the new Building Permit Hub. The Ministry has a mandate through the Homes for People action plan to become a North American leader in digital permitting and construction.

The Building Permit Hub will standardize building permit submission requirements across B.C. for new housing, and automatically check for completeness and compliance with key parts of the building code, making the building permit submission processes quicker, more collaborative, and more consistent.

The Ministry is launching phase one of the pilot tool at the end of March 2024. We are looking to create a working group of industry users who are directly involved in submitting building permit applications for the second phase of this project to provide feedback as new features are developed. Your experience

and insights will be invaluable in helping us achieve our mandate and delivering a product that is valuable to users in the construction industry.

Working Group Details:

Purpose: The working group's primary objective is to foster innovation within industry by bringing together experts like yourself to exchange ideas, share best practices, and tackle critical challenges related to submitting building permit applications.

Members: The working group will be comprised of 15-20 members. We are seeking a combination of builders, developers, registered professionals (such as engineers and architects), energy advisors and designers.

Meeting Frequency: We hold bi-weekly virtual meetings (sprint demos), with occasional 1:1 user research interviews throughout phase two of our pilot period (April 2024 – August 2024). We anticipate the monthly time commitment to be about 2-5 hours.

Next Steps:

If you are interested in participating in our working group, please confirm your availability and willingness to join by **March 20th**.

More information about the Building Permit Hub can be found on our Teams Channel. If you have any questions or require further information, please do not hesitate to reach out to me at Bethany.Frei@gov.bc.ca. I will be setting up a virtual intro call for interested parties to answer any questions you might have.

Thank you for your consideration, and we look forward to your participation in our working group and user research.

Respectfully,

Bethany Frei

Subject: Informal Pre-engagement on BC Codes 2024 Rollout

Good morning, Cassandra.

The Ministry is beginning to plan Spring engagement sessions with industry and local governments to better understand the space impacts related to the new adaptable dwelling and earthquake design requirements in the BC Codes 2024.

As a first step, we would like to meet with you, one-on-one, to discuss our plan and seek your input to help inform our approach.

Please let me know if any of the following dates might work for you to meet:

1. Friday, March 22 from 1:00 – 2:00 or 2:00 -3:00 pm

2. Monday, March 25 from 2:30 – 3:30 pm

3. Tuesday, March 26 from 3:00 – 4:00 pm

We look forward to connecting with you soon.

Kind regards,

Shannon Laboucane

Hi Elyse and Katherine,

Just following up on my question from yesterday's biweekly regarding local distribution capacity issues raised by the Urban Development Institute (UDI) with the 2024 Canadian Electrical Code changes.

Among other things, the upcoming changes will require electric vehicle supply equipment (EVSE) and Electrical Vehicle Energy Management System (EVEMS) demand factors be considered in load calculations for all buildings assuming a 100% load capacity to avoid overloading services and causing power outages.

UDI have raised some concerns about increasing load factors for buildings citing the potential to exacerbate existing issues with local distribution capacity in some regions and antiquated funding models for electrical distribution upgrades. UDI mentions working with you folks to address these local distribution capacity challenges and that there are implementation timeframes to consider. I'm interested in your thoughts on this feedback and would really like to learn more about this and any other relevant work underway both to inform my general understanding and to field and potential questions we may receive on the topic.

You mentioned Tom might be doing some work with CSA and hyrdro Quebec in this area and I would be interested in connecting and hearing anything your team might be able to share regarding initiatives underway.

Katherine- I may have missed someone else that you wanted included from the local government angle- hoping you can forward.

Look forward to connecting and learning more about this.

Thank you,

Christine Hunter

Hi Aman, We've been turning our minds to any support materials that would be useful once the code changes are finalized and announced. We're going to update the attached bulletin.

I know you and Cam will be at BOABC in late May. Is your team preparing a mail out and/or bulletin? How will you handle requests for presentations? I'm wondering if UDI and local chapters of CHBA and BOABC and others might send you requests.

FII and CWC are keen to support and amplify any messages. CWC may hold some seminars as well.

They know that we're moving towards an announcement but, of course, don't know when. Your thoughts?

Best regards,
Trudy

BRITISH COLUMBIA | Office of Mass Timber Implementation

ADVANCING MASS TIMBER IN BUILDING CODES

PUBLIC REVIEW FOR PROPOSED CHANGES TO THE NATIONAL BUILDING CODE OF CANADA RELATED TO ENCAPSULATED MASS TIMBER CONSTRUCTION (EMTC) OPEN UNTIL FEBRUARY 16, 2024

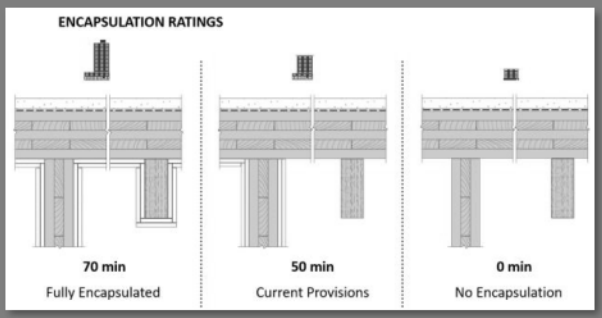
- B.C., in cooperation with Quebec, Ontario and other provincial partners, is working to expand building code permissions for Encapsulated Mass Timber Construction (EMTC) in Canada.
- The process is happening in parallel with the national code development system, with the intent of eventual adoption into the National Building Code of Canada. Interested provincial partners may adopt the code provisions sooner.
- This will expand the permitted applications for EMTC to new occupancy types and greater heights than is currently allowed.
- A brief explanation of the code proposal's content can be found on the following page.

To submit comments during the public review period, please visit the link below:
https://cbhcc-cchcc.ca/en/advancing-emtc-provisions/

SCOPE OF PROPOSAL

- New occupancy types and greater heights than previously permitted
- Portion of code content summarizing these provisions (Table 3.2.2.93.) below:

MAJOR OCCUPANCY	MAX. BUILDING HEIGHT, STOREYS	MAX. HEIGHT, m	MAX. BUILDING AREA, m^2	MINIMUM ENCAPSULATION RATING, min
A-2	18	76	7200	70
	12	51		50
	6	26		0
B-3	10	42	8000	70
	6	26		50
	4	17		0
C	18	76	6000	70
	8	34		0
D	18	76	7200	70
	9	38		0
E	12	51	6000	70
	8	34		50
	6	26		0
F-2	10	42	4500	70
	7	30		50
	5	21		0
F-3	12	51	7200	70
	8	34		50
	5	21		0



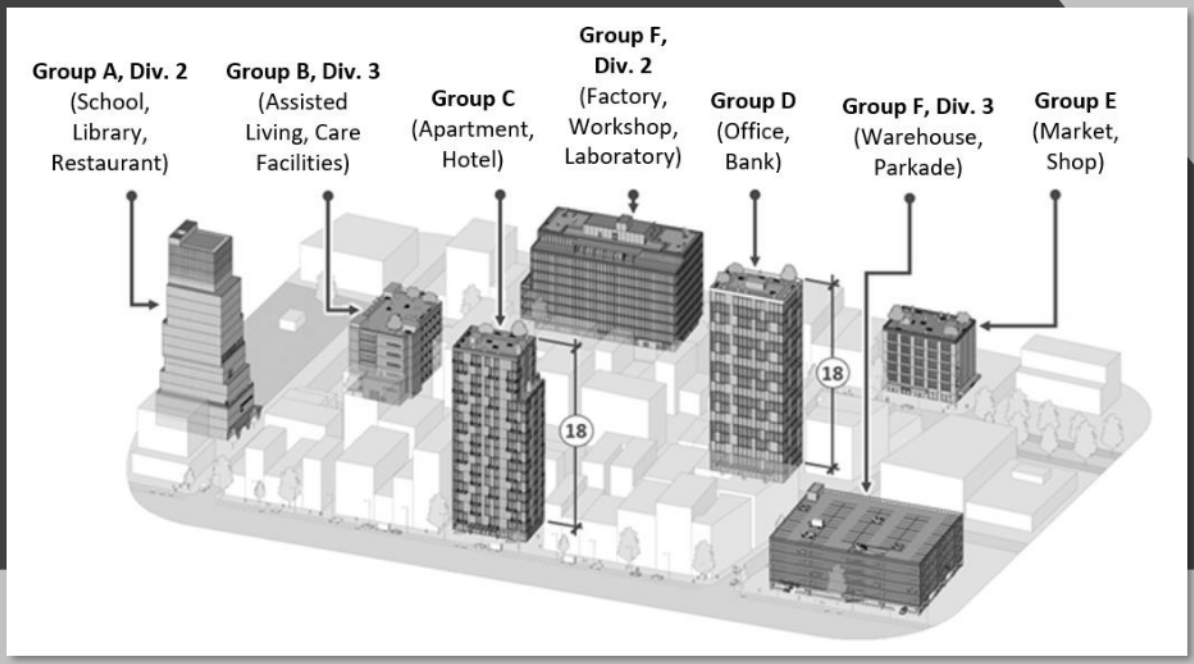
New encapsulation requirements tailored to scale of the building:

70-minute (2 layers 5/8" Type-X GWB) requires full encapsulation

50-minute (2 layers ½" Type-X GWB) permitted wood exposure as per existing requirements

0-minute permitted full exposure except in select, critical areas (exits, vertical shafts, public corridors)

Depiction of proposed newly permitted buildings:



For a digital version of this handout, please e-mail masstimberimplementation@gov.bc.ca

Agenda

Informal Pre-engagement BC Codes 2024

Urban Design Institute

Engagement Plan Overview

Timing:

- March to May 2024 - Engage development industry and local governments

Objectives:

- scope the space impact of implementing the adaptable dwelling units and earthquake design provisions in 2025
- analyze options to offset impacts

Materials:

Seeking input on the questions we pose to industry.

- Can you provide real-life examples of space impacts on implementing adaptable dwellings and earthquake design provisions that you have seen in your projects?
- What are the specific limitations with design options s.13
- Do you have proposed solutions that would address the pressures that were raised?

s.13

Items for discussion:

- Are we going in the right direction?
- Do we have the right objectives?
- Potential 3rd party advice

s.13

I've added this for your consideration to the pre-engagement agendas for discussion with UDI and CHBA BC.

Right- I will not I didn't look for accuracy of code compliance- I assumed it was correct.

s.13

s.13 . The footnotes suggest that a lot could be done to minimize space, and I think there are a number of assumptions that may be incorrect (850mm around all sides of a theoretical bed, or only one side, as an example)

A quick review seems to confirm they looked at space impacts isolated to the unit- they acknowledge the smaller highway, but don't seem to acknowledge it can be used to offset the increased space in the unit. They also seem to demonstrate that some bathroom designs will be more impactful than others WRT space overlap, or lack thereof, but then use the more impactful one in some cases for comparison? s.13

Hi Jun'ichi,

Here's an early space usage study by one consultant in industry to understand what the space and design implications of the new BCBC adaptability. The author indicated that I was welcome to share this with those directing policy in this area, but didn't want it publicly distributed.

Hi there,

As you know, I'll be off enjoying some time s.22

I prepared the attached project status summary so you can easily see and track where priority items are at.

I hope it is helpful and I didn't miss anything.

Wishing you a wonderful week and a special long weekend!

Kindly,

Shannon Laboucane
Senior Policy Analyst
Building and Safety Standards Branch
Ministry of Housing
Phone: 778-974-3912 | Email: Shannon.Laboucane@gov.bc.ca

With gratitude, I respectfully acknowledge the Coast Salish Peoples, specifically of the Lək̓ʷəŋən (Songhees and Esquimalt/Xwsepsum Nations) and WSÁNEĆ Peoples, on whose territories I am grateful to work, live, and continuously learn on.

Summary of Housing Targets Methodology Stakeholder Briefings

October 3, 2023

Key Themes

- Targets are too low, especially for Vancouver
- Targets do not sufficiently address housing precarity/homelessness
- Targets do not sufficiently address affordability
- Methodology does not sufficiently account for unmet need/pent up demand
- Purpose/goal of the Targets Program is unclear

Context: criticisms were in relation to CMHC Housing Gaps Report: BC needs to deliver much higher housing supply to meet forecast demand and affordability 2006-level (BC was 43% gross income).

UDI Meeting Notes Oct 3 2022

Friday, May 10, 2024 10:52 AM

Meeting Subject: Meeting | OHCS/UDI RE: Follow up to Oct 3 Mtg
Meeting Date: 2022-10-28 11:00 AM
Location: Microsoft Teams Meeting
Link to Outlook Item: *click here*
Invitation Message
Participants
Ruscheinski, Bonnie OHCS:EX (Meeting Organizer)
'jfisher@udi.org' (Accepted in Outlook)
May, Zachary OHCS:EX (Accepted in Outlook)
Cassandra Smith (Accepted in Outlook)
	• Tech changes not as concerned but more about how it gets implemented and timelines
	• Effective date 6 mos? And then focus on working with everyone with step code council to come up with clear best practice guidelines to assist loc gov'ts
	• Open to taking feedback today on timelines and effective and with the team, and specific consultation
	• Technical concerns, keep working with the team for solutions
	• HAS - we will need to understand
			Bullets below pulled from Meghan's notes (attached) - reason for the follow up meeting:
			
			• BSSB roll-out of carbon reduction tools through BC Energy Step Code
			  • UDI is on the energy step code council - flagged previous with spring roll-out. Looking at regulations closer to Dec so municipalities could implement carbon targets in new buildings shortly after.
			  • Will there be adequate guidance to do it phased/staged?
			  • TC - not just guidance they want but phased
			  • Unclear if natural gas can be used to meet GHG targets? Ex. If a new bldg has a contract with Fortis, they meet their GHG targets, if the strata a few years around the line want to switch - there's nothing stopping them from doing so.
			  • Jeff Fisher is engaged with Juni/BSSB. See it being a speed bump to the new housing legislation.
			ACTION – OHCS to set a dedicated mtg with Juni, Jeff and OHCS ADM (Bonnie) to explore further.
			
			Oct 28 Notes
			• Targets coming according to Eby public
			• UDI thinks a separation of sustainability folks talking to housing in LG and need to be linked
			• Michael - s.13
			s.13
			• Renewable natural gas - s.13
			Having BCUC decision would be helpful, need clarity on what can be done now before the BCUC decision (should be in place before it is implemented).
			• Slow down of applications if not clear.
			• Fortis trying to future proof their infrastructure
			  • Nothing under the building act

UDI Exec meeting and notes Mar 10 2022

Friday, May 10, 2024 11:45 AM

Meeting Subject: UDI Executive Meeting - MDE attending **Meeting Date:** 2022-03-10 8:30 AM **Location:** Details Pending **Link to Outlook Item:** *click here* **Invitation Message** **Content** FW UDI Executive ... Added by AG Associate DM HCSM Correspondence AG:EX Attachment from Outlook **Participants** AG Associate DM HCSM Correspondence AG:EX (Meeting Organizer) Cooke, Angela AG:EX Collins, Teri OHCS:EX Salter, Shannon CRT:EX	Agenda and Memos - ...		FW UDI Executive ... Presentation on data etc. Recommendations on performance based appraoch Link targets and municipal activity to Housing Needs Assessments Regoinal breakdown of polling is available and shows higher support for density around transit on Vancouver Island. UDI recommends municipalities be allowed to move density between transit stops if they get to the total Province should track rezonings, and approvals as well as Building Permits Issued Ontario ministerial zoning orders; california; tortonit goes farther Need to incent increased density Culture change needed s.13	Add to weekly housing update for MDE and seek his interest in follow up work related to this. s.13

UDI Exec Meeting April 13, 2022

Friday, May 10, 2024 11:47 AM

Meeting Subject: UDI Executive Meeting - AG Attending **Meeting Date:** 2022-04-13 8:30 AM **Location:** Details Pending **Link to Outlook Item:** *click here* **Invitation Message** **Participants**	Agenda and Memos - ...		Hong Kong Model, transit density - Setting expectations and having clear guidance. MDE - First step target based approach. Role of FN in transit oriented development. MST separate table etc. SPAs - include CACs etc in these agreements. s.13 UBCM Paper - s.16 . Some things that we agreed with - Alignment on areas of identifying supply chain issues and capacity shortages constraint in industry - in order to deliver. As well, building in rural/remote is a different set of challenges, will need different lens where development industry isn't present. s.16 Interesting - energy step code - energy efficiency requirements under building code - we were aware Municipality's were pushing for it - s.16 s.16 - did they talk to their members? s.16 BCH recommends drywall airtight system - which doesn't meet step code. (Neil Crystal). Testing requirements are expensive for large townhouse projects etc., MDE - interplay with federal rules, Building Code reuqirements. **MDE will bring back to next meeting to understand better. Additional costs to get to step 3/4.** CMHC requirements getting heavier and heavier. Step 4 on rentals, can't accommodate step 4. is p;olicy going to stick with policy or can we increase rents? Yes, CPI and inflation rents. **ENV and processing. Follow up with ENV for next meeting.** **Funding PSIs on VI have wait lists and can't fund positions could we explore?** s.16 s.16 **. Follow up (? Which facility?)** **BCIT - gov funded, ensure if that is expanding, facility running at full capacity. (? Building here?)** CMHC Rental report - Vancouver/Burnaby - digging into answer the Q from MDE before. Into the paper they sent. Analysis of rental units in Vancouver - Vancouver showed above cities - caught us offguard as well. Report only accounts for MARKET rental activity - Burnaby North Van - a lot of the rental is below market - incentive programs etc., Redevelopments - that WERE market rental, and are redeveloped to below market, show a deficit. s.16 This problem above is indicative of this. mismatch with CMHC and municipal programs. MDE - BCH works closely with CMHC (by request). Coordination of HAF and streamlined muni approvals, will be coordinated. Protections for tenants on redevelopment - between developer and municipality.

Hi Hannah,

Thanks for reaching out, and my sincere apologies for how long it has taken to respond. We are still catching up after some extended vacations in December/January.

I've attached a follow-up letter that we sent to the Minister after our last meeting in September. This covers a range of issues including PBR. I've also attached some older materials related to PBR that we shared with over the last year.

We'd be happy to set up a call if you would like to discuss any of the materials further or have a specific issues that you'd like to explore.

Thanks,
Cassandra

Subject: Follow-up from recent mtg w MRK

Hi Jeff,
My name is Hannah Rabinvitch and I'm a Director in the Housing Policy Branch. We heard from ADM Sawchuk that UDI recently met with Minister Kahlon and discussed your current thoughts / suggestions on purpose-built rental (PBR) developments. My team is doing some work on PBRs at the moment. Could you share any materials that were presented to the minister: a presentation, recommendations etc? My team may schedule a follow-up in the new year to learn more about what UDI is proposing.
Many thanks,
Hannah

UDI notes to summarize for Teri with key takeaways

Ruscheinski, Bonnie OHCS:EX <Bonnie.Ruscheinski@gov.bc.ca>

Thu 8/4/2022 11:26 AM

To:Corpe, Cimarron OHCS:EX <Cimarron.Corpe@gov.bc.ca>;Teekah, Alyssa OHCS:EX <Alyssa.Teekah@gov.bc.ca>

UDI response (Jon Stovell)

- HNR could understate HNRs
- Building permit target - it is the last step and is an expensive, and LG could approve unviable projects
- What about funding LG want for schools, hospitals, transit but don't provide needed housing
- HNR - Teri - other jurisdictions, methodology didn't exist (Cal, UK), we want to continue the LG accountability and recognize there is a requirement to the HNR and then nothing happens but our team will do our own analysis and look at immigration, homelessness, to see if they have adequate projections, so there will be a feedback mechanism that may set higher target than a HNR and will be iterative and
- Rick Ilich - future topic, half of cities are receptive to working with the province and places like Victoria responding favourably, but some don't and infrastructure discussions come up (workforce, etc) they say that its not a LG problem but a provincial problem. Gives time to fail and not address the problem so for the immediate housing concerns, there are still lots of loops and for a little while be a bit heavy handed. i.e. Affordable housing - lack of support bc LG feel province's problem. Feels that the province can afford to be heavy handed. BCH social housing projects and the question is always about BCH can put in and the non profit has to go find money while the cities have done nothing. Richmond an example. HNR and a soft stick for them to do their job in meeting all the demographics in their municipalities but they will point finger to province. More of the cities are following the inclusionary zoning where they ask the developer to deed the final product to them. Included density to be transferred offsite. i.e. church can develop smaller centre and work with developers so let the developer transfer the affordable housing not on the market site but to a social housing site with subsidized rentals. Richmond does not want to see this scenario. One stick about infrastructure - cities are getting 1% money for bridges and school busses and feds are doing the Accelerator fund and could give to the Canadian Infrastructure Bank low interest (could we block access to municipalities accessing this funding source if they don't meet targets?)
- Cynthia Jagger - when would the earliest intervention be? Teri, annual targets built on HNR which are done every 5 years. Ways out still before enforcement actions but the legislation itself might motivate. How did we choose the 2 year and 60 days timelines.
- Rob Blackwell - starting to see even from LG that are housing friendly pushing back, Coquitlam, that they are upset that they are not doing anything. Could be election coming. Getting to catch up with elections, and to head off the common Council objections that investments in schools, parks, and traffic and if the legislation can head off the contributions from the Prov needed with housing development, need to communicate and how do we as a province build on this. Get ahead of this and temper the resistance.
- Teri - we are consulting with UBCM under NDA. Introduced after the elections
- Urban Mayors and UBCM - disconnect, Urban Mayors give us money and give us targets.
- Anne McMullin - timelines once targets set, but if it takes years to implement, Teri (don't have an answer on this yet but talking to UBCM in particular - like how did they intend to monitor themselves)
- Jon Stovell - concern how the LG could argue. Construction costs etc. and there will inevitable slow down bc of the economic conditions, so implicit in the target, LG should give a report on what they have changed to try to meet targets so we know. So they need to encourage development. Teri (we are building this out as part of the reporting). Make sure HNR are not over representative of one housing class so they should be balanced (social, condo, workforce, market). What about the legal challenge assessment? Teri (And we are looking to mitigate that at the front end. And intent is not to battle this out in the courts and desire to put forward in a way that avoids this, may get some in enforcement).
- Cynthia Jagger - who do we envision the Advisor to be"? Teri (appointed at the minister's discretion but not sure if internal or external at this time, may even be a group of people working together).
- Jeff Fisher - how nimber is the process fo Cabinet? UDI sits on a regional meeting and clear that the HNR process has more questions than answers and before the HNRs are reviewed, need some direction. Need to deal with the undercounting issue (Places like Surrey are being penalized bc took seriously but Whiterock

not so much). May need to look at overriding RGS by the minister. 2 year - project may be in limbo and may need grandfathering or review and renew 2 year timeframe so we should be able to renew. Teri (prov direction on HNR - what does that look like?) Jeff - example, issues raised by planners undercounting their population projections (affordability adjustment Joy McPhail and Brian McCauley). Burnaby says they need 60 units per year of high end when tech sector moving in and they will need more high end. So need to address these issues and when HNRs are reviewed need to make LG and prov are happy with them. Teri (Min can request other info and then recommend to cabinet for override enforcement).

- Cassandra McComan - timing of HNR, review before they because they will always be just ahead of the next census data so need to look at economic forecasts and building this in to be more comprehensive. Also, not building permits so what other standards and goals. Teri (do we look at DP, occupancy, etc. and qualitative approach, Alyssa (looking at other metrics). Performance based is important. What is timeline for Advisor for review? (Teri - a year out from spring 2023, need to shore up our internal team). What is the timeline for review by Advisor? (Teri - brief, administrative fairness but aim to be brief?)
- Cynthia Jagger - the layers of approvals and what are added at the end which layer up all the requirements.
- Rob Blackwell - time and money and LG. Increasing costs that are not necessary from the approval process that LG control. Tiers of municipalities in New Zealand - quick capacity load where there are infrastructure that might apply (ie schools), Teri (aligns with the areas we are thinking about, starting with transit corridors but also got feedback on whether we should set density around corridors or set targets in general)
- Jeff Fisher - comparative analysis (i.e. Surrey is doing ok but Port Moody not, then look at why), talk to LG at different stages but add others as needed (talk to industry etc.)
- Michael Drummond - Eby has looked at using Provincially owned land - how would this differ for a public or private sector project. (Teri - here won't be targets applied to specific land but will look at muni in general.). Will there be gov't changes like coordinate with other ministries (MUNI who has generally acted in best interests of LG).
- Jeff Fisher - in addition to MUNI, ministry of ENV, water act, MOTI approvals taking time that stall system. Teri (fully engaged with those ministries)
- Rick Ilich - provincially owned lands, not optimistic and would encourage Prov to have language within the rights of own lands to do our own approval process, and not let cities who hide behind the charter. Look at SN lands at Burrard. No involvement in this development by LG. Ill-conceived project but LG are singing allocades but would never have approved in the LG process.
- Jon stovell - SVT, one potential flaws is that the LG has to answer to the electorate and likely continue show NIMBYISM. How do we ensure population is educated that there are consequences over time if LG don't do otherwise public will throw councils out over elections.
- Teri - does UBCM have a role in communicating to develop a broader understanding of needs? Jon - Education is good and consequences are good?
- Jon Stovell - Arbutus - 3000 letters of objection and some of the council members who approved will pay the price from public, and may see more political churn as the politicians need to be able to answer. Need a financial consequence
- Jeff Fisher - recommended changes to Translink tax, if not providing enough housing so this tax can be adjusted as it could have been put in place where they would have supported development
- Rick Ilich - if we believe there is a crisis, then we need to respond as it is a crisis, need bolder and swifter powers (not for market but affordable). Crisis response like if a social housing project can act they should be able to bypass city processes - connection between provincially owned land (and any legislation to support bypassing). Lots of social projects are on city lands funded by province.
- Rick Ilich - they are building several social projects, and took 10 months to do an agreement and cities give each department equal clout, City of Vancouver housing is a disaster and political will is spineless.
- Yes they want to look at Consultation draft, regulations, etc.

Bonnie Ruscheinski, B.Comm., AACI, P.App.
Executive Director, Housing Policy Branch
Office of Housing and Construction Standards
Ministry of Attorney General and Minister Responsible for Housing

Wed March 31st, 1 pm to 3 pm Pacific Daylight Savings Time

Consultation on Contributions to a Strata Corporation's Contingency Reserve Fund

Agenda

Chairing Meeting: Doug Page, Director, Policy and Legislation
Lead Policy Analyst: Veronica Barlee, Senior Policy Advisor

1:00	Doug Page	welcome, purpose of consultation and confidentiality
1:15	Discussion all	1. s.13
		2.
		3.
1:45		4.
2:05		5.
2:30		6.
2:55		7. concluding remarks and next steps

Attachment 2: Meeting Participants March 31st, 2021 1 to 3 pm

1. Jim Allison, President, CCI, (Canadian Condominium Institute) Vancouver Chapter
2. Tony Gioventu, Executive Director, CHOA (Condominium Homeowners Association)
3. Wendy Wall, President, VISOA (Vancouver Island Strata Owners Association)
4. Laura Asta, Policy, Policy Development Advisor, Insurance Bureau of Canada (IBC)
5. Chuck Byrne, Executive Director, Insurance Brokers Association of BC (IBABC)
6. Tara Laidman, Associate Vice President National Product Portfolio, Cooperators Insurance
7. Jennifer Mason, Home Product Specialist, Cooperators Insurance
8. Joseclyn Baker, lawyer representing UDI (Urban Development Institute)
9. Adrienne Murray, lawyer, Hamilton and Company
10. Kim Schuss, Partner Owner - Dorset Realty Group, representing Musqueam Capital Corporation
11. Carmina Tupe, Director, Government Relations, Canadian Homebuilders Association, BC Chapter (CHBABC)
12. Jake Fry, CEO, CEO Smallworks Studios and Laneway Housing Inc, representing CHABC
13. Norma Miller, Senior Policy Analyst, BCREA (BC Real Estate Association)
14. Alex Longson, Professional Standards Advisor, RECBC (Real Estate Council of BC)
15. Greg Bickert, President, PAMA (Professional Association of Managing Agents)
16. Tom Quinton, Director, SPABC (Strata Property Agents of BC)
17. Michelle Hayes, Deputy Register, Licencing and Consumer Services, BC Housing
18. Evan Kelly, A/Senior Policy Advisor, Financial and Corporate Sector Policy Branch, Ministry of Finance
19. Brian Remington, Manager Policy and Oversight, Office of the Superintendent of Real Estate (OSRE)
20. Harry James, Director, Policy Initiatives, BC Financial Services Authority

Office of Housing and Construction Standards, Ministry of Attorney General and Minister Responsible for Housing, Housing Policy Branch: Doug Page, Director of Legislation and Policy; Veronica Barlee, Senior Policy Advisor; Roxanne DeSouza, Senior Policy Analyst. Building and Safety Standards Branch: Nicole Vukosavljevic , Senior Policy Analyst; Tiffany Warkentin, Manager Policy and Regulation.

Research on strata corporation contributions to Contingency Reserve Funds

In May 2019, the Building Envelope magazine analyzed contingency reserve funds, contributions to contingency reserve funds and special levies by type of strata property, number units and age in B.C. for 200 strata corporations.
https://www.mediaedgemagazines.com/british-columbia-building-envelope-council-bcbec/bc91/

"The good news is that there is significant evidence that strata properties are generally saving and likely spending more on repairs and renewals."

While most contingency reserve funds are not fully funded, average annual contributions to the CRF ranged from 13-25% of the operating budget across all sizes, types and ages of strata property. Contributions increased from a range of 7% to 17% in 2014 to 13% to 25% in 2017.

Strata Property Act and Strata Property Regulations

Owner Developer

12 (1) At the time of the first conveyance of a strata lot to a purchaser, the owner developer must establish a contingency reserve fund by paying into the fund an amount calculated according to this section.

(2) If the first conveyance of a strata lot to a purchaser occurs no later than one year after the deposit of the strata plan, the minimum contribution to the fund must be 5% of the estimated operating expenses as set out in the interim budget referred to in section 13.

(3) If the first conveyance of a strata lot to a purchaser occurs later than one year after the deposit of the strata plan, the minimum contribution to the fund must be the lesser of

(a) 5% of the estimated annual operating expenses as set out in the interim budget referred to in section 13 multiplied by the number of years or partial years since the deposit of the strata plan, and

(b) 25% of the estimated annual operating expenses as set out in the interim budget referred to in section 13.

(4) The owner developer must not use money in the contingency reserve fund to pay strata corporation expenses.

(5) The contingency reserve fund belongs to the strata corporation.

Interim budget following first conveyance

13 (1) The owner developer must

(a) prepare an interim budget for the strata corporation for the 12 month period beginning the first day of the month following the month in which the first conveyance of a strata lot to a purchaser occurs, and

(b) deliver a copy of the interim budget to each prospective purchaser of a strata lot before the prospective purchaser signs an agreement of purchase and sale.

(2) The interim budget must include

(a) the estimated operating expenses of the strata corporation for the 12 month period,

(b) the contribution to the contingency reserve fund for the 12 month period, which must be at least 5% of the estimated operating expenses, and

(c) each strata lot's monthly share of the estimated operating expenses and contribution to the contingency reserve fund, calculated in accordance with section 99.

Strata Property Act

Minimum and maximum contributions to contingency reserve fund

93 Subject to the requirements set out in the regulations, the strata corporation must determine the amount of the annual contribution to the contingency reserve fund.

Strata Property Regulation

Contingency reserve fund contribution in first annual budget

3.4 For the purposes of section 93 of the Act, the amount of the annual contribution to the contingency reserve fund for the fiscal year following the first annual general meeting must be determined as follows:

(a) if the amount of money in the contingency reserve fund at the time of the first annual general meeting is less than 25% of the estimated operating expenses for the 12 month period set out in the interim budget, the annual contribution to the contingency reserve fund under the first annual budget must be at least 10% of the total amount budgeted for the contribution to the operating fund for the 12 month period covered by that budget;

(b) if the amount of money in the contingency reserve fund at the time of the first annual general meeting is at least 25% of the estimated operating expenses for the 12 month period set out in the interim budget, additional contributions to the contingency reserve fund may be made as part of the annual budget approval process after consideration of the depreciation report, if any, obtained under section 94 of the Act. [en. B.C. Reg. 238/2011, Sch. 1, s. 1.]

Contributions to the contingency reserve fund

6.1 For the purposes of section 93 of the Act, the amount of the annual contribution to the contingency reserve fund for a fiscal year, other than the fiscal year following the first annual general meeting, must be determined as follows:

(a) if the amount of money in the contingency reserve fund at the end of any fiscal year after the first annual general meeting is less than 25% of the total amount budgeted for the contribution to the operating fund for the fiscal year that has just ended, the annual contribution to the contingency reserve fund for the current fiscal year must be at least the lesser of

(i) 10% of the total amount budgeted for the contribution to the operating fund for the current fiscal year, and

(ii) the amount required to bring the contingency reserve fund to at least 25% of the total amount budgeted for the contribution to the operating fund for the current fiscal year;

(b) if the amount of money in the contingency reserve fund at the end of any fiscal year after the first annual general meeting is equal to or greater than 25% of the total amount budgeted for the contribution to the operating fund for the fiscal year that has just ended, additional contributions to the contingency reserve fund may be made as part of the annual budget approval process after consideration of the depreciation report, if any, obtained under section 94 of the Act.

2:55 Doug Page Concluding remarks and next steps

March 26, 2024

Tuesday, March 26, 2024
3:11 PM
ADU and seismic consultation

Base on real world examples
UDI- in stream protection is still an important discussion- some will still need redesign despite the delay
Agree with focus on space, but don't lose focus on cost impacts on seismic as there is a material cost.
Glad to hear density standards is in the conversation
Trying to data mine real examples to provide to us

Timelines- mapped out to election date- march/April consult, idea gathering, direction in Summer.
Noting interregnum will require a pause.
UDI acknowledges timeline is condensed, lot of work.

Are any measures off the table? Is 100% off the table?

It was noted that differences in interpretation of the code are leading to different space impacts, also need more understanding of compounding impacts of seismic and access

Udi- marketability. BSSB acknowledged to include, but also acknowledged limited influence in the codes.

UDI- walk through some misconceptions we are already seeing, demonstrate.

UDI- sec 568 of LGA and development permit/precursor applications- can we revisit in stream protection concept?

Invite should be clear on what kind of conversation -small and targeted or larger with broad perspectives. UDI recommends larger to start to help identify issues to focus on.

Electrical codes - UDI letter received- timing KH notes advance notice is a primary goal- looking at March next year. EV infrastructure- derating table removed due to safety risk- assumption that not more than 1 charger will be used at one time was incorrect, overloading circuits, energy management system is new option. UDI submission concern was mandating chargers KH noted not currently on the table. Other concern AEB- energy management system is also the solution for existing buildings due to safety concern.

JJ noted mandatory EV chargers may be discussed again nationally[s.13]
s.13

SCC meeting 2024-02-05

What do I want to do?

- Overheating
  - - future shifted climate files nationally - s.13 s.13

    andy: future shifted can come later we need to focus on cooling calcs - reach out to chair of national group to see where things landed - could have LGs pilot natioanl direction
    - Update from Ahmed - 50 year time horizon 2025-2075 looking at RCP 8.5 - HDD stays the same - however summer values will be reflective of this pathway. Hoping to have PCFs out by February. Doing additional impact analysis for mechanical systems design for 50 year time horizon.
  - Overheating roll out - Andy needs my help to roll out what to do - 15% FTE to rolling out - bulletins - working with TECA and HRAI lack of understanding for code basics - DM table met for national - start on this right away - apparently confusion regarding what this means
  - Andy: Part 9 ventallation needs to advance and can be impactful on overheating - do concurently with overheating - do we eliminate our variation? This is a broader tech team discussion as it dovetails with overheating
- Technical support for digitization
  - - BIM integration?
  - Using some of SC ZCSC work ie overheating and dovetailing into digitization.
    - Energy efficiency and ZCSC as first pilot

Other things:

- Single egress stairs - can look at in terms of energy efficiency and can help Kevin with this

Loose ends:

- Ancillary end uses and the ZCSC - Zac: appeals board is the arbiter regarding District of Saanich-code change in March we can make some changes to our regualtion to fill the gaps
  - I need to liase with Hugo and figure out how to best tackle - best to do in the new year.
- Part 3 high process loads - zac talk to Aman about whether or not this is an issue - Andy what are we trying to do here? - we should leave these alone and get a plan of attack and just monitor for the time being - I will need to come up a strategy - engage Andy further on this. It gets extremely complicated when having a definitive list of occupancies. Look at survey again and devise a plan of attack
- EMGs - revisions and fenestration - adopt new or buletin? I will look at revised language and we can figure out what to do and get back to the team. Revisions could be very clean. I need to confirm.
- Volta/snap - Input for changes to H2K - I will kick start the conversatoin and have stakeholders liase directly with NRCan - this is their initiative, not ours. Will help with our overheating.
  - Reached out to Alex - proposed meeting in the new year
- s.13

s.13

-

-

Nicole

- Nrcan funding - needs to be linked to energy - what needs to happen for submission of permit related docs - issues with expertise and LGs has been identified by BCHydro
- can tool help ee and carbon and what work do we need to do - permit side and code expertise - what process and what do we want to tackle - paint by numbers type of approach with user interface
- Julie is handling BIM - no technical expertise - what is necessary to digitize and validation and maintenance of code - how do we break down BIM -starting small and logical steps - small digestible chunks - ee first? - how do we make the code workable - what is a feasible scope? What can we build into AI tools -
- They are looking for guidance and expertise in forming and shaping digitization - not just engineers and architects but for the layperson.
- Permits a few hours a week - half my time ideally
- Pilot of digization regarding energy only - seems logical
- Fortis and funding - still need to access/use funding via ECIF
- NRCan is doing digitization roadmap and they are looking at us as province to pilot certain aspects
- Do we need to tweek code language to be compatible with machine learning? This would be challenging and would need buy in nationally
- Julie is engaging engineers and architects for BIM - integrating with BIM software - how this is accomplished remains to be seen - just started engagement with EGBC AIBC
- If I am working on overheating - then could have with a digitization lenses and I could them feed into the digitization process

Pauline - application of SC for retrofits - need clarity
Also technical approach for 26C - me: bulletin will be released - then we can fill gaps after as necessary.

Meghann - colder climate zones on whole building optimization - they are engaging to see what supports can be provided.

LG best practice guide

- New climate data and making sure this is being incorporated via NRCan - also too micro climates and issues with LGs setting their own values and how this works in the context of code requirements and NRCan process.
- Links to resiliency
- Nick - talk about performance path and the why for those LGs that had not previously adopted step code and don't understand the philosophy.
- Jeff - hydro capacity - distribution capacity and things to think about as an LG.
- Overheating? 26C

- Tying back to all new housing legislation
- Bea - looking at capacity and peak demand by the LGs and what works best re: gas or electricity given supply and infrastructure.
- Pauline - examples should provide info that EL1 is encouraged given education piece. Also what happens when prescriptive is no longer an option.
- Robyn - actual real world examples - case study of LG or LGs and what is being done right now.
- Jeff - there are projects that are being held up due to lack of BCHydro infrastructure - so LGs need to be cognisant of the fact that they maybe should not go to EL-4 given this issue.
- Jeff - overheating - if cooling for one room only and 26C - how is this shown to be enough. What is the context regarding impact to other spaces in the dwelling unit or building.

Digitization:
BIM - have data enabled within the code so, BIM software can read code and pull out relevant information pertenant to the project - example - BIM software is able to identify windows in the code and all associated requirements.
Pilot for March will look at Part 9 1-4 units and pilot in 16 LGs and 2 indigenous
Some LGs already have digital permitting. How do we leverage and add to what they already have while creating something for LGs that have nothing.
Richmond has quirky restraints ie building height due to air port, geotech requirement given soil issues. How would these types of requirements be integrated. Gets very challenging given all quirky requirements across the province.
Roberto - tool would self populate based on location.
Zac - focus on energy and carbon right now to leverage the relationships that we already have the with the SCC. Engagement with SCC will happen soon.

SCC meeting 2023-02-10
Post Public Review Summary

Part 3/Part 10
No changes post public review

Part 9
9.36.1.3. Compliance and Application
Must comply with 9.36.6. - so the performance path is not the default
Should an LG wish to pursue the prescriptive path, then they will need to do so via their bylaws.

Prescriptive -
Removed the continuous insulation requirements for below grade walls and non-accessible flat roofs
For ceilings below attics and the requirement for heal truss systems - dialed back the RSI requirement
Removed the ER (Energy Rating) requirements for fenestration
HRV efficiencies were dialed back form 75% efficiency to code minimum of 60%

Part 9 Performance Path
Peak Cooling requirement removed
Mix and match compliance path is still available

Part 9 GHG
Performance path - defined as per MEUI calc - so space conditioning, DHW and ventilation - this excludes ancillary uses. Gas fire places and gas stove - efficiencies not currently regulated in the code.
Part 9 - Performance path

- The focus will solely be on space heating, ventilation and DHW equipment (same as what is required when calculating MEUI so is in line with current energy modelling requirements) and does not include any ancillary uses such as wood burning/gas fireplaces, cook tops, gas dryers etc.
- Back-up heat (ie redundant systems not designed to accommodate the entire heating load of the building) are not included in the calculations, so wood burning stoves and gas fireplaces would not be included.
- Supplemental heat will be included – this includes packaged units (for example - heat pump with either electric or gas supplemental heat or heat pump as the primary system with a natural gas furnace as the secondary system)

Part 9 – Prescriptive

- For EL-4 (ie zero carbon), the requirement is for '*energy sources supplying all building systems, including equipment and appliances*' – so we have opened the door to have gas cook tops and gas dryers included in the prescriptive requirements (wood burning stoves and gas fire places would still not be included as these would still be considered 'back-up').
- We are vague in the code as to what 'appliances' means, so will need to provide some clarification via a bulletin.

Emissions factors inserted directly into the code for both electricity and natural gas.

(RNG) is not specifically listed as a compliance option in the Code.

No, due to lack of viable mitigation measure. The Code language does not restrict renewable natural gas (RNG), but it does not provide RNG as an acceptable compliance option either. As enforcers of the code, local governments may consider RNG as a compliance option, at their discretion.

BCHousing:
8 modules - mandatory - these have been the main focus
This is primary material so do not want to muddy the waters with other materials such as builder breakfasts given 8 modules
Can co-sponsor and support as needed

The have been finding that builders want more info on costs - how to builders to address costing issues - could partner with CEA, Bchydro etc - sensitivity analysis is best - builder want exact costs which is not feasible
I asked about CBAT - Wilma indicated that they are taking on GHGs for this tool
Train the trainer sessions - CBAT, IDP
Updating of builder guide - is something that we agreed needs to be addressed in the short term,.
Presentation deck (generic from RDH) - that can be used by others - ie train the trainers - must complete 8 modules to access the slide deck
Train the trainer - embodied
MBAR - next round table will be touching on operational

Meeting -
Convenience copy not to be for broad distribution

BCHydro -
Supply:
20% of electricity for total demand - the rest is from biofuels and fossil fuels
To meet CleanBC goals need comprehensive approach across all utilities
Currently 30 hydro electric for more than 5 million - Site C is coming on line in next couple of years
Energy efficiency is a key to reducing demand side
Distribution:
Ok to meet projections - however, some areas are growing faster than others.

Tranmission voltage - then goes to sub-station to step down the high transmission voltage to distribution voltage to homes and communities - feeders are lines that distribute to homes/customers
Expanding infrastructure

Carbon Pollution Standard
They are anticipating that there will be broad adoption of this new standard
Working with LGs that are early adopting - asking that LGs reach out the BCHydro to kickstart
Understanding high growth areas in these communities
Norm - what about high retrofit areas - is that being considered?
Robyn - new construction is only a small part, a lot of existing organizations and retrofits are being considered.

Distribution Extension Policy
-alocates costs between customers and BCHydro

-incentives for connection costs
-increasing capacity for extensions (new lines, transformers due to increased loads etc)
Bigger develpments are coming on line, not just single family homes

Custom connection

- No design requirements, then no issues, but if design then delays
- Timelines for connections has been lagging
-

Joe Hart - seems like more of a focus on Multi unit
s.22

Option 3 will help to benefit lower density
Cost - will depend on loads for commercial - has not figured out yet what to do for residential
Single family home has a lot of infrastructure but low energy usage, MURBs and low infrastructure and high usage - trying to have a systems that has Murbs help to pay for single family homes
Or they could maybe do costs reflected in rates as opposed to connection fees.
'Free rider' issue - a customer pays for upgrades and connection fees and then customers that come after don't pay but benefit from these upgrades.
With option it may be cheaper for single family but more expensive for MURBS to try and balance issues - Adrian - a MURB project that he is working on the fees are already $100K - so these could be higher under Option 3?!!

Hydro has a surplus of energy looking to 2030 - it is not production that is the issue, it is the transmission/distribution that is the issue ie sub-stations that are at capacity, not enough lines to etc.....which is just as imortant.
Patrick - all new buildings are connecting to hydro anyway it is just how much they need - so how does DSM (ie EE) help to mititgate these loads - smart metres etc.

Regarding future weather predcitions - they have dropped the capacity to 65% of systems to allow for that uncertainty, so they over design and build by apprximately 35%. Resiliency of infrastructure regarding floods, wind storms etc is something altogther different. They working towards underground infrastructure , however this is exteremely costly
Zac: need to have guidance for LGs given what has been discussed

CBCIF
National support of existing buildings - leave technical to NRCan and we can spend money on communication
Metrics research report
Website
LG Best Practice Guide
Fill any gaps regarding BCHousing - can we provide $ through the fund

ECIF
Part 3 and Part 9 checklists and training
Overheating -earmarked

Roundtable

Jeff Metrics Reports update via BCHydro work to address capacity, pilot studies - this is what was planned and this is what we ended up with - issues with HPs in remote areas
Laura - process map for GHGs and for AHJs

My notes:
Part 9 - peak cooling requirement
Part 3 - air tightness testing methodology
Part 3 - small commercial spaces and potential relaxation of TEDI
Part 3 - urban infill projects
ASHRAE 62.1
ASHRAE 90.1
CEDI
Unique building types - continued studies

Existing Buildings -
Need agreements in place for both Portfolio Manager and Building Benchmark BC

Part 9 and overheating - since we will be dropping peak cooling load - consider issuing a bulletin regarding overheating and part 9 - this will all depend on what happens with national direction regarding overheating

Metrics research report - update to include more comprehensive carbon costing - could also include more refined ECMs - could also conduct additional analysis regarding ASHRAE 62.1
Could also look at HP DHW
As well as the changes to the NBC regarding 300 m3.

Bea: 18PJ of RNG will be on line in the next couple of years
Joe: gas HPs - not small enough for single family homes -
Bea: they are making advancements
Lise Townsend - they like to see regionally produced RNG - she does not feel that new construction is the best use.
Laura - some LGs do not want to go through the process of undergoing review of RNG - time of permitting, staffing issues, expertise.

BCHousing Energy Step Code Response Survey will be linked to the next newsletter
Matrix study - need to look at GHGs with costing etc.
Costing study - provide a baseline to compare to - Roberto - as opposed to absolute values then it has more durability - retrospective studies as opposed to theoretical (ie Metrics)
Joe is finding that most builders are doing better than code minimum, so comparing to base code minimum is not very telling.
Office of superintendants within government - get them involved in EA capcacity and regulation.
Harshan - joint practice guidelines can provide guideance for Eas

Carbon - slide deck

- Jeff - should have that link to energy efficiency for each of the case studies
- Joe - should have similar slide for perfromance as we have for prescriptive
- Jeff - seconds that
- Jeff - suggests some public sector

[2:40 p.m.] Laura Sampliner

Perhaps the CPS slide deck should also reference in the speaking notes that many municipalities have been incentivizing GHG reductions similar to moderate and strong for 3-4 years - as in this isn't a new concept

Implementation:
For best practice guide - jeff suggests that LGs contact BCHydro - distribution and supply
Lise - would be good to have a summary doc with all costing studies
Jeff - for 2024 really need to figure out what to do with Fort Nelson grid when GHGs become mandatory
Zac- would be best to get a bunch of materials for next version of code as opposed to rushing out this summer.
Joe - builders tend not to understand mechanical systems - mechanical contractors are not required to have TECA training, F280 is in the code but only about 10% use it. Most just oversize.
Laura - HPs - oversizing of systems in common - mechanical engineers are not signing off of smaller systems.
Wilma - webinar to talk about mechanical design - these are the issues that are commonly seen
Kelly Reid - in cold climates - designers will always provide back up heat regardless
Zac - we will finalize a list of key actions with partners - what our plan is and what we can collaborate with others

National Code - input for request for review of GHG policy - all felt that a webinar would be best to engage others outside of Step Code council - Zac felt that individual submissions would be best as opposed to from the entire council.

CBCIF
National support of existing buildings - leave technical to NRCan and we can spend money on communication
Metrics research report

Part 3 and Part 9 checklists and training
Overheating -earmarked

SCC meeting 2022-09-27
Post Public Review Summary
Part 9 Technical subco report out:
Met a week ago on September 20th -
The purpose of the meeting was discuss the ongoing research regarding unique building types which we will be hearing more about later this meeting

Discussed GHGs and potential means of calculating given certain ancillary uses and back up heat:

- Intended to be a preliminary discussion or primer to get a better sense of the issues.
- Gas cook tops, gas dryers, fireplaces
- Back up heat that is integrated or stand alone - how would use be accounted for
    - functionality within H2Kbased on heat pump capacity with back up the difference and may be able to reasonably calculate GHGs using these outputs.
- Brief discussion on home owners potentially bypassing HP use - HP efficiencies lend well to reduced operating cost so no incentive to do so.
- Back up heat necessary in colder climates, do not want to inadvertently penalize owners for associated gas use for back up heat- calculation methodology needs to be balanced.
- Discussion of owners with gas fireplaces using these more often when homes have electric baseboard.
- Discussion on taking the outputs from H2K and using the Part 9 Calculator to determine GHG outputs.

Round table

- Update on proposed public review
- Roberto highlighted an article that was released by ZeBx n June regarding Low Carbon Energy Systems for new homes.

Thoughts after the meeting -
Research - Energy Factor: the efficiency of a system is inputted in terms of an energy factor - how would this affect GHGs
H2K technical guide:
energy factor (EF)
An efficiency rating of gas- or oil-fired storage tank-type or tankless water heaters, where energy supplied as hot water is divided by the total amount of energy used by the water heater over a 24 hour period taking into account standby loss, cycling and recovery efficiency. The higher the EF, the more efficient the water heater.

Included: cook tops, gas dryers
How is back up heat (or supplementary heating) accounted for? Under Energuide Technical Procedures - Section 3.5.22 - would be set as 'always' or 'never'. So how can we account for it if is set as 'never'. This affects things like back-up heat and other supplementary systems like fire places.

Part 9 unique building types
Key questions to the group -

- TEDI=MEUI relaxations - we have heard from some stakeholders - when following this approach may still have issues complying with MEUI unless more expensive/efficient systems are used.

There is a perceived concern with a typical small home that would need an ASHP and/or HP water heater to achieve Step 3
    - The study has shown that we can reduce ICC somewhat, but cannot reach full parity without drastically relaxing the metrics. Ideally, we would like to find some middle ground.

- Or TEDI and MEUI independent - this may mean that we would need more aggressive relaxations for MEUI - ie close to next step lower. Also may need to find the line of best fit.

Future work
- THs
- MEUI relaxations and ground truthing with real world examples, MEUI vs TEDI
-If MEUI independent then may need to look at this more in terms of more home sizes to get appropriate values
-larger log homes.

Context:
Study:
ERS vs absolute
Laneway
CZ 4 ERS not an option - absolute
CZ5 ERS for Step 3, but absolute for rest
CZ6 ERS for Step 3, but absolute for rest
CZ7a ERS Steps 3 and 4, Step 5 absolute
CZ7b ERS Steps 3 and 4, Step 5 absolute
CZ 8 ERS Steps 3 and 4, Step 5 absolute

Metrics research report
CZ4 ERS Step 3, absolute for rest
CZ5 ERS Step 3 and 4, absolute
CZ6 ERS Step 3,

Presentation:
Susan - looked at medium Homes ECMs and then applied them to small homes - do they still achieve the same step? This was the fundamentals of the analysis.
Line graphs show where they would line up if these ECMs (in terms of TEDI and MEUI) were applied. As a result they would exceed the TEDI and MEUI limits for each of the steps for each of the climate zones. They then assumed that this would be the required relaxation and looked at ICC as a result. This essentially eliminates the need for additional ECMs to meet the step requirements and creates a level playing field with
Pauline - CZ5 and Step 3 is not really an issue from the builders that they have been talking too, so we could instead look at relaxations for upper steps only for CZ 5 and colder.
Pauline has stated that an absolute limit for smaller homes may be the better route - we could look at this for future research.
Jeff Fisher - what do the relaxations mean in terms of GHG outcomes . Me - not part of this study. Something we can look at in the future.

Patrick Enright - now that we will have the carbon pollution standard - the context has shifted and energy efficiency does not necessarily need to be the primary driver. Step 3 and zero carbon is good enough.

Patrick Caraher
If anything, electrically heated/DHW'd homes need to be more efficient than gas, both for DSM and mitigation of energy poverty that often comes with mandated electrification, esp. in the colder climate zones.

[3:03 p.m.] Patrick Caraher
And I'll remove DHW from my comment re: Part 9... not as big an effect as heating, esp. in cooler climates. My comment pertains to retrofits more so than new construction. A lot of exciting stuff happening in the U.S. re: energy equity programs to alleviate energy burden from LMI households as they're being decarbonized... BC/Canada needs to follow suit. The Clean BC IQP is a good start, but hard to navigate for that demographic.

Townhall -
Jeff - Metrics report - costs - these are the measures you can take expect it to cost this.

Megan - lot of folks are already referencing Step 3 in their region. There are a few other areas that don't have capacity, they will be following the province. Concerned about building a legacy toolkit continuing education and how this plays into credit regarding Bchousing licensing.
Maura - looking at this for impacts on architects - practice guideline has been issued with regards to major occupancy.
Ron - only 25% of constituents have their heads wrapped around step code. Builders are too busy.
Roberto - could Step Code newsletter populate HAVAN news letter.
Jeff Fisher - really concerned about the changes to metrics for office and retail - this comes into effect immediately and builders may miss this.
Joe Hart - owner builders in the north is a big concern. Capacity is not seen as an issue except for most remote areas.
Paulne - need education for mechanical contractors - Eas need to be aware of the changes and changes compliance forms.
TECA, HRAI and mechanical contractors association.
Jo hart - he has seen a lot of issues with designers not knowing anything about step code - a huge gap.
Zero architets being used for Part 9 in the north.
Jason Jung ASTTbc- starting to get info out to designers and how can ASTTBC partner and provide conitnuing education. ASTTbc has very similar channels as EGBC.

SCC meeting 2021-09-22

Industry representatives and partners
Professional associations
LGs
Non-profits
Academic Institutions
Utilities
Government

Zac: this will not be the last meeting on this topic - complexity of impact analysis is always more complicated once we get into it.
Summary sheet as opposed to one-pagers

What are the issues that need to clearly laid out in best practice guides
Max: Energy modelling guidelines need to be addressed here as well

Zac: Can CHBA provide some input with regards to summary sheets for Part 9 when they become available.

Emissions Factors:
GGRCA - values for electricity is anomolous for 2020 given certain factor
Zac: suggest that we maintain status quo for long term stability - not anticipated to go up but go down
Nick - province has directed BCHydro to go to clean grid - can utilities guarantee the Efs being proposed.
Zac: we are not in that position. Used the analogy of climate files - they are wrong but trying to bridge gap - Efs are no different
Bea - there is a EF for NG from BC Best Practices Guide that should be considered. Zac: would be an easy change for us to do and can consider.
Jeff: it takes years for buildings to be designed and built so why not just stick with what we have.
Max: best practices guide - can make sense but there are fluctuations. Imporantant to understand true emissions. Cannot just rely on best practice guide or RNG.
Bea: fortis provides info to CAS regarding supply etc to make determination regarding emissions factor.
Good news on RNG front - demand has outstipped supply - program is being reopened
Patrick - in favour of approach of keeping CoV - standard so allows designers to understand changes and GHGi requirements. Can change CoV to reflect NG EF from best practice guide. He is ok with this.
Ian - worried about maintenance and cost to tenants and owners

Review of one-pagers:
Step 2 used for Part 3 - given that 20% better proposal
Step 3 for Part 9

% RNG is not something we can regulate today.
Norm - why no HP for DHW?
Alex: HP for DHW is becoming more popular, but we need to draw the line in the sand with options to analyze to keep things simple
Zac: need to include in assumptions as to why HPs not used
RNG comes at a premium but NG, over 20 years due to carbon tax, will essentially be equal.

Nick: fragile assumptions regarding carbon tax - no true direction from government - not fair to assume that electricity will not have zero emissions, why has this not been used in calculations?
Zac: something we need to look at
Jeff: why not all climate zones? Also to why not have all steps too. We may need to get that information.
Zac: we can talk to alex about summarizing
Ian: annual modelled utlity costs seem off by 50%
Alex: these are modelled not actual.
Ian: this is an huge gap
Zac: we do not have actual data

[1:48 p.m.] Mohareb, Adrian ENV:EX
I think the C tax rate was reflected in regulation federally?

[1:48 p.m.] Mohareb, Adrian ENV:EX
https://www.canada.ca/en/environment-climate-change/services/climate-change/pricing-pollution-how-it-will-work/carbon-pollution-pricing-federal-benchmark-information.html
The federal carbon pollution pricing benchmark - Canada.ca

[1:49 p.m.] Mohareb, Adrian ENV:EX
https://www.canada.ca/en/environment-climate-change/services/climate-change/pricing-pollution-how-it-will-work/carbon-pollution-pricing-federal-benchmark-information/federal-benchmark-2023-2030.html
Update to the Pan-Canadian Approach to Carbon Pollution Pricing 2023-2030 - Canada.ca
The updated federal carbon pollution pricing benchmark, with new information to update the minimum national standards for carbon pricing for the 2023 to 2030 period.

Zac: to act on ian - could provide some limitations with analysis to indictate shortcomings - could maybe have an estimate here and in metrics report ie re: modelled vs meaured

To Katherine's point - perhaps add assumptions around efficiency assumptions of the equipment in the notes to this document?

Some options over 6/3/1 - roberto - why not adjust ECMs so that we are meeting the thresholds
Zac: wanted to take the approach of bare minimum requirement for that Step. Not accounting for orientation etc.

Patrick: with thresholds that are currently in place for LGs - can we tweek the DHW savings to get it over the finish line
Alex: yes is possible - higher or lower densities affect DHW. 6 is not necessarily the wrong target
For metrics of 1 - if over as shown in analysis then could be and issue with this step.
Katherine: great set of data to work from as a base - if we want to refine metrics then we will need to look at other ECMs.

Including heat pump DHW in the ECMs might get the annual modeled utility cost closer to reality, and sustainable for operators/tenants.

Jeff: BCHydro connections fees and tier 2 rates - should be stating assumptions
Max: need to include other steps before we can make a decision. Info may be useful but maybe not essential.
Zac: could put an * beside the red numbers and outline what ECMs are required to meet that given threshold.
Katherine - NPV would be best to include
Pete: total $ value? Zac: we need to know what the actual building size is. And $ value would only apply to one specific building.
Mary McWilliam - affordabilty - can we provide some relatable information?
Zac: maybe we can have some plain language terms with some examples
Tom: consistent units - square feet used for floor area for part 9
Remi: Including comments to answer obvious questions (e.g. whole column with 10.2). The challenge I have with having this cost being constant at 10.2 is that it would make people assume everyone should use RNG, but only a small percentage of buildings could use this due to the limited supply. Is there a clear note above on the maximum percentage of buildings that can use RNG?
Max: what about cooling?
Alex: in Part 3 models cooling has been included
Remi: with lowered cost for BB - needs to be explained
[2:29 p.m.] Nicholas Heap | P9SC (Richmond) (Guest)
Alex: if the high-rise MURB already has A/C installed, is the cost of adding a heat pump cost $42/m2 [$2,300/suite] - the incremental cost of switching an HP in instead of A/C ?
like 1
[2:31 p.m.] Alex Blue
Yes. I've assumed central ASHP for the high-rise MURB, same as the other Part 3 buildings. It may be that the upgrade cost could be somewhat less if you went suite by suite but we've assumed central system for all.

Part 9 architype:
Pauline: Meeting requirements in CZ4 is easier, we need to include other climate zones.
ICC for option 6a - jheat pumps is much more expensive
Nick: ACH of 2.5 should be used as opposed to 1.5.
Max: why are bb not included?
Pauline: disclaimer should be provided regarding issues with predicting costs via H2K. Issues with occupant behaviours
Absolute value for dollar value and GHG
Pauline - need to evaluate extremes - smaller homes and bigger homes - absolute metrics
Adrian - rounding methodology needs to be reviewed. If GHGis of 3, then could applicant get 3.49? This needs to be clarified
Nick: Richmond have GHGis for small homes - CoV have a cap on big homes
Remi - need to have adjustment for small homes given disproportionate DHW load

[3:12 p.m.] Wark, Robyn
I also like the idea of a cap (for large homes) and a minimum (for smal homes). Reflects equity issues like 1

[3:12 p.m.] Ian Cullis

cap should sit at 2,000ft2
[3:12 p.m.] Patrick Enright - CoV (Guest)
while not a fix, most new smaller homes we see in Vancouver (mostly laneway homes) are all-electric, just by default and regardless of GHGI or GHG cap
like 1

[3:12 p.m.] Patrick Enright - CoV (Guest)
if that context helps

Ian Cullis - we should be more punitive for homeowners can that can afford it.
Zac: case studies after the fact will help to identify issues - will need to iden
Density cannot be penalized

Zac: impact analysis - need to explore impacts of attaching GHGis to steps - ie analyze highest GHGi step highest step code step.

Measure only - not prescriptive - just making people take a look.

Robyn - need to work backwards from provincial goals to determine when incremental steps become mandatory.
Zac; cannot make that distinction right now - we do not have that clear mandate
In best practices guide - what does the path to decarbonization look like?
**very important that needs to be coupled with BCBC 2022 so minimum step 3
Goal - regulation would be in place upon signature, so ASAP.
Opt in process
In Metrics research report - needs to discuss availability of RNG and assumptions made.

Case Studies - could get info from LGs that already have these metrics in place

Laura Sampliner: in the short term ok for opt in , but need to see what mandatory steps need to be implemented.

Summary sheets October
Consensus from ESCC (late oct/early november)
Target recommendation by end of year
Best Practice Guide - would need to done with the regulation
Roberto - would be good to have the one pagers included in the best practice guide
Maya - is setting up a WG for the peer network for this issue

[3:00 p.m.] Remi Charron (Guest)
Baseboard heaters had initially not been included in the 2018 metrics study. Due to the desire to have that data, baseboards were added to the data using post-processing of the HTAP results.
Energy consumption of baseboard = TEDI...
like 1

[3:02 p.m.] Remi Charron (Guest)

Small homes would lead to the same issues as those encountered in MEUI. Domestic hot water load is the same regardless on how size…

Key Actions items from Meeting
Patrick - in favour of approach of keeping CoV - standard so allows designers to understand changes and GHGi requirements. Can change CoV to reflect NG EF from best practice guide. He is ok with this.
need to include in assumptions as to why HPs not used for part 3
Jeff: why not all climate zones? Also to why not have all steps too. We may need to get that information.
could provide some limitations with analysis to indictate shortcomings - ie re: modelled vs meaured
perhaps add assumptions around efficiency assumptions of the equipment in the notes to this document
Patrick: with thresholds that are currently in place for LGs - can we tweek the DHW savings to get it over the finish line
Alex: yes is possible - higher or lower densities affect DHW. 6 is not necessarily the wrong target
For metrics of 1 - if over as shown in analysis then could be and issue with this step.
Katherine: great set of data to work from as a base - if we want to refine metrics then we will need to look at other ECMs.
Jeff: BCHydro connections fees and tier 2 rates - should be stating assumptions
Zac: could put an * beside the red numbers and outline what ECMs are required to meet that given threshold.
Katherine - NPV would be best to include
Mary McWilliam - affordabilty - can we provide some relatable information?
Zac: maybe we can have some plain language terms with some examples
Tom: consistent units - square feet used for floor area for part 9
Remi: Including comments to answer obvious questions (e.g. whole column with 10.2). The challenge I have with having this cost being constant at 10.2 is that it would make people assume everyone should use RNG, but only a small percentage of buildings could use this due to the limited supply. Is there a clear note above on the maximum percentage of buildings that can use RNG?
Remi: with lowered cost for BB - needs to be explained
Nick: fragile assumptions regarding carbon tax - no true direction from government - not fair to assume that electricity will not have zero emissions, why has this not been used in calculations?
Zac: state assumptions…..

Part 9
Pauline: Meeting requirements in CZ4 is easier, we need to include other climate zones.
Nick: ACH of 2.5 should be used as opposed to 1.5.
Max: why are bb not included?
Pauline: disclaimer should be provided regarding issues with predicting costs via H2K. Issues with occupant behaviours
Pauline - need to evaluate extremes - smaller homes and bigger homes - absolute metrics
Nick: Richmond have GHGis for small homes - CoV have a cap on big homes

SCC meeting 2021-07-28

Not forcing decisions today, just presenting technical analysis with input and discussion.
We did not provide enough time for ESCC members to reach out to their members.

APS - affordability is the strongest driver
30 point plan- housing shortage
BSSB has endeavoured to guide our work via the affordability charter
4 dimensions of affordability

- Construction - ICC
- Life cycle analysis - lower retrofit costs, energy decreases energy $ to occupant
- Risk mitigation impacts - resilient design
- Social dimensions - accessibility, decarbonization

Working on the buildings pathway - new and existing buildings
RCT agreement has been signed - based on canadian free trade agreement - NBC does not regulate resiliency and mitigation. Agree to adopt within 24 months once NBC 2021 has been released, 18 months for each subsequent version. Regarding 20% better - will not be in regulation for this fall, but rather mid 2022.
Overheating - Zac - national committee in scoping and planning phase - need to have BC representation, so will be reaching out to members via SCC. National is taking this issue seriously and are moving forward with urgency. The national process will guide the process moving forward. NRC and Canmet will be doing the analysis.
Code cycle - update everyone 5 years- can it be sooner? APS - this is something that has been talked about nationally.

Proposed GHGis steps - voluntary pollution standards- could be similar to the Step Code
Step 1 - measure only
Step 2 - decarbonize of either heating or DHW - not prescriptive*
Step 3 - Near Zero Carbon
Zac acknowledges that looking at complete decarbonization of energy supply
Could have 4 steps instead of 3.
Emissions factor : Looking at GGIRCA 2019 values - would be static - we need to have something in regulation for everyone to build to. GGIRCA is based on a 3 year average, so 2019 would be 2017, 2018 and 2019 averages
Needs to be objective and defendable
Curt - discrepancy between emissions factors in Portfolio Manager and GGIRCA - Zac - there will be discrepancies; however, we need to pick one #.
Jeff- number of different steps currently within the Step Code comparing commercial, MURB, Part 9.
How will the 3 steps relate for GHGis? Zac - would be great to having 3 steps for all architypes for both GHGis and Energy
Patrick - GGIRCA number throws metrics out of whack currently established by LGs. Leary of adopting different emissions factors if they are just going to drop in the future via the clean grid proposals. CoV has been refernced in the code and works re: emissions factors. Why not stick with this rather than rocking the boat.
Jeff: LGs using GHG standards using CoV standards will cause issues
[10:23 a.m.] Curt Hepting (EnerSys) (Guest)

Patrick - I appreciate your hesitancy to increase the electric GHG factor, but my recent analysis using the even higher 0.0401 factor is still relatively low and I've found we can easily meet the previously proposed GHGIs for at least schools. I see no reason this wouldn't hold for other building types.

Tom - why not use current CoV and wait until clean grid and associated changes. Why change what is working? Can reference the clean energy standard when it becomes available.

Roberto - can conduct study of new emissions factor to see if Steps can be met. If not a big deal with increased emissions factor, then could consider using GGIRCA. Sensitivity analysis will shed some light.
Zac - voluntary carbon pollution standard, so would expand scope in BCBC and potentially include in Step Code for voluntary adoption.
APS - could be include objective via 'environment'.

RNG/Hydrogen - use an emissions factor for NG a this point in time given lack of emissions factor for RNG and Hydrogen
Bea - there is an emissions factor determined by Fortis for RNG - this should be look at this for analysis. Post occupancy is another issue altogether in terms of locking in customers for use of RNG in perpetuity.
Zac: could use RNG EF is code, but it is hard in terms of compliance and enforcement via Building Officials and LGS.
Bea: working on application for tariffs to BCUC for this december. Commission would not make a decision for about another 10 months.
APS - would bring into regulation once tariff has been put in place.
Zac: we need something now as opposed what could be in the future
District energy - will need to rely on discretion of LGs to set. In discussion regarding methodology.

Need minimum energy efficiency improvement for GHGis steps to apply to avoid high operational costs, with the exception of the report only step. Ie step 3 (20% better) for Part 9 - this applies to fall regulation and not future changes to basecode minimum.
[10:55 a.m.] Pape-Salmon, Andrew OHCS:EX
Further to discussion on affordability and land-use planning, it is our goal that local governments that require carbon performance will enable increased density without lengthy and detrimental rezoning negotiations and public hearings. The increased fuel cost of operating a low carbon building can be compensated by enabling density. This is not around approving larger houses as is the case in one municipality, but rather increasing the number of residential units. We will be monitoring the extent to which LGs are approving density in the context of carbon pollution standards and will consider policy responses if there are challenges identified.

Alex:
Question was asked about just using TEDI for calculating GHGis. For Part 3 - TEDI does not include DHW. So big descrepancy. Part 9 focuses on MEUI and ERS which does not include plug-loads and base loads, but does include DHW.
APS - could we determine peak KW to give an indication of challenges that the grid may see for electrification.

[11:22 a.m.] Roberto (ZEBx) (Guest)
We're moving to Step 3 in 2022. The service connection for an all-electric S3 building is likely to be less than current all-electric buildings.

Costs for additional transformers and distribution extension.

[11:23 a.m.] Patrick Caraher
Encouraging LGs to skirt around rezoning negotiations and public hearings to drive density is a slippery slope... these processes are in place for a reason, and relaxing them can have unintended consequences.
like 1

Offices have lower heating loads and lower DHW loads so lower GHGIs
Colder climate is a little bit higher for all architypes
Hotels have highest ICCs of all of the architypes so could be the limiting factor.
** in powerpoint by alex - she normalized the ECMs for all GHGis scenarios, so ICCs are refer to changes to equipment etc to meet GHGi level.
Max: could we find synergies with overheating with GHGis analysis. What about CEDI?

Part 9
Don't have the full parametric run via HTAP, yet.
Size of dwelling has a huge impact on proportion of DHW. High for small bldgs, small for big bldgs.
Option 1 - could use TEDI and DHW
Would different targets for different size homes. MEUI stays the same? This methodology would better help with smaller homes.
Option 2 - MEUI
% of MEUI based on expected proportion of low carbon fuel.
For large homes - biggest bang would be for space heating. For small homes - biggest would be DHW

Potentially have one GHGi metric for Part 9, harder for Part 3.
CoV has varying GHGis based on house size.

Zac: would be good to have working group. Get recommendations from volunteers to present to SCC.

Discussion with Alex:
Part 9 - the issue of trying to apportion the appropriate amounts of GHG reductions given building size.
One proposal is looking at TEDI and DHW in lieu of MEUI - fundamentally TEDI+DHW = MEUI. TEDI is apportioned based on a percentage of energy usage given the building size.
Issue is that for large buildings - electrifying DHW would not get them over the finish line, so they would need to focus on space heating which takes up a huge chunk of the pie, so they would well surpass the GHGi metric whereas small buildings may need to focus on both DHW and TEDI. Trying to level the playing field.
One issue is that TEDI does not take into account equipment efficiencies.

SCC meeting 2021-06-09

Next 2-4 weeks

Jeff UDI - re metrics - some concerns raised about electrification and additional costs. He is looking into this further and will report back.
Also asked the question about getting info out to industry about how to build the buildings as outlined in the Metrics Research Report. Zac indicated that they would happen later in the process, potentially after once we have some numbers and analysis.

Fortis - Brent Graham
Goal of 15% renewable gas to meet CleanBC.
Working on ammendments to the Greenhouse Gas Reduction Regulation (GGRR)
Renewable gas includes hydrogen, lignin (by product of pulp and paper, would be used as displacement of NG) and syngas - this expanded list gives Fortis more latititude regarding how they are going to meet the 15% reduction.
Currently on-line is 0.4 petajoules looking to get to a 30 petajould cap to meet GGRR - with agreements that are being worked on they will be up to 24 petajoules and have not yet looked at hydrogen.
Clean Portfolio Standard which is being developed via the CleanBC.
If they bring on RNG they need clarity regarding policy to make sure that there will be consumer demand for all these efforts. CPS needs to be finalized to move forward.
Majority of systems in 2050 will be renewable.
Fortis has undertaken a study of role of energy efficiency and renewable gas in reducing emissions in new construction. Will be expanding scope to existing buildings.

**Zac - could have in regulation prior to 2022 BCBC, this is not coupled with the code. Could be a stand alone regulation.
LGs would have a number of steps to choose from. They would need to do their own impact analysis to determine impacts.
Roberto - would LGs loose their current low carbon pathways? Zac: want to create a great approach so there is more buy-in. A delicate balance.
Zac- we have explicit mandate to create carbon polution standards for LGs. Need to balance with the roadmap, as necessary, and will have more clarity this fall.

GHG survey

- Consensus with measure only step - ie included with energy modelling outputs, similar to ATT for step 1
- Gradual implementation - how this would roll out with LGs remains to be seen - ie LGs could go to highest step right away which could be and issue.
- Support for GHGis as the metric, but some concerns with small buildings
- Start with the most common building types similar to the Step Code
- Measure only GHG step for Step2/3 for 2022?
- Some desire for measure only for embodied carbon - not ready to put in regulation
- Some flexibility to secondary sources - ie wood burning stoves
- LGs with existing limits want to be grandfathered so there is no step back. Max Sykes raised density bonuses for more stringent GHGi limits
- Not much consensus on when more stringent requirements should be phased in.
- Less consensus on aligning GHGs with energy efficiency other than report only.

Subject:	Feedback Request: Building Energy Requirements Tool (BeRT)
Date:	Thursday, June 4, 2020 1:16:26 PM
Attachments:	Request Upcoming Engagement Session with Building and Safety Standards Branch (Municipal Affairs and Housing).msg

Hello Jeff,

I reached out to you last year to requesting your participation in our consultation sessions for BeRT (email attached for reference). You have given Jonathan Meads and Dale Mikkelson for additional contacts.

Since the completion of the sessions last year, the project team has developed the initial tool prototype and conducted user testing in March. Currently, we are looking into data management – collection, usage and storage as well as privacy impact assessment as we plan the next phase of the tool development.

Once again, we're seeking your input and feedback as we develop this tool to standardize the process for demonstrating, gathering and storing data pertaining to energy efficiency for Part 3 buildings. Additionally, the project team is exploring ideas on the BeRT's long-term intention to be a central repository of building information (in addition to energy) from permit submission to post-occupancy.

Could you please provide your thoughts on the following:

- Any supplemental information that would be useful to collect (e.g., energy modelling documents, architectural, mechanical, electrical drawings etc.)?
- What other types of data would be useful to collect in addition to energy requirements (e.g., post-occupancy performance data, etc.)?
- What type of information constitutes intellectual property or what information would your members be reluctant to disclose privately or publicly?
- Would the information requested in the City of Vancouver's current checklists, or the Part 3 Energy Design Report be considered sensitive?

Looking forward to hearing your response.

Thanks in advance.

Aura McCrae

Hi Jonathan,
Jeff Fisher of UDI provided your name to us in response to the email below. Iâ€™m looking to book a 1 hour meeting with you to talk with our contractor who will be leading this session. Can you please advise on your availability this week (or next)? For this week, tomorrow or Friday afternoon looks pretty open from our end.
Thanks in advance,

Aura McCrae
Senior Policy Analyst

Subject: FYI/Request: Upcoming Engagement Session with Building and Safety Standards Branch (Municipal Affairs and Housing)

Greetings,
I am writing to you as you have been identified as a contact for your organization.
As you may or may not know, Building and Safety Standards Branch (BSSB) with the BC government is working on an initiative called Building Energy Requirements Tool (BERT for short).
This tool is intended to gather data to help inform policies and programs throughout the building lifecycle.
Specifically, BERT will:

- Help manage information
- Support industry compliance with BC Building Code requirements
- Support local government enforcement of code requirements
- Improve transparency

With the initial application aimed at supporting industry and local government's transition to new energy performance requirements, there is potential to assess opportunities in tool development and other data needs.
To do this, we would be conducting engagement/consultation sessions in the next few weeks to seek your input. The purpose of these sessions is to document data needs in building/built environment to inform tool development from a user interface (data inputs and outputs) and on how we may manage the data we collect.
In addition to yourself, please provide 2 to 3 additional contacts from your organization as soon as possible.
*Note: we have also reached out to International Building Performance Simulation Association of British Columbia, Association of Professional Engineers and Geoscientists of British Columbia, Architectural Institute of British Columbia to seek representation from their organizations.
Myself and/or other members of the project team will be in contact with you with further details on this planned engagement/consultation session.
Please advise if you are no longer the appropriate contact. I look forward to hearing from you.
Sincerely,

Aura McCrae
Senior Policy Advisor
Building and Safety Standards Branch | Ministry of Municipal Affairs and Housing

Hi Aura,
I hope you're enjoying the summer and apologies for the delay. Please see our comments on the questions you provided, and if you have any follow-up questions, don't hesitate to let us know.
Many thanks,
Cassandra

Could you please provide your thoughts on the following:

- *Any supplemental information that would be useful to collect (e.g., energy modelling documents, architectural, mechanical, electrical drawings etc.)?*
  - *Building description by location (climatic zone) + what step code level designed.*
- *What other types of data would be useful to collect in addition to energy requirements (e.g., post-occupancy performance data, etc.)?*
  - *Building air tightness would be an after thought (design versus tested building) how many buildings met the air tightness design requirements.*
- *What type of information constitutes intellectual property or what information would your members be reluctant to disclose privately or publicly?*
  - *Must be in full compliance with privacy act.*
- *Would the information requested in the City of Vancouver's current checklists, or the Part 3 Energy Design Report be considered sensitive?*
  - *Yes in compliance with privacy act.*

We also received the following general comments:

We would suggest that the required data held and published be kept to a minimum and focused on the major Step Code performance indicators:

1. *Modelled TEDI, TEUI and carbon intensity*
2. *Annual post-occupancy TEUI, carbon intensity*
3. *Post-occupancy TEUI, carbon intensity normalized to account for differences in model to actual use (e.g., normalization to account for differences in occupant density, operational hours, addition of data centres/ exceptional loads, changes in space utilization)*
4. *Post-occupancy data posted publicly as per CaGBC Disclosure Project (Energy Star score, NEUI, water intensity, etc..)*

All four should be reviewed by a third-party to validate accuracy (EPL does this for us already, so no extra cost for builders).
All other data should either be confidential and/or will not be consistently enough gathered to be of public value and/or burdensome for the owner to maintain in the public record.

Hello Aura,
Apologies for the delay, Jeff asked me to follow-up on your earlier note to confirm whether or not you are still looking for feedback on the items below. If so, when would you like comments submitted by?
We also wanted to confirm if there will be any additional information sessions for this project (webinars) that we could send out to our members?
Many thanks,
Cassandra

Subject: RE: Follow-up AIBC-EGBC- Part 3 Energy Design Report Collection meeting Sept. 17

Hi Dale,

I seemed to recollect that AHJs could have greater sensitivities regarding central reporting out. Reason being is that although LoAs are FOIPPable, AHJs typically handle those requests and have vetting mechanisms in place to deal with requests. My recollection was also that some of AHJs present at the last meeting were going to seek legal counsel on this matter. Also, perhaps checking to see if there are sensitivities from BOMA or UDI's perspectives could be useful as it could highlight concerns of owners or builders.

It is not immediately clear to me what concerns Engineers and Geoscientists BC might have about individually identifying buildings and would seek to learn from Maura's perspectives on this.

If proceeding with this, there might be benefit in having an explanatory notes section (for the uninitiated) and a disclaimers section (with legal input). This would include stating things such as:

1. information provided is based on the checklist submitted to local government authorities to verify compliance with the BC Energy Step Code - purpose is to inform future policies, bylaws & code
2. the Energy Design Reports are not stamped and sealed and they are not Letters of Assurance under the BC Building Code – for code mandated LoAs refer to filed LoAs.
3. information is provided to promote a consistent way to gather and review modelled energy performance. Actual building energy performance will differ from modelled outputs due to variations in occupancy, operations, maintenance, weather, and other factors
4. there could be gaps in the information presented here because the report presents information at a snapshot in time – more complete information can be obtain through a review of information submitted at various development review stages

I am sure there's more to add in to this space, but I wanted to provide an initial response to your email and await further input from Maura.

On another note, I know Susan was working on a "Tips sheet" relating to the Energy Design Report – it might be useful to publish it ahead of going live.

Thanks,

Subject: Follow-up AIBC-EGBC- Part 3 Energy Design Report Collection meeting Sept. 17

Hello Harshan and Maura,

I just wanted to follow-up with you re: the Sept. 17 meeting about centrally collecting the completed Part 3 Energy Design Reports. My notes indicate that both AIBC and EGBC support collection of the reports at the As Built stage, so long as individual buildings are not identified in any central reporting out? Is that correct?

If yes, can you clarify what the concern is if individual buildings are identified? Is it the concern of owners or builders as to how their buildings perform compared to other buildings?

Thank you for your assistance. We hope to follow-up with everyone about the Sept. 17 meeting soon.

Kind regards,

Dale

Subject: Response Requested: Existing Buildings Technical Research Steering Committee - please respond by end of day Wednesday, February 2, 2022

Greetings,

This email is from the Building and Safety Standards Branch (BSSB) in the Ministry of the Attorney General and Responsible for Housing. BSSB has retained RDH and Integral to complete research to understand the energy and GHG performance of equipment and existing buildings in British Columbia and to identify the potential for energy and GHG reductions using a variety of retrofit measures and strategies. As a result, BSSB is convening an Existing Buildings Technical Research Steering Committee to help guide the project and provide feedback on the technical analysis and draft reports.

You are receiving this email because your organization is invited to participate on the Steering Committee. Membership is limited to 1 main participant and 1 alternate representative from each organization. The Steering Committee will meet approximately 8 times, up to 2.5 hours per meeting, throughout the duration of the research project. The first meeting is slated in mid-February.

Please confirm your organization's interest in participating and your 1 main participant as well as a 1 alternate representative by replying to this email by end of day Wednesday, February 2nd.

Myself and/or other members of the project team will be in contact with you with further details on this planned kick-off. In the meantime, watch out for a subsequent email with possible dates to hold the kick-off via doodle poll.

If you have any questions, please contact myself via email at aura.mccrae@gov.bc.ca.

Thank you and we look forward to hearing from you.

Aura McCrae
Senior Policy Analyst
Building and Safety Standards Branch | Office of Housing and Construction Standards
Ministry of Attorney General and Minister Responsible for Housing

Hello again you two,

Here's the revised minutes for your review. As mentioned, if I don't hear back from you today, can either of you send this out to the Steering Committee members?

Nicole - You can see that I've removed the table formatting and summarized/themed the comments. Action items are now at the top of the document and include other tasks from the meeting. Attendance is based on the actual MS Teams record.

Existing Buildings Technical Research Steering Committee | MINUTES

Meeting date | time *February 14, 2022* | *1:30-3:00pm PST* | Meeting location *MS Teams*

Chair Nicole

Agenda topics

Time allotted | *60 min* | Agenda topic *Proposed Methodology* | Presenter *Christy*

Action items	Person responsible	Deadline	Status
Proposed Methodology – written feedback	All	Friday, Feb 18	IP
Terms of Reference – written feedback	All	Friday, Feb 18	IP
Share BC Hydro study as requested by Max	Scott and Christy	asap	IP
Follow-up with Max on data tool and dataset sources	Eduard	asap	IP
Send international and national studies of successful retrofits to BSSB/RDH/Integral	Robert	asap	Completed

DRAFT

Discussion

- Technical research completion by end of June 2022 which will feed into the EB Renewal Strategy to be released in fall 2022.
- Advisory Committee Roles and Responsibilities: SC members to review the draft Terms of Reference.
- Overall approach
    - Phase 1: Research and Test Methodology
        - Task 1 Research Scan (build on prior research)
        - Task 2: Market Scan (Phase 2) - objectives include identifying dominant building archetypes in the Province and inform archetype selection for Phase 2 analysis
        - Task 3: Test Methodology
    - Phase 2: Apply methodology to all archetypes (QTY 10) – 5 PSO and 5 non-PSO with some crossover
- Proposed Approach – Phase 1: 2016 CWEC climate files and 3 climates (Vancouver zone 4, Kelowna zone 5 and Prince George zone 6)
- Selection of Measures – provided a summary of NECB 2020 prescriptive requirements and suggested alternatives.

SC Member Comments

Trigger requirements

- Focus on 'time of replacement' with no mandatory requirements on when retrofits are to be undertaken (or performance met).

Archetypes:

- Non-PSO model for Phase 1(MURBS and offices) would underestimate low-income energy use since it does not take the person density into account. Condos, market rent, non-market rent each with different performance
- Private and public care facilities have different existing building performance (public = higher than minimum code levels in public procurement vs private is likely closer to code minimums).
- Consider archetypes and ECM solutions to at least be run through the future climate files to at minimum identify 'potential implications for the main results and issues for future investigation' = could inform Phase 2 and after
- Care facilities are treated as an archetype constructed by the public sector, but the approach and performance metrics would likely apply to private sector archetypes (2/3 of care facilities are private sector).
- s.13

Test Methodology:s.13

- Consider overheating/future climate analysis in the test methodology metrics (i.e., overheating hours along with TEUI, GHGI, etc.) given knowledge of warming climate.
- Overall, the methodology proposes to look at overall heating and cooling demand, not necessarily sizing of mechanical systems. With future climate files, we can expect the heat demand to drop and the cooling demand to increase;s.13
- Peak demand will be looked at as part of the analysis.
- IAQ/health considerations in retrofits – where envelope s.13 , consider ventilation assessment (e.g., wildfire smoke) and how ventilation requirements would be incorporated into retrofits.
- s.13
- "Cool Roofs" (light coloured roof coatings) for a more economical way reducing overheating top floors of MURBs & offices.
- s.13 improved airtightness assumed within other envelope upgrades.
- Consider sensitivity runs re: 2020 and 2050 files; proposal to use CWEC 2016 files for energy modelling; will lead us to overestimate TEDI for space heating and underestimate cooling energy consumption and peak demand compared to current and future climate

Performance Measures:

- Opaque building assemblies will be more important in Climate Zone 6 than Climate Zone 4 and should be a stand alone 'measure'.s.13
- Consider fuel switch to RNG and hybrid heating systems.
- Measures should be reviewed based on alternate base buildings (i.e., if the building had electric heating baseboard, not a gas fired hydronic).
- Narrow options based on whether the existing heating system delivery is unitary, ducted, hydronic in-floor, etc.
- Consider a flow chart optic with pathways that include the 'bundling' of upgrades that would guide renovators (i.e., if you replace windows or exterior opaque wall assemblies you must have s.13 ventilation system overview).

s.13

s.13

Subject:	FYI - EBTR Steering Committee Kick-off Meeting Minutes
Date:	Monday, March 7, 2022 11:29:21 AM
Attachments:	image001.png EBTR SC Minutes kick off Feb 14 22 final.pdf

Good morning,

Please find attached the minutes for the February 14th existing buildings technical research kick-off meeting.

Aura McCrae
Senior Policy Analyst
Building and Safety Standards Branch | Office of Housing and Construction Standards
Ministry of Attorney General and Minister Responsible for Housing
T: 778 698-7635 | M: 250 880-4566 | Email: aura.mccrae@gov.bc.ca

I acknowledge, with gratitude and respect, the Lək^{w}əŋən peoples on whose traditional territory I live and work, and recognize the Songhees, Esquimalt (Xwsepsum), and W̱SÁNEĆ Nations whose deep connections with this land continue to this day.

Existing Buildings Technical Research Steering Committee | MINUTES

Meeting date | time *February 14, 2022* | *1:30-3:00pm PST* | Meeting location *MS Teams*

Chair	Nicole

Agenda topics

Time allotted | *60 min* | Agenda topic *Proposed Methodology* | Presenter *Christy*

Action items	Person responsible	Deadline	Status
Proposed Methodology – written feedback	All	Friday, Feb 18	IP
Terms of Reference – written feedback	All	Friday, Feb 18	IP
Share BC Hydro study as requested by Max	Scott and Christy	asap	IP
Follow-up with Max on data tool and dataset sources	Eduard	asap	IP
Send international and national studies of successful retrofits to BSSB/RDH/Integral	Luiz	asap	Completed

Discussion

- Technical research completion by end of June 2022 which will feed into the EB Renewal Strategy to be released in fall 2022.
- Advisory Committee Roles and Responsibilities: SC members to review the draft Terms of Reference.
- Overall approach
    - Phase 1: Research and Test Methodology
        - Task 1 Research Scan (build on prior research)
        - Task 2: Market Scan (Phase 2) - objectives include identifying dominant building archetypes in the Province and inform archetype selection for Phase 2 analysis
        - Task 3: Test Methodology
    - Phase 2: Apply methodology to all archetypes (QTY 10) – 5 PSO and 5 non-PSO with some crossover
- Proposed Approach – Phase 1: 2016 CWEC climate files and 3 climates (Vancouver zone 4, Kelowna zone 5 and Prince George zone 6)
- Selection of Measures – provided a summary of NECB 2020 prescriptive requirements and suggested alternatives.

SC Member Comments

Trigger requirements

- Focus on 'time of replacement' with no mandatory requirements on when retrofits are to be undertaken (or performance met).

Archetypes:

- Non-PSO model for Phase 1(MURBS and offices) may underestimate low-income energy use since it does not take the person density into account. Condos, market rent, non-market rent each with different performance
- Private and public care facilities may have different existing building performance (public = higher than minimum code levels in public procurement vs private is likely closer to code minimums).
- Care facilities are treated as an archetype constructed by the public sector, but the approach and performance metrics would likely apply to private sector archetypes (2/3 of care facilities are private sector).

Methodology:

- Consider overheating/future climate analysis in the test methodology metrics (i.e., overheating hours along with TEUI, GHGI, etc.) given knowledge of warming climate (at least for archetypes vulnerable to overheating).
- Overall, the methodology proposes to look at overall heating and cooling demand, not necessarily sizing of mechanical systems. With future climate files, we can expect the heat demand to drop and the cooling demand to increase.
- Consider sensitivity runs re: 2020 and 2050 files; proposal to use CWEC 2016 files for energy modelling; will lead us to overestimate TEDI for space heating and underestimate cooling energy consumption and peak demand compared to current and future climate
- Peak demand will be looked at as part of the analysis.
- IAQ/health considerations in retrofits – where envelope airtightness is improved, consider ventilation assessment (e.g., wildfire smoke) and how ventilation requirements would be incorporated into retrofits.
- Consider "Cool Roofs" (light coloured roof coatings) for a more economical way reducing overheating top floors of MURBs & offices.
- Assumed airtightness improvements will be modeled with enclosure upgrades.
- Wherever possible consider emissions reduction and climate resilience in concert with energy efficiency
- Performance path should be an option for private sector buildings

Performance Measures – Future Considerations from the Steering Committee:

- Consider that opaque building assemblies may be more important in Climate Zone 6 than Climate Zone 4 and should be a standalone 'measure'.
- Consider fuel switch to RNG and hybrid heating systems.
- Consider evaluating measures based on alternate base buildings (i.e., if the building had electric heating baseboard, not a gas fired hydronic).
- Narrow options based on whether the existing heating system delivery is unitary, ducted, hydronic in-floor, etc.
- Consider a flow chart optic with pathways that include the 'bundling' of upgrades that would guide renovators (i.e., if you replace windows or exterior opaque wall assemblies you must have a ventilation system overview).
- Would be great if building owners could be provided guidance, for example based on window to wall ratio – e.g. is there a certain percentage of glazing that would shift focus from opaque to glazed components, or when would one abandon central systems for distributed heat pumps?

Timeline	Person responsible	Deadline
Phase 1 modelling and market scan	RDH / Integral	Complete by March 11
SC meeting	BSSB / All	TBC

To: OHCS BSSB Public Review OHCS:EX <BSSB.public.review@gov.bc.ca>
Subject: Invite Reminder: BC Building Code Accessibility Focus Group

Good morning,

I am writing to remind you of the invite to attend a virtual focus group discussion about how BC Building Code requirements may be improved to make new buildings more accessible.

This engagement follows the fall 2021 public engagement where I invited British Columbians to complete an online survey on accessibility in new buildings.

The purpose of this focus group session is to deepen our understanding of the feedback

received to help inform the development of enhanced BC Building Code changes to support all people to navigate new buildings safely.

> **Note:** A separate engagement session with First Nations and organizations representing Indigenous Peoples is planned for the fall 2022. A separate invitation will be provided.

Two virtual focus group sessions are planned to occur on June 29 from 12:30 pm to 3:00 pm and June 30 from 10:00 am to 12:30 pm. Each session will offer discussion on the following breakout group topics.

Topics	**Objectives**
Accessibility Features	Identify opportunities to enhance functional accessibility features to improve accessibility for people navigating new buildings.
Adaptable Buildings	Identify opportunities for homes to be designed and built to be more easily and cost-effectively changed to meet peoples' evolving accessibility needs.
Safe Evacuation	Identify changes to the BC Building Code that could enhance safe evacuation from new buildings.
Visitable Buildings	Identify enhanced standards that would help make new buildings more visitable.

If your organization would like to take part, please nominate a participant. To deepen the understanding of feedback collected, it would be ideal to nominate the person who responded to the fall survey and/or a person living with a disability. This request is provided as guidance to support inclusion of perspectives from people with lived experience. To support fluid discussions and time to hear all perspectives, a maximum of one participant per organization is requested.

I understand that some organizations may want to attend multiple topics, or some won't have the availability or capacity to attend a focus group. To make sure we receive your input, we will accept written feedback in response to specific questions related to the topics identified, until June 30, 2022.

Registration for nominees will close June 20 at 4:00 pm and is on a first-come basis. Please note we are unable to guarantee registration in selected breakout groups, as space is limited.

To register, please visit BC Building Code accessibility event poll to:

- Provide the name and email address of your nominee,
- Indicate whether they wish to attend a virtual session or submit written feedback,
- Request the preferred date and breakout group topic they would like to attend, and
- Note any accessibility requirements, such as an ASL translator.

Upon receipt of your nominee, we will send them background information in advance to support discussions as well as the virtual Zoom invite.

Focus group sessions will conclude the initial public engagement phase for how BC Building Code accessibility requirements may be improved. The next step will involve ministry staff working with construction industry representatives to develop proposed changes that will be published for a final public review, prior to adoption in the next BC Building Code.

If you have any questions or would prefer to provide the required information by email or phone, please contact Kate Rollheiser, with Elevate Consulting, by email to Kate@elevateconsulting.ca or call 250-858-1307.

Thank you for considering this invitation. I look forward to meeting with your organization.

Yours truly,

Dan Coulter
Parliamentary Secretary for Accessibility

Subject: Contacts for digital permitting roundtable

Hi Nikki and Bindi,

I hope you both are well.

I am reaching out to see if you can help us identify contacts to invite to a digital permitting round

table on Thursday, April 6.

We have time held from 3-5 pm that day. It should be an hour. As I understand it, the Minister would like Ministry staff to speak about where we are going as well as the Digital Supercluster. And then open it up to thoughts from the attendees. Below is a list of the stakeholders he'd like to join.

Digital Supercluster
UDI
Homebuilders
Architects
Engineers
Planners
BC Building Trades
GVBOT
North Vancouver – Tim Ryce (Chief Building Official)
Kelowna
Surrey
Vancouver
Victoria
Burnaby
Port Coquitlam

We are hoping to have the list of invitees finalized today so if you can please provide contact details at your earliest convenience that would be amazing.

Thanks for your help and all the best,

Mark

Subject: RE: 2023 Codes

Hi Cassandra,

Yes 1.5 should be plenty. I will run through a few more topics, but will include seismic and accessibility for sure. I'd think 45 presenting and that would leave 45 for questions. Feel free to scale that down if appropriate.

Hi Jun'ichi,

That's great that the dates align and I'll send an invitation over shortly. In terms of timing, do you think 1.5h would be sufficient to cover both the seismic and accessibility changes, with time for discussion?

I'll discuss a possible webinar with Verna and we'll follow-up with some potential dates next week. The original intent was to create broader awareness on the changes during the engagement period so that members could still have the opportunity to participate in the consultation, however we'll need to take a look at timing.

Thanks,
Cassandra

Subject: RE: 2023 Codes

Hi Cassandra,

If you can please forward the invitation for April 26th, I will plan to present regardless. The consultation should be live by then. How much time should I plan for?

We hope to have it go live in late April. It will be open for about 4 weeks, so we should plan the webinar for soon after if the intent is to walk your members through the content that is out for consultation. If it's more about educating them on the proposed changes coming, but not with a specific goal of having them subsequently provide feedback, late May or June is fine.

[EXTERNAL] **This email came from an external source. Only open attachments or links that you are expecting from a known sender.**

Hi Jun'ichi,

Thanks for the update, and we'd be interested in scheduling a dedicated session with our Building Codes Committee and a few others, followed by a webinar for our broader membership during the consultation period, if that's an option.

We've heard some feedback already regarding challenges prompted by the seismic changes and would also be interested is discussing the accessibility changes in more detail. The committee would offer detailed feedback, and identify issues ahead of a presentation to our broader membership.

We currently have a Building Codes Committee meeting scheduled for April 26th, however if that date does not align with the consultation period we could shift it. Then perhaps look at options for a webinar towards the end of May/start of June?

Let us know what your thoughts are and we're happy to discuss options further.

Thanks and have a great long weekend,

Cassandra

Hi Verna and Cassandra,

We expect the public consultation to start in late April. We did reach out in advance to UDI and have a conversation, but it was not to a broad group. Perhaps a Q&A session at your building code group after the launch would be a good starting point, but I'm happy to do whatever works best.

Thank you for reaching out.

Subject: 2023 Codes

Hi Juni,

I just had a call with UDI about some questions they had about the 2023 codes, and potential implications for in-stream developments.

I suggested you connect with them to coordinate on consultation related to accessibility and seismic. It sounds like there may be some value in having smaller direct discussions and also providing a broader presentation to UDI to notify them of the public review process and key changes. I said you would be best positioned to sort out what format and timelines make sense.

Please coordinate with Verna.

Hi Cassandra,

We are still not certain on our date, but we hope it will be in the coming few weeks. But yes, once we get to public review what is proposed will reflect the latest thinking and direction. That will not mean it's set in stone, as the point of public review is to get feedback for the final decisions that have to be made for building code adoption.

Hi Jun'ichi,

Thanks for sending these over and we'll ask that they stay within the group that you met with last week. We're happy to wait to share anything more broadly under slides are updated based on newer decisions- we'd like to be able to provide our members with the most relevant information.

Do you have a sense as to when the public review will be live? Confirming as well that the information available through the public review would also reflect any newer decisions?

Thanks,
Cassandra

Subject: RE: UDI 2023 Building Codes Presentation

Hi Lily,

Thanks for following up. I promised to share and forgot. A PDF is attached. Since we are still making decisions on some of this content, I would ask that you pass along the request not to share these beyond the group for now. I've agreed to a larger presentation for UDI once the public review is live, and may have to adjust these slides to reflect newer decisions before sharing more broadly.

Hi Jun'ichi,

Thank you for your presentation last week to UDI members on the upcoming 2023 B.C. Building Code changes.

I am wondering if you have any materials available to share with the group following the presentation? Specifically, if you are able to share the presentation slides?

Please let me know when you get the chance!

Regards,
Lily

Hi Jun'ichi,

I hope you're doing well. I'm confirming that you're still able to participate in our Building Code meeting next Thursday afternoon via Zoom? Let me know if you have any slides/materials that we can circulate to our committee in advance.

I'm hoping that you'll be able to provide an update on the status of the 2023 BC Building Code updates and any potential mitigation measures, would this be possible?

Thanks,
Cassandra

Hi Jun'ichi,

Thank you for the update.

If you think the timing would work to have more information later in the fall, we would be happy to move our Building Codes Committee meeting. Are you available in the afternoon on October 18th? Any time between 1pm – 4 pm works on our end.

Thank you,
Lily

Hi Cassandra,

Thank you, I did receive your other email and will respond soon after we've had time to review and discuss.

On this note, I don't have a set day yet, but we do expect to know a bit more in late September or early October. I can definitely attend a meeting shortly after, but I'm sorry that I don't have a specific date I can give you.

Hi Jun'ichi

Thanks for following up on this. If the Sept. 21 timing no longer aligns, we can shift our meeting date to accommodate your schedule. This will avoid us needing to have two meetings in short succession, as the Building Code changes remain a major topic of discussion. Please let us know what timing would work better.

As well, we have gathered additional information from our members estimating the changes required to comply with the proposed accessibility requirements and we be able to share that next week. Hopefully this information is helpful and can still be considered as part of the process.

Thanks,
Cassandra

Hi Cassandra,

It sounds like there will be some further clarity on this just after your meeting- closer to the end of September. That means I won't have anything to share on September 21. Please feel free to let folks know we are expecting to know more shortly after the meeting. If helpful, I could attend the subsequent meeting to answer questions. For now, please do not hold a space for me on Sept 21. Thank you so much for working with me on this and for accommodating the changes as they've happened.

Hi Jun'ichi,

Thanks for the update. We will plan to have you provide a virtual update at the September 21st meeting. There may also be topics that our members want to discuss with you related to the BCBC changes as well.

I'd also flag that going into the fall our members will be looking for confirmation of the implementation timeline for the Building Code changes, as they were slated to come into effect by the end of the year. They're already reaching out to us looking for information to help direct their design processes, since these proposed changes will have a large impact. If you have any updates on when they will be effective that would be of interest to our members in September, or whenever information is available.

Feel free to reach out to myself or Jeff if there's any way we can be of assistance.

Thanks,
Cassandra

Hi Jun'ichi,

I hope you had a great vacation and got some R&R! I'm just picking up this thread from last month to confirm the timing of a follow-up meeting with UDI and our Building Codes Committee. We still have our next Committee meeting booked for Sept. 21, but could convene the group earlier if needed.

Let me know what the timing looks like for the next steps and we can set up a meeting with our Committee.

Thanks,
Cassandra

Hi Jun'ichi,

Thank you for reaching out and glad to hear you are enjoying your summer!

We would be pleased to meet to discuss the options you are looking at. Our next Building Codes

Committee meeting is scheduled for September 21st, 10am-11am. If it is preferred to meet with the group earlier, or if you require more than 1 hour, this can be adjusted.

Please let us know what your timing looks like to receive feedback on this and we look forward to continuing this discussion.

Best regards,
Lily

Hi Lily and Cassandra,

I hope you are both finding some time to relax this Summer. I've got some vacation coming up next week :)

When is your UDI building code committee meeting next? I would like to discuss with the group some proposed options for delayed implementation of some code requirements. This is based on the suggestion of tying the new code requirements to development permits.

Thanks,

Good afternoon,

On behalf of Anne McMullin, President & CEO of UDI and our members, please find attached our submission on the proposed B.C.-specific Building Code changes. Throughout our letter we recommend that additional time be taken before implementation to analyze the impacts of the proposed changes and develop offsets to mitigate them. We reiterate our appreciation for the work being done by the Building and Safety Standards Branch, and would be pleased to provide support if it is determined that further analysis will be done.

If you would like to discuss any of our recommendations further, please let us know.

Greetings,

The Ministry of Housing is working toward finalizing the British Columbia Building Code.

Thank you for participating in the earlier public review of code changes and providing feedback on proposed seismic mitigation provisions.

The purpose of this session is to continue that discussion and consider options to mitigate any unintended impacts of the seismic provisions in the proposed British Columbia Building Code. An agenda is attached.

Please feel free to send this invitation to the appropriate representative from your organization.

Sincerely,

Kevin Harding

November 17, 2021
Dear Anne and Jeff:

I am reaching out to you as Urban Development Institute is a key partner in the building regulatory system in British Columbia. The Building and Safety Standards Branch (the Branch) is exploring the possibility of revising the code inquiry service to ensure that code users get the best value for this service and consistent guidance regarding the BC Codes.

The question has been raised if there is better value and service if Urban Development Institute members work through their associations when they have feedback or questions about the BC Codes. The Branch remains committed to connecting at an organization level, especially for BC Codes questions that are not resolved for your members.

I would appreciate the opportunity to meet and discuss our ideas for streamlining the code inquiry process further and will be following up shortly. You are also welcome to reach out to me at any time through any of the means below.

Sincerely,
Jun'ichi Jensen

2021-11-30 UDI Meeting
AC Notes

• UDI members; build range of products (primary focus Part 3 - though some members build Part 9 townhomes)
• JF not aware that members used code inquiry service
• Developers typically work through RPs on Part 3 projects / CHBA on Part 9 (JJ shared that some reach out via code questions)
• Jeff was member of past BC Building Policy Advisory Committee
• RACC - Increased responsibility for province to be connected to provincial industry
• JF supports/favours BPAC-type model for industry voice into system (via province) UDI has building policy committee (meets about 4 times per years)
• BPAC was at 30,000 foot level - advised on policy but was not a technical committee (though some members were also technical experts)
• Likely to find need to interact with UDI at both levels (policy and technical) probably at different times
• E.g. BPAC could strike/form technical working groups
• UDI always felt separated from national system (UDI does not have a national body)
• Support
• UDI has a building code committee(?) [perhaps misheard… maybe would consider striking one?]
• UDI Newsletter every 2 weeks to 3000 recipients
• Corporate- hard to count individual members; 900-950 corporate members
• BSSB; could distribute comms for harmonization via newsletter
• BSSB; send links to Accessibility consultation for newsletter
Send to Jeff and Lily at lshieldsanderson@udi.org
• Favours joint (other industry reps) committee such as BPAC (meeting about 2-3 times a year; Feb, May, Oct)
• JF suggests we talk to Applied Scientists, Engineers and Architects and CHBA
• Harmonization; JF asked the question "what do we want done first?" (advice; look at cooling)
Decarbonization basically means heat pumps; heat pumps made viable when cooling is required
• BPAC; what does BC want out of this change process?

2023-02-23
Rick Bortolussi representing UDI
Works for TH Housing Solutions
Used to be CBO for City of Richmond
Member of SC-HSB and SC-EE
Wing of company; non-market housing

CMHC universal requirements
BCH guide
BCBC/NBC
CSA standards
Be consistent

Use quite wide flat stock at multiple heights; 3 sides
Likes medicine cabinet
BCH floor drain; requires additional plumbing $; reason t minimize wet floor slips; suggests should be options for materials that manage water

MURBs have common washrooms with toilet with flush valve
(Common spaces already to be accessible)

Usually not a problem to increase size of front common entrance

Area of refuge… should consider adopting (Rick; should consider bringing back)

Areas in MURBs problematic for builder
If you have accessible unit; requirements for thresholds
Adaptable unit doesn't have height requirements; don't have accessible depth
Accessible catered to, Adaptable not catered to
If they are all the same, they should cost the same

Common areas with laundry areas; common kitchens should be accessible
Appliances cost significantly more (wall oven with swing door very expensive)
Accessible dishwasher (BCH) challenge for height

BC clear which units are applicable for adaptable/accessible/universal

Watch for unrecoverable costs for homeowner

Add on changes for energy and adaptability

AC; DRAFTING; state 3.8.5. not required [applicable] to alterations

Type of doors for laundry; bypass/bifold problematic; cost of maintenance

UPDATED: Meeting Agenda Attached – Verna

UDI Webinar Moderator is inviting you to a scheduled Zoom meeting.

Topic: Pre-Event Meeting: BC Hydro & Clean BC UDI Webinar
Time: Nov 18, 2021 04:00 PM Vancouver

Join Zoom Meeting
s.15; s.17

Quick chat to share how the first two meetings (BOABC & LGMA) went and brainstorm for ideas to support next meetings (UDI, AIBC and CHBABC already scheduled).

Some ideas already on the table:

* Written backgrounder(s) we can share
* Town hall (or perhaps joint meeting with multiple partners..)

Subject: Orca light steel manufacturing

Hi Zac,

I wonder if you might have any suggestions for follow up or contacts. We just met with Orca- they are on the island and make light steel frame buildings using structural steel studs that are fabricated onsite, and can be assembled quickly by people with minimum construction experience. They were quite upfront that there is no “golden bullet” to solve the housing crisis, but think their product and methods could be of help, and I agree. They seem to have compliance dialed in via certifications and engineering, so I don’t think BSSB can offer more than some good contacts. I plan to reach out to BC Housing and also suggested they do some education on their product via BOABC and perhaps UDI and CHBA. Any additional thoughts or specific contacts you could point me to? I heard Lisa Helps is at BCH now? Would she be the right person? I was going to send to Wilma just from the education perspective.

Subject: RE: CHBA+UDI Briefings & eApproval logs

Thanks, Indi. I will just flag that the previous (Dec 4) meeting did not provide an opportunity to discuss digitized building codes. It was focused on code adoption. Zac or Nicole may have connected separately so I'll let them chime in.

Subject: CHBA+UDI Briefings & eApproval logs

Hi All,

Just reaching out in regards to eApp 131-1054, as there seems to be some confusion. The below meeting that I shared with you is a rapid-fire briefing to CHBA + UDI regarding Bill 44, 46, 47, and STR. There are no references to the building code in the meeting tomorrow.

The original CHBA + UDI housing briefing on November 28thth was cancelled, and split into two staff-level briefings without MRK:

1. December 4th on Building Code (eApp 131-3031)
2. December 14th on Bill 44, 46, 47, and STR (eApp 131-2393)

eApp 131-2393 is the correct eApproval log for tomorrow, and it correctly ONLY contains information for bills 44, 46, 47, and STR. Building codes and digitization are not included in tomorrow's briefing. Unfortunately, I believe that eApp 131-1054 was a duplicate eApp log to 131-3031 and can be closed.

Thank you,

Subject: RE: CHBA request for meeting with MRK

Thank you, that was the one I was looking for. We and the digital team have contributed to the e-app already and I've now sent to PLUM to address their items. I now see STR on the list- that may be new as I don't think this has been addressed yet- HPB may also need to look. E-app 131-1054
Thanks, all!

Subject: CHBA request for meeting with MRK

Hi Indiana,

Do you know if the meeting CHBA requested with MRK occurred? We had an e-app 131-1054 and sent it to 2 other branches for input and it got stuck, now the meeting date has passed. We're not sure if the meeting occurred on Nov 28 as indicted in the e-app or if it got rescheduled. It's a broad set of concerns they want to discuss related to housing legislation, so I doubt they would have cancelled, (nor been satisfied with other building code related meetings that have since happened).

Subject: notes

KH notes:

[3:25 p.m.] Harding, Kevin HOUS:EX

- Teri up to speed on most of the back and forth
- Juni providing general overview of the two items notable - seismic and accessibility
- s.13
-
-
-
-
-

- s.13
-
-
-
- Briefing set for the 10th
    - Like to pull back the note
    - There was a bit of a mixup - technical decisions made that were too narrow
    - Like to revise these and provide better options in the form of a decision note
    - s.13
    - Other item - going back to UDI and getting a bit more info from them on where they may like to see us land; it is risky because they will not be happy
        - Up to us
        - s.13
        -
        -
    - Framing for the team
        - Accessibility and seismic - when we started, were not in an acknowledged housing crisis
- Move forward as briefed
    - Pull the IBN back and reframe
    - Keep MIN briefing
    - Discuss with him the implications

[3:25 p.m.] Jensen, Jun'ichi HOUS:EX
wow, thank you!!
[3:26 p.m.] Harding, Kevin HOUS:EX
Happy to help! Shannon cancelled our follow-up, but I think that there's value in making sure we focus on understanding a recommendation to delay - s.13
s.13
[3:26 p.m.] Harding, Kevin HOUS:EX
Not sure how to brief that
[3:27 p.m.] Harding, Kevin HOUS:EX
Will likely come some how up in the options - s.13
That may not be the best approach as I write it....
[3:28 p.m.] Jensen, Jun'ichi HOUS:EX
I will report out tomorrow to the team and share this... we'll loop you in as we move forward.
[3:29 p.m.] Harding, Kevin HOUS:EX

Subject: Digital Innovation in Housing Construction

Greetings everyone,

Thank you again for participating in the Ministry of Housing's June 12th engagement on digital innovation in housing construction.

Attached is the *Ministry of Housing – Digital Innovation in Housing Construction, What We Heard Summary*. It also includes the Ministry's key engagement activities planned over the summer as we prepare to move into our product development stage this fall.

We really appreciated your participation and look forward to continuing to collaborate on this important work.

Wishing you all a safe and happy weekend!

Best,
Zachary D. May, MBA
Executive Director

Hi Tyler,

BOABC will be involved. We have reached out to LGs and Indigenous communities. We will also be connecting with BOABC, AIBC, EGBC, UDI, CHBABC… in the coming weeks.

Best,

Hi Zac,

A member indicated that an email went out a few days ago asking for organizations to identify whether they are interested in participating.

I don't believe that the Association itself received an invite to participate, but we'd very much like to be involved. Being involved will help us provide the province with feedback but also communicate out to officials, local governments and others who might contact us looking for information.

Can you let me know how we can be engaged in this work so that I can let our Executive know what is required?

Hi Mark,

I just heard that our contact for the City of North Vancouver is out of the office and would have missed the invite. Any chance we can add Tim Ryce, Chief Building Official from City of North Vancouver? tryce@cnv.org

Subject: Contacts for digital permitting roundtable

Hi Nikki and Bindi,
I hope you both are well.
I am reaching out to see if you can help us identify contacts to invite to a digital permitting round table on Thursday, April 6.
We have time held from 3-5 pm that day. It should be an hour. As I understand it, the Minister would like Ministry staff to speak about where we are going as well as the Digital Supercluster. And then open it up to thoughts from the attendees. Below is a list of the stakeholders he'd like to join.
Digital Supercluster
UDI
Homebuilders
Architects
Engineers
Planners
BC Building Trades
GVBOT
North Vancouver – Tim Ryce (Chief Building Official)
Kelowna
Surrey
Vancouver

Victoria
Burnaby
Port Coquitlam
We are hoping to have the list of invitees finalized today so if you can please provide contact details at your earliest convenience that would be amazing.
Thanks for your help and all the best,
Mark
