

Ministry of
Environment

BTEX Data Survey – Peace Region

Data Collection Periods:
July 20 through September 10, 2010
and
February 4th through April 18, 2011

Ministry of Environment
Mobile Air Monitoring Lab (MAML)
N.E. BC

The Ministry of Environment's Mobile Air Monitoring Laboratory (MAML), was deployed to monitor air quality in several communities in NE BC during 2010 and 2011. Specifically, the MAML was deployed to measure and observe the potential impact of oil and gas development on air quality. The selected locations were Toms Lake, Ground Birch, Rolla, Farmington and Kelly Lake. The MAML operated for approximately 3.5 weeks at each location from May 25, 2010 to February 28, 2011.

The following parameters were measured throughout the entire survey: sulphur dioxide, nitrogen dioxide, carbon monoxide, ozone, total reduced sulphur, and particulate matter (PM). A survey of the results of monitoring for these parameters is available at http://www.bcairquality.ca/reports/region_Peace.html.

In addition, a BTEX (Benzene, Toluene, Ethyl-benzene and Xylene) Monitor was installed in the MAML just prior to the deployment at Rolla (July 2010) to monitor potential volatile organic

compound (VOC) emissions from oil and gas development. The BTEX monitor installed was a VOCTEC Pneumatic Focusing Gas Chromatography (PFGC) in which an air sample of 1-1000 cc is compressed to 600 psi and injected directly on column in a specially designed gas chromatograph (GC)¹. This GC is entirely constructed within a personal computer (the GC-in-a-PC). This instrument is experimental in nature and new to Ministry staff.

The deployment periods for the BTEX operation are outlined in Table 1

Table 1: Location and duration of BTEX monitoring in the Peace region

<u>Location</u>	<u>Operational Period</u>
Rolla	July 20 – August 11, 2010
Farmington	August 13 – September 10, 2010
Kelly Lake	February 4 th – April 18 th , 2011

The Minimum Detection Limit (MDL) at the time of installation was 1ppb. Readings below 1 ppb were obscured by helium contamination in the monitor. After the Kelly Lake deployment, a helium scrubber was installed on the monitor lowering the BTEX MDL to 0.2ppb. Low levels of Pentane were detected at two of the three deployments (Farmington and Kelly Lake). Helium contamination did not impact Pentane monitoring.

BTEX was not detected during the MAML deployments in the Peace Region at the MDL of 1ppb. A further deployment of a BTEX analyser with a lower MDL would be required to determine the presence of lower hourly concentrations of BTEX in the area.

Methane was measured at 1.8 ppm throughout the measurement period.
