Mr. Davies,

Please accept the attached May 2012 Monthly Compliance Reports for the Upper and Lower Clowhom hydroelectric sites, submitted in accordance with the conditions of the Interim Leaves to Commence Operations, dated August 4, 2011 and their respective extensions dated December 23, 2011.

Please contact Robert Kulka or me with any questions or concerns.

Sincerely,

Kyle Edwards, BASc, EIT
Operations Engineer

Lower Clowhom - Monthly Compliance Report – May 2012

Dear Mr. Davies,

Please accept the following letter report, submitted in accordance with the conditions of the Interim Leave to Commence Operations dated August 4, 2011, and the subsequent extension dated December 23, 2011 for the Lower Clowhom power plant.

Compliance:

IFR							
Compliant							
Ramping							
Compliant – see below							
Event Date/ Time	Date First Reported	Duration (h:m)	Maximum Ramping Rate* (m/h)			Cause	Conclusion
			LIFR	LDR	LDS		
5/2/12 10:10	5/2/12	0:10**	0.021	0.001	-0.063	Vibration Trip	Not a ramping Non-compliance as -0.063 ramping rate was only for one reading. Original report was based on improperly scaled data.

Summary of operational information:

	Cause
Stage	

Diverted Flows	[redacted]

The ramping data attached consists of stage readings from the IFR gauge collected at 5 minute intervals, obtained from the plant HMI. Diversion reach (LDR) and downstream of powerhouse (LDS) data were obtained from Via-Sat Data Systems. The LDS data provided by Via-sat was inconsistent and had many false readings, therefore we are providing data from our plant tied gauge downstream of the powerhouse as it appears to be more reliable.

One potential ramping non-compliance reported on May 12, 2012 as part of the 24h reporting requirements was found to be compliant with ramping restrictions after reviewing corrected data from downstream of the powerhouse.

Sincerely,

Robert Kulka
Operations Manager

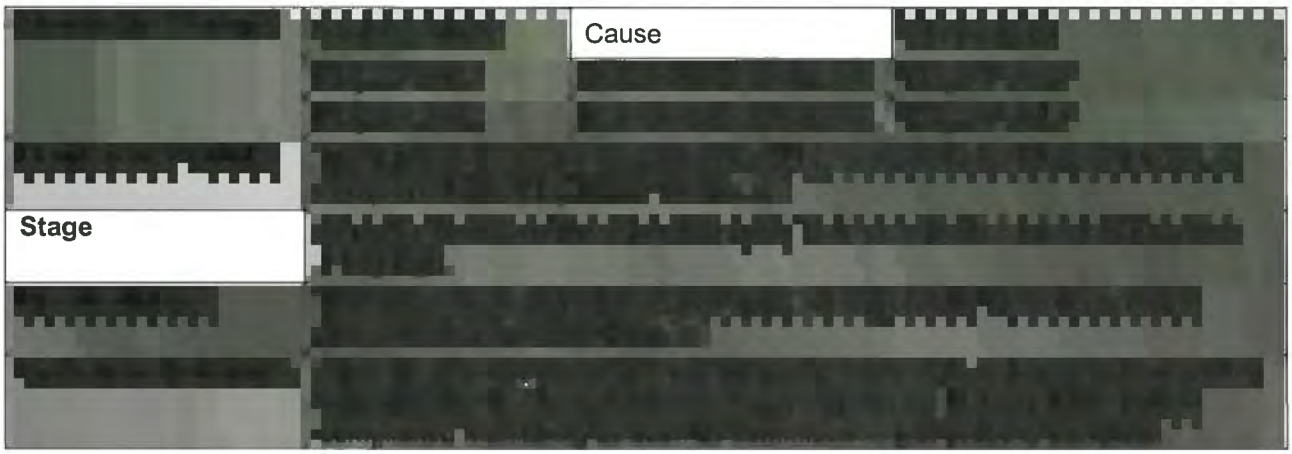
Upper Clowhom - Monthly Compliance Report – May 2012



Dear Mr. Davies,

Please accept the following letter report, submitted in accordance with the conditions of the Interim Leave to Commence Operations dated August 4, 2011, and the subsequent extension dated December 23, 2011 for the Upper Clowhom power plant.

Compliance:

IFR
Compliant
Ramping
Compliant

Summary of operational information:

The ramping data attached consists of stage readings collected at the IFR gauge at 5 minute intervals by the plant control system HMI, and stage readings collected at the gauges in the diversion reach and downstream of the powerhouse collected by Via-Sat Data Systems.

Sincerely,

Upper Clowhom Power Plant - May 2012

Date:	Friday, April 6, 2012 11:09:58 AM

During the startup of G1 there was a drop in flows as G2 was ramped down to compensate for the increase in flow during the start up of G1. There was a drop of approx. 3.6 to 4 cm (depending which gauge is used) exceeding the recommended guideline of 3.6cm/hr at the downstream of power plant river gauge. Flows were re established quickly causing a spike upwards in river level, followed by another subsequent drop to baseline flows.

Two pink salmon fry were found dead and are being analyzed. Three fry were found alive and returned to the river (see initial report below). A detailed report from Ecofish will follow Monday.

Plant operations staff performed this operation manually to the best of their abilities using the data available, however this is a difficult operation.

This function is being automated as part of the PLC replacement project which is currently proceeding. Testing will be performed under higher freshet flows.

Subject: MQM strandaing search complete April 05, 2012

Hi Marc,

From 14:48 to 15:50 April 05, 2012, the stage at the MQM DSLG01 dropped from 0.742 to 0.702 (4.0cm) over 12 minutes, the 24 hr average water level was approximately 0.794. There were subsequent spike in the stage following the initial drop. This was a plant induced event that we believed warranted a fish stranding search downstream of the Lower Mamquam Hydroelectric project, especially given the sensitivity and the fact that newly emerged fry are present and most susceptible at this time of year.

The post event stranding searches are complete on the Mamquam from 19:00 to 22:30 April 05, 2012. During the searched, two stranded dead pink salmon fry and three isolated alive pink salmon fry were found under substrate on the bank near the river's edge. The dead fry were collected for analysis whereas the live fry were successfully returned to the river.

I will have a ramping incident response memo out Monday morning.

Please follow up with Adam or I if you have any further questions.

Thanks,

Date:	Thursday, March 15, 2012 4:08:16 PM

Mr. Davies,

Please be advised that that at approximately 12:00 today (15 Mar 2012), there was an event at the Stokke Creek Hydro Facility which caused a low IFR event for approximately 3 hrs. Initial data indicates there was a slide upstream of the intake structure that caused a rapid decrease in creek flow.

A detailed report will be forwarded once all of the event data can be compiled.

Regards,

Sean McCoy, P.Eng.

Attachments:	image001.jpg Memo to Marc Nering re 30 Mar 2012 Ramping Incident Response Monitoring.pdf

Marc,

The memo is attached. You make some good points below. We cannot confirm that the ramping excursion did indeed isolate these fry, but it is possible. The fry were found approximately 2 m from the wetted edge, in the substrate. They were still alive because the pocket they were found in was still wet (~1 cm of water) and air temp was not freezing. This uncertainty is discussed in the memo.

We understand that you are concerned that the river may naturally be isolating or stranding fish and that these observations are being attributed to plant activities when, in fact, this may not be the case. I have discussed this briefly and Adam and we have some ideas to address this concern. We will contact you on Monday to discuss this further.

Ian/Dorian,

Please explain how this could occur? How did the fry survive for over 18 hours? The exceedances occurred at 16:00-22:00 yesterday.

Could they have been stranded as a result of the decrease in the natural flow rate? How close to the river's edge were they found? When was the spot the fish were found in dewatered? The plant increased the natural flow rate drop by 1.6cm/hr max, as the natural decrease in flows was 2.5cm/hr.

Thanks

Marc

Subject: MQM strandaing search complete

Hi Adam,

The post event stranding searches are complete on the MQM. During the searched, two fry (salmonids ~30mm) were found alive under substrate on the bank and were successfully returned to the river. Pascale and I are currently working on the event memo and will have it sent out to Adam (cc Ian) this afternoon.

Thanks,

Dorian

ECOFISH RESEARCH

MEMORANDUM

TO: Marc Nering, Matt Speer
FROM: Adam Lewis
DATE: March 31, 2012
FILE: 1071-04.09
RE: Lower Mamquam River - Ramping Incident Response Monitoring

This memo describes observations made during a ramping incident response monitoring conducted for Atlantic Power Corporation (APC) on the Lower Mamquam River run-of-river hydroelectric project (the project) on March 30, 2012. Ecofish staff received an automated email alarm notification of the incident at 20:11 hrs (Pacific Daylight Time PDT - local time). The ramping event occurred at approximately 18:36 hrs. During a natural decline in river discharge following a rain event, plant weir inflation operations to adjust headpond depth resulted in water level fluctuations downstream of the plant which triggered the excursion.

In the downstream reach, there was a 4.2 cm stage reduction from 18:36 hrs to 19:00 hrs (PDT) which resulted in an hourly stage change rate at the hydrometric gauge (MQM-DSLG01) of -4.2 cm/hr (Table 1). Ramping rates were calculated following the standard protocol (Appendix A), as the difference between the current data point stage (cm) and the maximum stage in the previous hour (cm).

Time series of discharge, stage, and ramping rates as recorded at the hydrometric gauges during the events are shown for the downstream reach (Table 1).

Crews searched monitoring site MQM-DSSD02, located on either side of the Highway 99 Bridge, between 12:50 and 13:58 hrs on March 30, 2012. As discharge had been decreasing between the time of the incident and the time the search began, the crew inspected the dry steam margin adjacent to the wetted channel as well as the shallow wetted marginal areas to search for stranded fish. Two areas of 100 m (one upstream and one downstream of the bridge) were searched by four people. Broad-based searches were conducted for approximately 49 minutes for an area 8250 m^2 while hotspot, detailed searches were conducted for 85 minutes (210 m^2). No stranded or isolated fish were found, but two free swimming fry were observed at the river margin.

Crews then moved to MQM-DSSD03 downstream of Government Rd. Bridge, and were onsite from 14:06 until 14:58. Two areas of 100 m (both downstream of the bridge, one on river right, one on river left) were searched by four people. Broad-based searches were conducted for approximately 20 minutes for an area 600 m^2 while hotspot, detailed searches were conducted for 84 minutes (213.5 m^2). Two isolated salmon fry (approximately 30 mm fork length) were found on the river right bank approximately 2 m back from the wetted edge. The fry were found in a wetted pocket within the substrate, the condition of the fry was good, and they were quickly returned to the river alive.

ECOFISH RESEARCH

In summary, the Lower Mamquam project ramping excursion on the evening of March 29, 2012 exceeded the recommended 3.6 cm/hr ramping criterion, as measured at MQM-DSLG01. Ecofish crews were onsite the following day and found two isolated fry at MQM-DSSD03. It is possible that the isolation of the fry was a result of the ramping excursion. It is also possible that the fry were isolated as a result of natural stage change as river flow was naturally decreasing at that time; this cannot be confirmed. Both fry were found alive and returned to the river.

Please contact me if you have any questions or need further information.

Yours truly,
Ecofish Research Ltd.

DRAFT

ECOFISH RESEARCH

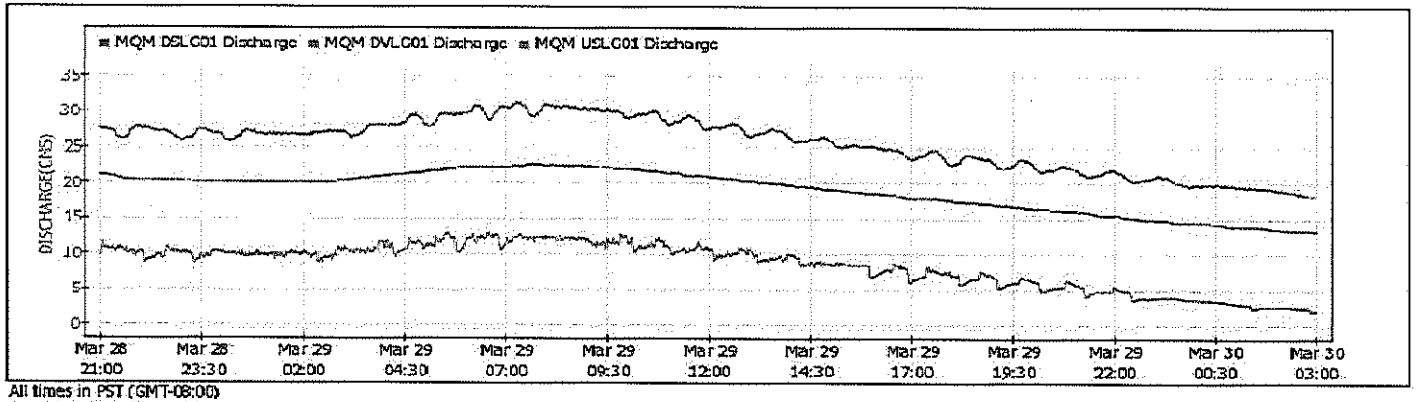
Table 1. Summary of stage change, incident duration, and rate of change at MQM-DSLG01 during the ramping excursion on March 29, 2012.

Compliance Point	Start Time (PST)	End Time (PST)	Duration (hh:mm)	Stage Start (cm)[4]	Stage End (cm)[4]	Total Stage Change (cm)[1]	Maximum Hourly Stage Change Rate	Estimated Discharge Start (cms)[1]	Estimated Discharge End (cms)[1]
MQM-DSLG01	29-Mar-12 17:36	29-Mar-12 18:00	0hour 24min	103.7	99.5	4.2	-4.2	24.7	22.6

1 Negative number indicates stage decrease.

2 MQM-DSLG01 discharge estimated from Rating Curve 8.0 (RC8.0; Discharge = 8.336 (Stage 0.4) ^ 2.998. Discharge values are estimates.

3 This is the maximum stage change recorded within one hour at the hydrometric gauge.



4 Start and End Times denote stage decrease induced by ramping.

ECOFISH RESEARCH

Appendix A. Ramping Rate Violation Measurement

The procedure is as follows:

1. The maximum stage observed over the past hour at time ti, , should be determined for each data point according to the following equation:
   hmax(ti) = max (h(ti-k), ... , h(ti-k))

   where *h* is stage, *k* is the number of data points recorded per hour, and *t* is time, The maximum stage decrease over the past hour relative to time *ti* is then defined by the equation:
   hmax(ti) = max (h(ti-k), ... , h(ti-k))

2. If the maximum stage change *hmax(ti)* exceeds the ramping criterion (e.g. -3.6 cm for MQM-DSLG01), the data are flagged as a potential ramping event. That is the exceedance rule (Rule 1).

3. A mortality event is assumed to occur if the stage remains below for a critical period, which is the dewatering time. The time to asphyxiation is assumed to be 10 minutes considering both air exposure and the time needed for the substrate to drain. This is the dewatering rule (Rule 2).

4. The average stage over some time prior to a ramping event may be used to determine the likelihood of habituation of the affected habitat (we have selected 24 hours). If the maximum level associated with the ramping exceeds the average stage from the past 24 hours, the stage change is recomputed using the 24hr average (as hmax), and violation of Rule 1 is reassessed. If the stage change based on the 24hr average does not exceed the ramping criteria, the event is not flagged as a ramping excursion.

Mr. Davies,

The follow-up report for the variance event at the Upper Stave generating facility is attached for your records.

Regards,

Sean McCoy, P.Eng.

Mr. Davies,

Please be advised that on 27 April 2012 there was an IFR event at the Upper Stave generating facility.

A follow-up report will be forwarded once all the data has been compiled and analyzed.

Regards,
Sean McCoy

Event Description

Date:	27 April 2012	Time:	23:00
Event Type:	IFR		

- The Upper Stave River was experiencing abnormally high flow prior to the variance event due to precipitation and warmer weather.
  - The peak instream flow was approximately 135 cms on 26 Apr 2012 @ 08:00. Refer to Figure 1.
  - The river began to naturally ramp down after the peak flow.
- During the high flow event, the IFR gate became partially obstructed due to the high volume of submerged debris which led to the IFR event when the river flow returned to normal.

Response & Mitigation

- The operator remotely opened the sluice gate to restore the IFR flow.
- The IFR gate was manually opened to dislodge the material that was causing the obstruction.

Environmental Impact & Assessment

- The instream flow release was 1.72 cms for approximately six hours, slightly less than the licenced release of 1.85 cms.
- The high flow event caused the stage to change drastically prior to the event.
  - The stage ranged from 0.2 m (prior to high flow event) to 2.9 m (peak flow) and then down to 0.17 m over a period of four days.

Preventative & Corrective Measures

- The plant control system has been modified to maintain the IFR by opening the sluice gate in the event that the IFR gate becomes partially obstructed.

Subject:	Lower Bear - E Stop Event - July 2nd 2012 - Ramping Violation Notification
Date:	Tuesday, July 3, 2012 3:11:57 PM
Attachments:	July 2nd 2012 - LB E Stop.xlsx

Jen et. al;

Yesterday (July 2nd 2012) at 4:15 PM, we had an e stop trip at Lower Bear Generating Station due to an issue with the main transformer oil temperature switch.

The site operators followed the draft interim compliance table. They notified FSCI Consultants and visited the site to respond to up ramping event. At the time of this trip, the spill into the bypass reach was approximately 6 CMS and we will wait for the bypass reach dataset download to confirm if there was a stream ramping violation.

It was found that under this combination of trip event and equipment operation, the logic resulted in a non ramping mode response to protect the rotating equipment. In further review, it was determined that there is not sufficient risk to equipment to justify a non ramping trip response and given this the operating logic has been modified so that future similar trip occurrences will respond with a ramped shutdown of the equipment.

Please see attached unit ramping violation data report.

---

Jim and Scott,

Please find attached the compliance monitoring data as discussed along with a report and incident report of the failure of the sluice gate actuator. We (George and I) have discussed two issues with Regional upon receiving this data on Saturday June 9, 2012.

1. The ramping rate information is not included as Dave Bates is away on holidays until June 13. Upon his return the independent in-stream level measurements and ramping sections will be available and submitted by June 15th via resubmission of the report.
2. The second more alarming issue is that the graphs and data submitted indicate that they are operating Lower Bear at a plant flow rate slightly higher than their licenced flow. The weekly report reflects that the plant has been operating at 8 MW which Regional indicated is the design output that then uses a flow in excess of the licenced flow as presented on the control system. Regional indicated that Andritz is calibrating the turbines this week at the maximum plant flow which to date has only been estimated in their flow algorithm. George instructed Regional, that until this is done and vetted through Dave Bates and/or Ecofish, the maximum flow to be used as currently measured is 7.9 m3/s. and instructed Regional to take the immediate steps necessary to operate Lower Bear at or below its licenced flow of 7.9 m3/s. Regional has confirmed today, that they will regulate flows to 7.9 m3/s using the currently uncalibrated governor flow estimate by tonight or tomorrow morning and that until the hard programmed limit is installed, they will be operating the units in flow mode such that the governor flow estimate does not indicate higher than 7.9 m3/s.

I am expecting the next set of data shortly.

-Jenn

BEAR HYDRO LIMITED PARTNERSHIP

Conditional Water License Compliance Reporting

May 27, 2012 to June 2, 2012

Presented to the Forests, Lands, and Natural Resource Operations Ministry regarding the Operation of the Lower Bear Creek Hydro Project (CWL File# 2001940) and the Upper Bear Creek Hydro Project (CWL File# 2001939) between the dates of May 27, 2012 and June 2, 2012 to demonstrate compliance.

Contents

Lower Bear Creek Hydro Plant Flow 4

Non-compliance Explanation 5

Lower Bear Creek Hydro In-stream Ramping 5

Overall Upper Bear Creek Hydro Plot 6

Upper Bear Creek Hydro In-stream Flow Release (IFR) Flow Rate 7

Upper Bear Creek Hydro Plant Flow 8

Upper Bear Creek Hydro In-stream Ramping 8

Overall Lower Bear Creek Hydro Plot

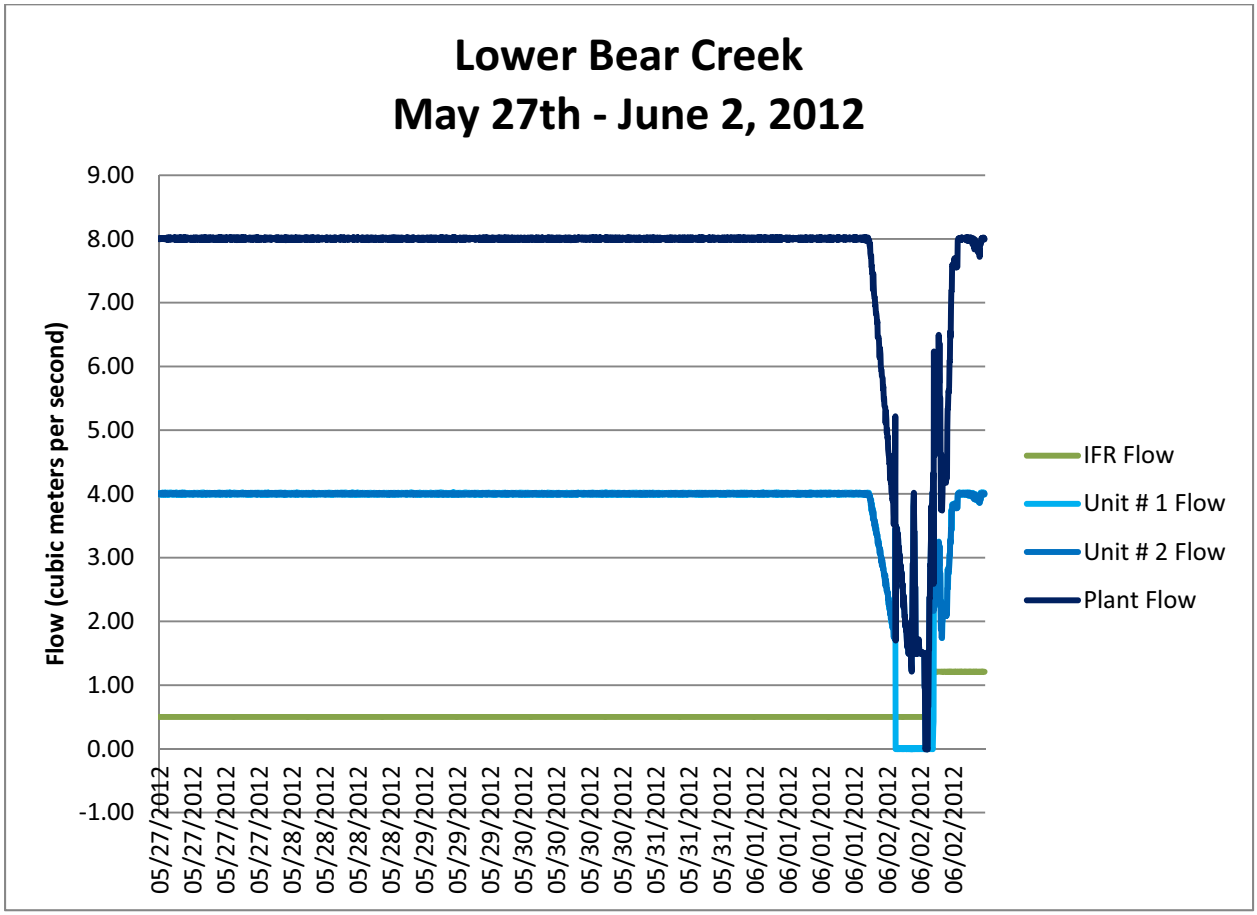

Figure 1: Plot showing in-stream flow release flow rate, and unit 1, unit 2 and plant flow rate at the Lower Bear Creek Hydro Project. The ramping data will added once received.

Lower Bear Creek Hydro In-stream Flow Release (IFR) Flow Rate

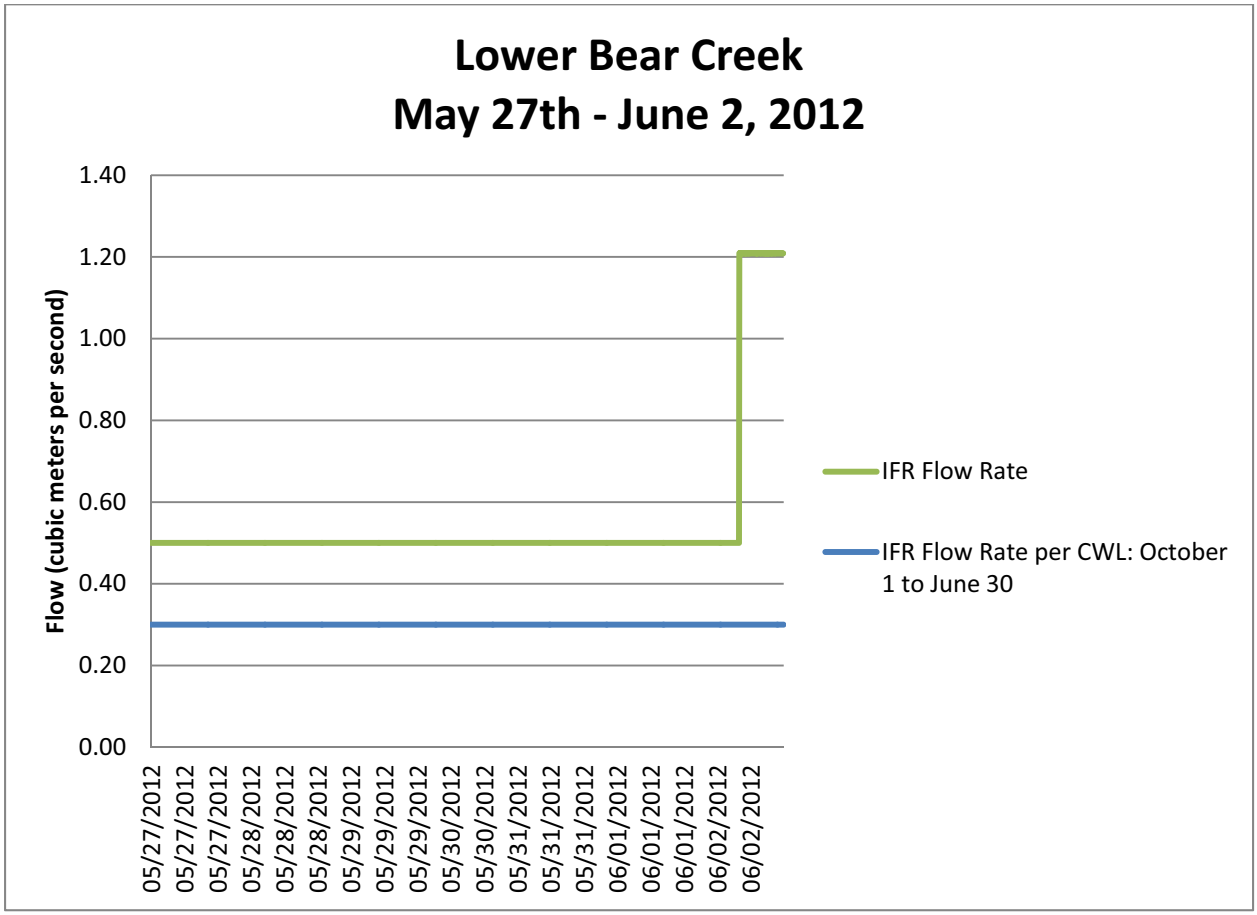

Figure 2: Plot showing IFR flow rate at the Lower Bear Creek Hydro Project compared to the IFR flow rate requirement during May and June. The IFR flow rates are kept higher and will be lowered once instream calibration is completed with IEM.

Lower Bear Creek Hydro Plant Flow

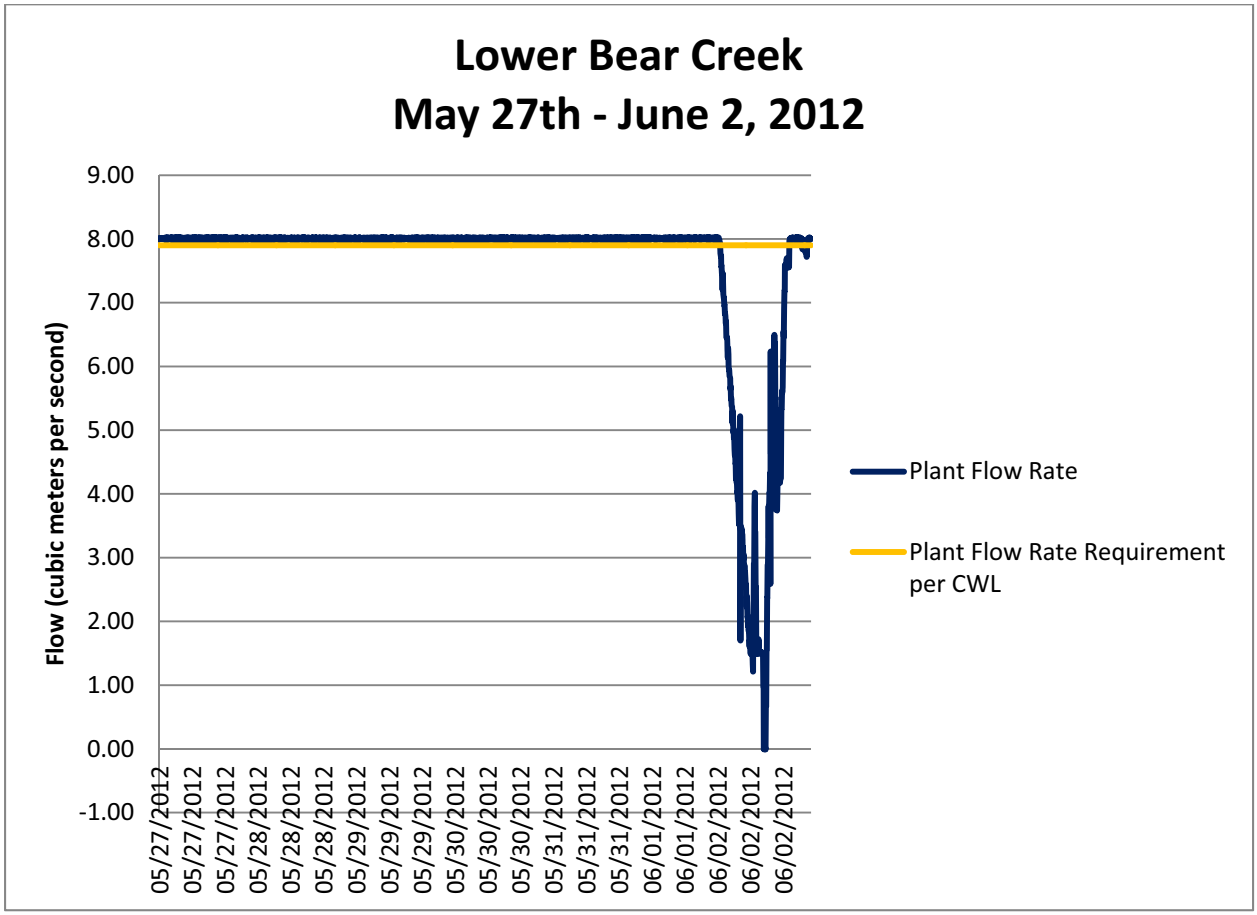

Figure 3: Plant flow of the Lower Bear Creek Hydro Project compared to the conditional water license authorized flow rate. Plant flow is estimated from wicket gate position at a given pressure head. Flow estimates were previously understated but a course adjustment was recently made. Final confirmation of flow rates will be undertaken during index and performance testing planned for the week of June 11th.

Non-compliance Explanation

On June 2nd, 2012, Lower Bear experienced a failure of sluice gate operation at the intake. The sluice gate was initially stuck at 14% and would not respond to commands to close as the headpond levels were dropping and later experienced a complete mechanical malfunction and fully closed. The sluice gate actuator repairs are underway. Please see attached incident report for the event. There is a possibility of non-compliance during this event due to sluice gate closing rapidly. However, Operators were on site and responded quickly by opening the flushing and IFR gates to supplement flow into the creek. Thus, we will wait to see in-stream flow and level measurement dataset to confirm if this was a non-compliance issue.

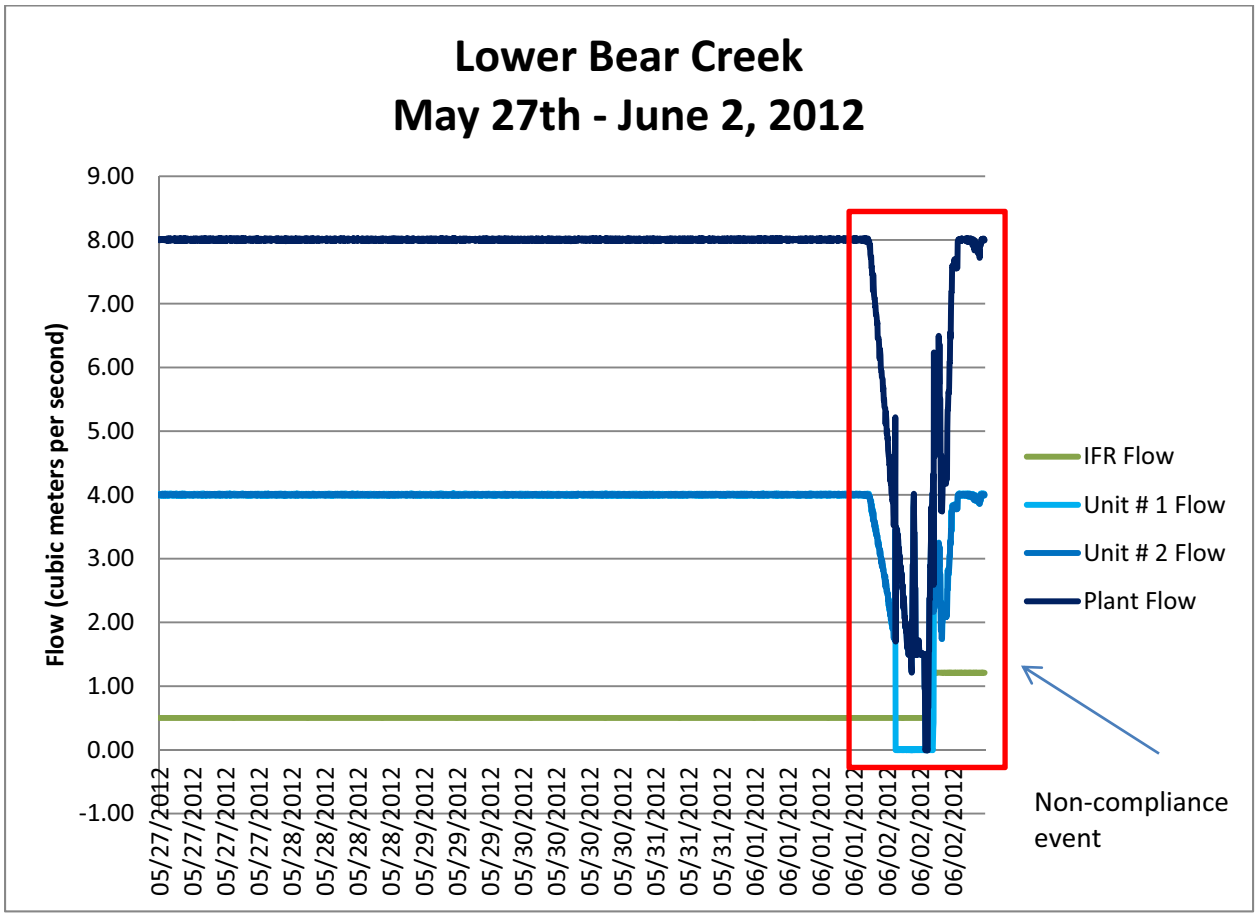

Figure 4: Non-compliance event; see explanation above.

Lower Bear Creek Hydro In-stream Ramping

To be completed and resubmitted by June 15, 2012

Overall Upper Bear Creek Hydro Plot

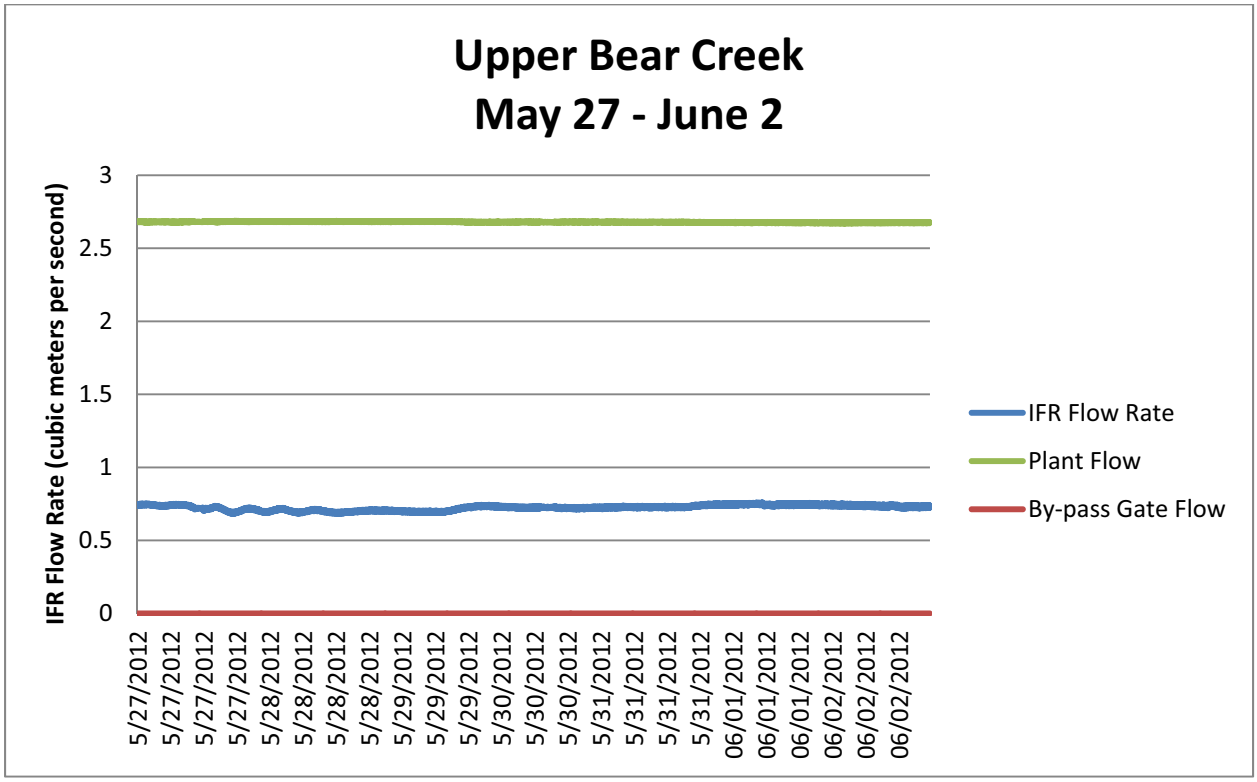

Figure 5: Plot showing in-stream flow release flow rate, and total plant flow rate through the one Pelton unit at the Upper Bear Creek Hydro Project. The ramping data will added once received.

Upper Bear Creek Hydro In-stream Flow Release (IFR) Flow Rate

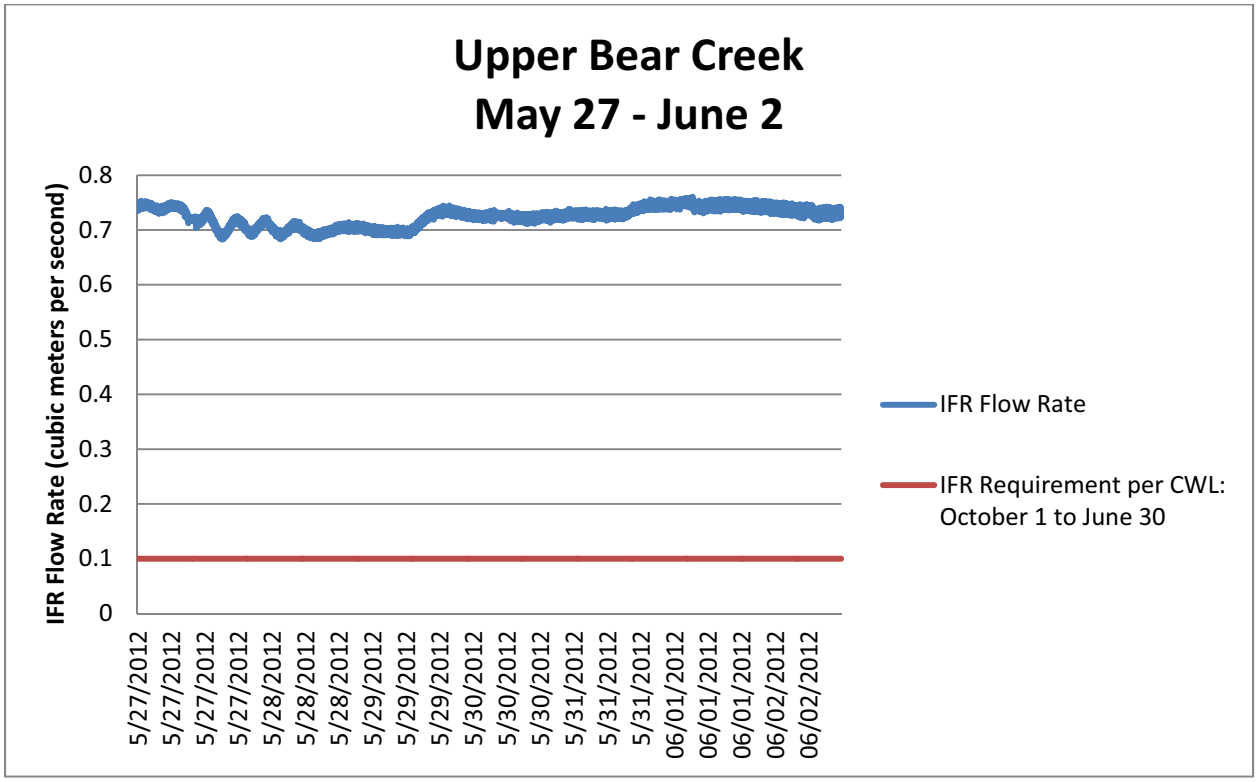

Figure 6: Plot showing IFR flow rate at the Upper Bear Creek Hydro Project compared to the IFR flow rate requirement during May and June. The IFR flow rates are kept higher and will be lowered once instream calibration is completed with IEM.

Upper Bear Creek Hydro Plant Flow

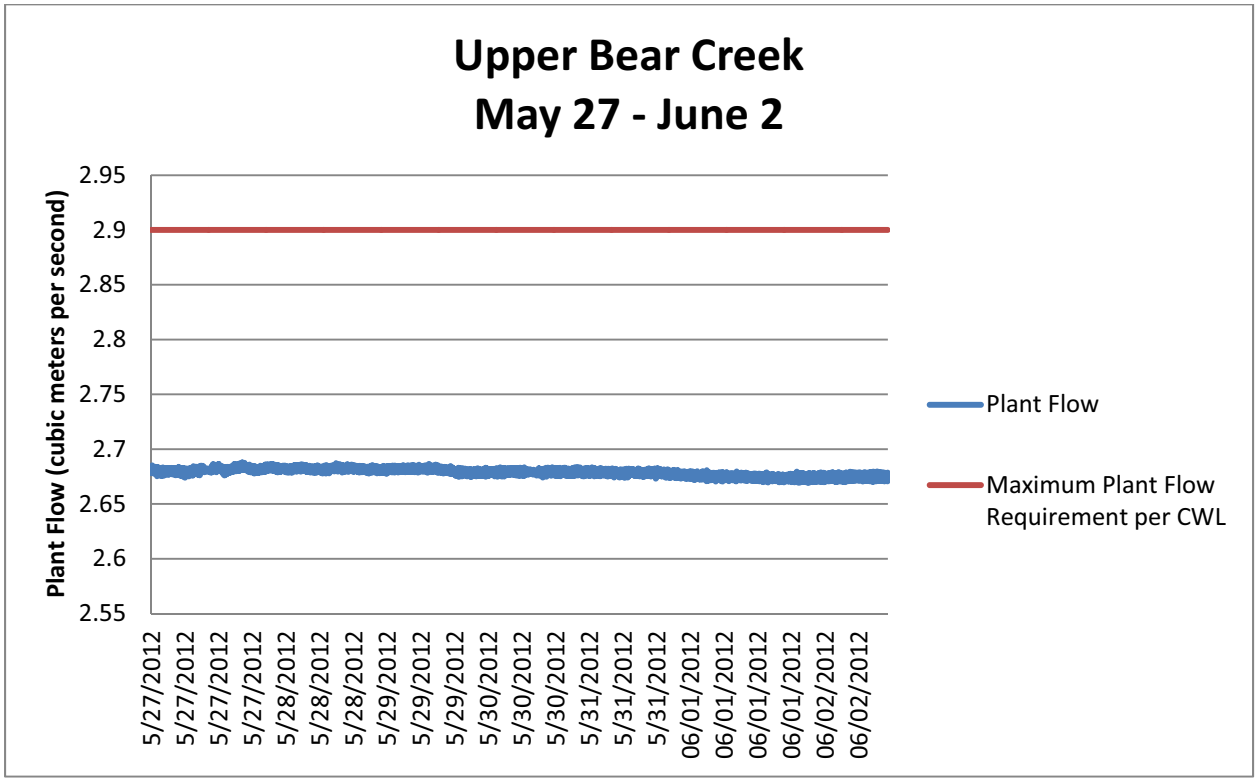

Figure 7: Plant flow of the Upper Bear Creek Hydro Project compared to the conditional water license authorized flow rate.

Upper Bear Creek Hydro In-stream Ramping

To be completed and resubmitted by June 15, 2012
