There should be a relocated bear data sheet on the bears that were relocated from the valley.

I am wondering about this PWOR from 2006 #607600 I do not have the tag # in my notes but it should be attached to the PWOR.

This was a healthy sow that was relocated to the upper reaches of the Kwatna. Her cub was not captured.

Barb, Could you look up this PWOR and see if a relocation sheet is on there?

I likely have some photos of this bear as well.

Hi,

No joy – this bear was not part of our 1992-1995 research program. There was some collaring from 1989 to 1991 (region 5 – Williams Lake – Tom Smith), and I am trying to find those records.

The tags attached by the researchers in the Park from 1992-1995 were colour

coded, but had no numbers.

SO, back to you guys with a question to James: could this have been a conflict bear James?

(Adult female, accompanied by 3 COY at time of death in valley last month).

Tony
