EDUCATION FOR THE FUTURE

*We are preparing **students** for jobs that don't exist...
using **technologies** that haven't been invented....
solving problems we don't even know are problems¹.*

*This is Advanced Education for the **Future***

¹ by Karl Fisch, and modified by Scott McLeod; Globalization & The Information Age.

MESSAGE FROM THE DEPUTY MINISTER

British Columbia's economic and social prosperity relies, more than ever, on an innovative and collaborative post-secondary education sector. British Columbians must have the knowledge and training required to succeed in a global marketplace where the requirement for a post-secondary education is ever increasing. To satisfy the growing demand for higher learning, and to ensure B.C. remains a global destination to learn and live, the post-secondary education sector will continue to transform.

In the future, the Ministry of Advanced Education and post-secondary institutions and agencies together as a sector, will be seen as a hub for leading edge higher education. This sector will draw global attention; attracting the brightest minds and furthering investments in B.C. We will inspire a sense of collective purpose, putting the student experience at the centre of our business where technology is used to enable transformation and enrich the value of post-secondary education.

It is my pleasure to present the Transformation and Technology Plan for the post-secondary education sector. The plan is the ministry's approach to maximizing the potential of collective resources throughout the sector. It is collaborative vision of a seamless student experience providing information, support and services in a way that ensures smooth and effortless transition throughout the student's educational journey and into the labour market. The Transformation and Technology Plan is a three year plan aligning to the three strategic shifts in the operating philosophy of the public service: to engage stakeholders more directly with government; expand opportunities for self-service; and take a more corporate approach to planning and innovation.

These shifts are aligned with the three pillars the sector has identified as the vision for transformation and the foundation for supporting jobs, families and our economy:

- ◆ Student Centred Experience – Service delivery for the modern learner
- ◆ Working Better Together – Building collective, connected solutions
- ◆ Reimagining our Workplace – Transforming how and where we work

The sector will focus on a student centred experience by improving online service delivery and modernizing its approach to the development of mobile web solutions. Students will have access when and where they want to the information, support and services vital to making informed choices about their educational path.

Collaboration with students, stakeholders and across government sectors will be enhanced by providing more open and transparent access to ministry information, data and policies. Public access to sector data and open information will encourage more informed public conversations and develop a stronger partnership with those whom the post-secondary education sector serves.

As modern technology and public expectations drive our transformative vision for service delivery and citizen engagement, the ministry also recognises the need for an innovative approach to business operations. We will support employee productivity and organizational agility by aligning the work environment with work patterns. Our future workplace will be more responsive and better able to accommodate the current and future needs of B.C. students.

Our plan is for an innovative post-secondary education sector that promotes citizen engagement and self-service, with a momentum of collaboration that will continue to transform the future of post-secondary education in British Columbia.

Cheryl Wenezenki-Yolland
A/Deputy Minister
Ministry of Advanced Education

1.0 BUSINESS CONTEXT AND DRIVERS FOR CHANGE

*Quality post-secondary education that fosters
innovation, strong communities and bright futures*

1.0 BUSINESS CONTEXT AND DRIVERS FOR CHANGE

Who We are Today

High quality and accessible post-secondary education continues to be a priority for government. The post-secondary education sector plays a vital role in shaping the future of B.C. by preparing students to find their place in the workforce. Our post-secondary education and training sector develops the knowledge, skills and creativity needed to create bright futures and strong communities.

The success of our province is dependent upon our people excelling in their education and training opportunities to become knowledge leaders and highly skilled workers. This advantage will help individuals to achieve successful careers, and the province to fulfill its labour and workforce productivity needs.

The Role of the Ministry

The Ministry of Advanced Education ensures that accessible, affordable, high quality post-secondary education and training opportunities are available to the public. We do this by working with B.C.'s province-wide network of public and private post-secondary institutions, training partners and service providers which makes up the post-secondary sector. The sector delivers relevant and responsive education and training opportunities and provides the provincial labour market with the right people, with the right skills, at the right time.

The ministry provides leadership to champion a world class post-secondary education system. We establish policy and provide funding to public post-secondary institutions. Various mechanisms are in place such as legislation, funding agreements and reporting requirements to ensure accountability for public funds.

We oversee the legislative and regulatory frameworks that govern private degree granting and career training institutions and administer the B.C. Education Quality Assurance program which ensures quality assurance standards are met and consumer protection is assured.

With our partner ministries, we administer student financial aid programs including loans, grants, bursaries, scholarships and special programs which help eligible students cover the costs of their post-secondary education.

We also deliver programs such as adult education, Aboriginal education, credential recognition and transfer, and international education to ensure access to post-secondary education for all British Columbians and students wishing to study in B.C. Working with post-secondary partners we deliver a transfer system that permits seamless mobility for students. This transfer system supports improved participation rates, learning outcomes and increases overall economic opportunities for all students.

1.0 BUSINESS CONTEXT AND DRIVERS FOR CHANGE

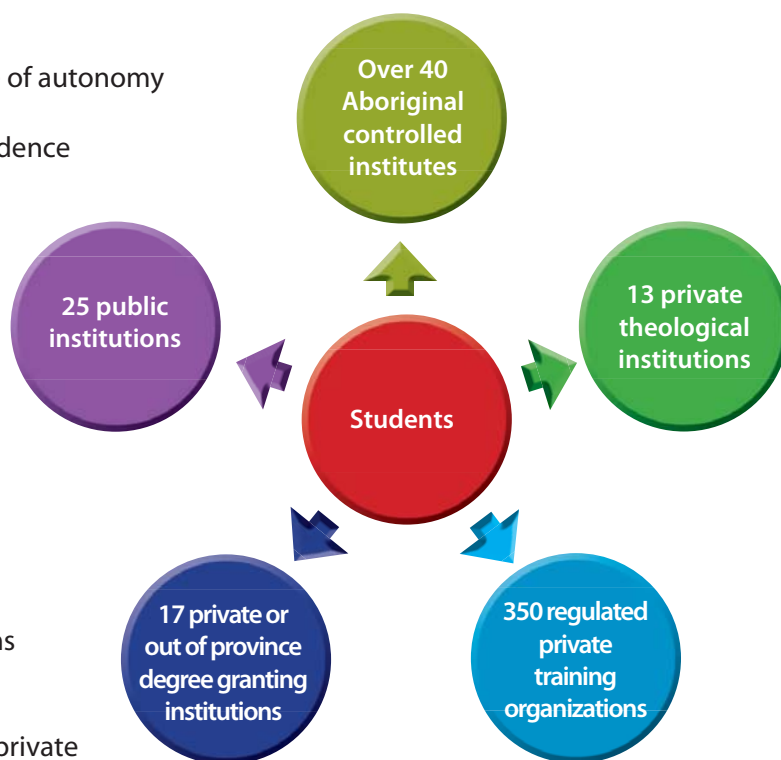

As part of the post-secondary sector we will capitalize on B.C.'s educational advantages to ensure it is recognized worldwide for quality, which in turn will make B.C. a destination of choice for students to study, work and invest. We strive to position the B.C. post-secondary sector as a leader in education and research so B.C. attracts the brightest minds and facilitates their pursuit of leading edge research and careers. Ensuring citizens possess the knowledge and skills needed to prosper in the local economy means they are equipped to fully contribute to the global economy.

The Role of Post-Secondary Institutions

It is our public and private post-secondary institutions, training partners and service providers that deliver education and training programs across the province. With over 1,900 programs at 25 publicly funded institutions – including 11 regional colleges that respond directly to local skill needs - and approximately 375 private institutions, B.C.'s post-secondary institutions offers a broad range of education and training options in every region.

Public post-secondary institutions in B.C. have a significant and appropriate degree of autonomy from government. This autonomy allows institutions the necessary independence to determine how to effectively meet the needs of their students, their communities and the province. These institutions develop and deliver programs and courses, provide education and training, undertake research, and serve the educational needs of their communities.

In addition to public post-secondary institutions, B.C. also has a diverse range of private post-secondary institutions and training organizations that offer education and training programs including career training, and English as a Second Language. Unlike their public counterparts, the ministry does not fund private post-secondary institutions. However, private degree granting and career training institutions are subject to legislative and regulatory frameworks including the *Degree Authorization Act* and the *Private Career Training Institutions Act*.

2.0 TRANSFORMING FOR TOMORROW

*...the 2020 learner will be less interested in the boundaries
between institutions than their inter-linkages...*

2.0 TRANSFORMING FOR TOMORROW

2.1 Drivers for Change

B.C.'s economy is changing. Primary industry jobs are dwindling while jobs in business, service, finance, sales, health care and technology are on the rise. The B.C. government estimates there will be over one million new job openings by 2020². About 78 per cent of those job openings will require some form of post-secondary education or training³. Currently, only 60 per cent of B.C. citizens possess post-secondary education. To close this gap, all citizens need access to high quality, future-oriented, affordable education leading to opportunities for gainful employment.

Students' needs are also changing. They want to learn whatever, whenever, wherever, and however they want through seamless access to high quality, affordable education. Students expect to learn and communicate through online services and social media tools. The traditional brick and mortar classroom no longer completely serves the needs of today's student. Instead, students are demanding asynchronous, self-paced, online, and mobile alternatives. Today's students want to have the ability to tailor their post-secondary experience to meet their diverse and geographically based needs. They want greater mobility of credits through seamless access to courses offered at different institutions across B.C. and around the world.

Changes in the local and global economy are necessitating changes to B.C.'s post-secondary education system. To meet students' and employers' needs, post-secondary institutions are shifting their focus from what they want to offer, to what students want and need to learn in order to fully contribute to the economy and to communities. Post-secondary institutions are delivering more online courses and offering abbreviated, blended (in-person and online) programs. The number of learners taking online courses has soared from 17,000 in 2006 to 71,000 in 2010⁴.

The post-secondary sector is collaborating. Institutions are offering new cross-disciplinary programs, researching together and partnering with other agencies and businesses. By striving to be relevant, flexible, adaptable, responsive and nimble they are re-conceptualizing their role in the larger community. Institutions are realizing the power of new communication and social media tools in the delivery of modern, student-centred post-secondary education.

\$4.8 billion investment in public post-secondary, generates 50,000 new graduates, 36,000 jobs, \$35.6 billion impact on gross domestic product

2.0 TRANSFORMING FOR TOMORROW

2.2 Vision for Transformation

“...the shifts required to meet the needs of B.C.’s learners over the next generation will not be confined to the traditional components of our education system, but must embrace a wider set of institutions. Call it “learning without borders.”

A seamless student experience is one that provides students with information, support and services in a way that ensures a smooth, effortless transition throughout their educational experience and into the labour market. Seamlessness is about the students’ educational journey when, where and how they want it; it is mobile, relevant, secure and connected.

The student’s journey does not begin in post-secondary studies nor does it end after a credential has been received. Students and their families need information and tools at every stage to help guide decision making and ensure students gain the skills necessary to be successful and fully engaged in the knowledge economy beyond graduation.

Whether a student is transitioning from K – 12 to post-secondary, a graduate student is transitioning from post-secondary to the labour market, a life-long learner is upgrading mid career or an international student is looking for placement in an english speaking country, their experience must be one that provides seamless access to information and services. Their experience within the post-secondary system must encourage collaboration, participation and successful completion. This seamless post-secondary education system will attract international students to study in B.C. providing cultural, financial and economic benefits to institutions and the communities they serve.

The post-secondary sector must encourage collaboration and work less in isolation and more as a federation. We need to inspire a sense of collective purpose while allowing institutions to maintain the autonomy necessary to preserve academic freedom and to flourish. We will lead collaboration and integration within the post-secondary sector to ensure a student-centred experience. We will work as a sector to create opportunities for students to study where, how and what they want and provide the information and financial support they need to make informed choices about their education. This new approach will ensure students have the knowledge and skills needed to fulfill their potential, contribute to society and flourish in the 21st century knowledge economy.

To achieve our transformative vision for post-secondary education, we will need to radically change how we do business, provide services, collaborate and innovate both internally and with the sector so that we continue to meet the needs and expectations of students now and into the future.

2.0 TRANSFORMING FOR TOMORROW

2.3 Our Achievements - Highlights

Achievements over the last year include:

- ◆ StudentAid BC has completed a full administrative review in partnership with the Ministry of Finance. The review focused on improved program administration.
- ◆ Student Financial Aid System Business case was submitted through the 2012/2013 Transformation Technology Plan.
- ◆ StudentAid BC Citizen Engagement Strategy was developed including an Internet strategy to modernize the StudentAid BC. This project is waiting for corporate website design libraries.
- ◆ Aboriginal Education Policy Framework Citizen Engagement Strategy was developed and approved. The implementation plan underway.
- ◆ Business requirements and design are underway for the enhancements to the Post-Secondary Institution Proposal System. The enhancements will improve system security and data transfer.
- ◆ Organizational Excellence – The Ministry is working to overcome adversity and embrace the challenge of change through engagement strategies to encourage a culture of inclusiveness, idea sharing and implementation from all parts of the organization.
- ◆ Visioning for the future is a business imperative. We are imagining the future together with our employees and the sector. We are soliciting ideas and listening to our stakeholder concerns in order to find common ground and a shared sense of values.
- ◆ AVED Academy – We have worked to provide a climate conducive to learning which is a prime requirement, to change and develop new skills to discover new ways to work together. Advanced Education has a training budget allocated for both developmental and job specific learning.

3.0 OUR PILLARS

*Quality post-secondary education that fosters innovation,
strong communities and bright futures*

3.0 OUR PILLARS

The Ministry of Advanced Education has identified three foundational pillars that will support us as we transform our business and services and the post-secondary sector:

Student Centred Experience – Service delivery for the modern learner

Service delivery focused on a seamless student-centred experience to meet the needs of the modern lifelong learner.

Working Better Together - Building collective, connected solutions

Work Better Together creates an environment where learners and their families, institutions, employers, stakeholders and the public can be involved in transforming the post-secondary education sector.

Reimagining our Workplace – Transforming how and where we work

Reimagining our workplace empowers and equips employees to achieve transformation by providing them with right work environment, tools and support.

3.0 OUR PILLARS

Quality post-secondary education that fosters innovation, strong communities and bright futures

PILLARS

INITIATIVE

1 Student Centred Experience

Internet Strategy
Modernizing StudentAid BC
Online Learning
Linking Labour Market and Student Data

2 Working Better Together

Engagement on Aboriginal Policy Framework
Open Data
Open Information

3 Reimagining our Workplace

Leading Workplace Strategies
Employee Collaboration

Citizen Participation

Engaging British Columbians more directly with their government, particularly through improved access to government data and sharing of information

Service Innovation

Expanding opportunities for citizen self-service by improving and modernizing the government's online service offerings so they are shaped less by the structure of government and more by citizen needs

Business Innovation

Taking a more corporate approach to technology planning and innovation for the benefit of citizens and public service employees

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

Service delivery for the modern learner

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

"Building motivation, expectations and confidence regarding post-secondary participation must begin as early as elementary school"

Technology has already transformed the way learning takes place. In many cases, the bricks and mortar classroom have yielded to the virtual classroom and alternative locations for learning. The transformation of the campus from physical location to the internet has forced us to think differently about how the student experience is delivered.

Throughout the province there are increasing efforts by our sector to reach across traditional boundaries to provide options and opportunities for learners to move at different speeds along a more creative and flexible path. There are programs that bring secondary students into universities, colleges and institutions and others that bring university and college programs into secondary schools.

These programs represent the early stages of an seamless, integrated approach to life-long learning. Our sector will embrace a service delivery model that focuses on the student experience; supporting effortless transitions from K-12 to post-secondary education and into the labour market.

Students will demand seamlessness in articulation and transfer and portability of credits and credentials. They will also expect integrated, seamless, mobile services such as financial aid, identity management and information collection and sharing.

Information systems and information management represent a tremendous opportunity for transformation to ensure B.C. is seen as a leader in the delivery of student services. Modernizing electronic services for students will create a dynamic, citizen-centred experience that is designed for mobile technology accessibility, mobile applications and data sharing. Soon students will be able to securely apply for services online, view status, view financial information and have real time data at their fingertips.

WHAT ARE STUDENTS SAYING?

"Better design of the website--more of the 'web 2.0' look. Maybe find a way to integrate the student loan account with facebook/social networking. Please add a login bar on the main page at the top instead of needing students to click on the yellow 'apply for a student loan online' button!"

"I would like the application process to be less lengthy every time I apply. I feel like since I have to apply every semester, I'm answering the same questions over and over and over again to student aid. They already know those things. When you are a full time student, you have enough things to do already."

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

PILLAR: STUDENT CENTRED EXPERIENCE – SERVICE DELIVERY FOR THE MODERN LEARNER

INITIATIVE	ACTION	SHIFT
Internet Strategy	<ol style="list-style-type: none"> 1. Inventory web properties and their management 2. Develop a strategy to rationalize web properties and render our web presence more citizen- centric and service focused 	SI

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

Internet Strategy

The Ministry of Advanced Education hosts a multitude of websites that disseminate information on our programs and services. The ministry's main site, www.gov.bc.ca/aved, receives over 41 million page views per year, 76% of which are directed to StudentAid BC. Other key areas of the site offer information for Aboriginal students, adult learners, post-secondary institutions, researchers and educators. The ministry also hosts two portal sites: an international student portal (www.learnlivebc.ca) and BC Perspectives (www.bc-perspectives.ca/), a student/teacher resource for information on the B.C. post-secondary sector.

While these sites reflect the structure and processes of our organization, they do little to promote student engagement or encourage citizen participation and are not optimized for mobile devices. Furthermore, little integration and cross-pollination exists between our content and the new B.C. government web presence, other government sites, post-secondary institutions and partner sites. The ministry is committed to transforming its web presence to provide relevant, high quality information and services that reflect the student's experience and ensures linkages with the K-12 system, with labour market information and with the new B.C. government web presence.

APPROACH

The ministry is modernizing its web presence to provide "no wrong door" access to information and invite citizen participation across the post-secondary sector. This Internet Strategy lays out actions defined by three main goals: to provide high quality, accessible online services; to engage citizens in our business; and to collaborate across the education sector.

The only way to truly understand the needs of our clients is to ask them. One of our first actions will be to conduct user research to determine who our audience is and what their information needs are so that we can target our efforts and make strategic investments where they matter most. At the same time we will inventory our web properties and work with subject matter experts to categorize and rationalize web assets so that we can begin to take a more citizen-centred approach to web development.

The ministry will leverage corporate knowledge and resources by collaborating with the Ministry of Labour, Citizens' Services and Open Government to integrate our online information into the new B.C. government home page and forms and services finder so that the public can easily gain access to our information from the main government online gateway. We will also implement corporate taxonomy and meta data standards to ensure search engine optimization. Our new sites will be developed using the new corporate libraries which use evidence based design standards to increase usability and accessibility regardless of platform or device. Combined, this approach will result in improved online service delivery that brings top tasks and services to the forefront and provides access to quality information that is mobile friendly and search engine optimized.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

We are also identifying opportunities for the use of social media to ensure students and their families receive the information they seek when, how and where they search for it and have greater opportunities for collaboration and participation in the development of services and policies. Additionally we will investigate the development of mobile applications for students that will provide anytime access to student loan information in the palm of their hands (see Modernizing StudentAid BC).

In support of strengthened collaboration across the post-secondary education sector, the ministry is investing in a modern technology infrastructure which will offer an integrated online platform for ministry staff, stakeholders and partners to share information and work together to build stronger linkages with the post-secondary sector in support of sector transformation and greater student engagement.

The foundation for this new approach to online service delivery will be the establishment of a formalized web governance framework. Through our Web Advisory Council, the ministry will continue to focus on building a web governance model that supports an integrated, strategic approach to web management. We will implement the best practices as outline in the recently released Online Service Delivery Toolkit by confirming senior leadership accountability for online services and capitalizing on the subject matter expertise in our ministry to increase collaboration at all levels of the organization.

Through the development of high quality, citizen-centred websites, mobile web applications and the use of social media, the ministry will transform its online services to attract international students to B.C. and support the student's journey from the K – 12 system, into a post-secondary institution of their choice while providing the tools to help them find meaningful attachment to the labour force once their academic goals have been achieved.

Figure 1 provides an outline of the actions we will take to rationalize our current web properties and make our websites more citizen-centred.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

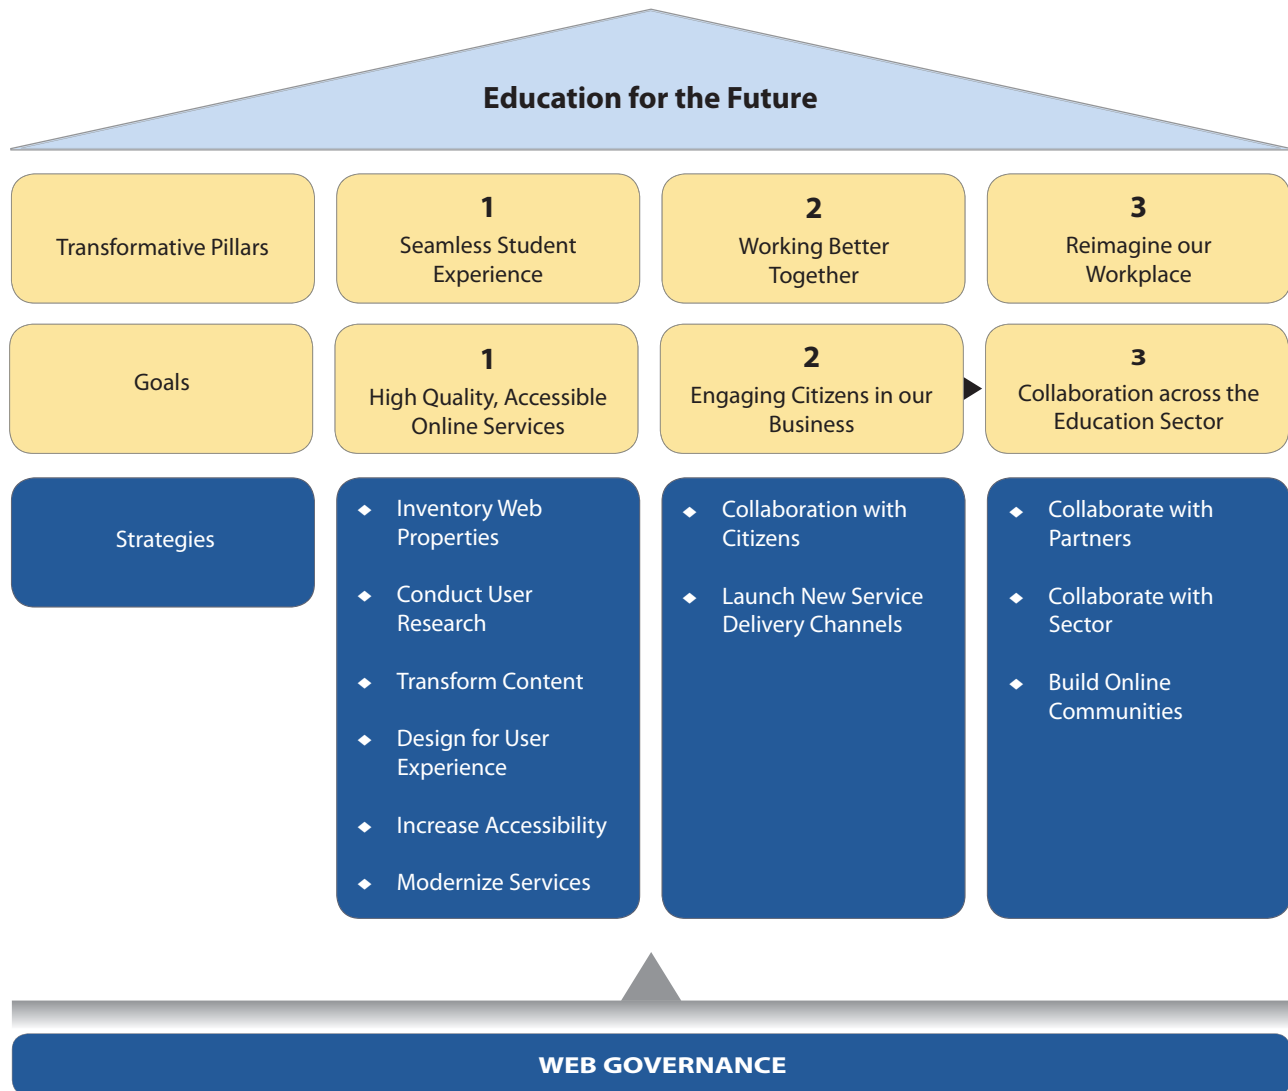

Figure 1

For a detailed overview of the Internet Strategy refer to Appendix I

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

Modernizing Student Aid BC

Student financial assistance is delivered in collaboration with the Ministries of Advanced Education, Finance and Social Development, the Government of Canada, and the Insurance Corporation of British Columbia. The provincial student financial assistance program, a one billion dollar portfolio, supports families and jobs by reducing financial barriers through the provision of student funding for post-secondary studies, ensuring manageable debt upon graduation and providing early planning for students in the selection of studies that align with labour market demands. In addition to managing a student's loan portfolio, the student financial aid program provides a variety of services such as programs for persons with disabilities, adult basic education, youth education assistance fund and Pacific Leaders.

Current financial aid policies and processes are impacting the student's experience as well as both the student ability to manage debt and government's ability to forecast and track the impacts of policy decision and outcomes around interest rates, defaulted student loans and loan repayment. The current process is very administrative and resource heavy. Improvements to policies and processes will allow StudentAid BC to direct resources to outreach and ensure that students are better informed about available resources and their loan-related responsibilities. Improved financial literacy provides a life skill that could result in improved student loan repayment.

One of the first significant interactions young British Columbians often have with government is through StudentAid BC. The manner in which government engages with students presents an opportunity to make a positive first impression, one in which the student feels supported, connected and informed.

The majority of students accessing financial aid today are between the ages of 18 and 24. They grew up in the information age, using technology extensively in daily activities. These students expect easy, unfettered access to information and tools needed to make decisions about their lives. While StudentAid BC relies on telephone, fax, websites and paper correspondence to connect with students, the current and future cohorts of applicants are technologically savvy and expect 24/7 online access to information and services with the option of person-to-person access when required. StudentAid BC needs to transform the way it does business and engage with students to create a modernized, integrated and streamlined student financial assistance process. Transformative changes to the StudentAid BC program are needed to ensure finite government funding for student financial assistance is targeted appropriately to meet the needs of students, their families and B.C.'s labour market while upholding sound accountability measures.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

Incorporating students perspective in service design (see Appendix I Internet Strategy for more details)

Currently, our clients and prospective clients seeking information on student financial assistance programs can access the StudentAid BC website for information and phone for enquiries. Calls are handled through an Integrated Voice Response system and a call center. Call center wait times are typically short but if a specialist is required calls can take longer. Requests and responses are either mailed or faxed as there is no capacity for secure electronic communication. Students need multiple channels to access StudentAid BC information and services. The website redesign will address the online channel, however, StudentAid BC will also explore options for how to best provide other channels for interacting with students (e.g. identifying opportunities for leveraging other existing front counter service providers). An outreach strategy is under development and will identify and evaluate options for engagement with students, institutions, and stakeholders .

StudentAid BC's objective is to modernize, streamline and transform the way it engages students. It will create an online service window that is client-centric, personalized, and will anticipate and respond to the needs of each student as he/she moves through the loan life cycle. The proposed "My StudentAid Account" will serve as a gateway between borrowers and online services. It will be rich in content, intuitive, and create a confidential, common, and evolving point of entry providing online capabilities that meet borrower needs. The window will initiate student financial assistance processes for the borrower (and potential borrowers) and provide information about student financial assistance, financial planning, receipt of student financial assistance and full repayment of loans. At the same time StudentAid BC will protect sensitive information by ensuring that the required security and control will allow access to the Integrated Client File by various stakeholders (i.e. borrowers, service delivery partners) while respecting privacy requirements.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

Next Steps:

1. **StudentAid BC policy review and program evaluation** – StudentAid BC is conducting a comprehensive review of the student financial assistance programs and policies including institution designation, application and assessment, disbursement and loan management and repayment. The review is expected to be completed by December 2012.
2. **Student Financial Aid System** – A business case was submitted to the Ministry of Labour, Citizens' Services and Open Government on September 15th. Next steps will include documenting business requirements, drafting a strategic implementation plan and completing an "as is" and "to be" business process models.
3. **Service delivery redesign** – Following the completed process modeling StudentAid BC will redesign its website to provide a better, citizen-centred online service experience. This project will also serve as a platform to explore the use of social media. StudentAid BC's clients are predominantly tech-savvy students between 18 and 24 years old, StudentAid BC will investigate how communications technologies can be used to reach students including creating applications and providing more direct access to StudentAid BC staff through instant messaging.
4. **Engagement and outreach** – StudentAid BC will look for opportunities to engage with students, parents and other interested stakeholders. Development and implementation of a comprehensive outreach strategy (including the use of social media tools) to help ensure that students are better informed about available resources and their loan related responsibilities. StudentAid BC will expand on current financial literacy projects by conducting a repayment analysis and developing financial planning and counselling tools for students and schools.
5. **Data sharing** – StudentAid BC will engage in a greater degree of inter-jurisdictional data sharing with its federal counterparts. The exchange of data will facilitate the delivery of seamless, holistic client-centered service at any entry point and over any service channel.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

Online Learning

Learners span a wide range of ages and life experiences. They expect and need more flexibility in their learning options. Online learning addresses two major challenges: access and affordability. B.C. post-secondary institutions currently offer over 2,000 online courses. The number of B.C. learners taking online courses soared from 17,000 in 2006 to 71,000 in 2010. Online learning is one of the fastest growing segments of the education system.

B.C. post-secondary institutions have the flexibility to decide when, how and what online learning courses and programs they offer. Many post-secondary providers are adding online courses and offering abbreviated blended (in-person and online) programs. Our role is to work with post-secondary sector partners to develop strategies that improve access to online learning opportunities and support the design and evolution of online learning by post-secondary institutions.

BCcampus was established in 2002 to facilitate collaboration and harness technological advances by providing system leadership and overall coordination for online learning across the province. BCcampus strives to ensure learners, educators and administrators have access to the best, most effective technologies and services for their learning and teaching needs. This innovative agency serves as the provincial gateway to online courses, programs and student services for higher education. Prospective students can access information and a comprehensive listings of online courses offered at all public post-secondary institutions through CoursesBC (www.coursesbc.ca).

Other available services include accessible course credit transfer information, ApplyBC, a post-secondary application service and an electronic transcript exchange. These services benefit both students and institutions by streamlining information transfers between institutions and eliminating duplication. BCcampus systems also allow institutions to access student data and generate reports on recruitment, application and learning resources.

BCcampus provides hosting services for both the Learning Management and Web-conference systems. It funds the development of shared course resources which can be used by public post-secondary providers, reducing costs and minimizing duplication. BCcampus is also developing the B.C. Learning Gateway, a unified web service that will integrate student services and learning resources from multiple sources and serve students as they move through K-12 schools, access trades training, post-secondary institutions, and other programs.

Through BCcampus we foster institutional collaboration and partnerships and provides post-secondary institutions with a shared service approach to educational technologies reducing costs and increasing efficiency.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

To investigate the future of online learning and the services students need, BCcampus hosted a one-day forum in mid-2011, involving students and B.C.'s post-secondary institutions. Students' needs are clear.

- ♦ mobile 24/7 services
- ♦ unified, easy-to-use services
- ♦ online (fewer paper-based) forms
- ♦ online chat services for answering simple questions
- ♦ access to and support for required applications
- ♦ easy transfer of credits between institutions
- ♦ online info about career/co-op opportunities

More information is required about online learning and what the education sector as a whole should do to meet students' current and future needs. We will investigate learners' current and projected needs with a view to developing a strategy in collaboration with partner post-secondary institutions, students and stakeholders to address those needs.

APPROACH

To ensure that current and future learners' needs are met, we will take an integrated approach. Efforts to integrate multiple partners and services will yield more coherent cross-sector education information and support services that will streamline the learners' experience. Fostering institutional collaboration and partnerships and providing post-secondary providers with a shared service approach to educational technologies will reduce costs and increase efficiency. To gather information and begin drafting a strategy, we will take an "iterative action research" approach. Steps include:

a) Inventory learning opportunities that are currently being delivered online

CoursesBC (<https://coursesbc.ca/>) provides a listing of online and distance courses available through B.C.'s 25 public post-secondary institutions (Appendix III) .

b) Undertake an analysis to determine current needs for online services

Baseline information needs to be analyzed and assessed to ascertain the degree to which current online courses are meeting students' needs. Students' future needs and expectations must be also examined. Over the coming months we will engage BCcampus, post-secondary institutions and students to ascertain what online courses and support services are required to enhance learner success. Throughout this process, we will work with our sector partners to foster collaboration.

c) Develop a strategic plan to address the gaps

Once gaps have been clearly identified, we will work with our sector partners to determine how best to fill these gaps and support the development of online courses and programs as well as student services and supports.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

Linking Labour Market and Student Data

Students and families need better information about current and future labour market conditions and anticipated job vacancies so they can make wise, well-informed decisions about what kind of education or training will best equip them to gainfully participate in the knowledge economy. Better alignment with current and future labour market needs can improve career planning, student outcomes, job satisfaction and B.C.'s economic prosperity. It can also be used to inform government policy and programming choices.

Programs offered by institutions need to align with current and future needs of B.C.'s economic and labour needs. These programs are informed and kept relevant through research and access to information for market forecasting and analysis. Informed decision-making and investments is critical to our ability to maintain a globally competitive and attractive education system.

Data about current and former post-secondary students is collected and analyzed by the Ministry of Advanced Education and includes:

- ♦ data on post-secondary enrolments and credentials – program of study, level of credential
- ♦ Student Outcomes Survey data (collected by BC Stats) – labour market experience of new graduates including salaries, occupations and evaluation of skills

Data about the labour market is collected and analyzed by the Ministry of Jobs, Tourism and Innovation and includes:

- ♦ occupational information - educational requirements, main duties, wage rates, supply and demand for workers, current employment trends, and outlook
- ♦ industrial information - employment in industries and industry location, economic impacts, industrial trends, and employment prospects
- ♦ regional and community information - business activity, supply and demand for skilled workers, unemployment rates, and population factors

The ministry is working with the Ministry of Jobs, Tourism and Innovation to build a bridge between the data the two ministries collect so that it can be used by students, potential students, post-secondary institutions, government policy makers and the public. Aligning post-secondary education and skills training outcomes to labour market demand data will provide British Columbians with one of the most sophisticated demand and supply models in the world, and help ensure that our population has access to the information and education they need to thrive in the knowledge economy. Sharing labour market and post-secondary data will provide decision-makers, institutions, learners, and their families with information to help them make informed decisions about their futures.

3.1 PILLAR 1 - STUDENT CENTRED EXPERIENCE

APPROACH

To make this data relevant to students, institutions, employers and citizens, a way to map or link these data sets is needed.

Not only will linking student and market data help students make smart educational and career choices, it will benefit post-secondary institutions and citizens by enabling institutions, agencies and employers to predict the number of students entering and graduating from post-secondary education programs as well as the supply of workers entering various professions.

NEXT STEPS

1. **Ensure stakeholder support** - The data to be shared on student educational outcomes and labour market experiences is managed by BC Stats and owned by each of the participating public post-secondary institutions. Engagement of stakeholders in this project will ensure its success. Timelines: December 31, 2011.
2. **Formalize a data sharing and management plan** - Working together with BC Stats, our sector and the Ministry of Jobs, Tourism and Innovation will develop a data sharing and management plan that links the labour market data to post-secondary educational and skills training requirements. This will include the processes for regular updating of the data linkages, and products to make the information readily available. All necessary privacy evaluations will be conducted during this process.
3. **Determine committee membership** - A steering committee comprised of representatives from our ministry, the Ministry of Jobs, Tourism and Innovation and BC Stats will ensure that this initiative moves forward by February 2012.
4. **Finalize a Memorandum of Understanding** - To facilitate the flow of data elements between the ministries, Advanced Education and Jobs Tourism and Innovation are developing a data sharing memorandum of agreement, to be signed by March 2012. This omnibus MOU will include a broader range of data products than the "linkage" data set, as the sharing of results from the federal Labour Force Survey and the Census will also be included, in order to achieve efficiencies for government.
5. **Create technical linkages** - Ministries of Advanced Education and Jobs, Tourism and Innovation will work together with BC Stats to establish data linkages that support this project: by April 2012. Technical challenges will be resolved through committee deliberation and data integration techniques will be developed.
6. **Create user friendly products** - These linkages will foster the development at Jobs Tourism and Innovation of a variety of products that can easily be used by the public who do not need to know the classification or coding systems: Jobs Tourism Innovation lead and timelines.

Successful alignment of these data sets will ensure that post-secondary education and employment outcomes data are merged to labour market demand data and will help ensure the future labour market in B.C. is based on sound public policy and the best available information.

3.2 PILLAR 2 - WORKING BETTER TOGETHER BUILDING COLLECTIVE, CONNECTED SOLUTIONS

Involving citizens in transforming our sector

3.2 *PILLAR 2 - WORKING BETTER TOGETHER - BUILDING COLLECTIVE, CONNECTED SOLUTIONS*

Working better together is about redefining our relationships with students, institutions, communities, industry and the broader public to engage them in transforming post-secondary education for the future. To shift to this new way of doing business we will expand the data, information and knowledge we share with the public. A more open and transparent approach will enable more informed conversations with the public about the post-secondary issues that matter to them and their families.

The ministry is an active consumer and provider of data about post-secondary education in B.C. Government's shift to open data presents many opportunities for the public to use government data in ways that interest them, whether that is for research, business or personal use. Recognizing this shift, the post-secondary sector has been an early adopter of open data – contributing to the launch of DataBC with seven datasets from a range of projects.

Beyond providing open data, the ministry and its partners in the sector have expertise in analyzing and interpreting these data, which are published in reports and newsletters to tell the story of post-secondary education in B.C. This type of information and analysis can help educate and engage the public on key policies and program decisions. The additional shift to proactively share ministry information acts as the foundation for educating the public on post-secondary education.

Establishing ongoing dialogues with the public on policies and programming is key to ensuring that the post-secondary sector is meeting the needs of students as well as ensuring that the sector delivers quality education and training programs. This enables British Columbians to develop the skills and knowledge to prosper in the new rapidly evolving economy.

3.2 PILLAR 2 - WORKING BETTER TOGETHER - BUILDING COLLECTIVE, CONNECTED SOLUTIONS

Open Data and Open Information

OPEN DATA

Improving access to post-secondary education data in B.C. provides the public with an opportunity to use the data in ways that we may never have imagined. Creative combinations and applications of data related to institutions, programs, tuition, default rates, and the job market will provide students with information to make educated choices about their future. Making data open and available to the public provides opportunities to use the data to create value which results in better government services through public participation.

To transform our data to open standards requires an evaluation of the data we collect, store and share with the public. Over the past year we have assessed our data to identify what we collect and what could be of value to the public, both for their own interest as well as to engage in a dialogue with the ministry. As we move forward we will expand the data we provide in open formats and seek ways for the public to view and interact with the data through visualizations, graphics and reports. We will also seek continuous feedback from the public to refine our approach and provide data that is of high value.

Data collected by the ministry originates primarily from public and private post-secondary institutions, which maintain information on students enrolled in their programs, and the student financial aid system. These data can be grouped into four key categories; post-secondary student data (applications, enrolments, and credentials earned), post-secondary finance (student financial aid and tuition fees), post-secondary institution governance and operations (accountability and post-secondary finances) and ministry operations (ministry finances). As we are not always the owner of the data we collect, we have developed information sharing agreements with institutions and stakeholders to collaborate and share data resources. We are working closely with institutions and other stakeholders on strategies for sharing these data with the public in open formats.

As an essential first step we have developed a ministry data inventory identifying all data holdings and providing a detailed list of the datasets available (see Appendix IV – Data Inventory). These datasets have been assessed to determine the priority, readiness and timeframes for release to the public. For some of our data holdings, further examination and conversations need to occur to develop a thorough listing of the datasets. Work to assess these holdings is currently underway and an updated inventory will be completed by September 30, 2012. Over the term of this plan we will open our most highly valued information to provide a basis of knowledge for ongoing public dialogue and collaboration.

New open datasets will be released on their existing publication schedule with updates to existing datasets made as data become available. Six new datasets will be provided to DataBC on November 4, 2011. Further datasets will be provided to DataBC as they are converted to open data formats. To ensure an efficient and effective transition to open data, steps have been identified to transform existing business processes. As depicted in Figure 2 these steps include: collaborating with database owners to produce reports in open formats, encouraging data suppliers to send data in open formats, requesting mandatory reports in open formats, establishing processes to publish open data while maintaining quality and timeliness, and, where appropriate, collaborating with other ministries to contribute open data.

3.2 PILLAR 2 - WORKING BETTER TOGETHER - BUILDING COLLECTIVE, CONNECTED SOLUTIONS

We recognize that users may be interested in our data for different reasons. For example, a developer building apps will have a different interest in our data than a student or educator at a university. To satisfy end-user's diverse needs we will continue to publish data in two formats whenever possible; a comma separated values document as the open standard and an Excel pivot table, for those who want to view the data at a glance or are more comfortable working in a traditional spreadsheet. We are also investigating technologies that will visually present post-secondary data and allow users to see the connections and stories that emerge from interacting with the data in this way.

Almost all of our datasets have a data management plan in place; however, these plans are often informal and details are often transmitted verbally. To document and standardize our data management practices, a Data and Information Stewardship Committee has been established to develop a consistent approach to data collection, storage and use. We will develop an integrated data management plan that will provide guidance on future data projects and ensure consistent standards and approaches are applied to such issues as small population size, data collection from post-secondary institutions, and regular reviews to rationalize our data holdings. This data management plan will act as an umbrella, offering short condensed data management plans for individual projects. We strongly believe that this collaborative and integrated approach will lead to greater consistency and linkages between datasets, thereby enhancing the quality and value of data assets.

The ministry views the open data initiative as an opportunity to enhance its existing data practices and share information with the public and looks forward to the creative applications the public will develop with this important asset.

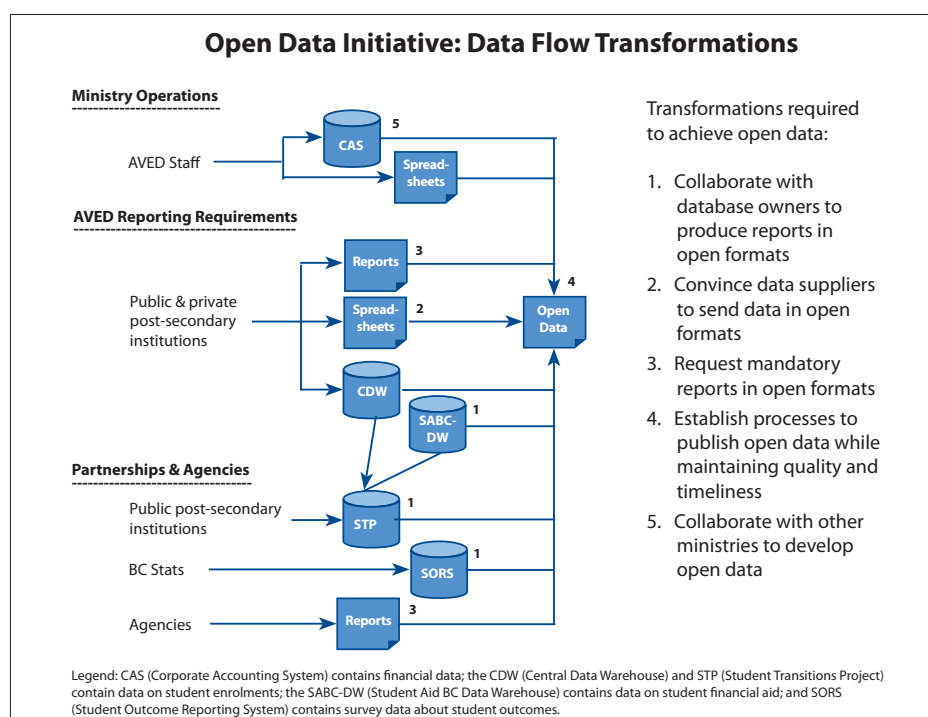

Figure 2

3.2 *PILLAR 2 - WORKING BETTER TOGETHER - BUILDING COLLECTIVE, CONNECTED SOLUTIONS*

OPEN INFORMATION

Opening up and proactively releasing information to the public will encourage citizen engagement and interaction between government and the public. We recognize that integration between our open information initiative and our internet strategy is important. Providing contextual information that is readily accessible through the internet and the public finds valuable will enable the public to have informed conversation with government which could lead to more innovative and creative solutions to complex problems. We will continue to take a team approach within the ministry and the Ministry of Labour, Citizens' Services and Open Government to transform how we provide information to the public in an open and transparent way.

Regular Release of Information

We will continue to routinely release information about B.C.'s post-secondary education system and expand the audience beyond our stakeholders in the post-secondary system. To date we have used this information primarily in our discussions and collaboration with stakeholders in the post-secondary education sector and internally within government. For example, we publish information about the funding we allocate to post-secondary institutions, the number of students studying in B.C., and learning outcomes they achieve.

To support government's open information initiative we have established an inventory of all the information we routinely release on our websites. This inventory is provided in the open information response template in [Appendix V](#).

Proactive Release of Information

In addition to regularly released information, a key aspect of our open information initiative is the proactive release of information likely to generate Freedom of Information requests. Past Freedom of Information requests were reviewed to identify types and categories of information that citizens request. Requests commonly concern:

- ◆ Vendor complaints – Contracts
- ◆ Contract information
- ◆ Calendar requests for Minister, Ministerial Assistant & Deputy Minister
- ◆ Direct award contracts

Proactively releasing this kind of information will save time, cut costs, and make good on government's promise to be more open and transparent.

Next Steps

Over the coming year we will make information more accessible to a wider range of users. We will identify information that has not yet been made available to the public which could be regularly released ([see Appendix V](#)). This information will contribute to citizen engagement initiatives, serve as a focal point for a discussion on pre-existing policies and processes, and support collaboration on open-ended topics.

3.2 PILLAR 2 - WORKING BETTER TOGETHER - BUILDING COLLECTIVE, CONNECTED SOLUTIONS

BROADENING THE CONVERSATION

The ministry will take a more collaborative approach to innovation and problem solving related to post-secondary education. We will bring together students, institutions, employers, other partners and the public to engage in conversations to improve the quality and accessibility of post-secondary education and build a seamless student educational experience. We will ask students and their families what information they need to plan for their future, how and where they want to learn and supports they require to be successful.

We plan to take a strategic, systematic approach to engagement. We will explore options to improve engagement with the public, topics and issues where a more collaborative approach is needed and what engagement tools to use. We will determine topics and engagement methods that will yield the highest value in future years. We will work closely with post-secondary institutions, the Ministry of Education, the Ministry of Jobs, Tourism and Innovation and other partner ministries to identify topics and issues where we can engage the public together in a dialogue about education and training and build creative and innovative solutions together.

Engagement on the Aboriginal Post-Secondary Education and Training Policy Framework and Action Plan

The ministry is developing a new policy framework and action plan for Aboriginal post-secondary education and training. It will incorporate best practices and lessons learned from the Aboriginal Post-Secondary Education Strategy and Action Plan. Specific measurable outcomes will be identified in the action plan to be finalized for consideration by government by March 31, 2012. By 2020 there will be:

- ◆ An increased number of Aboriginal learners participating in and completing post-secondary education and training programs
- ◆ Increased K-12 to post-secondary transition rates for Aboriginal learners

We are examining new approaches to be more open and involve more citizens and stakeholders, particularly students and remote community members in dialogue about Aboriginal Post-secondary education. Engagement is planned through to February 2012 ending with a final forum and virtual summit. The objectives of the engagement are to:

- ◆ Seek advice, direction and input in order to verify and validate proposed framework and action plan.
- ◆ Have a more open, transparent process for the development of the framework and action plan.
- ◆ Create space for partners to dialogue, identify or validate issues, leading practices and innovative solutions.
- ◆ Build consensus and support for the proposed policy framework to ensure effective implementation.
- ◆ Implement commitments under the New Relationship, Transformative Change Accord, and the Métis Nation Relationship Accord, as well as its commitments to work collaboratively to improve Aboriginal learner participation and success in the Memorandum of Understanding on Aboriginal Post-Secondary Education and Training.

3.2 PILLAR 2 - WORKING BETTER TOGETHER - BUILDING COLLECTIVE, CONNECTED SOLUTIONS

Engagement Process and Steps

Phase 1 - Face to Face Dialogue (February 2012)

- ◆ Face to face engagement on draft framework with key stakeholders
- ◆ Face to face and virtual roundtables/focus groups with stakeholders

Phase 2 – Online Engagement (December 2011 - January 2012)

- ◆ Launch online engagement via ministry website
- ◆ Online engagement with students and Aboriginal citizens in remote communities
- ◆ Online discussion between stakeholders

Phase 3 – Final Forum & Virtual Summit (February 2012)

- ◆ Culminate face to face and online engagement to build consensus and support for the proposed policy framework to ensure effective implementation.

3.3 PILLAR 3 - REIMAGINE OUR WORKPLACE

Transforming how and where we work

3.3 PILLAR 3 - REIMAGINING OUR WORKPLACE

As modern technology and public expectations drive our transformative vision for service delivery and citizen engagement, the ministry also recognises the need for an innovative approach to business operations. The ministry will support employee productivity and organizational agility by aligning the work environment with work patterns. This will require a shift in organizational culture to embrace a new way of working. Employees will need to be provided the right support and tools to make this shift in how we work.

Significant emphasis is being placed on investments in collaborative technology to support online engagement within the ministry. We are pursuing a new infrastructure to enable the use of tools such as SharePoint 2010 which will provide a modern platform for dynamic web solutions and user generated content. This investment is a critical part of our new approach to citizen centred online service delivery and will ensure the future workforce of the post-secondary education sector will be more responsive and better able to accommodate the current and future needs of students.

3.3 PILLAR 3 - REIMAGINE OUR WORKPLACE

Leading Workplace Strategies

*"Work is **what you do** not **where you work**..."*

This is the first year Leading Workplace Strategies (LWS) has been included in Transformation and Technology planning. As such, we are taking strides to develop a shared understanding of what these strategies mean to our employees.

In order to successfully implement we will need to:

1. Understand the facts and trends around employee work styles (mobile vs traditional work style)
2. Build on program and service delivery changes already underway due in part to business improvement
3. Synthesize workforce projections over the next 3-5 years to align future work styles and workspace provisioning solutions

Our ultimate aim for Leading Workplace Strategies is to optimize human and financial resources. To accomplish this goal we will align employee diverse work styles with the work they do and the environment in which they work. In doing this, over the next three fiscal years we are committed to the following deliverables:

- ◆ Identify the current profile of employee work styles and how we will transition to a future state
- ◆ Educate our employees by identifying organizational trends, strategies and initiatives that will enable the workforce to become more mobile and flexible
- ◆ Support the implementation of LWS pilots and provide supervisors with tools and resources to be successful
- ◆ Identify strategies that will outline how we intend to optimize existing space over the next three years by increasing the number of internally mobile, externally mobile, working from home or tele-worker employees
- ◆ Align Leading Workplace Strategies to support us in achieving the transformation vision for the post-secondary sector and key deliverables

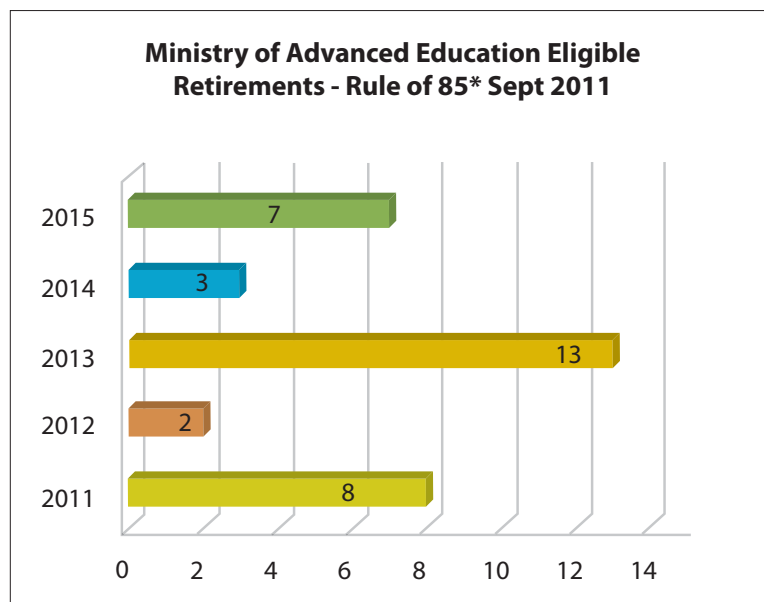

3.3 PILLAR 3 - REIMAGINE OUR WORKPLACE

CHALLENGES

We recognize that success of an organization rests on its people. Looking ahead, challenges and business pressures we face include but are not limited to the following:

Human resource pressures:

- ◆ We have an aging workforce. Retirements are rapidly rising. As illustrated in the diagram below, by 2013, 10% of the current workforce will be eligible to retire resulting in a decline in knowledge retention.

The low number of workers entering the workforce means government will have a smaller workforce. When the economy improves, competition for talent will intensify and staff turnover will increase. This demographic churn presents us with an opportunity to rethink the way we work with fewer leasing costs and salary dollars on the horizon.

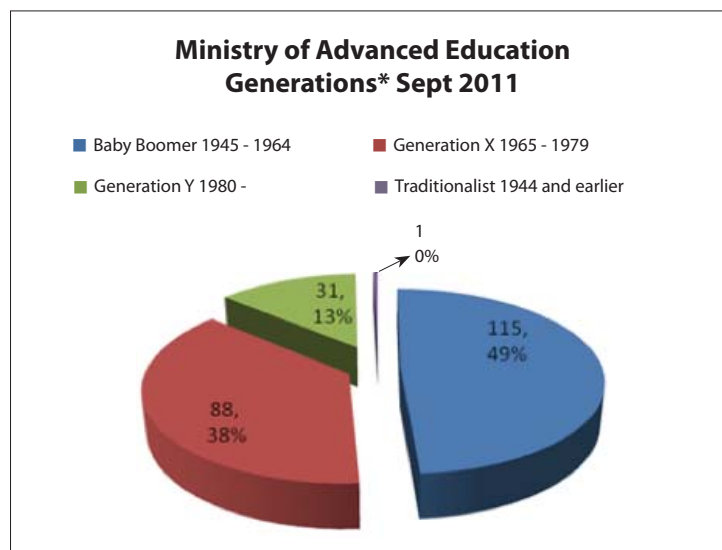

3.3 PILLAR 3 - REIMAGINE OUR WORKPLACE

The chart below indicates the demand growth for labour in B.C. will grow faster from 2010-2020 than the labour supply during that same period resulting in a scarcity of workers.

Source: **British Columbia** Labour Market Outlook: 2010-2020;
<http://www.bcstats.gov.bc.ca/data/lss/labour.asp#LFS>

Employees work in different ways. Those differences could influence many factors including the generation they grew up in and their preference in work style and environment. Those differences exist in the workplace and impact culture, recruitment strategies, the way we build teams, deal with change, motivate/manage employees and maintain/increase job performance. When the economy improves competition for talent will intensify and staff turnover may increase. Now is the time to change, engage and connect with our talent to improve recruitment and retention.

3.3 PILLAR 3 - REIMAGINE OUR WORKPLACE

APPROACH

Our goal is to implement organizational workplace changes aligned with previously identified flexible work options. Additionally, we will seek to realize human resource and financial benefits. Details of steps we intend to take in the first year are explained below.

1a). High-level Office Space Requirements

Our employees are co-located within three leased office spaces located in Victoria. We are working to reduce our real estate footprint over the next year to one workplace.

The modernization of StudentAid BC and the implementation of impact business delivery and space planning requirements, beginning this year.

Communication and collaboration tools, virtual workplaces and discussion forums across government will become more synthesized and accessible. As these changes are implemented our IT/IM infrastructure and supports will allow for greater mobility and the flexibility to adopt new work arrangements while still ensuring business objectives are achieved.

Additionally, the corporate shifts underway (Collective Agreement, Government office space standards, IM/IT security) will enable our approach and implementation.

1 b). Mobile and Flexible Workforce

We will conduct a ministry-wide environmental workforce scan to identify office space requirements:

- ◆ Engage supervisors and employees by building awareness through employee led focus groups
- ◆ Continue to promote and pilot flexible work options for self-selecting, supervisor-approved individuals
- ◆ Identify early adopter pilots this fiscal and communicate testimonials on pilot progress to ministry employees quarterly
- ◆ Develop lease expiry strategies
- ◆ Integrate workforce strategies with IT strategies to create a workplace of the future

Measures of Success:

By 2012-13 we hope to see 20 per cent of our workforce supported by flexible work arrangements. In addition, consolidation of our real estate footprint from three office locations to one leased space will significantly increase the availability of group space.

3.3 PILLAR 3 - REIMAGINE OUR WORKPLACE

2. Ministry transformation vision and business strategies that could be enabled by Leading Workplace Strategies:

Employee Engagement

As we move from analytics to action we will engage staff to create a workplace of the future. We will:

- ◆ Adopt Leading Workplace Strategies as a business priority within the ministry strategic plan
- ◆ Develop targeted change plans
- ◆ Design and offer supervisor conversations on Leading Workplace Strategies implementation
- ◆ Support earlier adopters and pilot projects
- ◆ Promote awareness and create avenues for employees and supervisors to engage in the ongoing evolution of the workplace:
 - utilize existing communication conduits (i.e. Employee Advisory Committee, coffee chats, Deputy Minister blog)
 - employee testimonials, focus groups, social media and webinars
- ◆ Leverage internal and external stakeholder possibilities

Improved Stakeholder Leadership and Relations

Leading Workplace Strategies will see many benefits within the sector including:

- ◆ Enhanced employee engagement strategies that will increase the ministry's ability to strengthen executive and supervisory level communications, change commitments, flexible workplace options, external stakeholder involvement, team work, and learning
- ◆ Implement the 2011/2012 integrated ministry strategic plan
- ◆ We will improve its ability to compete for talent by increasing the number of postings supporting flexible work styles

3. Employee Work-style – Our Current State

At present the ministry estimates 95 per cent of its employees fall into the residential category working onsite most of the time. As the way that we work evolves, so will how, when, and where staff do their work. By capitalizing on IM/IT supports and providing a solid transition framework, we will be able to provide the key supports to supervisors and employees needed to adapt to new workplace requirements and opportunities.

Our environmental work style scan will seek to identify:

- ◆ Current work-styles by division and branch
- ◆ Work-styles that are "role specific"
- ◆ Opportunities to collaborate with other sectors and stakeholders
- ◆ Facilities and IT considerations

Note: Jan 2012 – working to secure access to Tele-trips survey tool, available through Shared Services BC

3.3 PILLAR 3 - REIMAGINE OUR WORKPLACE

MINISTRY OF ADVANCED EDUCATION Leading Workplace Strategies ~ Three Year High Level Plan		
2011-12 Transformational Change	2012-13 Building Resiliency	2013-14 Sustainability
Complete an environmental work style scan Work-styles survey (Tele-trips tool) Identify high-level office space requirements Draft a change plan	Map mobile and flexible workers against job functions Begin to categorize job functions to T and T defined work-styles (residents, internally mobile, externally mobile, tele-worker)	Adopt and implement ministry-wide LWS strategy and work solutions proven to support business, cost savings, talent attraction and retention objectives
Summarize and present findings make recommendations to Executive for a change plan Develop performance measures to recognize our competitiveness to attract and retain talent Identify budget impacts	Learn by doing - conduct more broad-scale targeted pilots Share lessons learned Evaluate "experiments" success	Develop post occupancy evaluation and risk assessment
Engage the organization by building LWS awareness through employee-led focus groups and establishing a LWS working committee	Develop lease expiry strategies	Monitor/Measure/Course Correct against business objectives
Design and offer Supervisor Conversations on LWS implementation Advocate for course curriculum to be added to Supervisory Development Certificate program provided by BC PSA		
Early adopter pilots: 1. Technology Business Solutions Branch (confirmed) 2. Post Secondary Corporate Finance (confirmed) 3. StudentAid BC (stretch target) (Note: Nov 2011, 95% of our workforce fall within the Resident category)		
Identify work tool requirements Assess wireless capabilities Identify U3 refresh alignments Communicate business objectives and performance metrics to staff		

3.3 PILLAR 3 - REIMAGINING OUR WORKPLACE

Employee Collaboration to Achieve Excellence

Now more than ever it is important to share our knowledge, ideas and expertise to build creative and innovative solutions together. We need to work smarter and leverage the full potential of each team member. There is an opportunity to make our corporate knowledge and information readily available to create collaborative opportunities and work together through the use of collaborative tools like SharePoint, LiveMeeting and the ministry intranet. We need to encourage the use of these new tools and overcome barriers to succeed.

We benefit from a well established intranet site, AVED Online - a site that is recognized as one of the best in government. The site is widely used and acknowledged as the first point of reference for our employees and contains business resources such as ministry policy and research, administrative templates and tools, corporate communications and community announcements. This site also encourages online community building in the form of employee profiles, blogs and employee recognition. In order to further encourage employee collaboration, a series of new dynamic enhancements were recently launched including an employee blog section and a new learning centre, AVED Academy. These new sections encourage employees to share their experiences and contribute to a more engaging workplace.

The value of AVED Online as a critical business and communications tool is something the ministry recognizes more than ever before. This is why we will continue to expand the site to bring more paper processes online in order to streamline operations and build a culture of innovation. We are committed to fostering this online community so that it will grow and prosper in the coming months. As part of our investment in a new technology infrastructure, AVED Online will be further expanded and enhanced so that more opportunities for employee generated content can be provided. Through this dynamic online space, employees will be given the opportunity to share knowledge and expertise, work across branch and division boundaries and participate more fully in the business of the ministry.

We are also investing in SharePoint 2010 which will provide new opportunities for employee collaboration across the organization. SharePoint will serve as an online work space for employees and help to support a more innovative approach to collaboration. Through the implementation of this new technology, we will have an opportunity to reinvent the workplace and find smarter ways in which to work together and with our partners to meet our business objectives.

This transformation is not about technology. Transformation will only be achieved by internally shifting our culture so employees feel supported in the use of these new tools. The ministry will provide support for employees in the adoption of these innovative tools by providing training, leadership and communications so that employees learn to use new tools effectively. Opportunities to share knowledge and expertise will increase our productivity and ensure our team is more effective in supporting the growth and development of B.C.'s education sector.

Technology and Transformation Instructions

Ministry of
Advanced Education

2012/13 – 2014/15

INTERNET STRATEGY

Ministry of Advanced Education

Date: November 4, 2011

Executive Summary

The Ministry of Advanced Education hosts a multitude of websites that disseminate information on our programs and services. The ministry's main site, www.gov.bc.ca/aved, receives over 41 million page views per year, 76% of which are directed to StudentAid BC. Other key areas of the site offer information for Aboriginal students, adult learners, post-secondary institutions, researchers and educators. The ministry also hosts two portal sites: an international student portal (www.learnlivebc.ca) and BC Perspectives (www.bc-perspectives.ca), a student/teacher resource for information on the B.C. post-secondary sector.

While these sites reflect the structure and processes of our organization, they do little to promote student engagement or encourage citizen participation and are not optimized for mobile devices. Furthermore, little integration and cross-pollination exist between our content and the new B.C. government web presence, other government sites, post-secondary institutions and partner sites. The ministry is committed to transforming its web presence to provide relevant, high quality information and services that reflect the student's experience and ensures linkages with the K-12 system, with labour market information and with the new B.C. government web presence.

The ministry is modernizing its web presence to provide "no wrong door" access to information and invite citizen participation across the post-secondary sector. This Internet Strategy lays out actions defined by three main goals: to provide high quality, accessible online services; to engage citizens in our business; and to collaborate across the education sector.

The only way to truly understand the needs of our clients is to ask them. One of our first actions will be to conduct user research to determine who our audience is and what their information needs are so that we can target our efforts and make strategic investments where they matter most. At the same time we will inventory our web properties and work with subject matter experts to categorize and rationalize web assets so that we can begin to take a more citizen-centred approach to web development.

The ministry will leverage corporate knowledge and resources by collaborating with the Ministry of Labour, Citizens' Services and Open Government to integrate our online information into the new B.C. government home page and forms and services finder so that the public can easily gain access to our information from the main government online gateway. We will also implement corporate taxonomy and meta data standards to ensure search engine optimization. Our new sites will be developed using the new corporate libraries which use evidence based design standards to increase usability and accessibility regardless of platform or device. Combined, this approach will result in improved online service delivery that brings top tasks and services to the forefront and provides access to quality information that is mobile friendly and search engine optimized.

The ministry is also identifying opportunities for the use of social media to ensure students and their families receive the information they seek when, how and where they search for it and have greater opportunities for collaboration and participate in the development of services and policies. Additionally we will investigate the development of mobile applications for students that will provide anytime access to student loan information in the palm of their hands (see Modernizing StudentAid BC).

In support of strengthened collaboration across the post-secondary education sector, the ministry is investing in a modern technology infrastructure which will offer an integrated online platform for ministry staff, stakeholders and partners to share information and work together to build stronger linkages with the post-secondary sector in support of sector transformation and greater student engagement.

The foundation for this new approach to online service delivery will be the establishment of a formalized web governance framework. Through our Web Advisory Council, the ministry will continue to focus on building a web

governance model that supports an integrated, strategic approach to web management, puts citizens' needs before our organizational structures and ensures strategic alignment with corporate priorities. We will implement the best practices as outline in the recently released Online Service Delivery Toolkit by confirming senior leadership accountability for online services and capitalizing on the subject matter expertise in our ministry by establishing working groups to increase collaboration at all levels of the organization.

Through the development of high quality, citizen-centred websites, mobile web applications and the use social media the ministry will transform its online services to attract international students to B.C. and support the student's journey from the K – 12 system, into a post-secondary institution of their choice while providing the tools to help them find meaningful attachment to the labour force once their academic goals have been achieved.

Introduction

Today's students seek out information through multiple channels including social media such as Twitter, YouTube, Facebook, LinkedIn and Google+. Students read online forums, they subscribe to blogs and they spend more time watching YouTube than cable. More must be done to meet the expectations of today's student. It is no longer enough to provide static, one way information on websites built to mirror the organizational design of government. Students expect more.

In order to meet the needs of a new generation of students, the ministry must adopt a transformative approach— one that will ensure students have access to the information and services necessary to make informed choices about their educational path.

Underpinning the success of this vision is the ability of citizens to access information and services when and where they want. The most relied upon mechanism for information and service delivery is the internet. The internet has evolved rapidly and with the advent of Web 2.0 comes a whole new model of government service delivery. Not only is there a drive to make information more readily accessible through web-based services that provide information to citizens, but also an increased need for better information integration, linkages across all government websites in a form that is accessible from any device. Today's citizens are mobile, technically advanced and using social web like never before. This is especially true for our main audience – students.

B.C.'s Gov 2.0 strategy, Citizen's @ the Centre is creating a new imperative to modernize ministry websites. This transformative strategy lays out three broad shifts towards citizen participation, self-service and business innovation. The foundation for all three pillars will be improved online service delivery across all government sites. To address this shift, government is modernizing its approach to the development of dynamic, web solutions to better support online citizen engagement and electronic service delivery. This transformation is evident in the recent dramatic redesign of the main B.C. Government home page – www.gov.bc.ca – which presents citizens with no wrong door access to government information and services quickly and easily. Led by the Ministry of Labour, Citizen's Services and Open Government, this new approach to online information is based on extensive user research which provided real user data about citizens information needs. The next phase of this corporate initiative requires ministries to examine their web properties and develop a strategy by which to render websites and online services more citizen-centred so citizens can benefit from better online service delivery.

In response to this initiative, the Ministry of Advanced Education has produced this internet strategy which describes how the ministry will evolve its web presence so that it actively facilitates citizen interaction through improved service provision and makes information more readily available to citizens when, where and how they want.

1 Business Context and Vision

1.0 Current Situation

The Ministry of Advanced Education has identified over thirty separate web properties making up hundreds of web pages disseminating information on our programs and services. The ministry's main site, www.gov.bc.ca/aved, receives over 41 million page views per year - 76% of which are directed to StudentAidBC. This website – www.studentaidbc.ca - is the main online service delivery mechanism for the student financial aid program. The site hosts several online services for students: the online student financial aid application system; an online service to check the status of a student loan application; a change of address online service; and an application which allows students to check school designation status. Combined, these online services account for the majority of user visits to the entire ministry website. Although the StudentAid BC website is the primary destination for traffic to the ministry website, users visit our site to learn more about B.C. post-secondary institutions, International Education, Adult Education, English as a second language programs, Aboriginal Education initiatives, degree authorization and the quality assurance process for the post-secondary system. The ministry website also provides information for post-secondary institutions and stakeholders. For example, government letters of expectation, audited financial statements, institutional services plans and student level data in the form of PDF standard reports offer key information to the post-secondary sector. These sections support the ministry's requirement for transparency under the post-secondary accountability framework.

Aside from the main website, the ministry also hosts two standalone sites: B.C. Perspectives; and LearnLive BC. The B.C. Perspectives website - www.bc-perspectives.ca/ - is a dynamic and interactive teacher-student resource intended to provide information on students' perspectives of the post-secondary education system. The site provides "real people" examples in the form of videos that help students think and plan for their future. The LearnLive BC portal - www.learnlivebc.ca is a gateway for international students seeking information on how to study in B.C. This site receives visits from international students as far away as Zambia, Brazil, and China. Launched in 2006, the website will undergo a complete transformation this year as part of the International Education Strategy. The new site will be user-centred, optimized for mobile devices and integrated with the new provincial government home page to increase findability.

Ministry Web Management Framework

The Ministry of Advanced Education benefits from a well established, centralized web management approach. Websites are designed, developed and maintained by the Web Services Unit in the Technology and Business Solutions Branch. This team of developers, designers and user experience specialists provide end to end web solutions to the ministry. Subject matter experts work with the ministry web team to conduct user research, develop content strategies, taxonomy, meta data and design and develop web solutions to meet program area demands. The benefits of this centralized model include reduced costs, a stringent approach to web management, higher quality assurance standards and consistent user experience across all sites. The Ministry is also well on its way to a new, web governance model. The recently formed Web Advisory Council brings business, technology and communications leadership together monthly to ensure a strategic approach to web development that provides value to citizens.

Challenges

The ministry's current web presence has grown organically with little formal attention paid to the web's alignment with corporate goals and objectives. Websites do not provide a single access point for citizens seeking information about the entire post-secondary system all in one place and contain little or no cross-pollination to ensure citizens access to relevant information from the main government home page. Instead, students must navigate a labyrinth of individual sites in order to gain a fulsome picture of the B.C. post-secondary education system.

Content development within the ministry is more focused on meeting the communication goals of government than on meeting information needs of the citizens of B.C. Much of the ministry information is captured in PDF format and posted to the site with little attention paid to the accessibility, readability or value to our audiences. Many of our websites do not meet current user experience standards and are not search engine optimized. Furthermore, sites and online applications are not optimized for mobile platforms and devices. Finally, much of the content posted to ministry sites is not written in plain language for a general audience. The ministry recognizes the shortfalls of its current web presence and is taking a new approach to online service delivery in order to engage citizens through multiple service channels, including social media, providing "no wrong door" access to information.

1.1 Vision

A student's journey

The student's journey does not begin in post-secondary studies nor does it end after a credential has been received. Students and their families need information and tools at every stage to help guide decision making and ensure students gain the skills necessary to be fully engaged in the knowledge economy beyond graduation. Whether a student is planning entrance into post-secondary for the first time, an Aboriginal learner is seeking support programs, a life-long learner is pursuing education for education's sake or an international student is searching for information on studying in B.C., the ministry will provide better access to high quality online information and services to support this journey.

To achieve this vision, the ministry is taking a more holistic view of web development. This new approach will include user research to better understand the public's information needs. We will also collaborate with partner ministries such as the Ministry of Education to ensure linkages are in place to point students and their families to career planning tools and information about the entire post-secondary system so they can make informed choices about where, what and how they study. The ministry will also collaborate with the Ministry of Jobs, Tourism and Innovation to share data and build linkages to labour market and newcomer information to provide learners and international students with quality data about career prospects and opportunities to live and study in B.C. Finally, we will work closely with the Ministry of Labour, Citizens' Services and Open Government to implement corporate taxonomy, design libraries and user experience best practices and establish linkages to the new B.C. government web presence so our information is readily accessible from government's main door.

This new approach will ensure high quality, user-centred, mobile online services are available to the public wherever they choose to look for them. Ultimately the ministry will evolve its web presence to support the student's journey and provide pathways to high quality information wherever it may reside.

1.2 Key Priorities Already Underway

Student Financial Aid

The majority of students accessing financial aid today are in the 18 to 24 year age range. They grew up in the information age and are highly mobile, using technology extensively in daily activities. These students expect easy and unfettered access to information and tools needed to make important decisions about their lives. This young cohort is technologically savvy and expects 24/7 online access to information and services. The ministry has an opportunity to provide better service to students by offering more targeted information, through the StudentAid BC, website and through social media channels such as Twitter, Facebook and YouTube.

Work has already begun to make the Student Financial Aid process more citizen-centred through a proposed new student financial aid online application system, a new, mobile friendly website and by moving more administrative processes online. Phase one of the website redesign project has begun. The first phase of the project includes a user research project to gather information from students, school officials, service partners and staff about their service delivery needs. This research will also include persona development to build a clearer picture of our users. The project team will then create strategies for content development such as taxonomy, keywords, and meta data to increase search engine optimization. The team will also work with Labour, Citizen's Services and Open Government to determine placement of StudentAid BC services on the B.C. government home page, identify forms and services to be included in the corporate listings and implement corporate taxonomy standards so that the StudentAid BC site is fully integrated with the entire B.C. government web presence.

Phase two of the project will include applying the new government design libraries to all pages based on user experience testing and the implementation of an intuitive information architecture to improve way finding. The ministry is also considering the use of Twitter, Facebook and YouTube to offer students a more dynamic, responsive service delivery that is integrated with social media to provide more timely assistance. The target launch date for a new web presence for StudentAid BC is spring 2012.

Phase three of the project will focus on mobile application development within the new student financial aid application system to provide students with 24/7 mobile access to loan information.

User research shows students want...

... *"an easy to find login, so students could actually manage their accounts in one place, without having to run around to several different places to understand the loan process and their own loan information"...*

... *"integrate the student loan account with facebook/social networking". ..*

... *"it would be nice if it was easy to navigate, and if there was an actual self-service component - I don't need to take an agent's time for simple inquiries"...*

International Education

The Province has set a goal of increasing the number of international students by 50 per cent over the next four years as part of the new International Education Strategy which will help shine a spotlight on B.C. as the best place to receive a high quality education. In support of this vision, a new web presence for international students is being created.

Students from around the world are searching for information on how to study in B.C. and we must provide the highest quality information in order to attract international students to the province. Yet providing quality information will not be enough. Increasingly, mobile technology is overtaking all other forms of connectivity. This is even more evident internationally where mobile usage is sky rocketing. In order to attract the world to B.C. the ministry will ensure that information is optimized for a mobile audience.

The ministry is developing a web strategy for an International Education online presence that will include mobile optimization, multilingual information and search engine optimization strategies to ensure findability. The strategy will address the needs associated with an international audience. The ministry will engage with international student to determine what those information needs are and work with post-secondary institutions, partner organizations and service providers to gather data to shape the web strategy. In addition, the ministry will ensure the web presence for International Students is well integrated with the B.C. government home page, other government and stakeholder organizations to provide a “no wrong door” approach so that international students can access not only information about studying in B.C. but any other programs and services that will support their needs while they reside in B.C.

Aboriginal Education

B.C.’s full potential will only be realized when Aboriginal people participate fully in the social and economic life of B.C. Currently, Aboriginal people are underrepresented in post-secondary education and in the labour force. Engaging Aboriginal learners is an ongoing challenge – one that the ministry is working hard to overcome. While Aboriginal people may not be participating fully in the post-secondary education system, research shows that 90% of Aboriginal youth use social media and mobile technology. The ministry must leverage web and social media tools to encourage conversation and community building to support better outcomes for Aboriginal learners.

"The use of Facebook is pervasive among First Nations communities, and is being used in multiple ways, across all generations. Even with communities spread far and wide, there remains an incredible flow of ideas and all kinds of capital between the reserve and the city, forming 'communities in motion.' And Facebook provides one conduit for that."

Dr.Candis Callison, professor at UBC's Graduate School of Journalism.

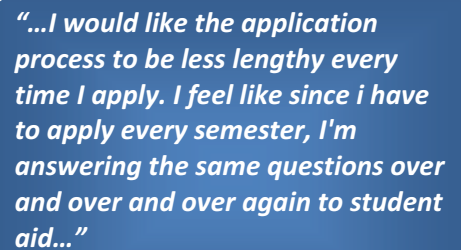

There is an exciting project underway in the ministry that will provide Aboriginal students, community partners, the post-secondary education system and other interested stakeholders/partners with the opportunity to engage in a dialogue about the future of Aboriginal Education Policy both through face to face community meetings and through the use of the web and social media. In support of this project, a new website will soon be launched that will focus primarily on the needs of Aboriginal students. The new web site, the result of user based research including focus groups and persona development, will deliver interactive, engaging information and resources to support their education transition and job future decisions. The website will also be a gateway into an online engagement space that will support citizen and stakeholder collaboration on the new draft Aboriginal Education Policy Framework. Furthermore, the ministry is exploring the use of social media channels like Twitter and Facebook in order to support a more open, ongoing dialogue and community building with Aboriginal people, community partners and service providers.

Opportunities for Innovation

The ministry is making investments in a new technical architecture to support the development of modern line of business and web applications. The Student Financial Assistance Application System is one example where the ministry is exploring new and innovative ways to support students in their academic achievements. This significant investment will not only improve service to citizens but will support business transformation as paper processes move online.

The ministry is also looking at ways to use to provide a more dynamic user experience. For example, the ministry collects student level data from public post-secondary institutions and currently posted this information on the website in PDF format, making it impossible for users to interact with the information in meaningful way. A project is now underway that will provide a more dynamic user experience by integrating the information into an online web application allowing users to customize the information for more relevant results. A similar project involving the Post-Secondary Institution Proposal System, which collects information as part of the degree authorization review process, will take the information and provide an interactive overlay for citizens to create custom views and disseminate meaningful information about B.C. post-secondary institutions.

Significant emphasis is also being placed on investments in collaborative technology to support online engagement within the ministry, with our sector partners and with students and citizens. The ministry is pursuing a new infrastructure to enable the use of tools which will provide a modern platform for dynamic web solutions. This investment is a critical part of our new approach to citizen centred online service delivery and will position the ministry towards a more responsive, flexible online experience for students.

"...I would like the application process to be less lengthy every time I apply. I feel like since I have to apply every semester, I'm answering the same questions over and over and over again to student aid..."

A Strategic Approach to Web Governance

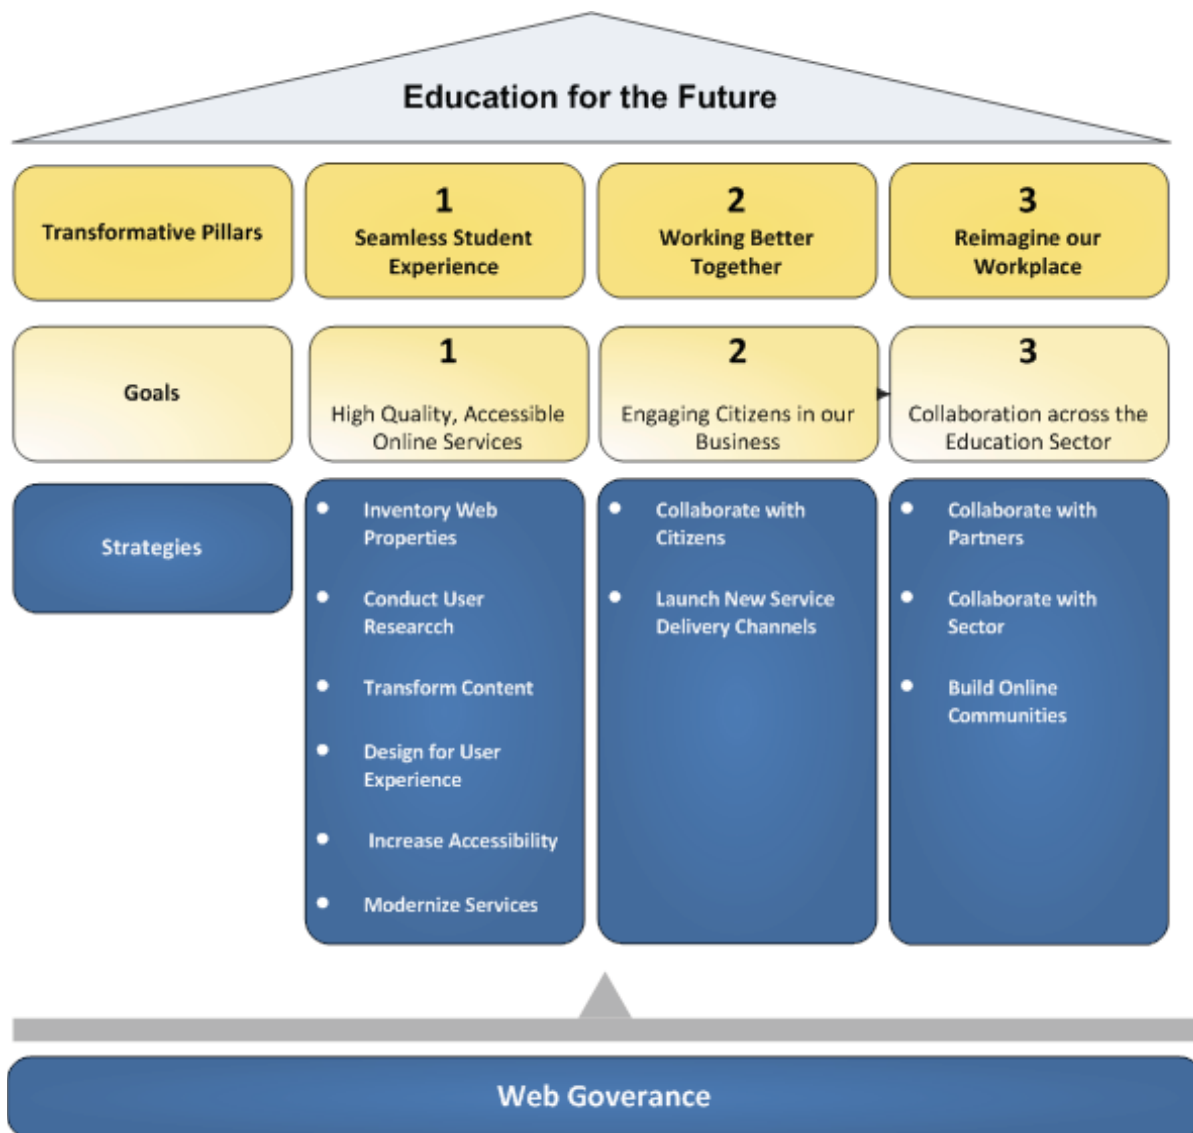

The Ministry of Advanced Education has an established, well recognized web program and benefits from a centralized approach to web management. The Ministry is committed to continuous improvement in this area to promote internal business transformation and ensure our use of the web is effective, that it supports mission achievement, and puts the needs of citizens first. The ministry has already begun to shift to a more strategic web management framework through the creation of a Web Advisory Council. This cross-ministry advisory group created in March, 2011, brings ministry business leadership together monthly to address weaknesses in the web process and to set strategy, direction, and policy for online service delivery. Through this new collaborative approach, program areas have a better understanding of roles and responsibilities, decision making authority for web projects is defined and a much more holistic view our organizational web presence is created.

Over the coming year, the ministry will be documenting the new formal governance framework and web process which will provide senior managers with better decision making tools. The ministry will also implement best practices as set out by the Ministry of Labour, Citizens' Services and Open Government in the recently released Online Service Delivery Governance Toolkit including confirming senior executive accountability for online services and the establishment of subject matter expert working groups across the organization.

Formalizing web governance will allow the ministry to fully realize the service value of the internet and transform ministry business processes to be citizen-centred and better aligned with ministry priorities and the priorities of government.

2 Action Plan

This is a very exciting time in the Ministry of Advanced Education. Conversations are happening across the ministry focused on building better online services and enabling citizen participation. Strategies and actions have been developed to realize this vision in support of the strategic shifts necessary to better enable citizen participation and access to high quality information and services. The diagram below provides a summary of these strategies and actions.

Goal 1: High Quality, Accessible Online Services

Our Commitment

The key to helping students and their families achieve their educational goals lies in our ability to provide high quality information in a way that is meaningful and encourages citizen participation. Our websites will reflect the needs of our audiences and provide seamless, integrated access to the entire sector through our new provincial government home page - www.gov.bc.ca.

Overview

The Ministry of Advanced Education has an opportunity to better present information on the post-secondary education system and coordinate information across the Education and Economy sectors based on citizen needs and expectations. These opportunities will require the ministry to take the steps necessary to transform content and design, increase accessibility and modernize business processes in order to meet the information needs of a new generation of citizens.

Work is already underway across the ministry in areas of Aboriginal Education, Student Financial Aid and International Education to build new online solutions for these key areas. The ministry is committed to redeveloping its entire web presence not just for these priority initiatives but for all sites across the organization. We will apply the following actions to achieve this goal:

Strategy	Actions		
	2012/13	2013/14	2014/15
1.1 Inventory Web Properties	<ul style="list-style-type: none">▪ Determine number of web properties▪ Categorize web properties (online services, static information, forms, publications)▪ Identify business owner/content stewards▪ Prioritize properties based on web analytics▪ Identify business critical pages▪ Identify top tasks to determine priority placement of key information▪ Make web properties available from B.C. Government home page and add to forms and services index.	<ul style="list-style-type: none">▪ Continue to integrate services with B.C. Government home page	<ul style="list-style-type: none">▪ Continue to integrate services with B.C. Government home page

1.2 Conduct User Research	<ul style="list-style-type: none"> ▪ Identify service touch points ▪ Conduct user Persona workshops with subject matter experts ▪ Refer to corporate toolkits and conduct user research on business critical websites ▪ Examine Web Analytics and Search Term data ▪ Take evidence based approach to web redevelopment ▪ Establish baseline performance measures for business critical sites 	<ul style="list-style-type: none"> ▪ Establish regular user research and testing cycle for business critical services (subject to available resources) ▪ Measure performance and adjust approach if required 	<ul style="list-style-type: none"> ▪ Conduct regular user research and testing on business critical services based on established cycle (subject to available resources) ▪ Measure performance and adjust approach if required
1.3 Transform Content	<ul style="list-style-type: none"> ▪ Develop content policy to categorize web properties and identify opportunities for open data and information ▪ Establish citizen-centred information architecture ▪ Rewrite business critical sites in plain language ▪ Apply corporate, taxonomy to business critical pages ▪ Implement metadata ▪ Develop and implement common key words, phrases and descriptive titles on business critical sites ▪ Integrate ministry content, forms and services into the B.C. Government home pages 	<ul style="list-style-type: none"> ▪ Continue to implement content strategy ▪ Rewrite non-critical web pages ▪ Continue to implement citizen-centric taxonomy, common key words, phrases and descriptive titles ▪ Continue to align ministry content with the B.C. Government home pages 	<ul style="list-style-type: none"> ▪ Enforce content strategy

1.4 Design for User Experience	<ul style="list-style-type: none"> ▪ Apply new corporate design libraries on business critical services to ensure consistent user experience across government sites 	<ul style="list-style-type: none"> ▪ Continue to implement new corporate design libraries to ensure consistent user experience across government sites. 	<ul style="list-style-type: none"> ▪ Continue to implement new corporate design libraries to ensure consistent user experience across government sites.
1.5 Increase Accessibility	<ul style="list-style-type: none"> ▪ W3C compliant code on business critical sites ▪ Use of responsive design standards to ensure accessibility for all devices and screen sizes 	<ul style="list-style-type: none"> • W3C compliant code on all ministry pages • Continue to implement responsive design standards 	<ul style="list-style-type: none"> • Continue to implement responsive design standards
1.6 Modernize Services	<ul style="list-style-type: none"> ▪ Identify opportunities to build dynamic online tools ▪ Develop mobile strategy ▪ Develop a web application for student level data that will provide custom reports ▪ Identify opportunities for mobile applications for Student Financial Aid ▪ Implement Smart Forms for Student Financial Aid application processes. 	<ul style="list-style-type: none"> • Implement new, online services for student financial aid ▪ Develop a mapping tool to provide high level, visual information about B.C.post-secondary institutions. ▪ Continue to identify opportunities for mobile web applications 	<ul style="list-style-type: none"> ▪ Continue to identify opportunities for mobile web applications

Goal 2: Engaging Citizens in our Business

Our Commitment

The Ministry of Advanced Education is committed to enhancing transparency and accountability to British Columbians. Opening our data, information and policy development processes creates the opportunity for citizens to access public information in a more useful and readable format, enabling greater insight into the inner workings of Government and empowering citizens to participate more directly in the decision-making process. The ministry will use the web wherever possible to support open, two-way collaboration with our clients and stakeholders.

Overview

Students today do not know a world without the social web. The ministry recognizes the importance of social media as a key mechanism for providing timely, accessible services and supporting a more open dialogue with students. Web 2.0 technologies have created significant opportunities for collaboration to engage citizens in decision making like never before. Through the use of new online tools, such as blogs and through social networking sites like Twitter and Facebook the ministry will establish two way conversations with our clients to provide more timely and effective services and better policies. What's more, the ministry will improve the ability of the public to find, download and use our data to allow citizens and stakeholders to derive value from data government holdings. The following actions will help us achieve this goal:

Strategy	Actions		
	2012/13	2013/14	2014/15
2.1 Collaborate with Citizens	<ul style="list-style-type: none"> ▪ Launch Aboriginal Education Policy Framework public collaboration ▪ Develop strategies for student engagement and collaboration ▪ Collaborate with Government Communications and Public Engagement and Citizen Engagement Team to integrate all public collaboration into new "Have your Say" platform. ▪ Open data and inventory information to be proactively released ▪ Build expertise within the ministry to support public engagement 	<ul style="list-style-type: none"> ▪ Continue to identify new opportunities for public engagement ▪ Continue to contribute data holdings to DataBC (See Open Data Appendix) ▪ Expand open information inventory where possible 	<ul style="list-style-type: none"> ▪ Continue to identify new opportunities for public engagement ▪ Continue to invite public engagement on existing collaboration opportunities ▪ Continue to contribute data holdings to DataBC (See Open Data Appendix) ▪ Expand open information inventory where possible

2.2 Launch New Service
Delivery Channels

- Establish @StudentAid BC Twitter account and hashtag #StudentAidBC
- Establish Aboriginal Education Twitter and Facebook
- Develop Social Media strategy for International Education

- Expand the use of Social Media

- Expand the use of Social Media

Goal 3: Collaboration across the Education Sector

Our Commitment

The Ministry of Advanced Education will collaborate with partner ministries such as Education and Jobs, Tourism and Innovation and with our stakeholders across the post-secondary education sector to improve knowledge sharing and increase effectiveness. We will be innovative in our approach and use web 2.0 technologies to engage stakeholders and partners in dialogue in pursuit of a more responsive, flexible student-centred post-secondary system that is relevant to communities and labour market needs.

Overview

To be successful the Ministry of Advanced Education must take a more collaborative approach to how we operate both within government and across the entire post-secondary education sector. The ministry is investing in collaborative online tools to support greater information sharing and online dialogue.

Strategy	Actions		
	2012/13	2013/14	2014/15
3.1 Collaborate with Partners	<ul style="list-style-type: none"> Form cross-government working groups with partner ministries Standardize taxonomy across the sector Consult with the Ministry of Labour, Citizens' Services and Open Government to align web properties with the B.C. Government web presence. 	<ul style="list-style-type: none"> Continue to build partnerships and align web properties with the B.C Government web presence. 	<ul style="list-style-type: none"> Continue to build partnerships and align web properties with the B.C Government web presence.
3.2 Collaborate with Sector	<ul style="list-style-type: none"> Launch online collaboration solutions to support electronic transfer of information and better online services to stakeholders Streamline corporate processes and bring processes online. 	<ul style="list-style-type: none"> Continue to build implement collaboration solutions and online processes to reduce paper 	<ul style="list-style-type: none"> Continue to build implement collaboration solutions and online processes to reduce paper
3.3 Build Online Communities	<ul style="list-style-type: none"> Develop SharePoint 2010 as a platform for stakeholder collaboration 	<ul style="list-style-type: none"> Continue to develop and foster community building using collaborative online tools 	<ul style="list-style-type: none"> Continue to develop and foster community building using collaborative online tools
