Thanks Andrew.

Passing this to Charlie, as I know that this issue is live on his A/ADM plate this morning.

Subject: Update Re: Marine Harvest (Swanson) Fish Farm Occupation

...there is a specific FaceBook page for this occupation called **Swanson Occupation**. They posted just three hours ago (Day 6).

They also put out a 'wish' list yesterday of items they require going forward (if anyone wants to contribute) including a generator, a bucket toilet with seat, a lantern, headlamps, a cooler of ice, and folding chairs.

They also have a GoFundMe page [\\$22](#) for monetary contributions.

Subject: Fwd: First Nations and salmon farms

Don,
Sorry for the delay. Attached is a note that provides an overview of the Finfish Aquaculture (Salmon Farm Issue). We've tried to briefly summarize a number of different elements including industry statistics, Ministry roles/responsibilities, First Nations and Crown tenures, Cohen Commission, fish health, tenure moratoriums and the "Pause". We've have also included some suggested some Key Messages that government could use in response to the recent concerns around fish farms.
With regards to some of the issues that s.22 and others are currently raising, there are no new issues being identified. There is a very robust surveillance and monitoring, and reporting program in place that we publicly report on some of the

normal occurrences of emaciated and abnormal fish that you typically find in any population. There is also public reporting on any bycatch in fish pens (herring, wild salmon, etc.) as well public reporting on fish escapes. In BC, escapes do happen albeit they are rare occurrences and typically involve only minimal numbers of fish. Finally, AGRI has dedicated fish pathologists (veterinarians) and one of the few certified laboratories to be able to monitor and report on fish health results (we provide this as a service to DFO who has responsibility for fish health). We are significantly more advanced than is the state of the industry in the US.

At the same time the pause on any future salmon aquaculture was initiated, government announced it was reviewing the salmon farm approval framework to ensure aquaculture operations are socially and ecologically sustainable and could coexist with BC's wild fishery. Government also committed to: forming an Advisory Council on Finfish Aquaculture; looking at the use of Aquaculture Stewardship Council certification for BC Salmon Farms; and the Strategic Salmon Health Research Initiative (BC is funding some of the research .s.22 references). We are expecting to receive the Final report from the Advisory Council before December 31,2017. All of these initiatives will inform how we proceed with Finfish Aquaculture in the future.

Finally, we have included a table that lists all of the locations of current tenures and the First Nations whose territory is in or close proximity to the site. It is important to note that the list is not an assessment whether a particular First Nation "supports" aquaculture or not - instead it simply indicates whether a company has an agreement in place with the First Nation for that site - green says agreement in place, yellow indicates under discussion, pink/red means they oppose the site. We need to be careful about how this table gets used and interpreted, especially since the numbers and situation are so dynamic. Hopefully this is helpful. My staff and I, along with my colleagues are happy to provide any further details or briefings that may be required.

**Ministry of Agriculture
BRIEFING NOTE FOR MINISTER FOR INFORMATION**

Ref: #186665

Date: August 29, 2017

Issue: Some First Nations requesting Atlantic salmon farms be removed from their traditional territories.

Background:

Industry Statistics:

The B.C. salmon farming sector has been operating for more than three decades. Farm-raised salmon is B.C.'s highest valued seafood product (93,000 metric tonnes worth \$797 million in 2016) and the number one agricultural export. About seventy per cent of the harvest is exported, primarily to the U.S., followed by Japan, China and Hong Kong. Salmon aquaculture is a major employer in rural and remote coastal and First Nations communities. The industry has identified that the industry generated 5,000 jobs, paying roughly 30 per cent more than the provincial median. Between 20 and 30 per cent of salmon farm workers in B.C. are First Nations.

As of July 2017, there were 126 existing salmon farm tenures and of these 65 were operating with salmon on site. There are 20 fish farm tenures (in the Broughton Archipelago) due to expire in June 2018. Typically the client would apply for a tenure replacement several months in advance of the expiry.

Roles and Responsibilities:

Fisheries and Oceans Canada (DFO) is the lead for aquaculture management including:

- Proper management and control of aquaculture including licensing, and management of pollution measures including conservation and protection of wild fish and fish habitat;
- Aquatic animal health including disease prevention, detection and control; feed, medication, and biologics;
- Scientific research and monitoring, data collection on industry performance; and,
- Protection of public rights of navigation in relation to placement of aquaculture operations.

Key provincial responsibilities broken down by Ministry are summarized in the table below:

Ministry of Agriculture	<ul style="list-style-type: none">• B.C.'s lead for seafood industry development• B.C.'s lead for strategic aquaculture policy• Aquaculture Industry Specialist on staff• Maintains Animal Health Laboratory in Abbotsford
Ministry of Forests Lands and Natural Resource Operations and Rural Economic Development	<ul style="list-style-type: none">• Issue tenures authorizing the use of the land, foreshore and marine areas for finfish and shellfish aquaculture (<i>Land Act</i>)• Issue freshwater licences (<i>Water Sustainability Act</i>).• Marine Use Planning
Ministry of Environment and Climate Change Strategy	<ul style="list-style-type: none">• Issues permits for sewage discharge (<i>Environmental Management Act</i>)• Issue permits for pesticide use (<i>Integrated Pest Management Act</i>)

**Ministry of Agriculture
BRIEFING NOTE FOR MINISTER FOR INFORMATION**

First Nations and Crown Land Tenures:

There are mixed perspectives from First Nations related to aquaculture in B.C. Some First Nations are seeking to have salmon farms removed from their traditional territories where they have been established in their territories, in some cases many years ago. This issue has gained profile because of the new government's commitment related to marine based aquaculture and to the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP).

Salmon farms may also operate on sites claimed as traditional territory by more than one First Nation, with differing views on the industry. For the majority of the tenures for finfish aquaculture considered to be in the Broughton Archipelago, the Gwawaenuk Tribe; Dzawada'enuxw First Nation; Kwickwasut'inuwx/Haxwa'mis First Nations have historically been opposed to aquaculture in their territory. The Namgis First Nations has also raised their opposition to open net aquaculture and have received government funding to support the land-based recirculating aquaculture system that is occurring in their territory (Kuterra Project). Some Interior First Nations may also oppose salmon farming because of their concerns on its potential to impact wild salmon spawning upstream in their territories.

Other First Nations have become active participants in the salmon aquaculture sector with 20 economic and social partnership agreements in place between companies and coastal First Nations accounting for approximately 80% of total production in the sector. First Nations who have chosen to actively participate in salmon aquaculture do so in a variety of ways ranging from: employment in hatcheries, farms and processing plants; providing contracted services and local environmental monitoring; to ownership of site tenures or full business ownership.

The Province is legally obligated to consult and (where required) accommodate First Nations on land and resource decisions that could impact their Aboriginal interests. To date, meeting the consultation obligations has not required the consent of First Nations. In many cases, First Nations are partners or receiving benefits from fish farm companies. In some cases, there are overlapping traditional territories with First Nations who may be interested in access to economic benefits, and First Nations who actively oppose marine-based salmon aquaculture within their traditional territories due to the potential risk to wild salmon, with its cultural and environmental significance.

Fish farms located in the traditional territories of First Nations opposed to marine-based salmon aquaculture pose challenges for the Province. If existing farms are to be relocated or closed over time, alternate priority development sites would need to be identified to ensure continued production opportunities. Marine planning processes undertaken on the coast may be helpful to inform this work. However, any termination or relocation of the land tenures would have significant economic impact on the affected businesses and could also set broader precedence for other sectors operating on crown land with First Nations opposition. s.14

s.14

Cohen Commission of Inquiry into the Decline of Sockeye Salmon in the Fraser River:

The Commission was established in 2009 to examine the potential causes of the Fraser River sockeye salmon decline. The report includes 75 recommendations regarding the policies, practices and procedures, DFO, eight of which directly or indirectly reference the Province of British Columbia. Although the Commission could not find a "smoking gun" for decline in Fraser River

Ministry of Agriculture
BRIEFING NOTE FOR MINISTER FOR INFORMATION

sockeye, the report did recommend that DFO not issue any new licenses for salmon farms or allow increases in existing farm production in the Discovery Islands until at least 2020. In 2013, the B.C. government accepted the intent of each of the eight Cohen Commission recommendations that directly reference the Province and have implemented them. In 2016, the Minister responsible for DFO issued a progress report on implementation of the Cohen Commission recommendations. The main outstanding issues relate to Canada's Wild Salmon Policy and DFO has decided to undertake consultations on how to address them.

Research and transparent monitoring to minimize risk to wild salmon:

Fish health monitoring is a joint responsibility of the salmon farm operators, DFO and independent veterinarians. DFO, the Canadian Food Inspection Agency and AGRI also have important regulatory, research and diagnostic roles with respect to managing disease risk. DFO has primary regulatory oversight and is responsible for the aquaculture audit program including sea lice management. B.C. provides salmon health diagnostics services to DFO through AGRI's Animal Health Centre (AHC). It is the only institution in North America with two board-certified veterinary pathologists who work exclusively with fish.

The Strategic Salmon Health Initiative (SSHI), funded by DFO, Pacific Salmon Foundation, and Genome B.C., is conducting large-scale assessments of microbes carried by farmed and wild salmon (sockeye, chinook and coho) and examining their potential for impacting the health and condition of salmon. The Province is also engaged in and monitoring the progress of the SSHI and other related salmon health research as part of the MAACFA process.

Tenure Moratoriums and the "Pause":

The Province has established two moratoriums on expansion of the finfish aquaculture industry. The first was established through a provincial Order in Council under the *Environmental and Land Use Act* in 2008, covering all coastal areas north of Klemtu. The second was implemented in 2013 in response to a recommendation of the Cohen Commission that no new salmon farms be approved in the Discovery Islands area until at least September 30, 2020 pending additional research and completion of a disease risk assessment process.

In 2015, the Province announced a "pause" on approvals for any new salmon aquaculture tenures and restrictions on amendments to existing tenures. The "pause" is in place to allow for an examination to ensure that aquaculture operations are socially and ecologically sustainable and can co-exist with B.C.'s wild fishery resource. On September 30, 2015, B.C. also clarified that it would review applications to amend or to relocate tenures for specific purposes such as health and safety.

As part of the pause, government committed to:

- Establish a Minister of Agriculture's Advisory Council on Finfish Aquaculture (MAACFA) to provide strategic advice about the future of marine-based salmon aquaculture. The members of MAACFA include representation from the aquaculture industry, academia, non-governmental organizations, First Nations and senior government officials. MAACFA is expected to submit a final report with recommendations by the end of 2017;
- Examine establishing a protocol relating to use of Aquaculture Stewardship Certification;
- Examine feasibility of improved microbe protection coming out of the Strategic Salmon Health Research Initiative.

Ministry of Agriculture
BRIEFING NOTE FOR MINISTER FOR INFORMATION

New Government Commitments:

The new government's commitments relate to marine based aquaculture are as follows:

- 1) Ensure that the salmon farming industry does not endanger wild salmon by:
 - a. implementing the recommendations of the Cohen Commission;
 - b. keeping farm sites out of important salmon migration routes; and,
 - c. supporting research and transparent monitoring to minimize the risk of disease transfer from captive to wild fish.
- 2) Provide incentives to help the aquaculture industry transition to closed containment where possible.

B.C. is working with DFO on how to meaningfully move forward on outstanding Cohen Commission recommendations. This will likely be focused on investments to improve the health of the wild salmon population as part of DFO's wild salmon policy.

B.C. has provided funding previously to support closed containment research. B.C. is in discussions with DFO about a potential new Clean Tech Fund for Fisheries and Aquaculture that could support further work in this area.

ED _____ ADM _____ DM _____

**Ministry of Agriculture
BRIEFING NOTE FOR MINISTER FOR INFORMATION**

Key Messages on Finfish Aquaculture

- B.C. is closely watching the recent escape of Atlantic salmon in the State of Washington.
 - DFO has been monitoring the fish farms and publicly reporting escapes for years
 - BC had 22 Atlantic salmon escape in the last year and only 10 total escapes over the previous four years.
- DFO has an audit program that regularly monitors the aquaculture industry in BC
 - The program audits and publicly reports on conditions of licence including:
 - ✓ Escapes
 - ✓ Biomass on site
 - ✓ Fish health (including sea lice)
 - ✓ Benthic monitoring
 - ✓ Unusual Mortality events
 - ✓ Veterinary drug and pest control products
 - ✓ Marine mammal interaction
 - ✓ Net testing (maintenance , net strength testing)
- B.C. provides salmon health diagnostics services to DFO through Ministry of Agriculture's Animal Health Centre.
 - It is the only institution in North America with two board-certified veterinary pathologists who work exclusively with fish.
- June 2015, the B.C. government announced it was going to examine the salmon aquaculture application and approval framework to ensure the operations are socially and ecologically sustainable, and could coexist with B.C.'s wild fishery resources. The announcement also clarified that while it was being undertaken, the Province will not consider any further approvals for new salmon aquaculture tenures.
- The review included the commitment to form Minister of Agriculture's Advisory Council on Finfish Aquaculture with members from the aquaculture industry, non-governmental organizations, First Nations and provincial government employees.
- B.C. is also looking at the use of Aquaculture Stewardship Council Certification for B.C. salmon farms, as well as the Strategic Salmon Health Research Initiative.
- The Council has met and discussed a range of matters related to salmon aquaculture and is anticipated will provide their report with recommendations in the fall or winter of 2017.
- The B.C. government looks forward to receiving and reviewing the report and any recommendations it includes.
- The B.C. government is open to hearing from First Nations and stakeholders with their concerns and ideas about aquaculture operations.
- The Federal Department of Fisheries and Oceans is responsible for the conservation and management of wild fisheries and has oversight of aquaculture operations in Canada, and as such, the B.C. government works in collaboration with them in all areas involving their jurisdiction.

Subject: ALERT 3: New Fish Farm Occupation - Swanson Island

Please be advised of the following update regarding **construction of a structure** on board the Swanson Island fish farm:

UPDATE

- Media reports indicate lumber was delivered to the fish farm yesterday and the construction of a house structure is underway by protesters.
- Additional hereditary chiefs from 'Namgis and Mamalilikala have arrived to support the occupation.
- Protesters have indicated they plan on remaining long-term at the fish farm until the Province revokes the Swanson Island License of Occupation (LOO). Those involved with *Operation Virus Hunter II* have identified that BC can revoke the LOO if the project is found to be not in the Province's best interest.
- Representatives from *Operation Virus Hunter II* have started collecting information regarding

the capture of any Atlantic salmon in Pacific waters.

Subject: ALERT: New Fish Farm Occupation

Importance: High

CIEM Branch has confirmed that an additional fish farm occupation has begun at the Marine Harvest location on Swanson Island, 17 km east of Alert Bay.

- Four people s.22 are at the site, and they have erected a tent and brought luggage. The individuals have indicated they will not leave the fish farm until the Province agrees not to renew the tenures.
- The issue is receiving media attention, as the News Release attached below has been shared with APTN and CBC.
- The 'Namgis News Release indicates an NDP and Green Party campaign commitment to work with First Nations to remove unwanted fish farms.

s.15,s.16

s.15,s.19 will have more info to share as it becomes available.
