Hi,

That's correct – we didn't get the data file from FHA so there is this note on the dashboard:

November 25, 2020: Case count data from Fraser Health Authority have not yet been restated. Age, sex and cases by day graphs have not been updated.

Heather

The dashboard is showing the old numbers for FH – non-corrected. I'm not sure this is right. I think there's still some glitches to be worked out, I'm afraid.

Hi,

I don't understand this either. I went back to the FHA cases on the 13th and then added each day individually from then on with all the corrections and they don't add up to today's tally.

Doing the math here – it looks like Justin might be right – but my data sources still have the old numbers.

Subject: Number challenges

So – the total we have and that Dr. Henry mentioned was 29,086, but Justin McElroy has run the numbers from the corrections Dr. Henry gave at the conference and has come up with a total of 29,345 – so, I'm not sure if there was something misspoken – or what there.

For those interested here's the data
