Notes:

Utilization measures are based on the location of a person's residence and not on the location of the service provider.  
Attachment represents a consistent, ongoing relationship between patient and provider (in this case a GP/NP practice).  
Information in this table illustrates attachment to a physician practice, which may include multiple physicians.  
Percentages will not add to 100% because of individuals with unknown attachment status.  
B.C. Total figures include individuals with unknown HSDA/HA.

Example statement:

**Eighty-two percent** of the population is attached to a family practice (general practitioners and/or nurse practitioners), compared with **77%** at the provincial level.  
Approximately **7,300** people are not attached to a family practice.
