Update:

I just received a call from Grant and the shipment has not arrived in Vancouver. It is still in Toronto and now we are hoping it gets on a flight tonight so that it will be here later today or at least by tomorrow. Grant will keep me informed as to whether or not the shipment arrives tomorrow.

Apologies and we will get it here as soon as we can.

Hello,

I have spoke with Grant Hunt the Provincial Warehouse Logistics Director and he will arrange pick-up of the delivery for today.

Thanks

Patricia

Hi Jamie,

There was a mix up for delivery and the items were shipped to Air Canada Cargo and not to the Provincial Warehouse. Do you need these items today or can we ship them to you from the YVR to you on Monday?

Please advise.

Hi Jamie,

I have just received the following information back from the NESS

Please provide address with postal code and contact name and number for delivery.
Due to global shortages, overall availability of supplies in the NESS, and the number of requests we have received, we can provide 7,000 N95 masks at this time.

We are proposing the following mix:

Mask N95, Cone, 1860 5,000
Mask N95, Cone, 1860s 2,000

Our NESS team will follow up to coordinate logistics for this immediate requirement.

Thank you,

N95/PPE Sub Working Group: Weekly Report

Tuesday, July 14, 2020

Do not distribute this report.

If you wish to include others on the distribution, please email quinn.danyluk@fraserhealth.ca.

Scope

This report provides a summary of initiatives undertaken by the N95/PPE Supply Management Sub Working Group.

Beginning on June 15, this report will be compiled every 2 weeks to coincide with the meeting frequency of the COVID-19 IPAC/WHS Provincial Working Group.

Sub Working Group: Scope & Deliverables

1. Continue to source and secure regular N95 respirator models.
2. Identify and secure a supply of appropriate alternative respiratory protection – including alternative N95 respirator models and reusable respirator models. Identify and share strategies for controlling department access and distribution.
3. Create provincially-coordinated and consistent implementation strategies for alternative respiratory protection.
4. Develop an enhanced provincial respirator supply status report, with appropriate metrics and analysis, for the Provincial Coronavirus Coordination Committee.
5. Develop a long-term plan for creating and sustaining a provincial respiratory protection pandemic stock.

Refer to the [Supply Chain COVID-19 Dashboard](#) for PPE quantities on hand, daily usage, incoming inventory shipments, consumption, and health authority shipments.

Report Sections

This report

- **Alternative N95 Reviews Completed.** This section provides an overview of the assessments completed for Alternative N95s models (defined as any filtering facepiece respirator model other than the N95 models regularly used in BC health authorities) to determine their appropriateness for use.
- **Deployed Alternative Respiratory Protection.** To mitigate demand on regular N95 respirators, alternative respiratory protection deployment began in Health Authority departments in February and continues as appropriate devices in required quantities are received. This section provides an overview of the locations targeted, the type of alternative respiratory protection utilized, and the status of deployment.
- **Alternative PPE Assessment Inspection.** PPE supply that meets the following situations will be assessed and inspected. Regular PPE from known supplies does not go through this process.
 - Alternative PPE (Health Authority Sourced)
 - Unknown (New) Products from Known Suppliers
 - Products from Unknown Suppliers
 - Donated PPE (non-Health Authority Sourced)
 - Fabricated PPE

N95/PPE Sub Working Group: Weekly Report

Tuesday, July 14, 2020

N95 Fit-Test Equivalencies

On May 28th, updates were applied to the *WorkSafeBC Guidelines Section G8.40(2.1)(c) Single-use respirators and fit test equivalency*. WorkSafeBC removed the requirement for them to approve model equivalencies and placed the responsibility on the employer. The updated language reads:

'For WorkSafeBC to consider the respirator models to be equivalent for the purpose of fit testing, the respirators will need to have been produced by the same manufacturer. Also, there will need to be a statement from the manufacturer that is available to employers stating that the respirators are identical for fit purposes, and that the manufacturer recognizes that a fit test for one of the respirators is suitable evidence of adequate fit for the other respirator.

It is the employer's responsibility to consult with the manufacturer of the respirator to obtain this information and to note this in its respirator program.'

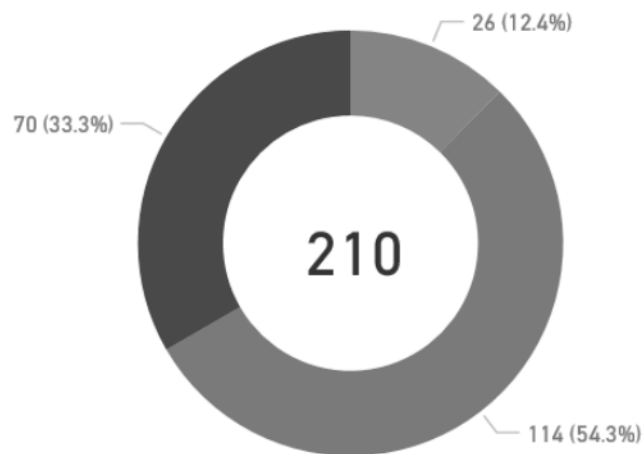

The following models have been reviewed and documented on SharePoint by the SWG and determined to have fit-test equivalencies:

- 3M 1870 and 3M 9210
- 3M 1804 and 3M 1805
- 3M 1804S and 3M 1805S
- Halyard FLUIDSHIELD N95 Particulate Filter Respirator And Surgical Masks and Kimberly-Clark Versions

Alternative N95 Model Appropriateness Assessments

This section provides an overview of the assessments completed for Alternative N95s models (defined as any filtering facepiece respirator model other than the N95 models regularly used in BC health authorities) to determine their appropriateness for use.

Status of Alternative N95s Assessed

Category 2: Not a standard inventory item, meets all required standards and use requirements, and is acceptable for use.

Category 3: Not a standard inventory item, does not meet all required standards or use requirements, but could be considered at PPE Stage 5 or 6.

Category 4: Item is unacceptable for healthcare worker protection as it does not meet minimal acceptable standards or use requirements.

For those within the health authority network, please refer to the [Alternative PPE Model Appropriateness Assessment Tracker \(Alternative N95s\)](#) for up-to-date information.

Alternative PPE Model Appropriateness Assessments

Similar to the previous section, model appropriateness assessments have been completed for all PPE categories. To reduce the length of this report, summaries of these assessments have not been included. Each of these is listed below with a hyperlink to the associated SharePoint tracker (for those within the health authority network) and details are available upon request:

- [Coveralls](#)
- Facial Protection: [Face Shields](#) | [Glasses](#) | [Goggles](#)
- [Gowns](#)
- [Gloves](#)
- [Masks](#)
- [Other](#)

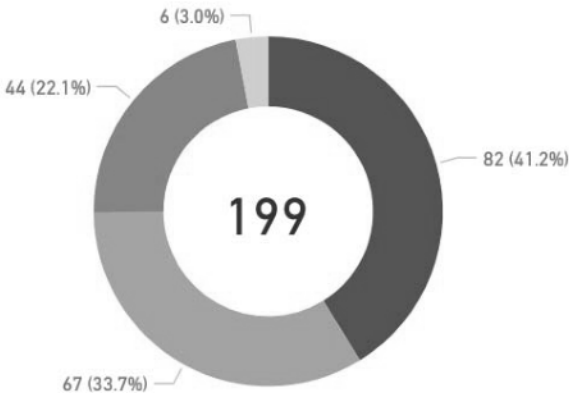

N95/PPE Sub Working Group: Weekly Report

Tuesday, July 14, 2020

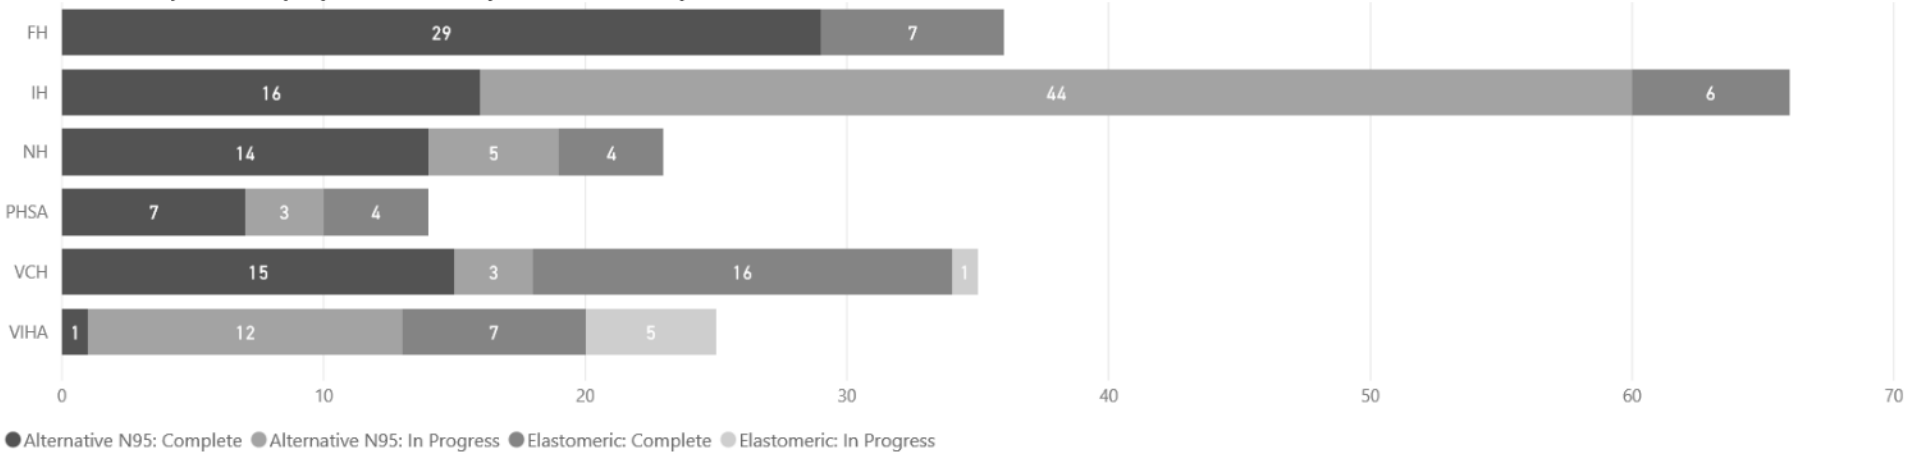

Deployed Alternative Respiratory Protection

To mitigate demand on regular N95 respirators, alternative respiratory protection deployment began in Health Authority departments in February and continues as appropriate devices in required quantities are received. This section provides an overview of the locations targeted, the type of alternative respiratory protection utilized, and the status of deployment.

Alternative Respirator Deployment Status in Departments

Alternative Respirator Deployment Status by Health Authority

N95/PPE Sub Working Group: Weekly Report

Tuesday, July 14, 2020

Elastomeric Respirator Usage

Health Authority	Number of Elastomerics Deployed	Number of Elastomerics Reprocessed		Total Number of N95s Saved ^A
		Last Week	Total	
BCEHS	519	Individually issued		
FH	351	455	10,148	40,592
IH	340	69	1,007	4,028
VCH	775	18*	5,973	23,892
VIHA	43	24	748	2,992
TOTAL	3,016	566	17,876	71,504 ^B

^A Assuming each shift an elastomeric respirator is used prevents 4 N95 respirators from being used | Values in the table will be updated weekly – on Tuesday.

^B Total is an underestimation as it does not include the number saved by BCEHS as these are individually issued. Similar individually issued elastomeric respirators are in use for some groups in the health authorities as well (e.g. anesthesiologists) and are not centrally reprocessed through MDR.

* Value only for LGH and does not include other VCH sites for this reporting period.

Alternative N95 Usage

Model	Total Quantity in Warehouses	Daily Issued from Warehouse - Average Daily Usage (Last 7 Days)
3M 1804	40,100	192
3M 1804S	41,250	272
3M 8210	203,860	1,962
3M 1870/3M 9210	47,580	309
3M 8511	29,340	12
TOTAL		2,747

Locations Where Alternative Respiratory Protection Has Already Been Deployed

Deployment Status Definitions

- **Complete:** Fit-testing has been completed in the department and the alternative respiratory protection is in use.
- **In Progress:** Fit-testing is currently in progress in the department. Once fit-testing is complete, the alternative respiratory protection will be put into use.

Note: Each health authority OHS is responsible for adding, updating, and maintaining the departments, contents, and status for their respective health authority. For those within the health authority network, please refer to the [Alternative Respirator Deployment Priority and Status Tracker](#) for up-to-date information.

N95/PPE Sub Working Group: Weekly Report

Tuesday, July 14, 2020

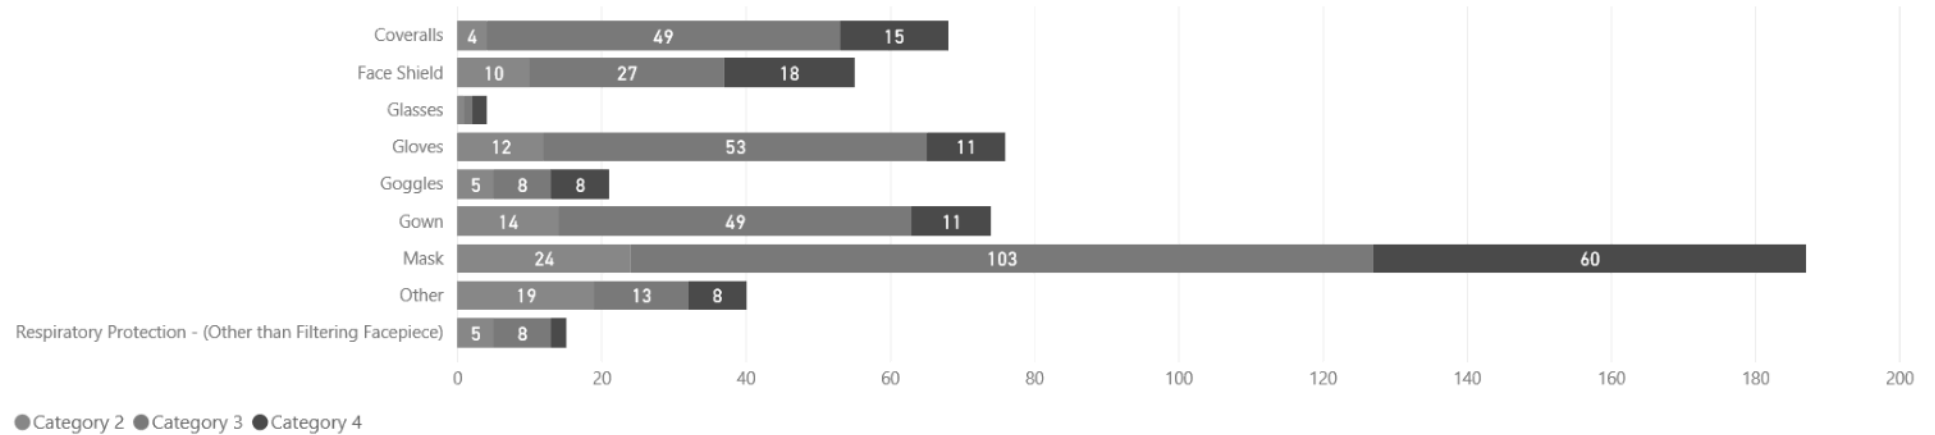

Alternative PPE Assessment Inspection

PPE is inspected per the [Alternative PPE Assessment and Review Process](#).

Regular PPE from known supplies does not go through this process. This process applies to the following supply sources:

- Alternative PPE (Health Authority Sourced)
 - Unknown (New) Products from Known Suppliers
 - Products from Unknown Suppliers
- Donated PPE (non-Health Authority Sourced)
- Fabricated PPE

Alternative PPE Categorization

Category 2: Not a standard inventory item, meets all required standards and use requirements, and is acceptable for use.

Category 3: Not a standard inventory item, does not meet all required standards or use requirements, but could be considered at PPE Stage 5 or 6.

Category 4: Item is unacceptable for healthcare worker protection as it does not meet minimal acceptable standards or use requirements.
