

Volumes of Hospitalizations with Opiate-Related Most Responsible Diagnosis, 2003/04 - 2021/22

Selected by most responsible diagnosis

Filename Volumes of Hospitalizations with Opiate-Related Most Responsible Diagnosis.xlsx

Data source 1 Discharge Abstract Data Base

Extract date 2021-10-17

Notes

- 1 Cases were selected for Acute, Rehab, and Psychiatric care level only. Day surgery cases were excluded ("LEVEL" in ('A', 'R', 'P')).
- 2 This **workload** report excluded out of province treatments of BC residents, however hospitalization of non-BC residents were included, (hosp <> 997).
- 3 The first diagnosis coded in a Discharge Abstract Database (DAD) abstract is the most responsible diagnosis. For this report, cases with opiate-related diagnosis as the most responsible diagnosis were selected.
Diagx1 in: ('F11', 'T400', 'T401', 'T402', 'T403', 'T404', 'T406').
F11 codes are Mental and behavioural disorders due to use of opioids
T40* codes are Poisoning by narcotics and psychodysleptics
- 4 **Report-Volumes:**
This table provides opiate-related cases throughout B.C. per annum. See note 3 for information on selected diagnoses.
