

**Title** **Leading Causes of Death in British Columbia and Interior Health Authority (IHA)**

**Completion Date** 2024/07/17

**Client** FOI Operations, Corporate Issues and Client Relations Branch

**Client Organization** Ministry of Health

**Question being asked**

The leading causes of death and deaths per 100,000 per year for B.C., Interior Health Authority (IHA) and associated LHAs within IHA

**Summary of Analysis**

The leading cause of death within B.C. is malignant neoplasms, commonly known as cancer. It accounts for roughly one in every four deaths (27%) between 2014 and 2023.

**Prepared by:** Saiganesh Dhannewar HSIAR, Ministry of Health

**SME Contact:** Werner Grundling HSIAR, Ministry of Health

SME = Subject Matter Expert

**Information Security Classification:** Protected B

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div>1 Deaths are grouped using the US Centers for Disease Control and Prevention's National Center for Health Statistics mortality tabulations. These allow for grouping ICD 10-coded deaths into selected groups with common underlying factors.causes of death" and assigned a rank of X.</div> <div>2 Only the top 5 death groups are shown, with the remaining deaths grouped into "All other causes of death."</div> <div>3 Deaths were only included if the place of residence was within BC.</div> <div>4 The death rate represents the number of deaths per 100,000 people in each year and region.</div> <div>5 Cause of death is not always apparent and may require an (often lengthy) investigation. As such, cause of death data within the last two years should be considered preliminary and subject to change.</div> |
