Does "Flood Hazard Torrent Debris" mapping sound familiar to either of you? I've looked through the scanned maps and project data directories and can't find anything, and google was no help either. Ideas? Or is this something we just don't have?

Cheers,  
C.

Hello Carole

Thank you for the info. Another question please. Would you be able to send me or direct me to the Flood Hazard Torrent Debris mapping of Horsetheif Drainage and Forrester Creek located North to North West of Wilmar BC. Will be appreciated.

Thank you  
tom

Hi Tom,

There are a number of scanned maps available that should have the information you are looking for. You can download them from our web distribution site here:

[http://www.env.gov.bc.ca/esd/distdata/ecosystems/TEI\\_Scanned\\_Maps/](http://www.env.gov.bc.ca/esd/distdata/ecosystems/TEI_Scanned_Maps/). You'll need to navigate the site via the "Image File" name. For example, for file B01-4700, you would navigate to the B01 folder, then to the B01-4700 folder. The B01-4700 folder contains the scanned map image (.TIF) and associated georeferencing files. If you plan on using the scanned map image in a GIS environment, you'll need to download all of the files. If you are not using GIS, you only need the TIF file. If you don't have image processing software, I'd recommend opening the .TIF files with MS Office Document Imaging (under Start – Programs – MS Office – Tools), as the default picture and fax viewers are not powerful enough to deal with the large files.

I've attached a spreadsheet listing all of the available scanned maps that cover your area of interest – please feel free to download whichever ones you need from the web distribution site. There is also some very generalized soils GIS data for this area available if you should need it. Please don't hesitate to call or email if you need assistance navigating the web distribution site, or require further information.

Cheers,

Ph 250 348 2574

Email s.22

I am contacting you for information regarding soil classifications of the property located at the mouth of Horsetheif drainage located in Invermere Forest District North West of Wilmar BC. Any other pertinent information that you may supply regarding soils, vegetation and flood hazard with associated known land slips would be also appreciated. I have attached an overview map showing the location of the property with a survey plan, copies of the titles and a chart showing the associated file number regarding Invermere Project: 6 Soil Capability For Agriculture File # L28-523, and a Invermere Project 11 Core Vegetation Sensitivity File # L28-3720 The legal description of the property is as follows:

P.I.D. 024-680-982

LOT 3 DISTRICT LOT 380 K,D.

PLAN NEP65917

&

P.I.D. 024-680-974

LOT 2 DISTRICT LOT 380 K.D.,

PLAN NEP65917

Your assistance to this matter would be greatly appreciated. If you require any other information from me, please to not hesitate.

Thank you,

Kind Regards,

tom

Hi Tony,

The only mapping that has been done regarding flooding is floodplain maps - more than 10 years ago now (floodplain mapping is now handled by local jurisdictions). There won't be any flood hazard torrent debris mapping or any up-to-date floodplain mapping, but you can see the historical floodplain mapping layers in ArcGIS or iMapBC (including links to EcoCat reports and drawings).

Hi Rick and Brad,

Do you folks have any "Flood Hazard Torrent Debris" mapping?

Someone requested this information for the Horsetheif drainage located in Invermere Forest District.

Cheers, Tony
