Hi Earle,

Just confirming that the 2:30 pm meeting today will now take place at **Ladysmith Secondary School**. If you need to move on to the Intermediate school then it is only a few blocks away.

Rick Morley will be there to meet you. Rick's cell number is \$.22 (cell).

Hopefully, Rob can join also,

Thanks,

Andv

Re-location shouldn't be an issue Pete but I could also look at siting the sensor at the one of the other schools as well. Maybe I could look at possible options in all 3 locations? Would the intermediate school be an option for at least 1 year?

I can meet at the intermediate school @ 0900 or on my way back from Victoria at 1430.

Thanks Pete. I was thinking of Ladysmith Intermediate School as it is more Central and is representative of a large residential area. I will be headed to Victoria on Thursday so was hoping to meet someone at the school either in the morning or mid-afternoon if possible.

It would be good to meet with someone who is familiar with where the WiFi router is located in the School and where there may be external outlets already installed either on the roof or on any external wall.

Please let me know if this will work for you. Thanks.

Subject: Possible Air Monitoring project - Ladysmith

Hi Pete. I am writing you to see if School District 68 would be interested in hosting an outdoor air quality sensor for the community of Ladysmith. Brian Branting of SD79 has supported this project at school locations in Chemainus, Duncan, North Cowichan, Lake Cowichan, Shawnigan Lake, and Mill Bay but Ladysmith lies in your District.

#### Some background:

The Ministry of Environment & Climate Change Strategy has recently partnered with local governments, 1st Nations, Island Health, and SD 79 on ambient air quality monitoring initiatives across the Cowichan Valley in order to improve our understanding of air quality in each community. We currently have 19 sensors deployed across the Cowichan Valley in support of Cowichan's Regional Airshed Protection Strategy (see: <a href="https://www.cvrd.bc.ca/documentcenter/view/70959">https://www.cvrd.bc.ca/documentcenter/view/70959</a>) and would like to include a sensor in Ladysmith at a location where there are sensitive receptors — at the middle school seems ideal. In order for the sensor to operate correctly, it requires access to a stable private Wi-Fi network (won't work on Shaw open for instance). Once every few minutes the sensor sends air quality readings to a central server for upload to a public facing map. If you grant me access, I need to know which network to connect the sensor to and what the password is (we've done this in SD79 with no problems).

The monitor itself is called a Purple Air sensor. It's about the size of a softball - here is a link to sensor information:

https://www.purpleair.com/sensors. A map showing the current sensor network across the CVRD can be found here:

https://www.purpleair.com/map?

 $\underline{\&xoom} = 10 \& lat = 48.7993789001314 \& lng = -123.82909014298093 \& cluster size = 30 \& order by = 1. \& lat = 0.6648700230222317 \& lng = 2.3126220703125.$ 

All we need is access to an outdoor plug (we can pay for this if there isn't one close to the Wi-Fi source) and access to a non-public Wi-Fi service. I would do the installation myself or I could provide the sensor to one of your electricians if you'd prefer.

Please let me know if you can support this project in Ladysmith. I'd like to meet with someone there to look at possible monitoring locations in the near future. Give me a call to discuss further if you like.

Much appreciated.

 July 18, 2018 2:08:00 PM

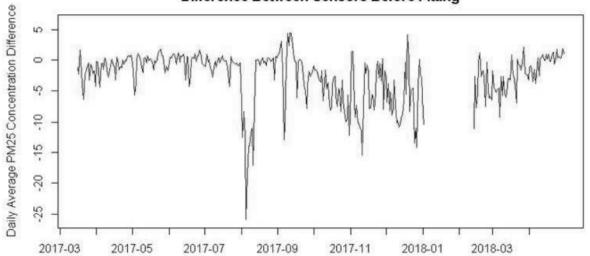

Attachments: image003.png

Hi Paul. I don't know anything about the sensors you're referring to in 1st Nations communities in northern BC but they could have been funded through the First Nations Health Authority. Many Purple Air sensors in BC have been purchased and installed by individuals with no funding or direction from government bodies. This results in an adhoc network of sensors that tend to be situated in more affluent areas (they have money to spend on a private sensor) and lack oversight in terms of siting, external influences, etc. The Ministry of Environment and Climate Change Strategy has been involved in evaluating the Purple Air sensors for over a year now. We have installed sensors at 4 fixed monitoring sites across the province to evaluate performance over time next to our FEM sensors. So far the Purple Air sensors do a good job of mirroring diurnal patterns in PM2.5 as measured by our FEMs. However, as found in other tests, the sensors do tend to over-report under high concentrations. We are hoping to pull together an evaluation report in the near future with the help of academics at UNBC as they are doing similar work in Prince George. In the meantime, here are a couple of charts from one site on Vancouver Island that shows the kind of agreement we've seen between a Purple Air sensor and a BAM 1020:

#### Daily Average PM25 Concentrations Before Fitting

#### Daily Average PM25 Concentrations: Difference Between Sensors Before Fitting

You might also want to contact Andrew Teakles with Environment Canada and Climate Change as I understand they are considering do some evaluations on the east coast.

Best regards,

#### Earle Plain - Air Quality Meteorologist

Subject: Re: PM 2.5 measurement

Hi Paul (and others),

The data I showed today were from the globally distributed PurpleAir network:

https://www.purpleair.com/map?

& zoom = 3& lat = 39.51596757727815 & lng = -99.35539180755615 & cluster size = 45& order by = L& lat = 81.39214395046434 & lngreen lange = 1.39214395046434 & lngreen lange = 1.39214396 & lngreen lange = 1.3921439 & lngreen lange = 1.39214396 & lngreen lange = 1.3921439 & lngreen lange = 1.39214396 & lngreen lange = 1.3921439 & lngreen lange = 1.39214=-135

Of the low-cost sensors available to the general public, these are probably the best. There are still many pitfalls associated with the data and their display on the website, but we have confidence that the sensors perform reasonably well in a relativistic way: they are appropriately response to PM when it's present. We don't put much value in the absolute concentration estimates or in the 10-second averaging period.

There has been a lot of work to co-locate these sensors with our BAMs and SHARPs in BC, and I can definitely connect you with people running those studies if you need further information.

Visual assessment of smoke is challenging for a wide range of reasons. I was going to talk about it today, but decided to cut it out because I believe that it's better to have a low-cost sensor than it is to have visual assessment. I prefer not to encourage use of visual assessment as a tool unless nothing else is available.

Cheers,

Sarah

**Subject:** Purple Air and fog effects **Date:** January 16, 2019 9:38:00 AM

Attachments: image001.png image002.png

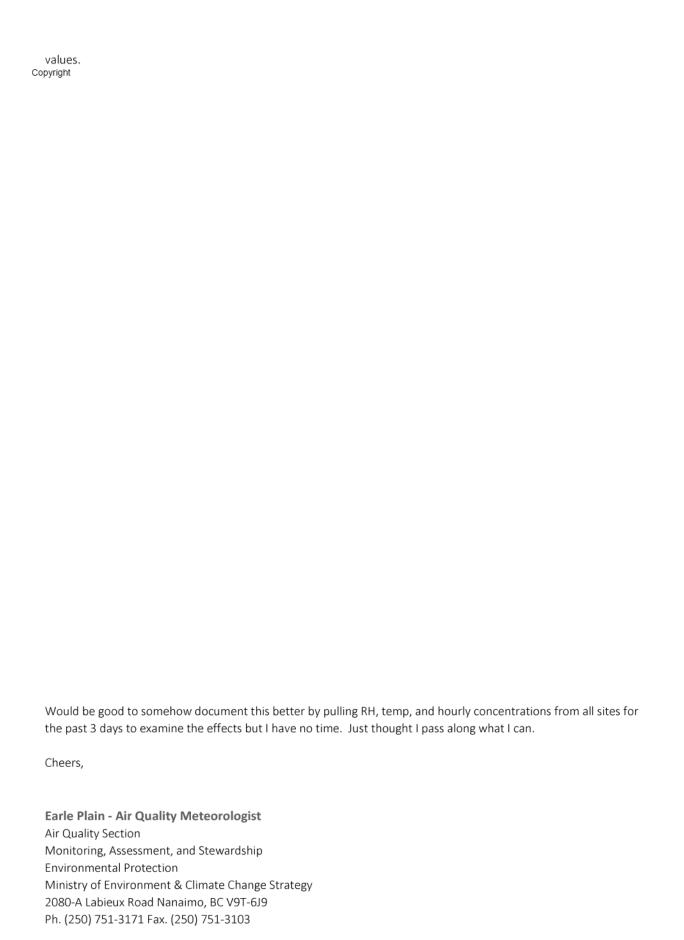

Hi all. Thought you might be interested.

I issued an Air Quality Advisory in Cowichan Valley on Monday due to elevated PM2.5 (lots of open burning on the weekend as people were cleaning up properties after the windstorm). Overnight on Monday and through to today we've had heavy fog in the area which help scavenge particles from the air and resulted in the PM2.5 levels measured at our regulatory sites to drop well below advisory levels. However, the Purple Air sensors in the area remained elevated. At first I thought it might be that things were in fact elevated across the airshed but not at the regulatory monitoring sites (x3) due to localized influences. In looking at things this morning the patterns remain and the fog is still there - PM2.5 levels are very low at the regulatory sites. Unfortunately, I don't have anything colocated anymore. I think this is evidence of erroneous readings on the PA sensors due to fog. We see the same thing with nephelometers if the sample isn't conditioned first.

Here's a map of 1-hour concentrations from 0900 (<a href="https://www.cvrd.bc.ca/2187/Air-Quality-Map">https://www.cvrd.bc.ca/2187/Air-Quality-Map</a>). The regulatory monitors are the circles; PA sensors are squares. At the Duncan site, we are reading 12 ug/m3 on the BAM while the closest PA sensors are reading 57 and 42 ug/m3 I don't have any webcams in the Shawnigan Lake area (two PA sensors to the south) so can't confirm, but I expect that there is less fog there.

I just got the UNBC site working again – has not been loading PA data on Island properly. Had to refresh 5 times to get this. Similar results as above except that some sites are not being updated. Look at the big differences around our Duncan Site (12 ug/m3 at the BAM vs. 42 and 33 ug/m3 at the nearest PA sensors)...and these are CORRECTED

## Purple Air Pilot Project for the Cowichan Valley

Island Health All Staff Meeting

Earle Plain, Air Quality Meteorologist Air Quality Section, Environmental Protection

October 4, 2018

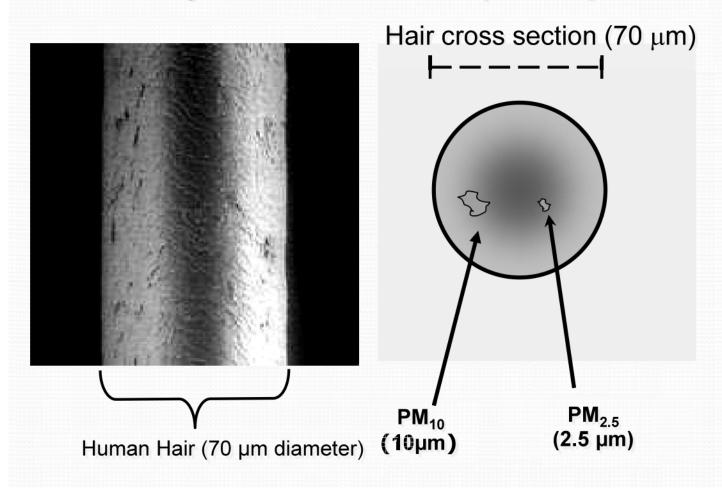

Copyright

## Parameter of Concern

- Of the five air pollutants measured in the Cowichan Valley, only fine particulate matter (PM<sub>2.5</sub>) exceeds Ambient Air Quality Objectives
- Nitrogen Dioxide, SO<sub>2</sub>, & ground level O<sub>3</sub> levels are well below objective levels
- TRS concentrations are below Provincial odour objective levels 99% of the time at Quamichan Lake & 96-98% of the time at sites closer to the pulp mill
  - Remains a pollutant of interest

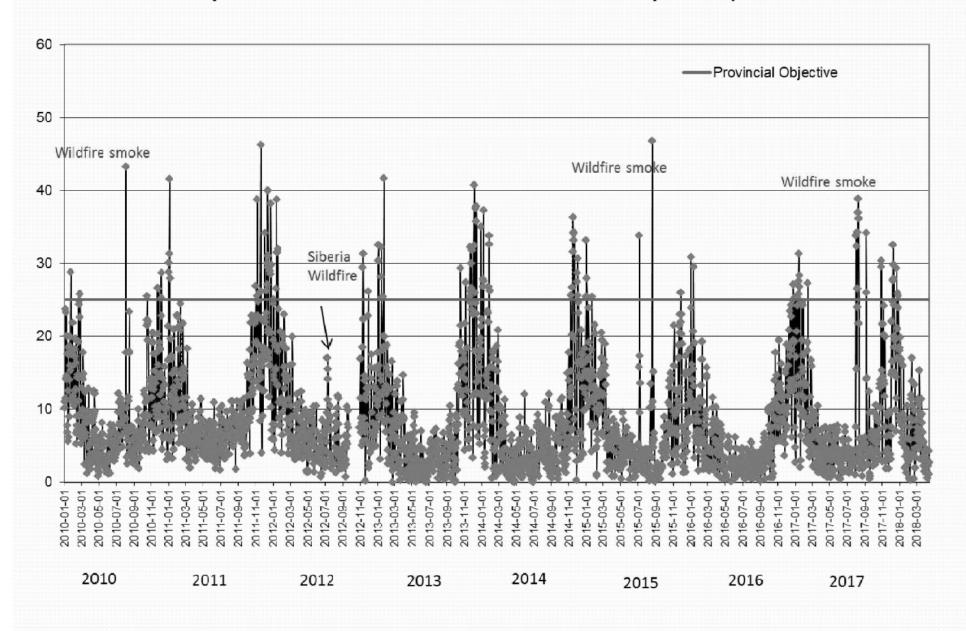

## Fine Particulate Matter

## Particulate Matter, PM are a complex mixture of extremely small solids, and liquid droplets

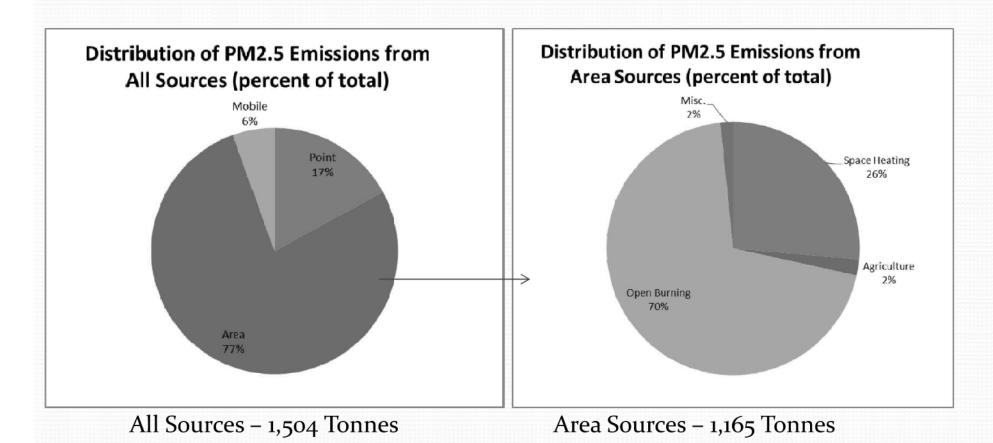

- PM2.5 is mainly generated from combustion sources and atmospheric chemical reactions
- Particles
  between 2.5-10
  um generated
  from
  mechanical
  grinding e.g.
  road dust,
  quarrying, etc.
- PM2.5 reached deepest recesses of lung

#### Daily PM2.5 Concentrations at Duncan Cairnsmore January 2010 - April 2018

# PM<sub>2.5</sub> Emission Sources in the Cowichan Valley (2011 base year)

Open burning & space heating accounts for – 1,146 T or 76% of all  $PM_{2.5}$  emissions in the Cowichan Valley

### Airshed Protection Strategy

 Began an Airshed Management Planning process in 2013. Airshed Protection Strategy was produced by a multi-stakeholder air quality partnership in November of 2015

https://www.cvrd.bc.ca/DocumentCenter/View/70959/Cowichans-Regional-Airshed-Protection-Strategy--18-Nov-2015

 An important component of the Strategy is increasing public awareness around air quality at the neighbourhood level

## Purple Air Pilot Program

- An active local citizens group wanted to purchase and install low-cost PM2.5 sensors on their own to raise awareness around wood stove smoke
- BCENV interested in addressing spatial variability question but concerns about data quality; siting bias
- BC ENV needed to be involved in sensor siting and data use guidance to maintain Roundtable credibility.
- BC Env offered to add 10 more sensors to the pool and the CVRD added 3 for a total of 19 sensors
- Worked with CVRD and Health Canada to produce sensor FAQs

### Purple Air Data uses

- Augment existing regulatory monitoring network to examine spatial differences in PM2.5 concentrations on a near real-time basis
- Examine PM2.5 patterns in relation to sources to identify possible hotspots
- Public outreach & awareness tool how certain activities affect neighbourhood AQ
- Use information to better inform AQ management

### Cowichan PA Network Results

 Deployed sensors in fall of 2017 in order to measure cold season PM2.5 & to utilize best part of sensor life during period of interest; deployed 2 or more sensors in each geographic area

See Spreadsheet

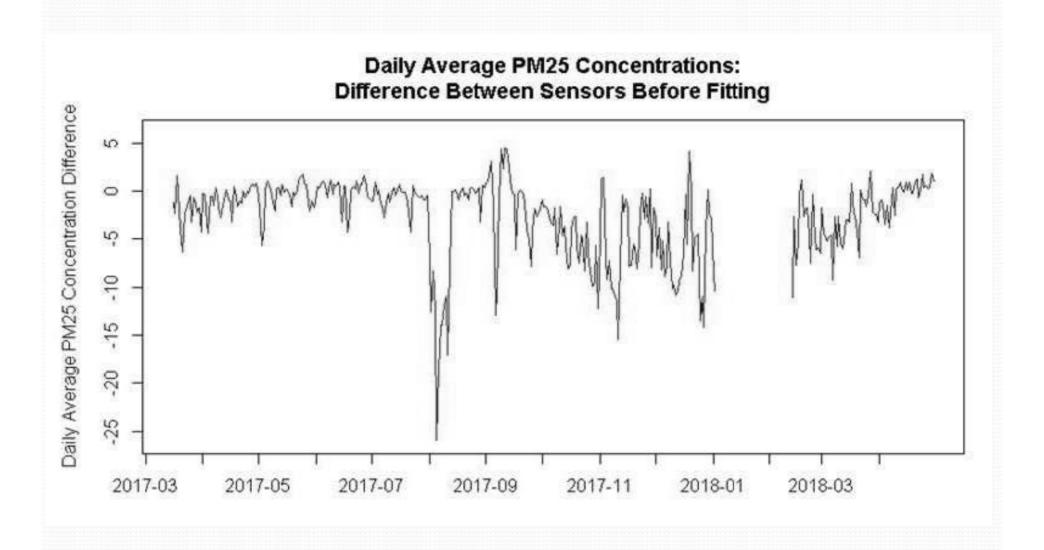

### Summary

- Presented daily average results to the AQ Roundtable and to local government using the Village Green system of reporting values as High, Medium or Low to avoid the use of absolute values
- Helpful in highlighting the problem with the current residential open burning bylaw (burn window) and woodstove smoke; Some change underway
- A good tool for public engagement on air quality

### FEM BAM vs. PA Sensor Courtenay

### FEM BAM vs. PA Sensor Courtenay

### Next steps

- Develop better options to present summary data spatially.
- Examine the applicability of applying a Courtenay FEM/PA sensor regression model to make CVRD PA data more FEM-like.
- Online resources continue to be developed to direct the public to sensor data and to assist them with how best to use low-cost sensor data (<a href="https://www.cvrd.bc.ca/2187/Air-Quality-Sensor-Network">https://www.cvrd.bc.ca/2187/Air-Quality-Sensor-Network</a>).
- CVRD considering network expansion and replacing sensors that have failed.
- An integrated map of the Cowichan Valley that includes hourly and daily values of PM2.5 from regulatory and PurpleAir sensors all in one place is now complete.

### Collaboration with Island Health

- Partnership between ENV and IH invaluable
  - Co-presenting environmental data and associated public health impacts has been very effective at affecting change at the local level
- James Bay Cruise Ship study; Health assessment
- Gold Stream Campground woodsmoke
- Cowichan Valley Airshed Protection Strategy development and support; Roundtable participation
- Port Alberni bylaw support, many presentations, local Air Quality Council work, Cantimber
- Comox Valley Studies, forums, many presentations
- AQ Advisories/Smoky Skies media support

### Fun with Smoke - 2018!

# Wildfire smoke Impacts on Vancouver Island - 2018

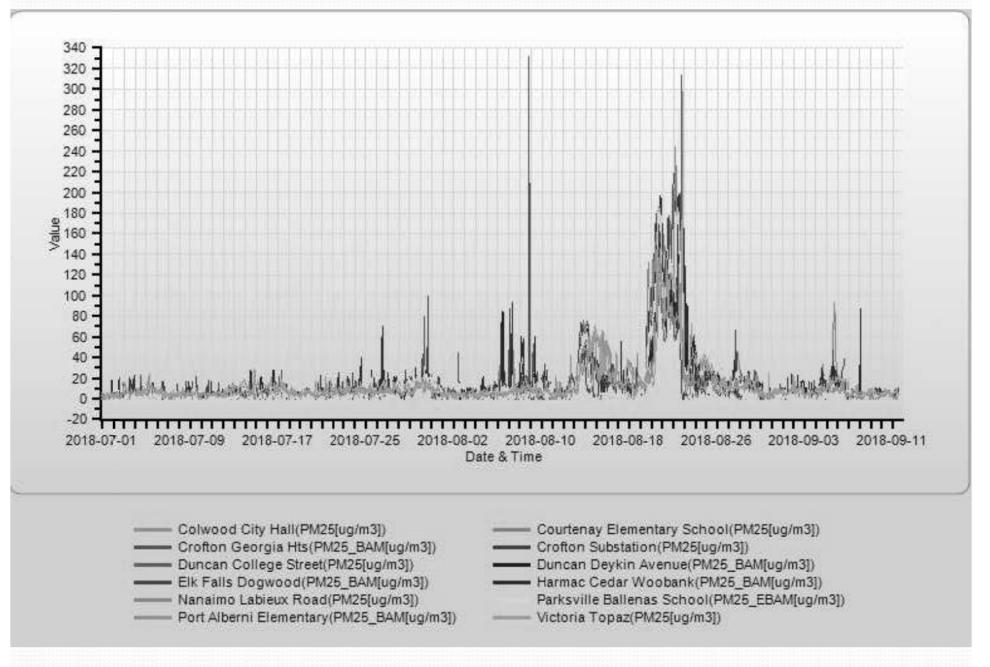

- Record smoke impacts measured on Island higher hourly and daily PM2.5 levels in 2018 than 2017.
- Sources varied:
  - Siberia (mid-July)
  - Interior of BC
  - Washington State and Southern BC
  - Fires on Vancouver Island

### Parameter of Concern

- Of the five air pollutants measured in the Cowichan Valley, only fine particulate matter (PM<sub>2.5</sub>) exceeds Ambient Air Quality Objectives
- Nitrogen Dioxide, SO<sub>2</sub>, & ground level O<sub>3</sub> levels are well below objective levels
- TRS concentrations are below Provincial odour objective levels 99% of the time at Quamichan Lake & 96-98% of the time at sites closer to the pulp mill
  - Remains a pollutant of interest

#### Daily PM2.5 Concentrations at Duncan Cairnsmore January 2010 - April 2018

# PM<sub>2.5</sub> Emission Sources in the Cowichan Valley (2011 base year)

Open burning & space heating accounts for – 1,146 T or 76% of all  $PM_{2.5}$  emissions in the Cowichan Valley

### Airshed Protection Strategy

 Began an Airshed Management Planning process in 2013. Airshed Protection Strategy was produced by a multi-stakeholder air quality partnership in November of 2015

https://www.cvrd.bc.ca/DocumentCenter/View/70959/Cowichans-Regional-Airshed-Protection-Strategy--18-Nov-2015

 An important component of the Strategy is increasing public awareness around air quality at the neighbourhood level

## Purple Air Pilot Program

- In early 2017, an active local citizens group wanted to purchase and install low-cost PM2.5 sensors on their own to raise awareness around wood stove smoke
- BCENV interested in addressing spatial variability question but concerns about data quality, siting bias, data use.
- BC ENV needed to be involved to maintain Roundtable credibility with the public
- BC Env offered to add 10 more sensors to the pool and the CVRD added 3 for a total of 19 sensors
- Struck monitoring committee; Worked with CVRD and Health Canada to produce sensor FAQs

### Purple Air Monitoring Objectives

- Augment existing regulatory monitoring network to examine spatial differences in PM2.5 concentrations across the airshed;
- Examine PM2.5 patterns in relation to known sources to identify possible hotspots (open burning, woodstoves, etc.);
- Examine spatial patterns during residential 'Open Burning Window' – effectiveness of bylaw
- Use as public outreach & awareness tool how certain activities affect neighbourhood AQ
- Present information in such a way as to avoid the use of absolute values from the sensors

Page 66 of 94

### Cowichan PA Network Results

 Deployed sensors in fall of 2017 in order to utilize best part of sensor life during period of interest (cold season); deployed 2 or more sensors in each geographic area to help detect possible sensor issues

See Results - Spreadsheet

### Summary

- Presented daily average results to the local AQ
   Roundtable and to local government using the a
   system of reporting values as High, Medium or Low to
   avoid the use of absolute values; Visually effective
- Helpful in highlighting the problem with the current open burning bylaw (burn window); and woodstove smoke impacts across airshed; -> changes in Bylaw made as a result
- Proven to be a good tool for public engagement on air quality;
- ~25% sensor failure rate over a 1-year period (5 of 19)

### **BCMOE** Field Testing Project

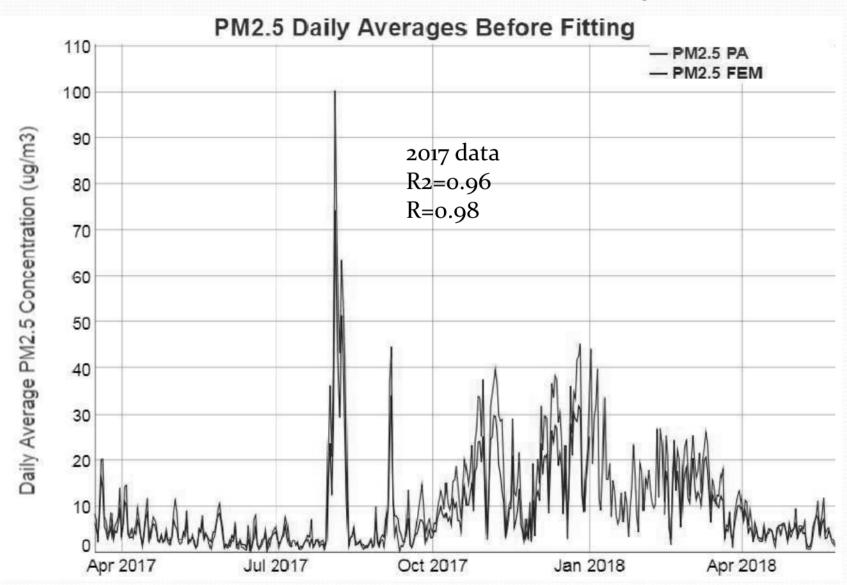

- Four Purple Air (PA-2) sensors purchased November 2016 to examine accuracy, longevity and response.
- 3-phase project ongoing
  - Phase 1 all sensors collocated with Sharp 5030 in Smithers for 2 months
  - Phase 2 3 of the 4 sensors deployed to other areas of the province
  - Phase 3 bring all sensors back to Smithers and recompare
- Currently in Phase 3

### Some Phase 1 Observations -

Analysis by G. King BC MOE

- PM2.5 comparative with Sharp 5030 not as promising as AQ-SPEC evaluations (South Coast AQMD 2016/17) for PA-II vs. GRIMM FEM
  - 1 sensor failure right out of box (fan not working); another sensor appeared to be failing
  - R<sup>2</sup> values with Sharp FEM 0.60 to 0.67 <u>vs.</u> >0.93 with GRIMM (AQ-SPEC)
  - Within monitor variation (working monitors) strongly correlated R<sup>2</sup>>0.95; but precision/accuracy poor –> working sensors did not produce similar data distributions
  - The sensors we were given didn't work particularly well in Smithers during the winter

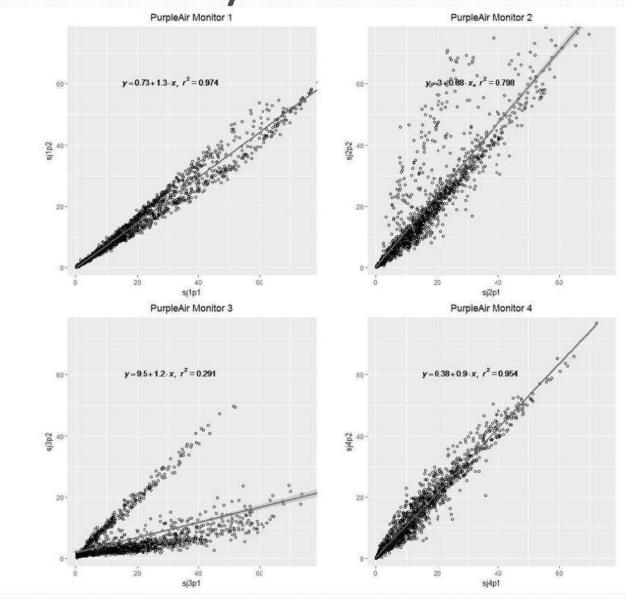

### FEM BAM vs. PA Sensor Courtenay - Phase 2

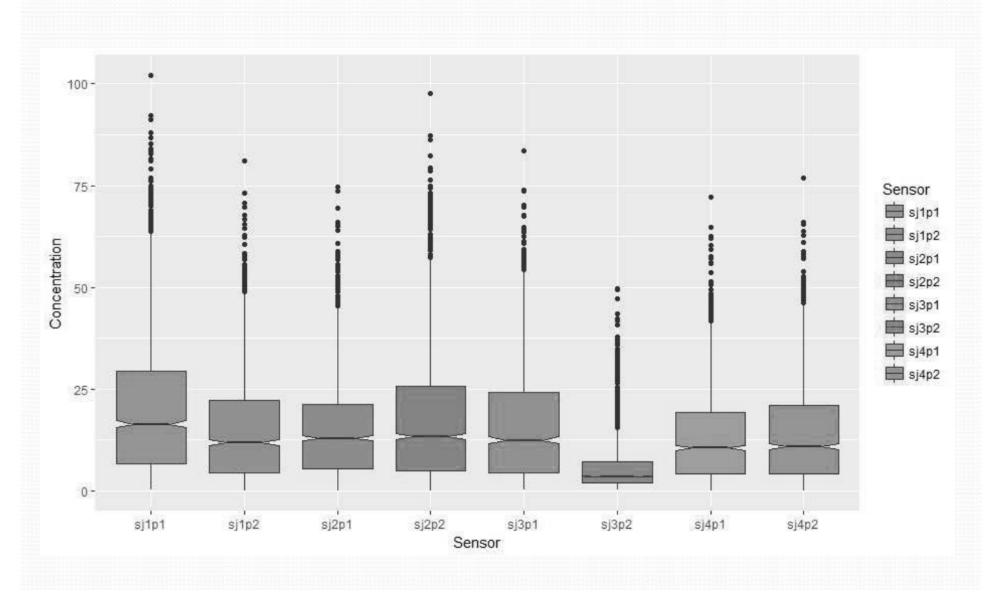

### Closing Thoughts

- We are still learning as we go. Concerns remain around the accuracy, consistency, drift, and longevity of low cost sensors
- The PA sensor is very popular in BC need to be familiar with the limitations and learn how best to use the information these sensors provide
- With appropriate oversight these sensors can be used for educational/research purposes, increasing public awareness, and AQ surveillance work

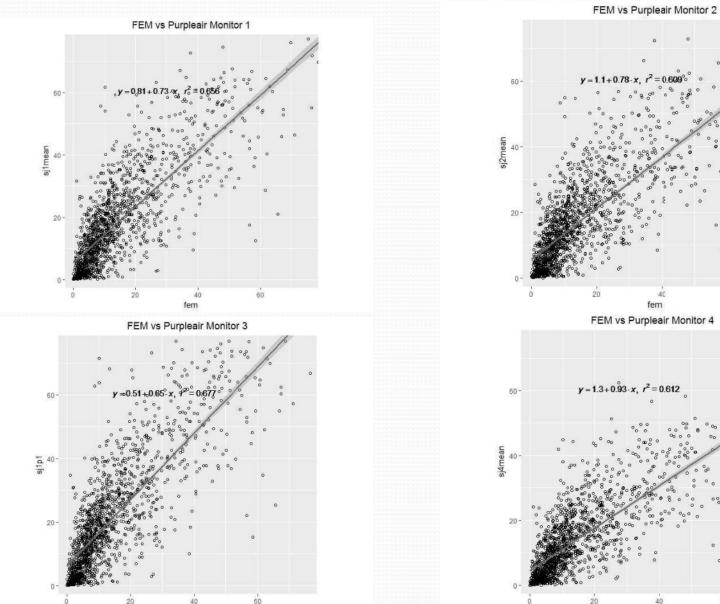

### Phase 1 analysis – Between sensors

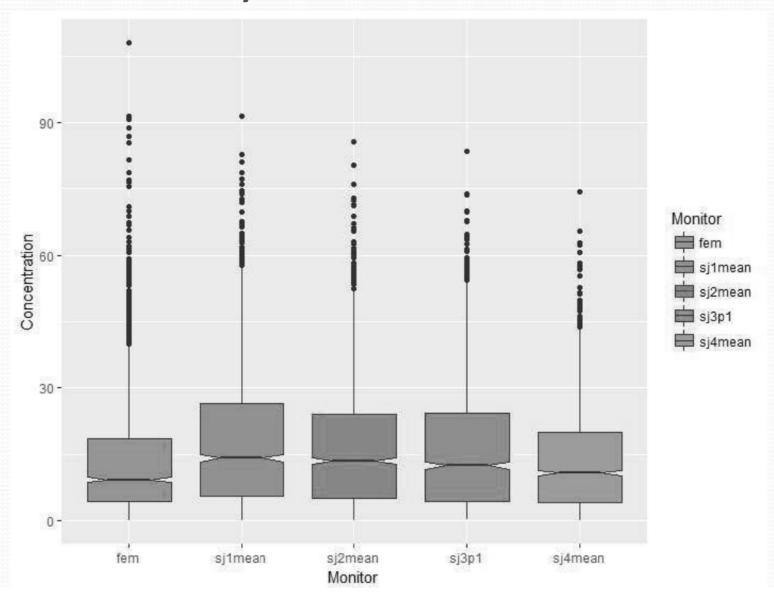

### Phase 1 analysis – Between sensors
