Subject: Update MVI 2 km west of Wardner

Eastbound pickup hit black cow on road and lost control. Then hit front right quadrant of westbound dump truck pulling trailer. Pickup rolled over and briefly caught fire and driver was s.22 Awaiting analyst from Nelson. No more than half dozen semis in lineup and they are turning around. Detour via Wardner Fort Steele with traffic control. Semi driver s.22 Only one male occupant in eastbound pickup s.22 s.22

Roads bare and dry at time of incident. Air and road about 8 to 10 Celsius.
That is all the info for now.

Just got an update from Rob. Van Horne has to change their rigging on the semi to get enough lift on the tractor to avoid dragging the damaged tandem axle. If not possible then they will have to separate the tractor and trailer before hauling to the pullout.

The RCMP analyst has decided he needs more info from the pickup and will be done with it between 3:30 and 4 before the flat deck can recover. That is why the update states 4pm opening not 3.

Rob will be calling Cranbrook 16 to include an update time of 3:30 as it is missing from the latest message.

Rob just provided an update. They will be fully open by 7pm.

The extra delays were caused by the RCMP analyst needing more information after they gave the all clear at 2:30. s.22 ; and the operators who showed up were unprepared for the size of clean up. Rob had Van Horne dispatch extra personnel and flaggers to help and begin SLAT at 6pm.

There was a considerable oil slick which took more time and spill kits to clean up.

I will be asking for a debrief with MEK to discuss the management at site. For my short time on site there were numerous cars that got pass the traffic control on either side. The management of the detour locations could be done better.

Subject: Re: Hwy 3 MVI Review/Debrief

I won't be there on Thursday or Friday.

My comments:

1. When the highway needs to be closed for eastbound traffic at the Ft Steele interchange there needs to be two flaggers there - one to direct traffic to Ft Steele, and the other needs to be positioned so as to prevent drivers from Hwy 93/95 looping around under the interchange bridge and thinking they can keep heading east.
2. Without causing traffic congestion at the Ft Steele end of Wardner-Ft Steele a flagger can not stop all traffic at that location just to find out if they are heading east or west.
3. The tow company should be better prepared when the RCMP gives the okay to start recovery. They certainly could have been escorted to the site by MoTI or MEK before the analyst was done so that there would be no doubt as to what would be needed to quickly do the recovery and clean-up when cleared to do so.
4. The flaggers were sent to the site with an insufficient number and type of signs. For example, at Ft Steele the flagger would have liked to put up a Detour with arrow sign, but he didn't have one.

That's my two-bits worth.

Kareen.
