NSC Carrier Profile

The Carrier Profile is a measurement of a carrier's on-road performance and is comprised of a carrier's demographic information, accident records, contraventions, and vehicle inspections.

On-road performance is measured in the following ways:

- **Contraventions:** The number and types of violation tickets that have been deemed guilty;
- **CVSA (Out of Service):** Roadside CVSA vehicle inspections that put a power unit, trailer or driver out-of-service;
- **Accidents:** The number and types of accidents where the driver was found at fault or fault unknown;
- **Total:** Sum of accidents, out-of-service CVSA inspections and contraventions.

Profile scores are compared to the intervention thresholds for carriers with the same or similar fleet size.

- **Average Fleet Size:** Calculated for a 12 month period by dividing the Total Active Vehicle Days by the Active Monthly Days.
 - **Total Active Vehicle Days:** Calculated by adding the number of days each vehicle was operating under the NSC certificate for the previous 12 months. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Total Active Vehicle Days would be 330 days.
 - **Active Monthly Days:** Calculated by adding the number of days in each month that the carrier had an active vehicle. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Active Monthly Days would be 59 days and the Average Fleet Size would be 5.59
- **Risk Band:** Carriers are divided into 7 risk bands based on their fleet size.

Please report any items believed to be in error to the NSC Program Office by mail, fax, or email. The NSC program office will investigate and, where applicable, make the necessary corrections as promptly as possible.

NSC Carrier Profile

The Carrier Profile is a measurement of a carrier's on-road performance and is comprised of a carrier's demographic information, accident records, contraventions, and vehicle inspections.

On-road performance is measured in the following ways:

- **Contraventions:** The number and types of violation tickets that have been deemed guilty;
- **CVSA (Out of Service):** Roadside CVSA vehicle inspections that put a power unit, trailer or driver out-of-service;
- **Accidents:** The number and types of accidents where the driver was found at fault or fault unknown;
- **Total:** Sum of accidents, out-of-service CVSA inspections and contraventions.

Profile scores are compared to the intervention thresholds for carriers with the same or similar fleet size.

- **Average Fleet Size:** Calculated for a 12 month period by dividing the Total Active Vehicle Days by the Active Monthly Days.
 - **Total Active Vehicle Days:** Calculated by adding the number of days each vehicle was operating under the NSC certificate for the previous 12 months. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Total Active Vehicle Days would be 330 days.
 - **Active Monthly Days:** Calculated by adding the number of days in each month that the carrier had an active vehicle. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Active Monthly Days would be 59 days and the Average Fleet Size would be 5.59
- **Risk Band:** Carriers are divided into 7 risk bands based on their fleet size.

Please report any items believed to be in error to the NSC Program Office by mail, fax, or email. The NSC program office will investigate and, where applicable, make the necessary corrections as promptly as possible.

NSC Carrier Profile

The Carrier Profile is a measurement of a carrier's on-road performance and is comprised of a carrier's demographic information, accident records, contraventions, and vehicle inspections.

On-road performance is measured in the following ways:

- **Contraventions:** The number and types of violation tickets that have been deemed guilty;
- **CVSA (Out of Service):** Roadside CVSA vehicle inspections that put a power unit, trailer or driver out-of-service;
- **Accidents:** The number and types of accidents where the driver was found at fault or fault unknown;
- **Total:** Sum of accidents, out-of-service CVSA inspections and contraventions.

Profile scores are compared to the intervention thresholds for carriers with the same or similar fleet size.

- **Average Fleet Size:** Calculated for a 12 month period by dividing the Total Active Vehicle Days by the Active Monthly Days.
 - **Total Active Vehicle Days:** Calculated by adding the number of days each vehicle was operating under the NSC certificate for the previous 12 months. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Total Active Vehicle Days would be 330 days.
 - **Active Monthly Days:** Calculated by adding the number of days in each month that the carrier had an active vehicle. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Active Monthly Days would be 59 days and the Average Fleet Size would be 5.59
- **Risk Band:** Carriers are divided into 7 risk bands based on their fleet size.

Please report any items believed to be in error to the NSC Program Office by mail, fax, or email. The NSC program office will investigate and, where applicable, make the necessary corrections as promptly as possible.

NSC Carrier Profile

The Carrier Profile is a measurement of a carrier's on-road performance and is comprised of a carrier's demographic information, accident records, contraventions, and vehicle inspections.

On-road performance is measured in the following ways:

- **Contraventions:** The number and types of violation tickets that have been deemed guilty;
- **CVSA (Out of Service):** Roadside CVSA vehicle inspections that put a power unit, trailer or driver out-of-service;
- **Accidents:** The number and types of accidents where the driver was found at fault or fault unknown;
- **Total:** Sum of accidents, out-of-service CVSA inspections and contraventions.

Profile scores are compared to the intervention thresholds for carriers with the same or similar fleet size.

- **Average Fleet Size:** Calculated for a 12 month period by dividing the Total Active Vehicle Days by the Active Monthly Days.
 - **Total Active Vehicle Days:** Calculated by adding the number of days each vehicle was operating under the NSC certificate for the previous 12 months. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Total Active Vehicle Days would be 330 days.
 - **Active Monthly Days:** Calculated by adding the number of days in each month that the carrier had an active vehicle. For example, if a carrier only had ten vehicles operating from January 1 to February 2, the Active Monthly Days would be 59 days and the Average Fleet Size would be 5.59
- **Risk Band:** Carriers are divided into 7 risk bands based on their fleet size.

Please report any items believed to be in error to the NSC Program Office by mail, fax, or email. The NSC program office will investigate and, where applicable, make the necessary corrections as promptly as possible.
